System Setup

Dell™ OptiPlex™ 380 Service Manual—Desktop

- Boot Menu
- Navigation Keystrokes
- Entering System Setup
- System Setup Menu Options

Boot Menu

Press <F12> when the Dell™ logo appears to initiate a one-time boot menu with a list of the valid boot devices for the system.

The options listed are:

Internal HDD CD/DVD/CD-RW Drive Onboard NIC BIOS Setup Diagnostics

This menu is useful when you are attempting to boot to a particular device or to bring up the diagnostics for the system. Using the boot menu does not make any changes to the boot order stored in the BIOS.

Navigation Keystrokes

Use the following keystrokes to navigate the System Setup screens.

Navigation Keystrokes	
Action	Keystroke
Expand and collapse field	<enter>, left- or right-arrow key, or +/-</enter>
Expand or collapse all fields	<>
Exit BIOS	<esc>—Remain in Setup, Save/Exit, Discard/Exit</esc>
Change a setting	Left or right-arrow key
Select field to change	<enter></enter>
Cancel modification	<esc></esc>
Reset defaults	<alt><f> or Load Defaults menu option</f></alt>

Entering System Setup

Your computer offers the following BIOS and System Setup options:

- Bring up a one-time boot menu by pressing <F12>
- 1 Access System Setup by pressing <F2>

<F12> Menu

Press <F12> when the Dell™ logo appears to initiate a one-time boot menu with a list of the valid boot devices for the computer. Diagnostics and Enter Setup options are also included in this menu. The devices listed on the boot menu depend on the bootable devices installed in the computer. This menu is useful when you are attempting to boot to a particular device or to bring up the diagnostics for the computer. Making changes in the boot menu does not make any changes to the boot order stored in the BIOS.

<F2>

Press <F2> to enter System Setup and make changes to user-definable settings. If you have trouble entering System Setup using this key, press <F2> when the keyboard lights first flash.

System Setup Menu Options

NOTE: System Setup options may vary depending on your computer and may not appear in the exact same order.

General	
System Board	Displays the following information: 1 System information: Displays BIOS Info,, System Info, Service Tag, Express Service Code, Asset Tag, Manufacture Date, and the Ownership Date 1 Memory information: Displays Installed Memory, Usable Memory, Memory Speed, Memory Channel Mode, Memory Technology, DIMM_1 Size, DIMM_2 Size, DIMM_3 Size, and DIMM_4 Size. 1 Processor information: Displays the Processor Type, Processor Speed, Processor Bus Speed, Processor L2 cache, Processor ID, Microcode Version, Multi Core Capable and HT Capable 64-bit Technology

Date/Time	Displays the system date and time. Changes to the system date and time take effect immediately.
Boot Sequence	Specifies the order in which the computer attempts to find an operating system from the devices specified in this list.
	Onboard or USB Floppy HDD(will show the model currently in system) Onboard or USB CD-Rom Drive USB Device

Drives	
Diskette drive	This field determines how the BIOS configures floppy drives, Operating Systems with USB support will recognize USB Floppy drives regardless of this setting:
	Disable - All Floppy drive are disable Enable - All floppy drive are enable.
	The "USB Controller" Setup option will affect floppy operation.
SATA Operation	configures the operating mode of the integrated hard drive controller. 1 RAID Autodetect / AHCI = RAID if signed drives, otherwise AHCI 1 RAID Autodetect / ATA= RAID if signed drives, otherwise ATA 1 RAID On / ATA= SATA is configured for RAID on every boot 1 Legacy = The hard drive controller is configured for legacy mode Legacy mode provides for compatibility with some older operating systems that do not support native resources assigned to the drive controller. RAID Mode is incompatible with I mageServer. Please disable RAID mode if enabling I mage Server.
S.M.A.R.T. Reporting	This field controls whether hard drive errors for integrated drives are reported during system startup. This technology is part of the SMART (Self Monitoring Analysis and Reporting Technology) specification.
	This option is disabled by default.
Drives	Enables or disables the SATA or ATA drives connected to the system board.

Intograted NIC	Enables or disables the integrated network card. You can set the integrated NIC to:
Integrated NIC	Disable Dis
	ImageServe is incompatible with RAID mode. Please disable RAID if enabling ImageServer. PXE is needed only if intending to boost to an operating system located on a server, not if you are booting on an OS located on a ha
	drive in this system.
	This field enable and disable the internal USB for FlexBay, you can set:
USB for Flexbay	Disable - Internal USB for FlexBay is disable Fnable - Internal USB for FlexBay is enable No Boot - Internal USB for FlexBay is enable, but not bootable. (default)
USB Controller	Enables or disables the integrated USB controller. You can set the USB controller to: 1 Enable (default)
	Disable No boot
	Operating systems with USB support will recognize USB Storage
Parallel Port	Identifies and defines the parallel port settings. You can set the parallel port to: 1 Disable 1 AT 1 PS/2 (default) 1 EPP 1 ECP No DMA 1 ECP DMA 1 1 ECP DMA 3
Parallel Port Address	Sets the base I/O address of the integrated parallel port.
Serial Port #1	Identifies and defines the serial port settings. You can set the serial port to: 1
Serial Port #2	Identifies and defines the serial port settings. You can set the serial port to:
	1 Disable

	Auto (default) COM2 COM4 The Operating System may allocate resources even though the setting is disabled.
Miscellaneous Devices	Enables or disables the following onboard devices: 1 Front USB 1 PCI slots 1 Audio

Video Primary Video This field determines which video controller will become the primary video controller when 2 controllers are available in the system. This selection matters only if there are 2 video controller present. Auto(default) - Use the add-in video controller. Onboard/Card - Use the integrated video controller unless a Graphic care is installed. A PCI Express Graphic(PEG) card will overide and disable the integrated video controller.

Performance	
Multi Core Support	This field specifies whether the processor will have one or all cores enable. The performance of some application will improve with the additional cores.
Intel® SpeedStep™	This Option enables or disables the Intel® SpeedStep™ mode of the processor. When disabled, the system is placed into the highest performance state and the Intel® SpeedStep™ applet or native operating system driver are prevented from adjusting the processor's performance. When enable. the Intel® SpeedStep™, enabled CPU is allowed to operate in multiple performance states.
	This option is disabled by default.
C States Control	This option enables or disables additional processor sleep states. The operating system may optionally use these for additional power saving when idle.
Control	This option is disabled by default.
Limit CPUID Value	This field limits the maximum value the processor Standard CPUID Function will support. Some operating systems will not complete installation when the maximum CPUID Function supported is greater than 3.
	This option is disabled by default.
HDD Acoustic Mode	This option allows you to optimize your hard drives performance and acoustic noise level based on your personal preferences.
	Bypass(default)- Do nothing (needed for older drives) Quiet- The drive is slower, but quieter. Suggested - Allow drive manufacturer to select the mode. Performance- The drive is faster, but possibly noisier.

Virtualization S	Virtualization Support	
Virtualization	This Option specifies whether a Virtual Machine Monitor (VMM) can utilize the additional hardware capabilities provided by Intel® Virtualization Technology.	
	Enable Intel® Virtualization Technology - This option is disabled by default.	
VT for Direct I/O	Enables or disables the Virtual Machine Monitor (VMM) from utilizing the additional hardware capabilities provided by Intel® Virtualization technology for direct I/O.	
	Enable Intel® Virtualization Technology for Direct I/O - This option is disabled by default.	
Trusted Execution	Field specifies whether a Measured Virtual Machine (MVMM) can utilize the additional hardware capabilities provided by Intel® Trusted Execution Technology. The TPM Virtualization Technology and Virtualization Technology for Direct I/O must be enable to use this feature.	
Excountries	Enable Intel® Trusted Execution Technology - This option is disabled by default.	

Security	Security	
Administrative Password	Provides restricted access to the computer's system setup program in the same way that access to the system can be restricted with the System Password option .	
	This option is not set by default.	
System Password	Displays the current status of the system's password security feature and allows a new system password to be assigned and verified.	
	This option is not set by default.	
Password Changes	Enables or disables the user from changing the system password without the administrative password.	
	This option is enabled by default.	
TPM Security	Enables or disables the trusted platform module (TPM) security.	
	You can set the TPM security to:	
	Deactivate (default) Activate Clear	
	NOTE: When TPM Security is set to Clear the system setup program clears the user information stored in the TPM.	

CPU XD Support	Enables or disables the execute disable mode of the processor.
	This option is enabled by default.
Computrace(R)	Enables or disables the optional Computrace® service designed for asset management.
	You can set this option to:
	Deactivate (default) Disable Activate
SATA-0 Password	Displays the current status of the password set for the hard drive connected to the SATA-0 connector on the system board.
	You can also set a new password. This option is not set by default.
	NOTE: The system setup program displays a password for each of the hard drives connected to your system board.

Power Manageme	ower Management	
AC Recovery	Determines how the system responds when AC power is re-applied after a power loss. You can set the AC Recovery to: Power Off (default) Power On Last State	
Auto On Time	Sets time to automatically turn on the computer. Time is kept in the standard 12-hour format (hours:minutes:seconds). Change the startup time by typing the values in the time and AM/PM fields. NOTE: This feature does not work if you turn off your computer using the switch on a power strip or surge protector or if Auto Power On is set to disabled.	
Low Power Mode	Enables or disables low power mode. This option is disabled by default. When low power mode is enabled, the integrated network card is disabled when the system is shutdown or in Hibernate mode. Only Add-in NIC cards will be able to remotely wake the system.	
Remote Wakeup	Allows the system to power up when a network interface controller receives a wake up signal. You can set Remote Wakeup to: 1 Disable (default) 1 Enable 1 Enable with Boot NIC	
Suspend Mode	Sets the power management suspend mode to: 1 S1 1 S3 (default)	
Fan Control Override	Controls the speed of the system fan. NOTE: When enabled, the fan runs at full speed.	

Maintenance	
Service Tag	Displays the Service Tag of your computer.
Asset Tag	Allows you to create a system asset tag if an asset tag is not already set.
	This option is not set by default.
SERR Messages	Controls the SERR Message mechanism.
	This option is enabled by default.
	Some graphics cards require the SERR Message mechanism be disabled.

Image Server	
Lookup Method Specifies how the ImageServer looks up the server address.	
	1 Static IP 1 DNS
	NOTE: You must set the Integrated NIC to Enable with I mageServer to set the Lookup Method.
ImageServer IP Specifies the primary static IP address of the ImageServer with which the client software communicates.	
	The default IP address is 255.255.255.255
	NOTE: You must set the Integrated NIC to Enable with ImageServer to set the ImageServer IP.
ImageServer Port	Specifies the primary IP port of the image server with which the client software communicates.

		The default IP port is 06910.	
Client DHCP		Specifies how the client obtains the IP address.	
		1 Static IP 1 DHCP (default)	
Client IP		Specifies the static IP address of the client.	
		The default IP address is 255.255.255.255	
		NOTE: To set Client IP you must set Client DHCP to Static IP	
Client Subnet	Лask	Specifies the subnet mask for the client.	
		The default setting is 255.255.255.255	
		NOTE: To set Client SubnetMask you must set Client DHCP to Static IP	
Client Gatewa	у	Specifies the gateway IP address for the client.	
		The default setting is 255.255.255.255	
		NOTE: To set Client SubnetMask you must set Client DHCP to Static IP	
License Status	cense Status Displays the current license status.		
Post Behavior	1		
Fast Boot	When enabled (default), your computer starts more quickly because it skips certain configurations and tests.		
NumLock LED Enables or disables the NumLock feature when your computer starts.		disables the NumLock feature when your computer starts.	
	When enabled (default), this option activates the numeric and mathematical features shown at the top of each key. When disabled, this op activates the cursor-control functions labeled on the bottom of each key		
POST Allows you to specify the function keys to display on the scree Hotkeys		to specify the function keys to display on the screen when the computer starts.	
	Enable F2 = Setup (enabled by default) Enable F12 = Boot menu (enabled by default)		
Keyboard	Enables o	disables keyboard error reporting when the computer starts.	
Errors	This option is enabled by default.		
	sign-on displays a message stating the keystroke sequence required to enter the Manageability Engine BIOS Extensions(MEBx) Setup program.		
MEBx Hotkey	This option is enabled by default.		
	Set the system maximum memory for OS to load while installation. If enabled the maximum available memory is 256MB RAM.		
OS Install	This option is disable by default.		
Reason being some operating system will not complete install with more then 2GB of system memory.		ing some operating system will not complete install with more then 2GB of system memory.	
System Logs			
BIOS Events		Displays the system event log and allows you to:	
		Clear Log Mark all Entries	

Coin-Cell Battery

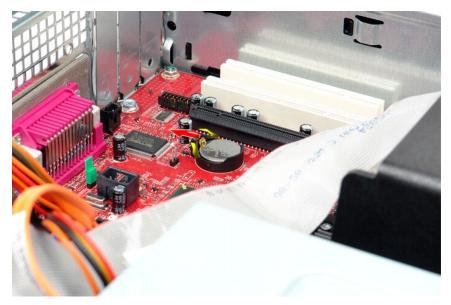

Dell™ OptiPlex™ 380 Service Manual—Desktop

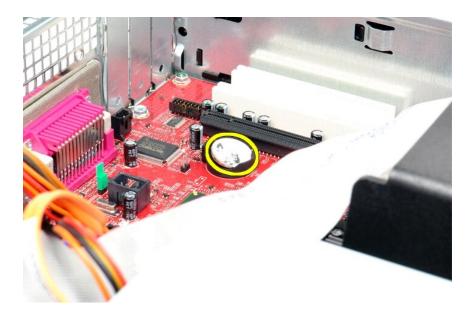

WARNING: Before working inside your computer, read the safety information that shipped with your computer. For additional safety best practices information, see the Regulatory Compliance Homepage at www.dell.com/regulatory_compliance.

Removing the Coin-Cell Battery

- Follow the procedures in <u>Before Working Inside Your Computer</u>.
 Pull the retention clip away from the coin-cell battery.

3. Lift the coin-cell battery up and away from the computer.

Replacing the Coin-Cell Battery

To replace the coin-cell battery, perform the above steps in reverse order.

Cover

Dell™ OptiPlex™ 380 Service Manual—Desktop

MARNING: Before working inside your computer, read the safety information that shipped with your computer. For additional safety best practices information, see the Regulatory Compliance Homepage at www.dell.com/regulatory_compliance.

Removing the Cover

- Follow the procedures in <u>Before Working Inside Your Computer</u>.
 Pull back the cover-release latch.

3. Tilt the computer cover outwards from the top, and then remove it from the computer.

Replacing the Cover

To replace the cover, perform the above steps in reverse order.

Diagnostics

Dell™ OptiPlex™ 380 Service Manual—Desktop

- Dell Diagnostics
- Power Button Light Codes
- Beep Codes
- Diagnostic Lights

Dell Diagnostics

When to Use the Dell Diagnostics

It is recommended that you print these procedures before you begin.

NOTE: The Dell Diagnostics software works only on Dell computers.

NOTE: The Drivers and Utilities media is optional and may not ship with your computer.

Enter system setup (see Entering System Setup), review your computer's configuration information, and ensure that the device you want to test displays in System Setup and is active.

Start the Dell Diagnostics from either your hard drive or from the Drivers and Utilities media.

Starting the Dell Diagnostics From Your Hard Drive

- 1. Turn on (or restart) your computer.
- 2. When the DELL logo appears, press <F12> immediately.

NOTE: If you see a message stating that no diagnostics utility partition has been found, run the Dell Diagnostics from your Drivers and Utilities media.

If you wait too long and the operating system logo appears, continue to wait until you see the Microsoft® Windows® desktop. Then shut down your computer and try again.

- 3. When the boot device list appears, highlight **Boot to Utility Partition** and press <Enter>.
- 4. When the Dell Diagnostics Main Menu appears, select the test that you want to run.

Starting the Dell Diagnostics From the Drivers and Utilities Disc

- 1. Insert the Drivers and Utilities disc.
- 2. Shut down and restart the computer.

When the DELL logo appears, press <F12> immediately.

If you wait too long and the Windows logo appears, continue to wait until you see the Windows desktop. Then shut down your computer and try again.

- NOTE: The next steps change the boot sequence for one time only. On the next startup, the computer boots according to the devices specified in the system setup program.
- 3. When the boot device list appears, highlight Onboard or USB CD-ROM Drive and press <Enter>.
- 4. Select the **Boot from CD-ROM** option from the menu that appears and press <Enter>.
- 5. Type 1 to start the menu and press <Enter> to proceed.
- 6. Select Run the 32 Bit Dell Diagnostics from the numbered list. If multiple versions are listed, select the version appropriate for your computer.
- 7. When the Dell Diagnostics Main Menu appears, select the test you want to run.

Dell Diagnostics Main Menu

1. After the Dell Diagnostics loads and the **Main Menu** screen appears, click the button for the option you want.

Option	Function	
	Performs a quick test of devices. This test typically takes 10 to 20 minutes and requires no interaction on your part. Run Express Test first to increase the possibility of tracing the problem quickly.	
Extended Test	Performs a thorough check of devices. This test typically takes 1 hour or more and requires you to answer questions periodically.	
Custom Test	Tests a specific device. You can customize the tests you want to run.	
Symptom Tree	Lists the most common symptoms encountered and allows you to select a test based on the symptom of the problem you are having.	

- 2. If a problem is encountered during a test, a message appears with an error code and a description of the problem. Write down the error code and problem description and follow the instructions on the screen.
- 3. If you run a test from the Custom Test or Symptom Tree option, click the applicable tab described in the following table for more information.

Tab	Function	
Results	Displays the results of the test and any error conditions encountered.	
Errors	Displays error conditions encountered, error codes, and the problem description.	
Help	Describes the test and may indicate requirements for running the test.	
Configuration	ation Displays your hardware configuration for the selected device.	
	The Dell Diagnostics obtains configuration information for all devices from system setup, memory, and various internal tests, and it displays the information in the device list in the left pane of the screen. The device list may not display the names of all the components installed on your computer or all devices attached to your computer.	
Parameters	Allows you to customize the test by changing the test settings.	

- 4. When the tests are completed, if you are running the Dell Diagnostics from the Drivers and Utilities disc, remove the disc.
- 5. Close the test screen to return to the Main Menu screen. To exit the Dell Diagnostics and restart the computer, close the Main Menu screen.

Power Button Light Codes

The diagnostic lights give much more information about the system state, but legacy power light states are also supported in your computer. The power light states are shown in following table.

Power Light State	Description	
Off	Power is off, light is blank.	
Blinking Amber	Initial state of light at power up. Indicates system has power, but the POWER_GOOD signal is not yet active. If the Hard Drive light is off, it is probable that the power supply needs to be replaced. If the Hard Drive light on, it is probable that an onboard regulator or VRM has failed. Look at the diagnostic lights for further information.	
Solid Amber	Second state of the light at power up. Indicates the POWER_GOOD signal is active and it is probable that the power supply is fine. Look at the diagnostic lights for further information.	
Blinking Green	System is in a low power state, either S1 or S3. Look at the diagnostic lights to determine which state the system is in.	
Solid Green	System is in S0 state, the normal power state of a functioning machine. The BIOS will turn the light to this state to indicate it has started fetching op-codes.	

Beep Codes

If the monitor cannot display error messages during the POST, the computer may emit a series of beeps that identifies the problem or that can help you identify a faulty component or assembly. The following table lists the beep codes that may be generated during the POST. Most beep codes indicate a fatal error that prevents the computer from completing the boot routine until the indicated condition is corrected.

Cause
Microprocessor register failure
NVRAM read/write failure
ROM BIOS checksum failure
Programmable interval timer failure
DMA initialization failure
DMA page register read/write failure
Video Memory Test failure
Memory not being properly identified or used
Slave DMA register failure
Master DMA register failure
Master interrupt mask register failure
Slave interrupt mask register failure
Interrupt vector loading failure
Keyboard Controller Test failure
NVRAM power loss

3-3-2	Invalid NVRAM configuration
3-3-4	Video Memory Test failure
3-4-1	Screen initialization failure
3-4-2	Screen retrace failure
3-4-3	Search for video ROM failure
4-2-1	No timer tick
4-2-2	Shutdown failure
4-2-3	Gate A20 failure
4-2-4	Unexpected interrupt in protected mode
4-3-1	Memory failure above address OFFFFh
4-3-3	Timer-chip counter 2 failure
4-3-4	Time-of-day clock stopped
4-4-1	Serial or parallel port test failure
4-4-2	Failure to decompress code to shadowed memory
4-4-3	Math-coprocessor test failure
4-4-4	Cache test failure

Diagnostic Lights

To help troubleshoot a problem, your computer has four lights labeled 1, 2, 3, and 4 on the bank panel. When the computer starts normally, the lights flash before turning off. If the computer malfunctions, the sequence of the lights help to identify the problem.

NOTE: After the computer completes POST, all four lights turn off before booting to the operating system.

Light Pattern	Problem Description	Suggested Resolution
0234	The computer is in a normal <i>off</i> condition or a possible pre-BIOS failure has occurred. The diagnostic lights are not lit	Plug the computer into a working electrical outlet. If the problem persists, contact Dell.
	after the computer successfully boots to the operating system.	
1234	A possible processor failure has occurred.	Reseat the processor (see Processor information for your computer). If the problem persists, contact Dell.
0 2 34	Memory modules are detected, but a memory failure has occurred.	If two or more memory modules are installed, remove the modules, then reinstall one module and restart the computer. If the computer starts normally, continue to install additional memory modules (one at a time) until you have identified a faulty module or reinstalled all modules without error. If available, install working memory of the same type into your computer. If the problem persists, contact Dell.
1234	A possible graphics card failure has occurred.	Reseat any installed graphics cards. If available, install a working graphics card into your computer. If the problem persists, contact Dell .
1234	A possible floppy drive or hard drive failure has occurred.	Reseat all power and data cables.
1234	A possible USB failure has occurred.	Reinstall all USB devices and check all cable connections.
1 234	No memory modules are detected.	If two or more memory modules are installed, remove the modules, then reinstall one module and restart the computer. If the computer starts normally, continue to install additional memory modules (one at a time) until you have identified a faulty module or reinstalled all modules without error. If available, install working memory of the same type into your computer. If the problem persists, contact Dell.
1234	Memory modules are detected, but a memory configuration or compatibility error has occurred.	Ensure that no special requirements for memory module/connector placement exist. Ensure that the memory you are using is supported by your computer (see the Specifications section for your computer). If the problem persists, contact Dell.
12 34	A possible expansion card failure has occurred.	Determine if a conflict exists by removing an expansion card (not a graphics card) and restarting the computer. If the problem persists, reinstall the card you removed, then remove a different card and restart the computer. Repeat this process for each expansion card installed. If the computer starts normally, troubleshoot the last card removed from the computer for resource conflicts. If the problem persists, contact Dell.
123 4	Another failure has occurred.	Ensure that all hard drive and optical drive cables are properly connected to the system board. If there is an error message on the screen identifying a problem with a device (such as the floppy drive or hard drive), check the device to make sure it is functioning properly.

	If the operating system is attempting to boot from a device (such as the floppy drive or optical drive), check system setup to ensure the boot sequence is correct for the devices installed on your computer. If the problem persists, contact Dell.

Expansion Cards

Dell™ OptiPlex™ 380 Service Manual—Desktop

WARNING: Before working inside your computer, read the safety information that shipped with your computer. For additional safety best practices information, see the Regulatory Compliance Homepage at www.dell.com/regulatory_compliance.

Removing Expansion Cards

- Follow the procedures in <u>Before Working Inside Your Computer</u>.
 Rotate the release tab on the card-retention latch upwards.

3. Pull the release lever away from the card and then ease the card up and out of its connector on the system board.

Replacing Expansion Cards

To replace expansion cards, perform the above steps in reverse order.

Fan **Dell™ OptiPlex™ 380 Service Manual**—Desktop

MARNING: Before working inside your computer, read the safety information that shipped with your computer. For additional safety best practices information, see the Regulatory Compliance Homepage at www.dell.com/regulatory_compliance.

Removing the Fan

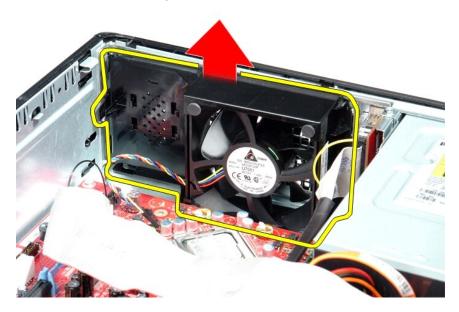

- Follow the procedures in <u>Before Working Inside Your Computer</u>.
 Disconnect the fan power cable from the system board.

3. Pull out the fan retention tab, and then shift the fan towards the system board.

4. Lift the fan and remove it from the computer.

Replacing the Fan

To replace the fan, perform the above steps in reverse order.

Hard Drive

Dell™ OptiPlex™ 380 Service Manual—Desktop

MARNING: Before working inside your computer, read the safety information that shipped with your computer. For additional safety best practices information, see the Regulatory Compliance Homepage at www.dell.com/regulatory_compliance.

Removing the Hard Drive

- Follow the procedures in <u>Before Working Inside Your Computer</u>.
 Remove the <u>optical drive</u> from the computer.
 Disconnect the hard-drive data cable from the hard drive.

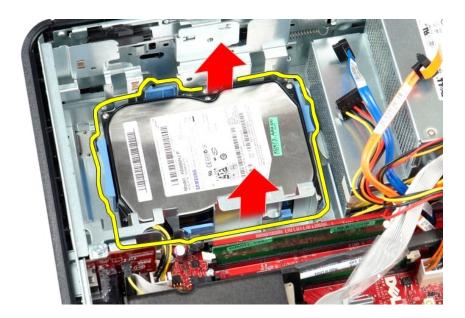

4. Disconnect the hard-drive power cable from the hard drive.

5. Press in on the blue securing tabs on each side of the hard drive, and then slide the hard drive towards the back of the computer.

6. Lift the hard drive and remove it from the computer.

Replacing the Hard Drive

To replace the hard drive, perform the above steps in reverse order.

Heat Sink and Processor

Dell™ OptiPlex™ 380 Service Manual—Desktop

MARNING: Before working inside your computer, read the safety information that shipped with your computer. For additional safety best practices information, see the Regulatory Compliance Homepage at www.dell.com/regulatory_compliance.

Removing the Heat Sink and Processor

- Follow the procedures in <u>Before Working Inside Your Computer</u>.
 Loosen the captive screws on the sides of the heat sink.

3. Rotate the heat sink upwards.

4. Lift the heat sink and remove it from the computer.

5. Slide the release lever from under the center-cover latch and rotate the release lever upward.

6. Lift the processor cover

7. Remove the processor from the computer.

△ CAUTION: When replacing the processor, do not touch any of the pins inside the socket or allow any objects to fall on the pins in the socket.

Replacing the Heat Sink and Processor

To replace the heat sink and processor, perform the above steps in reverse order.

I/O Panel Dell™ OptiPlex™ 380 Service Manual—Desktop

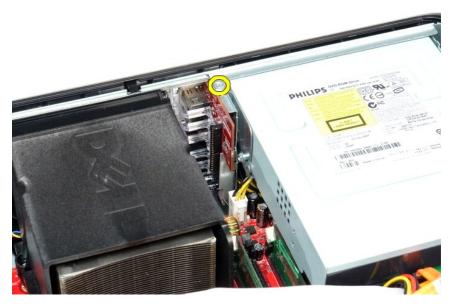

MARNING: Before working inside your computer, read the safety information that shipped with your computer. For additional safety best practices information, see the Regulatory Compliance Homepage at www.dell.com/regulatory_compliance.

Removing the I/O Panel

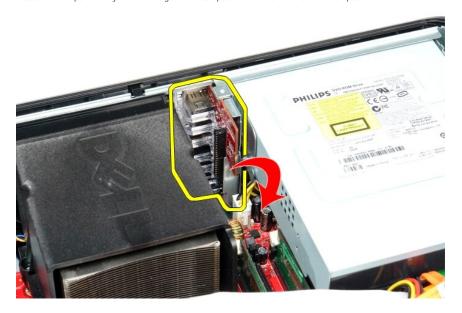

- Follow the procedures in <u>Before Working Inside Your Computer</u>.
 Disconnect the I/O-panel cable.

3. Remove the screw that secures the I/O panel.

4. Rotate the I/O panel away from the edge of the computer and remove it from the computer.

Replacing the I/O Panel

To replace the I/O panel, perform the above steps in reverse order.

Memory

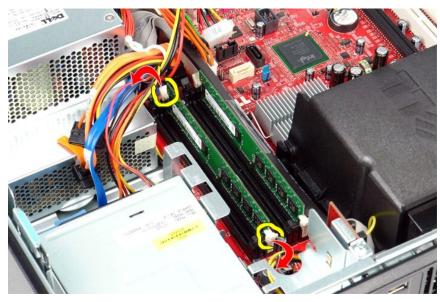

Dell™ OptiPlex™ 380 Service Manual—Desktop

MARNING: Before working inside your computer, read the safety information that shipped with your computer. For additional safety best practices information, see the Regulatory Compliance Homepage at www.dell.com/regulatory_compliance.

Removing the Memory Module(s)

- Follow the procedures in <u>Before Working Inside Your Computer</u>.
 Press down on the memory retention clips to release the memory module.

3. Lift the memory module out of the connector and remove it from the computer.

Replacing the Memory Module(s)

To replace the memory module(s), perform the above steps in reverse order.

Optical Drive

Dell™ OptiPlex™ 380 Service Manual—Desktop

WARNING: Before working inside your computer, read the safety information that shipped with your computer. For additional safety best practices information, see the Regulatory Compliance Homepage at www.dell.com/regulatory_compliance.

Removing the Optical Drive

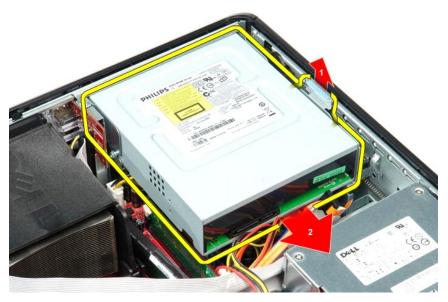

- Follow the procedures in <u>Before Working Inside Your Computer</u>
 Disconnect the optical-drive data cable.

3. Disconnect the optical-drive power cable.

4. Lift the drive-release latch and slide the drive towards the back of the computer.

5. Lift the optical drive up and away from the computer.

Replacing the Optical Drive

To replace the optical drive, perform the steps above in reverse order.

MARNING: Before working inside your computer, read the safety information that shipped with your computer. For additional safety best practices information, see the Regulatory Compliance Homepage at www.dell.com/regulatory_compliance.

Removing the Power Supply

- Follow the procedures in <u>Before Working Inside Your Computer.</u>
 Remove the <u>optical drive.</u>
 Remove the <u>secondary hard drive</u> (if present).
 Remove the <u>hard drive.</u>
 Disconnect the main power connector from the system board.

6. Disconnect the processor power connector from the system board.

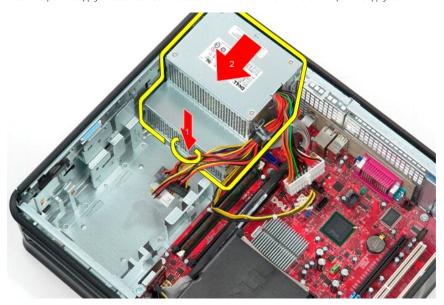

7. Release the processor power connector cable from their routing guides under the system board.

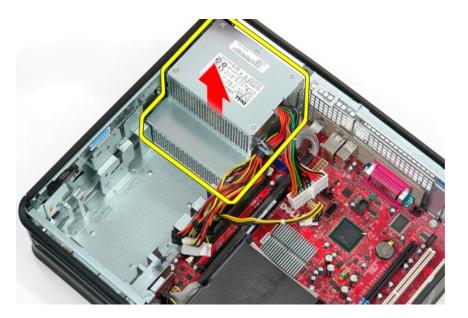

8. Remove the screws that secure the power supply to the back of the chassis.

9. Press the power-supply release latch at the bottom of the chassis and then slide the power supply towards the front of the computer.

10. Lift the power supply up and away from the computer.

Replacing the Power Supply

To replace the power supply, perform the above steps in reverse order.

Riser Assembly Dell™ OptiPlex™ 380 Service Manual—Desktop

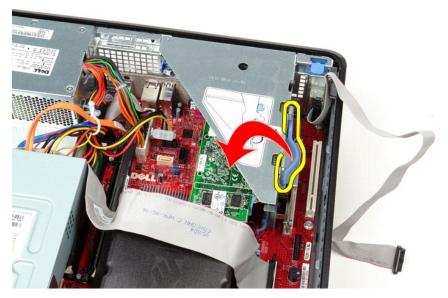

MARNING: Before working inside your computer, read the safety information that shipped with your computer. For additional safety best practices information, see the Regulatory Compliance Homepage at www.dell.com/regulatory_compliance.

Removing the Riser Assembly

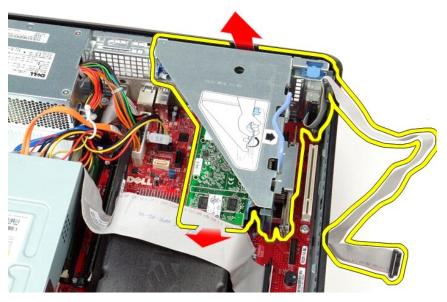

- Follow the procedures in <u>Before Working Inside Your Computer</u>.
 Disconnect the PS/2 serial-port cable from the system board.

3. Pivot the riser-assembly handle to an upright position.

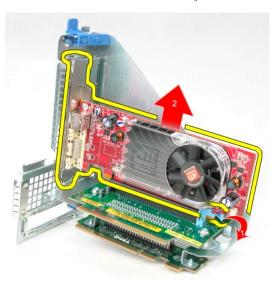

4. Pull up on the riser-assembly, and lift the riser assembly up and away from the computer.

5. Rotate the card retention latch upwards.

6. Pull the card release latch on the riser board away from the card and ease the card out of its connector.

Replacing the Riser Assembly

To replace the riser assembly, perform the above steps in reverse order. $\label{eq:control}$

Secondary Hard Drive (Optional) Dell™ OptiPlex™ 380 Service Manual – Desktop

MARNING: Before working inside your computer, read the safety information that shipped with your computer. For additional safety best practices information, see the Regulatory Compliance Homepage at www.dell.com/regulatory_compliance.

Removing the Secondary Hard Drive (Optional)

- Follow the procedures in <u>Before Working Inside Your Computer</u>.
 Remove the <u>optical drive</u> from the computer.
 Disconnect the hard-drive data cable from the hard drive.

4. Disconnect the hard-drive power cable from the hard drive.

5. Pull up on the release latch, and then slide the hard drive towards the back of the computer.

6. Lift the hard drive and remove it from the computer.

Replacing the Secondary Hard Drive (Optional)

To replace the secondary hard drive, perform the above steps in reverse order.

System Information	
Chipset	Intel® G41 Express chipset
DMA channels	eight
Interrupt levels	24
BIOS chip (NVRAM)	16 Mb (2 MB)

Processor	
Туре	Intel Core™2 Quad, Core2 Duo, Intel Pentium [®] Dual-Core, Intel Celeron [®] Dual-Core, Intel Celeron
Level 2 (L2) cache	512 KB - 12 MB (depending on processor model)

Memory	
Туре	DDR3 SDRAM (non-ECC memory only)
Speed	1067 MHz
Connectors	two
Capacity	1 GB or 2 GB
Minimum memory	1 GB
Maximum memory	4 GB

Video	
Integrated	Intel GMA X4500
Discrete	PCI-E x16 half-length graphics card with two DVI and one S-Video out, or one DVI, one VGA, and one S-Video out: NVIDIA GeForce 9300 GE − 256 MB ATI Radeon™ HD 3450 − 256 MB

Audio	
Integrated	5.1 channel High Definition audio

Network	
	Broadcom BCM57780 Gigabit network interface card capable of 10/100/1000 Mb/s communication

Expansion Bus	
Bus type	PCI 2.3 PCI Express 1.0 SATA 1.0A and 2.0 USB 2.0
Bus speed	PCI: 133 MB/s PCI Express: x16-slot bidirectional speed — 8 GB/s SATA: 1.5 Gb/s and 3.0 Gb/s USB: 480 Mb/s

Cards		
PCI:	Full Height	Low Profile
Mini-tower	two	none
Desktop	two (with a PCI riser installed)	
Small form factor	none	one
PCI-Express x16 (with support for PCI-		

Express x1):		
Mini-tower	one	
Desktop	one (with combo riser installed)	
Small form factor	none	one

Drives	
Externally accessible:	
5.25-inch drive bays	Mini-tower — two Desktop — one Small form factor — one (slim line)
Internally accessible:	
3.5-inch drive bays	Mini-tower — two Desktop — one Small form factor — one

External Connectors	
Audio:	
back panel	two connectors for line-out and line-in/microphone
front panel	two connectors for microphone and headphone
Network adapter	one RJ45 connector
Serial	one 9-pin connector; 16550C compatible
Parallel	one 25-pin connector
USB:	
front panel	two
back panel	six
Video	15-pin VGA connector 28-pin DVI-I connector
	NOTE: Available video connectors may vary based on the graphics card selected.

System Board Connectors	
PCI 2.3:	
connectors	120-pin connector
data width (maximum)	32 bits
PCI Express x16:	
connectors	164-pin connector
data width (maximum)	16 PCI-Express lanes
Serial ATA	Mini-tower — three 7-pin connectors Desktop — three 7-pin connectors Small form factor — two 7-pin connectors
Memory	two 240-pin connectors
Processor fan	one 5-pin connector
System fan	one 5-pin connector
Front panel control/front panel audio	one 40-pin connector
Processor	one LGA775 connector
Power 12V	one 4-pin connector
Power	one 24-pin connector

Power						
Mini-Tower:	Wattage	Maximum heat dissipation	Voltage			
Non-EPA	255 W	1338 BTU/hr 115/230 VAC, 50/60 Hz, 6.5/				
EPA	255 W	1023 BTU/hr 100-240 VAC, 50/60 Hz, 1.8/3.				
Desktop:						
Non-EPA	235 W	1233 BTU/hr	115/230 VAC, 50/60 Hz, 6.5/3.5 A			
EPA	255 W	1023 BTU/hr	BTU/hr 100- 240 VAC, 50/60 Hz, 2.0/4.0 A			
Small Form Factor:						
Non-EPA	235 W	1233 BTU/hr	115/230 VAC, 50/60 Hz, 6.5/3.5 A			
EPA	235 W	943 BTU/hr	100-240 VAC, 50/60 Hz, 1.8/3.5 A			
Coin-cell battery	3V CR2032 li	3V CR2032 lithium coin cell				

 $\ensuremath{\mathsf{NOTE}}\xspace$ Heat dissipation is calculated by using the power supply wattage rating.

NOTE: See the safety information that shipped with your computer for important voltage-setting information.

Physical							
	Height	Width	Depth	Weight			
Mini-Tower	40.8 cm	18.7 cm	43.3 cm	12.0 kg			
	(16.1 inches)	(7.4 inches)	(17.0 inches)	(26.5 lb)			
Desktop	11.4 cm	39.9 cm	35.3 cm	9.0 kg			
	(4.5 inches)	(15.7 inches)	(13.9 inches)	(19.8 lb)			
Small Form Factor	9.3 cm	31.4 cm	34.0 cm	7.0 kg			
	(3.7 inches)	(12.4 inches)	(13.4 inches)	(15.4 lb)			

Environmental				
Temperature:				
Operating	10 °C to 35 °C (50 °F to 95 °F)			
Storage	-40 °C to 65 °C (-40 °F to 149 °F)			
Relative humidity (noncondensing)	operating: 20 % to 80 % (maximum wet bulb temperature: 29 °C) storage: 5 % to 95 % (maximum wet bulb temperature: 38 °C)			
Maximum vibration:				
Operating	5-350 Hz at 0.0002 G2/Hz			
Storage	5-500 Hz at 0.001 to 0.01 G2/Hz			
Maximum shock:				
Operating	40 G +/- 5 % with pulse duration of 2 msec +/- 10 % (equivalent to 20 in/sec [51 cm/sec])			
Storage	105 G +/- 5 % with pulse duration of 2 msec +/- 10 % (equivalent to 50 in/sec [127 cm/sec])			
Altitude:				
Operating	-15.2 m to 3048 m (-50 ft to 10,000 ft)			
Storage	-15.2 m to 10,668 m (-50 ft to 35,000 ft)			
Airborne contaminant level	G2 or lower as defined by ISA-S71.04-1985

Standard Back Plate

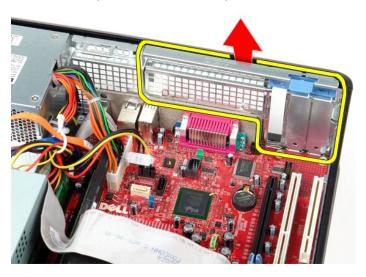

Dell™ OptiPlex™ 380 Service Manual—Desktop

WARNING: Before working inside your computer, read the safety information that shipped with your computer. For additional safety best practices information, see the Regulatory Compliance Homepage at www.dell.com/regulatory_compliance.

Removing the Standard Back Plate

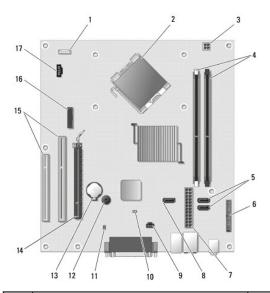

- Follow the procedures in <u>Before Working Inside Your Computer</u>.
 Remove the <u>riser assembly</u>.
 Lift the standard back plate and remove it from the computer.

Replacing the Standard Black Plate

To replace the standard black plate, perform the above steps in reverse order.

System Board

Dell™ OptiPlex™ 380 Service Manual—Desktop

WARNING: Before working inside your computer, read the safety information that shipped with your computer. For additional safety best practices information, see the Regulatory Compliance Homepage at www.dell.com/regulatory_compliance.

Removing the System Board

- Follow the procedures in <u>Before Working Inside Your Computer</u>. Remove the <u>riser assembly</u>. Remove the <u>heat sink and processor</u>. Remove the <u>expansion card(s)</u>. Remove the <u>memory</u>. Disconnect the fan power cable from the system board.

7. Disconnect the main power cable from the system board.

8. Disconnect the IO-panel cable from the system board.

9. Disconnect the optical-drive data cable from the system board.

10. Disconnect the hard-drive data cable from the system board.

11. Disconnect the processor power cable from the system board.

12. Remove the screws that secure the system board to the computer chassis.

13. Remove the heat-sink assembly bracket from the computer.

14. To remove the system board, slide the system board towards the back of the computer and lift the system board up and away from the computer.

Replacing the System Board

To replace the system board, perform the above the steps in reverse order.

Working on Your Computer

Dell™ OptiPlex™ 380 Service Manual—Desktop

- Before Working Inside Your Computer
- Recommended Tools
- Turning Off Your Computer
- After Working Inside Your Computer

Before Working Inside Your Computer

Use the following safety guidelines to help protect your computer from potential damage and to help to ensure your personal safety. Unless otherwise noted, each procedure included in this document assumes that the following conditions exist:

- You have performed the steps in <u>Working on Your Computer</u>. You have read the safety information that shipped with your computer.
- A component can be replaced or—purchased separately—installed by performing the removal procedure in reverse order.

MARNING: Before working inside your computer, read the safety information that shipped with your computer. For additional safety best practices information, see the Regulatory Compliance Homepage at www.dell.com/regulatory_compliance

CAUTION: To avoid electrostatic discharge, ground yourself by using a wrist grounding strap or by periodically touching an unpainted metal surface, such as a connector on the back of the computer.

CAUTION: Handle components and cards with care. Do not touch the components or contacts on a card. Hold a card by its edges or by its metal mounting bracket. Hold a component such as a processor by its edges, not by its pins.

CAUTION: When you disconnect a cable, pull on its connector or on its pull-tab, not on the cable itself. Some cables have connectors with locking tabs; if you are disconnecting this type of cable, press in on the locking tabs before you disconnect the cable. As you pull connectors apart, keep them evenly aligned to avoid bending any connector pins. Also, before you connect a cable, ensure that both connectors are correctly oriented and aligned

NOTE: The color of your computer and certain components may appear differently than shown in this document.

To avoid damaging your computer, perform the following steps before you begin working inside the computer

- Ensure that your work surface is flat and clean to prevent the cover from being scratched.

A CAUTION: To disconnect a network cable, first unplug the cable from your computer and then unplug the cable from the network device.

- Disconnect all network cables from the computer.
 Disconnect your computer and all attached devices from their electrical outlets.
- Press and hold the power button while the computer is unplugged to ground the system board.

CAUTION: Before touching anything inside your computer, ground yourself by touching an unpainted metal surface, such as the metal at the back of the computer. While you work, periodically touch an unpainted metal surface to dissipate static electricity, which could harm internal

Recommended Tools

The procedures in this document may require the following tools:

- Small flat-blade screwdriver
- Phillips screwdriver
- Small plastic scribe
- Flash BIOS update program media

Turning Off Your Computer

A CAUTION: To avoid losing data, save and close all open files and exit all open programs before you turn off your computer.

- 1. Shut down the operating system:
 - 1 In Windows Vista®:

Click Start [®] , then click the arrow in the lower-right corner of the Start menu as shown below, and then click Shut Down.

1 In Windows® XP:

Click Start→ Turn Off Computer→ Turn Off.

The computer turns off after the operating system shutdown process is complete.

2. Ensure that the computer and all attached devices are turned off. If your computer and attached devices did not automatically turn off when you shut down your operating system, press and hold the power button for about 6 seconds to turn them off.

After Working Inside Your Computer

After you complete any replacement procedure, ensure you connect any external devices, cards, and cables before turning on your computer.

1. Replace the cover.

AUTION: To connect a network cable, first plug the cable into the network device and then plug it into the computer.

- Connect any telephone or network cables to your computer.
 Connect your computer and all attached devices to their electrical outlets.
 Turn on your computer.
 Verify that the computer works correctly by running the <u>Dell Diagnostics</u>.
