## WARRANTY INFORMATION

The warranty period on this product (parts and labor) is one (1) year from the date of purchase. Please contact Lightwave Communications at +49 (0)89 306381-0 or office@lightwave.de for information regarding repairs and/or returns. A return authorization number is required for all repairs/returns.

# **INTRODUCTION**

The Lightwave Communication USB-Wizard USB KVM switch allows access to any Windows, MAC, or SUN USB CPUs from one monitor, USB keyboard and USB mouse (up to 8 CPUs as a single switch or 64 CPUs when cascaded). Internal microprocessor circuitry allows all USB CPUs to be booted simultaneously without keyboard error. Port selection is accomplished by front panel push buttons or commands typed on the keyboard. Port lights & status LEDs continuously update on the front panel.

### **Available Options**

Switch models are available in 60 or 50 Hz, and 110 or 220V. On Screen Display (OSD) Control feature will superimpose operating menus directly onto the monitor for security administration and control.

### Types of User Input Devices Supported:

USB keyboard with Windows layout USB keyboard with SUN layout USB keyboard with MAC layout USB Mouse - (up to 3 buttons) USB IntelliMouse (scrollwheel) USB Hub Mouse-trak trackball Logitech Cordless Elite Duo keyboard and mouse Crystal Vision keyboard with touchpad Gyration keyboard/mouse Lightwave Communications USB-PS/2 Adapter Lightwave Communications USB-SUN Adapter

### **Types of CPUs Supported:**

Any USB CPU supporting USB version 1.0 or above including:

USB WINxx USB MAC USB SUN

# MATERIALS

### Materials supplied with this kit:

USB Wizard (8 ports) USB KVM Switch 120VAC/5VDC AC Adapter

### Materials Not supplied but REQUIRED:

A USBVEXT-xx-MM cable for each USB CPU being connected to the switch must be used for monitor, keyboard and mouse interface.

where:

*xx* is the length of the cable in feet *MM* indicates male-to-male connector

Cables can be purchased from Lightwave Communicatins by calling +49 (0)89 306381-0

# DEFINITIONS

- USB Composite Device A USB device that contains multiple endpoints each representing input devices that cannot be separated (i.e. a keyboard with a built-in mouse)
- USB Hub A USB device that allows one or more USB input devices to plug in to the USB. The hub has exactly one upstream port with one or more downstream ports which input devices connect to
- CPU Enclosure that contains the operating system and processor (i.e. Sun with SPARCstation5, Windows 95 with Pentium II)
- Input Device Keyboard or Mouse
- System
  - One or more CPUs connected to one or more switches controlled by one or more input devices

# FEATURES AND FUNCTIONS

# FEATURES AND FUNCTIONS

- 1. Power Switch- to power up or power down the USB Wizard USB KVM switch
- 2. Mode Status LEDs- for visual indication of switch operating mode
- 3. CPU Status LEDs- for visual indication of connection between the user and a specific CPU.
- 4. CPU Select Switches- push to manually switch to a specific CPU or change the switch operating mode
- 5. Dipswitches- for configuring cascaded switches
- 6. Daisy In/Out for attaching interface cables (REXT-SR-xx) between slave switches and the master switch
- 7. VIDEO-x- 15HD female connectors- for connecting video cables from CPUs
- 8. MONITOR- 15HD female connector- for connection of the user video monitor
- 9. 5VDC- connection jack for the AC adapter
- 10. CPU x- USB type B female connector-for connection of USB device cable from CPU(s)
- 11. DEVICES- USB type A female connector- for connection of user USB device(s)

# INSTALLATION

- 1. It is not necessary to turn the CPUs or monitors OFF during this installation.
- 2. Connect the cable from a VGA multi-scan monitor to the 15HD connector labeled "MONITOR" on the USB Wizard switch. (See Fig. 1 below.)

Figure 1- Connect a VGA multi-scan monitor

- 3. Connect the male USB type A connector on the keyboard cable to either one of the two USB type A female connectors labeled "DEVICES" on the rear panel of the USB Wizard.
- 4. Connect the male USB type A connector on the mouse cable to the remaining USB type A female connector labeled "DEVICES".

Figure 2- Connect the device(s)

- 5. When cascading switches, configure dip-switches accordingly (see Tables 1 & 2 on page 8).
- 6. Power-up the USB Wizard. (See Fig. 3 below.)

Figure 3- Connect the AC adapter

### Note: Do not press any port buttons until the PORT 1 LED on the front panel of the switch illuminates.

- 7. Connect each CPU to the USB Wizard using a USBVEXT-xx-MM video and input device interface cable REQUIRED (not supplied). (See Fig. 4 below.)
- Group the input device and monitor interface cables from each CPU, making sure that cables from the first CPU are connected to the USB Wizard switch at connectors CPU 1 and VIDEO 1. Cables from the second CPU should connect to CPU 2 and VIDEO 2 connectors...etc.

Figure 4- Connect each CPU

# **Power-Up Sequence**

- The USB Wizard can be powered at any time.
- The CPUs can be powered at any time although if a CPU needs a keyboard and/or mouse at power-ON it should be powered after connecting to and powering-ON the USB Wizard.
- USB input devices (keyboard and mouse) can be hot plugged to and from the USB Wizard switch at any time.

If the security option is enabled (see page 12 for details on the "Security Option"), when the USB Wizard is powered up the user will be prompted for a username and password to continue. If the security option is not enabled the monitor will display the desktop image for the connected CPU and the user can continue with normal operation of the connected CPU.

# **Limitations**

- Only USB input device or hub cables can be connected to the USB Wizard at the USB Type A female ports labeled "DEVICES". (See Features and Functions on page 3, item 11.)
- A USB hub (single or multi-port) can be used provided only USB input devices (except for MAC keyboards) are plugged into it.
- No additional hubs may be connected (as in a daisy-chain) to the hub that is directly connected to the USB Wizard.
- USB MAC keyboards with USB Type A female ports built into them are designed as hubs and must be treated as such with
  respect to the USB Wizard. As a result, USB MAC keyboards cannot be connected to a multi-port hub or other
  MAC keyboards connected directly to the switch.
- Only a USB Windows or SUN keyboard or USB mouse may be connected to the USB port on a USB MAC keyboard
- A maximum of 8 input devices may be connected to the USB Wizard either directly or through hubs.

See Fig. 5 for some examples of input device combinations that can and cannot be used with the USB Wizard.

Figure 5- Compatible and incompatible device combinations

# CASCADING

The USB Wizard can be cascaded as shown in Fig. 6 below. If USB Wizard switches are being cascaded, configure the dip-switches accordingly (see Tables 1 and 2 on page 8).

# **Configuration**

All units are configured using the 6-position dip switch (located on the front of each unit) according to the tables on page 8 (1 & 2).

## **Cascaded Installation**

- a. Configure each dip switch as per the tables on page 8 before proceeding.
- b. Using the 15HD video cable ends of a USBVEXT-xx-MM cable, connect the USB Wizard slave's MONITOR port to the master's VIDEO 1 port.
- c. Using the USB ends of the same USBVEXT-xx-MM cable, connect one of the USB slave's USB DEVICES ports to the master's CPU 1 port.

### Note: Only one of the two ports labeled DEVICES on a slave needs to be used in order for cascading to work.

- d. Repeat step b. & c. for each additional slave, keeping in mind that each slave will connect to the next available master's port (i.e. Slave #2 to master's VIDEO 2 & CPU 2, etc.) See Fig. 7 on page 8.
- e. With a RMT extension cable, connect the master's DAISY OUT port to slave #2's DAISY IN port. Then connect slave #2's DAISY OUT to slave #3's DAISY IN. Continue until all slaves are connected together.

Figure 6- Connections for Cascading

### **Front Panel Configuration Switches**

Table 1 * (default settings)			
Switch	SW1	SW5	SW6
STAND-ALONE SWITCH	OFF*	OFF*	OFF*
SLAVE	ON	OFF	OFF
MASTER W/4-PORT SLAVES	OFF	OFF	ON
MASTER W/8-PORT SLAVES	OFF	ON	OFF
MASTER W/16-PORT SLAVES	OFF	ON	ON

Table 2 * (default settings) Master & Slave dip switch 2-4 Settings				
SW2	SW3	SW4	Master with-	Slave Setting
OFF*	OFF*	OFF*	No Slave Attached	N/A
OFF	OFF	OFF	1 Slave attached	Slave #1
OFF	OFF	ON	2 Slaves attached	Slave #2
OFF	ON	OFF	3 Slaves attached	Slave #3
OFF	ON	ON	4 Slaves attached	Slave #4
ON	OFF	OFF	5 Slaves attached	Slave #5
ON	OFF	ON	6 Slaves attached	Slave #6
ON	ON	OFF	7 Slaves attached	Slave #7
ON	ON	ON	8 Slaves attached	Slave #8

These switch settings (Table 2) enable the slave to establish its identity (i.e. location in the group) to the Master.

Side Note: In a Master, the same switches are used to configure the Master for how many slaves are attached to it.

### Note: All USB Wizard switches must be powered OFF during dip switch configuration

Figure 7- Master-to-Slave Device Cable Connections

## **Limitations**

- > All switches used as slaves must be the same size (all 8 port).
- > Up to 8 slaves be connected to form a maximum system size of 64 ports.
- Slaves must be added to the master in order (slave #1 to master's port 1, slave #2 to master's port 2, etc).

# Note: Master Port 1 (with an 8-port Slave connected to it) will become ports 1-8. Master Unit Port 2 (with a second 8-port Slave Unit connected) will become port numbers 9-16.

> All USB Wizard switches must be powered OFF during dip switch configuration.

# **USING THE USB WIZARD KVM SWITCH**

Once the USB Wizard switch is properly connected, the USB Wizard will enable a connection to be made between the CPUs attached to its VIDEO and CPU ports and the monitor and input devices attached to the MONITOR and DEVICES ports. The LEDs on the control panel of the USB Wizard will illuminate depending on which port (and corresponding CPU) is being connected to the monitor and input devices.

The USB Wizard can be controlled by three methods:

- front control panel using touch-switches and LEDs
- keyboard control through Command Mode
- mouse clicks from within some menus of OSD Command Mode (optional).

## Front Panel Control

There is a touch-switch and LED on the front panel of the USB Wizard for each CPU the switch will connect the monitor and input devices to. Pressing any touch-switch on the front panel of the USB Wizard will connect the corresponding CPU to the monitor and input devices.

Holding down any front panel touch-switch for more than 2 seconds will cause the USB Wizard to cycle through all modes of operation including COMMAND, SCAN, and NORMAL (described below and on page 11). The two MODE LEDs on the front panel indicate which mode is selected. Release the touch-switch when the LEDs indicate the desired mode. When no mode LEDs are illuminated the user is in Normal Mode controlling directly the CPU to which the user is connected through the USB Wizard.

## Keyboard Control

Keyboard control of the USB Wizard can be achieved using either of two methods:

- Basic Command Mode- operated strictly by using keyboard commands as instructed below. Basic Command Mode is only applicable if the OSD option is not built into the switch.
- OSD Command Mode (optional)- operated using the keyboard and mouse in conjunction with OSD menus superimposed onto the monitor. If OSD is built in, use the menus as instructed on page 11.

By pressing <Ctrl> + < > (accent key), the user can enter Command Mode (either Basic, or OSD). Once in Command Mode, typing a series of commands will cause the USB Wizard to connect the user to any one CPU connected to the switch. Pressing the <Esc> key will exit Command Mode.

# **MODES OF OPERATION**

## **Basic Command Mode**

In order to control the USB Wizard with the keyboard connected, Command Mode must be enabled. To enter Command Mode from the keyboard:

# **OSD CONTROL**

OSD superimposes a menu system on the user's video screen with a list of all connected CPUs. OSD allows CPUs to be named (with up to 12-character names). OSD then allows selection of CPUs by that name. Connected CPUs can be listed by name or by port number. OSD Search Mode enables the user to type in the first few characters of the CPU's name and the OSD will locate it. Help screens assist with all OSD functions.

## Security Option

The security option of the OSD Control enables an administrator to control access to CPU ports for each user. Up to 24 users can be created. These users have controlled access to any CPU. Only the administrator can activate or deactivate the security features. Security can be activated from the Maintenance Mode menu (page 17) with a successful administrator login for verification purposes. Furthermore, the administrator can set a maximum idle time value after which the current user will be logged out and the login screen displayed. This time out does not function while the OSD is active. The current security status, idle time out, and scan dwell time are all saved and will be restored whenever power to the switch is cycled OFF, then ON. To reset the administrator's password call Lightwave Communications and have the device serial number of the USB Wizard available.

## **Enabling the Security Feature**

To enable the security feature the administrator must first enter Command Mode from the keyboard using the sequence <Ctrl> + <`> (accent key). The OSD menu will automatically appear on the monitor in addition to illuminating the Command Mode indicator LED on the USB Wizard. This provides a visual way to control the USB Wizard using the keyboard and mouse.

**The administrator**, when setting the USB Wizard up for the first time, may want to proceed directly to the ADMINISTRATION Mode by typing <CTRL> +<M>, then <A>, and then <Y>.

### The factory settings are:

- default user name = ADMINISTRATOR
- default password = ADMINISTRATOR

# Note: The user name for the administrator cannot be changed from "ADMINISTRATOR".

Once logged-in, follow the instructions on page 12 for setting up users and changing the password. Once the password is setup, if it is lost or forgotten the administrator will have to contact Lightwave for assistance on clearing the password and set it up again. Within the Administration Mode the administrator can setup each of the users and the limitations of their use of the individual CPUs attached to the switch.

NETWORK TECHNOLOGIES INC
USER LOGIN
USER NAME> ADMINISTRATOR
PASSWORD> ************
ESC - EXIT

### Figure 8- Administrator Login screen

### When a standard user powers up the system a security screen will appear if security has been enabled by the

administrator. The user will need to login to the switch by following the instructions on page 12 for the USER LOGIN. If the user does not know the appropriate user name and password (setup by the administrator), contact the switch administrator for this information. Once logged-in a user can follow the Command Mode functions described on page 14 to control the switch within the limitations as determined by the administrator.

## User Login Mode

User login mode requires a user to login with a user name and password from the list created by the administrator. This mode will also disable use of the front panel until the user logs in.

# ADDITIONAL MODES AVAILABLE WITH SECURITY

The three modes that follow are only available if the administrator is logged in.

## **Administration Mode**

To enter the Administration Mode menu press <A> from the Maintenance Mode menu (page 10).

Administration Mode allows the administrator to use the following functions:

C

NETWORK TECHNOLOGIES

ADMINISTRATION MODE

CHANGE THE ADMIN PASSWORD

INC

## Administrator Password

To change the administrator password press <C> from the Administration Mode menu.

The administrator is able to change the administrator password as needed (see Fig. 11). Two edit fields are available, one for password, the other for verify password. The password can be up to 13 characters in length.

# Note: The default password for the administrator is ADMINISTRATOR.

#### NETWORK TECHNOLOGIES INC ADMINISTRATION MODE - CHANGE THE ADMIN PASSWORD C S - DISABLE SECURITY U - UPDATE USER NAME LIST IDLE Т - CHANGE TIMEOUT TOGGLE LANGUAGE ▶ ENGLISH L — ITALIAN◀ PASSWORD \*\*\*\* VERIFY D ESCAPE - PREVIOUS SCREEN Figure 11- Administrator password change

(Type any upper or lower case

alphabetical or numeric character)

A-Z

(If Password string and Verify Password string

are different, this command will have no effect, enabling the administrator to correct the password)

### Function:

### Keystroke:

Backspace

Enter

Esc

or

Add character to password string or verify password string

Delete previous character in edited string

Save new password.

Return to Administration Mode

## User Name List

To enter the User Name List press <U> from the Administration Mode menu.

The User Name List displays the list of users and provides control for adding new users (up to 24), changing or assigning user passwords, and changing access rights for any given user. User names may be up to 12 characters long, may not contain spaces, and are not case sensitive. Passwords may be up to 15 characters long, may not contain spaces, and are case sensitive.

🕈 Shift

### Figure 12- User Name List screen

# **System Access List**

To enter the System Access List press <Ctrl> + <A> from the User Name List menu.

The System Access List displays a list of numbers representing the ports so the administrator can change access rights to the ports for the selected user. The user's name is displayed at the top of the access list. The mouse is used to change access rights by clicking on a given number to toggle a port's status. A user that has access to a port can connect to that port and control the CPU connected to that port when in Normal Mode.

#### Function:

Save the changes to the access list and return to previous mode

Exit the System Access List without saving and return to previous mode.

# **USER ACCESS FUNCTIONS**

### INTRODUCTION

The OSD menu enables a user to name the CPUs connected to the USB Wizard and connect to them using that name from a single keyboard and mouse. The OSD is positioned on the user's monitor, displaying 8 CPU names at a time. The screen can be used for switching as well as editing the CPUs' names. Through the OSD menu, the user can operate the USB Wizard to have the switch cycle through 2 extended modes of operation: COMMAND and SCAN. Two LEDs on the front panel indicate when these modes are enabled.

## OSD Command Mode

When entering the Command Mode from the keyboard using the  $\langle Ctrl \rangle + \langle \rangle$  (accent key), the OSD menu will automatically appear on the monitor in addition to illuminating the COMMAND indicator LED on the USB KVM switch. This provides a visual way to control the USB Wizard.

The list below describes the OSD C the keyboard after entering Comma LED is illuminated:	Command functions available from and Mode and while the COMMAND	NETWORK TECHNOLOGIES INC COMMAND MODE
Function:	Keystroke:	▶ 1 PORT 1 V USB OFF
Select the previous port		2 PORT 2 USB OFF 3 PORT 3 USB OFF 4 PORT 4 USB OFF 5 PORT 5 USB OFF 6 PORT 6 USB OFF
Select the next port		6 PORT 6 USB OFF 7 PORT 7 USB OFF 8 PORT 8 USB OFF 8CAN - OFF BROADCAST - OFF
Enable/disable Scan Mode	Ctrl + S	F1 - HELP <b>GTRL</b> ESC - EXIT Figure 14- Command Mode screen
Enter Edit Mode	Ctrl + E	-

#### **OSD Command Mode (Cont'd)** Function:

To exit Command Mode, either hold down any touch-switch on the front panel for more than 2 seconds, OR press <ESC> on the keyboard.

The mouse can also be used to control the USB Wizard within the Command Mode menu.

- The mouse cursor can be moved to the Scan, Help, and Exit fields where the user can then click on the left mouse button to perform that function.
- Ports listed on the screen can be selected by moving the cursor onto that port and clicking. Clicking twice on a . selected port will switch to that port and exit Command Mode.
- To change the displayed ports on the screen simply click on the up and down arrows located to the right of the port . names displayed.

## Scan Mode

To activate Scan Mode press <Ctrl> + <S> from the Command Mode menu.

When in Scan Mode the switch scans to each port with a CPU powered-ON. (The SCAN LED on the front panel will illuminate and remain ON while in Scan Mode.) The port with the CPU powered-ON remains active while in use until it becomes idle for the configured dwell time (default time-out period is 5 seconds) before switching to the next powered-ON CPU port. See Command Mode section above for configuring the scan dwell time.

Note: The keyboard and mouse must remain idle for the full scan dwell time before the switch selects the next active port.

Note: The scan dwell time set by the user only effects that user and has no effect on other switch users.

## Normal Mode

When the USB Wizard is not in Command or Scan mode and all of the USB KVM switch mode LEDs are OFF, the user is in Normal Mode, controlling the CPU to which the user is connected through the USB Wizard.

## Edit Mode

To activate Edit Mode press <Ctrl> + <E> from the Command Mode menu.

Edit Mode enables the user to modify the names of the CPUs connected to the switch. Names of CPUs can be up to 12 characters in length. When in Edit Mode, multiple keystroke combinations are not valid (<Shift>+P, <Ctrl>+P, <Alt>+ P, and P will all type a "P" to the display - lower case letters cannot be typed).

When finished making changes in Edit Mode, press <Enter> and a prompt will appear to press either <Y> to save the changes or <N> to continue making changes without saving the changes just made. If the <Esc> key is pressed instead of <Enter>, all changes made will be ignored and the display will return to the previous menu.

# Search Mode

To enter Search Mode, type any alphabetical or numeric character when the Command Mode menu is on the monitor.

To enter Search Mode, type any a	alphabetical of numeric ci	nalacter when				nitor.	
Search Mode enables the user to through a list of CPU names. The		NET	WORK	TECHN	OLOGIES	INC	
matching the characters typed is s CPUs may also be searched for a	selected. The list of	FIND	- P	EARCH	MODE		
name. The following commands a search option has been invoked fr			PORT	1	V USB	OFF

Return to Command Mode	Esc	

pted for a "Y" (yes) or "N" (no) to confirm the choice, at which point the user will be asked username and password before continuing. the administrator can activate the security res.

## **Help Mode**

To enter Help Mode press the <F1> key from the Command Mode menu (see page 14).

Help Mode displays a list of commands with a short explanation of their function. These lists are organized in pages for each mode (i.e. COMMAND, EDIT, and SEARCH). The following options enable the user to quickly obtain information on any command.

### Function:

### Keystroke:

View the previous page of help if available

	Page Up
Ľ	

View the next page of help if available

Exit HELP and return to previous mode

Dowr

If activating security features, the user will be

# **KEYBOARD FEATURES**

The keyboard configuration of each CPU is saved in the USB Wizard. For example, if the CPU attached to Port 2 had CAPS LOCK and NUM LOCK selected the last time that CPU was accessed, then they will automatically be set when that CPU is accessed again.

## Keyboard-To-Computer Translation

(See Fig. 19 on page 19 for reference.)

The USB Wizard enables a mixture of otherwise incompatible peripheral computer components to be connected together. This is accomplished by performing keyboard-to-computer translations automatically (i.e. translate a MAC keyboard and mouse to a Windows type CPU). The chart below shows the capabilities of devices controlling certain CPU types.

## **Translation Capabilities**

	CPU		
Device	Sun	Мас	Windows
Sun Keyboard	Full functionality	Full functionality	Full functionality
AT101 Keyboard	Extra keys emulation	Power key emulation	Full functionality
Mac keyboard	Extra keys emulation	Full functionality	Full functionality-except Application Key
Apple Pro Keyboard	Extra keys emulation	Extra Keys not supported (Eject, Mute, Volume+, Volume-)	Full functionality
Sun Mouse	Full functionality	Full functionality	Full functionality
Wheel Mouse	Full functionality	Full functionality	Full functionality
Apple Mouse	Right button emulation	Full functionality	Right button emulation

# Translation Tables

Use the charts below to type SUN's additional keys with Win95 and Apple keyboards:

# SUN Extra Keys

WINxx or Mac Keyboards	Sun Extra Keys
Space Bar + F1	Stop
Space Bar + F2	Again
Space Bar + F3	Props
Space Bar + F4	Undo
Space Bar + F5	Front
Space Bar + F6	Сору
Space Bar + F7	Open
Space Bar + F8	Paste
Space Bar + F9	Find
Space Bar + F10	Cut
Space Bar + F11	Help
Space Bar + F12	Compose
Space Bar + Up Arrow	Volume +
Space Bar + Down Arrow	Volume -
Space Bar + Left Arrow	Mute

## Power Key Emulation

Win95 Keyboards	Mac CPU	Sun CPU
SB+RT Arrow	Power	Power

### **Mouse Click Equivalents**

To emulate right-button click using an Apple 1-button mouse, hold down the CMND key (key with open apple insignia) while pressing the mouse button.

Figure 19- Keyboard Layouts

# **HOW TO DISABLE OPERATING MODES**

Two operating modes of the USB Wizard can be disabled if desired. The Command Mode can be disabled which would also disable the Scan Mode, or, the Scan Mode can be separately disabled leaving Command Mode enabled.

To disable these operating modes, the user must get access to the jumpers block. This block is located close to the dip switches on the circuit board the keyboards plug into (called the digital board) inside the USB Wizard. (See Fig. 20)

Overhead view of video board on top of digital board.

### Figure 20- Location of the jumpers block

<u>If the unit is a rackmount style</u>, the digital board is located directly beneath the cover of the unit, requiring the user to only remove the 9 screws from the cover to get access. With the cover removed, the jumpers block will be easy to locate (see Fig. 20). Follow the instructions under "CONFIGURING THE JUMPER BLOCK" (page 21) to disable the desired mode(s).

If the unit is in a plastic case, the digital board is located on the bottom of the case, requiring the user to partially disassemble the unit to gain access to the jumpers block.

### For models in a plastic case::

- 1. The USB Wizard must be completely disconnected from all computer components.
- 2. Unplug the USB Wizard from the electrical outlet.
- 3. Remove the two philips-head screws from the underside of the USB Wizard and set the USB Wizard on a firm and flat surface, bottom down (see Fig. 21).

View of bottom of plastic case

Figure 21- Remove the philips-head screws

4. Remove the top half of the plastic case from the USB Wizard.

Note: Before proceeding, it is important to discharge any static charge by touching any large metal object (away from the USB Wizard).

5. Grasp firmly the front panel and slide the front panel up out of the slots in the plastic case that support it. Once the panel is clear of the case, pivot the panel back approximately 1", just enough to expose the jumper block. (See Fig. 22.) Be careful not to dislodge the connection of the ribbon connecting the LED board to the digital board. If it appears to become loose, be sure to reseat the connection before re-assembly. Now follow the instructions under "CONFIGURING THE JUMPER BLOCK" below.

Figure 22- Get access to jumper block

## **Configuring The Jumper Block**

Once the jumper block is exposed, apply a jumper across the appropriate pins to disable the desired mode(s) according to the chart below.

Pin Designation	Mode	
KCMD	Command Mode*	
SCAN	Scan Mode	
*Note: Putting a jumper across pins KCMD to		
disable Command Mode will also disable		

Scan Mode.

Do not put a jumper here. The LCD feature is not JUMPER BLOCK available on this switch. SBKL **DIP SWITCHES** CRCC ADMD NCDE 0 0 0 0 0 0 0 0 0 0 Π 0 П 0 0 0 0 0 0 0 0 la. ٥ DEFAULT JUMPERS JUMPER 

Drawing shows jumper across SCAN pins, disabling Scan Mode. Command Mode is still enabled.

## Figure 23- Configure the jumper block

Once the desired jumpers are in place, reverse the disassembly process to re-assemble the USB Wizard. Do not turn the power ON until the switch has been properly re-assembled.

# TROUBLESHOOTING

**PROBLEM:** Keyboard Errors

**SOLUTION:** Check cable connections on each CPU and the switch.

PROBLEM: No Video

**SOLUTION:** Check cable connections on each CPU and the switch. Verify that keyboard and video connect from each CPU to matching ports. After reconnecting, CPU may need to be re-booted in order to sense the monitor connection.

PROBLEM: No Mouse Movement

**SOLUTION:** Check cable connections of mouse. Verify that mouse driver was loaded.
