Operation Guide COMBIWAVE1

CASIO

About This Manual

- The operational procedures for Modules 2735, 3747, and 4772 are identical. All of the illustrations in this manual show Module 2735. Button operations are indicated using the letters shown in the illustration. This watch does not have a time zone that corresponds to the Greenwich Mean Time differential of -3.5 hours. Because of this, the radio-controlled timekeeping and World Time functions will not display the correct time for Newfoundland, Canada.

· Each section of this manual provides you with the information you need to perform operations in each mode. Further details and technical information can be found in the "Reference" section.

Radio-controlled Atomic Timekeeping

- This watch receives a time calibration signal and updates its time setting accordingly. The time calibration signal includes both Standard Time and Daylight Saving Time
- (summer time) data. This watch is designed to pick up the time calibration signal transmitted from Fort Collins, Colorado (USA). Reception is possible within North America*. The term "North America" in this User's Guide refers to the area that consists of Canada, the continental United States, and Merica is a summary of the term of term of the term of term o
 - and Mexico.

Current Time Setting This watch automatically adjusts its digital time setting in accordance with a time calibration signal. You can also perform a manual procedure to set the time and date, . when necessary.

- The first thing you should do after purchasing this watch is to set your Home City, which is the city where you will normally use the watch. For more information, see "To set your Home City" below.
 When using the watch outside of the range of the transmitter in Fort Collins, you need to manually adjust the time as required. See "Timekeeping" for information about monul actined.
- about manual settings. The analog time of this watch is synchronized with the digital time. Because of this, the analog time setting is automatically adjusted whenever you change the digital setting. See "Analog Timekeeping" for more information.

City code

- 1. In the Timekeeping Mode, hold down (A) until the transmitter indicator (USA) starts to flash, which transmitter indicator (USH) starts to hash, which indicates the setting screen. Press © to display the city code setting screen. Use © (east) and ® (west) to select the city code you want to use as your Home City. • The following are the city codes for major cities in North America. 3
- North America. LAX: Los Angeles, San Francisco, Las Vegas,
- LHX: Los Angletes, San Francisco, Las vegas, Seattle, Vancouver, Tijuana
 DEN: Denver, El Paso, Edmonton, Culiacan
 CHI: Chicago, Houston, Dallas/Fort Worth, New Orleans, Winnipeg, Mexico City
 NY⊂: New York, Detroit, Miami, Boston, Montreal
 Note that this watch does not have a city code that correspond to heaven durated and the second second and the second and the second and the second second and the second second and the second second and second seco
- corresponds to Newfoundland.
 Press (A) twice to exit the setting screen.
 The first press of (A) displays the 12/24-hour setting screen. Pressing (A) again exits the setting screen.

Important!

- Normally, your watch should show the correct time as soon as you select your Home City code. If it does not, it should adjust automatically after the next auto receive operation (in the middle of the night). You can also perform manual receive or you can set the time manually
- If you are in an area that does not use Daylight Saving Time (summer time), turn off the DST setting.

Time Calibration Signal Reception

- There are two different methods you can use to receive the time calibration signal: auto receive and manual receive
- Auto Receive
- With auto receive, the watch automatically picks up the time calibration signal four times a day at 2:00 a.m., 3:00 a.m., 4:00 a.m., and 5:00 a.m. For more information, see "About Auto Receive"
- Manual Receive Manual receive lets you start a time calibration receive operation with the press of a button. For more information, see "To perform manual receive".

- Important!
- osition the watch as shown in the nearby illustration, with its 12 o'clock side facing towards a window. Make sure there are no metal objects nearby

The watch should not be on its side or facing the wrong way.
Proper signal reception can be difficult or even impossible under the conditions listed below.

- Signal reception is normally better at night than during the day.
 Time calibration signal reception takes from two to six minutes, but in some cases it can take as long as 12 minutes. Take care that you do not perform any button operations or move the watch during this time.

- At distances further than about 600 miles (1,000 kilometers) from the transmitter,
- A distances from their about our finites (1,000 kilonitetis) from the transmitter, signal reception may not be possible during certain times of year or times of day. Radio interference may also cause problems with reception. Even when the watch is within the reception range of the transmitter, signal reception is impossible if the signal is blocked by mountains or other geological formations between the watch and signal source. Signal reception is affected by weather, atmospheric conditions, and seasonal chances
- changes.See the information under "Signal Receive Troubleshooting" if you experience
- problems with time calibration signal reception.

About Auto Receive When auto receive is turned on, the watch automatically starts to receive the time calibration signal when the digital time in the Timekeeping Mode reaches 2:00 a.m., 3:00 a.m., 4:00 a.m., and 5:00 a.m. each day (calibration times).

1

- The auto receive operation is performed only if the watch is in the Timekeeping Mode or World Time Mode when one of the calibration times is reached. It is no performed if a calibration time is reached while an alarm is sounding, or while you
- Performed if a calibration time is reached while an alarm is sounding, or while you are configuring settings (while settings are flashing on the display).
 Auto receipt of the calibration signal is designed to be performed early in the morning, while you sleep (provided that the Timekeeping Mode time is set correct) Before going to bed for the night, remove the watch from your wrist, and put it in a location where it can easily receive the signal. orrectly)
- When auto receive is turned on, the watch receives the calibration signal for two to of the calibration times. Do not perform any button operation within six minutes before or after any one of the calibration times. Doing so can interfere with correct
- before or alter any one or the calibration calibration. Remember that reception of the calibration signal depends on the time kept in the digital display. The receive operation will be performed whenever the display shows any one of the calibration times, regardless of whether or not the displayed time is returning the correct time.
- When two three, or four receptions are successful, the watch uses the data of the last reception for calibration. When only one reception is successful, the watch uses ata of the successful reception

About the Receiving Indicator

The receiving indicator shows the strength of the calibration signal being received. For best reception, be sure to keep the watch in a location where signal strength is strongest

- Even in an area where signal strength is strong, it takes about 10 seconds for signal reception to stabilize enough for the receiving indicator to indicate signal strength. Use the receiving indicator as a guide for checking signal strength and for finding the take to strength of the take the strength of the strength
- best location for the watch during signal receive operations.
- best location for the watch during signal receive operations.
 Following reception of the time calibration signal and calibration of the watch's time setting, the Level 4 receiving indicator will remain on the display in all modes. The Level 4 receiving indicator will not be displayed if signal reception was unsuccessful or after you adjust the current time setting manually.
 The Level 4 receiving indicator is displayed only when the watch is able to successfully receive both time and date data. It does not appear when only time data
- is received
- The Level 4 receiving indicator indicates that at least one of the auto calibration signal receive operations was successful. Note, however, that the Level 4 receiving indicator is cleared from the display at 3:00 a.m. each day.

Signal Receive Troubleshooting

Check the following points whenever you experience problems with calibration signal

Problem	Probable Cause	What you should do
Cannot perform manual receive.	 The watch is not in the Timekeeping Mode. Your current Home City is not one of the following city codes: LAX, DEN, CHI, or NYC. 	 Enter the Timekeeping Mode and try again. Select LAX, DEN, CHI, or NYC as your Home City.
Auto receive is turned on, but the Level 4 receiving indicator does not appear on the display.	 You changed the time setting manually, The watch was not in the Timekeeping or World Time Mode, or you performed some button operation during the auto receive operation. Even if receive is successful, the Level 4 receiving indicator disappears every day at 3 am. Time data (hour, minutes, seconds) only was received during the last receive operation. The Level 4 receiving indicator appears only when time data and date data (year, month, day) are both received. 	 Perform manual signal receive or wait until the next auto signal receive operation is performed. Check to make sure the watch is in a location where it can receive the signal.
Time setting is incorrect following signal reception.	 If the time is one hour off, the DST setting may be incorrect. The Home City code setting is not correct for the area where you are using the watch. 	Change the DST setting to Auto DST. Select the correct Home City code.

For further information, see "Important!" under "Time Calibration Signal Reception" and "Radio-controlled Atomic Timekeeping Precautions".

World Time

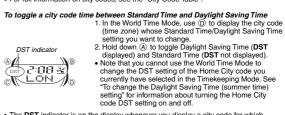

- The World Time shows the current time in 30 cities (29 time zones) around the world. If the current time shown for a city is wrong, check your Home City time settings and make the necessary
- Home Unit time seturings are an advantage of the watch will perform a signal receive operation even if it is in the World Time Mode when a calibration time is reached. If this happens, the World Time Mode time settings will be adjusted in accordance with the Timekeeping Mode's Home City time.
- All of the operations in this section are performed in the World Time Mode, which you enter by pressing ©.

To view the time in another city While in the World Time Mode, press (1) to scroll through the city codes (time zones).
 For full information on city codes, see the "City Code Table".

City Code

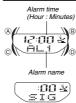

• The DST indicator is on the display whenever you display a city code for which

- Note that the DST/Standard Time setting affects only the currently displayed city code. Other city codes are not affected.

Alarms

The Alarm Mode gives you a choice of four one-time alarms and one snooze alarm. One of the one-time alarms functions as a "target alarm," which counts the time remaining from the current Home City time to the target alarm time. Also use the Alarm Mode to turn the Hourly Time Signal

- on and off
- on and off. There are five alarms named AL1, AL2, AL3, TAL (target alarm), and SNZ. You can configure SNZ as a snooze alarm only. Alarms AL1, AL2, AL3, and TAL can be used as one-time alarms only. Alarm settings (and Hourly Time Signal settings) are available in the Alarm Mode, which you enter by pressing ©.

Reference

This section contains more detailed and technical information about watch operation. It also contains important precautions and notes about the various functions of this watch. ature

Auto return features

- If you leave the watch in the Alarm (except for the target alarm screen explained on "To set an alarm time"). Date Alert or Hand Setting Mode for two or three minutes without performing any operation, it automatically changes to the Timekeeping Mode.
- If you leave the watch with a flashing setting on the display for two or three minutes without performing any operation, it automatically saves any settings you have made up to that point and exits the setting screen.

Scrolling

The B and D buttons are used in various modes and setting screens to scroll through data on the display. In most cases, holding down these buttons during a scroll operation scrolls through the data at high speed.

Initial Screens

When you enter the World Time, Alarm, or Date Alert Mode, the data you were viewing when you last exited the mode appears first

Radio-controlled Atomic Timekeeping Precautions

- · Strong electrostatic charge can result in the wrong time being set. The time calibration single can recar in the first of the ionosphere. Because of this, such factors as changes in the reflectivity of the ionosphere, as well as movement of the ionosphere to higher attitudes due to seasonal atmospheric changes or the time of day may change the reception range of the signal and make reception temporarily
- impossible. Even if the time calibration signal is received properly, certain conditions can cause the time setting to be off by up to one second

- The current time setting in accordance with the time calibration signal takes priority
- The current time setting in accordance with the time calibration signal takes priority over any time settings you make.
 The watch is designed to automatically update the date and day of the week for the period January 1, 2000 to December 31, 2039. Setting of the date by the time calibration signal cannot be performed starting from January 1, 2040.
 This watch can receive signals that differentiate between leap years and non-leap time.
- years. Though this watch is designed to receive both time data (hour, minutes, seconds) and date data (year, month, day), certain signal conditions can limit reception to time data only
- Normally, the signal reception date shown by the Last Signal screen is the date data Normally, the signal reception date shown by the Last Signal screen is the date data included in the received time calibration signal. When only time data is received, however, the Last Signal screen shows date as kept in the Timekeeping Mode at the time of signal reception.
 If you are in an area where proper time calibration signal reception is impossible, the watch keeps time within ±20 seconds a month at normal temperature.
 If you have problems with proper time calibration signal reception or if the time setting is wrong after signal reception, check your current city code, DST (summer time), and auto receive settings. The following are the initial factory defaults for these settings.
- settings

Setting	Initial	Factory Default
City code	NYC	(New York)
DST (summer time)	A DST	(Auto switching)
Auto receive	on R/C	(Auto receive)

Timekeeping

- Timekeeping
 Resetting the seconds to 0.0 while the current count is in the range of 30 to 59 causes the minutes to be increased by 1. In the range of 00 to 29, the seconds are reset to 0.0 without changing the minutes.
 The day of the week is automatically displayed in accordance with the date (year, month, and day) settings.
 The year can be set in the range of 2000 to 2039.
 The watch's built-in full automatic calendar makes allowances for different month lengths and leap years. Once you set the date, there should be no reason to change it except after you have the watch's battery replaced.
 The current time for all city codes in the Timekeeping Mode and World Time Mode is calculated in accordance with the Greenwich Mean Time (GMT) differential for each city, based on your Home City time setting.
 GMT differential is calculated by this watch based on UTC* data.

- The letters "UTC" stands for "Universal Time Coordinated," which is the world-wide scientific standard of timekeeping. It is based upon carefully maintained atomic (cesium) clocks that keep time accurately to within microseconds. Leap seconds are added or subtracted as necessary to keep UTC in sync with the Earth's rotation. The reference point for UTC is Greenwich, England.

12-hour/24-hour Timekeeping Formats

The 12-hour/24-hour timekeeping format you select in the Timekeeping Mode is also

- With the 12-hour/24-hour unnexeeping format you select in the innexeeping mode is also applied in all other modes.
 With the 12-hour format, the P (PM) indicator appears on the display for times in the range of noon to 11:59 n... and no indicator appears for times in the range of mode to 11:59 n...
- With the 24-hour format, times are displayed in the range of 0:00 to 23:59. The indicator 24 indicates the 24-hour format.

Illumination Precautions

The watch has an EL (electro-luminescent) panel that causes the entire display to glow for easy reading in the dark. In any mode, press (B) to illuminate the display for about one second.

- . The electro-luminescent panel that provides illumination loses power after very long
- Illumination may be hard to see when viewed under direct sunlight.
 The watch may emit an audible sound whenever the display is illuminated. This is due to vibration of the EL panel used for illumination, and does not indicate
- malfunction.
- Illumination turns off automatically whenever an alarm sounds.
 Frequent use of illumination runs down the battery.
