Quick Start

1 Install the Hub

- Remove the hub and parts from the box.
- Attach the enclosed brackets if you plan to mount the hub in a rack.
- Install the Intel® Express 140T Standalone Hub in a rack or on a shelf.
- Plug in the power cord.

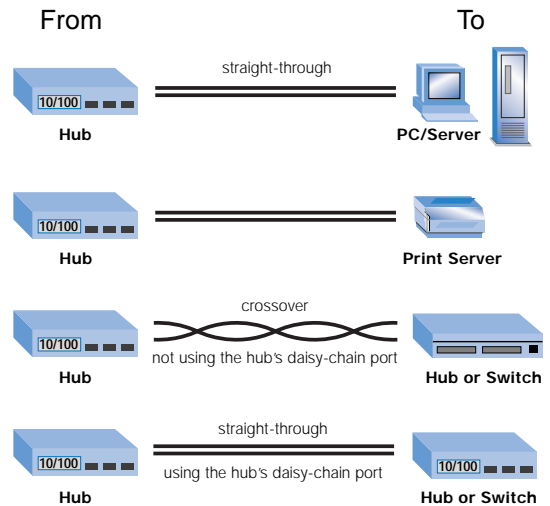

Rack: Use the four small screws to attach the brackets to the hub.

Shelf: Peel off the protective backing and attach the rubber feet to the hub.

2 Connect the Devices

- All ports automatically detect the speed of the device connected to them.
- Connect PCs and print servers to the hub with straight-through cables.
- Use a crossover cable to connect a hub to another hub or switch.
- Use a straight-through cable to connect to another hub or switch when using the daisy-chain port.
- Use only CAT 5 UTP to connect 100Mbps devices. To connect 10Mbps devices, use CAT 3, 4, or 5 UTP.

3 Check the Connections

- Check the port LEDs (located to the left of the ports) to confirm the link status. A solid LED indicates a valid link. A blinking LED indicates port activity.
- The bottom two rows indicate port speed.

Top Row – Port Activity

Solid Green = Link
Blinking = Activity
Orange = Autodisabled

Bottom Row – Port Speed

Solid Green = 100Mbps
Off = 10Mbps

User Guide - Overview

Features

This guide covers both the 16- and 24-port versions of the Express 140T Standalone Hub.

16-port 140T Hub (Product Code EE140TX16)

24-port 140T Hub (Product Code EE140TX24)

- Autosenses speed—10Mbps or 100Mbps *per port*.
- Automatically bridges 10Mbps and 100Mbps segments.
- Can be daisy-chained with another 140T hub (or any ClassII hub) to expand port density (maximum of two hubs).

Understanding 140T Hubs

Port LEDs

On the 140T, the port LEDs are located on a common panel with the hub LEDs. These LEDs indicate port status, individual port speed, and port activity.

| LED | Status | Meaning |
|----------------------|-----------------|--|
| Port Activity | Solid green | Device linked. |
| | Blinking green | Receiving activity on that port. |
| | Blinking orange | Port auto-disabled (partitioned). See below. |
| | Off | No link detected. |
| Port Speed | Solid green | Device connected at 100Mbps |
| | Off | Device connected at 10Mbps. |

Partitioned ports

A port is automatically disabled (partitioned) by the hub when an invalid condition occurs, such as too many consecutive collisions.

Once the hub is able to transmit data to the port collision free, the hub automatically re-enables (unpartitions) the port. Clients are usually not affected by a partitioned port because the port is often unpartitioned very quickly.

Usually, a partitioned port indicates an overloaded network or a malfunctioning device (like an adapter card) on the network. To alleviate an overloaded network, divide the network into smaller segments so that fewer devices share the same fixed amount of bandwidth.

Hub LEDs

The 140T hub LEDs are located above and below the port LEDs. These LEDs indicate the condition of the power supply, collisions per segment, and the amount of traffic per segment.

| LED | Status | Meaning |
|---------------------------|----------|--|
| Power | On | Hub is receiving power. |
| | Off | Hub is not receiving power. |
| Collisions 10Mbps | Blinking | Collisions detected on 10Mbps segment. |
| Collisions 100Mbps | Blinking | Collisions detected on 100Mbps segment. |
| Traffic% (1-50+) | On | Gives an approximation of the traffic in the 10Mbps or 100Mbps segments. |
| | Off | No network traffic on segment. |

Segment Traffic

The traffic bar graphs (located below the port LEDs) provide a quick reference on the current traffic load relative to the total available 10Mbps or 100Mbps network bandwidth. The graphs display a measure of the percentage of bandwidth used on the respective network segment. Typically, a segment showing more than 30% utilization indicates an overloaded network.

The traffic percentage is determined by counting all data packets, whether the packets are valid or not.

Connecting to Devices

Connection Guidelines

General

- The 140T is capable of autonegotiating port speed and can operate at 10Mbps or 100Mbps per port. The hub matches the highest possible speed of an attached device.
- The ports on the 140T hub are half-duplex. The hub cannot connect to a device at full-duplex.
- To prevent a loop in the network, do not connect the 140T to 10Mbps and 100Mbps segments simultaneously if the 10Mbps and 100Mbps segments are bridged externally (through a switch).

Cabling

- Use Category 5 unshielded twisted-pair (CAT 5 UTP) cable when connecting 100Mbps devices to the hub.
- Use Category 3, 4, or 5 unshielded twisted-pair (CAT 3, 4, 5 UTP) cable when connecting 10Mbps devices to the hub.
- Limit the cable length between devices to 100 meters.
- Use crossover cables or the daisy-chain port to connect to a hub or switch.
- Use a straight-through cable to connect the hub to a server or workstation. For more information on cabling, see pages 8-9.

Bridging Segments

A bridge allows two segments to communicate with each other. Typically, a bridge connects segments operating at different speeds. The 140T contains an internal bridge that automatically allows devices operating at 10Mbps to communicate with devices operating at 100Mbps.

Daisy-chaining Hubs

Normally, to make a hub-to-hub connection you need to use a crossover cable. The daisy-chain port on the 140T hub is wired MDI so you can use a straight-through cable to connect the 140T to an MDI-X port on a hub or switch. When using the daisy-chain port, follow these guidelines:

- Only two hubs (ClassII) can be daisy-chained together.
- The maximum cable length connecting the hubs can't exceed 5 meters.

- Use a straight-through cable to connect from the daisy-chain port on one hub to any port on the other hub (**except** the daisy-chain port).
- Don't connect daisy-chain ports together with a straight-through cable.
- Never daisy-chain a 140T hub with a 100Base-T Class I device (such as the Express 200 Series Stackable Hubs).

Daisy-chain Port

Do not use Port 1 and the Daisy-chain port at the same time. Port 1 and the daisy-chain port are the same logical port, except their pinouts are different.

It is also possible to connect from a daisy-chain port on a 140T to a daisy-chain port on another 140T. However, because the daisy-chain ports are wired the same (MDI) you will need to use a crossover cable just as if you were connecting two MDI-X ports together.

Cabling Devices

Media Requirements

Incorrect cabling is often the cause of network configuration problems. Read the next two pages if you're unsure of your requirements.

100Base-TX

The 100Base-TX Fast Ethernet specification requires that you use CAT 5 UTP cabling to operate at 100Mbps. If you use lower grade cabling (CAT 3 or CAT 4), you may get a connection, but will soon experience data loss or slow performance. You're limited to 100 meters between any two devices.

10Base-T

The 10Base-T Ethernet specification allows you to use CAT 3, CAT 4, or CAT 5 UTP cabling. You're limited to 100 meters between any two devices.

Straight-through vs. Crossover Cables

Hub ports are wired MDI-X, so use a straight-through cable when connecting to a workstation or server (network adapter cards are wired MDI). For direct connection to another MDI-X port, use the daisy-chain port or a crossover cable. Here are the pin arrangements for the hub's Ethernet jack and the typical RJ-45 connector.

Testing a cable

A quick way to check a cable's link integrity is to plug one end into the daisy-chain port, the other end of into port 2, and check the Activity LEDs for ports 1 and 2. If the LEDs are on, you have a functioning **straight-through** cable.

If the LEDs are off, remove the cable from the daisy-chain port and reinsert it in port 1. If the Activity LEDs for ports 1 and 2 are on, you have a functioning **crossover cable**.

However, if the LEDs remain off, you probably have a bad cable. If a cable passes either of these tests, but the network connection is slow, verify that wires 1 & 2 and 3 & 6 on the cable are twisted pairs. Refer to the following diagrams.

Troubleshooting

Can I daisy-chain a 100Mbps hub to the 140T hub with UTP cabling?

Yes. The 140T is a Class II device so you can daisy-chain two hubs operating at 100Mbps a maximum of 5m.

How do I get devices running at 10Mbps to talk to devices running at 100Mbps?

The 140T hub's internal bridge allows 10Mbps and 100Mbps segments to communicate with each other automatically.

Can I set the speed on individual ports?

On the 140T hub, all ports are autosensing and operate at either 10Mbps or 100Mbps, depending on the speed of the attached device. You cannot force port speed.

Can I configure a full-duplex link from the 140T hub to another device?

No, because the ports on the 140T hub can only operate at half-duplex.

I've connected the cable but the Activity LED is off. Why?

- Try removing the cable and plugging it in again. Wait up to six seconds for a link.
- Make sure you're using the right type of cable (straight-through or crossover) for the device you want to connect to. If you're using the wrong cable, the link LED will not come on.
- Check the speed and duplex settings on the PC's network adapter.

The Activity LED is now blinking orange instead of green. Why?

The port is partitioned (auto-disabled). This condition is usually caused by a malfunctioning network adapter or an overloaded network segment. For more information, see page 4.

I keep getting an intermittent loss of link. Why?

- You may be using the wrong grade of cable. The wrong cable can cause erratic performance and you may eventually lose the connection between the port and the attached device.
- Make sure the device connected to the hub port is configured for half-duplex operation. Hubs operate at half-duplex only.
- A cable segment somewhere in your collision domain is too long. Make sure none of your UTP cabling is longer than 100 meters.

Garanzia limitata sull'hardware (valida solo in Europa)

Intel garantisce al proprietario originale che il prodotto hardware incluso in questo pacchetto è privo di difetti in materiale e in lavorazione per un periodo di tre (3) anni a partire dall'ultima data tra: (i) la data di acquisto, solo nel caso in cui l'utente effettua la registrazione tramite la scheda di registrazione, come indicato, accompagnata dalla prova di acquisto; oppure (ii) la data di fabbricazione; oppure (iii) la data di registrazione, se effettuata per via elettronica, a condizione che tale registrazione avvenga entro trenta (30) giorni dall'acquisto. Questa garanzia non copre il prodotto nel caso questo fosse danneggiato durante l'installazione. Intel raccomanda di fare installare il prodotto dall'azienda da cui il prodotto è stato acquistato.

INTEL SI RISERVA IL DIRITTO DI ONORARE L'ORDINAZIONE CON UN PRODOTTO CONTENENTE PARTI NUOVE O RIFABBRICATO. LA GARANZIA QUI SOPRA SOSTITUISCE QUALSIASI ALTRA GARANZIA, SIA QUELLA ESPLICITA, IMPLICITA O STATUTORIA, INCLUSO, MA NON LIMITATO A, QUALSIASI GARANZIA DI NON VIOLAZIONE DI PROPRIETÀ INTELLETTUALE, QUALITÀ SODDISFACENTE, IDONEITÀ A QUALSIASI SCOPO PARTICOLARE O QUALSIASI GARANZIA DERIVANTE DA PROPOSTA, SPECIFICAZIONI, CAMPIONI O ALTRO.

Questa garanzia non include la sostituzione di prodotti danneggiati a causa di abuso, incidente, uso inappropriato, negligenza, alterazione, riparazione, disastro, installazione o controllo inadeguati. Se il prodotto viene considerato difettoso per altri motivi, Intel, a sua discrezione, sostituirà o riparerà il prodotto, a proprie spese, eccetto nei casi qui sotto menzionati, a condizione che il prodotto venga consegnato congiuntamente al numero di autorizzazione per la restituzione del materiale (RMA, Return Material Authorization) (a) all'azienda da cui si è acquistato il prodotto, oppure (b) a Intel, solo quando in Nord America (se il prodotto è stato acquistato in Europa, sarà necessario consegnare il prodotto seguendo le modalità indicate in "(a)"). Se il prodotto viene inviato, il mittente si assume la responsabilità in caso di danni o di perdita durante il tragitto. È necessario utilizzare l'imballaggio originale del prodotto (o un suo equivalente) e pagare le spese di spedizione. Intel sostituirà o riparerà il prodotto (o la parte) con uno nuovo o uno rifabbricato, e il prodotto restituito diventerà proprietà di Intel. Intel garantisce che il prodotto riparato o sostituito sarà privo di difetti in materiale e in lavorazione per un periodo comunque non superiore: (i) a novanta (90) giorni dalla data di spedizione all'utente; oppure (ii) al periodo rimanente nella garanzia originale di tre (3) anni.

Beschränkte Hardwaregarantie (Nur für Europa)

Intel garantiert dem ursprünglichen Eigentümer, daß die in diesem Paket enthaltene Hardware keine Material- oder Herstellungsfehler aufweist. Diese Garantie gilt für drei (3) Jahre (a) nach dem Kaufdatum, wenn die ausgefüllte Registrierungskarte entsprechend den darauf enthaltenen Angaben zusammen mit einem Kaufnachweis eingeschendet wurde; oder (b) nach dem Herstellungsdatum; oder (c) nach dem Registrierungsdatum, wenn die Registrierung innerhalb von 30 Tagen auf elektronischem Weg durchgeführt wird. Diese Garantie entfällt, wenn die Hardware bei der Installation beschädigt wird. Intel empfiehlt, die Installation durch den Verkäufer der Hardware durchführen zu lassen.

INTEL BEHÄLT SICH DAS RECHT VOR, IHREN AUFTRAG MIT EINEM PRODUKT ZU ERFÜLLEN, DAS NEUE ODER ERNEUERTE KOMPONENTEN ENTHÄLT. OBIGE GARANTIE GILT ANSTELLE ALLER ANDEREN AUSDRÜCKLICHEN, STILLSCHWEIGENDEN ODER GESETZLICH FESTGELEGTEN GARANTIEEN. AUSGESCHLOSSEN SIND DAMIT AUCH UNTER ANDEREM ALLE GARANTIEEN FÜR DIE VERKEHRSFÄHIGKEIT, DIE VERLETZUNG DER RECHTE VON DRITTEN, DIE EIGNUNG FÜR EINEN BESTIMMTEN ZWECK ODER GARANTIEEN, DIE IM ZUSAMMENHANG MIT EINEM ANGEBOT, EINER SPEZIFIKATION ODER EINEM MUSTER GEBEBEN WURDEN.

Diese Garantie schließt den Hardware-Ersatz bei Beschädigung aufgrund von Mutwilligkeit, Unfall, falscher Verwendung, Fahrlässigkeit, Umänderung, Reparatur, Katastrophen, falscher Installation oder unvorschriftsmäßigem Testen aus. Wenn das Hardwareprodukt aus anderen Gründen beschädigt ist, liegt die Entscheidung bei Intel, ob die Hardware mit Ausnahme der im folgenden beschriebenen Einschränkungen kostenlos ersetzt oder repariert wird. Hierzu müssen Sie das Produkt zusammen mit einer Rückgabenummer (RMA-Nummer, siehe unten) entweder (a) an den Verkäufer des Produkts oder (b) an Intel zurücksenden (bei Kauf in Europa muß das Produkt an "(a)" geliefert werden). Das Risiko des Verlusts oder der Beschädigung während des Transports liegt bei Ihnen als Käufer. Sie müssen zum Versenden die Originalverpackung (oder einen gleichwertigen Ersatz) verwenden und die Versandkosten übernehmen. Intel ersetzt die Hardware entweder durch ein neues oder ein neuwertiges Produkt. Das zurückgegebene Hardwareprodukt wird Eigentum von Intel. Intel garantiert, daß das reparierte oder ersetzte Hardwareprodukt für einen Zeitraum von: (i) neunzig (90) Tagen ab Rückgabedatum oder (ii) für die verbleibende Zeit der ursprünglichen Garantie von drei (3) Jahren frei von Material- und Herstellungsfehlern ist. Dabei gilt jeweils der längere Zeitraum.

Mit dieser Garantie erhalten Sie bestimmte Rechte, die je nach Staat durch weitere Rechte ergänzt werden können. Alle Teile oder Komponenten dieses Hardwareprodukts werden durch die beschränkte Hardwaregarantie von Intel abgedeckt. Das Hardwareprodukt kann vollständig getestete, wiederverwendete Teile enthalten, die derselben Garantie wie neue Produkte unterliegen. Informationen zur Garantie erhalten Sie unter einer der Intel Kundendienstnummern, die am Ende dieses Handbuchs zu finden sind.

Nachdem die Beschädigung vom Kundendienst bestätigt worden ist, wird von der zuständigen Abteilung eine Rückgabenummer (RMA-Nummer) ausgegeben, die auf der äußeren Verpackung der Hardware angebracht werden muß. Intel akzeptiert kein Produkt ohne RMA-Nummer auf der Verpackung.
