DESCRIPTION

Embroidery machine makes the single thread chain stitch and can be quickly adjusted to make the drop or moss stitch without unthreading the machine. It is designed for ornamenting or embroidering curtains, upholstery, dresses, scarf, gloves, table covers, lace, etc. The machine also can make linen and towels for hotels, etc., by stitching a name into the material.

The thread may be of cotton, wool, worsted, silk, metal and other threads of similar adaptability. A large variety of fabrics can be embroidered, ranging from fine chiffon to china silk and cloth.

The usual method of producing embroidered designs is to follow a pattern that has been perforated, stamped or traced on the fabric, but with practice the operator can produce embroidery designs without pre-making the fabric.

SPEED

When first operating this machine, the best results can be obtained by running the machine at approximately 800 stitches per minute. The speed can be increased as the operator become more proficient and the nature of the work permits.

TO OIL THE MACHINE

To insure easy running and prevent unnecessary wear of the parts which are in movable contact, the machine requires oiling.

Oil should be applied to the plac es designated by unlettered arrows in Figs. 1, 2, 9, and 10.

Fig. 1, End view of machine showing oiling points.

Fig. 2, Oiling points of the front of the machine

Fig. 2 shows the arm cover removed for the purpose of oiling. This arm cover can be removed after taking out thumb screw W, Fig. 8.

If the machine is used continuously, oil should be applied at least once each day.

NIPPLES, NIPPLES AND THREAD

Needles for embroidery machine are catalogue no. 5901 (137 x 1) and are available in sizes from 1 to 12. These needles have hook similar in appearance to those of hand crochet needles.

The needle must be selected according to the thickness and the style of the thread to be used. The thread must not only fill the opening of the hook in the needle but must slide freely therein.

To correspond with the needle used in the machine a suitable nipple must be selected, as the needle in formin g the stitch has to operate through the nipple. The needle must fit in the ni pple and slide freely without side play. Nipples are available in size numbers similar to those of the needles, and for general work the number of the nipple should be the same as that of the needle.

TO REMOVE, REPLACE AND SET NEEDLE AND NIPPLE

When it is necessary to change the needle and nipple on the machine, first select another n eedle and corresponding nipple. Then lower the presser bar, loosen wing screw B, Fig. 3 and remove needle hol der A and needle from top of machine. Unscrew nipple N, using the small wrench provided.

Select the correct needle hole in needle plate D.

NOTE: The needle hole should be slightly larger than the needle, so that the needle, when laid around the needle, will have sufficient space to pass without touching the sides of the needle hole.

Loosen thumb screw L and turn plate D until correct needle hole is in line with needle, then tighten thumb screw L.

Next, screw selected ni pple into the lower end of nipple carrier O and tighten securely with the small wrench. Screw selected needle into either end of needle hol der A and tighten with pliers provided. Replace needle holder A down into sleeve and adjust its height so that the fabric to be embroidered can just under the point of the needle.

Be sure handle K is as far to the front as possible and that the hook of the needle faces the front. Then tighten wing screw B, wh ich also should face the front.

Fig. 3, Adjustments on the machine

- A. Needle holder
- B. Wing screw for needle holder
- C. Thumb screw for regulating pressure on presser foot
- D. Needle plate
- E. Tension regulating lever
- F. Tension regulating plate
- G. Tension complete
- H. Tension bracket
- I. Thread controller spring
- K. Handle for directing feed and operating stop motion
- L. Thumb screw for holding needle plate
- M. End for looper shaft
- N. Nipple
- O. Nipple carrier
- P. Thumb screw for regulating pressure on nipple

TO THREAD THE MACHINE

Place the cone of thread in a convenient position on the floor.

Three thread eyelets are furnished with machine. These eyel ets should be fastened to the underside of the t able as shown at 1, 2 and 3, Fig. 4. Eyelet 1 should be located directly above the cone of thread.

Pass the thread up from the cone and t hrough eyelets 1, 2 and 3, then through hole 4, over between tension di scs 5, through thr ead controller 6. Turn handle K, Fig. 5 to the front or slightly to the left, raise presser foot and insert threading wire S in the forward hole 7 of needle plate. With the left thand, catch thread on hook of threading wire S and draw wire and thread up through hole of needle plate. With the left hand, hold end of thread with a slight tension.

With the right hand, turn handle K strai ght to the left and, having started the machine, quickly bear down and up on handle K so that the needle will pick up the thread for one stitch.

Keep handle K in same position and, with the threading wire, draw thread directly toward you laying end of the read loosely on needle pleate after it comes up through needle hole. The machine is then ready for operation.

Fig. 4, Threading machine

Fig. 5, Threading machine

LEARNING TO OPERATE THE MACHINE

NOTE: When in operation the machine pulley must always turn over away from operator.

Mark a design (see Fig. 6) on a 12 inch square piece of cloth.

Place cloth under presser foot so that needle will enter cloth at point 1. Turn handle K, Fig. 3 to the right and the hook of the needle will be turned in the same direction. Lower presser foot, start machine pulley by turning it over away from you, grasp handle K and pull it down to start the machine. With handle depressed and to the right, cloth will be fed to point 2, then turn handle to the front and cloth will be fed to point 3, turn handle to the left and cloth will be fed to point 4, etc.

Fig. 6. Diagram for practice

To stop machine raise handle K. machine will stop with needle as its highest point.

TO OPERATE THE MACHINE

The operator should practice embroi dering designs similar to those illustrated below:

Fig. 7. Designs for beginners

These designs can be sketched on w hite material such as lawn, and by following them, the operator can soon become proficient enough to attempt more intricate designs or patterns.

TO REGULATE THE PRESSURE ON THE PRESSER FOOT

The pressure on the presser foot is regulated by the thumb screw C, Fig. 3. To increase the pressure, turn the thumb screw over to the right or downward. To decrease the pressure, turn the thumb screw over to the left or upward.

TENSIONS

If stitches are too tight, raise needle holder approximately 1/16 inch.

Various effects can be produced by changing the height of the needle holder as well as by adjusting the length of stitch.

The tension on the threa d is regulated by the thumb nut B, Fig. 4 at the left of the tension discs. T o increase the tension turn this nut over toward you. To decrease the tension turn this thumb nut over from you. This tension should be only tight enough to prevent the skipping of stitches.

TO ADJSUT THE LENGTH OF STITCH

The length of stitch is adjusted by screw T, Fig 8. To lengthen the stitch, loosen locking lever U and turn screw T over to the left or upward, then tighten locking lever U.

To shorten the stitch, loosen locking lever U and turn the screw T over to the right or downward, then tighten locking lever U.

Fig. 8. Adjustments on the machine

TO REGULATE THE PRESSURE ON THE NIPPLE

The pressure on the nipple is regulated by the thumb screw P, Fig. 8 at the top of the machine. To increase the pressure, turn this thumb screw over to the right or downward. To decrease the pressure, turn this thumb screw ov er to the left or upward.

NOTE: Too much pressure on the nipple may cause the thread to break.

When sewing fine net it is sometimes necessary to prevent the nipple from touching the needle plate.

To raise the nipple, insert a screw driver in hole R, Fig. 9 and loosen the set screw therein. The eccentric adjusting stud Q can then be turned so that nipple can be set at the desired height; then tighten the set screw in hole R.

Fig. 9. Oiling points and adjustments of the back of the machine

THE LOOPER

Allow the stop motion to throw the machine out of action and make sure that it is securely held in it is locking position. Raise the needle holder to avoid breaking the point of the needle, remove the needle plate after removing the thumb screw L, Fig. 10, and observe the notch in the looper which, when in its correct position, should be at the rear, slightly to the right of the needle, while the handle K is toward the front.

TO SET THE LOOPER

Turn the machine back on its hinges and turn handle K, fig. 10 and wing screw B, Fig. 3 to the front. Loosen set screw X, Fig. 10 of the operating worm gear Y, and turn the gear slightly, until the notch in the looper is in its correct position as instructed above. Af ter having set the worm gear flush with the end of the looper shaft M, tighten the set screw X.

Fig. 10, Oiling points and adjustments in base of machine

PILE OR MOSS STITCH

The raised pile or moss stitch or produced by adjusting the machine so that it will drop the stitches in loose loops on the material. To accomplish this, turn handle K to the front , loosen the wing screw B, Fig.3 and turn the needle holder so that the hook of the needle will pint directly to the back of the machine, then tighten the wing sc rew. Reach under the bed of the machine with the left hand, grasp the knurled end Z, Fig. 10 of the operating worm gear, draw the worm gear to the left and while holding it turn handle K around to the right directly to the ba ck, the release the knurled and of the gear.

The looper will then be set in the opposite direction to that which is required for the chain stitch, or with the notch of the looper at the front of the needle while handle K is at the front.

By operating the machine and turning handle K rapidly, so as to make very small circles of dropped stitch loops laid one on the other, raised pile work is produced. The higher the needle is set the longer the loop will be. The size of the thread and thickness of the material sued will have to be considered when adjusting the machine for pile stitching.
