Chapter-1

General Information

The CV700A is a Light form factor All-In-One Multimedia control Board. The board design combines all necessary input and output effects interfaces, which makes itself an ideal all-in-one control board for Networking Application. The board is designed with 400 MHz internal bus clock rate architecture.

The CV700A All-In-One motherboard uses VIA CN700 (CN700 and VT8237R Plus) chipset, built-in VIA Eden(V4) / C7(V4) EBGA CPU, VGA and Audio feature onboard and supports , built-in multi-LAN options . The board is also designed with AC97 2.1 sound interface which provides an ideal sound adapter in any audio application. This board offers the superb performance and PC specification in the industry.

The motherboard is fully compatible with industry standards, adding many technical enhancements, and is fully compatible with thousands of software applications developed for IBM PC/AT compatible computers. The control logic provides high-speed performance for the most advanced multiuser, multitasking applications available today.

With DMA33/66/100 and SATA150 access of mode 4 to IDE drive interface architecture, the IDE interface supports maximum 100 MB/sec (IDE) and 150 MB/sec (SATA) data transfer rate to 2 pieces of IDE drive connection and 1 piece of SATA Driver connection. Compact Flash Reader supports IDE/ ATA interface.

A single Flash chip holds the system BIOS, and you can change the Flash BIOS by the Utility Update. Advanced IR port also provides a faster data transmission.

CV700A board is designed with CN700 intergrated graphic VGA controller which provides connection to VGA Monitor . VGA Controller is 128-bit single cycle 2D/3D graphic engine which supports up to 1600x1200 extended screen resolutions and also real time DVD MPEG-2 and AC3 playback.

The CV700A Board supports DDR2 RAM memory with one unbuffered double-sided DIMMs up to 1GB

1-1 Major Feature

1. VIA Eden (V4) nano BGA2 500MHz CPU/ VIA C7 nano BGA2 1GHz CPU
2. VIA CN700 chipset (CN700 + VT8237R Plus)
3. One DDR2 400/533 DRAM unbuffered double-sided DIMMs up to 1GB
4. Dual channel master mode PCI support four IDE disk drives DMA 33/66/100 controller
One Channle SATA 150 Connector
5. 400 MHz system clock support
6. Versatile storage device:
 - * One 50-pin Compact Flash socket
 - * One 40-pin DOM
 - * One 2.5" HDD
 - * One SATA HDD
7. On board CN700 graphic controller integrated graphics
8. On board multi-LAN option*:
 - * CV700A-3R ----3 x Realtek 8100C 10/100 Mb
 - * CV700A-3G ----3 x Realtek 8110SC 10/100/1000 Mb
 - * CV700A-3U ----3 x Intel 82541GI/PI/ER 10/100/1000 Mb
9. Compact Flash Reader Type I/II for IDE/ATA interface
10. Two serial RS232 Ports
11. One enhanced bi-directional parallel ports (SPP/ECP/EPP)
12. On board mini PS/2 Keyboard/Mouse connector
13. On board Sound, AC97 2.1
14. DC 12V-IN Power Adapter support

*The models mentioned above are standard models currently.

The multi-LAN option might change due to customization.

1-2 Specification

1. **CPU:** VIA Eden (V4) nano BGA2 500 MHZ CPU / VIA C7 (V4) nano BGA2 1GHz CPU
2. **Cache Memory:** Integrated full-speed 128KB L1/L2 cache
3. **Chipset:** VIA CN700 (North:CN700 ;South:VT8237R Plus)
4. **Memory:** One DIMM socket up to 1GB DDR2 400/533 DRAM
5. **VGA:** CN700 integrated graphic controller ; support 128-bit 2D/3D display up to 1600x1200, memory sharable up to 64MB
6. **I/O Chipset:** VIA VT1211IO
7. **IDE:** four IDE disk drives; support DMA33/66/100 transfer rate up to 33/66/100 MB/sec
SATA : 1 SATA disk drivers ; support SATA150 MB/sec
8. **LAN:** * CV700A-3R ----3 x Realtek 8100C 10/100 Mb (Wake-On-Lan) for LAN1
* CV700A-3G ----3 x Realtek 8110SC 10/100/1000 Mb
* CV700A-3U ----3 x Intel 82541GI/PI/ER 10/100/1000 Mb
9. **Storage devices:** * One 50-pin Compact Flash socket
* One 40-pin DOM
* One 2.5" HDD
* One SATA HDD
10. **Parallel Port:** 1 parallel port ; Support SPP/ECP/EPP
11. **Serial Port:** Two serial ports ; Support RS-232
12. **IR:** One IrDA TX/RX header
13. **USB:** Support Six USB ports
14. **Keyboard:** PS/2 6-pin Mini Din
15. **Mouse:** PS/2 6-pin Mini Din
16. **Sound:** AC97 2.1 Sound, full-duplex
17. **BIOS:** Award BIOS version 6.1
18. **Form Factor:** LIGHT Board, 200x150mm
19. **Power:** DC12V-IN power Adapter input
21. **Power Voltage:** +12V (11.4V to 12.6V)
22. **Power Consumption:** Please refer to page 57

1-3 Hardware Notice Guide

1. Before installing the power supply with this motherboard, please attach the 12V/DC (4 pin connector) of the adapter to motherboard first.
After that, plug the adapter power to AC outlet.
Always normally shut down the computer before you move the system unit or remove the power supply from the motherboard.
Please unplug the 12V/DC (4 pin connector) of the adapter from motherboard first.
Then unplug the adapter from the AC outlet.
Please refer to procedure from the photo 1
2. There will be high possibility to burn out the CPU if you change/ modify any parts of the CPU cooler.
3. Please wear wrist strap and attach it to a metal part of the system unit before handling a component.
You can also touch an object that is of ground connection or with metal surface if you don't have wrist strap.
4. Please be careful when you handle this product. Pay attention to & don't touch the sharp-pointed components at the bottom PCB .
5. Please pay attention to this: Remove or change any components from the motherboard will VOID the warranty of the motherboard you purchased .
6. Before you install/remove any components or make any jumper setting on the motherboard, please make sure to disconnect the power first.
(Please follow the instructions as of this guide)
7. Please only use single sided Mini PCI card, do not use the double sided Mini PCI card which is not suitable.
8. This does not support 16 bit mini PCI card
9. Please follow this instruction carefully when using the "POWERON after PWR-Fair" function.
When the DC power adaptor runs out of power, unplug it from the DC current;
when power returns plug it back in only after 5 seconds. If there is a power outage, unplug it from the AC current, when power returns plug it back in only after 30 seconds.
Otherwise it will cause system locking or serious damage.

Remark 1:

Always insert/unplug the 12V/DC (4 pin connector) horizontally & directly from the motherboard.

DO NOT twist the 12V/DC (4 pin connector) gently, it is designed to fit snugly .

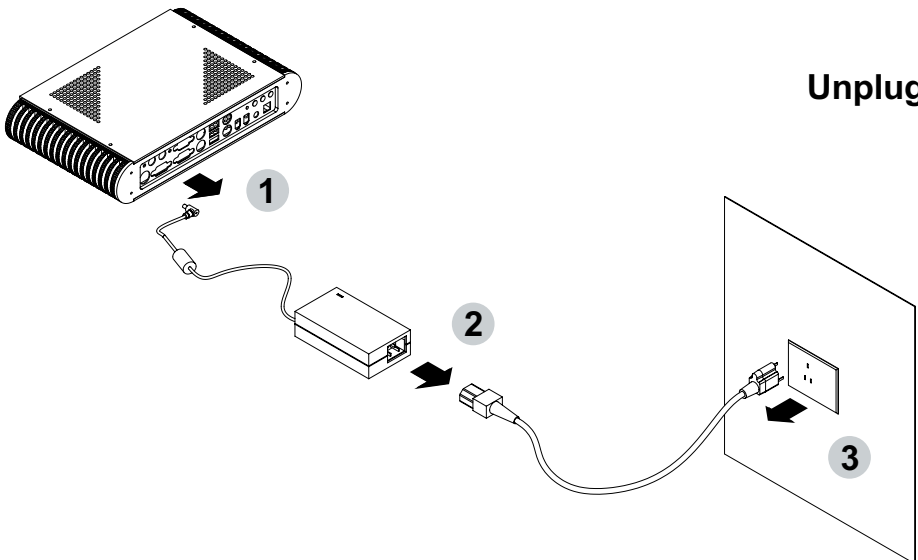

Moreover, erratic pull / push testing with the DC Jack might cause the unpredictable damage to the component & system unit.

Photo 1

Insert

Unplug

1-3-1 Installing the Mini PCI card

1. Align the Mini PCI card with the connector at a 45 degree angle.

2. Press the Mini PCI into the connector until you hear a click.

Notices:

1. The connectors are designed to ensure the correct insertion. If you feel resistance, check the connectors & golden finger direction, and realign the card.

2. Make sure the retaining clips (on two sides of the slot) lock onto the notches of the card firmly.

1-3-1.1 Removing the Mini PCI card

1. Release the Mini PCI card by pulling outward the two retaining clips and the card pops up slightly.

2. Lift the mini PCI card out of its connector carefully.

1-4 Packing List*

- ① CV700A Board
- ② DC 12V Power Adapter
- ③ One ATA 100 Flat Cable (2.54mm)
- ④ One slim IDE port flat Cable (2.00mm)
- ⑤ Power Cable
- ⑥ Utility CD Disk
- ⑦ User's Manual
- ⑧ SATA DATE Cable (optional)
- ⑨ SATA HDD Power Cable (optional)

*The packing list above is for the users who purchase single motherboard. The users who purchase the board with chassis may refer to the packing list in the Assembly Guide.

Please contact with your dealer if any of these items is missing or damaged on delivery. And please keep all parts of the delivery package with packing materials in case if you need to deliver or store the product in the future.

Chapter-2

Hardware Installation

This chapter provides the information how to install the hardware of CV700A. Please follow section 1-4, 2-1 and 2-2 to check the delivery package and unpack carefully. Please follow the jumper setting procedure.

2-1 Unpacking Precaution

The CV700A board has been well packed with an anti-static bag to protect its sensitive components and circuitry from damage due to static electric discharge.

NOTE!

1. Do not touch the board or any other sensitive components without all necessary anti-static protection.
2. Please pay attention to the voltage limitation of DC-IN12 V \pm 5 %.
Overuse of DC-IN voltage limitation or change to another power adapter (not provided with this system) will VOID warranty.

You should follow these

steps to protect the board from the static electric discharge whenever you handle the board:

1. Ground yourself by a grounded wrist strap at all times when you handle the CV700A. Well secure the ALLIGATOR clip of the strap to the end of the shielded wire lead from a grounded object. Please put on and connect the strap before handling the CV700A for harmlessly discharge any static electricity through the strap.
2. Please use anti-static pad to put any components, parts, or tools on the pad whenever you work on them outside the computer. You may also use the anti-static bag instead of the pad. Please ask your local supplier for necessary parts on anti-static requirement.
3. Do not plug any connector or set any jumper when the power is on.

2-2 Unpacking checkup

First of all, please follow all necessary steps of section 2.1 to protect CV700A from electricity discharge. With reference to section 1.3, please check the delivery package again with following steps:

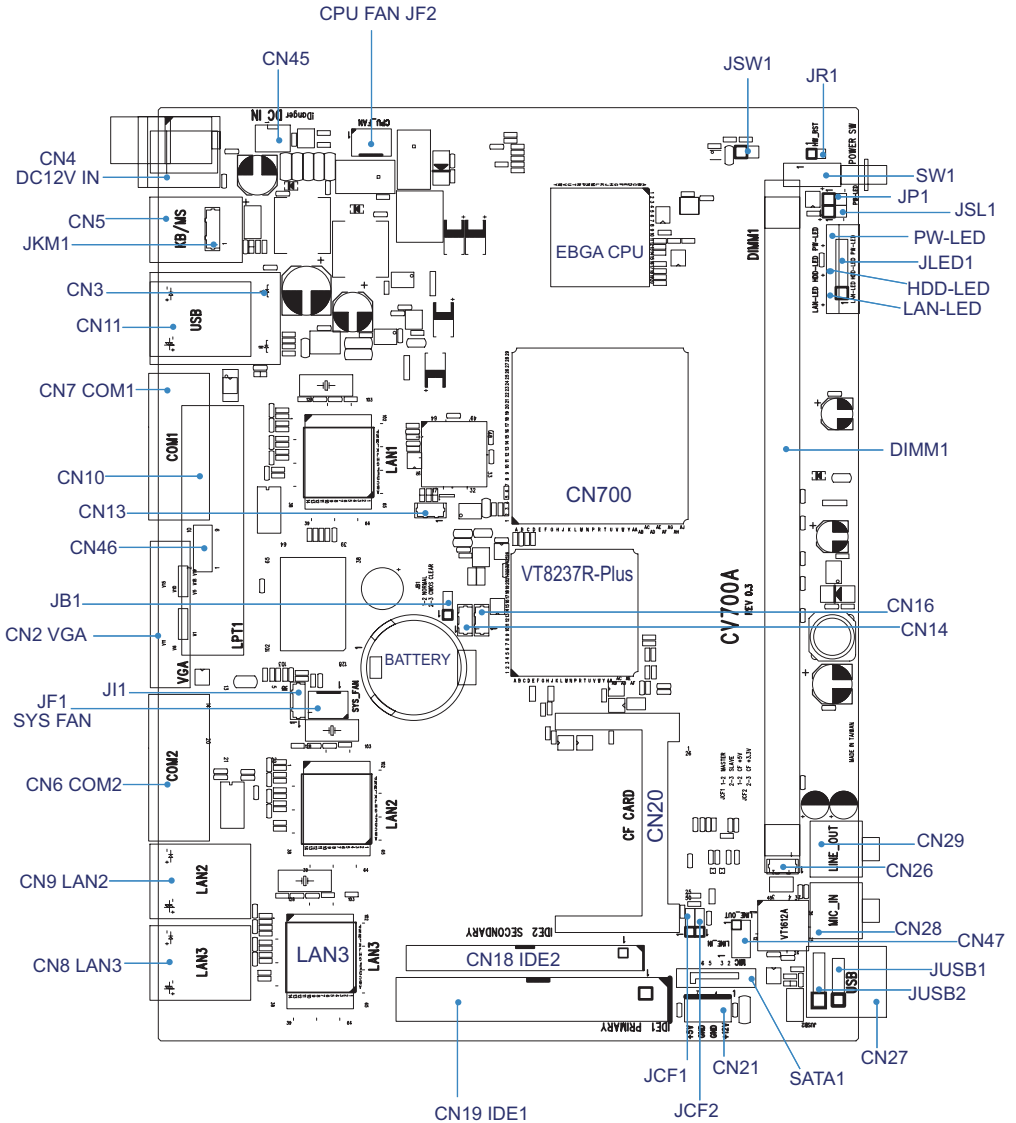

1. Unpack the CV700A board and keep all packing material, manual and driver disc etc, do not dispose !
2. Is there any components lose or drops from the board? DO NOT CONTINUE TO INSTALL THIS BOARD!CONTACT THE DEALER YOU PURCHASED THIS BOARD FROM, IMMEDIATELY.
3. Is there any visible damage on the board? DO NOT CONTINUE TO INSTALL THIS BOARD!CONTACT THE DEALER YOU PURCHASED THIS BOARD FROM, IMMEDIATELY.
4. Check your optional parts (i.e. DDR2, CF etc.), all necessary jumpers setting to jumper pin-set, and CMOS setup correctly.
Please also refer to all information of jumper settings in this manual.
5. Check your external devices (i.e. Add-On-Card, Driver Type etc.) for complete add-in or connection and CMOS setup correctly.
Please also refer to all information of connector connection in this manual.
6. Please keep all necessary manual and driver disc in a good condition for future re-installation if you change your Operating System.

2-6 Install Memory

This motherboard provides one 240-pin DUAL INLINE MEMORY MODULES (DIMM) socket for memory expansion available from minimum memory size of 256MB to maximum memory size of 1GB DDR2 RAM.

DDR2 clock supports: DDR200, DDR266

Valid Memory Configurations

DIMM1	System Accept or Not	Total Memory
		Min. ~ Max.
DS/SS	Accept	256MB~1GB

DS: Double Sided DIMM

SS: Single Sided DIMM

NOTE!

Make sure the total installed memory does not exceed 1GB; otherwise, the system may hang during startup.

Install DDR RAM module oriented as Fig. 2.1.

Figure 2.1

NOTE!

When you install DIMM module fully into the DIMM socket, the eject tab should be locked into the DIMM module very firmly and fit into its indentation on both sides.

WARNING!

2. Once you hear " Beep Beep Beep" sounds after turning on the power , please check if the DRAM is installed properly or not.

2-7 List of Jumpers

JB1: CMOS DATA SET

JCF1: CF card mast and slave select

JCF2: CF card Voltage select

2-8 Jumper Setting Description

A jumper is ON as a closed circuit with a plastic cap covering two pins. A jumper is OFF as an open circuit without the plastic cap. Some jumpers have three pins, labeled 1, 2, and 3. You could connect either pin 1 and 2 or 2 and 3.

The below figure 2.2 shows the examples of different jumper settings in this manual.

Figure 2.2

All jumpers already have its default setting with the plastic cap inserted as ON, or without the plastic cap as OFF. The default setting may be referred in this manual with a " * " symbol .

2-9 CMOS Data Set

A battery must be used to retain the motherboard configuration in CMOS RAM. Close pin 1 and pin 2 of JB1 to store the CMOS data.

To clear the CMOS, follow the procedures below:

1. Turn off the system and unplug the AC power
2. Remove DC 12V power cable from DC 12V power connector
3. Locate JB1 and close pin 2-3 for a few seconds
4. Return to its normal setting by shorting pin 1-2
5. Connect DC 12V power cable back to DC 12V power connector

Note: Do not clear CMOS unless

1. **Troubleshooting**
2. **Forget password**
3. **You fail over-clocking system**

JB1	Description

Master*

Slave

Chapter-3

Connection

This chapter provides all necessary information of the peripheral's connections, switches and indicators. Always power off the board before you install the peripherals.

3-1 List of Connectors

CN1: DC 12V-IN DIN Connector

CN4: DC 12V-IN Connector (Share to CN1)

CN5: PS2 Keyboard /Mouse Connector

JKM1: PS2 Keyboard /Mouse Connector (Share to CN5)

CN3: USB port 0/1 and LAN1 RJ45 Connector(or CN11 single RJ45)

CN7: COM1 port Connector

CN2: VGA DB15 Connector

CN46: VGA Header

CN10: Printer (LPT)port

CN6: COM2 port Connector

CN9: LAN2 RJ45 Connector

CN8: LAN3 RJ45 Connector

CN19: IDE1 40 pin (2.54mm)Connector

CN18: IDE2 44 pin (2.0mm)Connector

CN20:CF 50 pin socket

SATA1: S-ATA IDE 7pin Wafer

CN14: USB port 2 connector

CN16: USB port 3 connector

CN27: USB port 4 connector

JUSB1/JUSB2:USB 4/5 port connector

CN29: Line out connector

CN28 : Mic-in connector

CN47: Line out /Line in/ Mic-in Header

JF2: CPU FAN connector

JF1: System FAN connector

J11: IR connector

CN21: DC +5/+12V output connector

CN26: I2C Bus connector

CN13: TV out connector

MPC11:Mini PCI socket

JR1: Reset pin

SW1 : System power switch

JSW1 : System power switch pin header

PW LED : System power LED or pin header

JP1: System power LED pin header

HD LED : Hard Disk LED or pin header

LAN LED: LAN active LED

3-2 FAN Connector

CV700A provides one CPU fan connector and one system fan connector.

CPU Fan Connector- JF2

System FAN Connector-JF1

PIN NO.	Description
1	FAN Control ON/OFF
2	+12V
3	FAN speed Sensor

*Note : DC- in +12V by switch to DC-out voltage +12V
So DC -in need stable +12V input

3-3 IDE Connectors

There are two kinds of IDE connectors on this board, 40-pin and 44-pin. Each can support up to two IDE-interface devices. One standard 40-pin header daisy-chain driver connector provides as IDE1 with following pin assignment.

40 pins (2.54mm)-CN19(IDE 1)

This connector supports the provided IDE hard disk ribbon cable. After connecting the single plug end to motherboard, connect the two plugs at other end to your hard disk(s). If you install two hard disks, you must configure the second drive as Slave mode by setting its jumpers accordingly. Please refer to the documentation of your hard disk for the jumper settings.

Note!

PIN 20 connector +5V of IDE 1 could provide the power of DOM

3-11 LAN Port

The Fast Ethernet controller provides 32-bit performance, PCI bus master capability, and full compliance with IEEE 802.3 10/100Based-T specification.

For 10/100Base-T operation, please connect the network connection by plugging one end of the cable into the RJ-45 jack of the CN9,CN8 Connector.

Besides 10/100 Base-T, CV700A can provide Giga LAN solution through CN9,CN8 once equipped with Intel 82541GI/PI/ER chipset.

- **CN3 (Up side) (or CN11 single RJ45-CV702A) :LAN1 Giga/100Mb Jack**

- **Power switch: PW-ON--- SW1**

JSW1: Power on switch

Based on case design , there may be a power switch or a 2-pin header connected to the case-mounted power switch. It is used to power ON/OFF the system.

- **Power LED: PW-LED / JP1**

The Power LED is lit while the system power is on.

- **IDE Activity LED: HDD-LED**

HDD-LED shows the activity of the hard disk.

- **LAN LED Activity LED**

LAN1/ LAN2 LED shows the activity of network

Chapter 4

Introduction of BIOS

The BIOS is a program located in the Flash Memory on the motherboard.

This program is a bridge between motherboard and operating system.

When you start the computer, the BIOS program gains control. The BIOS first operates an auto-diagnostic test called POST (Power on Self Test) for all the necessary hardware, it detects the entire hardware devices and configures the parameters of the hardware synchronization. After these tasks are completed, BIOS will give control of the computer back to operating system (OS). Since the BIOS is the only channel for hardware and software to communicate with, it is the key factor of system stability and of ensuring your system performance at best.

In the BIOS Setup main menu of Figure 4-1, you can see several options. We will explain these options in the following pages. First, let us see the function keys you may use here:

- Press <Esc> to quit the BIOS Setup.
- Press ↑↓←→ (up, down, left, right) to choose the option you want to confirm or modify.
- Press <F10> to save these parameters and to exit the BIOS Setup menu after you complete the setup of BIOS parameters.
- Press Page Up/Page Down or +/- keys to modify the BIOS parameters for the active option.

4-1 Enter Setup

Power on the computer and press immediately to enter Setup.

If the message disappears before you respond but you still wish to enter Setup, restart the system by turning it OFF then ON button on the system case. You may also restart the system by simultaneously pressing <Ctrl>, <Alt> and <Delete> keys.

If you do not press the keys at the proper time and the system does not boot, an error message will display and you will be asked to

Press <F1> to continue, <Ctrl-Alt-Esc> or to enter Setup

4-2 Getting Help

Main Menu

The on-line description of the highlighted setup function is displayed at the bottom of the screen.

Status Page Setup Menu/ Option Page Setup Menu

Press F1 to pop up a small help window that describes the appropriate keys to use and the possible selections for the highlighted item.

To exit the Help Window, press <Esc>.

4-3 The Main Menu

Once you enter Award BIOS CMOS Setup Utility, the Main Menu will appear on the screen. The Main Menu has fourteen setup functions and two exit choices.

Use arrow keys to select among these items. Press <Enter> to accept or enter the sub-menu.

Phoenix-AwardBIOS CMOS Setup Utility

Standard CMOS Features	Frequency/Voltage Control
Advanced BIOS Features	Load Fail-Safe Defaults
Advanced Chipset Features	Load Optimized Defaults
Integrated Peripherals	Set Supervisor Password
Power Management Setup	Set User Password
PnP/PCI Configurations	Save & Exit Setup
PC Health Status	Exit Without Saving
Esc : Quit F9 : Menu in BIOS : Select Item F10 : Save & Exit Setup	
Time, Date, Hard Disk Type...	

Standard CMOS Features

This Menu is for basic system configurations.

Advanced BIOS Features

This menu is to set the Advanced Features available in your system.

Advanced Chipset Features

This menu is to change the values in the chipset registers and optimize your system performance.

Integrated Peripherals

This menu is to specify your settings for integrated peripherals.

Power Management Setup

This menu is to specify your settings for power management.

PnP/PCI configurations

This entry appears if your system supports PnP/PCI.

PC Health Status

This entry shows your PC health status.

Frequency/Voltage Control

This menu is to specify your settings for Miscellaneous Control.

Load Optimized Defaults

Use this menu to load the BIOS default values that are factory settings for optimal system operation performance. It is provided for the skillful users who want to push the motherboard to get better performance. The Optimized setting does not go through all the reliability and compatibility tests, it is verified only with limited configurations and loading (for example, a system that is equipped with only one VGA card and one DIMM). Do not use Optimized setting unless you fully understand the items in chipset setup menu.

Load Standard Defaults

Use this menu to load the BIOS default values for the optimum system performance. Standard Defaults settings are relatively more reliable than Optimized Defaults. All the product verifications, compatibility test reports and manufacture quality controls are based on "Standard Defaults". We suggest you to use this setting for normal operation. "Standard Defaults" is not the slowest setting for this motherboard. If you need to verify an unstable problem, you may manually set the parameter in "Advanced Chipset Features" to get slower and safer setting.

Set Supervisor/User Password

This menu is to set User and Supervisor Passwords.

Save & Exit Setup

Save CMOS values modified to CMOS and exit setup.

Exit Without Saving

Abandon all the CMOS values modified and exit setup.

4-4 Standard CMOS Features

The items in Standard CMOS Setup Menu are divided into several categories. Each category includes no, one or more than one setup items. Use the arrow keys to highlight the item and then use the <PgUp> or <PgDn> keys to select the value you want to modify with this item.

Virus Warning

The VIRUS Warning feature can help you protect IDE Hard Disk boot sector. If this function is enabled, BIOS will show a warning message on screen and alarm beep when someone attempts to write data into this area without permission.

Disabled (default) No warning message appears when anything attempts to access the boot sector or hard disk partition table.

Enabled Activate automatically when the system boots up. The system will show the warning message if anything attempts to access the boot sector of hard disk partition table.

4-6 Advanced Chipset Features

The Advanced Chipset Features Setup option is used to change the values of the chipset registers. These registers control most of the system options in the computer.

Phoenix- AwardBIOS CMOS Setup Utility
Advanced Chipset Features

<pre> ▶DRAM Clock/Drive Control [Press Enter] ▶AGP & P2P Bridge Control [Press Enter] Memory Hole [Disabled] System BIOS Cacheable [Enabled] Video RAM Cacheable [Disabled] </pre>	Item Help
<pre> :Move Enter:Select +/-/PU/PD:Value F10:Save ESC:Exit F1:General Help F5:Previous Values F6:Fail-Safe Defaults F7:Optimized Defaults </pre>	Menu Level >>

4-9 PnP / PCI Configuration Setup

This section describes how to configure the PCI bus system. PCI, or Personal Computer Interconnect, is a system which allows I/O devices to operate at the speed the CPU itself keeps when CPU communicates with its own special components. This section covers some very technical items and we strongly recommended that only experienced users should make any change to the default settings.

Phoenix - AwardBIOS CMOS Setup Utility		Item Help
PnP/PCI Configurations		Menu Level ▶
PnP OS Installed	[No]	Select Yes if you are using a Plug and Play capable operating system. Select No if you need the BIOS to configure non-boot devices.
Reset Configuration Data	[Disabled]	
Resources Controlled By	[Auto(ESCD)]	
× IRQ Resources	[Press Enter]

F5: Previous Values F6: Fail-Safe Defaults F7: Optimized Defaults		

Resource Controlled By

The Award Plug and Play BIOS can automatically configure all of the boot and Plug and Play compatible devices. However, this capability means absolutely nothing unless you are using a Plug and Play operating system such as Windows 95/98. If you set this field to "manual", choose a specific resource by going into each sub menu that follows this field (a sub menu is preceded by a ">").

The settings are Auto (ESCD) or Manual.

IRQ Resources

When resources are controlled manually, each system interrupt is assigned a type, depending on the type of device using the interrupt.

PCI/VGA Palette Snoop

Leave this field at Disabled. The settings are Enabled or Disabled.

4-10 PC Health Status

This section shows the status of your CPU, Fan, and overall system.

This is only available when there is Hardware Monitor function onboard.

Phoenix - AwardBIOS CMOS Setup Utility PC Health Status

Show PC Health in Post

During Enabled, it displays information list below. The choice is either Enabled or Disabled

**Current CPU Temperature/Current System Temp/Current FAN1,FAN2 Speed/
Vcore/3.3V/+5V/+12V**

This will show the CPU/FAN/System voltage chart and FAN Speed

4-11 Frequency/Voltage Control

This section is to set CPU Frequency Control.

Phoenix-AwardBIOS CMOS Setup Utility Frequency/Voltage Control

Auto Detect PCI Clk Spread Spectrum	[Disabled] [Disabled]	Item Help
		Menu Level >
:Move Enter:Select +/-/PU/PD:Value F10:Save ESC:Exit F1:General Help F5:Previous Values F6:Fail-Safe Defaults F7:Optimized Defaults		

Auto Detect DIMM/PCI Clock

This item allows you to enable or disable Auto Detect DIMM/PCI Clock.

The settings are Enabled or Disabled.

Spread Spectrum

This item allows you to set the CPU Host/PCI clock Spread Spectrum.

The choice are Disabled or Enabled.

4-12 Load Fail-Safe/Optimized Defaults

Load Standard Defaults

When you press <Enter> on this item, you get a confirmation dialog box with a message similar to:

Load Standard Defaults (Y/N)? N

Press <Y> to load the BIOS default values for the most stable system operation and minimal performance.

Load Optimized Defaults

When you press <Enter> on this item, you get a confirmation dialog box with a message similar to:

Load Optimized Defaults (Y/N)? N

Press <Y> to load the default values that are factory settings for optimal system operation performance.

4-13 Set Supervisor/ User Password

You can set supervisor password, user password, or both. The differences are:

Supervisor password: You can enter the setup menus and change the options.

User password: You can enter the setup menus but do not have the right to change the options. When you select this function, the following message will appear at the center of the screen to assist you in creating a password.

ENTER PASSWORD:

Type the password, up to eight characters in length, and press <Enter>. The password typed will clear any previous password from CMOS memory. You will be asked to confirm the password. Type the password again and press <Enter>. You may also press <Esc> to abort the selection without entering password.

To disable a password, just press <Enter> when you are prompted to enter the password. A message will confirm if you want to disable the password. Once the password is disabled, the system will boot and you can enter Setup menus freely.

PASSWORD DISABLED.

When a password has been enabled, you have to enter it every time before you enter the Setup. This prevents an unauthorized person from changing any part of your system configuration.

Additionally, when a password is enabled, you can also have the BIOS to request a password at every time when your system is rebooted. This would prevent the unauthorized user.

You can determine if the password is required within the BIOS Features Setup Menu and its Security option. If the Security option is set to "System", the password will be required both at boot and at entry to Setup. If set to "Setup", the password is required only at the entry to Setup.

Chapter 5

DRIVER INSTALLATION

There is a SYSTEM INSTALL CD disk in the package. This CD has all the drivers you need and some free application programs and utility programs. In addition, this CD also includes an auto-detect software which can tell you which hardware is installed and which driver is needed so that your system can function properly.

We call this auto detect software SYSTEM INSTALL.

SYSTEM INSTALL Supports WINDOWS

98/98SE/ME/2000/XP

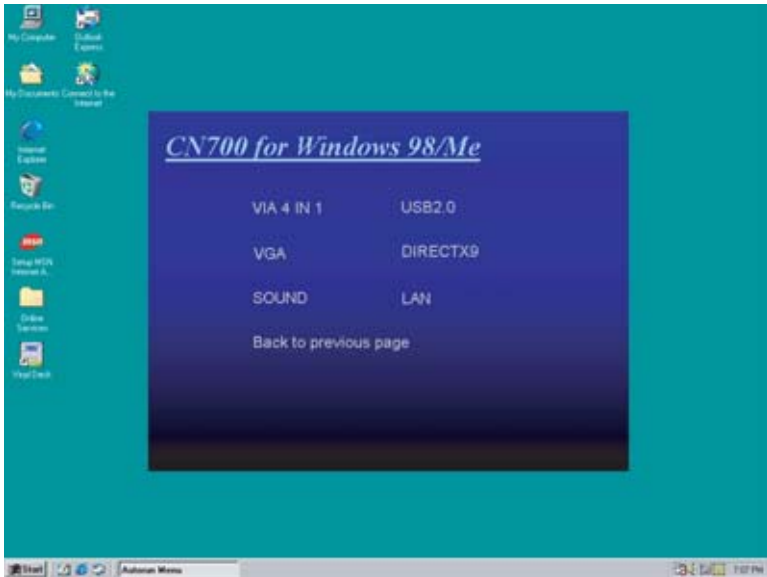

Insert the CD into your CD-ROM drive and the SYSTEM INSTALL Menu should appear as below. If the menu does not appear, double-click MY COMPUTER and double-click CD-ROM drive or click START, click RUN, and type X:\AUTORUN.EXE (assuming X is your CD-ROM drive).

From MAGIC INSTALL MENU you may make 3 selections:

- 1 . Auto detect main board and OS Into auto install driver Menu
- 2 . Explore CD to explore the contents of the CD
- 3 . EXIT to exit from SYSTEM INSTALL menu

Auto install driver Menu

1. VIA 4 IN 1 install VIA IDE/AGP/IRQ ROUTING/INF driver
2. VGA install on-board VGA driver
3. SOUND install AC97 Audio Codec Installing driver
4. USB2.0 install VIA USB2.0 hardware Installing driver
5. LAN to LAN install driver readme file
6. DIRECTX9 To install DirectX9 driver readme file
7. OTHERS To PenMount 6000 install driver readme file

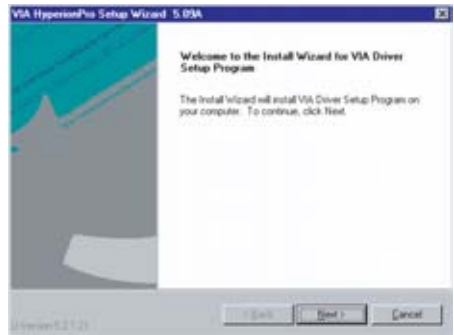

Note: PenMount 6000 DRIVER IS TO BE INSTALLED UNDER WIN 2000/XP ONLY.
Each selection is illustrated as below:

5-1 VIA 4 IN 1 Install VIA IDE/AGP/ INF Driver

- IDE :** VIA ATAPI VENDOR SUPPORT DRIVER IS USED TO FIX COMPATIBILITY ISSUE FOR IDE DEVICES.
- AGP:** VIA AGP DRIVER IS TO BE INSTALLED. IF YOU ARE USING AN AGP VGA CARD, VIAGART.VXD WILL PROVIDE SERVICE ROUTINES TO YOUR VGA DRIVER AND INTERFACE DIRECTLY TO HARDWARE, PROVIDING FAST GRAPHIC ACCESS.
- INF :** VIA REGISTRY DRIVER IS TO BE INSTALLED UNDER WINDOWS. THE DRIVER WILL ENABLE VIA POWER MANAGEMENT CONTROLLER.

1. Click VIA 4 IN 1 when System Install MENU appears.

2. Click NEXT when VIA Service Pack Wizard appears.

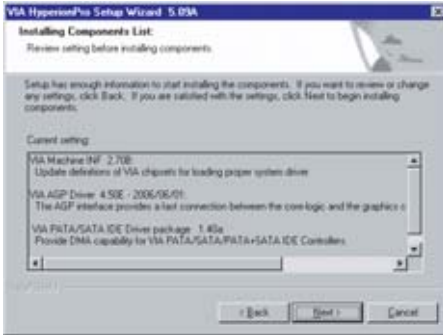

3. License Agreement. Click NEXT.

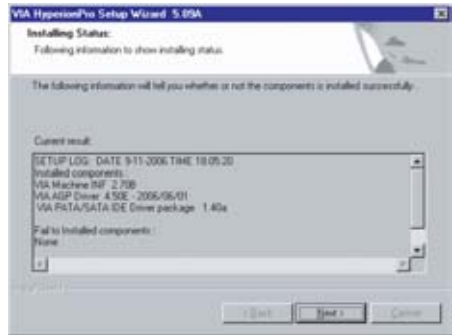

4. Choose all the drivers. Click NEXT.

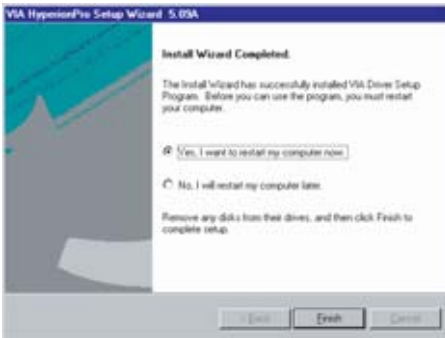

Note: VIA AGP Driver IS TO BE INSTALLED UNDER WIN98 ONLY.

5.Installing Components List. Click NEXT.

6. This is to announce the Copy Right. Click NEXT.

7.Click Finish to restart computer.

NOTE: SYSTEM INSTALL will auto detect file path

X:\driver\VIA\CN700\4IN1\setup.exe

This driver supports WINDOWS 95\98\98SE\NT4.0\2000\XP

5-5 HOW TO DISABLE ON-BOARD SOUND

Enter BIOS SETUP. Choose INTEGRATE PERIPHERALS. Choose On-Chip Device FUNCTION. Choose " AC97 Audio Disable " on-board sound function by pressing PAGE DOWN KEY to Disable.

5-6 HOW TO UPDATE BIOS

In DOS Mode

- STEP 1. Prepare a boot disc. (you may make one by clicking START, clicking RUN, typing SYS A: , and clicking OK)
- STEP 2. Copy utility program to your boot disc. You may copy it from DRIVER CD X:\Diver\bios\AWDFLASH.EXE or download it from our web site.
- STEP 3. Copy the latest BIOS for CV700A from our web site to your boot disc.
- STEP 4. Insert your boot disc into A:
Start the computer and type "Awdflash A:\CV700Axxx.BIN/SN/PY/CC/R"
CV700Axxx.BIN is the file name of the latest BIOS. It may be CV700AA1.BIN or CV700AA2.BIN
SN means don't save the current BIOS data
PY means renew the current BIOS data
CC means clear the current CMOS data
R means restart computer
- STEP 5. Press ENTER and the BIOS will be updated, computer will restart automatically.

Appendix A: Power Consumption Test

Condition

Item	Spec
CPU	V4 - C7 1GHz
DDR RAM	DDR2 533/1GB
Operating System	Windows XPP/SP2
Test Program	3D Mark 2001SE
HDD 3.5"	Standard HDD
HDD 2.5"	Slim Type HDD
Mini PCI Card	Wireless LAN IEEE802.11g

Test Result for reference !

Hard Disk	Stand by	Start up		Operation	Shut down
		Maximum	Stable	Maximum	Maximum
Standard HDD	0.10A	2.53A	1.51A	2.12A	1.89A
Slim Type HDD	0.10A	1.51A	1.04A	1.67A	1.43A

The power consumption depends on your device choice!

Appendix B: Resolution list

640 x 480 x (256 / 16bit / 32bit)
800 x 600 x (256 / 16bit / 32bit)
1024 x 768 x (256 / 16bit / 32bit)
1280 x 1024 x (256 / 16bit / 32bit)
1366 x 768 x (256 / 16bit / 32bit)
1600 x 1200 x (256 / 16bit / 32bit)

Warning !

1. CF card & 2.5" HDD first boot issue

Due to the frequent update and change of Compact Flash card, it can't always work with 2.5" HDD at the same time. Users may try and get the test result.

2. Battery

Battery on board is consumables. Lex doesn't guarantee the life time of it.

3. Fanless solution with HDD

Please be aware of specification & limitation for HDD when fanless solution is implemented.
