GETTING STARTED

■ First time operation:

1. Pull out the battery insulation sheet, then the battery will be loaded.
2. Press **ON** **Shift** **CLR** **3** **=** **CA** to reset the calculator.

Power ON: When **ON** is pressed.

Power OFF: **Shift** **OFF** are pressed.

■ Auto Power off Function:

When the calculator is not used for about 7 minutes, it will automatically power off.

Display Contrast Adjustment

- Press **Shift** **SET-UP** **6** (6: **CONT**), enter the Display Contrast Adjustment screen.

Press **▶** to make the display contrast darken.

Press **◀** to make the display contrast lighten.

Press **CA** or **ON** to confirm and clear the screen.

- To initialize the LCD contrast, press **Shift** **CLR** **3** **=** **CA** outside the **Display Contrast Adjustment** screen.

Mode Selection

- Press **MODE** to enter the Calculation Mode Selection screen.

■ **To select the angle unit [3] Deg, [4] Rad or [5] Gra**

[3] Deg: Angle unit in Degree

[4] Rad: Angle unit in Radian

[5] Gra: Angle unit in Gradient

$$90^\circ = \frac{\pi}{2} \text{ radians} = 100\text{grads}$$

■ **To select display digit or notation [6] Fix, [7] Sci or [8] Norm**

[6] Fix: Fixed Decimal, [Fix 0~9?] appears, specify the number of decimal places by pressing [0] – [9].

Example: $220 \div 7 = 31.4286$ (FIX 4)
 $= 31.43$ (FIX 2)

[7] Sci: Scientific Notation, [Sci 0~9?] appears, specify the number of significant digits by pressing [0] – [9].

Example: $220 \div 7 = 3.1429 \times 10^1$ (SCI 5)
 $= 3.143 \times 10^1$ (SCI 4)

[8] Norm: Exponential Notation, [Norm 1~2?] appears, specify the exponential notation format by pressing [1] or [2].

Norm 1: Exponential notation is automatically used for integer values with more than 10 digits and decimal values with more than **TWO** decimal points.

Norm 2: Exponential notation is automatically used for integer values with more than 10 digits and decimal values with more than **NINE** decimal places.

Example: $1 \div 1000 = 1 \times 10^{-3}$ (Norm 1)
 $= 0.001$ (Norm 2)

■ **To select the fraction format [1] a b/c or [2] d/c**

[1] a b/c: specify Mixed fraction display

[2] d/c: specify Improper fraction display

■ **To select the complex number display format [3] CPLX ([1] a+bi or [2] r<θ)**

[1] a+bi: specify Rectangular Coordinates

[2] r<θ : specify Polar Coordinates

■ **To select the statistical display format [4] STAT ([1] ON or [2] OFF)**

[1] ON: Show FREQ (Frequency) Column in Statistical Data Input Screen

[2] OFF: Hide FREQ (Frequency) Column in Statistical Data Input Screen

■ **To select the decimal point display format [5] Disp ([1] Dot or [2] Comma)**

[1] Dot: specify dot format for Decimal point result display

[2] Comma: specify comma format for Decimal point result display

■ **To Adjust Display contrast [6] ◀CONT▶**

See "Display Contrast Adjustment" section.

Before Using the Calculator

■ **Check the current Calculation Mode**

Be sure to check the status indicators that indicate the current calculation mode (COMP, STAT, BASE, EQN), display formats setting and angle unit setting (Deg, Rad, Gra)

■ **Return to initial setup**

Pressing $\overset{\text{Shift}}{\square}$ $\overset{\text{CLR}}{\square}$ **1** (Setup) \square (Yes) **CA** to return the initial calculator setup

Calculation mode	: COMP
Input/Output Format	: MthIO/MathO
Angle unit	: Deg
Display Digits	: Norm 2
Fraction Display Format	: d/c
Statistical Data Input	: OFF
Decimal Point format	: Dot

This action will not clear the variable memories.

■ **Initialize the calculator**

When you are not sure of the current calculator setting, you are recommended to initialize the calculator (reset calculation mode "COMP", angle unit "Degree", and clear reply and variable memories), and LCD contrast by

pressing $\overset{\text{Shift}}{\square}$ $\overset{\text{CLR}}{\square}$ **3** (All) \square (Yes) **CA** .

INPUTTING EXPRESSIONS AND VALUES

Input Capacity

F-960SG allows you to input a single calculation up to 99 bytes. Normally, one byte is used as each time you press one of the numeric keys, arithmetic keys, scientific function keys or **Ans**. Some functions require 4 – 13bytes.

Shift, **Alpha**, and the direction keys will not use up any bytes.

When input capacity is less than 10bytes, the input cursor will change from "█" to "■" that notifying the memory is running now.

Input Editing

- New Input begins on the left of display. If input data are more than 15 characters, the line will scroll to the right consecutively. You can scroll back to the left by using **◀** and **▶** to review the input
- In LinIO mode, press **▲** to let the cursor jump to the beginning of inputting, while **▼** will jump to the end.
- In MthIO mode, press **▶** to let the cursor jump to the beginning of inputting while it is at the end of the input calculation. Or press **◀** to let the cursor jump to the end of inputting while it is at the beginning of the input calculation.
- Omit the multiplication sign and final close parenthesis.

Example: $2 \times \log 100 \times (1+3) = 16$

	Operation 1:	Display 1
Including × ^{*1} ,) ^{*2} ,) ^{*3}	$2 \times \log 100 \times (1+3)$ 	$2 \times \log(100) \times (1+3)$ 16
Omitting × ^{*1} , Omitting) ^{*3}	$2 \log 100 (1+3)$ 	$2 \log(100)(1+3)$ 16

- *1. Omit multiplication sign (x)
 - Input before an open parentheses $\boxed{()}: 1 \times (2+3)$
 - Input before scientific functions that includes parenthesis:
 $2 \times \cos(30)$
 - Input before Random number function $\overset{\text{Ran\#}}{\boxed{}}$
 - Input before Variable (A, B, C, D, X, Y, M), π , e
- *2. Scientific functions come with the open parenthesis.
Example: sin(, cos(, Pol(, You need to input the argument and the close parenthesis $\boxed{)}$.
- *3. Omit the last close parenthesis before the $\boxed{=}$, $\boxed{M+}$, $\overset{M-}{\boxed{}}$, $\overset{\text{Shift}}{\boxed{}}$ $\overset{\text{STO}}{\boxed{}}$.

■ Insert and overwrite Input mode

In LinIO mode, you can use INSERT $\overset{\text{Insert}}{\boxed{}}$ or overwrite mode for inputting.

- In Insert mode (Default input mode), the cursor is a vertical flashing line " | " for inserting a new character.
- In overwrite mode, press $\overset{\text{Shift}}{\boxed{}}$ $\overset{\text{Insert}}{\boxed{}}$ key to switch the cursor to a flashing horizontal (_) and replace the character at the current cursor position.

In MthIO mode, you can only use the insert mode.

Whenever the display format changes from LinIO mode to MthIO mode, it will automatically switch to the insert mode.

■ Deleting and Correcting an Expression

In insert mode: Move the cursor to the right of the character or function that needs to be deleted, then press **DEL**.

In overwrite mode: Move the cursor under the character or function being deleted, then press **DEL**.

Example: 1234567 + 889900

(1) Replace an entry (1234567 → 1234560)

Mode Setting	Key In operation	Display (input Line only)
Method 1: LineIO/MthIO mode – Insert mode	1234567 + 889900	1234567 +889900
	← 7 times DEL 0	1234560 +889900
Method 2: LineIO mode – Overwrite mode	Shift SET-UP 2 1 1234567 + 889900 Shift Insert	1234567+889900_
	← 8 times	123456 <u>z</u> +889900
	0	1234560 <u>±</u> 889900

(2) Deletion (1234567 → 134567)

Method 1: LineIO/MthIO mode – Insert mode	← 12 times	12 34567+889900
	DEL	1 34567+889900
Method 2: LineIO mode – Overwrite mode	Shift Insert	1234567+889900_

(3) Insertion (889900 → 2889900)

LineIO/MthIO mode – Insert mode	← 6 times	1234567+ 889900
	2	1234567+2 889900

Inputting and Display result in MthIO Mode

- In MthIO Mode, the Input display of fraction or certain functions (log, x^2 , x^3 , x^{\square} , $\sqrt{\square}$, $\sqrt[3]{\square}$, $\sqrt[n]{\square}$, x^{-1} , 10^{\square} , e^{\square} , Abs) is shown in Mathematics textbook format.

MthIO & MathO MODE : \square \square \square \square

Example	Key in operation	Display
$\left \sqrt{3} - \frac{2}{\sqrt{2}} \right $	Abs \square \square 3 \square \square \square 2 \square \square \square 2 \square	$\left \sqrt{3} - \frac{2}{\sqrt{2}} \right $ 0.3178372452

Remark

- Some input expressions cause the height of a calculation expression to be greater than one display screen.
Maximum input capacity: 2 display screen (31 dots x 2).
- Calculator memory limits how many functions or perentheses can be input in any single expression. In this case divide the expression into multiple parts and calculate separately.
- If part of the expression you input is cut off after calculation and in the result display screen you can press \square or \square to view the full expression.

- Errors are cumulative in the case of consecutive calculations, this is also true as internal consecutive calculation are performed in the case of x^a , $\sqrt[n]{x}$, $\sqrt[3]{x}$, $x!$, nPr , nCr , etc. And may become large.

Order of Operations

This calculator will automatically determine the operation priority of each individual command as follows:-

1st Priority	Recall memory (A, B, C, D, E, F, X, Y, M), Ran#
2nd	Calculation within parentheses ().
3rd	Function with parenthesis that request the input argument to the right: Pol(, Rec(, P(, Q(, R(, sin(, cos(, tan(, \sin^{-1} (, \cos^{-1} (, \tan^{-1} (, sinh(, cosh(, tanh(, \sinh^{-1} (, \cosh^{-1} (, \tanh^{-1} (, log(, ln(, e^x (, 10^x (, \sqrt{x} (, $\sqrt[3]{x}$ (, Abs(, Rnd(, RanInt#(
4th	Functions that come after the input value preceded by values, powers, power roots: x^2 , x^3 , x^{-1} , $x!$, $^{\circ}$, $^{\circ}$, $^{\circ}$, r, g, \wedge (, $\sqrt[x]{y}$ (, Percent %, $x10^x$, \blacktriangleright
5th	Fractions: $a^{b/c}$, d/c
6th	Prefix symbol: (-) (negative sign), base-n symbols (d, h, b, o, Neg, Not)
7th	Statistical estimated value calculation: \hat{x} , \hat{y} , $\hat{x}1$, $\hat{x}2$
8th	Multiplication where sign is omitted: Multiplication sign omitted immediately before π , e, variables (2π , $5A$, πA , etc.), functions with parentheses ($2\sqrt{3}$), Asin(30), etc.)
9th	Permutations, combinations: nPr , nCr
10th	Multiplication and division: \times , \div
11th	Addition and subtraction: $+$, $-$
12th	Logical AND (and)
13th	Logical OR, XOR, XNOR (or xor, xnor)
14th	Calculation ending instruction: =, M+, M- STO(store memory)

- In the same precedence level, calculations are performed from left to right.
- Operation enclosed within parentheses is performed first. When a calculation contains an argument that is a negative number, the negative number must be enclosed within parentheses.

Example:

$$(-) \ 2 \ x^2 \ = \quad -2^2 = -4$$

$$(\ (-) \ 2 \) \ x^2 \ = \quad (-2)^2 = 4$$

- The calculator will automatically determine the operation priority of each individual command.

Example 1:

$$1 \ \div \ 2 \ \pi \ = \ 0.1591549431$$

Example 2:

$$2 \ \xrightarrow{\text{Shift STO}} \ (-) \quad 2 \rightarrow A$$

$$1 \ \div \ 2 \ \xrightarrow{\text{Alpha A}} \ = \quad 1 \div 2A = \frac{1}{4}$$

Calculation Stacks

- This calculator uses memory areas, called "stacks", to temporarily store numeric value (numbers) and commands (+, -, x...) according to their precedence during calculations.
- The numeric stack has 10 levels and command stack has 128 levels. A stack error [Stack ERROR] occurs whenever you try to perform a calculation that exceeds the capacity of stacks.
- Calculations are performed in sequence according to "Order of Operations". After the calculation is performed, the stored stack values will be released.

Error Messages and Error locator

The calculator is locked up while an error message is shown on the display to indicate the cause of the error.

- Press **CA** to clear the error message, then return to the initial display of latest mode.
- Press **←** or **→** to display input expression with the cursor positioned next to the error.
- Press **ON** to clear the error message, clear the replay memory history and return to the initial display of the latest mode.

Error Message	Cause	Action
Math ERROR	<ul style="list-style-type: none"> The intermediate or final result is outside the allowable calculation range. An attempt to perform a calculation using a value that exceeds the allowable input range. An attempt to perform an illegal operation (division by zero, etc.) 	<ul style="list-style-type: none"> Check the input values and make sure they are all within the allowable ranges, Pay special attention to values in any using memory areas
Stack ERROR	<ul style="list-style-type: none"> The capacity of the numeric stack or operator stack is exceeded. 	<ul style="list-style-type: none"> Simplify the calculation. Divide the calculation into two or more separate parts.
Syntax ERROR	<ul style="list-style-type: none"> An attempt to perform an illegal mathematical operation. 	<ul style="list-style-type: none"> Press \leftarrow or \rightarrow to display the cursor at the location of the error, make appropriate corrections

BASIC CALCULATIONS

- Press **MODE** **1** to enter COMP mode.
- During the busy calculation, the calculator shows only the indicators (without any calculation result). You can press **CA** key to interrupt the calculating operation.

Arithmetic Calculations

- To calculate with negative values (exclude the negative exponent) enclose then with parentheses.
- This calculator supports 99 levels of parenthetical expression.

MthIO & MathO MODE : \square \square **1** **1**

Example	Key in operation	Display
$(-2.5)^2$	$\left(\right) (-) 2 \cdot 5$ $\right) x^2 =$	$(-2.5)^2$ $\frac{25}{4}$
$(4 \times 10^{75})(-2 \times 10^{-79})$	$4 \times 10^x 7 5 \times$ $(-) 2 \times 10^x (-) 7$ $9 =$	$4_{x10}75x-2_{x10}-79$ $-\frac{1}{1250}$

Memory Calculations

Memory Variables

- There are 9 memory variables (A – F, M, X and Y), which store data, results, or dedicated values.
- Store values into memory by pressing $\boxed{\text{Shift}} \boxed{\text{STO}} + \text{Memory variable}$.
- Recall memory values by pressing $\boxed{\text{RCL}} + \text{Memory variable}$.
- Memory content can be cleared by pressing $\boxed{0} \boxed{\text{Shift}} \boxed{\text{STO}} + \text{Memory variable}$.

Example: $23 + 7 \rightarrow A$ (30 store into A), calculate $2 \sin A$ and clear memory A.

MthIO & MathO MODE : $\boxed{\text{Shift}} \boxed{\text{SET-UP}} \boxed{1} \boxed{1}$

Example	Key in operation	Display
$23 + 7 \rightarrow A$	$\boxed{2} \boxed{3} \boxed{+} \boxed{7} \boxed{\text{Shift}} \boxed{\text{STO}} \boxed{A}$	$23+7 \rightarrow A$ 30
$2 \times \sin A = 1$	$\boxed{2} \boxed{\sin} \boxed{\text{Alpha}} \boxed{A} \boxed{=}$	$2\sin(A)$ 1
Clear memory	$\boxed{0} \boxed{\text{Shift}} \boxed{\text{STO}} \boxed{A}$	$0 \rightarrow A$ 0

Independent Memory

- Independent memory $\boxed{\text{Alpha}} \boxed{M}$ uses the same memory area as variable M. It is convenient for calculating cumulative total by just pressing $\boxed{\text{M+}}$ (add to memory) or $\boxed{\text{Shift}} \boxed{\text{M-}}$ (subtract from memory)
- Memory contents are retained even when the calculator is powered off.
- Clear independent memory (M) by pressing $\boxed{0} \boxed{\text{Shift}} \boxed{\text{STO}} \boxed{M}$.
- Clear all memory values by pressing $\boxed{\text{Shift}} \boxed{\text{CLR}} \boxed{2}$ (Clear Memory) $\boxed{=}$ $\boxed{\text{CA}}$

Answer Memory

- The input values or the most recent calculation result will be automatically stored into Answer memory whenever you press $\boxed{=}$, $\boxed{M+}$, $\boxed{\text{Shift}} \boxed{M-}$, $\boxed{\text{Shift}} \boxed{STO}$. Answer memory can hold up to 18 digits.
- Recall and use the latest stored Answer memory by pressing $\boxed{\text{Ans}}$.
- Answer memory is not updated as an error operation had been performed.
- Answer memory contents can be maintained even if pressing $\boxed{\text{CA}}$, changing the calculation mode, or turning off the calculator.

MthIO & MathO MODE : $\boxed{\text{Shift}} \boxed{\text{SET-UP}} \boxed{1} \boxed{1}$

Example	Key in operation	Display
123 + 456 → M+, Ans ² = 335,241	$\boxed{1} \boxed{2} \boxed{3} \boxed{+} \boxed{4}$ $\boxed{5} \boxed{6} \boxed{M+} \boxed{x^2} \boxed{=}$	Ans ² 335241
789900 – Ans = 454,659	$\boxed{7} \boxed{8} \boxed{9} \boxed{9} \boxed{0}$ $\boxed{0} \boxed{-} \boxed{\text{Ans}} \boxed{=}$	789900–Ans 454659

Fraction Calculations

The calculator supports Fraction calculation and the conversions between Fraction, Decimal point, Mixed fraction and Improper fraction.

- Specify the fraction calculation result display format by either **mixed fraction** ($\boxed{\text{Shift}} \boxed{\text{SET-UP}} \boxed{\downarrow} \boxed{1}$) or **improper fraction** ($\boxed{\text{Shift}} \boxed{\text{SET-UP}} \boxed{\downarrow} \boxed{2}$) in set-up menu.
- At the default setting, fractions are displayed as improper fractions ($\frac{\blacksquare}{\blacksquare}$).
- Mixed Fraction display result only available after set the ($\blacksquare\frac{\blacksquare}{\blacksquare}$) in the setup menu.

	Improper Fraction ($\frac{\blacksquare}{\blacksquare}$)	Mixed Fraction ($\blacksquare\frac{\blacksquare}{\blacksquare}$)
MthIO Mode	$\frac{11}{3}$	$3\frac{2}{3}$
LineIO Mode	11┌3	3┌2┌3

- Press **S↔D** to switch a calculation result between fraction and decimal format.
- Press **Shift** **Mode** to switch a calculation result between improper fraction and mixed fraction format.
- Result will be displayed in decimal format automatically whenever the total digit of a fractional value (integer + numerator + denominator + separator marks) exceeds 10.
- When fraction calculation in DecimalO mode (MthIO, DecimalO and LineIO, DecimalO), the calculation result will be shown in decimal format.

Replay & Multi-statements

■ Replay Memory Function

- Replay memory is only available in COMP and BASE mode.
- After the calculation is executed, the calculation input and result will be stored in the replay memory automatically.
- Pressing \square (or \square) can replay the performed calculation input and result history.
- After obtaining the calculation result on the display, press \square or \square to edit the input expression of that result.
- If the \square Indicator is on the right side of a calculation result display, you need to press \square and then \square or \square to scroll the calculation.
- Replay memory is cleared when you press
 - Initialize calculator setting by \square \square \square 3 \square = \square CA
 - Change from one calculation mode or display mode to other.
 - Press \square ON key.
 - Press \square \square \square OFF to power off machine.

Multi-statements Function

- Use a colon [] to put two or more calculation input together.
- The first executed statement will have "Disp" indicator; and the "Disp" icon will disappear after the last statement is being executed.

Angle Unit Conversion

The calculator angle unit setting is "Degree". Pressing Shift SET-UP enter the setup menu to change the unit to "Radian" or "Gradient":

```

1:MthIO 2:LineIO
3:Deg   4:Rad
5:Gra   6:Fix
7:Sci   8:Norm
    
```

Press the corresponding number key $\boxed{3}$, $\boxed{4}$ or $\boxed{5}$ for the angle unit you need. Then the display will show the **D**, **R**, **G** Indicator accordingly.

Convert an angle unit between "Degree", "Radian" and "Gradient" by pressing Shift $\text{DRG}\rightarrow$

```

1:°      2:r
3:g
    
```

Then, pressing $\boxed{1}$, $\boxed{2}$, or $\boxed{3}$ will convert the displayed value into the selected angle unit.

Advertisement expenses: X	18	35	40	21	19
Effectiveness: y (%)	38	54	59	40	38

Please use the regression to estimate the effectiveness (estimate the value of y) if the advertisement expenses $X=30$, and estimate the advertisement expenses level (estimate the value of X_1, X_2) for effectiveness $y = 50$.

Probability Distribution Calculation

- After sample data is entered in either Statistic (SD) or Regression (REG) mode, you can perform the normal distribution or probability distribution calculation such as $P(t)$, $Q(t)$ and $R(t)$ in which t is the variate of the probabilistic experiment.

$$t = \frac{x - \bar{x}}{\sigma \sigma_n}$$

x : Random variable

\bar{x} : Mean of sample

$\sigma \sigma_n$: Standard deviation

- Press **Shift** **1** **6** to display the distribution calculations screen.

1: P(2: Q(
3: R(4: ▶t

- Press **1**, **2**, **3** or **4** for the corresponding calculations.

<p>$P(t)$: Probability below a given point x</p>	$P(t) = \int_{-\infty}^x \frac{1}{\sigma \sqrt{2\pi}} e^{-\frac{1}{2} \left(\frac{t-u}{\sigma} \right)^2} dt,$ 
<p>$Q(t)$: Probability below a given point x and above the mean</p>	$Q(t) = 0.5 - R(t),$ 
<p>$R(t)$: Probability above a given point x</p>	$R(t) = 1 - P(t),$ 

- ▶ t : This function is preceded by the argument X , and determines the normalized variate $X \blacktriangleright t = \frac{x - \bar{x}}{\sigma \sigma_n}$

Example: Calculate the probability distribution $P(t)$ for the sample data: 20, 43, 26, 46, 20, 43, when $x = 26$.

EQUATION CALCULATIONS

■ Press **MODE** **4** to enter the equation mode.

- 1: $anX + bnY = cn$
 2: $anX + bnY + cnZ = dn$
 3: $aX^2 + bX + c = 0$
 4: $aX^3 + bX^2 + cX + d = 0$

Equation Item	Description
[1] 2 unknow EQN	Simultaneous Linear Equations with two unknowns
[2] 3 unknow EQN	Simultaneous Linear Equations with three unknowns
[3] Quad EQN	Quadratic Equation, degree 2 equation
[4] Cubic EQN	Cubic Equation, degree 3 equation

Simultaneous Linear Equations

Simultaneous Linear Equations with Two Unknowns:

$$a_1x + b_1y = c_1$$

$$a_2x + b_2y = c_2$$

Simultaneous Linear Equations with Three Unknowns:

$$a_1x + b_1y + c_1z = d_1$$

$$a_2x + b_2y + c_2z = d_2$$

$$a_3x + b_3y + c_3z = d_3$$

Example: Solve the simultaneous equation with three unknowns

$$2x + 4y - 4z = 20$$

$$2x - 2y + 4z = 8$$

$$5x - 2y - 2z = 20$$

Quadratic and Cubic Equations

Quadratic equation : $ax^2 + bx + c = 0$ (a second-order polynomial equation with a single variable x)

Cubic equation : $ax^3 + bx^2 + cx + d = 0$ (an equation with cubic polynomial)

Example: Solve the Cubic equation $5x^3 + 2x^2 - 2x + 1 = 0$

■ For quadratic, cubic, or quartic equations, the variable name starts with "X₁".

BATTERY REPLACEMENT

When the display characters are dim or show the follow message on the screen, turn the calculator off and replace the lithium battery immediately.

LOW BATTERY

Please replace the lithium battery using the following procedures,

1. Press Shift OFF to power off the calculator.
2. Remove the screw that securely fixes the battery cover in place.
3. Remove battery cover.
4. Remove the old battery with ball pen or similar sharp object.
5. Load the new battery with positive "+" side facing up.
6. Replace the battery cover, screw, and press ON, Shift CLR
 $3 = \text{CA}$ to initialize the calculator.

Caution: Risk of explosion if battery is replaced by an incorrect type. Dispose of used battery according to the instruction.

Electromagnetic interference or electrostatic discharge may cause the display to malfunction or the contents of the memory to be lost or altered.

Should this occur, press **ON** , **Shift CLR** **3** **=** **CA** to restart the calculator.

ADVICE AND PRECAUTIONS

- This calculator contains precision components such as LSI chips and should not be used in place subject to rapid variations in temperature, excessive humidity dirt or dust, or exposed to direct sunlight.
- The liquid crystal display panel is made of glass and should not be subjected to excessive pressure.
- When cleaning the device do not use a damp cloth or volatile liquid such as paint thinner. Instead, use only a soft, dry cloth.
- Do not under any circumstances dismantle this device. If you believe that the calculator is not functioning properly, either bring or mail the device together with the guarantee to service representative of Canon Business office.
- Never dispose the calculator improperly such as burning; it can create risks of personal injury or harm. You are suggested to dispose this product according to your national law.
- Do replace the battery once very two years even it is not used frequently.

Battery Caution!

- Keep the Battery out of reach of children. If the battery is swallowed, contact a doctor immediately.
- Misuse of battery may cause leakage, explosion, damages or personal injury.
- Don't recharge or disassemble the battery, it could cause a short circuit.
- Never expose the battery to high temperatures, direct heat, or dispose by incineration.
- Never leave a dead battery in the calculator as the dead battery may leak and cause damage to the calculator.
- Continue using the calculator in the low battery condition may have improper operation or the stored memory may be corrupted or lost completely. Keep the written records of important data all the time; and replace the battery as soon as possible.

SPECIFICATIONS

Power Supply	: Solar and Lithium battery (CR2032 x 1)
Power Consumption	: DC 3.0V / 0.3mW
Battery Life	: Approximately 3 years (Base on 1 hour operation per day)
Auto power off	: Approx. 7 minutes
Usable Temperature	: 0° ~ 40°C
Dimension:	171 (L) × 86 (W) × 18.75 (H) mm (with cover) / 168 (L) × 80 (W) × 14.5 (H) mm (without cover)
Weight:	131 g (with cover) / 94.5 g (without cover)
