# INTRODUCTION

The Switch can be managed through the Switch's serial port, Telnet, or the Web-based management agent. The Command Line Interface (CLI) can be used to configure and manage the Switch via the serial port or Telnet interfaces.

This manual provides a reference for all of the commands contained in the CLI. Configuration and management of the Switch via the Web-based management agent is discussed in the Manual. This manual provides a reference for all of the commands contained in the CLI for members of this series, including the DES-3028, DES-3028P, DES-3052, and DES-3052P. Examples present in this manual may refer to any member of this series and may show different port counts, but are universal to this series of switches, unless otherwise stated. Configuration and management of the Switch via the Web-based management agent is discussed in the User's Guide.

## Accessing the Switch via the Serial Port

The Switch's serial port's default settings are as follows:

- **9600 baud**
- **no parity**
- **8 data bits**
- **1 stop bit**

A computer running a terminal emulation program capable of emulating a VT-100 terminal and a serial port configured as above is then connected to the Switch's serial port via an RS-232 DB-9 cable.

With the serial port properly connected to a management computer, the following screen should be visible. If this screen does not appear, try pressing Ctrl+r to refresh the console screen.

```
DES-3028P Fast Ethernet Switch Command Line Interface
                               Firmware: Build 1.00-B22
                               Copyright(C) 2006-2009 D-Link Corporation. All rights reserved.
UserName:
```

**Figure 1-1. Initial CLI screen**

There is no initial username or password. Just press the **Enter** key twice to display the CLI input cursor – **DES-3028P:4#**. This is the command line where all commands are input.

## Setting the Switch's IP Address

Each Switch must be assigned its own IP Address, which is used for communication with an SNMP network manager or other TCP/IP application (for example BOOTP, TFTP). The Switch's default IP address is 10.90.90.90. Users can change the default Switch IP address to meet the specification of your networking address scheme.

The Switch is also assigned a unique MAC address by the factory. This MAC address cannot be changed, and can be found on the initial boot console screen – shown below.

```

Boot Procedure V1.00-B04
-----
Power On Self Test ..... 100%
MAC Address   : 00-50-BA-30-28-00
H/W Version   : 1A1G
Please wait, loading V1.00-B22 Runtime image ..... 100%_

```

**Figure 1-2. Boot screen**

The Switch's MAC address can also be found in the Web management program on the **Switch Information (Basic Settings)** window on the **Configuration** menu.

The IP address for the Switch must be set before it can be managed with the Web-based manager. The Switch IP address can be automatically set using BOOTP or DHCP protocols, in which case the actual address assigned to the Switch must be known.

The IP address may be set using the Command Line Interface (CLI) over the console serial port as follows:

1. Starting at the command line prompt, enter the commands **config ipif System ipaddress xxx.xxx.xxx.xxx/yyy.yyy.yyy.yyy**. Where the **x**'s represent the IP address to be assigned to the IP interface named **System** and the **y**'s represent the corresponding subnet mask.
2. Alternatively, users can enter **config ipif System ipaddress xxx.xxx.xxx.xxx/z**. Where the **x**'s represent the IP address to be assigned to the IP interface named **System** and the **z** represents the corresponding number of subnets in CIDR notation.

The IP interface named **System** on the Switch can be assigned an IP address and subnet mask which can then be used to connect a management station to the Switch's Telnet or Web-based management agent.

```
DES-3028P:4#config ipif System ipaddress 10.90.90.91/8
Command: config ipif System ipaddress 10.90.90.91/8

Success.
DES-3028P:4#_
```

**Figure 1-3. Assigning an IP Address**

In the above example, the Switch was assigned an IP address of 10.90.90.91 with a subnet mask of 255.0.0.0. The system message **Success** indicates that the command was executed successfully. The Switch can now be configured and managed via Telnet, SNMP MIB browser and the CLI or via the Web-based management agent using the above IP address to connect to the Switch.

## USING THE CONSOLE CLI

The DES-3028/28P/52/52P support a console management interface that allows the user to connect to the Switch's management agent via a serial port and a terminal or a computer running a terminal emulation program. The console can also be used over the network using the TCP/IP Telnet protocol. The console program can be used to configure the Switch to use an SNMP-based network management software over the network.

This chapter describes how to use the console interface to access the Switch, change its settings, and monitor its operation.

**Note:** Switch configuration settings are saved to non-volatile RAM using the save command. The current configuration will then be retained in the Switch's NV-RAM, and reloaded when the Switch is rebooted. If the Switch is rebooted without using the save command, the last configuration saved to NV-RAM will be loaded.

### Connecting to the Switch

The console interface is used by connecting the Switch to a VT100-compatible terminal or a computer running an ordinary terminal emulator program (e.g., the **HyperTerminal** program included with the Windows operating system) using an RS-232C serial cable. Your terminal parameters will need to be set to:

- **VT-100 compatible**
- **9600 baud**
- **8 data bits**
- **No parity**
- **One stop bit**
- **No flow control**

Users can also access the same functions over a Telnet interface. Once users have set an IP address for your Switch, users can use a Telnet program (in VT-100 compatible terminal mode) to access and control the Switch. All of the screens are identical, whether accessed from the console port or from a Telnet interface.

After the Switch reboots and users have logged in, the console looks like this:

```
DES-3028P Fast Ethernet Switch Command Line Interface
                               Firmware: Build 1.00-B22
                               Copyright(C) 2006-2009 D-Link Corporation. All rights reserved.
UserName:
Password:
DES-3028P:4#_
```

**Figure 2-1. Initial Console Screen after logging in**

Commands are entered at the command prompt, **DES-3028P:4#**.

There are a number of helpful features included in the CLI. Entering the ? command will display a list of all of the top-level commands.

```

?
clear
clear arptable
clear counters
clear fdb
clear log
clear port_security_entry port
config 802.1p default_priority
config 802.1p user_priority
config 802.1x auth_mode
config 802.1x auth_parameter ports
config 802.1x auth_protocol
config 802.1x capability ports
config 802.1x guest_vlan ports
config 802.1x init
config 802.1x reauth
config access_profile profile_id
config account
config admin local_enable
config arp_aging time
config arpretry
CTRL+C ESC Quit SPACE Next Page ENTER Next Entry All

```

**Figure 2-2. The ? Command**

When users enter a command without its required parameters, the CLI will prompt users with a **Next possible completions:** message.

```

DES-3028P:4#config account
Command: config account

Next possible completions:
<username>

DES-3028P:4#_

```

**Figure 2-3. Example Command Parameter Help**

In this case, the command **config account** was entered with the parameter **<username>**. The CLI will then prompt users to enter the **<username>** with the message, **Next possible completions:**. Every command in the CLI has this feature, and complex commands have several layers of parameter prompting.

In addition, after typing any given command plus one space, users can see all of the next possible sub-commands, in sequential order, by repeatedly pressing the **Tab** key.

To re-enter the previous command at the command prompt, press the up arrow cursor key. The previous command will appear at the command prompt.

```

DES-3028P:4#config account
Command: config account

Next possible completions:
<username>

DES-3028P:4#config account
Command: config account

Next possible completions:
<username>

DES-3028P:4#_

```

**Figure 2-4. Using the Up Arrow to Re-enter a Command**

In the above example, the command **config account** was entered without the required parameter **<username>**, the CLI returned the **Next possible completions: <username>** prompt. The up arrow cursor control key was pressed to re-enter the previous command (**config account**) at the command prompt. Now the appropriate username can be entered and the **config account** command re-executed.

All commands in the CLI function in this way. In addition, the syntax of the help prompts are the same as presented in this manual – angle brackets **< >** indicate a numerical value or character string, braces **{ }** indicate optional parameters or a choice of parameters, and brackets **[ ]** indicate required parameters.

If a command is entered that is unrecognized by the CLI, the top-level commands will be displayed under the **Available commands:** prompt.

```

DES-3028P:4#the
Available commands:
..                ?                clear                config
create            delete            dir                  disable
download          enable            login                logout
ping              reboot            reconfig            reset
save              show              smtp                 telnet
traceroute        upload

DES-3028P:4#

```

**Figure 2-5. The Next Available Commands Prompt**

The top-level commands consist of commands such as **show** or **config**. Most of these commands require one or more parameters to narrow the top-level command. This is equivalent to **show what?** or **config what?** Where the **what?** is the next parameter.

For example, if users enter the **show** command with no additional parameters, the CLI will then display all of the possible next parameters.

```
DES-3028P:4#show
Command: show

Next possible completions:
802.1p          802.1x          access_profile  account
acct_client     arpentry        auth_client     auth_diagnostics
auth_session_statistics
authen_enable   authen_login    auth_statistics authen
bandwidth_control  command_history  authen_policy  autoconfig
cpu_access_profile
error           fdb             config          cos
gvrp           igmp_snooping  dhcp_relay     dscp_mapping
lacp_port       link_aggregation  firmware       greeting_message
mac_notification  mirror          ipif           iproute
packet          poe             log            log_save_timing
radius          router_ports    multicast      multicast_fdb
scheduling_mechanism
sim            smtp           port_security  ports
ssh           ssl            safeguard_engine  scheduling
syslog        time          serial_port    session
traffic_segmentation
vlan          time_range    snmp           sntp
switch
utilization
```

**Figure 2-6. Next possible completions: Show Command**

In the above example, all of the possible next parameters for the **show** command are displayed. At the next command prompt, the up arrow was used to re-enter the **show** command, followed by the **account** parameter. The CLI then displays the user accounts configured on the Switch.

## COMMAND SYNTAX

The following symbols are used to describe how command entries are made and values and arguments are specified in this manual.

**Note:** All commands are case-sensitive. Be sure to disable Caps Lock or any other unwanted function that changes text case.

<b>&lt;angle brackets&gt;</b>	
Purpose	Encloses a variable or value that must be specified.
Syntax	<b>config ipif &lt;ipif_name 12&gt; [{ipaddress &lt;network_address&gt;   vlan &lt;vlan_name 32&gt;   state [enable   disable]}   bootp   dhcp]</b>
Description	In the above syntax example, users must supply an IP interface name in the <ipif_name 12> space, a VLAN name in the <vlan_name 32> space, and the network address in the <network_address> space. Do not type the angle brackets.
Example Command	<b>config ipif Engineering ipaddress 10.24.22.5/255.0.0.0 vlan Design state enable</b>

<b>[square brackets]</b>	
Purpose	Encloses a required value or set of required arguments. One value or argument can be specified.
Syntax	<b>create account [admin   user] &lt;username 15&gt;</b>
Description	In the above syntax example, users must specify either an <b>admin</b> or a <b>user</b> level account to be created. Do not type the square brackets.
Example Command	<b>create account admin Darren</b>

<b>  vertical bar</b>	
Purpose	Separates two or more mutually exclusive items in a list, one of which must be entered.
Syntax	<b>create account [admin   user] &lt;username 15&gt;</b>
Description	In the above syntax example, users must specify either <b>admin</b> , or <b>user</b> . Do not type the vertical bar.
Example Command	<b>create account admin Darren</b>

<b>{braces}</b>	
Purpose	Encloses an optional value or set of optional arguments.
Syntax	<b>reset {[config   system]}</b>
Description	In the above syntax example, users have the option to specify <b>config</b> or <b>system</b> . It is not necessary to specify either optional value,

<b>{braces}</b>	
	however the effect of the system reset is dependent on which, if any, value is specified. Therefore, with this example there are three possible outcomes of performing a system reset. See the following chapter, Basic Commands for more details about the reset command.
Example command	<b>reset config</b>

<b>Line Editing Key Usage</b>	
Delete	Deletes the character under the cursor and then shifts the remaining characters in the line to the left.
Backspace	Deletes the character to the left of the cursor and then shifts the remaining characters in the line to the left.
Insert or Ctrl+R	Toggle on and off. When toggled on, inserts text and shifts previous text to the right.
Left Arrow	Moves the cursor to the left.
Right Arrow	Moves the cursor to the right.
Up Arrow	Repeats the previously entered command. Each time the up arrow is pressed, the command previous to that displayed appears. This way it is possible to review the command history for the current session. Use the down arrow to progress sequentially forward through the command history list.
Down Arrow	The down arrow will display the next command in the command history entered in the current session. This displays each command sequentially as it was entered. Use the up arrow to review previous commands.
Tab	Shifts the cursor to the next field to the left.

<b>Multiple Page Display Control Keys</b>	
Space	Displays the next page.
CTRL+c	Stops the display of remaining pages when multiple pages are to be displayed.
ESC	Stops the display of remaining pages when multiple pages are to be displayed.
n	Displays the next page.
p	Displays the previous page.
q	Stops the display of remaining pages when multiple pages are to be displayed.
r	Refreshes the pages currently displayed.
a	Displays the remaining pages without pausing between pages.
Enter	Displays the next line or table entry.

## BASIC SWITCH COMMANDS

The basic switch commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
create account	[admin   user] <username 15>
config account	<username 15>
show account	
delete account	<username 15>
show session	
show switch	
show serial_port	
config serial_port	{baud_rate [9600   19200   38400   115200] auto_logout [never   2_minutes   5_minutes   10_minutes   15_minutes]}
enable clipaging	
disable clipaging	
enable telnet	<tcp_port_number 1-65535>
disable telnet	
telnet	<ipaddr> {tcp_port <value 0-65535>}
enable web	<tcp_port_number 1-65535>
disable web	
save	
reboot	
reset	{[config   system]}
login	
logout	

Each command is listed, in detail, in the following sections.

<b>create account</b>	
<b>Purpose</b>	Used to create user accounts.
<b>Syntax</b>	<b>create [admin   user] &lt;username 15&gt;</b>
<b>Description</b>	The <b>create account</b> command is used to create user accounts that consist of a username of 1 to 15 characters and a password of 0 to 15 characters. Up to 8 user accounts can be created.
<b>Parameters</b>	<i>admin</i> <username> <i>user</i> <username>
<b>Restrictions</b>	Only Administrator-level users can issue this command. Usernames can be between 1 and 15 characters. Passwords can be between 0 and 15 characters.

Example usage:

To create an administrator-level user account with the username “dlink”.

```
DES-3028P:4#create account admin dlink
Command: create account admin dlink

Enter a case-sensitive new password:****
Enter the new password again for confirmation:****

Success.

DES-3028P:4#
```

**NOTICE:** In case of lost passwords or password corruption, please refer to the D-Link website and the White Paper entitled “Password Recovery Procedure”, which will guide you through the steps necessary to resolve this issue.

### config account

<b>Purpose</b>	Used to configure user accounts
<b>Syntax</b>	<b>config account &lt;username&gt;</b>
<b>Description</b>	The <b>config account</b> command configures a user account that has been created using the <b>create account</b> command.
<b>Parameters</b>	<username>
<b>Restrictions</b>	Only Administrator-level users can issue this command. Usernames can be between 1 and 15 characters. Passwords can be between 0 and 15 characters.

Example usage:

To configure the user password of “dlink” account:

```
DES-3028P:4#config account dlink
Command: config account dlink

Enter a old password:****
Enter a case-sensitive new password:****
Enter the new password again for confirmation:****

Success.

DES-3028P:4#
```

### show account

<b>Purpose</b>	Used to display user accounts.
<b>Syntax</b>	<b>show account</b>
<b>Description</b>	Displays all user accounts created on the Switch. Up to 8 user accounts can exist at one time.
<b>Parameters</b>	None.
<b>Restrictions</b>	Only Administrator-level users can issue this command.

Example usage:

To display the accounts that have been created:

```
DES-3028P:4#show account
```

```
Command: show account
```

```
Current Accounts:
```

```
Username      Access Level
```

```
-----  
-----  
dlink         Admin
```

```
Total Entries: 1
```

```
DES-3028P:4#
```

## delete account

<b>Purpose</b>	Used to delete an existing user account.
<b>Syntax</b>	<b>delete account &lt;username&gt;</b>
<b>Description</b>	The <b>delete account</b> command deletes a user account that has been created using the <b>create account</b> command.
<b>Parameters</b>	<username>
<b>Restrictions</b>	Only Administrator-level users can issue this command.

Example usage:

To delete the user account "System":

```
DES-3028P:4#delete account System
```

```
Command: delete account System
```

```
Success.
```

```
DES-3028P:4#
```

## show session

<b>Purpose</b>	Used to display a list of currently logged-in users.
<b>Syntax</b>	<b>show session</b>
<b>Description</b>	This command displays a list of all the users that are logged-in at the time the command is issued.
<b>Parameters</b>	None.
<b>Restrictions</b>	None.

Example usage:

To display the way that the users logged in:

```
DES-3028P:4#show session
Command: show session

ID  Login Time           Live Time From           Level  Name
--  -
8   00000 days 00:00:37   0:3:36:27  Serial Port  4     Anonymous

Total Entries: 1

CTRL+C ESC q Quit SPACE n Next Page p Previous Page r Refresh
```

## show switch

<b>Purpose</b>	Used to display general information about the Switch.
<b>Syntax</b>	<b>show switch</b>
<b>Description</b>	This command displays information about the Switch.
<b>Parameters</b>	None.
<b>Restrictions</b>	Only Administrator-level users can issue this command.

Example usage:

To display the Switch's information:

```
DES-3028P:4#show switch
Command: show switch

Device Type       : DES-3028P Fast Ethernet Switch
MAC Address       : 00-01-02-03-04-00
IP Address        : 10.90.90.91 (Manual)
VLAN Name         : default
Subnet Mask       : 255.0.0.0
Default Gateway   : 0.0.0.0
Boot PROM Version : Build 1.00.B04
Firmware Version  : Build 1.00-B22
Hardware Version  : 1A1G
System Name       : DES-3028P
System Location   : 7th_flr_east_cabinet
System Contact    : Channing_Frye_212-555-6666
Spanning Tree     : Disabled
GVRP              : Disabled
IGMP Snooping    : Disabled
802.1x            : Disabled
TELNET            : Enabled (TCP 23)
WEB               : Enabled (TCP 80)
RMON              : Enabled
SSH               : Enabled
SSL               : Enabled
Clipaging         : Enabled
Syslog Global State : Disabled
Dual Image        : Supported

DES-3028P:4#
```

**show serial\_port**

<b>Purpose</b>	Used to display the current serial port settings.
<b>Syntax</b>	<b>show serial_port</b>
<b>Description</b>	This command displays the current serial port settings.
<b>Parameters</b>	None.
<b>Restrictions</b>	None

Example usage:

To display the serial port setting:

```
DES-3028P:4#show serial_port
Command: show serial_port

Baud Rate      : 9600
Data Bits      : 8
Parity Bits     : None
Stop Bits      : 1
Auto-Logout    : 10 mins

DES-3028P:4#
```

**config serial\_port**

<b>Purpose</b>	Used to configure the serial port.
<b>Syntax</b>	<b>config serial_port {baud_rate [9600   19200   38400   115200]   auto_logout [never   2_minutes   5_minutes   10_minutes   15_minutes]}</b>
<b>Description</b>	This command is used to configure the serial port's baud rate and auto logout settings.
<b>Parameters</b>	<p><i>baud_rate [9600   19200   38400   115200]</i>– The serial bit rate that will be used to communicate with the management host. There are four options: 9600, 19200, 38400, 115200.</p> <p><i>never</i> – No time limit on the length of time the console can be open with no user input.</p> <p><i>2_minutes</i> – The console will log out the current user if there is no user input for 2 minutes.</p> <p><i>5_minutes</i> – The console will log out the current user if there is no user input for 5 minutes.</p> <p><i>10_minutes</i> – The console will log out the current user if there is no user input for 10 minutes.</p> <p><i>15_minutes</i> – The console will log out the current user if there is no user input for 15 minutes.</p>
<b>Restrictions</b>	Only administrator-level users can issue this command.

Example usage:

To configure the baud rate:

```
DES-3028P:4#config serial_port baud_rate 115200
Command: config serial_port baud_rate 115200

Success.

DES-3028P:4#
```

**enable clipaging**

<b>Purpose</b>	Used to pause the scrolling of the console screen when a command displays more than one page.
<b>Syntax</b>	<b>enable clipaging</b>
<b>Description</b>	This command is used when issuing a command which causes the console screen to rapidly scroll through several pages. This command will cause the console to pause at the end of each page. The default setting is enabled.
<b>Parameters</b>	None.
<b>Restrictions</b>	Only administrator-level users can issue this command.

Example usage:

To enable pausing of the screen display when the show command output reaches the end of the page:

```
DES-3028P:4#enable clipaging
Command: enable clipaging

Success.

DES-3028P:4#
```

**disable clipaging**

<b>Purpose</b>	Used to disable the pausing of the console screen scrolling at the end of each page when a command displays more than one screen of information.
<b>Syntax</b>	<b>disable clipaging</b>
<b>Description</b>	This command is used to disable the pausing of the console screen at the end of each page when a command would display more than one screen of information.
<b>Parameters</b>	None.
<b>Restrictions</b>	Only administrator-level users can issue this command.

Example usage:

To disable pausing of the screen display when show command output reaches the end of the page:

```
DES-3028P:4#disable clipaging
Command: disable clipaging

Success.

DES-3028P:4#
```

**enable telnet**

<b>Purpose</b>	Used to enable communication with and management of the Switch using the Telnet protocol.
<b>Syntax</b>	<b>enable telnet &lt;tcp_port_number 1-65535&gt;</b>
<b>Description</b>	This command is used to enable the Telnet protocol on the Switch. The user can specify the TCP or UDP port number the Switch will use to listen for Telnet requests.
<b>Parameters</b>	<tcp_port_number 1-65535> – The TCP port number. TCP ports

**enable telnet**

	are numbered between 1 and 65535. The “well-known” TCP port for the Telnet protocol is 23.
<b>Restrictions</b>	Only administrator-level users can issue this command.

Example usage:

To enable Telnet and configure port number:

```
DES-3028P:4#enable telnet 23
Command: enable telnet 23

Success.

DES-3028P:4#
```

**disable telnet**

<b>Purpose</b>	Used to disable the Telnet protocol on the Switch.
<b>Syntax</b>	<b>disable telnet</b>
<b>Description</b>	This command is used to disable the Telnet protocol on the Switch.
<b>Parameters</b>	None.
<b>Restrictions</b>	Only administrator-level users can issue this command.

Example usage:

To disable the Telnet protocol on the Switch:

```
DES-3028P:4#disable telnet
Command: disable telnet

Success.

DES-3028P:4#
```

**telnet**

<b>Purpose</b>	Used to Telnet another device on the network.
<b>Syntax</b>	<b>telnet &lt;ipaddr&gt; {tcp_port &lt;value 0-65535&gt;}</b>
<b>Description</b>	This command is used to connect to another device’s management through Telnet.
<b>Parameters</b>	<i>&lt;ipaddr&gt;</i> - Enter the IP address of the device to connect through, using Telnet. <i>tcp_port &lt;value 0-65535&gt;</i> - Enter the TCP port number used to connect through. The common TCP port number for telnet is 23.
<b>Restrictions</b>	Only administrator-level users can issue this command.

Example usage:

To connect to a device through telnet with a IP address of 10.53.13.99:

```
DES-3028P:4#telnet 10.53.13.99 tcp_port 23
Command: telnet 10.53.13.99 tcp_port 23
```

**enable web**

<b>Purpose</b>	Used to enable the HTTP-based management software on the Switch.
<b>Syntax</b>	<b>enable web &lt;tcp_port_number 1-65535&gt;</b>
<b>Description</b>	This command is used to enable the Web-based management software on the Switch. The user can specify the TCP port number the Switch will use to listen for Telnet requests.
<b>Parameters</b>	<tcp_port_number 1-65535> – The TCP port number. TCP ports are numbered between 1 and 65535. The “well-known” port for the Web-based management software is 80.
<b>Restrictions</b>	Only administrator-level users can issue this command.

Example usage:

To enable HTTP and configure port number:

```
DES-3028P:4#enable web 80
Command: enable web 80

Note: SSL will be disabled if web is enabled.
Success.

DES-3028P:4#
```

**disable web**

<b>Purpose</b>	Used to disable the HTTP-based management software on the Switch.
<b>Syntax</b>	<b>disable web</b>
<b>Description</b>	This command disables the Web-based management software on the Switch.
<b>Parameters</b>	None.
<b>Restrictions</b>	Only administrator-level users can issue this command.

Example usage:

To disable HTTP:

```
DES-3028P:4#disable web
Command: disable web

Success.

DES-3028P:4#
```

**save**

<b>Purpose</b>	Used to save changes in the Switch’s configuration to non-volatile RAM.
<b>Syntax</b>	<b>save</b>
<b>Description</b>	This command is used to enter the current switch configuration into non-volatile RAM. The saved switch configuration will be loaded into the Switch’s memory each time the Switch is restarted.
<b>Parameters</b>	None

**save**

<b>Restrictions</b>	Only administrator-level users can issue this command.
---------------------	--------------------------------------------------------

Example usage:

To save the Switch's current configuration to non-volatile RAM:

```
DES-3028P:4#save
Command: save

Saving all configurations to NV-RAM... Done.

Success.

DES-3028P:4#
```

**reboot**

<b>Purpose</b>	Used to restart the Switch.
<b>Syntax</b>	<b>reboot</b>
<b>Description</b>	This command is used to restart the Switch.
<b>Parameters</b>	None.
<b>Restrictions</b>	None.

Example usage:

To restart the Switch:

```
DES-3028P:4#reboot
Command: reboot
Are users sure want to proceed with the system reboot? (y/n)
Please wait, the switch is rebooting...
```

**reset**

<b>Purpose</b>	Used to reset the Switch to the factory default settings.
<b>Syntax</b>	<b>reset {[config   system]}</b>
<b>Description</b>	This command is used to restore the Switch's configuration to the default settings assigned from the factory.
<b>Parameters</b>	<p><i>config</i> – If the keyword 'config' is specified, all of the factory default settings are restored on the Switch including the IP address, user accounts, and the switch history log. The Switch will not save or reboot.</p> <p><i>system</i> – If the keyword 'system' is specified all of the factory default settings are restored on the Switch. The Switch will save and reboot after the settings are changed to default. Rebooting will clear all entries in the Forwarding Data Base.</p> <p>If no parameter is specified, the Switch's current IP address, user accounts, and the switch history log are not changed. All other parameters are restored to the factory default settings. The Switch will not save or reboot.</p>
<b>Restrictions</b>	Only administrator-level users can issue this command.

Example usage:

To restore all of the Switch's parameters to their default values:

```
DES-3028P:4#reset config
Command: reset config

Are you sure you want to proceed with system reset?(y/n)

Success.

DES-3028P:4#
```

## login

<b>Purpose</b>	Used to log in a user to the Switch's console.
<b>Syntax</b>	<b>login</b>
<b>Description</b>	This command is used to initiate the login procedure. The user will be prompted for a Username and Password.
<b>Parameters</b>	None.
<b>Restrictions</b>	None.

Example usage:

To initiate the login procedure:

```
DES-3028P:4#login
Command: login

UserName:
```

## logout

<b>Purpose</b>	Used to log out a user from the Switch's console.
<b>Syntax</b>	<b>logout</b>
<b>Description</b>	This command terminates the current user's session on the Switch's console.
<b>Parameters</b>	None.
<b>Restrictions</b>	None.

Example usage:

To terminate the current user's console session:

```
DES-3028P:4#logout
```

## MODIFY BANNER AND PROMPT COMMANDS

Administrator level users can modify the login banner (greeting message) and command prompt by using the commands described below.

Command	Parameters
config command_prompt	[<string 16>   username   default]
config greeting_message	{default}
show greeting_message	
enable greeting_message	
disable greeting_message	

The Modify Banner and Prompt commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<b>config command prompt</b>	
Purpose	Used to configure the command prompt.
Syntax	<b>config command_prompt [&lt;string 16&gt;   username   default]</b>
Description	Administrator level users can use this command to change the command prompt.
Parameters	<p><i>string 16</i> - The command prompt can be changed by entering a new name of no more that 16 characters.</p> <p><i>username</i> - The command prompt will be changed to the login username.</p> <p><i>default</i> - The command prompt will reset to factory default command prompt.</p>
Restrictions	<p>Only administrator-level users can issue this command. Other restrictions include:</p> <ul style="list-style-type: none"> <li>If the “<b>reset/reset config</b>” command is executed, the modified command prompt will remain modified. However, the “<b>reset system</b>” command will reset the command prompt to the original factory banner.</li> </ul>

Example usage

To modify the command prompt to “AtYourService”:

```
DES-3028P:4#config command_prompt AtYourService
Command: config command_prompt AtYourService

Success.

AtYourService:4#
```

### config greeting\_message

Purpose	Used to configure the login banner (greeting message).
Syntax	<b>config greeting_message {default}</b>
Description	Users can use this command to modify the login banner (greeting

**config greeting\_message**

	message).
Parameters	<p><i>default</i> – If the user enters <i>default</i> to the modify banner command, then the banner will be reset to the original factory banner.</p> <p>To open the Banner Editor, click <b>Enter</b> after typing the <b>config greeting_message</b> command. Type the information to be displayed on the banner by using the commands described on the Banner Editor:</p> <p>Quit without save:       Ctrl+C  Save and quit:            Ctrl+W  Move cursor:             Left/Right/Up/Down  Delete line:             Ctrl+D  Erase all setting:        Ctrl+X  Reload original setting:  Ctrl+L</p>
Restrictions	<p>Only administrator-level users can issue this command. Other restrictions include:</p> <ul style="list-style-type: none"> <li>• If the “<b>reset/reset config</b>” command is executed, the modified banner will remain modified. However, the “<b>reset system</b>” command will reset the modified banner to the original factory banner.</li> <li>• The capacity of the banner is 6*80. 6 Lines and 80 characters per line.</li> <li>• Ctrl+W will only save the modified banner in the DRAM. Users need to type the “<b>save</b>” command to save it into FLASH.</li> <li>• Only valid in threshold level.</li> </ul>

Example usage:

To modify the banner to read “Say goodnight, Gracie”:

```
DES-3028P:4# config greeting_message
```

```
Command: config greeting_message
```

```
Greeting Messages Editor
```

```
=====

```

```
up/down   Move cursor
```

```
Ctrl+D    Delete line
```

```
Ctrl+X    Erase all setting
```

```
Ctrl+L    Reload original setting
```

```
=====
```

## show greeting\_message

Purpose	Used to view the currently configured greeting message configured on the Switch.
Syntax	<b>show greeting_message</b>
Description	This command is used to view the currently configured greeting message on the Switch.
Parameters	None.
Restrictions	None.

Example usage:

To view the currently configured greeting message:

```
DES-3028P:4#show greeting_message
Command: show greeting_message

=====

```

## SWITCH PORT COMMANDS

The switch port commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config ports	[<portlist>   all] {medium_type [fiber   copper]} {speed [auto   10_half   10_full   100_half   100_full   1000_full {[master   slave]}]   flow_control [enable   disable]   learning [enable   disable]   state [enable   disable]   [description <desc 1-32>   clear_description]}
show ports	[<portlist>] {description}

Each command is listed, in detail, in the following sections.

### config ports

Purpose	Used to configure the Switch's Ethernet port settings.
Syntax	<b>[&lt;portlist&gt;   all] {medium_type [fiber   copper]} {speed [auto   10_half   10_full   100_half   100_full   1000_full {[master   slave]}]   flow_control [enable   disable]   learning [enable   disable]   state [enable   disable]   [description &lt;desc 1-32&gt;   clear_description]}</b>
Description	This command allows for the configuration of the Switch's Ethernet ports. Only the ports listed in the <portlist> will be affected.
Parameters	<p><i>all</i> – Configure all ports on the Switch.</p> <p>&lt;portlist&gt; – Specifies a port or range of ports to be configured.</p> <p><i>medium_type [fiber   copper]</i> – This applies only to the Combo ports. If configuring the Combo ports this defines the type of transport medium used.</p> <p><i>speed</i> – Allows the user to adjust the speed for a port or range of ports. The user has a choice of the following:</p> <ul style="list-style-type: none"> <li>• <i>auto</i> – Enables auto-negotiation for the specified range of ports.</li> <li>• <i>[10   100   1000]</i> – Configures the speed in Mbps for the specified range of ports. Gigabit ports are statically set to 1000 and cannot be set to slower speeds.</li> <li>• <i>[half   full]</i> – Configures the specified range of ports as either full-duplex or half-duplex.</li> <li>• <i>[master   slave]</i> - The master setting (1000M/Full_M) will allow the port to advertise capabilities related to duplex, speed and physical layer type. The master setting will also determine the master and slave relationship between the two connected physical layers. This relationship is necessary for establishing the timing control between the two physical layers. The timing control is set on a master physical layer by a local source. The slave setting (1000M/Full_S) uses loop timing, where the timing comes from a data stream received from the master. If one connection is set for 1000M/Full_M, the other side of the connection must be set for 1000M/Full_S. Any other configuration will result in a link down status for both ports.</li> </ul> <p><i>flow_control [enable   disable]</i> – Enable or disable flow control for the specified ports.</p> <p><i>learning [enable   disable]</i> – Enables or disables the MAC address learning on the specified range of ports.</p> <p><i>state [enable   disable]</i> – Enables or disables the specified range of ports.</p> <p><i>description &lt;desc 32&gt;</i> - Enter an alphanumeric string of no more than 32 characters to describe a selected port interface.</p> <p><i>clear_description</i> - Enter this command to clear the port description of the selected port(s).</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure the speed of port 3 to be 10 Mbps, full duplex, with learning and state enabled:

```
DES-3028P:4#config ports 1-3 speed 10_full state enable
Command: config ports 1-3 speed 10_full state enable

Success.

DES-3028P:4#
```

## show ports

<b>Purpose</b>	Used to display the current configuration of a range of ports.
<b>Syntax</b>	<b>show ports</b> [<portlist>] {description   err_disabled}
<b>Description</b>	This command is used to display the current configuration of a range of ports.
<b>Parameters</b>	<p>&lt;portlist&gt; – Specifies a port or range of ports to be displayed.</p> <p>{description} – Adding this parameter to the <b>show ports</b> command indicates that a previously entered port description will be included in the display.</p> <p>err_disabled – Use this to list disabled ports including connection status and reason for being disabled.</p>
<b>Restrictions</b>	None.

Example usage:

To display the configuration of all ports on a standalone switch:

```
DES-3028P:4#show ports
Command show ports
```

Port	Port State	Settings Speed/Duplex/FlowCtrl	Connection Speed/Duplex/FlowCtrl	Address Learning

## PORT SECURITY COMMANDS

The Switch's port security commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config port_security ports	[<auth_portlist>   all] {admin_state [enable  disable]   max_learning_addr <max_lock_no 0-16>   lock_address_mode [DeleteOnTimeout   DeleteOnReset   Permanent]}
delete port_security entry	vlan_name <vlan_name 32> mac_address <macaddr> port <auth_port>
clear port_security_entry	port <auth_portlist>
show port_security	{ports <auth_portlist>}
enable port_security trap_log	
disable port_security trap_log	

Each command is listed, in detail, in the following sections.

<b>config port_security ports</b>	
<b>Purpose</b>	Used to configure port security settings.
<b>Syntax</b>	<b>config port_security ports</b> [<auth_portlist>   all ] {admin_state [enable  disable]   max_learning_addr <max_lock_no 0-16>   lock_address_mode [Permanent   DeleteOnTimeout   DeleteOnReset]}
<b>Description</b>	This command allows for the configuration of the port security feature. Only the ports listed in the <auth_portlist> are affected.
<b>Parameters</b>	<p><i>auth_portlist</i> – Specifies a port or range of ports to be configured.</p> <p><i>all</i> – Configure port security for all ports on the Switch.</p> <p><i>admin_state</i> [enable   disable] – Enable or disable port security for the listed ports.</p> <p><i>max_learning_addr</i> &lt;max_lock_no 0-16&gt; - Use this to limit the number of MAC addresses dynamically listed in the FDB for the ports.</p> <p><i>lock_address_mode</i> [Permanent   DeleteOnTimeout   DeleteOnReset] – Indicates the method of locking addresses. The user has three choices:</p> <ul style="list-style-type: none"> <li>▪ <i>Permanent</i> – The locked addresses will not age out after the aging timer expires.</li> <li>▪ <i>DeleteOnTimeout</i> – The locked addresses will age out after the aging timer expires.</li> <li>▪ <i>DeleteOnReset</i> – The locked addresses will not age out until the Switch has been reset.</li> </ul>
<b>Restrictions</b>	Only administrator-level users can issue this command.

Example usage:

To configure the port security:

```
DES-3028P:4#config port_security ports 1-5 admin_state enable
max_learning_addr 5 lock_address_mode DeleteOnReset
Command: config port_security ports 1-5 admin_state enable
max_learning_addr 5 lock_address_mode DeleteOnReset

Success.

DES-3028P:4#
```

## delete port\_security\_entry

<b>Purpose</b>	Used to delete a port security entry by MAC address, port number and VLAN ID.
<b>Syntax</b>	<b>delete port_security_entry vlan name &lt;vlan_name 32&gt; mac_address &lt;macaddr&gt; port &lt;auth_port&gt;</b>
<b>Description</b>	This command is used to delete a single, previously learned port security entry by port, VLAN name, and MAC address.
<b>Parameters</b>	<i>vlan name &lt;vlan_name 32&gt;</i> - Enter the corresponding VLAN name of the port to delete. <i>mac_address &lt;macaddr&gt;</i> - Enter the corresponding MAC address, previously learned by the port, to delete. <i>port &lt;auth_port&gt;</i> - Enter the port number which has learned the previously entered MAC address.
<b>Restrictions</b>	Only administrator-level users can issue this command.

Example usage:

To delete a port security entry:

```
DES-3028P:4#delete port_security_entry vlan_name default
mac_address 00-01-30-10-2C-C7 port 6
Command: delete port_security_entry vlan_name default
mac_address 00-01-30-10-2C-C7 port 6

Success.

DES-3028P:4#
```

## clear port\_security\_entry

<b>Purpose</b>	Used to clear MAC address entries learned from a specified port for the port security function.
<b>Syntax</b>	<b>clear port_security_entry ports &lt;auth_portlist&gt;</b>
<b>Description</b>	This command is used to clear MAC address entries which were learned by the Switch by a specified port. This command only relates to the port security function.
<b>Parameters</b>	<i>&lt;auth_portlist&gt;</i> – Specifies a port or port range to clear.
<b>Restrictions</b>	Only administrator-level users can issue this command.

Example usage:

To clear a port security entry by port:

```
DES-3028P:4# clear port_security_entry port 6
Command: clear port_security_entry port 6

Success.

DES-3028P:4#
```

## show port\_security

<b>Purpose</b>	Used to display the current port security configuration.
<b>Syntax</b>	<b>show port_security {ports &lt;auth_portlist&gt;}</b>
<b>Description</b>	This command is used to display port security information of the Switch's ports. The information displayed includes port security, admin state, maximum number of learning address and lock mode.
<b>Parameters</b>	<auth_portlist> – Specifies a port or range of ports to be viewed.
<b>Restrictions</b>	None.

Example usage:

To display the port security configuration:

```
DES-3028P:4#show port_security ports 1-5
Command: show port_security ports 1-5

Port_security Trap/Log : Disabled
Port Admin State Max. Learning Addr. Lock Address Mode
----
1 Disabled 1 DeleteOnReset
2 Disabled 1 DeleteOnReset
3 Disabled 1 DeleteOnReset
4 Disabled 1 DeleteOnReset
5 Disabled 1 DeleteOnReset

CTRL+C ESC q Quit SPACE n Next Page p Previous Page r Refresh
```

## enable port\_security trap\_log

<b>Purpose</b>	Used to enable the trap log for port security.
<b>Syntax</b>	<b>enable port_security trap_log</b>
<b>Description</b>	This command, along with the <b>disable port_security trap_log</b> , will enable and disable the sending of log messages to the Switch's log and SNMP agent when the port security of the Switch has been triggered.
<b>Parameters</b>	None.
<b>Restrictions</b>	None.

Example usage:

To enable the port security trap log setting:

```
DES-3028P:4#enable port_security trap_log
Command: enable port_security trap_log

Success.

DES-3028P:4#
```

**disable port\_security trap\_log**

<b>Purpose</b>	Used to disable the trap log for port security.
<b>Syntax</b>	<b>disable port_security trap_log</b>
<b>Description</b>	This command, along with the <b>enable port_security trap_log</b> , will enable and disable the sending of log messages to the Switch's log and SNMP agent when the port security of the Switch has been triggered.
<b>Parameters</b>	None.
<b>Restrictions</b>	None.

Example usage:

To enable the port security trap log setting:

```
DES-3028P:4#enable port_security trap_log
Command: enable port_security trap_log

Success.

DES-3028P:4#
```

## NETWORK MANAGEMENT (SNMP) COMMANDS

The DES-3028/28P/52/52P support the Simple Network Management Protocol (SNMP) versions 1, 2c, and 3. Users can specify which version of the SNMP users want to use to monitor and control the Switch. The three versions of SNMP vary in the level of security provided between the management station and the network device. The following table lists the security features of the three SNMP versions:

SNMP Version	Authentication Method	Description
v1	Community String	Community String is used for authentication – NoAuthNoPriv
v2c	Community String	Community String is used for authentication – NoAuthNoPriv
v3	Username	Username is used for authentication – NoAuthNoPriv
v3	MD5 or SHA	Authentication is based on the HMAC-MD5 or HMAC-SHA algorithms – AuthNoPriv
v3	MD5 DES or SHA DES	Authentication is based on the HMAC-MD5 or HMAC-SHA algorithms – AuthPriv. DES 56-bit encryption is added based on the CBC-DES (DES-56) standard

The network management commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
create snmp user	<SNMP_name 32> <groupname 32> {encrypted [by_password auth [md5 <auth_password 8-16 >   sha <auth_password 8-20>] priv [none   des <priv_password 8-16>]   by_key auth [md5 <auth_key 32-32>   sha <auth_key 40-40>] priv [none   des <priv_key 32-32>]]}
delete snmp user	<SNMP_name 32>
show snmp user	
create snmp view	<view_name 32> <oid> view_type [included   excluded]
delete snmp view	<view_name 32> [all   oid]
show snmp view	<view_name 32>
create snmp community	<community_string 32> view <view_name 32> [read_only   read_write]
delete snmp community	<community_string 32>
show snmp community	<community_string 32>
config snmp engineID	<snmp_engineID 10-64>
show snmp engineID	
create snmp group	<groupname 32> {v1   v2c   v3 [noauth_nopriv   auth_nopriv   auth_priv]} {read_view <view_name 32>   write_view <view_name 32>   notify_view <view_name 32>}
delete snmp group	<groupname 32>
show snmp groups	
create snmp host	<ipaddr> {v1   v2c   v3 [noauth_nopriv   auth_nopriv   auth_priv]} <auth_string 32>

Command	Parameters
delete snmp host	<ipaddr>
show snmp host	<ipaddr>
create trusted_host	<ipaddr>
delete trusted_host	<ipaddr>
show trusted_host	<ipaddr>
enable snmp traps	
enable snmp authenticate traps	
show snmp traps	
disable snmp traps	
disable snmp authenticate traps	
config snmp system_contact	<sw_contact>
config snmp system_location	<sw_location>
config snmp system_name	<sw_name>
enable rmon	
disable rmon	

Each command is listed, in detail, in the following sections.

## create snmp user

<b>Purpose</b>	Used to create a new SNMP user and adds the user to an SNMP group that is also created by this command.
<b>Syntax</b>	<b>create snmp user &lt;SNMP_name 32&gt; &lt;groupname 32&gt; {encrypted [by_password auth [md5 &lt;auth_password 8-16&gt;   sha &lt;auth_password 8-20&gt;] priv [none   des &lt;priv_password 8-16&gt;]   by_key auth [md5 &lt;auth_key 32-32&gt;   sha &lt;auth_key 40-40&gt;] priv [none   des &lt;priv_key 32-32&gt;]]}</b>
<b>Description</b>	<p>The <b>create snmp user</b> command creates a new SNMP user and adds the user to an SNMP group that is also created by this command. SNMP ensures:</p> <p>Message integrity – Ensures that packets have not been tampered with during transit.</p> <p>Authentication – Determines if an SNMP message is from a valid source.</p> <p>Encryption – Scrambles the contents of messages to prevent it from being viewed by an unauthorized source.</p>
<b>Parameters</b>	<p><b>&lt;SNMP_name 32&gt;</b> – An alphanumeric name of up to 32 characters that will identify the new SNMP user.</p> <p><b>&lt;groupname 32&gt;</b> – An alphanumeric name of up to 32 characters that will identify the SNMP group the new SNMP user will be associated with.</p> <p><b>encrypted</b> – Allows the user to choose a type of authorization for authentication using SNMP. The user may choose:</p> <ul style="list-style-type: none"> <li><b>by_password</b> – Requires the SNMP user to enter a password for authentication and privacy. The password is defined by specifying the <b>auth_password</b> below. This method is recommended.</li> <li><b>by_key</b> – Requires the SNMP user to enter a encryption key for authentication and privacy. The key is defined by specifying the key in hex form below. This method is not recommended.</li> </ul> <p><b>auth</b> - The user may also choose the type of authentication algorithms used to authenticate the snmp user. The choices are:</p> <ul style="list-style-type: none"> <li><b>md5</b> – Specifies that the HMAC-MD5-96 authentication level will be used. md5 may be utilized by entering one of the following:</li> </ul>

**create snmp user**

- *<auth\_password 8-16>* - An alphanumeric string of between 8 and 16 characters that will be used to authorize the agent to receive packets for the host.
  - *<auth\_key 32-32>* - Enter an alphanumeric string of exactly 32 characters, in hex form, to define the key that will be used to authorize the agent to receive packets for the host.
  - *sha* – Specifies that the HMAC-SHA-96 authentication level will be used.
    - *<auth\_password 8-20>* - An alphanumeric string of between 8 and 20 characters that will be used to authorize the agent to receive packets for the host.
    - *<auth\_key 40-40>* - Enter an alphanumeric string of exactly 40 characters, in hex form, to define the key that will be used to authorize the agent to receive packets for the host.
- priv* – Adding the *priv* (privacy) parameter will allow for encryption in addition to the authentication algorithm for higher security. The user may choose:
- *des* – Adding this parameter will allow for a 56-bit encryption to be added using the DES-56 standard using:
    - *<priv\_password 8-16>* - An alphanumeric string of between 8 and 16 characters that will be used to encrypt the contents of messages the host sends to the agent.
    - *<priv\_key 32-32>* - Enter an alphanumeric key string of exactly 32 characters, in hex form, that will be used to encrypt the contents of messages the host sends to the agent.
  - *none* – Adding this parameter will add no encryption.

**Restrictions** Only administrator-level users can issue this command.

Example usage:

To create an SNMP user on the Switch:

```
DES-3028P:4#create snmp user dlink default encrypted by_password auth md5
canadian priv none
Command: create snmp user dlink default encrypted by_password auth md5
canadian priv none

Success.

DES-3028P:4#
```

**delete snmp user**

<b>Purpose</b>	Used to remove an SNMP user from an SNMP group and also to delete the associated SNMP group.
<b>Syntax</b>	<b>delete snmp user &lt;SNMP_name 32&gt;</b>
<b>Description</b>	The <b>delete snmp user</b> command removes an SNMP user from its SNMP group and then deletes the associated SNMP group.
<b>Parameters</b>	<i>&lt;SNMP_name 32&gt;</i> – An alphanumeric string of up to 32 characters that identifies the SNMP user that will be deleted.
<b>Restrictions</b>	Only administrator-level users can issue this command.

Example usage:

To delete a previously entered SNMP user on the Switch:

```
DES-3028P:4#delete snmp user dlink
Command: delete snmp user dlink

Success.

DES-3028P:4#
```

## show snmp user

Purpose	Used to display information about each SNMP username in the SNMP group username table.
Syntax	<b>show snmp user</b>
Description	The <b>show snmp user</b> command displays information about each SNMP username in the SNMP group username table.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To display the SNMP users currently configured on the Switch:

```
DES-3028P:4#show snmp user
Command: show snmp user

Username  Group Name  SNMP Version  Auth-Protocol  PrivProtocol
-----
initial   initial     V3            None           None

Total Entries: 1

DES-3028P:4#
```

## create snmp view

Purpose	Used to assign views to community strings to limit which MIB objects and SNMP manager can access.
Syntax	<b>create snmp view &lt;view_name 32&gt; &lt;oid&gt; view_type [included   excluded]</b>
Description	The <b>create snmp view</b> command assigns views to community strings to limit which MIB objects an SNMP manager can access.
Parameters	<p><b>&lt;view_name 32&gt;</b> – An alphanumeric string of up to 32 characters that identifies the SNMP view that will be created.</p> <p><b>&lt;oid&gt;</b> – The object ID that identifies an object tree (MIB tree) that will be included or excluded from access by an SNMP manager.</p> <p><b>view type</b> – Sets the view type to be:</p> <ul style="list-style-type: none"> <li><i>included</i> – Include this object in the list of objects that an SNMP manager can access.</li> <li><i>excluded</i> – Exclude this object from the list of objects that an SNMP manager can access.</li> </ul>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To create an SNMP view:

```
DES-3028P:4#create snmp view dlinkview 1.3.6 view_type included
Command: create snmp view dlinkview 1.3.6 view_type included

Success.

DES-3028P:4#
```

### delete snmp view

Purpose	Used to remove an SNMP view entry previously created on the Switch.
Syntax	<b>delete snmp view &lt;view_name 32&gt; [all   &lt;oid&gt;]</b>
Description	The <b>delete snmp view</b> command is used to remove an SNMP view previously created on the Switch.
Parameters	<p><i>&lt;view_name 32&gt;</i> – An alphanumeric string of up to 32 characters that identifies the SNMP view to be deleted.</p> <p><i>all</i> – Specifies that all of the SNMP views on the Switch will be deleted.</p> <p><i>&lt;oid&gt;</i> – The object ID that identifies an object tree (MIB tree) that will be deleted from the Switch.</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To delete a previously configured SNMP view from the Switch:

```
DES-3028P:4#delete snmp view dlinkview all
Command: delete snmp view dlinkview all

Success.

DES-3028P:4#
```

### show snmp view

Purpose	Used to display an SNMP view previously created on the Switch.
Syntax	<b>show snmp view {&lt;view_name 32&gt;}</b>
Description	The <b>show snmp view</b> command displays an SNMP view previously created on the Switch.
Parameters	<i>&lt;view_name 32&gt;</i> – An alphanumeric string of up to 32 characters that identifies the SNMP view that will be displayed.
Restrictions	None.

Example usage:

To display SNMP view configuration:

**DES-3028P:4#show snmp view**  
**Command: show snmp view**

**Vacm View Table Settings**

<b>View Name</b>	<b>Subtree</b>	<b>View Type</b>
-----	-----	-----
<b>ReadView</b>	<b>1</b>	<b>Included</b>
<b>WriteView</b>	<b>1</b>	<b>Included</b>
<b>NotifyView</b>	<b>1.3.6</b>	<b>Included</b>
<b>restricted</b>	<b>1.3.6.1.2.1.1</b>	<b>Included</b>
<b>restricted</b>	<b>1.3.6.1.2.1.11</b>	<b>Included</b>
<b>restricted</b>	<b>1.3.6.1.6.3.10.2.1</b>	<b>Included</b>
<b>restricted</b>	<b>1.3.6.1.6.3.11.2.1</b>	<b>Included</b>
<b>restricted</b>	<b>1.3.6.1.6.3.15.1.1</b>	<b>Included</b>
<b>CommunityView</b>	<b>1</b>	<b>Included</b>
<b>CommunityView</b>	<b>1.3.6.1.6.3</b>	<b>Excluded</b>
<b>CommunityView</b>	<b>1.3.6.1.6.3.1</b>	<b>Included</b>

**Total Entries: 11**

**DES-3028P:4#**

## create snmp community

Purpose	Used to create an SNMP community string to define the relationship between the SNMP manager and an agent. The community string acts like a password to permit access to the agent on the Switch. One or more of the following characteristics can be associated with the community string: An Access List of IP addresses of SNMP managers that are permitted to use the community string to gain access to the Switch's SNMP agent. An MIB view that defines the subset of all MIB objects that will be accessible to the SNMP community. <i>read_write</i> or <i>read_only</i> level permission for the MIB objects accessible to the SNMP community.
Syntax	<b>create snmp community &lt;community_string 32&gt; view &lt;view_name 32&gt; [read_only   read_write]</b>
Description	The <b>create snmp community</b> command is used to create an SNMP community string and to assign access-limiting characteristics to this community string.
Parameters	<i>&lt;community_string 32&gt;</i> – An alphanumeric string of up to 32 characters that is used to identify members of an SNMP community. This string is used like a password to give remote SNMP managers access to MIB objects in the Switch's SNMP agent. <i>view &lt;view_name 32&gt;</i> – An alphanumeric string of up to 32 characters that is used to identify the group of MIB objects that a remote SNMP manager is allowed to access on the Switch. <i>read_only</i> – Specifies that SNMP community members using the community string created with this command can only read the contents of the MIBs on the Switch. <i>read_write</i> – Specifies that SNMP community members using the community string created with this command can read from and write to the contents of the MIBs on the Switch.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To create the SNMP community string "dlink:"

```
DES-3028P:4#create snmp community dlink view ReadView read_write
Command: create snmp community dlink view ReadView read_write
```

```
Success.
```

```
DES-3028P:4#
```

## delete snmp community

Purpose	Used to remove a specific SNMP community string from the Switch.
Syntax	<b>delete snmp community &lt;community_string 32&gt;</b>
Description	The <b>delete snmp community</b> command is used to remove a previously defined SNMP community string from the Switch.
Parameters	<community_string 32> – An alphanumeric string of up to 32 characters that is used to identify members of an SNMP community. This string is used like a password to give remote SNMP managers access to MIB objects in the Switch's SNMP agent.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To delete the SNMP community string "dlink:"

```
DES-3028P:4#delete snmp community dlink
Command: delete snmp community dlink
```

```
Success.
```

```
DES-3028P:4#
```

## show snmp community

Purpose	Used to display SNMP community strings configured on the Switch.
Syntax	<b>show snmp community {&lt;community_string 32&gt;}</b>
Description	The <b>show snmp community</b> command is used to display SNMP community strings that are configured on the Switch.
Parameters	<community_string 32> – An alphanumeric string of up to 32 characters that is used to identify members of an SNMP community. This string is used like a password to give remote SNMP managers access to MIB objects in the Switch's SNMP agent.
Restrictions	None.

Example usage:

To display the currently entered SNMP community strings:

```

DES-3028P:4#show snmp community
Command: show snmp community

SNMP Community Table

Community Name      View Name          Access Right
-----
private            CommunityView     read_write
public            CommunityView     read_only
dlink              ReadView          read_write

Total Entries: 3

DES-3028P:4#

```

## config snmp engineID

Purpose	Used to configure a name for the SNMP engine on the Switch.
Syntax	<b>config snmp engineID &lt;snmp_engineID&gt;</b>
Description	The <b>config snmp engineID</b> command configures a name for the SNMP engine on the Switch.
Parameters	<snmp_engineID> – An alphanumeric string that will be used to identify the SNMP engine on the Switch.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To give the SNMP agent on the Switch the name “0035636666”

```

DES-3028P:4#config snmp engineID 0035636666
Command: config snmp engineID 0035636666

Success.

DES-3028P:4#

```

## show snmp engineID

Purpose	Used to display the identification of the SNMP engine on the Switch.
Syntax	<b>show snmp engineID</b>
Description	The <b>show snmp engineID</b> command displays the identification of the SNMP engine on the Switch.
Parameters	None.
Restrictions	None.

Example usage:

To display the current name of the SNMP engine on the Switch:

```

DES-3028P:4#show snmp engineID
Command: show snmp engineID

SNMP Engine ID : 0035636666

DES-3028P:4#

```

**create snmp group**

<b>Purpose</b>	Used to create a new SNMP group, or a table that maps SNMP users to SNMP views.
<b>Syntax</b>	<b>create snmp group &lt;groupname 32&gt; [v1   v2c   v3 [noauth_nopriv   auth_nopriv   auth_priv]] {read_view &lt;view_name 32&gt;   write_view &lt;view_name 32&gt;   notify_view &lt;view_name 32&gt;}</b>
<b>Description</b>	The <b>create snmp group</b> command creates a new SNMP group, or a table that maps SNMP users to SNMP views.
<b>Parameters</b>	<p><i>&lt;groupname 32&gt;</i> – An alphanumeric name of up to 32 characters that will identify the SNMP group the new SNMP user will be associated with.</p> <p><i>v1</i> – Specifies that SNMP version 1 will be used. The Simple Network Management Protocol (SNMP), version 1, is a network management protocol that provides a means to monitor and control network devices.</p> <p><i>v2c</i> – Specifies that SNMP version 2c will be used. The SNMP v2c supports both centralized and distributed network management strategies. It includes improvements in the Structure of Management Information (SMI) and adds some security features.</p> <p><i>v3</i> – Specifies that the SNMP version 3 will be used. SNMP v3 provides secure access to devices through a combination of authentication and encrypting packets over the network. SNMP v3 adds:</p> <ul style="list-style-type: none"> <li>• Message integrity – Ensures that packets have not been tampered with during transit.</li> <li>• Authentication – Determines if an SNMP message is from a valid source.</li> <li>• Encryption – Scrambles the contents of messages to prevent it being viewed by an unauthorized source.</li> </ul> <p><i>noauth_nopriv</i> – Specifies that there will be no authorization and no encryption of packets sent between the Switch and a remote SNMP manager.</p> <p><i>auth_nopriv</i> – Specifies that authorization will be required, but there will be no encryption of packets sent between the Switch and a remote SNMP manager.</p> <p><i>auth_priv</i> – Specifies that authorization will be required, and that packets sent between the Switch and a remote SNMP manager will be encrypted.</p> <p><i>read_view</i> – Specifies that the SNMP group being created can request SNMP messages.</p> <p><i>write_view</i> – Specifies that the SNMP group being created has write privileges.</p> <p><i>notify_view</i> – Specifies that the SNMP group being created can receive SNMP trap messages generated by the Switch's SNMP agent.</p> <ul style="list-style-type: none"> <li>• <i>&lt;view_name 32&gt;</i> – An alphanumeric string of up to 32 characters that is used to identify the group of MIB objects that a remote SNMP manager is allowed to access on the Switch.</li> </ul>
<b>Restrictions</b>	Only administrator-level users can issue this command.

Example usage:

To create an SNMP group named "sg1:"

```
DES-3028P:4#create snmp group sg1 v3 noauth_nopriv read_view v1
write_view v1 notify_view v1
Command: create snmp group sg1 v3 noauth_nopriv read_view v1
write_view v1 notify_view v1

Success.

DES-3028P:4#
```

## delete snmp group

<b>Purpose</b>	Used to remove an SNMP group from the Switch.
<b>Syntax</b>	<b>delete snmp group &lt;groupname 32&gt;</b>
<b>Description</b>	The <b>delete snmp group</b> command is used to remove an SNMP group from the Switch.
<b>Parameters</b>	<i>&lt;groupname 32&gt;</i> – An alphanumeric name of up to 32 characters that will identify the SNMP group the new SNMP user will be associated with.
<b>Restrictions</b>	Only administrator-level users can issue this command.

Example usage:

To delete the SNMP group named “sg1”.

```
DES-3028P:4#delete snmp group sg1
Command: delete snmp group sg1

Success.

DES-3028P:4#
```

## show snmp groups

<b>Purpose</b>	Used to display the group-names of SNMP groups currently configured on the Switch. The security model, level, and status of each group are also displayed.
<b>Syntax</b>	<b>show snmp groups</b>
<b>Description</b>	The <b>show snmp groups</b> command displays the group-names of SNMP groups currently configured on the Switch. The security model, level, and status of each group are also displayed.
<b>Parameters</b>	None.
<b>Restrictions</b>	None.

Example usage:

To display the currently configured SNMP groups on the Switch:

```

DES-3028P:4#show snmp groups
Command: show snmp groups
Vacm Access      Table Settings

Group Name       : Group3
ReadView Name    : ReadView
WriteView Name   : WriteView
Notify View Name : NotifyView
Security Model   : SNMPv3
Security Level   : NoAuthNoPriv

Group Name       : Group4
ReadView Name    : ReadView
WriteView Name   : WriteView
Notify View Name : NotifyView
Security Model   : SNMPv3
Security Level   : authNoPriv

Group Name       : Group5
ReadView Name    : ReadView
WriteView Name   : WriteView
Notify View Name : NotifyView
Security Model   : SNMPv3
Security Level   : authNoPriv

Group Name       : initial
ReadView Name    : restricted
WriteView Name   :
Notify View Name : restricted
Security Model   : SNMPv3
Security Level   : NoAuthNoPriv

Group Name       : ReadGroup
ReadView Name    : CommunityView
WriteView Name   :
Notify View Name : CommunityView
Security Model   : SNMPv1
Security Level   : NoAuthNoPriv

Total Entries: 5

DES-3028P:4#

```

## create snmp host

Purpose	Used to create a recipient of SNMP traps generated by the Switch's SNMP agent.
Syntax	<b>create snmp host</b> <ipaddr> [v1   v2c   v3 [noauth_nopriv   auth_nopriv   auth_priv] <auth_string 32>]
Description	The <b>create snmp host</b> command creates a recipient of SNMP traps generated by the Switch's SNMP agent.
Parameters	<p>&lt;ipaddr&gt; – The IP address of the remote management station that will serve as the SNMP host for the Switch.</p> <p>v1 – Specifies that SNMP version 1 will be used. The Simple Network Management Protocol (SNMP), version 1, is a network management protocol that provides a means to monitor and control network devices.</p> <p>v2c – Specifies that SNMP version 2c will be used. The SNMP v2c supports both centralized and distributed network management</p>

## create snmp host

strategies. It includes improvements in the Structure of Management Information (SMI) and adds some security features.

**v3** – Specifies that the SNMP version 3 will be used. SNMP v3 provides secure access to devices through a combination of authentication and encrypting packets over the network. SNMP v3 adds:

- Message integrity – ensures that packets have not been tampered with during transit.
- Authentication – determines if an SNMP message is from a valid source.
- Encryption – scrambles the contents of messages to prevent it being viewed by an unauthorized source.

**noauth\_nopriv** – Specifies that there will be no authorization and no encryption of packets sent between the Switch and a remote SNMP manager.

**auth\_nopriv** – Specifies that authorization will be required, but there will be no encryption of packets sent between the Switch and a remote SNMP manager.

**auth\_priv** – Specifies that authorization will be required, and that packets sent between the Switch and a remote SNMP manager will be encrypted.

- **<auth\_sting 32>** – An alphanumeric string used to authorize a remote SNMP manager to access the Switch's SNMP agent.

Restrictions

Only administrator-level users can issue this command.

Example usage:

To create an SNMP host to receive SNMP messages:

```
DES-3028P:4#create snmp host 10.48.74.100 v3 auth_priv public
Command: create snmp host 10.48.74.100 v3 auth_priv public
```

```
Success.
```

```
DES-3028P:4#
```

## delete snmp host

Purpose	Used to remove a recipient of SNMP traps generated by the Switch's SNMP agent.
Syntax	<b>delete snmp host &lt;ipaddr&gt;</b>
Description	The <b>delete snmp host</b> command deletes a recipient of SNMP traps generated by the Switch's SNMP agent.
Parameters	<b>&lt;ipaddr&gt;</b> – The IP address of a remote SNMP manager that will receive SNMP traps generated by the Switch's SNMP agent.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To delete an SNMP host entry:

```
DES-3028P:4#delete snmp host 10.48.74.100
Command: delete snmp host 10.48.74.100

Success.

DES-3028P:4#
```

## show snmp host

Purpose	Used to display the recipient of SNMP traps generated by the Switch's SNMP agent.
Syntax	<b>show snmp host</b> {<ipaddr>}
Description	The <b>show snmp host</b> command is used to display the IP addresses and configuration information of remote SNMP managers that are designated as recipients of SNMP traps that are generated by the Switch's SNMP agent.
Parameters	<ipaddr> – The IP address of a remote SNMP manager that will receive SNMP traps generated by the Switch's SNMP agent.
Restrictions	None.

Example usage:

To display the currently configured SNMP hosts on the Switch:

```
DES-3028P:4#show snmp host
Command: show snmp host

SNMP Host Table
Host IP Address  SNMP Version  Community Name/SNMPv3 User Name
-----
10.48.76.23      V2c           private
10.48.74.100    V3  authpriv   public

Total Entries: 2

DES-3028P:4#
```

## create trusted\_host

Purpose	Used to create the trusted host.
Syntax	<b>create trusted_host</b> <ipaddr>
Description	The <b>create trusted_host</b> command creates the trusted host. The Switch allows users to specify up to four IP addresses that are allowed to manage the Switch via in-band SNMP or TELNET based management software. These IP addresses must be members of the Management VLAN. If no IP addresses are specified, then there is nothing to prevent any IP address from accessing the Switch, provided the user knows the Username and Password.
Parameters	<ipaddr> – The IP address of the trusted host to be created.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To create the trusted host:

```
DES-3028P:4#create trusted_host 10.48.74.121
Command: create trusted_host 10.48.74.121

Success.

DES-3028P:4#
```

## show trusted\_host

Purpose	Used to display a list of trusted hosts entered on the Switch using the <b>create trusted_host</b> command above.
Syntax	<b>show trusted_host &lt;ipaddr&gt;</b>
Description	This command is used to display a list of trusted hosts entered on the Switch using the <b>create trusted_host</b> command above.
Parameters	<ipaddr> – The IP address of the trusted host.
Restrictions	None.

Example Usage:

To display the list of trust hosts:

```
DES-3028P:4#show trusted_host
Command: show trusted_host

Management Stations

IP Address
-----
10.53.13.94

Total Entries: 1

DES-3028P:4#
```

## delete trusted\_host

Purpose	Used to delete a trusted host entry made using the <b>create trusted_host</b> command above.
Syntax	<b>delete trusted_host &lt;ipaddr&gt;</b>
Description	This command is used to delete a trusted host entry made using the <b>create trusted_host</b> command above.
Parameters	<ipaddr> – The IP address of the trusted host.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To delete a trusted host with an IP address 10.48.74.121:

```
DES-3028P:4#delete trusted_host 10.48.74.121
Command: delete trusted_host 10.48.74.121

Success.

DES-3028P:4#
```

**enable snmp traps**

Purpose	Used to enable SNMP trap support.
Syntax	<b>enable snmp traps</b>
Description	The <b>enable snmp traps</b> command is used to enable SNMP trap support on the Switch.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To enable SNMP trap support on the Switch:

```
DES-3028P:4#enable snmp traps
Command: enable snmp traps

Success.

DES-3028P:4#
```

**enable snmp authenticate traps**

Purpose	Used to enable SNMP authentication trap support.
Syntax	<b>enable snmp authenticate traps</b>
Description	This command is used to enable SNMP authentication trap support on the Switch.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example Usage:

To turn on SNMP authentication trap support:

```
DES-3028P:4#enable snmp authenticate traps
Command: enable snmp authenticate traps

Success.

DES-3028P:4#
```

**show snmp traps**

Purpose	Used to show SNMP trap support on the Switch .
Syntax	<b>show snmp traps</b>
Description	This command is used to view the SNMP trap support status currently configured on the Switch.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To view the current SNMP trap support:

```
DES-3028P:4#show snmp traps
```

```
Command: show snmp traps
```

```
SNMP Traps      : Enabled
```

```
Authenticate Traps : Enabled
```

```
DES-3028P:4#
```

## disable snmp traps

Purpose	Used to disable SNMP trap support on the Switch.
Syntax	<b>disable snmp traps</b>
Description	This command is used to disable SNMP trap support on the Switch.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To prevent SNMP traps from being sent from the Switch:

```
DES-3028P:4#disable snmp traps
```

```
Command: disable snmp traps
```

```
Success.
```

```
DES-3028P:4#
```

## disable snmp authenticate traps

Purpose	Used to disable SNMP authentication trap support.
Syntax	<b>disable snmp authenticate traps</b>
Description	This command is used to disable SNMP authentication support on the Switch.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To disable the SNMP authentication trap support:

```
DES-3028P:4#disable snmp authenticate traps
```

```
Command: disable snmp authenticate traps
```

```
Success.
```

```
DES-3028P:4#
```

**config snmp system\_contact**

Purpose	Used to enter the name of a contact person who is responsible for the Switch.
Syntax	<b>config snmp system_contact{&lt;sw_contact&gt;}</b>
Description	The <b>config snmp system_contact</b> command is used to enter the name and/or other information to identify a contact person who is responsible for the Switch. A maximum of 255 character can be used.
Parameters	<sw_contact> - A maximum of 255 characters is allowed. A NULL string is accepted if there is no contact.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure the Switch contact to “MIS Department II”:

```
DES-3028P:4#config snmp system_contact MIS Department II
Command: config snmp system_contact MIS Department II

Success.

DES-3028P:4#
```

**config snmp system\_location**

Purpose	Used to enter a description of the location of the Switch.
Syntax	<b>config snmp system_location {&lt;sw_location&gt;}</b>
Description	The <b>config snmp system_location</b> command is used to enter a description of the location of the Switch. A maximum of 255 characters can be used.
Parameters	<sw_location> - A maximum of 255 characters is allowed. A NULL string is accepted if there is no location desired.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure the Switch location for “HQ 5F”:

```
DES-3028P:4#config snmp system_location HQ 5F
Command: config snmp system_location HQ 5F

Success.

DES-3028P:4#
```

**config snmp system\_name**

Purpose	Used to configure the name for the Switch.
Syntax	<b>config snmp system_name {&lt;sw_name&gt;}</b>
Description	The <b>config snmp system_name</b> command configures the name of the Switch.
Parameters	<sw_name> - A maximum of 255 characters is allowed. A NULL string is accepted if no name is desired.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure the Switch name for “DES-3028P Switch”:

```
DES-3028P:4#config snmp system_name DES-3028P Switch
Command: config snmp system_name DES-3028P Switch

Success.

DES-3028P:4#
```

**enable rmon**

Purpose	Used to enable RMON on the Switch.
Syntax	<b>enable rmon</b>
Description	This command is used, in conjunction with the <b>disable rmon</b> command below, to enable and disable remote monitoring (RMON) on the Switch.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example Usage:

To enable RMON:

```
DES-3028P:4#enable rmon
Command: enable rmon

Success.

DES-3028P:4#
```

**disable rmon**

Purpose	Used to disable RMON on the Switch.
Syntax	<b>disable rmon</b>
Description	This command is used, in conjunction with the <b>enable rmon</b> command above, to enable and disable remote monitoring (RMON) on the Switch.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example Usage:

To disable RMON:

```
DES-3028P:4#disable rmon
```

```
Command: disable rmon
```

```
Success.
```

```
DES-3028P:4#
```

## SWITCH UTILITY COMMANDS

The switch utility commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
download	[ <i>firmware_fromTFTP</i> <ipaddr> <path_filename 64> { <i>image_id</i> <int 1-2>}   <i>cfg_fromTFTP</i> <ipaddr> <path_filename 64> { <i>increment</i> }]
config firmware	<i>image_id</i> <int 1-2> [delete   boot_up]
show firmware information	
show config	[ <i>current_config</i>   <i>config_in_nvram</i> ]
upload	[ <i>cfg_toTFTP</i>   <i>log_toTFTP</i> ] <ipaddr> <path_filename 64>
enable autoconfig	
disable autoconfig	
show autoconfig	
ping	<ipaddr> { <i>times</i> <value 1-255>} { <i>timeout</i> <sec 1-99>}

Each command is listed, in detail, in the following sections.

download	
Purpose	Used to download and install new firmware or a Switch configuration file from a TFTP server.
Syntax	<b>download</b> [ <i>firmware_fromTFTP</i> <ipaddr> <path_filename 64> { <i>image_id</i> <int 1-2>}   <i>cfg_fromTFTP</i> <ipaddr> <path_filename 64> { <i>increment</i> }]
Description	This command is used to download a new firmware or a Switch configuration file from a TFTP server.
Parameters	<p><i>firmware_fromTFTP</i> – Download and install new firmware on the Switch from a TFTP server.</p> <p><i>cfg_fromTFTP</i> – Download a switch configuration file from a TFTP server.</p> <p>&lt;<i>ipaddr</i>&gt; – The IP address of the TFTP server.</p> <p>&lt;<i>path_filename</i>&gt; – The DOS path and filename of the firmware or switch configuration file on the TFTP server. For example, C:\3028.had.</p> <p><i>image_id</i> &lt;int 1-2&gt; - Specify the working section ID. The Switch can hold two firmware versions for the user to select from, which are specified by section ID.</p> <p><i>increment</i> – Allows the download of a partial switch configuration file. This allows a file to be downloaded that will change only the switch parameters explicitly stated in the configuration file. All other switch parameters will remain unchanged.</p>
Restrictions	The TFTP server must be on the same IP subnet as the Switch. Only administrator-level users can issue this command.

Example usage:

To download a configuration file:

```

DES-3028P:4#download cfg_fromTFTP 10.48.74.121 c:\cfg\setting.txt
Command: download cfg_fromTFTP 10.48.74.121 c:\cfg\setting.txt

Connecting to server..... Done.
Download configuration..... Done.

DES-3028P:4#
DES-3028P:4##-----
DES-3028P:4##          DES-3028P Configuration
DES-3028P:4##
DES-3028P:4##          Firmware: Build 1.00-B22
DES-3028P:4##          Copyright(C) 2006-2009 D-Link Corporation. All rights reserved.
DES-3028P:4##-----
DES-3028P:4#
DES-3028P:4#
DES-3028P:4## BASIC
DES-3028P:4#
DES-3028P:4#config serial_port baud_rate 9600 auto_logout 10_minutes
Command: config serial_port baud_rate 9600 auto_logout 10_minutes

```

The download configuration command will initiate the loading of the various settings in the order listed in the configuration file. When the file has been successfully loaded the message “End of configuration file for DES-3028P” appears followed by the command prompt.

```

DES-3028P:4#disable authen_policy
Command: disable authen_policy

Success.

DES-3028P:4#

```

## config firmware

Purpose	Used to configure the firmware section image as a boot up section, or to delete the firmware section
Syntax	<b>config firmware image_id &lt;int 1-2&gt; [delete   boot_up]</b>
Description	This command is used to configure the firmware section image. The user may choose to remove the firmware section or use it as a boot up section.
Parameters	<p><i>image_id</i> – Specifies the working section image. The Switch can hold two firmware versions for the user to select from, which are specified by image ID.</p> <p><i>delete</i> – Entering this parameter will delete the specified firmware section image.</p> <p><i>boot_up</i> – Entering this parameter will specify the firmware image ID as a boot up section image.</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure firmware section image 1 as a boot up section:

```
DES-3028P:4# config firmware image_id 1 boot_up
Command: config firmware image_id 1 boot_up

Success.

DES-3028P:4#
```

## show firmware information

Purpose	Used to display the firmware section information.
Syntax	<b>show firmware information</b>
Description	This command is used to display the firmware section information.
Parameters	None.
Restrictions	None

Example usage:

To display the current firmware information on the Switch:

```
DES-3028P:4#show firmware information
Command: show firmware information

ID  Version  Size(B)  Update Time          From                User
--  -
*1  1.00-B22  1532344  0000/00/00 00:03:03  10.24.22.5(CONSOLE) Anonymous
2   1.00-B05  1518404  0000/00/00 00:00:56  10.90.90.1(CONSOLE) Anonymous

**
(SSH) : Firmware update through SSH
(WEB) : Firmware update through WEB
(SIM) : Firmware update through Single IP Management
(SNMP) : Firmware update through SNMP
(TELNET) : Firmware update through TELNET
(CONSOLE) : Firmware update through CONSOLE

DES-3028P:4#
```

## show config

Purpose	Used to display the current or saved version of the configuration settings of the switch.
Syntax	<b>show config [current_config   config_in_nvram]</b>
Description	Use this command to display all the configuration settings that are saved to NV RAM or display the configuration settings as they are currently configured. Use the keyboard to list settings one line at a time (Enter), one page at a time (Space) or view all (a).  The configuration settings are listed by category in the following order:

**show config**

- |                                                          |                                                 |
|----------------------------------------------------------|-------------------------------------------------|
| 1. Basic (serial port, Telnet and web management status) | 19. ACL                                         |
| 2. storm control                                         | 20. SNMP                                        |
| 3. IP group management                                   | 21. IP route                                    |
| 4. Syslog                                                | 22. LACP                                        |
| 5. QoS                                                   | 23. ARP                                         |
| 6. port mirroring                                        | 24. IP                                          |
| 7. traffic segmentation                                  | 25. IGMP snooping                               |
| 8. port                                                  | 26. access authentication control (TACACS etc.) |
| 9. port lock                                             | 27. PoE                                         |
| 10. 8021x                                                | 28. Bandwidth                                   |
| 11. SNMPv3                                               | 29. Time_range                                  |
| 12. management (SNMP traps RMON)                         | 30. GM                                          |
| 13. VLAN                                                 | 31. safeguard_engine                            |
| 14. FDB (forwarding data base)                           | 32. Banner_promp                                |
| 15. MAC address table notification                       | 33. SMTP                                        |
| 16. STP                                                  | 34. AAA                                         |
| 17. SSH                                                  | 35. DHCP_Relay                                  |
| 18. SSL                                                  |                                                 |

Parameters *current\_config* – Entering this parameter will display configurations entered without being saved to NVRAM.

*config\_in\_NVRAM* - Entering this parameter will display configurations entered and saved to NVRAM.

Restrictions None.

Example usage:

To view the current configuration settings:

```
DES-3028P:4#show config current_config
Command: show config current_config

#-----
#           DES-3028P Configuration

```

**upload**

Purpose	Used to upload the current switch settings or the switch history log to a TFTP.
Syntax	<b>upload [cfg_toTFTP   log_toTFTP] &lt;ipaddr&gt; &lt;path_filename 64&gt;</b>
Description	This command is used to upload either the Switch's current settings or the Switch's history log to a TFTP server.
Parameters	<p><i>cfg_toTFTP</i> – Specifies that the Switch's current settings will be uploaded to the TFTP server.</p> <p><i>log_toTFTP</i> – Specifies that the switch history log will be uploaded to the TFTP server.</p> <p><i>&lt;ipaddr&gt;</i> – The IP address of the TFTP server. The TFTP server must be on the same IP subnet as the Switch.</p> <p><i>&lt;path_filename 64&gt;</i> – Specifies the location of the Switch configuration file on the TFTP server. This file will be replaced by the uploaded file from the Switch.</p>
Restrictions	The TFTP server must be on the same IP subnet as the Switch. Only administrator-level users can issue this command.

Example usage:

To upload a configuration file:

```
DES-3028P:4#upload cfg_toTFTP 10.48.74.121 c:\cfg\log.txt
Command: upload cfg_toTFTP 10.48.74.121 c:\cfg\log.txt

Connecting to server..... Done.
Upload configuration.....Done.

DES-3028P:4#
```

**enable autoconfig**

Purpose	Used to activate the autoconfiguration function for the Switch. This will load a previously saved configuration file for current use.
Syntax	<b>enable autoconfig</b>
Description	When autoconfig is enabled on the Switch, the DHCP reply will contain a configuration file and path name. It will then request the file from the TFTP server specified in the reply. When autoconfig is enabled, the ipif settings will automatically become DHCP client.
Parameters	None.
Restrictions	<p>When autoconfig is enabled, the Switch becomes a DHCP client automatically (same as: <b>config ipif System dhcp</b>). The DHCP server must have the TFTP server IP address and configuration file name, and be configured to deliver this information in the data field of the DHCP reply packet. The TFTP server must be running and have the requested configuration file in its base directory when the request is received from the Switch. Consult the DHCP server and TFTP server software instructions for information on loading a configuration file.</p> <p>If the Switch is unable to complete the autoconfiguration process the previously saved local configuration file present in Switch memory will be loaded.</p>

**NOTE:** Dual-purpose (DHCP/TFTP) server utility software may require entry of the configuration file name and path within the user interface. Alternatively, the DHCP software may require creating a separate ext file with the configuration file name and path in a specific directory on the server. Consult the documentation for the DHCP server software if users are unsure.

Example usage:

To enable autoconfiguration on the Switch:

```
DES-3028P:4#enable autoconfig
Command: enable autoconfig

Success.

DES-3028P:4#
```

When autoconfig is enabled and the Switch is rebooted, the normal login screen will appear for a few moments while the autoconfig request (i.e. download configuration) is initiated. The console will then display the configuration parameters as they are loaded from the configuration file specified in the DHCP or TFTP server. This is exactly the same as using a **download configuration** command. After the entire Switch configuration is loaded, the Switch will automatically “logout” the server. The configuration settings will be saved automatically and become the active configuration.

Upon booting up the autoconfig process is initiated, the console screen will appear similar to the example below. The configuration settings will be loaded in normal order.

```
DES-3028P Fast Ethernet Switch Command Line Interface

Firmware: Build 1.00-B22
Copyright(C) 2006-2009 D-Link Corporation. All rights reserved.

DES-3028P:4#
DES-3028P:4#
DES-3028P:4#download cfg_fromTFTP 10.41.44.44 c:\cfg\setting.txt
Command: download cfg_fromTFTP 10.41.44.44 c:\cfg\setting.txt

Connecting to server..... Done.
Download configuration..... Done.
```

The very end of the autoconfig process appears like this:

```
Success.

DES-3028P:4#
DES-3028P:4## ROUTE
DES-3028P:4#
DES-3028P:4#
DES-3028P:4##-----
DES-3028P:4##           End of configuration file for DES-3028P
DES-3028P:4##-----
DES-3028P:4#
DES-3028P:4#
```

**NOTE:** With autoconfig enabled, the Switch ipif settings now define the Switch as a DHCP client. Use the **show switch** command to display the new IP settings status.

**disable autoconfig**

Purpose	Use this to deactivate autoconfiguration from DHCP.
Syntax	<b>disable autoconfig</b>
Description	This instructs the Switch not to accept autoconfiguration instruction from the DHCP server. This does not change the IP settings of the Switch. The ipif settings will continue as DHCP client until changed with the <b>config ipif</b> command.
Parameters	None.
Restrictions	None.

Example usage:

To stop the autoconfiguration function:

```
DES-3028P:4#disable autoconfig
Command: disable autoconfig

Success.

DES-3028P:4#
```

**show autoconfig**

Purpose	Used to display the current autoconfig status of the Switch.
Syntax	<b>show autoconfig</b>
Description	This command will list the current status of the autoconfiguration function.
Parameters	None.
Restrictions	None.

Example usage:

To display the autoconfig status:

```
DES-3028P:4#show autoconfig
Command: show autoconfig

Autoconfig State: Disabled

DES-3028P:4#
```

<b>ping</b>	
Purpose	Used to test the connectivity between network devices.
Syntax	<b>ping &lt;ipaddr&gt; {times &lt;value 1-255&gt;} {timeout &lt;sec 1-99&gt;}</b>
Description	The ping command sends Internet Control Message Protocol (ICMP) echo messages to a remote IP address. The remote IP address will then “echo” or return the message. This is used to confirm connectivity between the Switch and the remote device.
Parameters	<p><i>&lt;ipaddr&gt;</i> - Specifies the IP address of the host.</p> <p><i>times &lt;value 1-255&gt;</i> - The number of individual ICMP echo messages to be sent. A value of 0 will send an infinite ICMP echo messages. The maximum value is 255. The default is 0.</p> <p><i>timeout &lt;sec 1-99&gt;</i> - Defines the time-out period while waiting for a response from the remote device. A value of 1 to 99 seconds can be specified. The default is 1 second</p>
Restrictions	None.

Example usage:

To ping the IP address 10.48.74.121 four times:

```

DES-3028P:4#ping 10.48.74.121 times 4
Command: ping 10.48.74.121

Reply from 10.48.74.121, time<10ms
Reply from 10.48.74.121, time<10ms
Reply from 10.48.74.121, time<10ms
Reply from 10.48.74.121, time<10ms

Packets: Sent =4, Received =4, Lost =0

DES-3028P:4#

```

## NETWORK MONITORING COMMANDS

The network monitoring commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
show packet ports	<portlist>
show error ports	<portlist>
show utilization	[cpu   ports {<portlist>}]
clear counters	ports <portlist>
clear log	
show log	index <value_list X-Y>
enable syslog	
disable syslog	
show syslog	
create syslog host	<index 1-4> ipaddress <ipaddr> {severity [informational   warning   all]   facility [local0   local1   local2   local3   local4   local5   local6   local7]   udp_port <udp_port_number>   state [enable   disable]}
config syslog host	[all   <index 1-4>] {severity [informational   warning   all]   facility [local0   local1   local2   local3   local4   local5   local6   local7]   udp_port <udp_port_number>   ipaddress <ipaddr>   state [enable   disable]}
delete syslog host	[<index 1-4>   all]
show syslog host	<index 1-4>
config log_save_timing	[time_interval <min 1-65535>   on_demand   log_trigger]
show log_save_timing	

Each command is listed, in detail, in the following sections.

### show packet ports

Purpose	Used to display statistics about the packets sent and received by the Switch.
Syntax	<b>show packet ports &lt;portlist&gt;</b>
Description	This command is used to display statistics about packets sent and received by ports specified in the <portlist>.
Parameters	<portlist> – Specifies a port or range of ports to be displayed.
Restrictions	None.

Example usage:

To display the packets analysis for port 7 of module 2:

```

DES-3028P:4#show packet port 2
Command: show packet port 2

Port number : 2
Frame Size      Frame Counts  Frame/sec      Frame Type      Total      Total/sec
-----
64              3275         10            RX Bytes       408973    1657
65-127         755          10            RX Frames      395       19
128-255        316          1
256-511        145          0            TX Bytes       7918     178
512-1023       15           0            TX Frames      111      2
1024-1518      0            0

Unicast RX     152          1
Multicast RX   557          2
Broadcast RX   3686         16

CTRL+C ESC q Quit SPACE n Next Page p Previous Page r Refresh

```

## show error ports

Purpose	Used to display the error statistics for a range of ports.
Syntax	<b>show error ports &lt;portlist&gt;</b>
Description	This command will display all of the packet error statistics collected and logged by the Switch for a given port list.
Parameters	<portlist> – Specifies a port or range of ports to be displayed.
Restrictions	None.

Example usage:

To display the errors of the port 3 of module 1:

```

DES-3028P:4#show error ports 3
Command: show error ports 3

Port number : 3

          RX Frames                TX Frames
          -----                -----
CRC Error  19          Excessive Deferral  0
Undersize  0           CRC Error          0
Oversize   0           Late Collision     0
Fragment   0           Excessive Collision 0
Jabber     11          Single Collision   0
Drop Pkts  20837         Collision          0

CTRL+C ESC q Quit SPACE n Next Page p Previous Page r Refresh

```

**show utilization**

Purpose	Used to display real-time port and CPU utilization statistics.
Syntax	<b>show utilization [cpu   ports {&lt;portlist&gt;}]</b>
Description	This command will display the real-time port and CPU utilization statistics for the Switch.
Parameters	<p><i>cpu</i> – Entering this parameter will display the current cpu utilization of the Switch.</p> <p><i>ports</i> - Entering this parameter will display the current port utilization of the Switch.</p> <ul style="list-style-type: none"> <li>▪ <i>&lt;portlist&gt;</i> - Specifies a port or range of ports to be displayed.</li> </ul>
Restrictions	None.

Example usage:

To display the port utilization statistics:

```
DES-3028P:4#show utilization ports
Command: show utilization ports
```

Port	TX/sec	RX/sec	Util	Port	TX/sec	RX/sec	Util
1	0	0	0	22	0	0	0
2	0	0	0	23	0	0	0
3	0	0	0	24	0	0	0
4	0	0	0	25	0	26	1
5	0	0	0	26	0	0	0
6	0	0	0	27	0	0	0
7	0	0	0	28	0	0	0
8	0	0	0				
9	0	0	0				
10	0	0	0				
11	0	0	0				
12	0	0	0				
13	0	0	0				
14	0	0	0				
15	0	0	0				
16	0	0	0				
17	0	0	0				
18	0	0	0				
19	0	0	0				
20	0	0	0				
21	0	0	0				

CTRL+C ESC q Quit SPACE n Next Page p Previous Page r Refresh

To display the current CPU utilization:

```
DES-3028P:4#show utilization cpu
Command: show utilization cpu
```

**CPU utilization :**

-----

Five seconds - 15%      One minute - 25%      Five minutes - 14%

DES-3028P:4#

**clear counters**

Purpose	Used to clear the Switch's statistics counters.
Syntax	<b>clear counters {ports &lt;portlist&gt;}</b>
Description	This command will clear the counters used by the Switch to compile statistics.
Parameters	<portlist> – Specifies a port or range of ports to be displayed.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To clear the counters:

```
DES-3028P:4#clear counters ports 2-9
Command: clear counters ports 2-9

Success.

DES-3028P:4#
```

**clear log**

Purpose	Used to clear the Switch's history log.
Syntax	<b>clear log</b>
Description	This command will clear the Switch's history log.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To clear the log information:

```
DES-3028P:4#clear log
Command: clear log

Success.

DES-3028P:4#
```

**show log**

Purpose	Used to display the switch history log.
Syntax	<b>show log {index &lt;value_list X-Y&gt;}</b>
Description	This command will display the contents of the Switch's history log.
Parameters	<i>index &lt;value_list X-Y&gt;</i> – This command will display the history log, beginning and ending at the value specified by the user in the <value_list X-Y> field. If no parameter is specified, all history log entries will be displayed.
Restrictions	None.

Example usage:

To display the switch history log:

```
DES-3028P:4#show log index 1-5
```

```
Command: show log index 1-5
```

Index	Data	Time	Log Text
5	00000-00-00	01:01:09	Successful login through Console (Username: Anonymous)
4	00000-00-00	00:00:14	System started up
3	00000-00-00	00:00:06	Port 1 link up, 100Mbps FULL duplex
2	00000-00-00	00:00:01	Spanning Tree Protocol is disabled
1	00000-00-00	00:06:31	Configuration saved to flash (Username: Anonymous)

```
DES-3028P:4#
```

## enable syslog

Purpose	Used to enable the system log to be sent to a remote host.
Syntax	<b>enable syslog</b>
Description	The <b>enable syslog</b> command enables the system log to be sent to a remote host.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To the syslog function on the Switch:

```
DES-3028P:4#enable syslog
```

```
Command: enable syslog
```

```
Success.
```

```
DES-3028P:4#
```

## disable syslog

Purpose	Used to enable the system log to be sent to a remote host.
Syntax	<b>disable syslog</b>
Description	The <b>disable syslog</b> command enables the system log to be sent to a remote host.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To disable the syslog function on the Switch:

```
DES-3028P:4#disable syslog
```

```
Command: disable syslog
```

```
Success.
```

```
DES-3028P:4#
```

**show syslog**

<b>Purpose</b>	Used to display the syslog protocol status as enabled or disabled.
<b>Syntax</b>	<b>show syslog</b>
<b>Description</b>	The <b>show syslog</b> command displays the syslog status as enabled or disabled.
<b>Parameters</b>	None.
<b>Restrictions</b>	None.

Example usage:

To display the current status of the syslog function:

```
DES-3028P:4#show syslog
Command: show syslog

Syslog Global State: Enabled

DES-3028P:4#
```

**create syslog host**

<b>Purpose</b>	Used to create a new syslog host.																				
<b>Syntax</b>	<b>create syslog host &lt;index 1-4&gt; ipaddress &lt;ipaddr&gt; {severity [informational   warning   all]   facility [local0   local1   local2   local3   local4   local5   local6   local7]   udp_port &lt;udp_port_number&gt;   state [enable   disable]}</b>																				
<b>Description</b>	The <b>create syslog host</b> command is used to create a new syslog host.																				
<b>Parameters</b>	<p><i>&lt;index 1-4&gt;</i> – Specifies that the command will be applied to an index of hosts. There are four available indexes, numbered 1 through 4.</p> <p><i>ipaddress &lt;ipaddr&gt;</i> – Specifies the IP address of the remote host where syslog messages will be sent.</p> <p><i>severity</i> – Severity level indicator. These are described in the following:            Bold font indicates that the corresponding severity level is currently supported on the Switch.</p> <table border="1"> <thead> <tr> <th>Numerical Code</th> <th>Severity</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>Emergency: system is unusable</td> </tr> <tr> <td>1</td> <td>Alert: action must be taken immediately</td> </tr> <tr> <td>2</td> <td>Critical: critical conditions</td> </tr> <tr> <td>3</td> <td>Error: error conditions</td> </tr> <tr> <td><b>4</b></td> <td><b>Warning: warning conditions</b></td> </tr> <tr> <td>5</td> <td>Notice: normal but significant condition</td> </tr> <tr> <td><b>6</b></td> <td><b>Informational: informational messages</b></td> </tr> <tr> <td>7</td> <td>Debug: debug-level messages</td> </tr> </tbody> </table> <table border="1"> <thead> <tr> <th>Numerical Code</th> <th>Facility</th> </tr> </thead> <tbody> </tbody> </table>	Numerical Code	Severity	0	Emergency: system is unusable	1	Alert: action must be taken immediately	2	Critical: critical conditions	3	Error: error conditions	<b>4</b>	<b>Warning: warning conditions</b>	5	Notice: normal but significant condition	<b>6</b>	<b>Informational: informational messages</b>	7	Debug: debug-level messages	Numerical Code	Facility

**create syslog host**

0	kernel messages
1	user-level messages
2	mail system
3	system daemons
4	security/authorization messages
5	messages generated internally by syslog
6	line printer subsystem
7	network news subsystem
8	UUCP subsystem
9	clock daemon
10	security/authorization messages
11	FTP daemon
12	NTP subsystem
13	log audit
14	log alert
15	clock daemon
<b>16</b>	<b>local use 0 (local0)</b>
<b>17</b>	<b>local use 1 (local1)</b>
<b>18</b>	<b>local use 2 (local2)</b>
<b>19</b>	<b>local use 3 (local3)</b>
<b>20</b>	<b>local use 4 (local4)</b>
<b>21</b>	<b>local use 5 (local5)</b>
<b>22</b>	<b>local use 6 (local6)</b>
<b>23</b>	<b>local use 7 (local7)</b>

*local0* – Specifies that local use 0 messages will be sent to the remote host. This corresponds to number 16 from the list above.

*local1* – Specifies that local use 1 messages will be sent to the remote host. This corresponds to number 17 from the list above.

*local2* – Specifies that local use 2 messages will be sent to the remote host. This corresponds to number 18 from the list above.

*local3* – Specifies that local use 3 messages will be sent to the remote host. This corresponds to number 19 from the list above.

*local4* – Specifies that local use 4 messages will be sent to the remote host. This corresponds to number 20 from the list above.

*local5* – Specifies that local use 5 messages will be sent to the remote host. This corresponds to number 21 from the list above.

*local6* – Specifies that local use 6 messages will be sent to the remote host. This corresponds to number 22 from the list above.

*local7* – Specifies that local use 7 messages will be sent to the remote host. This corresponds to number 23 from the list above.

*udp\_port <udp\_port\_number>* – Specifies the UDP port number that the syslog protocol will use to send messages to the remote host.

*state [enable | disable]* – Allows the sending of syslog messages to the remote host, specified above, to be enabled and disabled.

**Restrictions**

Only administrator-level users can issue this command.

Example usage:

To create syslog host:

```
DES-3028P:4#create syslog host 1 severity all facility local0
Command: create syslog host 1 severity all facility local0
```

```
Success.
```

```
DES-3028P:4#
```

**config syslog host**

<b>Purpose</b>	Used to configure the syslog protocol to send system log data to a remote host.
<b>Syntax</b>	<b>config syslog host</b> [all   <index 1-4>] {severity [informational   warning   all]   facility [local0   local1   local2   local3   local4   local5   local6   local7]   udp_port <udp_port_number>   ipaddress <ipaddr>   state [enable   disable]}
<b>Description</b>	The <b>config syslog host</b> command is used to configure the syslog protocol to send system log information to a remote host.

<b>Parameters</b>	<p>&lt;index 1-4&gt; – Specifies that the command will be applied to an index of hosts. There are four available indexes, numbered 1 through 4.</p> <p>ipaddress &lt;ipaddr&gt; – Specifies the IP address of the remote host where syslog messages will be sent.</p> <p>severity – Severity level indicator. These are described in the following:  <b>Bold</b> font indicates that the corresponding severity level is currently supported on the Switch.</p>
-------------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<b>Numerical Code</b>	<b>Severity</b>
0	Emergency: system is unusable
1	Alert: action must be taken immediately
2	Critical: critical conditions
3	Error: error conditions
<b>4</b>	<b>Warning: warning conditions</b>
5	Notice: normal but significant condition
<b>6</b>	<b>Informational: informational messages</b>
7	Debug: debug-level messages

<p><i>informational</i> – Specifies that informational messages will be sent to the remote host. This corresponds to number 6 from the list above.</p> <p><i>warning</i> – Specifies that warning messages will be sent to the remote host. This corresponds to number 4 from the list above.</p> <p><i>all</i> – Specifies that all of the currently supported syslog messages that are generated by the Switch will be sent to the remote host.</p> <p><i>facility</i> – Some of the operating system daemons and processes have been assigned Facility values. Processes and daemons that have not been explicitly assigned a Facility may use any of the "local use" facilities or they may use the "user-level" Facility. Those Facilities that have been designated are shown in the following: Bold font indicates the facility values the Switch currently supports.</p>
----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Parameters	Numerical Code	Facility
	0	kernel messages
	1	user-level messages
	2	mail system
	3	system daemons
	4	security/authorization messages
	5	messages generated internally by syslog
	6	line printer subsystem
	7	network news subsystem
	8	UUCP subsystem
	9	clock daemon
	10	security/authorization messages
	11	FTP daemon
	12	NTP subsystem
	13	log audit
	14	log alert
	15	clock daemon
	<b>16</b>	<b>local use 0 (local0)</b>
	<b>17</b>	<b>local use 1 (local1)</b>
	<b>18</b>	<b>local use 2 (local2)</b>
	<b>19</b>	<b>local use 3 (local3)</b>
	<b>20</b>	<b>local use 4 (local4)</b>
	<b>21</b>	<b>local use 5 (local5)</b>
	<b>22</b>	<b>local use 6 (local6)</b>
	<b>23</b>	<b>local use 7 (local7)</b>
<b>Parameters</b>	<p><i>local0</i> – Specifies that local use 0 messages will be sent to the remote host. This corresponds to number 16 from the list above.</p> <p><i>local1</i> – Specifies that local use 1 messages will be sent to the remote host. This corresponds to number 17 from the list above.</p> <p><i>local2</i> – Specifies that local use 2 messages will be sent to the remote host. This corresponds to number 18 from the list above.</p> <p><i>local3</i> – Specifies that local use 3 messages will be sent to the remote host. This corresponds to number 19 from the list above.</p> <p><i>local4</i> – Specifies that local use 4 messages will be sent to the remote host. This corresponds to number 20 from the list above.</p> <p><i>local5</i> – Specifies that local use 5 messages will be sent to the remote host. This corresponds to number 21 from the list above.</p> <p><i>local6</i> – Specifies that local use 6 messages will be sent to the remote host. This corresponds to number 22 from the list above.</p> <p><i>local7</i> – Specifies that local use 7 messages will be sent to the remote host. This corresponds to number 23 from the list above.</p> <p><i>udp_port</i> &lt;<i>udp_port_number</i>&gt; – Specifies the UDP port number that the syslog protocol will use to send messages to the remote host.</p> <p><i>state</i> [<i>enable</i>   <i>disable</i>] – Allows the sending of syslog messages to the remote host, specified above, to be enabled and disabled.</p>	
<b>Restrictions</b>	Only administrator-level users can issue this command.	

Example usage:

To configure a Syslog host:

```
DES-3028P:4#config syslog host 1 severity all facility local0
Command: config syslog host all severity all facility local0

Success.

DES-3028P:4#
```

Example usage:

To configure a Syslog host for all hosts:

```
DES-3028P:4#config syslog host all severity all facility local0
Command: config syslog host all severity all facility local0

Success.

DES-3028P:4#
```

## delete syslog host

<b>Purpose</b>	Used to remove a syslog host that has been previously configured, from the Switch.
<b>Syntax</b>	<b>delete syslog host [&lt;index 1-4&gt;   all]</b>
<b>Description</b>	The <b>delete syslog host</b> command is used to remove a syslog host that has been previously configured from the Switch.
<b>Parameters</b>	<index 1-4> – Specifies that the command will be applied to an index of hosts. There are four available indexes, numbered 1 through 4. all – Specifies that the command will be applied to all hosts.
<b>Restrictions</b>	Only administrator-level users can issue this command.

Example usage:

To delete a previously configured syslog host:

```
DES-3028P:4#delete syslog host 4
Command: delete syslog host 4

Success.

DES-3028P:4#
```

## show syslog host

<b>Purpose</b>	Used to display the syslog hosts currently configured on the Switch.
<b>Syntax</b>	<b>show syslog host {&lt;index 1-4&gt;}</b>
<b>Description</b>	The <b>show syslog host</b> command is used to display the syslog hosts that are currently configured on the Switch.
<b>Parameters</b>	<index 1-4> – Specifies that the command will be applied to an index of hosts. There are four available indexes, numbered 1 through 4.
<b>Restrictions</b>	None.

Example usage:

To show Syslog host information:

```

DES-3028P:4#show syslog host
Command: show syslog host

Syslog Global State: Disabled

Host Id  Host IP Address  Severity  Facility  UDP port  Status
-----  -
1        10.1.1.2          All       Local0    514       Disabled
2        10.40.2.3         All       Local0    514       Disabled
3        10.21.13.1        All       Local0    514       Disabled

Total Entries : 3

DES-3028P:4#

```

## config log\_save\_timing

Purpose	Used to configure the method of saving log files to the switch's flash memory.
Syntax	<b>config log_save_timing [time_interval &lt;min 1-65535&gt;   on_demand   log_trigger]</b>
Description	The <b>config log_save_timing</b> command allows the user to configure the time method used in saving log files to the switch's flash memory.
Parameters	<p><i>time_interval &lt;min 1-65535&gt;</i> - Use this parameter to configure the time interval that will be implemented for saving log files. The log files will be save every x number of minutes that are configured here.</p> <p><i>on_demand</i> - Users who choose this method will only save log files when they manually tell the Switch to do so, using the <b>save</b> or <b>save log</b> command.</p> <p><i>log_trigger</i> - Users who choose this method will have log files saved to the Switch every time a log event occurs on the Switch.</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure the time interval as every 30 minutes for saving log files:

```

DES-3028P:4#config log_save_timing time_interval 30
Command: config log_save_timing time_interval 30

Success.

DES-3028P:4#

```

## show log\_save\_timing

Purpose	Used to display the method configured for saving log files to the switch's flash memory.
Syntax	<b>show log_save_timing</b>
Description	The <b>show log_save_timing</b> command allows the user to view the time method configured for saving log files to the switch's flash memory.
Parameters	None.
Restrictions	None.

Example usage:

To display the time interval for saving log files:

```
DES-3028P:4#show log_save_timing
Command: show log_save_timing

Saving log method: time_interval
Interval : 30

DES-3028P:4#
```

## MULTIPLE SPANNING TREE PROTOCOL (MSTP) COMMANDS

This Switch supports three versions of the Spanning Tree Protocol; 802.1d STP, 802.1w Rapid STP and 802.1s MSTP. Multiple Spanning Tree Protocol, or MSTP, is a standard defined by the IEEE community that allows multiple VLANs to be mapped to a single spanning tree instance, which will provide multiple pathways across the network. Therefore, these MSTP configurations will balance the traffic load, preventing wide scale disruptions when a single spanning tree instance fails. This will allow for faster convergences of new topologies for the failed instance. Frames designated for these VLANs will be processed quickly and completely throughout interconnected bridges utilizing either of the three spanning tree protocols (STP, RSTP or MSTP). This protocol will also tag BDPUs packets so receiving devices can distinguish spanning tree instances, spanning tree regions and the VLANs associated with them. These instances will be classified by an *instance\_id*. MSTP will connect multiple spanning trees with a Common and Internal Spanning Tree (CIST). The CIST will automatically determine each MSTP region, its maximum possible extent and will appear as one virtual bridge that runs a single spanning tree. Consequentially, frames assigned to different VLANs will follow different data routes within administratively established regions on the network, continuing to allow simple and full processing of frames, regardless of administrative errors in defining VLANs and their respective spanning trees. Each switch utilizing the MSTP on a network will have a single MSTP configuration that will have the following three attributes:

- A configuration name defined by an alphanumeric string of up to 32 characters (defined in the **config stp mst\_config\_id** command as *name <string>*).
- A configuration revision number (named here as a *revision\_level*) and;
- A 4094 element table (defined here as a *vid\_range*) which will associate each of the possible 4094 VLANs supported by the Switch for a given instance.

To utilize the MSTP function on the Switch, three steps need to be taken:

- The Switch must be set to the MSTP setting (*config stp version*)
- The correct spanning tree priority for the MSTP instance must be entered (*config stp priority*).
- VLANs that will be shared must be added to the MSTP Instance ID (*config stp instance\_id*).

The Multiple Spanning Tree Protocol commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
enable stp	
disable stp	
config stp version	[mstp   rstp   stp]
config stp	{maxage <value 6-40>   maxhops <value 1-20>   hellotime <value 1-10>   forwarddelay <value 4-30>   txholdcount <value 1-10>   fbpdu [enable   disable]   lbd [enable   disable]   lbd_recover_timer [0   <value 60-1000000>]}
config stp ports	<portlist> {externalCost [auto   <value 1-200000000>]   hellotime <value 1-10>   migrate [yes   no]   edge [true   false]   p2p [true   false   auto]   state [enable   disable]   lbd [enable   disable]   fbpdu [enable   disable]}
create stp instance_id	<value 1-4>
config stp instance_id	<value 1-4> [add_vlan   remove_vlan] <vidlist>
delete stp instance_id	<value 1-4>
config stp priority	<value 0-61440> instance_id <value 0-4>
config stp mst_config_id	{revision_level <int 0-65535>   name <string>}
config stp mst_ports	<portlist> instance_id <value 0-4> {internalCost [auto   value 1-200000000]   priority <value 0-240>}
show stp	
show stp ports	{<portlist>}

Command	Parameters
show stp instance	{<value 0-4>}
show stp mst_config id	

Each command is listed, in detail, in the following sections.

### enable stp

<b>Purpose</b>	Used to globally enable STP on the Switch.
<b>Syntax</b>	<b>enable stp</b>
<b>Description</b>	This command allows the Spanning Tree Protocol to be globally enabled on the Switch.
<b>Parameters</b>	None.
<b>Restrictions</b>	Only administrator-level users can issue this command.

Example usage:

To enable STP, globally, on the Switch:

```
DES-3028P:4#enable stp
Command: enable stp

Success.

DES-3028P:4#
```

### disable stp

<b>Purpose</b>	Used to globally disable STP on the Switch.
<b>Syntax</b>	<b>disable stp</b>
<b>Description</b>	This command allows the Spanning Tree Protocol to be globally disabled on the Switch.
<b>Parameters</b>	None.
<b>Restrictions</b>	Only administrator-level users can issue this command.

Example usage:

To disable STP on the Switch:

```
DES-3028P:4#disable stp
Command: disable stp

Success.

DES-3028P:4#
```

### config stp version

<b>Purpose</b>	Used to globally set the version of STP on the Switch.
<b>Syntax</b>	<b>config stp version [mstp   rstp   stp]</b>
<b>Description</b>	This command allows the user to choose the version of the spanning tree to be implemented on the Switch.
<b>Parameters</b>	<i>mstp</i> – Selecting this parameter will set the Multiple Spanning Tree Protocol (MSTP) globally on the Switch. <i>rstp</i> - Selecting this parameter will set the Rapid Spanning Tree Protocol

**config stp version**

(RSTP) globally on the Switch.

*stp* - Selecting this parameter will set the Spanning Tree Protocol (STP) globally on the Switch.

**Restrictions** Only administrator-level users can issue this command.

Example usage:

To set the Switch globally for the Multiple Spanning Tree Protocol (MSTP):

```
DES-3028P:4#config stp version mstp
```

```
Command: config stp version mstp
```

```
Success.
```

```
DES-3028P:4#
```

**config stp**

<b>Purpose</b>	Used to setup STP, RSTP and MSTP on the Switch.
<b>Syntax</b>	<b>config stp {maxage &lt;value 6-40&gt;   maxhops &lt;value 1-20&gt;   hellotime &lt;value 1-10&gt;   forwarddelay &lt;value 4-30&gt;  txholdcount &lt;value 1-10&gt;   fbpdu [enable   disable]   lbd [enable   disable]   lbd_recover_timer [0   &lt;value 60-1000000&gt;]}</b>
<b>Description</b>	This command is used to setup the Spanning Tree Protocol (STP) for the entire Switch. All commands here will be implemented for the STP version that is currently set on the Switch.
<b>Parameters</b>	<p><i>maxage &lt;value 6-40&gt;</i> – This value may be set to ensure that old information does not endlessly circulate through redundant paths in the network, preventing the effective propagation of the new information. Set by the Root Bridge, this value will aid in determining that the Switch has spanning tree configuration values consistent with other devices on the bridged LAN. If the value ages out and a BPDU has still not been received from the Root Bridge, the Switch will start sending its own BPDU to all other switches for permission to become the Root Bridge. If it turns out that your switch has the lowest Bridge Identifier, it will become the Root Bridge. The user may choose a time between 6 and 40 seconds. The default value is 20.</p> <p><i>maxhops &lt;value 1-20&gt;</i> - The number of hops between devices in a spanning tree region before the BPDU (bridge protocol data unit) packet sent by the Switch will be discarded. Each switch on the hop count will reduce the hop count by one until the value reaches zero. The Switch will then discard the BPDU packet and the information held for the port will age out. The user may set a hop count from 1 to 20. The default is 20.</p> <p><i>hellotime &lt;value 1-10&gt;</i> – The user may set the time interval between transmission of configuration messages by the root device, thus stating that the Switch is still functioning. A time between 1 and 10 seconds may be chosen, with a default setting of 2 seconds.</p> <p> <b>NOTE:</b> In MSTP, the spanning tree is configured by port and therefore, the <i>hellotime</i> must be set using the <i>configure stp ports</i> command for switches utilizing the Multiple Spanning Tree Protocol.</p> <p><i>forwarddelay &lt;value 4-30&gt;</i> – The maximum amount of time (in seconds) that the root device will wait before changing states. The user may choose a time between 4 and 30 seconds. The default is 15 seconds.</p> <p><i>txholdcount &lt;1-10&gt;</i> - The maximum number of BPDU Hello packets transmitted per interval. Default value = 3.</p>

**config stp**

*fbpdu [enable | disable]* – Allows the forwarding of STP BPDU packets from other network devices when STP is disabled on the Switch. The default is *enable*.

*lbd [enable | disable]* – Enabling this feature temporarily block STP on the Switch when a BPDU packet has been looped back to the switch. When the Switch detects its own BPDU packet coming back, it signifies a loop on the network. STP will automatically be blocked and an alert will be sent to the administrator. The LBD STP port will restart (change to discarding state) when the **LBD Recover Time** times out. The default is enabled.

*lbd\_recover\_timer [0 | <value 60-1000000>]* - This field will set the time the STP port will wait before recovering the STP state set. 0 will denote that the LBD will never time out or restart until the administrator personally changes it. The user may also set a time between 60 and 1000000 seconds. The default is 60 seconds.

**Restrictions** Only administrator-level users can issue this command.

Example usage:

To configure STP with maxage 18 and maxhops of 15:

```
DES-3028P:4#config stp maxage 18 maxhops 15
Command: config stp maxage 18 maxhops 15

Success.

DES-3028P:4#
```

**config stp ports**

<b>Purpose</b>	Used to setup STP on the port level.
<b>Syntax</b>	<b>config stp ports &lt;portlist&gt; {externalCost [auto   &lt;value 1-200000000&gt;]   hellotime &lt;value 1-10&gt;   migrate [yes   no] edge [true   false]   p2p [true   false]   auto}   state [enable   disable]   lbd [enable   disable]   fbpdu [enable   disable]}</b>
<b>Description</b>	This command is used to create and configure STP for a group of ports.
<b>Parameters</b>	<p><i>&lt;portlist&gt;</i> – Specifies a range of ports to be configured.</p> <p><i>externalCost</i> – This defines a metric that indicates the relative cost of forwarding packets to the specified port list. Port cost can be set automatically or as a metric value. The default value is <i>auto</i>.</p> <ol style="list-style-type: none"> <li>1. <i>auto</i> – Setting this parameter for the external cost will automatically set the speed for forwarding packets to the specified port(s) in the list for optimal efficiency. Default port cost: 100Mbps port = 200000. Gigabit port = 20000.</li> <li>2. <i>&lt;value 1-200000000&gt;</i> - Define a value between 1 and 200000000 to determine the external cost. The lower the number, the greater the probability the port will be chosen to forward packets.</li> </ol> <p><i>hellotime &lt;value 1-10&gt;</i> – The time interval between transmission of configuration messages by the designated port, to other devices on the bridged LAN, thus stating that the Switch is still functioning. The user may choose a time between 1 and 10 seconds. The default is 2 seconds.</p> <p><i>migrate [yes   no]</i> – Setting this parameter as “yes” will set the ports to send out BPDU packets to other bridges, requesting information on their STP setting if the Switch is configured for RSTP, the port will be capable to migrate from 802.1d STP to 802.1w RSTP. If the Switch is configured for MSTP, the port is capable of migrating from 802.1d STP to 802.1s MSTP. RSTP and MSTP can coexist with standard STP, however the benefits of RSTP and MSTP are not realized on a port</p>

**config stp ports**

where an 802.1d network connects to an 802.1w or 802.1s enabled network. Migration should be set as *yes* on ports connected to network stations or segments that are capable of being upgraded to 802.1w RSTP or 802.1s MSTP on all or some portion of the segment.

*edge [true | false]* – *true* designates the port as an edge port. Edge ports cannot create loops, however an edge port can lose edge port status if a topology change creates a potential for a loop. An edge port normally should not receive BPDU packets. If a BPDU packet is received it automatically loses edge port status. *false* indicates that the port does not have edge port status.

*p2p [true | false | auto]* – *true* indicates a point-to-point (P2P) shared link. P2P ports are similar to edge ports however they are restricted in that a P2P port must operate in full-duplex. Like edge ports, P2P ports transition to a forwarding state rapidly thus benefiting from RSTP. A *p2p* value of *false* indicates that the port cannot have *p2p* status. *Auto* allows the port to have *p2p* status whenever possible and operate as if the *p2p* status were *true*. If the port cannot maintain this status (for example if the port is forced to half-duplex operation) the *p2p* status changes to operate as if the *p2p* value were *false*. The default setting for this parameter is *auto*.

*state [enable | disable]* – Allows STP to be enabled or disabled for the ports specified in the port list. The default is *enable*.

*lbd [enable | disable]* - Used to enable or disable the loop-back detection function on the switch for the ports configured above in the *config stp* command.

*fbpdu [enable | disable]* – When enabled, this allows the forwarding of STP BPDU packets from other network devices when STP is disabled in the specified ports. If users want to enable Forwarding BPDU on a per port basis, the following settings must first be in effect: 1. STP must be globally disabled and 2. Forwarding BPDU must be globally enabled. To globally disable STP, use the **disable stp** command, to globally enable *fbpdu*, use the **config stp** command. The default is *disable*.

**Restrictions** Only administrator-level users can issue this command.

Example usage:

To configure STP with path cost 19, hellotime set to 5 seconds, migration enable, and state enable for ports 1-5 of module 1.

```
DES-3028P:4#config stp ports 1-5 externalCost 19 hellotime 5 migrate yes state enable
Command: config stp ports 1-5 externalCost 19 hellotime 5 migrate yes state enable
```

Success.

```
DES-3028P:4#
```

## create stp instance\_id

<b>Purpose</b>	Used to create a STP instance ID for MSTP.
<b>Syntax</b>	<b>create stp instance_id &lt;value 1-4&gt;</b>
<b>Description</b>	This command allows the user to create a STP instance ID for the Multiple Spanning Tree Protocol. There are 5 STP instances on the Switch (one internal CIST, unchangeable) and the user may create up to 4 instance IDs for the Switch.
<b>Parameters</b>	<value 1-4> - Enter a value between 1 and 4 to identify the Spanning Tree instance on the Switch.
<b>Restrictions</b>	Only administrator-level users can issue this command.

Example usage:

To create a spanning tree instance 2:

```
DES-3028P:4#create stp instance_id 2
Command: create stp instance_id 2
```

Success.

```
DES-3028P:4#
```

## config stp instance\_id

<b>Purpose</b>	Used to add or delete an STP instance ID.
<b>Syntax</b>	<b>config stp instance_id &lt;value 1-4&gt; [add_vlan   remove_vlan] &lt;vidlist&gt;</b>
<b>Description</b>	This command is used to map VIDs (VLAN IDs) to previously configured STP instances on the Switch by creating an <i>instance_id</i> . A STP instance may have multiple members with the same MSTP configuration. There is no limit to the number of STP regions in a network but each region only supports a maximum of 5 spanning tree instances (one unchangeable default entry). VIDs can belong to only one spanning tree instance at a time.   <b>NOTE:</b> Switches in the same spanning tree region having the same STP <i>instance_id</i> must be mapped identically, and have the same configuration <i>revision_level</i> number and the same <i>name</i> .
<b>Parameters</b>	<value 1-4> - Enter a number between 1 and 4 to define the <i>instance_id</i> . The Switch supports 5 STP regions with one unchangeable default instance ID set as 0.  <i>add_vlan</i> – Along with the <i>vid_range</i> <vidlist> parameter, this command will add VIDs to the previously configured STP <i>instance_id</i> .

**config stp instance\_id**

*remove\_vlan* - Along with the *vid\_range <vidlist>* parameter, this command will remove VID's to the previously configured STP *instance\_id*.

*<vidlist>* - Specify the VID range from configured VLANs set on the Switch. Supported VID's on the Switch range from ID number 1 to 4094.

**Restrictions** Only administrator-level users can issue this command.

Example usage:

To configure instance ID 2 to add VID 10:

```
DES-3028P:4#config stp instance_id 2 add_vlan 10
```

```
Command : config stp instance_id 2 add_vlan 10
```

```
Success.
```

```
DES-3028P:4#
```

Example usage:

To remove VID 10 from instance ID 2:

```
DES-3028P:4#config stp instance_id 2 remove_vlan 10
```

```
Command : config stp instance_id 2 remove_vlan 10
```

```
Success.
```

```
DES-3028P:4#
```

**delete stp instance\_id**

**Purpose** Used to delete a STP instance ID from the Switch.

**Syntax** **delete stp instance\_id <value 1-4>**

**Description** This command allows the user to delete a previously configured STP instance ID from the Switch.

**Parameters** *<value 1-4>* Enter a value between 1 and 4 to identify the Spanning Tree instance on the Switch.

**Restrictions** Only administrator-level users can issue this command.

Example usage:

To delete STP instance ID 2 from the Switch.

```
DES-3028P:4#delete stp instance_id 2
```

```
Command: delete stp instance_id 2
```

```
Success.
```

```
DES-3028P:4#
```

**config stp priority**

Purpose	Used to update the STP instance configuration
Syntax	<b>config stp priority &lt;value 0-61440&gt; instance_id &lt;value 0-4&gt;</b>
Description	This command is used to update the STP instance configuration settings on the Switch. The MSTP will utilize the priority in selecting the root bridge, root port and designated port. Assigning higher priorities to STP regions will instruct the Switch to give precedence to the selected <i>instance_id</i> for forwarding packets. The lower the priority value set, the higher the priority.
Parameters	<i>priority &lt;value 0-61440&gt;</i> - Select a value between 0 and 61440 to specify the priority for a specified instance ID for forwarding packets. The lower the value, the higher the priority. This entry must be divisible by 4096. <i>instance_id &lt;value 0-4&gt;</i> - Enter the value corresponding to the previously configured instance ID of which the user wishes to set the priority value. An instance id of 0 denotes the default <i>instance_id</i> (CIST) internally set on the Switch.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To set the priority value for *instance\_id* 2 as 4096.

```
DES-3028P:4#config stp priority 4096 instance_id 2
Command : config stp priority 4096 instance_id 2
```

```
Success.
```

```
DES-3028P:4#
```

**config stp mst\_config\_id**

Purpose	Used to update the MSTP configuration identification.
Syntax	<b>config stp mst_config_id {revision_level &lt;int 0-65535&gt;   name &lt;string 32&gt;}</b>
Description	This command will uniquely identify the MSTP configuration currently configured on the Switch. Information entered here will be attached to BPDU packets as an identifier for the MSTP region to which it belongs. Switches having the same <i>revision_level</i> and <i>name</i> will be considered as part of the same MSTP region.
Parameters	<i>revision_level &lt;int 0-65535&gt;</i> — Enter a number between 0 and 65535 to identify the MSTP region. This value, along with the name will identify the MSTP region configured on the Switch. The default setting is 0. <i>name &lt;string&gt;</i> - Enter an alphanumeric string of up to 32 characters to uniquely identify the MSTP region on the Switch. This <i>name</i> , along with the <i>revision_level</i> value will identify the MSTP region configured on the Switch. If no <i>name</i> is entered, the default name will be the MAC address of the device.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure the MSTP region of the Switch with *revision\_level* 10 and the *name* "Trinity":

```
DES-3028P:4#config stp mst_config_id revision_level 10 name Trinity
Command : config stp mst_config_id revision_level 10 name Trinity
```

Success.

```
DES-3028P:4#
```

## config stp mst\_ports

Purpose	Used to update the port configuration for a MSTP instance.
Syntax	<b>config stp mst_ports &lt;portlist&gt; instance_id &lt;value 0-4&gt; {internalCost [auto   &lt;value 1-2000000&gt;] priority &lt;value 0-240&gt;</b>
Description	This command will update the port configuration for a STP <i>instance_id</i> . If a loop occurs, the MSTP function will use the port priority to select an interface to put into the forwarding state. Set a higher priority value for interfaces to be selected for forwarding first. In instances where the priority value is identical, the MSTP function will implement the lowest MAC address into the forwarding state and other interfaces will be blocked. Remember that lower priority values mean higher priorities for forwarding packets.
Parameters	<p><i>&lt;portlist&gt;</i> - Specifies a port or range of ports to be configured.</p> <p><i>instance_id &lt;value 0-4&gt;</i> - Enter a numerical value between 0 and 4 to identify the <i>instance_id</i> previously configured on the Switch. An entry of 0 will denote the CIST (Common and Internal Spanning Tree).</p> <p><i>internalCost</i> – This parameter is set to represent the relative cost of forwarding packets to specified ports when an interface is selected within a STP instance. The default setting is <i>auto</i>. There are two options:</p> <ul style="list-style-type: none"> <li><i>auto</i> – Selecting this parameter for the internalCost will set quickest route automatically and optimally for an interface. The default value is derived from the media speed of the interface.</li> <li><i>value 1-2000000</i> – Selecting this parameter with a value in the range of 1-2000000 will set the quickest route when a loop occurs. A lower <i>internalCost</i> represents a quicker transmission.</li> </ul> <p><i>priority &lt;value 0-240&gt;</i> - Enter a value between 0 and 240 to set the priority for the port interface. A higher priority will designate the interface to forward packets first. A lower number denotes a higher priority.</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To designate ports 1 through 5, with instance id 2, to have an auto internalCost and a priority of 16:

```
DES-3028P:4#config stp mst_config_id ports 1-5 instance_id 2
internalCost auto priority 16
```

```
Command : config stp mst_config_id ports 1-5 instance_id 2
internalCost auto priority 16
```

Success.

```
DES-3028P:4#
```

**show stp**

Purpose	Used to display the Switch's current STP configuration.
Syntax	<b>show stp</b>
Description	This command displays the Switch's current STP configuration.
Parameters	None
Restrictions	None.

Example usage:

To display the status of STP on the Switch:

**Status 1: STP enabled with STP compatible version**

```
DES-3028P:4#show stp
Command: show stp

STP Status           : Enabled
STP Version          : STP Compatible
Max Age              : 20
Hello Time           : 2
Forward Delay        : 15
Max Age              : 20
TX Hold Count        : 3
Forwarding BPDU      : Enabled
Loopback Detection   : Enabled
LBD Recover Time     : 60

DES-3028P:4#
```

**Status 2 : STP enabled for RSTP**

```
DES-3028P:4#show stp
Command: show stp

STP Status           : Enabled
STP Version          : RSTP
Max Age              : 20
Hello Time           : 2
Forward Delay        : 15
Max Age              : 20
TX Hold Count        : 3
Forwarding BPDU      : Enabled
Loopback Detection   : Enabled
LBD Recover Time     : 60

DES-3028P:4#
```

**Status 3 : STP enabled for MSTP**

```
DES-3028P:4#show stp
Command: show stp

STP Status           : Enabled
STP Version          : MSTP
Max Age              : 20
Forward Delay        : 15
Max Age              : 20
TX Hold Count        : 3
Forwarding BPDU      : Enabled
Loopback Detection   : Enabled
LBD Recover Time     : 60

DES-3028P:4#
```

**show stp ports**

Purpose	Used to display the Switch's current STP ports configuration.
Syntax	<b>show stp ports &lt;portlist&gt;</b>
Description	This command displays the STP ports settings for a specified port or group of ports (one port at a time).
Parameters	<portlist> – Specifies a port or range of ports to be viewed. Information for a single port is displayed. If no ports are specified the STP information for port 1 will be displayed. Users may use the Space bar, p and n keys to view information for the remaining ports.
Restrictions	None.

Example usage:

To show STP ports information for port 5 (STP enabled on Switch):

```
DES-3028P:4#show stp ports
Command: show stp ports

MSTP Port Information
-----
Port Index      : 5   , Hello Time: 2 /2 , Port STP Enabled LBD : No
External PathCost : Auto/200000 , Edge Port : No /No , P2P : Auto /Yes
Port Forward BPDU Disabled

Msti  Designated Bridge  Internal PathCost Prio  Status      Role
----  -
0     8000/0050BA7120D6  200000           128  Forwarding  Root
CTRL+C ESC q Quit SPACE n Next Page p Previous Page r Refresh
```

**show stp instance\_id**

Purpose	Used to display the Switch's STP instance configuration
Syntax	<b>show stp instance_id &lt;value 0-4&gt;</b>
Description	This command displays the Switch's current STP Instance Settings and the STP Instance Operational Status.
Parameters	<value 0-4> - Enter a value defining the previously configured <i>instance_id</i> on the Switch. An entry of 0 will display the STP configuration for the CIST internally set on the Switch.
Restrictions	None

Example usage:

To display the STP instance configuration for instance 0 (the internal CIST) on the Switch:

```

DES-3028P:4#show stp instance 0
Command: show stp instance 0

STP Instance Settings
-----
Instance Type           : CIST
Instance Status        : Enabled
Instance Priority       : 32768(bridge priority : 32768, sys ID ext : 0 )

STP Instance Operational Status
-----
Designated Root Bridge : 32766/00-90-27-39-78-E2
External Root Cost     : 200012
Regional Root Bridge   : 32768/00-53-13-1A-33-24
Internal Root Cost     : 0
Designated Bridge      : 32768/00-50-BA-71-20-D6
Root Port              : 1
Max Age                : 20
Forward Delay          : 15
Last Topology Change   : 856
Topology Changes Count : 2987

CTRL+C ESC q Quit SPACE n Next Page p Previous Page r Refresh

```

## show stp mst\_config\_id

<b>Purpose</b>	Used to display the MSTP configuration identification.
<b>Syntax</b>	<b>show stp mst_config_id</b>
<b>Description</b>	This command displays the Switch's current MSTP configuration identification.
<b>Parameters</b>	None.
<b>Restrictions</b>	None.

Example usage:

To show the MSTP configuration identification currently set on the Switch:

```

DES-3028P:4#show stp mst_config_id
Command: show stp mst_config_id

Current MST Configuration Identification
-----
Configuration Name : [00:53:13:1A:33:24]      Revision Level :0
MSTI ID   VID list
-----
CIST      2-4094
  1       1

DES-3028P:4#

```

## FORWARDING DATABASE COMMANDS

The layer 2 forwarding database commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
create fdb	<vlan_name 32> <macaddr> port <port>
create multicast_fdb	<vlan_name 32> <macaddr>
config multicast_fdb	<vlan_name 32> <macaddr> [add   delete] <portlist>
config fdb aging_time	<sec 10-1000000>
delete fdb	<vlan_name 32> <macaddr>
clear fdb	[vlan <vlan_name 32>   port <port>   all]
show multicast_fdb	{vlan <vlan_name 32>   mac_address <macaddr>}
show fdb	{port <port>   vlan <vlan_name 32>   mac_address <macaddr>   static   aging_time}
config multicast port_filtering_mode	[<portlist>   all] [forward_all_groups   forward_unregistered_groups   filter_unregistered_groups]
show multicast port_filtering_mode	

Each command is listed, in detail, in the following sections.

<b>create fdb</b>	
<b>Purpose</b>	Used to create a static entry to the unicast MAC address forwarding table (database).
<b>Syntax</b>	<b>create fdb &lt;vlan_name 32&gt; &lt;macaddr&gt; port &lt;port&gt;</b>
<b>Description</b>	This command will make an entry into the Switch's unicast MAC address forwarding database.
<b>Parameters</b>	<p>&lt;vlan_name 32&gt; – The name of the VLAN on which the MAC address resides.</p> <p>&lt;macaddr&gt; – The MAC address that will be added to the forwarding table.</p> <p>port &lt;port&gt; – The port number corresponding to the MAC destination address. The Switch will always forward traffic to the specified device through this port.</p>
<b>Restrictions</b>	Only administrator-level users can issue this command.

Example usage:

To create a unicast MAC FDB entry:

```
DES-3028P:4#create fdb default 00-00-00-00-01-02 port 5
Command: create fdb default 00-00-00-00-01-02 port 5

Success.

DES-3028P:4#
```

**create multicast\_fdb**

<b>Purpose</b>	Used to create a static entry to the multicast MAC address forwarding table (database)
<b>Syntax</b>	<b>create multicast_fdb &lt;vlan_name 32&gt; &lt;macaddr&gt;</b>
<b>Description</b>	This command will make an entry into the Switch's multicast MAC address forwarding database.
<b>Parameters</b>	<vlan_name 32> – The name of the VLAN on which the MAC address resides. <macaddr> – The MAC address that will be added to the forwarding table.
<b>Restrictions</b>	Only administrator-level users can issue this command.

Example usage:

To create multicast MAC forwarding:

```
DES-3028P:4#create multicast_fdb default 01-00-00-00-00-01
Command: create multicast_fdb default 01-00-00-00-00-01

Success.

DES-3028P:4#
```

**config multicast\_fdb**

<b>Purpose</b>	Used to configure the Switch's multicast MAC address forwarding database.
<b>Syntax</b>	<b>config multicast_fdb &lt;vlan_name 32&gt; &lt;macaddr&gt; [add   delete] &lt;portlist&gt;</b>
<b>Description</b>	This command configures the multicast MAC address forwarding table.
<b>Parameters</b>	<vlan_name 32> – The name of the VLAN on which the MAC address resides. <macaddr> – The MAC address that will be added to the multicast forwarding table. [add   delete] – add will add ports to the forwarding table. delete will remove ports from the multicast forwarding table. <portlist> – Specifies a port or range of ports to be configured.
<b>Restrictions</b>	Only administrator-level users can issue this command.

Example usage:

To add multicast MAC forwarding:

```
DES-3028P:4#config multicast_fdb default 01-00-00-00-00-01 add 1-5
Command: config multicast_fdb default 01-00-00-00-00-01 add 1-5

Success.

DES-3028P:4#
```

**config fdb aging\_time**

Purpose	Used to set the aging time of the forwarding database.
Syntax	<b>config fdb aging_time &lt;sec 10-1000000&gt;</b>
Description	The aging time affects the learning process of the Switch. Dynamic forwarding table entries, which are made up of the source MAC addresses and their associated port numbers, are deleted from the table if they are not accessed within the aging time. The aging time can be from 10 to 1000000 seconds with a default value of 300 seconds. A very long aging time can result in dynamic forwarding table entries that are out-of-date or no longer exist. This may cause incorrect packet forwarding decisions by the Switch. If the aging time is too short however, many entries may be aged out too soon. This will result in a high percentage of received packets whose source addresses cannot be found in the forwarding table, in which case the Switch will broadcast the packet to all ports, negating many of the benefits of having a switch.
Parameters	<sec 10-1000000> – The aging time for the MAC address forwarding database value. The value in seconds may be between 10 and 1000000 seconds.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To set the fdb aging time:

```
DES-3028P:4#config fdb aging_time 300
Command: config fdb aging_time 300

Success.

DES-3028P:4#
```

**delete fdb**

Purpose	Used to delete an entry to the Switch's forwarding database.
Syntax	<b>delete fdb &lt;vlan_name 32&gt; &lt;macaddr&gt;</b>
Description	This command is used to delete a previous entry to the Switch's MAC address forwarding database.
Parameters	<vlan_name 32> – The name of the VLAN on which the MAC address resides.  <macaddr> – The MAC address that will be added to the forwarding table.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To delete a permanent FDB entry:

```
DES-3028P:4#delete fdb default 00-00-00-00-01-02
Command: delete fdb default 00-00-00-00-01-02

Success.

DES-3028P:4#
```

To delete a multicast FDB entry:

```
DES-3028P:4#delete fdb default 01-00-00-00-01-02
```

```
Command: delete fdb default 01-00-00-00-01-02
```

```
Success.
```

```
DES-3028P:4#
```

## clear fdb

Purpose	Used to clear the Switch's forwarding database of all dynamically learned MAC addresses.
Syntax	<b>clear fdb [vlan &lt;vlan_name 32&gt;   port &lt;port&gt;   all]</b>
Description	This command is used to clear dynamically learned entries to the Switch's forwarding database.
Parameters	<p><i>&lt;vlan_name 32&gt;</i> – The name of the VLAN on which the MAC address resides.</p> <p><i>port &lt;port&gt;</i> – The port number corresponding to the MAC destination address. The Switch will always forward traffic to the specified device through this port.</p> <p><i>all</i> – Clears all dynamic entries to the Switch's forwarding database.</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To clear all FDB dynamic entries:

```
DES-3028P:4#clear fdb all
```

```
Command: clear fdb all
```

```
Success.
```

```
DES-3028P:4#
```

## show multicast\_fdb

Purpose	Used to display the contents of the Switch's multicast forwarding database.
Syntax	<b>show multicast_fdb [vlan &lt;vlan_name 32&gt;   mac_address &lt;macaddr&gt;]</b>
Description	This command is used to display the current contents of the Switch's multicast MAC address forwarding database.
Parameters	<p><i>&lt;vlan_name 32&gt;</i> – The name of the VLAN on which the MAC address resides.</p> <p><i>&lt;macaddr&gt;</i> – The MAC address that is present in the forwarding database table.</p>
Restrictions	None.

Example usage:

To display multicast MAC address table:

```

DES-3028P:4#show multicast_fdb vlan default
Command: show multicast_fdb vlan default

VLAN Name      : default
MAC Address    : 01-00-5E-00-00-00
Egress Ports   : 1-5
Mode           : Static

Total Entries  : 1

DES-3028P:4#

```

## show fdb

Purpose	Used to display the current unicast MAC address forwarding database.
Syntax	<b>show fdb {port &lt;port&gt;   vlan &lt;vlan_name 32&gt;   mac_address &lt;macaddr&gt;   static   aging_time}</b>
Description	This command will display the current contents of the Switch's forwarding database.
Parameters	<p><i>port &lt;port&gt;</i> – The port number corresponding to the MAC destination address. The Switch will always forward traffic to the specified device through this port.</p> <p><i>&lt;vlan_name 32&gt;</i> – The name of the VLAN on which the MAC address resides.</p> <p><i>&lt;macaddr&gt;</i> – The MAC address that is present in the forwarding database table.</p> <p><i>static</i> – Displays the static MAC address entries.</p> <p><i>aging_time</i> – Displays the aging time for the MAC address forwarding database.</p>
Restrictions	None.

Example usage:

To display unicast MAC address table:

```

DES-3028P:4#show fdb
Command: show fdb

Unicast MAC Address Ageing Time = 300

VID  VLAN Name  MAC Address      Port  Type
----  -
1    default    00-00-51-43-70-00  10    Dynamic
1    default    00-00-5E-00-01-01  10    Dynamic
1    default    00-00-74-60-72-2D  10    Dynamic

```

**config multicast port\_filtering\_mode**

Purpose	Used to configure the multicast packet filtering mode on a port per port basis.
Syntax	<b>config multicast port_filtering_mode [&lt;portlist&gt;   all] [forward_unregistered_groups   filter_unregistered_groups]</b>
Description	This command will configure the multicast packet filtering mode for specified ports on the Switch.
Parameters	<i>[&lt;portlist&gt;   all]</i> – Enter a port or list of ports for which to configure the multicast port filtering mode. Entering the <i>all</i> parameter will denote all ports on the switch. <i>[forward_unregistered_groups   filter_unregistered_groups]</i> – The user may set the filtering mode to any of these three options.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure the multicast filtering mode to forward all groups on ports 1 through 4.

```
DES-3028P:4#config multicast port_filtering_mode 1-4 forward_unregistered_groups
Command: config multicast port_filtering_mode 1-4 forward_unregistered_groups

Success.

DES-3028P:4#
```

**show multicast port\_filtering\_mode**

Purpose	Used to show the multicast packet filtering mode on a port per port basis.
Syntax	<b>show multicast port_filtering_mode</b>
Description	This command will display the current multicast packet filtering mode for specified ports on the Switch.
Parameters	None.
Restrictions	None.

Example usage:

To view the multicast port filtering mode for all ports:

```
DES-3028P:4#show multicast port_filtering_mode
Command: show multicast port_filtering_mode

Multicast Filter Mode For Unregistered Group:
  Forwarding List: 1-28
  Filtering List:

DES-3028P:4#
```

## BROADCAST STORM CONTROL COMMANDS

On a computer network, packets such as Multicast packets and Broadcast packets continually flood the network as normal procedure. At times, this traffic may increase do to a malicious endstation on the network or a malfunctioning device, such as a faulty network card. Thus, switch throughput problems will arise and consequently affect the overall performance of the switch network. To help rectify this packet storm, the Switch will monitor and control the situation.

The packet storm is monitored to determine if too many packets are flooding the network, based on the threshold level provided by the user. Once a packet storm has been detected, the Switch will drop packets coming into the Switch until the storm has subsided. This method can be utilized by selecting the **Drop** option of the **Action** field in the window below. The Switch will also scan and monitor packets coming into the Switch by monitoring the Switch's chip counter. This method is only viable for Broadcast and Multicast storms because the chip only has counters for these two types of packets. Once a storm has been detected (that is, once the packet threshold set below has been exceeded), the Switch will shutdown the port to all incoming traffic with the exception of STP BPDU packets, for a time period specified using the CountDown field. If this field times out and the packet storm continues, the port will be placed in a Shutdown Forever mode which will produce a warning message to be sent to the Trap Receiver. Once in Shutdown Forever mode, the only method of recovering this port is to manually recoup it using the **Port Configuration** window in the **Administration** folder and selecting the disabled port and returning it to an Enabled status. To utilize this method of Storm Control, choose the **Shutdown** option of the **Action** field in the window below.

The broadcast storm control commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config traffic control	[<portlist>   all] {broadcast [enable   disable]   multicast [enable   disable]   dlf [enable   disable]   action [drop   shutdown]   threshold <value 64-1000000>   time_interval <sec 5-30>   countdown [<minutes 0>  <minute 5-30>]}
show traffic control	{<portlist>}
config traffic trap	[none   storm_occurred   storm_cleared   both]

Each command is listed, in detail, in the following sections.

### config traffic control

Purpose	Used to configure broadcast/multicast/dlf packet storm control. The software mechanism is provided to monitor the traffic rate in addition to the hardware storm control mechanism previously provided.
Syntax	<b>config traffic control</b> [<portlist>   all] { <b>broadcast</b> [enable   disable]   <b>multicast</b> [enable   disable]   <b>dlf</b> [enable   disable]   <b>action</b> [drop   shutdown]   <b>threshold</b> <value 64-1000000>   <b>time_interval</b> <sec 5-30>   <b>countdown</b> [<minutes 0>   <minute 5-30>]}
Description	This command is used to configure broadcast/multicast/dlf storm control. By adding the new software traffic control mechanism, the user can now use both a hardware and software mechanism, the latter of which will now provide shutdown, recovery and trap notification functions for the Switch.
Parameters	<p>&lt;portlist&gt; – Used to specify a range of ports to be configured for traffic control.</p> <p><i>all</i> – Specifies all ports are to be configured for traffic control on the Switch.</p> <p><i>broadcast</i> [enable   disable] – Enables or disables broadcast storm control.</p> <p><i>multicast</i> [enable   disable] – Enables or disables multicast storm control.</p> <p><i>dlf</i> [enable   disable] – Enables or disables dlf traffic control.</p> <p><i>action</i> – Used to configure the action taken when a storm control has been detected on the Switch. The user has two options:</p> <p><i>drop</i> - Utilizes the hardware Traffic Control mechanism, which means</p>

## config traffic control

the Switch's hardware will determine the Packet Storm based on the Threshold value stated and drop packets until the issue is resolved.

*shutdown* - Utilizes the Switch's software Traffic Control mechanism to determine the Packet Storm occurring. Once detected, the port will deny all incoming traffic to the port except STP BPDU packets, which are essential in keeping the Spanning Tree operational on the Switch. If the countdown timer has expired and yet the Packet Storm continues, the port will be placed in Shutdown Forever mode and is no longer operational until the user manually resets the port using the **config ports enable** command. Choosing this option obligates the user to configure the *time\_interval* field as well, which will provide packet count samplings from the Switch's chip to determine if a Packet Storm is occurring.

*threshold <value 64-1000000>* – The upper threshold at which the specified traffic control is switched on. The *<value>* is the number of broadcast/multicast/dlf packets, in Kbits per second (Kbit/sec), received by the Switch that will trigger the storm traffic control measures. The default setting is 64 Kbit/sec.

*time\_interval* - The Interval will set the time between Multicast and Broadcast packet counts sent from the Switch's chip to the Traffic Control function. These packet counts are the determining factor in deciding when incoming packets exceed the Threshold value.

*sec 5-30* - The Interval may be set between 5 and 30 seconds with the default setting of 5 seconds.

*countdown* - The countdown timer is set to determine the amount of time, in minutes, that the Switch will wait before shutting down the port that is experiencing a traffic storm. This parameter is only useful for ports configured as **shutdown** in the **action** field of this command and therefore will not operate for Hardware based Traffic Control implementations.

- *minutes 0* - 0 is the default setting for this field and 0 will denote that the port will never shutdown.
- *minutes 5-30* – Select a time from 5 to 30 minutes that the Switch will wait before shutting down. Once this time expires and the port is still experiencing packet storms, the port will be placed in shutdown forever mode and can only be manually recovered using the config ports command mentioned previously in this manual.

Restrictions      User Account Command Level – Administrator and Operator

Example usage:

To configure traffic control and enable broadcast storm control for ports 1-12:

```
DES-3028P:4# config traffic control 1-12 broadcast enable action
shutdown threshold 64 countdown 10 time_interval 10
Command: config traffic control 1-12 broadcast enable action shutdown
threshold 64 countdown 10 time_interval 10
```

Success.

```
DES-3028P:4#
```

## show traffic control

Purpose                      Used to display current traffic control settings.

Syntax                     **show traffic control { <portlist> }**

**show traffic control**

Description	This command displays the current storm traffic control configuration on the Switch.
Parameters	<i>&lt;portlist&gt;</i> - Used to specify port or list of ports for which to display traffic control settings. The beginning and end of the port list range are separated by a dash.
Restrictions	User Account Command Level – All

Example usage:

To display traffic control setting for ports 1-4:

DES-3028P:4#show traffic control 1-4

Command: show traffic control 1-4

Traffic Storm Control Trap: [None]

Port	Thres hold	Broadcast Storm	Multicast Storm	DLF Storm	Action	Count down	Time Interval	Shutdown Forever
1	64	Disabled	Disabled	Disabled	drop	0	5	
2	64	Disabled	Disabled	Disabled	drop	0	5	
3	64	Disabled	Disabled	Disabled	drop	0	5	
4	64	Disabled	Disabled	Disabled	drop	0	5	

Total Entries: 4

DES-3028P:4#

**config traffic trap**

Purpose	Used to configure the trap settings for the packet storm control mechanism.
Syntax	<b>config traffic trap [none   storm_occurred   storm_cleared   both]</b>
Description	This command will configure how packet storm control trap messages will be used when a packet storm is detected by the Switch. This function can only be used for the software traffic storm control mechanism (when the <b>action</b> field in the <b>config traffic control</b> command is set as <b>shutdown</b> ).
Parameters	<p><i>none</i> – No notification will be generated or sent when a packet storm control is detected by the Switch.</p> <p><i>storm_occurred</i> – A notification will be generated and sent when a packet storm has been detected by the Switch.</p> <p><i>storm_cleared</i> - A notification will be generated and sent when a packet storm has been cleared by the Switch.</p> <p><i>both</i> - A notification will be generated and sent when a packet storm has been detected and cleared by the Switch.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure notifications to be sent when a packet storm control has been detected and cleared by the Switch.

```
DES-3028P:4# config traffic trap both
```

```
Command: config traffic trap both
```

```
Success.
```

```
DES-3028P:4#
```

## CoS COMMANDS

The DES-3028/28P/52/52P supports 802.1p priority queuing. The Switch has four priority queues. These priority queues are numbered from 3 (Class 3) — the highest priority queue — to 0 (Class 0) — the lowest priority queue. The eight priority tags specified in IEEE 802.1p (p0 to p7) are mapped to the Switch's priority queues as follows:

- Priority 0 is assigned to the Switch's Q1 queue.
- Priority 1 is assigned to the Switch's Q0 queue.
- Priority 2 is assigned to the Switch's Q0 queue.
- Priority 3 is assigned to the Switch's Q1 queue.
- Priority 4 is assigned to the Switch's Q2 queue.
- Priority 5 is assigned to the Switch's Q2 queue.
- Priority 6 is assigned to the Switch's Q3 queue.
- Priority 7 is assigned to the Switch's Q3 queue.

Priority scheduling is implemented by the priority queues stated above. The Switch will empty the four hardware priority queues in order, beginning with the highest priority queue, 3, to the lowest priority queue, 0. Each hardware queue will transmit all of the packets in its buffer before permitting the next lower priority to transmit its packets. When the lowest hardware priority queue has finished transmitting all of its packets, the highest hardware priority queue will begin transmitting any packets it may have received.

The commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config bandwidth_control	[<portlist>] {rx_rate [no_limit   <value 64-1024000>]   tx_rate [no_limit <value 64-1024000>]}
show bandwidth_control	<portlist>
config scheduling	<class_id 0-3> {weight <value 1-55>}
config scheduling_mechanism	[strict   weight_fair]
show scheduling	
show scheduling_mechanism	
config 802.1p user_priority	<priority 0-7> <class_id 0-3>
show 802.1p user_priority	
config 802.1p default_priority	[<portlist>   all] <priority 0-7>
show 802.1p default_priority	<portlist>
config cos mapping port	[<portlist>   all] [none   {port_mapping   ethernet [802.1p   mac_mapping]   ip [tos   dscp]}]
show cos mapping	{port <portlist> }
config cos port_mapping	[class [ 0(1)   3(2) ] [<portlist>   all]
show cos port_mapping	{port <portlist> }
config cos mac_mapping	destination_addr <macaddr> [class <class_id 0-3>]
show cos mac_mapping	{destination_addr < macaddr > }
config cos tos value	<value 0-7> [class <class_id 0-3>]
show cos tos	{value <value 0-7>}
config dscp_mapping	dscp_value <value 0-63> [class <class_id 0-3>]
show dscp_mapping	{dscp_value <value 0-63> }

Each command is listed, in detail, in the following sections.

<b>config bandwidth_control</b>	
Purpose	Used to configure bandwidth control on a port by-port basis.
Syntax	<b>config bandwidth_control</b> [<portlist>] {rx_rate [no_limit   <value 64-1024000>]   tx_rate [no_limit <value 64-1024000>]}
Description	The <b>config bandwidth_control</b> command is used to configure bandwidth on a port by-port basis.
Parameters	<p>&lt;portlist&gt; – Specifies a port or range of ports to be configured.</p> <p>rx_rate – Specifies that one of the parameters below (<i>no_limit</i> or &lt;value 64-1024000&gt;) will be applied to the rate at which the above specified ports will be allowed to receive packets</p> <ul style="list-style-type: none"> <li>▪ <i>no_limit</i> – Specifies that there will be no limit on the rate of packets received by the above specified ports.</li> <li>▪ &lt;value 64-1024000&gt; – Specifies the traffic limit, in Kbits, that the above ports will be allowed to receive.</li> </ul> <p>tx_rate – Specifies that one of the parameters below (<i>no_limit</i> or &lt;value 64-1024000&gt;) will be applied to the rate at which the above specified ports will be allowed to transmit packets.</p> <ul style="list-style-type: none"> <li>▪ <i>no_limit</i> – Specifies that there will be no limit on the rate of packets received by the above specified ports.</li> <li>▪ &lt;value 64-1024000&gt; – Specifies the traffic limit, in Kbits, that the above ports will be allowed to receive.</li> </ul>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure bandwidth control:

```
DES-3028P:4#config bandwidth_control 1 rx_rate 64
Command: config bandwidth_control 1 rx_rate 64
```

**Note:** To perform precise bandwidth control, it is required to enable the flow control to mitigate the retransmission of TCP traffic.

**Success.**

```
DES-3028P:4#
```

<b>show bandwidth_control</b>	
Purpose	Used to display the bandwidth control table.
Syntax	<b>show bandwidth_control</b> {<portlist>}
Description	The <b>show bandwidth_control</b> command displays the current bandwidth control configuration on the Switch, on a port-by-port basis.
Parameters	<portlist> – Specifies a port or range of ports to be viewed.
Restrictions	None.

Example usage:

To display bandwidth control settings:

```
DES-3028P:4#show bandwidth_control 1-5
```

```
Command: show bandwidth_control 1-5
```

#### Bandwidth Control Table

Port	RX Rate (Kbit/sec)	TX Rate (Kbit/sec)
1	no_limit	no_limit
2	no_limit	no_limit
3	no_limit	no_limit
4	no_limit	no_limit
5	no_limit	no_limit

```
DES-3028P:4#
```

## config scheduling

Purpose	Used to configure the traffic scheduling mechanism for each COS queue.
Syntax	<b>config scheduling &lt;class_id 0-3&gt; [weight &lt;value 1-55&gt;]</b>
Description	<p>The Switch contains four hardware priority queues. Incoming packets must be mapped to one of these four queues. This command is used to specify the rotation by which these four hardware priority queues are emptied.</p> <p>The Switch's default (if the config scheduling command is not used) is to empty the four hardware priority queues in order – from the highest priority queue (hardware queue 3) to the lowest priority queue (hardware queue 0). Each hardware queue will transmit all of the packets in its buffer before allowing the next lower priority queue to transmit its packets. When the lowest hardware priority queue has finished transmitting all of its packets, the highest hardware priority queue can again transmit any packets it may have received.</p> <p>weight &lt;value 1-55&gt; – Specifies the weights for weighted fair queueing. A value between 1 and 55 can be specified.</p>
Parameters	<class_id 0-3> – This specifies which of the four hardware priority queues the <b>config scheduling</b> command will apply to. The four hardware priority queues are identified by number – from 0 to 3 – with the 0 queue being the lowest priority.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure the traffic scheduling mechanism for each queue:

```
DES-3028P:4# config scheduling 0 weight 55
```

```
Command: config scheduling 0 weight 55
```

```
Success.
```

```
DES-3028P:4#
```

## show scheduling

Purpose	Used to display the currently configured traffic scheduling on the Switch.
Syntax	<b>show scheduling</b>
Description	The <b>show scheduling</b> command will display the current traffic

**show scheduling**

	scheduling mechanisms in use on the Switch.
Parameters	None.
Restrictions	None.

Example usage:

To display the current scheduling configuration:

```
DES-3028P:4# show scheduling
```

```
Command: show scheduling
```

**QOS Output Scheduling**

Class ID	Weight
Class-0	1
Class-1	2
Class-2	4
Class-3	8

```
DES-3028P:4#
```

**config scheduling\_mechanism**

Purpose	Used to configure the scheduling mechanism for the QoS function
Syntax	<b>config scheduling_mechanism [strict   weight_fair]</b>
Description	<p>The <b>config scheduling_mechanism</b> command allows the user to select between a <b>weight fair</b> and a <b>Strict</b> mechanism for emptying the priority classes of service of the QoS function. The Switch contains seven hardware priority classes of service. Incoming packets must be mapped to one of these seven hardware priority classes of service. This command is used to specify the rotation by which these seven hardware priority classes of service are emptied.</p> <p>The Switch's default is to empty the seven priority classes of service in order – from the highest priority class of service (queue 6) to the lowest priority class of service (queue 0). Each queue will transmit all of the packets in its buffer before allowing the next lower priority class of service to transmit its packets. Lower classes of service will be pre-empted from emptying its queue if a packet is received on a higher class of service. The packet that was received on the higher class of service will transmit its packet before allowing the lower class to resume clearing its queue.</p>
Parameters	<p><i>strict</i> – Entering the <i>strict</i> parameter indicates that the highest class of service is the first to be processed. That is, the highest class of service should finish emptying before the others begin.</p> <p><i>weight_fair</i> – Entering the <i>weight fair</i> parameter indicates that the priority classes of service will empty packets in a fair weighted order. That is to say that they will be emptied in an even distribution.</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure the traffic scheduling mechanism for each QoS queue:

```
DES-3028P:4#config scheduling_mechanism strict
Command: config scheduling_mechanism strict
```

**Note:** The strict mode is only supported at the highest queue and the other lower queues will still work at WRR mode.

**Success.**

```
DES-3028P:4#
```

## show scheduling\_mechanism

Purpose	Used to display the current traffic scheduling mechanisms in use on the Switch.
Syntax	<b>show scheduling_mechanism</b>
Description	This command will display the current traffic scheduling mechanisms in use on the Switch.
Parameters	None.
Restrictions	None.

Example usage:

To show the scheduling mechanism:

```
DES-3028P:4#show scheduling_mechanism
Command: show scheduling_mechanism
```

```
QOS scheduling_mechanism
CLASS ID  Mechanism
-----  -
```

Class-0	strict
Class-1	strict
Class-2	strict
Class-3	strict

```
DES-3028P:4#
```

**config 802.1p user\_priority**

Purpose	Used to map the 802.1p user priority of an incoming packet to one of the four hardware queues available on the Switch.																											
Syntax	<b>config 802.1p user_priority &lt;priority 0-7&gt; &lt;class_id 0-3&gt;</b>																											
Description	<p>This command allows users to configure the way the Switch will map an incoming packet, based on its 802.1p user priority, to one of the four available hardware priority queues on the Switch.</p> <p>The Switch's default is to map the following incoming 802.1p user priority values to the four hardware priority queues:</p> <table border="1"> <thead> <tr> <th>802.1p</th> <th>Hardware Queue</th> <th>Remark</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>1</td> <td>Mid-low</td> </tr> <tr> <td>1</td> <td>0</td> <td>Lowest</td> </tr> <tr> <td>2</td> <td>0</td> <td>Lowest</td> </tr> <tr> <td>3</td> <td>1</td> <td>Mid-low</td> </tr> <tr> <td>4</td> <td>2</td> <td>Mid-high</td> </tr> <tr> <td>5</td> <td>2</td> <td>Mid-high</td> </tr> <tr> <td>6</td> <td>3</td> <td>Highest</td> </tr> <tr> <td>7</td> <td>3</td> <td>Highest.</td> </tr> </tbody> </table> <p>This mapping scheme is based upon recommendations contained in IEEE 802.1D.</p> <p>Change this mapping by specifying the 802.1p user priority users want to map to the &lt;class_id 0-3&gt; (the number of the hardware queue).</p> <p>&lt;priority 0-7&gt; – The 802.1p user priority to associate with the &lt;class_id 0-3&gt; (the number of the hardware queue).</p> <p>&lt;class_id 0-3&gt; – The number of the Switch's hardware priority queue. The Switch has four hardware priority queues available. They are numbered between 0 (the lowest priority) and 3 (the highest priority).</p>	802.1p	Hardware Queue	Remark	0	1	Mid-low	1	0	Lowest	2	0	Lowest	3	1	Mid-low	4	2	Mid-high	5	2	Mid-high	6	3	Highest	7	3	Highest.
802.1p	Hardware Queue	Remark																										
0	1	Mid-low																										
1	0	Lowest																										
2	0	Lowest																										
3	1	Mid-low																										
4	2	Mid-high																										
5	2	Mid-high																										
6	3	Highest																										
7	3	Highest.																										
Restrictions	Only administrator-level users can issue this command.																											

Example usage:

To configure 802.1 user priority on the Switch:

```
DES-3028P:4# config 802.1p user_priority 1 3
Command: config 802.1p user_priority 1 3

Success.

DES-3028P:4#
```

**show 802.1p user\_priority**

Purpose	Used to display the current mapping between an incoming packet's 802.1p priority value and one of the Switch's four hardware priority queues.
Syntax	<b>show 802.1p user_priority</b>
Description	The <b>show 802.1p user_priority</b> command displays the current mapping of an incoming packet's 802.1p priority value to one of the Switch's four hardware priority queues.
Parameters	None.
Restrictions	None.

Example usage:

To show 802.1p user priority:

```
DES-3028P:4# show 802.1p user_priority
Command: show 802.1p user_priority

QOS Class of Traffic

Priority-0 -> <Class-1>
Priority-1 -> <Class-0>
Priority-2 -> <Class-0>
Priority-3 -> <Class-1>
Priority-4 -> <Class-2>
Priority-5 -> <Class-2>
Priority-6 -> <Class-3>
Priority-7 -> <Class-3>

DES-3028P:4#
```

### config 802.1p default\_priority

Purpose	Used to configure the 802.1p default priority settings on the Switch. If an untagged packet is received by the Switch, the priority configured with this command will be written to the packet's priority field.
Syntax	<b>config 802.1p default_priority [&lt;portlist&gt;   all] &lt;priority 0-7&gt;</b>
Description	This command allows the user to specify default priority handling of untagged packets received by the Switch. The priority value entered with this command will be used to determine to which of the four hardware priority queues the packet is forwarded.
Parameters	<p><i>&lt;portlist&gt;</i> – Specifies a port or range of ports to be configured.</p> <p><i>all</i> – Specifies that the command applies to all ports on the Switch.</p> <p><i>&lt;priority 0-7&gt;</i> – The priority value to assign to untagged packets received by the Switch or a range of ports on the Switch.</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure 802.1p default priority on the Switch:

```
DES-3028P:4#config 802.1p default_priority all 5
Command: config 802.1p default_priority all 5

Success.

DES-3028P:4#
```

### show 802.1p default\_priority

Purpose	Used to display the currently configured 802.1p priority value that will be assigned to an incoming, untagged packet before being forwarded to its destination.
Syntax	<b>show 802.1p default_priority {&lt;portlist&gt;}</b>
Description	The <b>show 802.1p default_priority</b> command displays the currently configured 802.1p priority value that will be assigned to an incoming, untagged packet before being forwarded to its destination.
Parameters	<i>&lt;portlist&gt;</i> – Specifies a port or range of ports to be configured.

**show 802.1 default\_priority**

Restrictions      None.

Example usage:

To display the current 802.1p default priority configuration on the Switch:

```
DES-3028P:4# show 802.1p default_priority
Command: show 802.1p default_priority

Port   Priority
-----
1       0
2       0
3       0
4       0
5       0
6       0
7       0
8       0
9       0
10      0
11      0
12      0
13      0
14      0
15      0
16      0
17      0
18      0
19      0
20      0
21      0
22      0
23      0
24      0

DES-3028P:4#
```

**config cos mapping**

Purpose	Used to configure the CoS to port mapping method to be used on the switch.
Syntax	<b>config cos mapping port</b> [<portlist>   all] [none   {port_mapping   ethernet [802.1p   mac_mapping]   ip [tos   dscp]]]
Description	The <b>config cos mapping</b> is used to set the method of which incoming packets will be identified for the CoS to port mapping feature on the Switch. Identified packets will be forwarded to the appropriate CoS queue.
Parameters	<p>&lt;portlist&gt; – Specifies a port or range of ports to be configured.</p> <p>all – Specifies all ports will be configured.</p> <p>none – Disable all priority-base CoS features.</p> <p>port_mapping – Enable port-based CoS.</p> <p>ethernet – Enable Ethernet frame based priority.</p> <p>802.1p – Enable 802.1p CoS</p> <p>mac_mapping – Enable MAC-based CoS.</p> <p>ip – Enable Ethernet frame based priority.</p>
Restrictions	None.

Example usage:

To configure port 1 as a CoS enabled port which uses the physical port number as its criteria for identifying packets:

```
DES-3028P:4# config cos mapping port 1 port_mapping
Command: config cos mapping port 1 port_mapping

Success.

DES-3028P:4#
```

**show cos mapping**

Purpose	Used to show CoS mapping.
Syntax	<b>show cos mapping</b> {port <portlist> }
Description	The <b>show cos mapping</b> displays information regarding CoS mapping enabled ports and their mapping method.
Parameters	<portlist> – Specifies a range of ports to be displayed. If no parameter is specified, the all ports priority settings will be shown.
Restrictions	None.

Example usage:

To show the CoS capability of port 1:

```
DES-3028P:4# show cos mapping
Command: show cos mapping
```

Port	Port_priority	Ethernet_priority	IP_priority
1	off	802.1p	off
2	off	802.1p	off
3	off	802.1p	off
4	off	802.1p	off
5	off	802.1p	off
6	off	802.1p	off

7	off	802.1p	off
8	off	802.1p	off
9	off	802.1p	off
10	off	802.1p	off
11	off	802.1p	off
12	off	802.1p	off
13	off	802.1p	off
14	off	802.1p	off
15	off	802.1p	off
16	off	802.1p	off
17	off	802.1p	off
18	off	802.1p	off
19	off	802.1p	off
20	off	802.1p	off

CTRL+C ESC q Quit SPACE n Next Page ENTER Next Entry a All

## config cos port\_mapping

Purpose	Used to map a specific port to one of the hardware queues available on the switch.
Syntax	<b>config cos port_mapping [0-3] port [&lt;portlist&gt;   all]</b>
Description	The config cos port_mapping command is used to configure port-to-class CoS mapping.
Parameters	<p>0-3 – The number of the switch's hardware priority queue. The switch has eight hardware priority queues available. They are numbered between 0 (the lowest priority queue) and 3 (the highest priority queue).</p> <p>&lt;portlist&gt; – Specifies a port or range of ports to be configured.</p> <p>all – To set all ports in the system at once, you may use the "all" parameter.</p>
Restrictions	You must have administrator privileges.

Example usage:

To configure a specific CoS queue to be mapped to a destination port 1:

```
DES-3028P:4# config cos port_mapping 3 port 1
Command: config cos port_mapping 3 port 1

Success.

DES-3028P:4#
```

**show cos port\_mapping**

Purpose	Used to map the destination MAC address in incoming packets to one of the hardware queues available on the switch.
Syntax	<b>show cos port_mapping {port &lt;portlist&gt;}</b>
Description	The <b>show cos mac_mapping</b> command is used to view map static destination MAC addresses to one of the CoS traffic classes.
Parameters	<portlist> – Specifies a port or range of ports to be configured. If no parameter is specified, all port-to-class mappings will be shown.
Restrictions	None.

Example usage:

To show the cos port\_mapping of the port 3:

```
DES-3028P:4# show cos port_mapping port 3
Command: show cos port_mapping port 3

Port Priority
-----
3      3

DES-3028P:4#
```

**config cos mac\_mapping**

Purpose	Used to map the destination MAC address in incoming packet to one of the hardware queues available on the switch.
Syntax	<b>config cos mac_mapping destination_addr &lt;macaddr&gt; [class &lt;class_id 0-3&gt;]</b>
Description	The <b>config cos mac_mapping</b> command is used to map static destination MAC address to one of the traffic classes.
Parameters	<i>destination_addr</i> – The MAC address to be configured. <i>class_id</i> – The number of the Switch's hardware priority queue. The Switch has four hardware priority queues available. They are numbered between 0 (the lowest priority) and 3 (the highest priority).
Restrictions	You must have administrator privileges.

Example usage:

To configure the destination MAC address 00-01-02-03-04-05 to traffic class 2 mapping:

```
DES-3028P:4# config cos mac_mapping destination_addr 00-01-02-03-04-05 class 2
Command: config cos mac_mapping destination_addr 00-01-02-03-04-05 class 2

Success.

DES-3028P:4#
```

**show cos mac\_mapping**

Purpose	Used to show the mapping between destination MAC addresses and CoS traffic classes.
Syntax	<b>show cos mac_mapping {destination_addr &lt;macaddr&gt;}</b>
Description	The <b>show cos mac_mapping</b> command display the information of the destination MAC address mapped to a traffic class.
Parameters	<i>destination_addr</i> – The MAC address of the incoming packet destination address. If no parameter is specified, all the MAC address mapping to traffic class will be shown.
Restrictions	None.

Example usage:

To show the MAC address to traffic class mapping of MAC address 00-01-02-03-04-05:

```
DES-3028P:4# show cos mac_mapping destination_addr 00-01-02-03-04-05
Command: show cos mac_mapping destination_addr 00-01-02-03-04-05

MAC Address      Class
-----
00-01-02-03-04-05    2

DES-3028P:4#
```

**config cos tos value**

Purpose	Used to map the ToS value in the IP header of incoming packets to one of the eight hardware queues available on the switch.
Syntax	<b>config cos tos value &lt;value 0-7&gt; [class &lt;class_id 0-3&gt;]</b>
Description	The <b>config cos tos</b> command is used to configure ToS to traffic class mapping.
Parameters	<i>value</i> – The ToS value of incoming packet that you want to associate with the traffic class.  <i>class_id</i> – The number of the Switch's hardware priority queue. The Switch has four hardware priority queues available. They are numbered between 0 (the lowest priority) and 3 (the highest priority).
Restrictions	You must have administrator privileges.

Example usage:

Configure the TOS 5 to the traffic class 1 mapping:

```
DES-3028P:4# config cos tos value 5 class 1
Command: config cos tos value 5 class 1

Success.

DES-3028P:4#
```

**show cos tos**

Purpose	Used to show TOS value to traffic class mapping.
Syntax	<b>show cos tos {value &lt;value 0-7&gt;}</b>
Description	The <b>show cos tos</b> command displays the information of ToS to traffic class mappings.
Parameters	<i>value</i> – The TOS value of the incoming packet. If no parameter is specified, all the ToS values to traffic class mappings will be shown.
Restrictions	None.

Example usage:

To show the TOS to traffic class mapping of the TOS 5:

```
DES-3028P:4# show cos tos value 5
Command: show cos tos value 5

TOS value      Class
-----
5              2

DES-3028P:4#
```

**config dscp\_mapping**

Purpose	Used to map the DSCP value in the IP header of incoming packet to one of the four hardware queues available on the switch.
Syntax	<b>config dscp_mapping dscp_value &lt;value 0-63&gt; [class &lt;class_id 0-3&gt;]</b>
Description	The <b>config dscp_mapping</b> command is used to configure DSCP mapping to traffic class. This command is supported when the ACL commands are not supported.
Parameters	<i>value</i> – The DSCP value of the incoming packet you want to associate with the <i>class_id</i> . <i>class_id</i> – The number of the Switch's hardware priority queue. The switch has four hardware priority queues available. They are numbered between 0 (the lowest priority) and 3 (the highest priority).
Restrictions	You must have administrator privileges.

Example usage:

To configure DSCP map to traffic class:

```
DES-3028P:4# config dscp_mapping dscp_value 8 class 1
Command: config dscp_mapping dscp_value 8 class 1

Success.

DES-3028P:4#
```

**show dscp\_mapping**

Purpose	Used to show DSCP value map to traffic class.
Syntax	<b>show dscp_mapping {dscp_value &lt;value 0-63&gt;}</b>
Description	The <b>show dscp_mapping</b> command displays the information for DSCP mapping to traffic class. This command is supported when the ACL commands are not supported.
Parameters	<i>value</i> – The DSCP value of the incoming packet. If no parameter is specified, all the DSCP value mapping to traffic class will be shown.
Restrictions	None.

Example usage:

To show the DSCP map to traffic class:

```
DES-3028P:4# show dscp_mapping
Command: show dscp_mapping

DSCP  Class
-----
0      0
1      0
2      0
3      0
4      0

```

## PORT MIRRORING COMMANDS

The port mirroring commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config mirror port	<port> [add   delete] source ports <portlist> [rx   tx   both]
enable mirror	
disable mirror	
show mirror	

Each command is listed, in detail, in the following sections.

<b>config mirror port</b>	
Purpose	Used to configure a mirror port – source port pair on the Switch. Traffic from any source port to a target port can be mirrored for real-time analysis. A logic analyzer or an RMON probe can then be attached to study the traffic crossing the source port in a completely obtrusive manner.
Syntax	<b>config mirror port &lt;port&gt; [add   delete] source ports &lt;portlist&gt; [rx   tx   both]</b>
Description	This command allows a range of ports to have all of their traffic also sent to a designated port, where a network sniffer or other device can monitor the network traffic. In addition, users can specify that only traffic received by or sent by one or both is mirrored to the Target port.
Parameters	<p><b>&lt;port&gt;</b> – This specifies the Target port (the port where mirrored packets will be received). The target port must be configured in the same VLAN and must be operating at the same speed as the source port. If the target port is operating at a lower speed, the source port will be forced to drop its operating speed to match that of the target port.</p> <p><b>[add   delete]</b> – Specifies if the user wishes to add or delete ports to be mirrored that are specified in the <i>source ports</i> parameter.</p> <p><b>source ports</b> – The port or ports being mirrored. This cannot include the Target port.</p> <p><b>&lt;portlist&gt;</b> – This specifies a port or range of ports that will be mirrored. That is, the range of ports in which all traffic will be copied and sent to the Target port.</p> <p><b>rx</b> – Allows the mirroring of only packets received by (flowing into) the port or ports in the port list.</p> <p><b>tx</b> – Allows the mirroring of only packets sent to (flowing out of) the port or ports in the port list.</p> <p><b>both</b> – Mirrors all the packets received or sent by the port or ports in the port list.</p>
Restrictions	The Target port cannot be listed as a source port. Only administrator-level users can issue this command.

Example usage:

To add the mirroring ports:

```
DES-3028P:4# config mirror port 1 add source ports 2-7 both
Command: config mirror port 1 add source ports 2-7 both
```

```
Success.
```

```
DES-3028P:4#
```

Example usage:

To delete the mirroring ports:

```
DES-3028P:4#config mirror port 1 delete source port 2-4 both
Command: config mirror 1 delete source 2-4 both
```

```
Success.
```

```
DES-3028P:4#
```

## enable mirror

Purpose	Used to enable a previously entered port mirroring configuration.
Syntax	<b>enable mirror</b>
Description	This command, combined with the <b>disable mirror</b> command below, allows the user to enter a port mirroring configuration into the Switch, and then turn the port mirroring on and off without having to modify the port mirroring configuration.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To enable mirroring configurations:

```
DES-3028P:4#enable mirror
Command: enable mirror
```

```
Success.
```

```
DES-3028P:4#
```

## disable mirror

Purpose	Used to disable a previously entered port mirroring configuration.
Syntax	<b>disable mirror</b>
Description	This command, combined with the <b>enable mirror</b> command above, allows the user to enter a port mirroring configuration into the Switch, and then turn the port mirroring on and off without having to modify the port mirroring configuration.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To disable mirroring configurations:

```
DES-3028P:4#disable mirror
```

```
Command: disable mirror
```

```
Success.
```

```
DES-3028P:4#
```

## show mirror

Purpose	Used to show the current port mirroring configuration on the Switch.
Syntax	<b>show mirror</b>
Description	This command displays the current port mirroring configuration on the Switch.
Parameters	None
Restrictions	None.

Example usage:

To display mirroring configuration:

```
DES-3028P:4#show mirror
```

```
Command: show mirror
```

```
Current Settings
```

```
Mirror Status : Enabled
```

```
Target Port   : 1
```

```
Mirrored Port :
```

```
    RX :
```

```
    TX : 5-7
```

```
DES-3028P:4#
```

## VLAN COMMANDS

The VLAN commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
create vlan	<vlan_name 32> {tag <vlanid 2-4094>   advertisement}
delete vlan	<vlan_name 32>
config vlan	<vlan_name 32> {[add [tagged   untagged   forbidden]   delete] <portlist>   advertisement [enable   disable]}
config gvrp	[<portlist>   all] {state [enable   disable]   ingress_checking [enable   disable]   acceptable_frame [tagged_only   admit_all]   pvid <vlanid 1-4094>}
enable gvrp	
disable gvrp	
show vlan	<vlan_name 32>
show gvrp	<portlist>

Each command is listed, in detail, in the following sections.

create vlan	
Purpose	Used to create a VLAN on the Switch.
Syntax	<b>create vlan &lt;vlan_name 32&gt; {tag &lt;vlanid 2-4094&gt;   advertisement}</b>
Description	This command allows the user to create a VLAN on the Switch.
Parameters	<p>&lt;vlan_name 32&gt; – The name of the VLAN to be created.</p> <p>&lt;vlanid 2-4094&gt; – The VLAN ID of the VLAN to be created. Allowed values = 2-4094</p> <p><i>advertisement</i> – Specifies that the VLAN is able to join GVRP. If this parameter is not set, the VLAN cannot be configured to have forbidden ports.</p>
Restrictions	Each VLAN name can be up to 32 characters. If the VLAN is not given a tag, it will be a port-based VLAN. Up to 4094 static VLANs may be created per configuration. Only administrator-level users can issue this command.

Example usage:

To create a VLAN v1, tag 2:

```
DES-3028P:4#create vlan v1 tag 2
Command: create vlan v1 tag 2

Success.

DES-3028P:4#
```

**delete vlan**

Purpose	Used to delete a previously configured VLAN on the Switch.
Syntax	<b>delete vlan &lt;vlan_name 32&gt;</b>
Description	This command will delete a previously configured VLAN on the Switch.
Parameters	<vlan_name 32> – The VLAN name of the VLAN to delete.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To remove the VLAN “v1”:

```
DES-3028P:4#delete vlan v1
Command: delete vlan v1

Success.

DES-3028P:4#
```

**config vlan**

Purpose	Used to add additional ports to a previously configured VLAN.
Syntax	<b>config vlan &lt;vlan_name 32&gt; {[add [tagged   untagged   forbidden]   delete] &lt;portlist&gt;   advertisement [enable   disable]}</b>
Description	This command allows the user to add ports to the port list of a previously configured VLAN. The user can specify the additional ports as tagging, untagging, or forbidden. The default is to assign the ports as untagging.
Parameters	<p>&lt;vlan_name 32&gt; – The name of the VLAN to which to add ports.</p> <p><i>add</i> – Entering the add parameter will add ports to the VLAN. There are three types of ports to add:</p> <ul style="list-style-type: none"> <li>• <i>tagged</i> – Specifies the additional ports as tagged.</li> <li>• <i>untagged</i> – Specifies the additional ports as untagged.</li> <li>• <i>forbidden</i> – Specifies the additional ports as forbidden</li> </ul> <p><i>delete</i> – Deletes ports from the specified VLAN.</p> <p>&lt;portlist&gt; – A port or range of ports to add to, or delete from the specified VLAN.</p> <p><i>advertisement [enable   disable]</i> – Enables or disables GVRP on the specified VLAN.</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To add 4 through 8 as tagged ports to the VLAN v1:

```
DES-3028P:4#config vlan v1 add tagged 4-8
Command: config vlan v1 add tagged 4-8

Success.

DES-3028P:4#
```

To delete ports from a VLAN:

```
DES-3028P:4#config vlan v1 delete 6-8
```

```
Command: config vlan v1 delete 6-8
```

```
Success.
```

```
DES-3028P:4#
```

## config gvrp

Purpose	Used to configure GVRP on the Switch.
Syntax	<b>config gvrp</b> [<portlist>   all] {state [enable   disable]   ingress_checking [enable   disable]   acceptable_frame [tagged_only   admit_all]   pvid <vlanid 1-4094>}
Description	This command is used to configure the Group VLAN Registration Protocol on the Switch. Ingress checking, the sending and receiving of GVRP information, and the Port VLAN ID (PVID) can be configured.
Parameters	<p>&lt;portlist&gt; – A port or range of ports for which users want to enable GVRP for.</p> <p>all – Specifies all of the ports on the Switch.</p> <p>state [enable   disable] – Enables or disables GVRP for the ports specified in the port list.</p> <p>ingress_checking [enable   disable] – Enables or disables ingress checking for the specified port list.</p> <p>acceptable_frame [tagged_only   admit_all] – This parameter states the frame type that will be accepted by the Switch for this function. <i>tagged_only</i> implies that only VLAN tagged frames will be accepted, while <i>admit_all</i> implies tagged and untagged frames will be accepted by the Switch.</p> <p>pvid &lt;vlanid 1-4094&gt; – Specifies the default VLAN associated with the port.</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To set the ingress checking status, the sending and receiving GVRP information:

```
DES-3028P:4#config gvrp 1-4 state enable ingress_checking enable
acceptable_frame tagged_only pvid 2
```

```
Command: config gvrp 1-4 state enable ingress_checking enable
acceptable_frame tagged_only pvid 2
```

```
Success.
```

```
DES-3028P:4#
```

## enable gvrp

Purpose	Used to enable GVRP on the Switch.
Syntax	<b>enable gvrp</b>
Description	This command, along with <b>disable gvrp</b> below, is used to enable and disable GVRP on the Switch, without changing the GVRP configuration on the Switch.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To enable the generic VLAN Registration Protocol (GVRP):

```
DES-3028P:4#enable gvrp
Command: enable gvrp

Success.

DES-3028P:4#
```

## disable gvrp

Purpose	Used to disable GVRP on the Switch.
Syntax	<b>disable gvrp</b>
Description	This command, along with <b>enable gvrp</b> , is used to enable and disable GVRP on the Switch, without changing the GVRP configuration on the Switch.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To disable the Generic VLAN Registration Protocol (GVRP):

```
DES-3028P:4#disable gvrp
Command: disable gvrp

Success.

DES-3028P:4#
```

## show vlan

Purpose	Used to display the current VLAN configuration on the Switch
Syntax	<b>show vlan {&lt;vlan_name 32&gt;}</b>
Description	This command displays summary information about each VLAN including the VLAN ID, VLAN name, the Tagging/Untagging status, and the Member/Non-member/Forbidden status of each port that is a member of the VLAN.
Parameters	<vlan_name 32> – The VLAN name of the VLAN for which to display a summary of settings.
Restrictions	None.

Example usage:

To display the Switch's current VLAN settings:

```

DES-3028P:4#show vlan
Command: show vlan

VID          : 1          VLAN Name    : default
VLAN TYPE    : static    Advertisement : Enabled
Member ports : 1,5-26
Static ports  : 1,5-26
Current Untagged ports : 1,5-26
Static Untagged ports : 1,5-26
Forbidden ports :

VID          : 4094       VLAN Name    : Trinity
VLAN TYPE    : static    Advertisement : Enabled
Member ports : 2-4
Static ports  : 2-4
Current Untagged ports : 2-4
Static Untagged ports : 2-4
Forbidden ports :

Total Entries : 2

DES-3028P:4#

```

## show gvrp

Purpose	Used to display the GVRP status for a port list on the Switch.
Syntax	<b>show gvrp {&lt;portlist&gt;}</b>
Description	This command displays the GVRP status for a port list on the Switch.
Parameters	<portlist> – Specifies a port or range of ports for which the GVRP status is to be displayed.
Restrictions	None.

Example usage:

To display GVRP port status:

```

DES-3028P:4#show gvrp 1-10
Command: show gvrp 1-10

Global GVRP : Disabled

Port   PVID  GVRP      Ingress Checking  Acceptable Frame Type
-----
1      1     Disabled  Enabled           All Frames
2      1     Disabled  Enabled           All Frames
3      1     Disabled  Enabled           All Frames
4      1     Disabled  Enabled           All Frames
5      1     Disabled  Enabled           All Frames
6      1     Disabled  Enabled           All Frames
7      1     Disabled  Enabled           All Frames
8      1     Disabled  Enabled           All Frames
9      1     Disabled  Enabled           All Frames
10     1     Disabled  Enabled           All Frames

Total Entries : 10

DES-3028P:4#

```

## LINK AGGREGATION COMMANDS

The link aggregation commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
create link_aggregation	group_id <value 1-6> {type [lacp   static]}
delete link_aggregation	group_id <value 1-6>
config link_aggregation	group_id <value 1-6> {master_port <port>   ports <portlist>   state [enable   disable]}
config link_aggregation algorithm	[mac_source   mac_destination   mac_source_dest]
show link_aggregation	{group_id <value 1-6>   algorithm}
config lacp_port	<portlist> mode [active   passive]
show lacp_port	{<portlist>}

Each command is listed, in detail, in the following sections.

### create link\_aggregation

Purpose	Used to create a link aggregation group on the Switch.
Syntax	<b>create link_aggregation group_id &lt;value 1-6&gt; {type[lacp   static]}</b>
Description	This command will create a link aggregation group with a unique identifier.
Parameters	<p><b>&lt;value&gt;</b> – Specifies the group ID. The Switch allows up to 6 link aggregation groups to be configured. The group number identifies each of the groups.</p> <p><b>type</b> – Specify the type of link aggregation used for the group. If the type is not specified the default type is <i>static</i>.</p> <ul style="list-style-type: none"> <li><b>lacp</b> – This designates the port group as LACP compliant. LACP allows dynamic adjustment to the aggregated port group. LACP compliant ports may be further configured (see config lacp_ports). LACP compliant must be connected to LACP compliant devices.</li> <li><b>static</b> – This designates the aggregated port group as static. Static port groups can not be changed as easily as LACP compliant port groups since both linked devices must be manually configured if the configuration of the trunked group is changed. If static link aggregation is used, be sure that both ends of the connection are properly configured and that all ports have the same speed/duplex settings.</li> </ul>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To create a link aggregation group:

```
DES-3028P:4#create link_aggregation group_id 1
Command: create link_aggregation group_id 1

Success.

DES-3028P:4#
```

**delete link\_aggregation group\_id**

Purpose	Used to delete a previously configured link aggregation group.
Syntax	<b>delete link_aggregation group_id &lt;value 1-6&gt;</b>
Description	This command is used to delete a previously configured link aggregation group.
Parameters	<i>&lt;value 1-6&gt;</i> – Specifies the group ID. The Switch allows up to 6 link aggregation groups to be configured. The group number identifies each of the groups.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To delete link aggregation group:

```
DES-3028P:4#delete link_aggregation group_id 6
Command: delete link_aggregation group_id 6

Success.

DES-3028P:4#
```

**config link\_aggregation**

Purpose	Used to configure a previously created link aggregation group.
Syntax	<b>config link_aggregation group_id &lt;value 1-6&gt; {master_port &lt;port&gt;   ports &lt;portlist&gt;   state [enable   disable]}</b>
Description	This command allows users to configure a link aggregation group that was created with the <b>create link_aggregation</b> command above.
Parameters	<i>group_id &lt;value 1-6&gt;</i> – Specifies the group ID. The Switch allows up to 6 link aggregation groups to be configured. The group number identifies each of the groups.  <i>master_port &lt;port&gt;</i> – Master port ID. Specifies which port (by port number) of the link aggregation group will be the master port. All of the ports in a link aggregation group will share the port configuration with the master port.  <i>ports &lt;portlist&gt;</i> – Specifies a port or range of ports that will belong to the link aggregation group.  <i>state [enable   disable]</i> – Allows users to enable or disable the specified link aggregation group.
Restrictions	Only administrator-level users can issue this command. Link aggregation groups may not overlap.

Example usage:

To define a load-sharing group of ports, group-id 1, master port 1 with group members ports 1 through 4:

```
DES-3028P:4#config link_aggregation group_id 1 master_port 1 ports 1-4
Command: config link_aggregation group_id 1 master_port 1 ports 1-4

Success.

DES-3028P:4#
```

**config link\_aggregation algorithm**

Purpose	Used to configure the link aggregation algorithm.
Syntax	<b>config link_aggregation algorithm [mac_source   mac_destination   mac_source_dest ]</b>
Description	This command configures the part of the packet examined by the Switch when selecting the egress port for transmitting load-sharing data. This feature is only available using the address-based load-sharing algorithm.
Parameters	<p><i>mac_source</i> – Indicates that the Switch should examine the MAC source address.</p> <p><i>mac_destination</i> – Indicates that the Switch should examine the MAC destination address.</p> <p><i>mac_source_dest</i> – Indicates that the Switch should examine the MAC source and destination addresses</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure link aggregation algorithm for mac-source-dest:

```
DES-3028P:4#config link_aggregation algorithm mac_source_dest
Command: config link_aggregation algorithm mac_source_dest

Success.

DES-3028P:4#
```

**show link\_aggregation**

Purpose	Used to display the current link aggregation configuration on the Switch.
Syntax	<b>show link_aggregation {group_id &lt;value 1-6&gt;   algorithm}</b>
Description	This command will display the current link aggregation configuration of the Switch.
Parameters	<p><i>&lt;value 1-6&gt;</i> – Specifies the group ID. The Switch allows up to 6 link aggregation groups to be configured. The group number identifies each of the groups.</p> <p><i>algorithm</i> – Allows users to specify the display of link aggregation by the algorithm in use by that group.</p>
Restrictions	None.

Example usage:

To display Link Aggregation configuration:

```

DES-3028P:4#show link_aggregation
Command: show link_aggregation

Link Aggregation Algorithm = MAC-source-dest

Group ID      : 1
Master Port   : 1
Member Port   : 1, 5-10
Active Port   :
Status       : Disabled
Flooding Port : 0

DES-3028P:4#

```

## config lacp\_ports

Purpose	Used to configure settings for LACP compliant ports.
Syntax	<b>config lacp_ports &lt;portlist&gt; mode [active   passive]</b>
Description	This command is used to configure ports that have been previously designated as LACP ports (see <b>create link_aggregation</b> ).
Parameters	<p><i>&lt;portlist&gt;</i> – Specifies a port or range of ports to be configured.</p> <p><i>mode</i> – Select the mode to determine if LACP ports will process LACP control frames.</p> <ul style="list-style-type: none"> <li><i>active</i> – Active LACP ports are capable of processing and sending LACP control frames. This allows LACP compliant devices to negotiate the aggregated link so the group may be changed dynamically as needs require. In order to utilize the ability to change an aggregated port group, that is, to add or subtract ports from the group, at least one of the participating devices must designate LACP ports as active. Both devices must support LACP.</li> <li><i>passive</i> – LACP ports that are designated as passive cannot process LACP control frames. In order to allow the linked port group to negotiate adjustments and make changes dynamically, at one end of the connection must have “active” LACP ports (see above).</li> </ul>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure LACP port mode settings:

```

DES-3028P:4#config lacp_port 1-12 mode active
Command: config lacp_port 1-12 mode active

Success.

DES-3028P:4#

```

## show lacp\_port

Purpose	Used to display current LACP port mode settings.
Syntax	<b>show lacp_port {&lt;portlist&gt;}</b>
Description	This command will display the LACP mode settings as they are currently configured.

**show lacp\_port**

Parameters	<portlist> - Specifies a port or range of ports to be configured. If no parameter is specified, the system will display the current LACP status for all ports.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To display LACP port mode settings:

```
DES-3028P:4#show lacp_port 1-10
```

```
Command: show lacp_port 1-10
```

Port	Activity
1	Active
2	Active
3	Active
4	Active
5	Active
6	Active
7	Active
8	Active
9	Active
10	Active

```
DES-3028P:4#
```

## BASIC IP COMMANDS

The IP interface commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config ipif	[System] [{ipaddress <network_address>   vlan <vlan_name 32>   state [enable   disable]}   bootp   dhcp]
show ipif	
enable autoconfig*	

Each command is listed, in detail, in the following sections.

\*See Switch Utility Commands for descriptions of all autoconfig commands.

### config ipif

Purpose	Used to configure the System IP interface.
Syntax	<b>config ipif [System] [{ipaddress &lt;network_address&gt; [vlan &lt;vlan_name 32&gt;   state [enable   disable]}   bootp   dhcp]</b>
Description	This command is used to configure the System IP interface on the Switch.
Parameters	<p><i>System</i> - Enter System.</p> <p><i>ipaddress &lt;network_address&gt;</i> – IP address and netmask of the IP interface to be created. Users can specify the address and mask information using the traditional format (for example, 10.1.2.3/255.0.0.0 or in CIDR format, 10.1.2.3/8).</p> <p><i>&lt;vlan_name 32&gt;</i> – The name of the VLAN corresponding to the System IP interface.</p> <p><i>state [enable   disable]</i> – Allows users to enable or disable the IP interface.</p> <p><i>bootp</i> – Allows the selection of the BOOTP protocol for the assignment of an IP address to the Switch's System IP interface.</p> <p><i>dhcp</i> – Allows the selection of the DHCP protocol for the assignment of an IP address to the Switch's System IP interface. If users are using the autoconfig feature, the Switch becomes a DHCP client automatically so it is not necessary to change the ipif settings.</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure the IP interface System:

```
DES-3028P:4#config ipif System ipaddress 10.48.74.122/8
Command: config ipif System ipaddress 10.48.74.122/8

Success.

DES-3028P:4#
```

**show ipif**

Purpose	Used to display the configuration of an IP interface on the Switch.
Syntax	<b>show ipif</b>
Description	This command will display the configuration of an IP interface on the Switch.
Parameters	None.
Restrictions	None.

Example usage:

To display IP interface settings.

```
DES-3028P:4#show ipif
Command: show ipif

IP Interface Settings

Interface Name : System
IP Address    : 10.48.74.122 (MANUAL)
Subnet Mask   : 255.0.0.0
VLAN Name    : default
Admin. State  : Disabled
Link Status   : Link UP
Member Ports  : 1-28

Total Entries : 1

DES-3028P:4#
```

**enable autoconfig**

Purpose	Used to activate the autoconfiguration function for the Switch. This will load a previously saved configuration file for current use.
Syntax	<b>enable autoconfig</b>
Description	When autoconfig is enabled on the Switch, the DHCP reply will contain a configuration file and path name. It will then request the file from the TFTP server specified in the reply. When autoconfig is enabled, the ipif settings will automatically become DHCP client.
Parameters	None.
Restrictions	When autoconfig is enabled, the Switch becomes a DHCP client automatically (same as: config ipif System dhcp). The DHCP server must have the TFTP server IP address and configuration file name, and be configured to deliver this information in the data field of the DHCP reply packet. The TFTP server must be running and have the requested configuration file in its base directory when the request is received from the Switch. Consult the DHCP server and TFTP server software instructions for information on loading a boot file or configuration file.

Example usage:

To enable autoconfiguration on the Switch:

**DES-3028P:4#enable autoconfig**

**Command: enable autoconfig**

**Success.**

**DES-3028P:4#**

**NOTE:** More detailed information for this command and related commands can be found in the section titled Switch Utility Commands.

## IGMP SNOOPING COMMANDS

The IGMP Snooping commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config igmp_snooping	[<vlan_name 32>   all] {host_timeout <sec 1-16711450>   router_timeout <sec 1-16711450>   leave_timer <sec 0-16711450>   state [enable   disable]   fast_leave [enable   disable]}
config igmp_snooping querier	[<vlan_name 32>   all] {query_interval <sec 1-65535>   max_response_time <sec 1-25>   robustness_variable <value 1-255>   last_member_query_interval <sec 1-25>   state [enable   disable]}
config router_ports	<vlan_name 32> [add   delete] <portlist>
config router_ports_forbidden	<vlan_name 32> [add   delete] <portlist>
enable igmp snooping	forward_mrouter_only
show igmp snooping	{vlan <vlan_name 32>}
disable igmp snooping	
show igmp snooping group	{vlan <vlan_name 32>}
show router ports	{vlan <vlan_name 32>} {static   dynamic}

Each command is listed, in detail, in the following sections.

### config igmp\_snooping

Purpose	Used to configure IGMP snooping on the Switch.
Syntax	<b>config igmp_snooping</b> [<vlan_name 32>   all] {host_timeout <sec 1-16711450>   router_timeout <sec 1-16711450>   leave_timer <sec 0-16711450>   state [enable   disable]}   fast_leave [enable   disable]}
Description	This command allows the user to configure IGMP snooping on the Switch.
Parameters	<p>&lt;vlan_name 32&gt; – The name of the VLAN for which IGMP snooping is to be configured.</p> <p><i>host_timeout</i> &lt;sec 1-16711450&gt; – Specifies the maximum amount of time a host can be a member of a multicast group without the Switch receiving a host membership report. The default is 260 seconds.</p> <p><i>router_timeout</i> &lt;sec 1-16711450&gt; – Specifies the maximum amount of time a route can be a member of a multicast group without the Switch receiving a host membership report. The default is 260 seconds.</p> <p><i>leave_timer</i> &lt;sec 1-16711450&gt; – Specifies the amount of time a Multicast address will stay in the database before it is deleted, after it has sent out a leave group message. An entry of zero (0) specifies an immediate deletion of the Multicast address. The default is 2 seconds.</p> <p><i>state</i> [enable   disable] – Allows users to enable or disable IGMP snooping for the specified VLAN.</p> <p><i>fast_leave</i> [enable   disable] – This parameter allows the user to enable the <i>fast leave</i> function. Enabled, this function will allow members of a multicast group to leave the group immediately (without the implementation of the Last Member Query Timer) when an IGMP Leave Report Packet is received by the Switch.</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure IGMP snooping:

```
DES-3028P:4#config igmp_snooping default host_timeout 250 state enable
Command: config igmp_snooping default host_timeout 250 state enable

Success.

DES-3028P:4#
```

## config igmp\_snooping querier

Purpose	This command configures IGMP snooping querier.
Syntax	<b>config igmp_snooping querier</b> [ <i>&lt;vlan_name 32&gt;</i>   all] { <i>query_interval &lt;sec 1-65535&gt;</i>   <i>max_response_time &lt;sec 1-25&gt;</i>   <i>robustness_variable &lt;value 1-255&gt;</i>   <i>last_member_query_interval &lt;sec 1-25&gt;</i>   <i>state [enable   disable]</i> }
Description	Used to configure the time in seconds between general query transmissions, the maximum time in seconds to wait for reports from members and the permitted packet loss that guarantees IGMP snooping.
Parameters	<p><i>&lt;vlan_name 32&gt;</i> – The name of the VLAN for which IGMP snooping querier is to be configured.</p> <p><i>query_interval &lt;sec 1-65535&gt;</i> – Specifies the amount of time in seconds between general query transmissions. The default setting is 125 seconds.</p> <p><i>max_response_time &lt;sec 1-25&gt;</i> – Specifies the maximum time in seconds to wait for reports from members. The default setting is 10 seconds.</p> <p><i>robustness_variable &lt;value 1-255&gt;</i> – Provides fine-tuning to allow for expected packet loss on a subnet. The value of the robustness variable is used in calculating the following IGMP message intervals:</p> <ul style="list-style-type: none"> <li>• Group member interval—Amount of time that must pass before a multicast router decides there are no more members of a group on a network. This interval is calculated as follows: (robustness variable x query interval) + (1 x query response interval).</li> <li>• Other querier present interval—Amount of time that must pass before a multicast router decides that there is no longer another multicast router that is the querier. This interval is calculated as follows: (robustness variable x query interval) + (0.5 x query response interval).</li> <li>• Last member query count—Number of group-specific queries sent before the router assumes there are no local members of a group. The default number is the value of the robustness variable.</li> <li>• By default, the robustness variable is set to 2. Users may want to increase this value if a subnet is expected to be lossy. Although 1 is specified as a valid entry, the robustness variable should not be one or problems may arise.</li> </ul> <p><i>last_member_query_interval &lt;sec 1-25&gt;</i> – The maximum amount of time between group-specific query messages, including those sent in response to leave-group messages. Users might lower this interval to reduce the amount of time it takes a router to detect the loss of the last member of a group.</p> <p><i>state [enable   disable]</i> – Allows the Switch to be specified as an IGMP Querier or Non-querier.</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure IGMP snooping:

```
DES-3028P:4#config igmp_snooping querier default query_interval 125 state enable
Command: config igmp_snooping querier default query_interval 125 state enable
```

Success.

```
DES-3028P:4#
```

## config router\_ports

Purpose	Used to configure ports as router ports.
Syntax	<b>config router_ports &lt;vlan_name 32&gt; [add   delete] &lt;portlist&gt;</b>
Description	This command allows users to designate a range of ports as being connected to multicast-enabled routers. This will ensure that all packets with such a router as its destination will reach the multicast-enabled router – regardless of protocol, etc.
Parameters	<vlan_name 32> – The name of the VLAN on which the router port resides. <portlist> – Specifies a port or range of ports that will be configured as router ports.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To set up static router ports:

```
DES-3028P:4#config router_ports default add 1-10
Command: config router_ports default add 1-10
```

Success.

```
DES-3028P:4#
```

## config router\_ports\_forbidden

Purpose	Used to configure ports as forbidden multicast router ports.
Syntax	<b>config router_ports_forbidden &lt;vlan_name 32&gt; [add   delete] &lt;portlist&gt;</b>
Description	This command allows designation of a port or range of ports as being forbidden to multicast-enabled routers. This will ensure that multicast packets will not be forwarded to this port – regardless of protocol, etc.
Parameters	<vlan_name 32> – The name of the VLAN on which the router port resides. [add   delete] - Specifies whether to add or delete forbidden ports of the specified VLAN. <portlist> – Specifies a range of ports that will be configured as forbidden router ports.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To set up forbidden router ports:

```
DES-3028P:4#config router_ports_forbidden default add 1-10
Command: config router_ports_forbidden default add 1-10

Success.

DES-3028P:4#
```

## enable igmp\_snooping

Purpose	Used to enable IGMP snooping on the Switch.
Syntax	<b>enable igmp_snooping {forward_mcrouter_only}</b>
Description	This command allows users to enable IGMP snooping on the Switch. If <i>forward_mcrouter_only</i> is specified, the Switch will only forward all multicast traffic to the multicast router, only. Otherwise, the Switch forwards all multicast traffic to any IP router.
Parameters	<i>forward_mcrouter_only</i> – Specifies that the Switch should only forward all multicast traffic to a multicast-enabled router. Otherwise, the Switch will forward all multicast traffic to any IP router.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To enable IGMP snooping on the Switch:

```
DES-3028P:4#enable igmp_snooping
Command: enable igmp_snooping

Success.

DES-3028P:4#
```

## disable igmp\_snooping

Purpose	Used to enable IGMP snooping on the Switch.
Syntax	<b>disable igmp_snooping</b>
Description	This command disables IGMP snooping on the Switch. IGMP snooping can be disabled only if IP multicast routing is not being used. Disabling IGMP snooping allows all IGMP and IP multicast traffic to flood within a given IP interface.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To disable IGMP snooping on the Switch:

```
DES-3028P:4#disable igmp_snooping
Command: disable igmp_snooping

Success.

DES-3028P:4#
```

**show igmp\_snooping**

Purpose	Used to show the current status of IGMP snooping on the Switch.
Syntax	<b>show igmp_snooping {vlan &lt;vlan_name 32&gt;}</b>
Description	This command will display the current IGMP snooping configuration on the Switch.
Parameters	<vlan_name 32> – The name of the VLAN for which to view the IGMP snooping configuration.
Restrictions	None.

Example usage:

To show IGMP snooping:

```
DES-3028P:4#show igmp_snooping
Command: show igmp_snooping

IGMP Snooping Global State : Disabled
Multicast Router Only      : Disabled

VLAN Name                  : default
Query Interval              : 125
Max Response Time          : 10
Robustness Value           : 2
Last Member Query Interval : 1
Host Timeout                : 260
Route Timeout               : 260
Leave Timer                  : 2
Querier State               : Disabled
Querier Router Behavior    : Non-Querier
State                       : Disabled
Multicast Fast Leave       : Disabled

Total Entries: 1
DES-3028P:4#
```

**show igmp\_snooping group**

Purpose	Used to display the current IGMP snooping group configuration on the Switch.
Syntax	<b>show igmp_snooping group {vlan &lt;vlan_name 32&gt;}</b>
Description	This command will display the current IGMP snooping group configuration on the Switch.
Parameters	<vlan_name 32> – The name of the VLAN for which to view IGMP snooping group configuration information.
Restrictions	None.

Example usage:

To show IGMP snooping group:

```
DES-3028P:4#show igmp_snooping group
```

```
Command: show igmp_snooping group
```

```
VLAN Name      : default
Multicast group: 224.0.0.2
MAC address    : 01-00-5E-00-00-02
Reports       : 1
Port Member    : 2,5
```

```
VLAN Name      : default

## show router\_ports

Purpose	Used to display the currently configured router ports on the Switch.
Syntax	<b>show router_ports {vlan &lt;vlan_name 32&gt;} {static   dynamic}</b>
Description	This command will display the router ports currently configured on the Switch.
Parameters	<p>&lt;vlan_name 32&gt; – The name of the VLAN on which the router port resides.</p> <p><i>static</i> – Displays router ports that have been statically configured.</p> <p><i>dynamic</i> – Displays router ports that have been dynamically configured.</p>
Restrictions	None.

Example usage:

To display the router ports.

**DES-3028P:4#show router\_ports**

**Command: show router\_ports**

**VLAN Name : default**

**Static router port :**

**Dynamic router port :**

**Total Entries: 1**

**DES-3028P:4#**

The DHCP relay commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config dhcp_relay	{hops <value 1-16>   time <sec 0-65535>}
config dhcp_relay add ipif	<ipif_name 12> <ipaddr>
config dhcp_relay delete ipif	<ipif_name 12> <ipaddr>
config dhcp_relay option_82 state	[enable   disable]
config dhcp_relay option_82 check	[enable   disable]
config dhcp_relay option_82 policy	[replace   drop   keep]
show dhcp_relay	{ipif <ipif_name 12>}
enable dhcp_relay	
disable dhcp_relay	

Each command is listed in detail in the following sections.

### config dhcp\_relay

Purpose	Used to configure the DHCP/BOOTP relay feature of the switch.
Syntax	<b>config dhcp_relay {hops &lt;value 1-16&gt;   time &lt;sec 0-65535&gt;}</b>
Description	This command is used to configure the DHCP/BOOTP relay feature.
Parameters	<i>hops &lt;value 1-16&gt;</i> Specifies the maximum number of relay agent hops that the DHCP packets can cross. <i>time &lt;sec 0-65535&gt;</i> If this time is exceeded, the Switch will relay the DHCP packet.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To config DHCP relay:

```
DES-3028P:4#config dhcp_relay hops 2 time 23
Command: config dhcp_relay hops 2 time 23

Success.

DES-3028P:4#
```

### config dhcp\_relay add ipif

Purpose	Used to add an IP destination address to the switch's DHCP/BOOTP relay table.
Syntax	<b>config dhcp_relay add ipif &lt;ipif_name 12&gt; &lt;ipaddr&gt;</b>
Description	This command adds an IP address as a destination to forward (relay) DHCP/BOOTP relay packets to.
Parameters	<ipif_name 12> The name of the IP interface in which DHCP relay is to be enabled. <ipaddr> The DHCP server IP address.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To add an IP destination to the DHCP relay table:

```
DES-3028P:4#config dhcp_relay add ipif System 10.58.44.6
Command: config dhcp_relay add ipif System 10.58.44.6

Success.

DES-3028P:4#
```

### config dhcp\_relay delete ipif

Purpose	Used to delete one or all IP destination addresses from the Switch's DHCP/BOOTP relay table.
Syntax	<b>config dhcp_relay delete ipif &lt;ipif_name 12&gt; &lt;ipaddr&gt;</b>
Description	This command is used to delete an IP destination addresses in the Switch's DHCP/BOOTP relay table.
Parameters	<ipif_name 12> The name of the IP interface that contains the IP address below. <ipaddr> The DHCP server IP address.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To delete an IP destination from the DHCP relay table:

```
DES-3028P:4#config dhcp_relay delete ipif System 10.58.44.6
Command: config dhcp_relay delete ipif System 10.58.44.6

Success.

DES-3028P:4#
```

### config dhcp\_relay option\_82 state

Purpose	Used to configure the state of DHCP relay agent information option 82 of the switch.
Syntax	<b>config dhcp_relay option_82 state [enable   disable]</b>
Description	This command is used to configure the state of DHCP relay agent information option 82 of the switch.
Parameters	<i>enable</i> - When this field is toggled to <i>Enabled</i> the relay agent will insert and remove DHCP relay information (option 82 field) in messages between DHCP server and client. When the relay agent receives the DHCP request, it adds the option 82 information, and the IP address of the relay agent (if the relay agent is configured), to the packet. Once the option 82 information has been added to the packet it is sent on to the DHCP server. When the DHCP server receives the packet, if the server is capable of option 82, it can implement policies like restricting the number of IP addresses that can be assigned to a single remote ID or circuit ID. Then the DHCP server echoes the option 82 field in the DHCP reply. The DHCP server unicasts the reply to the back to the relay agent if the request was relayed to the server by the relay agent. The switch verifies that it originally inserted the option 82 data. Finally, the relay agent removes the option 82 field and forwards the packet to the switch port that connects to the DHCP client that sent the DHCP request.  <i>disable</i> - If the field is toggled to <i>disable</i> the relay agent will not insert and remove DHCP relay information (option 82 field) in messages between DHCP servers and clients, and the check and policy settings will have no effect.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure DHCP relay option 82 state:

```
DES-3028P:4#config dhcp_relay option_82 state enable
Command: config dhcp_relay option_82 state enable

Success.

DES-3028P:4#
```

### config dhcp\_relay option\_82 check

Purpose	Used to configure the checking mechanism of DHCP relay agent information option 82 of the switch.
Syntax	<b>config dhcp_relay option_82 check [enable   disable]</b>
Description	This command is used to configure the checking mechanism of DHCP/BOOTP relay agent information option 82 of the switch.
Parameters	<p><i>enable</i> – When the field is toggled to <i>enable</i>, the relay agent will check the validity of the packet's option 82 field. If the switch receives a packet that contains the option 82 field from a DHCP client, the switch drops the packet because it is invalid. In packets received from DHCP servers, the relay agent will drop invalid messages.</p> <p><i>disable</i> - When the field is toggled to <i>disable</i>, the relay agent will not check the validity of the packet's option 82 field.</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure DHCP relay option 82 check:

```
DES-3028P:4#config dhcp_relay option_82 check enable
Command: config dhcp_relay option_82 check enable

Success.

DES-3028P:4#
```

### config dhcp\_relay option\_82 policy

Purpose	Used to configure the reforwarding policy of relay agent information option 82 of the switch.
Syntax	<b>config dhcp_relay option_82 policy [replace   drop   keep]</b>
Description	This command is used to configure the reforwarding policy of DHCP relay agent information option 82 of the switch.
Parameters	<p><i>replace</i> - The option 82 field will be replaced if the option 82 field already exists in the packet received from the DHCP client.</p> <p><i>drop</i> - The packet will be dropped if the option 82 field already exists in the packet received from the DHCP client.</p> <p><i>keep</i> - The option 82 field will be retained if the option 82 field already exists in the packet received from the DHCP client.</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure DHCP relay option 82 policy:

```
DES-3028P:4#config dhcp_relay option_82 policy replace
Command: config dhcp_relay option_82 policy replace

Success.

DES-3028P:4#
```

## show dhcp\_relay

Purpose	Used to display the current DHCP/BOOTP relay configuration.
Syntax	<b>show dhcp_relay {ipif &lt;ipif_name 12&gt;}</b>
Description	This command will display the current DHCP relay configuration for the Switch, or if an IP interface name is specified, the DHCP relay configuration for that IP interface.
Parameters	<i>ipif &lt;ipif_name 12&gt;</i> - The name of the IP interface for which to display the current DHCP relay configuration.
Restrictions	None.

Example usage:

To show the DHCP relay configuration:

```
DES-3028P:4#show dhcp_relay
Command: show dhcp_relay

DHCP/BOOTP Relay Status           : Enabled
DHCP/BOOTP Hops Count Limit       : 2
DHCP/BOOTP Relay Time Threshold   : 23
DHCP Relay Agent Information Option 82 State : Enabled
DHCP Relay Agent Information Option 82 Check : Enabled
DHCP Relay Agent Information Option 82 Policy : Replace

Interface  Server 1  Server 2  Server 3  Server 4
-----
System    10.58.44.6

DES-3028P:4#
```

Example usage:

To show a single IP destination of the DHCP relay configuration:

```
DES-3028P:4#show dhcp_relay ipif System
Command: show dhcp_relay ipif System

Interface  Server 1  Server 2  Server 3  Server 4
-----
System    10.58.44.6

DES-3028P:4#
```

## enable dhcp\_relay

Purpose	Used to enable the DHCP/BOOTP relay function on the Switch.
Syntax	<b>enable dhcp_relay</b>
Description	This command is used to enable the DHCP/BOOTP relay function on the Switch.
Parameters	None.

**enable dhcp\_relay**

Restrictions	Only administrator-level users can issue this command.
--------------	--------------------------------------------------------

Example usage:

To enable DHCP relay:

```
DES-3028P:4#enable dhcp_relay
Command: enable dhcp_relay

Success.

DES-3028P:4#
```

**disable dhcp\_relay**

Purpose	Used to disable the DHCP/BOOTP relay function on the Switch.
Syntax	<b>disable dhcp_relay</b>
Description	This command is used to disable the DHCP/BOOTP relay function on the Switch.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To disable DHCP relay:

```
DES-3028P:4#disable dhcp_relay
Command: disable dhcp_relay

Success.

DES-3028P:4#
```

## 802.1X COMMANDS

The DES-3028/28P/52/52P implements the server-side of the IEEE 802.1x Port-based and MAC-based Network Access Control. This mechanism is intended to allow only authorized users, or other network devices, access to network resources by establishing criteria for each port on the Switch that a user or network device must meet before allowing that port to forward or receive frames.

Command	Parameters
enable 802.1x	
disable 802.1x	
show 802.1x auth_state	{ports <portlist>}
show 802.1x auth_configuration	{ports <portlist>}
config 802.1x capability ports	[<portlist>   all] [authenticator   none]
config 802.1x auth_parameter ports	[<portlist>   all] [default   {direction [both   in]   port_control [force_unauth   auto   force_auth]   quiet_period <sec 0-65535>   tx_period <sec 1-65535>   supp_timeout <sec 1-65535>   server_timeout <sec 1-65535>   max_req <value 1-10>   reauth_period <sec 1-65535>   enable_reauth [enable   disable]}]
config 802.1x auth_protocol	[radius eap   local]
config 802.1x init	{port_based ports [<portlist>   all]   mac_based [ports] [<portlist>   all] {mac_address <macaddr>}}
config 802.1x auth_mode	[port_based   mac_based]
config 802.1x reauth	{port_based ports [<portlist>   all]   mac_based [ports] [<portlist>   all] {mac_address <macaddr>}}
config radius add	<server_index 1-3> <server_ip> key <passwd 32> [default   {auth_port <udp_port_number 1-65535>   acct_port <udp_port_number 1-65535>}]
config radius delete	<server_index 1-3>
config radius	<server_index 1-3> {ipaddress <server_ip>   key <passwd 32> [auth_port <udp_port_number 1-65535> acct_port <udp_port_number 1-65535>}]
show radius	
create 802.1x guest_vlan	<vlan_name 32>
config 802.1x guest_vlan ports	[<portlist>   all] state [enable   disable]
delete 802.1x guest_vlan	{<vlan_name 32>}
show 802.1x guest_vlan	
show auth_statistics	{ports <portlist   all>}
show auth_diagnostics	{ports <portlist   all>}
show auth_session_statistics	{ports <portlist   all>}
show auth_client	
show acct_client	
create 802.1x user	<username 15>
delete 802.1x user	<username 15>
show 802.1x user	

Each command is listed, in detail, in the following sections

**enable 802.1x**

Purpose	Used to enable the 802.1x server on the Switch.
Syntax	<b>enable 802.1x</b>
Description	The <b>enable 802.1x</b> command enables the 802.1x Network Access control server application on the Switch. To select between port-based or MAC-based, use the <b>config 802.1x auth_mode</b> command.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To enable 802.1x switch wide:

```
DES-3028P:4#enable 802.1x
Command: enable 802.1x

Success.

DES-3028P:4#
```

**disable 802.1x**

Purpose	Used to disable the 802.1x server on the Switch.
Syntax	<b>disable 802.1x</b>
Description	The <b>disable 802.1x</b> command is used to disable the 802.1x Network Access control server application on the Switch.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To disable 802.1x on the Switch:

```
DES-3028P:4#disable 802.1x
Command: disable 802.1x

Success.

DES-3028P:4#
```

<b>show 802.1x auth_configuration</b>	
Purpose	Used to display the current configuration of the 802.1x server on the Switch.
Syntax	<b>show 802.1x auth_configuration {ports &lt;portlist&gt;}</b>
Description	The <b>show 802.1x auth_configuration</b> command is used to display the 802.1x Port-based or MAC-based Network Access control local users currently configured on the Switch.
Parameters	<p><i>ports &lt;portlist&gt;</i> – Specifies a port or range of ports to view.</p> <p>The following details are displayed:</p> <p>802.1x Enabled / Disabled – Shows the current status of 802.1x functions on the Switch.</p> <p>Authentication Mode – Shows the authentication mode, whether it be by MAC address or by port.</p> <p>Authentication Protocol: Radius_Eap – Shows the authentication protocol suite in use between the Switch and a RADIUS server. May read <i>Radius_Eap</i> or <i>local</i>.</p> <p>Port number – Shows the physical port number on the Switch.</p> <p>Capability: Authenticator/None – Shows the capability of 802.1x functions on the port number displayed above. There are two 802.1x capabilities that can be set on the Switch: Authenticator and None.</p> <p>AdminCtlDir: Both / In – Shows whether a controlled Port that is unauthorized will exert control over communication in both receiving and transmitting directions, or just the receiving direction.</p> <p>OpenCtlDir: Both / In – Shows whether a controlled Port that is unauthorized will exert control over communication in both receiving and transmitting directions, or just the receiving direction.</p> <p>Port Control: ForceAuth / ForceUnauth / Auto – Shows the administrative control over the port's authorization status. ForceAuth forces the Authenticator of the port to become Authorized. ForceUnauth forces the port to become Unauthorized.</p> <p>QuietPeriod – Shows the time interval between authentication failure and the start of a new authentication attempt.</p> <p>TxPeriod – Shows the time to wait for a response from a supplicant (user) to send EAP Request / Identity packets.</p> <p>SuppTimeout – Shows the time to wait for a response from a supplicant (user) for all EAP packets, except for the Request / Identity packets.</p> <p>ServerTimeout – Shows the length of time to wait for a response from a RADIUS server.</p> <p>MaxReq – Shows the maximum number of times to retry sending packets to the supplicant.</p> <p>ReAuthPeriod – Shows the time interval between successive re-authentications.</p> <p>ReAuthenticate: Enabled / Disabled – Shows whether or not to re-authenticate.</p>
Restrictions	None.

Example usage:

To display the 802.1x authentication states:

```
DES-3028P:4#show 802.1x auth_configuration ports 1
```

```
Command: show 802.1x auth_configuration ports 1
```

```
802.1X           : Enabled
Authentication Mode : Port_based
Authentication Protocol : Radius_Eap
```

```
Port number      : 1
Capability       : None
AdminCrIDir     : Both
OpenCrIDir      : Both
Port Control     : Auto
QuietPeriod     : 60 sec

CTRL+C ESC q Quit SPACE n Next Page Enter Next Entry a All
```

## show 802.1x auth\_state

Purpose	Used to display the current authentication state of the 802.1x server on the Switch.
Syntax	<b>show 802.1x auth_state {ports &lt;portlist&gt;}</b>
Description	The <b>show 802.1x auth_state</b> command is used to display the current authentication state of the 802.1x Port-based or MAC-based Network Access Control server application on the Switch.
Parameters	<p><i>ports &lt;portlist&gt;</i> – Specifies a port or range of ports to be viewed.</p> <p>The following details what is displayed:</p> <p>Port number – Shows the physical port number on the Switch.</p> <p>Auth PAE State: Initalize / Disconnected / Connecting / Authenticating / Authenticated / Held / ForceAuth / ForceUnauth – Shows the current state of the Authenticator PAE.</p> <p>Backend State: Request / Response / Fail / Idle / Initalize / Success / Timeout – Shows the current state of the Backend Authenticator.</p> <p>Port Status: Authorized / Unauthorized – Shows the result of the authentication process. Authorized means that the user was authenticated, and can access the network. Unauthorized means that the user was not authenticated, and cannot access the network.</p>
Restrictions	None.

Example usage:

To display the 802.1x auth state for Port-based 802.1x:

```
DES-3028P:4#show 802.1x auth_state
Command: show 802.1x auth_state
```

Port	Auth PAE State	Backend State	Port Status
1	ForceAuth	Success	Authorized
2	ForceAuth	Success	Authorized
3	ForceAuth	Success	Authorized
4	ForceAuth	Success	Authorized

## config 802.1x auth\_mode

Purpose	Used to configure the 802.1x authentication mode on the Switch.
Syntax	<b>config 802.1x auth_mode {port_based   mac_based}</b>
Description	The <b>config 802.1x auth_mode</b> command is used to enable either the port-based or MAC-based 802.1x authentication feature on the Switch.

**config 802.1x auth\_mode**

Parameters	<i>[port_based   mac_based]</i> – The Switch allows users to authenticate 802.1x by either port or MAC address.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure 802.1x authentication by MAC address:

```
DES-3028P:4#config 802.1x auth_mode mac_based
Command: config 802.1x auth_mode mac_based

Success.

DES-3028P:4#
```

**config 802.1x capability ports**

Purpose	Used to configure the 802.1x capability of a range of ports on the Switch.
Syntax	<b>config 802.1x capability ports</b> [<portlist>   all] [authenticator   none]
Description	The <b>config 802.1x</b> command has two capabilities that can be set for each port, <i>authenticator</i> and <i>none</i> .
Parameters	<portlist> – Specifies a port or range of ports to be configured. all – Specifies all of the ports on the Switch. <i>authenticator</i> – A user must pass the authentication process to gain access to the network. <i>none</i> – The port is not controlled by the 802.1x functions.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure 802.1x capability on ports 1-10:

```
DES-3028P:4#config 802.1x capability ports 1-10 authenticator
Command: config 802.1x capability ports 1-10 authenticator

Success.

DES-3028P:4#
```

**config 802.1x auth\_parameter**

Purpose	Used to configure the 802.1x Authentication parameters on a range of ports. The default parameter will return all ports in the specified range to their default 802.1x settings.
Syntax	<b>config 802.1x auth_parameter ports</b> [<portlist>   all] [default   {direction [both   in]   port_control [force_unauth   auto   force_auth]   quiet_period <sec 0-65535>   tx_period <sec 1-65535>   supp_timeout <sec 1-65535>   server_timeout <sec 1-65535>   max_req <value 1-10>   reauth_period <sec 1-65535>   enable_reauth [enable   disable]}]
Description	The <b>config 802.1x auth_parameter</b> command is used to configure the 802.1x Authentication parameters on a range of ports. The

**config 802.1x auth\_parameter**

	default parameter will return all ports in the specified range to their default 802.1x settings.
Parameters	<p><i>&lt;portlist&gt;</i> – Specifies a port or range of ports to be configured.</p> <p><i>all</i> – Specifies all of the ports on the Switch.</p> <p><i>default</i> – Returns all of the ports in the specified range to their 802.1x default settings.</p> <p><i>direction [both   in]</i> – Determines whether a controlled port blocks communication in both the receiving and transmitting directions, or just the receiving direction.</p> <p><i>port_control</i> – Configures the administrative control over the authentication process for the range of ports. The user has the following authentication options:</p> <ul style="list-style-type: none"> <li>• <i>force_auth</i> – Forces the Authenticator for the port to become authorized. Network access is allowed.</li> <li>• <i>auto</i> – Allows the port's status to reflect the outcome of the authentication process.</li> <li>• <i>force_unauth</i> – Forces the Authenticator for the port to become unauthorized. Network access will be blocked.</li> </ul> <p><i>quiet_period &lt;sec 0-65535&gt;</i> – Configures the time interval between authentication failure and the start of a new authentication attempt.</p> <p><i>tx_period &lt;sec 1-65535&gt;</i> - Configures the time to wait for a response from a supplicant (user) to send EAP Request/Identity packets.</p> <p><i>supp_timeout &lt;sec 1-65535&gt;</i> - Configures the time to wait for a response from a supplicant (user) for all EAP packets, except for the Request/Identity packets.</p> <p><i>server_timeout &lt;sec 1-65535&gt;</i> - Configure the length of time to wait for a response from a RADIUS server.</p> <p><i>max_req &lt;value 1-10&gt;</i> – Configures the number of times to retry sending packets to a supplicant (user).</p> <p><i>reauth_period &lt;sec 1-65535&gt;</i> – Configures the time interval between successive re-authentications.</p> <p><i>enable_reauth [enable   disable]</i> – Determines whether or not the Switch will re-authenticate. Enabled causes re-authentication of users at the time interval specified in the Re-authentication Period field, above.</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure 802.1x authentication parameters for ports 1 – 20:

```
DES-3028P:4#config 802.1x auth_parameter ports 1-20 direction both
Command: config 802.1x auth_parameter ports 1-20 direction both

Success.

DES-3028P:4#
```

**config 802.1x auth\_protocol**

Purpose	Used to configure the 802.1x authentication protocol on the Switch.
Syntax	<b>config 802.1x auth_protocol [local   radius_eap]</b>
Description	The <b>config 802.1x auth_protocol</b> command enables users to configure the authentication protocol.

## config 802.1x auth\_protocol

Parameters	<i>radius_eap</i>   <i>local</i> – Specify the type of authentication protocol desired.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure the authentication protocol on the Switch:

```
DES-3028P:4# config 802.1x auth_protocol radius_eap
Command: config 802.1x auth_protocol radius_eap

Success.

DES-3028P:4#
```

## config 802.1x init

Purpose	Used to initialize the 802.1x function on a range of ports.
Syntax	<b>config 802.1x init {port_based ports [&lt;portlist&gt;   all]   mac_based   ports [&lt;portlist&gt;   all] {mac_address &lt;macaddr&gt;}}</b>
Description	The <b>config 802.1x init</b> command is used to immediately initialize the 802.1x functions on a specified range of ports or for specified MAC addresses operating from a specified range of ports.
Parameters	<i>port_based</i> – This instructs the Switch to initialize 802.1x functions based only on the port number. Ports approved for initialization can then be specified.  <i>mac_based</i> – This instructs the Switch to initialize 802.1x functions based only on the MAC address. MAC addresses approved for initialization can then be specified.  <i>ports &lt;portlist&gt;</i> – Specifies a port or range of ports to be configured.  <i>all</i> – Specifies all of the ports on the Switch.  <i>mac_address &lt;macaddr&gt;</i> - Enter the MAC address to be initialized.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To initialize the authentication state machine of all ports:

```
DES-3028P:4# config 802.1x init port_based ports all
Command: config 802.1x init port_based ports all

Success.

DES-3028P:4#
```

## config 802.1x reauth

Purpose	Used to configure the 802.1x re-authentication feature of the Switch.
Syntax	<b>config 802.1x reauth {port_based ports [&lt;portlist&gt;   all]   mac_based   ports [&lt;portlist&gt;   all] {mac_address &lt;macaddr&gt;}}</b>
Description	The <b>config 802.1x reauth</b> command is used to re-authenticate a previously authenticated device based on port number.
Parameters	<i>port_based</i> – This instructs the Switch to re-authorize 802.1x functions

**config 802.1x reauth**

based only on the port number. Ports approved for re-authorization can then be specified.

*mac\_based* – This instructs the Switch to re-authorize 802.1x functions based only on the MAC address. MAC addresses approved for re-authorization can then be specified.

*ports <portlist>* – Specifies a port or range of ports to be re-authorized.

*all* – Specifies all of the ports on the Switch.

*mac\_address <macaddr>* - Enter the MAC address to be re-authorized.

**Restrictions**

Only administrator-level users can issue this command.

Example usage:

To configure 802.1x reauthentication for ports 1-18:

```
DES-3028P:4#config 802.1x reauth port_based ports 1-18
Command: config 802.1x reauth port_based ports 1-18
```

```
Success.
```

```
DES-3028P:4#
```

**config radius add**

Purpose	Used to configure the settings the Switch will use to communicate with a RADIUS server.
Syntax	<b>config radius add &lt;server_index 1-3&gt; &lt;server_ip&gt; key &lt;passwd 32&gt; [default   {auth_port &lt;udp_port_number 1-65535&gt;   acct_port &lt;udp_port_number 1-65535&gt;}]</b>
Description	The <b>config radius add</b> command is used to configure the settings the Switch will use to communicate with a RADIUS server.
Parameters	<p><i>&lt;server_index 1-3&gt;</i> – Assigns a number to the current set of RADIUS server settings. Up to 3 groups of RADIUS server settings can be entered on the Switch.</p> <p><i>&lt;server_ip&gt;</i> – The IP address of the RADIUS server.</p> <p><i>key</i> – Specifies that a password and encryption key will be used between the Switch and the RADIUS server.</p> <p><i>&lt;passwd 32&gt;</i> – The shared-secret key used by the RADIUS server and the Switch. Up to 32 characters can be used.</p> <p><i>default</i> – Uses the default UDP port number in both the “auth_port” and “acct_port” settings.</p> <p><i>auth_port &lt;udp_port_number 1-65535&gt;</i> – The UDP port number for authentication requests. The default is 1812.</p> <p><i>acct_port &lt;udp_port_number 1-65535&gt;</i> – The UDP port number for accounting requests. The default is 1813.</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure the RADIUS server communication settings:

```
DES-3028P:4#config radius add 1 10.48.74.121 key dlink default
Command: config radius add 1 10.48.74.121 key dlink default

Success.

DES-3028P:4#
```

## config radius delete

Purpose	Used to delete a previously entered RADIUS server configuration.
Syntax	<b>config radius delete &lt;server_index 1-3&gt;</b>
Description	The <b>config radius delete</b> command is used to delete a previously entered RADIUS server configuration.
Parameters	<i>&lt;server_index 1-3&gt;</i> – Assigns a number to the current set of RADIUS server settings. Up to 3 groups of RADIUS server settings can be entered on the Switch.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To delete previously configured RADIUS server communication settings:

```
DES-3028P:4#config radius delete 1
Command: config radius delete 1

Success.

DES-3028P:4#
```

## config radius

Purpose	Used to configure the Switch's RADIUS settings.
Syntax	<b>config radius &lt;server_index 1-3&gt; {ipaddress &lt;server_ip&gt;   key &lt;passwd 32&gt;   auth_port &lt;udp_port_number 1-65535&gt;   acct_port &lt;udp_port_number 1-65535&gt;}</b>
Description	The <b>config radius</b> command is used to configure the Switch's RADIUS settings.
Parameters	<p><i>&lt;server_index 1-3&gt;</i> – Assigns a number to the current set of RADIUS server settings. Up to 3 groups of RADIUS server settings can be entered on the Switch.</p> <p><i>ipaddress &lt;server_ip&gt;</i> – The IP address of the RADIUS server.</p> <p><i>key</i> – Specifies that a password and encryption key will be used between the Switch and the RADIUS server.</p> <ul style="list-style-type: none"> <li><i>&lt;passwd 32&gt;</i> – The shared-secret key used by the RADIUS server and the Switch. Up to 32 characters can be used.</li> </ul> <p><i>auth_port &lt;udp_port_number 1-65535&gt;</i> – The UDP port number for authentication requests. The default is 1812.</p> <p><i>acct_port &lt;udp_port_number 1-65535&gt;</i> – The UDP port number for accounting requests. The default is 1813.</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure the RADIUS settings:

```
DES-3028P:4#config radius 1 10.48.74.121 key dlink default
Command: config radius 1 10.48.74.121 key dlink default

Success.

DES-3028P:4#
```

## show radius

Purpose	Used to display the current RADIUS configurations on the Switch.
Syntax	<b>show radius</b>
Description	The <b>show radius</b> command is used to display the current RADIUS configurations on the Switch.
Parameters	None.
Restrictions	None.

Example usage:

To display RADIUS settings on the Switch:

```
DES-3028P:4#show radius
Command: show radius

Index  IP Address      Auth-Port  Acct-Port  Status  Key
-----  -
1      10.1.1.1        1812       1813       Active  switch
2      20.1.1.1        1800       1813       Active  des3226
3      30.1.1.1        1812       1813       Active  dlink

Total Entries : 3

DES-3028P:4#
```

## create 802.1x guest\_vlan

Purpose	Used to configure a pre-existing VLAN as a 802.1x Guest VLAN.
Syntax	<b>create 802.1x guest_vlan &lt;vlan_name 32&gt;</b>
Description	The <b>create 802.1x guest_vlan</b> command is used to configure a pre-defined VLAN as a 802.1x Guest VLAN. Guest 802.1X VLAN clients are those who have not been authorized for 802.1x or they haven't yet installed the necessary 802.1x software, yet would still like limited access rights on the Switch.
Parameters	<vlan_name 32> - Enter an alphanumeric string of no more than 32 characters to define a pre-existing VLAN as a 802.1x Guest VLAN. This VLAN must have first been created with the <b>create vlan</b> command mentioned earlier in this manual.
Restrictions	Only administrator-level users can issue this command. Users must have already previously created a VLAN using the <b>create vlan</b> command. Only one VLAN can be set as the 802.1x Guest VLAN.

Example usage:

To configure a previously created VLAN as an 802.1x Guest VLAN for the Switch:

```
DES-3028P:4#create 802.1x guest_vlan Trinity
```

```
Command: create 802.1x guest_vlan Trinity
```

```
Success.
```

```
DES-3028P:4#
```

### config 802.1x guest\_vlan ports

Purpose	Used to configure ports for a pre-existing 802.1x guest VLAN.
Syntax	<b>config 802.1x guest_vlan ports</b> [<portlist>   all] state [enable   disable]
Description	The <b>config 802.1x guest_vlan ports</b> command is used to configure ports to be enabled or disabled for the 802.1x guest VLAN.
Parameters	<portlist> - Specify a port or range of ports to be configured for the 802.1x Guest VLAN.  all – Specify this parameter to configure all ports for the 802.1x Guest VLAN. state [enable   disable] – Use these parameters to enable or disable port listed here as enabled or disabled for the 802.1x Guest VLAN.
Restrictions	Only administrator-level users can issue this command.  Users must have already previously created a VLAN using the <b>create vlan</b> command. If the specific port state changes from an enabled state to a disabled state, these ports will return to the default VLAN.

Example usage:

To configure the ports for a previously created 802.1x Guest VLAN as enabled.

```
DES-3028P:4#config 802.1x guest_vlan ports 1-5 state enable
```

```
Command: config 802.1x guest_vlan ports 1-5 state enable
```

```
Success.
```

```
DES-3028P:4#
```

### show 802.1x guest\_vlan

Purpose	Used to view the configurations for a 802.1x Guest VLAN.
Syntax	<b>show 802.1x guest_vlan</b>
Description	The <b>show 802.1x guest_vlan</b> command is used to display the settings for the VLAN that has been enabled as an 802.1x Guest VLAN. Guest 802.1X VLAN clients are those who have not been authorized for 802.1x or they haven't yet installed the necessary 802.1x software, yet would still like limited access rights on the Switch.
Parameters	None.
Restrictions	None.

Example usage:

To configure the configurations for a previously created 802.1x Guest VLAN.

```
DES-3028P:4#show 802.1x guest_vlan
```

```
Command: show 802.1x guest_vlan
```

#### Guest VLAN Setting

```
-----
```

```
Guest VLAN : Trinity
```

```
Enable guest VLAN ports: 1-5
```

```
DES-3028P:4#
```

## delete 802.1x guest\_vlan

Purpose	Used to delete a 802.1x Guest VLAN.
Syntax	<b>delete 802.1x guest_vlan {&lt;vlan_name 32&gt;}</b>
Description	The <b>delete 802.1x guest_vlan</b> command is used to delete an 802.1x Guest VLAN. Guest 802.1X VLAN clients are those who have not been authorized for 802.1x or they haven't yet installed the necessary 802.1x software, yet would still like limited access rights on the Switch.
Parameters	<vlan_name 32> - Enter the VLAN name of the Guest 802.1x VLAN to be deleted.
Restrictions	Only administrator-level users can issue this command. Users must have already previously created a VLAN using the <b>create vlan</b> command. Only one VLAN can be set as the 802.1x Guest VLAN.

Example usage:

To delete a previously created 802.1x Guest VLAN.

```
DES-3028P:4#delete 802.1x guest_vlan Trinity
```

```
Command: delete 802.1x guest_vlan Trinity
```

```
Success.
```

```
DES-3028P:4#
```

## show acct\_client

Purpose	Used to display the current RADIUS accounting client.
Syntax	<b>show acct_client</b>
Description	The <b>show acct_client</b> command is used to display the current RADIUS accounting client currently configured on the Switch.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To view the current RADIUS accounting client:

```

DES-3028P:4#show acct_client
Command: show acct_client

radiusAcctClient
-----
radiusAcctClientInvalidServerAddresses      0
radiusAcctClientIdentifier                  D-Link

radiusAuthServerEntry                       0
-----
radiusAccServerIndex                       1
radiusAccServerAddress                     10.53.13.199
radiusAccClientServerPortNumber            0
radiusAccClientRoundTripTime              0
radiusAccClientRequests                    0
radiusAccClientRetransmissions             0
radiusAccClientResponses                   0
radiusAccClientMalformedResponses          0
radiusAccClientBadAuthenticators           0
radiusAccClientPendingRequests             0
radiusAccClientTimeouts                   0
radiusAccClientUnknownTypes                0
radiusAccClientPacketsDropped              0
CTRL+C ESC q Quit SPACE n Next Page Enter Next Entry a All

```

## show auth\_client

Purpose	Used to display the current RADIUS authentication client.
Syntax	<b>show auth_client</b>
Description	The <b>show auth_client</b> command is used to display the current RADIUS authentication client currently configured on the Switch.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To view the current RADIUS authentication client:

```

DES-3028P:4#show auth_client
Command: show auth_client

radiusAuthClient
-----
radiusAuthClientInvalidServerAddresses      0
radiusAuthClientIdentifier                  D-Link

radiusAuthServerEntry                       0
-----
radiusAuthServerIndex                      : 1
radiusAuthServerAddress                    : 0.0.0.0
radiusAuthClientServerPortNumber           0
radiusAuthClientRoundTripTime              0
radiusAuthClientAccessRequests             0
radiusAuthClientAccessRetransmissions      0
radiusAuthClientAccessAccepts              0
radiusAuthClientAccessRejects              0
radiusAuthClientAccessChallenges           0
radiusAuthClientMalformedAccessResponses   0
radiusAuthClientBadAuthenticators           0
radiusAuthClientPendingRequests            0

```

radiusAuthClientTimeouts	0
radiusAuthClientUnknownTypes	0
radiusAuthClientPacketsDropped	0
<b>CTRL+C</b> <b>ESC</b> <b>q</b> Quit <b>SPACE</b> <b>n</b> Next Page <b>Enter</b> Next Entry <b>a</b> All	

## show auth\_diagnostics

Purpose	Used to display the current authentication diagnostics.
Syntax	<b>show auth_diagnostics {ports [&lt;portlist&gt;   all]}</b>
Description	The <b>show auth_diagnostics</b> command is used to display the current authentication diagnostics of the Switch on a per port basis.
Parameters	<i>ports</i> <portlist> – Specifies a range of ports. <i>all</i> – Specifies that all ports will be viewed.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To display the current authentication diagnostics for port 16 of module 1:

```
DES-3028P:4#show auth_diagnostics ports 1
Command: show auth_diagnostics ports 1

Port number : 1

EntersConnecting                0
EapLogoffsWhileConnecting       0
EntersAuthenticating            0
SuccessWhileAuthenticating      0
TimeoutsWhileAuthenticating     0
FailWhileAuthenticating         0
ReauthsWhileAuthenticating      0
EapStartsWhileAuthenticating    0
EapLogoffWhileAuthenticating    0
ReauthsWhileAuthenticated      0
EapStartsWhileAuthenticated     0
EapLogoffWhileAuthenticated     0
BackendResponses                0
BackendAccessChallenges         0
BackendOtherRequestsToSupplicant 0
BackendNonNakResponsesFromSupplicant 0
BackendAuthSuccesses           0
BackendAuthFails                0
CTRL+C ESC q Quit SPACE n Next Page Enter Next Entry a All
```

## show auth\_session\_statistics

Purpose	Used to display the current authentication session statistics.
Syntax	<b>show auth_session_statistics {ports &lt;portlist   all&gt;}</b>
Description	The <b>show auth_session</b> statistics command is used to display the current authentication session statistics of the Switch on a per port basis.
Parameters	<i>ports</i> <portlist> – Specifies a range of ports. <i>all</i> – Specifies that all ports will be viewed.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To display the current authentication session statistics for port 16 of module 1:

```
DES-3028P:4#show auth_session_statistics ports 1
Command: show auth_session_statistics ports 1

Port number : 1

SessionOctetsRx          0
SessionOctetsTx          0
SessionFramesRx          0
SessionFramesTx          0
SessionId
SessionAuthenticMethod   Remote Authentication Server
SessionTime              0
SessionTerminateCause    SupplicantLogoff
SessionUserName           Trinity

CTRL+C ESC q Quit SPACE n Next Page Enter Next Entry a All
```

## show auth\_statistics

Purpose	Used to display the current authentication statistics.
Syntax	<b>show auth_statistics {ports &lt;portlist&gt;   all}</b>
Description	The <b>show auth_statistics</b> command is used to display the current authentication statistics of the Switch on a per port basis.
Parameters	<i>ports &lt;portlist&gt;</i> – Specifies a range of ports. <i>all</i> – Specifies that all ports will be viewed.
Restrictions	None.

Example usage:

To display the current authentication statistics for port 1:16:

```
DES-3028P:4#show auth_statistics ports 1
Command: show auth_statistics ports 1

Port number : 1

EapolFramesRx           0
EapolFramesTx           0
EapolStartFramesRx      0
EapolReqIdFramesTx      0
EapolLogoffFramesRx     0
EapolReqFramesTx        0
EapolRespIdFramesRx     0
EapolRespFramesRx       0
InvalidEapolFramesRx    0
EapLengthErrorFramesRx  0

LastEapolFrameVersion    0
LastEapolFrameSource     00-00-00-00-00-00

CTRL+C ESC q Quit SPACE n Next Page Enter Next Entry a All
```

## create 802.1x user

Purpose	Used to create a new 802.1x user.
Syntax	<b>create 802.1x user &lt;username 15&gt;</b>
Description	The <b>create 802.1x user</b> command is used to create new 802.1x

**create 802.1x user**

	users.
Parameters	<username 15> – A username of up to 15 alphanumeric characters in length.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To create an 802.1x user:

```
DES-3028P:4#create 802.1x user dtremblett
Command: create 802.1x user dtremblett

Enter a case-sensitive new password:*****
Enter the new password again for confirmation:*****
Success.

DES-3028P:4#
```

**show 802.1x user**

Purpose	Used to display the 802.1x user accounts on the Switch.
Syntax	<b>show 802.1x user</b>
Description	The <b>show 802.1x user</b> command is used to display the 802.1x Port-based or MAC-based Network Access control local users currently configured on the Switch.
Parameters	None.
Restrictions	None.

Example usage:

To view 802.1X users currently configured on the Switch:

```
DES-3028P:4#show 802.1x user
Command: show 802.1x user

Index          UserName
-----
Darren         Trinity

Total Entries: 1

DES-3028P:4#
```

**delete 802.1x user**

Purpose	Used to delete an 802.1x user account on the Switch.
Syntax	<b>delete 802.1x user &lt;username 15&gt;</b>
Description	The <b>delete 802.1x user</b> command is used to delete the 802.1x Port-based or MAC-based Network Access control local users currently configured on the Switch.
Parameters	<username 15> – A username can be as many as 15 alphanumeric characters.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To delete 802.1x users:

```
DES-3028P:4#delete 802.1x user dtremblett
Command: delete 802.1x user dtremblett

Are you sure to delete the user?(y/n)
Success.

DES-3028P:4#
```

## ACCESS CONTROL LIST (ACL) COMMANDS

The DES-3028/28P/52/52P implements Access Control Lists that enable the Switch to deny network access to specific devices or device groups based on IP settings and MAC address.

The access profile commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
create access_profile	[ethernet {vlan   source_mac <macmask>   destination_mac <macmask>   802.1p   ethernet_type}   ip {vlan   source_ip_mask <netmask>   destination_ip_mask <netmask>   dscp   [icmp   igmp   tcp {src_port_mask <hex 0x0-0xffff>   dst_port_mask <hex 0x0-0xffff>   flag_mask [ all   {urg   ack   psh   rst   syn   fin}]}   udp {src_port_mask <hex 0x0-0xffff>   dst_port_mask <hex 0x0-0xffff>}   protocol_id_mask <hex 0x0-0xffff>}   packet_content_mask {offset_0-15 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_16-31 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_32-47 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_48-63 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_64-79 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>} } profile_id <value 1-256>
delete access_profile	profile_id <value 1-256>
config access_profile	<value 1-256> [add access_id [auto_assign   <value 1-256>] [ethernet {vlan <vlan_name 32>   source_mac <macaddr>   destination_mac <macaddr>   802.1p <value 0-7>   ethernet_type <hex 0x0-0xffff>}   ip {vlan <vlan_name 32>   source_ip <ipaddr>   destination_ip <ipaddr>   dscp <value 0-63>   [icmp   igmp   tcp {src_port <value 0-65535>   dst_port <value 0-65535>   urg   ack   psh   rst   syn   fin}   udp {src_port <value 0-65535>   dst_port <value 0-65535>}   protocol_id <value 0 - 255>}]   packet_content offset <value 0-76> <hex0x0-0xffffffff> {offset <value 0-76> <hex 0x0-0xffffffff> {offset <value 0-76> <hex 0x0-0xffffffff> {offset <value 0-76> <hex 0x0-0xffffffff>}}}}] port [<portlist>   all] [ permit {priority <value 0-7>   rx_rate [ no_limit  <value 64-1024000>}]   deny] {time_range <range_name 32>}   delete access_id <value 1-256>]
show access_profile	profile_id <value 1-256>
enable cpu_interface_filtering	
disable cpu_interface_filtering

show cpu access_profile	profile_id <value 1-3>

Access profiles allow users to establish criteria to determine whether or not the Switch will forward packets based on the information contained in each packet's header.

Creating an access profile is divided into two basic parts. First, an access profile must be created using the **create access\_profile** command. For example, if users want to deny all traffic to the subnet 10.42.73.0 to 10.42.73.255, users must first **create** an access profile that instructs the Switch to examine all of the relevant fields of each frame.

First create an access profile that uses IP addresses as the criteria for examination:

```
create access_profile ip source_ip_mask 255.255.255.0 profile_id 1
```

Here we have created an access profile that will examine the IP field of each frame received by the Switch. Each source IP address the Switch finds will be combined with the **source\_ip\_mask** with a logical AND operation. The **profile\_id** parameter is used to give the access profile an identifying number – in this case, 1 – and it is used to assign a priority in case a conflict occurs. The **profile\_id** establishes a priority within the list of profiles. A lower **profile\_id** gives the rule a higher priority. In case of a conflict in the rules entered for different profiles, the rule with the highest priority (lowest **profile\_id**) will take precedence. *See below for information regarding limitations on access profiles and access rules.*

The **deny** parameter instructs the Switch to filter any frames that meet the criteria – in this case, when a logical AND operation between an IP address specified in the next step and the **ip\_source\_mask** match.

The default for an access profile on the Switch is to **permit** traffic flow. If users want to restrict traffic, users must use the **deny** parameter.

Now that an access profile has been created, users must add the criteria the Switch will use to decide if a given frame should be forwarded or filtered. We will use the **config access\_profile** command to create a new rule that defines the criteria we want. Let's further specify in the new rule to deny access to a range of IP addresses through an individual port: Here, we want to filter any packets that have an IP source address between 10.42.73.0 and 10.42.73.255, and specify the port that will not be allowed:

```
config access_profile profile_id 1 add access_id 1 ip source_ip 10.42.73.1 port 7 deny
```

We use the **profile\_id 1** which was specified when the access profile was created. The **add** parameter instructs the Switch to add the criteria that follows to the list of rules that are associated with access profile 1. For each rule entered into the access profile, users can assign an **access\_id** that identifies the rule within the list of rules. The **access\_id** is an index number only and does not effect priority within the **profile\_id**. This **access\_id** may be used later if users want to remove the individual rule from the profile.

The **ip** parameter instructs the Switch that this new rule will be applied to the IP addresses contained within each frame's header. **source\_ip** tells the Switch that this rule will apply to the source IP addresses in each frame's header. The IP address **10.42.73.1** will be combined with the **source\_ip\_mask 255.255.255.0** to give the IP address 10.42.73.0 for any source IP address between 10.42.73.0 to 10.42.73.255. Finally the restricted port - port number 7 - is specified.

## create access\_profile

Purpose	Used to create an access profile on the Switch and to define which parts of each incoming frame's header the Switch will examine. Masks can be entered that will be combined with the values the Switch finds in the specified frame header fields. Specific values for the rules are entered using the <b>config access_profile</b> command, below.
Syntax	<b>create access_profile [ethernet {vlan   source_mac &lt;macmask&gt;   destination_mac &lt;macmask&gt;   802.1p   ethernet_type}] ip {vlan   source_ip_mask &lt;netmask&gt;   destination_ip_mask &lt;netmask&gt;   dscp   [icmp   igmp   tcp {src_port_mask &lt;hex 0x0-0xffff&gt;   dst_port_mask &lt;hex 0x0-0xffff&gt;   flag_mask [all   {urg   ack   psh   rst   syn   fin}]}]   udp {src_port_mask &lt;hex 0x0-0xffff&gt;   dst_port_mask &lt;hex 0x0-0xffff&gt;}   protocol_id_mask &lt;hex 0x0-0xff&gt;}]   packet_content_mask {offset_0-15 &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt;   offset_16-31 &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt;   offset_32-47</b>

**create access\_profile**

```
<hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> |
offset_48-63 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-
0xffffffff> | offset_64-79 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex
0x0-0xffffffff>}] profile_id <value 1-256>
```

**Description**

The **create access\_profile** command is used to create an access profile on the Switch and to define which parts of each incoming frame's header the Switch will examine. Masks can be entered that will be combined with the values the Switch finds in the specified frame header fields. Specific values for the rules are entered using the **config access\_profile** command, below.

**Parameters**

*ethernet* – Specifies that the Switch will examine the layer 2 part of each packet header.

- *vlan* – Specifies that the Switch will examine the VLAN part of each packet header.
- *source\_mac* <macmask> – Specifies a MAC address mask for the source MAC address. This mask is entered in a hexadecimal format.
- *destination\_mac* <macmask> – Specifies a MAC address mask for the destination MAC address.
- *802.1p* – Specifies that the Switch will examine the 802.1p priority value in the frame's header.
- *ethernet\_type* – Specifies that the Switch will examine the Ethernet type value in each frame's header.

*ip* – Specifies that the Switch will examine the IP address in each frame's header.

- *vlan* – Specifies a VLAN mask.
- *source\_ip\_mask* <netmask> – Specifies an IP address mask for the source IP address.
- *destination\_ip\_mask* <netmask> – Specifies an IP address mask for the destination IP address.
- *dscp* – Specifies that the Switch will examine the DiffServ Code Point (DSCP) field in each frame's header.
- *icmp* – Specifies that the Switch will examine the Internet Control Message Protocol (ICMP) field in each frame's header.
- *igmp* – Specifies that the Switch will examine each frame's Internet Group Management Protocol (IGMP) field.
- *src\_port\_mask* <hex 0x0-0xffff> – Specifies a TCP port mask for the source port.
- *dst\_port\_mask* <hex 0x0-0xffff> – Specifies a TCP port mask for the destination port.
- *flag\_mask* – Enter the appropriate flag\_mask parameter. All incoming packets have TCP port numbers contained in them as the forwarding criterion. These numbers have flag bits associated with them which are parts of a packet that determine what to do with the packet. The user may deny packets by denying certain flag bits within the packets. The user may choose between *all*, *urg* (urgent), *ack* (acknowledgement), *psh* (push), *rst* (reset), *syn* (synchronize) and *fin* (finish).

*udp* – Specifies that the Switch will examine each frame's Universal Datagram Protocol (UDP) field.

- *src\_port\_mask* <hex 0x0-0xffff> – Specifies a UDP port mask for the source port.
- *dst\_port\_mask* <hex 0x0-0xffff> – Specifies a UDP port mask for the destination port.

## create access\_profile

*protocol\_id\_mask* – Specifies that the Switch will examine the protocol field in each packet and if this field contains the value entered here, apply the following rules.

*packet\_content\_mask* – Specifies that the Switch will mask the packet header beginning with the offset value specified as follows:

- *offset\_0-15* – Enter a value in hex form to mask the packet from the beginning of the packet to the 15<sup>th</sup> byte.
- *offset\_16-31* – Enter a value in hex form to mask the packet from byte 16 to byte 31.
- *offset\_32-47* – Enter a value in hex form to mask the packet from byte 32 to byte 47.
- *offset\_48-63* – Enter a value in hex form to mask the packet from byte 48 to byte 63.
- *offset\_64-79* – Enter a value in hex form to mask the packet from byte 64 to byte 79.

*profile\_id* <value 1-256> – Sets the relative priority for the profile. Priority is set relative to other profiles where the lowest profile ID has the highest priority. The user may enter a profile ID number between 1 to 256.

Restrictions Only administrator-level users can issue this command.

Example usage:

To create an access list rules:

```
DES-3028P:4#create access_profile ip vlan source_ip_mask 20.0.0.0
destination_ip_mask 10.0.0.0 dscp icmp profile_id 101
Command: create access_profile ip vlan source_ip_mask 20.0.0.0 destination_ip_mask
10.0.0.0 dscp icmp permit profile_id 101

Success.

DES-3028P:4#
```

## delete access\_profile

Purpose	Used to delete a previously created access profile.
Syntax	<b>delete access_profile [profile_id &lt;value 1-256&gt;]</b>
Description	The <b>delete access_profile</b> command is used to delete a previously created access profile on the Switch.
Parameters	<i>profile_id</i> <value 1-256> – Enter an integer between 1 and 256 that is used to identify the access profile that will be deleted with this command. This value is assigned to the access profile when it is created with the <b>create access_profile</b> command. The user may enter a profile ID number between 1 and 256.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To delete the access profile with a profile ID of 1:

```
DES-3028P:4# delete access_profile profile_id 1
Command: delete access_profile profile_id 1

Success.

DES-3028P:4#
```

## config access\_profile

<b>Purpose</b>	Used to configure an access profile on the Switch and to define specific values that will be used to by the Switch to determine if a given packet should be forwarded or filtered. Masks entered using the <b>create access_profile</b> command will be combined, using a logical AND operational method, with the values the Switch finds in the specified frame header fields. Specific values for the rules are entered using the <b>config access_profile</b> command, below.
<b>Syntax</b>	<b>config access_profile profile_id &lt;value 1-256&gt; [add access_id [auto_assign   &lt;value 1-256&gt;] [ethernet {vlan &lt;vlan_name 32&gt;   source_mac &lt;macaddr&gt;   destination_mac &lt;macaddr&gt;   802.1p &lt;value 0-7&gt;   ethernet_type &lt;hex 0x0-0xffff&gt; }   ip {vlan &lt;vlan_name 32&gt;   source_ip &lt;ipaddr&gt;   destination_ip &lt;ipaddr&gt;   dscp &lt;value 0-63&gt;   [icmp   igmp   tcp {src_port &lt;value 0-65535&gt;   dst_port &lt;value 0-65535&gt;   urg   ack   psh   rst   syn   fin }   udp {src_port &lt;value 0-65535&gt;   dst_port &lt;value 0-65535&gt;}   protocol_id &lt;value 0-255&gt;}]   packet_content offset &lt;value 0-76&gt; &lt;hex0x0-0xffffffff&gt; {offset &lt;value 0-76&gt; &lt;hex 0x0-0xffffffff&gt; {offset &lt;value 0-76&gt; &lt;hex 0x0-0xffffffff&gt;}}}] port [&lt;portlist&gt;   all ] [permit{ priority &lt;value 0-7&gt;   rx_rate [no_limit  &lt;value 64-102400&gt;}]   deny] {time_range &lt;range_name 32&gt;}   delete access_id &lt;value 1-256&gt;]</b>
<b>Description</b>	The <b>config access_profile</b> command is used to configure an access profile on the Switch and to enter specific values that will be combined, using a logical AND operational method, with masks entered with the <b>create access_profile</b> command, above.
<b>Parameters</b>	<p><i>profile_id</i> &lt;value 1-256&gt; – Enter an integer used to identify the access profile that will be configured with this command. This value is assigned to the access profile when it is created with the <b>create access_profile</b> command. The profile ID sets the relative priority for the profile and specifies an index number that will identify the access profile being created with this command. Priority is set relative to other profiles where the lowest profile ID has the highest priority. The user may enter a profile ID number between 1 and 256.</p> <p><i>add access_id</i> &lt;value 1-256&gt; – Adds an additional rule to the above specified access profile. The value is used to index the rule created. For information on number of rules that can be created for a given port, lease see the introduction to this chapter.</p> <p><i>ethernet</i> – Specifies that the Switch will look only into the layer 2 part of each packet.</p> <ul style="list-style-type: none"> <li>• <i>vlan</i> &lt;vlan_name 32&gt; – Specifies that the access profile will apply to only to this VLAN.</li> <li>• <i>source_mac</i> &lt;macaddr&gt; – Specifies that the access profile will apply to only packets with this source MAC address.</li> <li>• <i>destination_mac</i> &lt;macaddr&gt; – Specifies that the access profile will apply to only packets with this destination MAC address.</li> <li>• <i>802.1p</i> &lt;value 0-7&gt; – Specifies that the access profile will apply only to packets with this 802.1p priority value.</li> <li>• <i>ethernet_type</i> &lt;hex 0x0-0xffff&gt; – Specifies that the access profile will apply only to packets with this hexadecimal 802.1Q Ethernet type value in the packet header.</li> </ul>

## config access\_profile

<b>Parameters</b>	<p><i>ip</i> – Specifies that the Switch will look into the IP fields in each packet.</p> <ul style="list-style-type: none"> <li>• <i>vlan</i> &lt;vlan_name 32&gt; – Specifies that the access profile will apply to only this VLAN.</li> <li>• <i>source_ip</i> &lt;ipaddr&gt; – Specifies that the access profile will apply to only packets with this source IP address.</li> <li>• <i>destination_id</i> &lt;value 0-255&gt; – Specifies that the access profile will apply to only packets with this destination IP address.</li> <li>• <i>dscp</i> &lt;value 0-63&gt; – Specifies that the access profile will apply only to packets that have this value in their Type-of-Service (DiffServ code point, DSCP) field in their IP packet header</li> <li>• <i>icmp</i> – Specifies that the Switch will examine the Internet Control Message Protocol (ICMP) field within each packet.</li> <li>• <i>igmp</i> – Specifies that the Switch will examine the Internet Group Management Protocol (IGMP) field within each packet.</li> <li>• <i>tcp</i> – Specifies that the Switch will examine the Transmission Control Protocol (TCP) field within each packet. <ul style="list-style-type: none"> <li>• <i>src_port</i> &lt;value 0-65535&gt; – Specifies that the access profile will apply only to packets that have this TCP source port in their TCP header.</li> <li>• <i>dst_port</i> &lt;value 0-65535&gt; – Specifies that the access profile will apply only to packets that have this TCP destination port in their TCP header.</li> </ul> </li> <li>• <i>flag_mask</i> – Enter the type of TCP flag to be masked.</li> <li>• <i>all</i>: all flags are selected.</li> <li>• <i>urg</i>: TCP control flag (urgent)</li> <li>• <i>ack</i>: TCP control flag (acknowledgement)</li> <li>• <i>psh</i>: TCP control flag (push)</li> <li>• <i>rst</i>: TCP control flag (reset)</li> <li>• <i>syn</i>: TCP control flag (synchronize)</li> <li>• <i>fin</i>: TCP control flag (finish)</li> <li>• <i>udp</i> – Specifies that the Switch will examine the Universal Datagram Protocol (UDP) field in each packet. <ul style="list-style-type: none"> <li>• <i>src_port</i> &lt;value 0-65535&gt; – Specifies that the access profile will apply only to packets that have this UDP source port in their header.</li> <li>• <i>dst_port</i> &lt;value 0-65535&gt; – Specifies that the access profile will apply only to packets that have this UDP destination port in their header.</li> </ul> </li> </ul> <p><i>protocol_id</i> &lt;value 0-255&gt; – Specifies that the Switch will examine the protocol field in each packet and if this field contains the value entered here, apply the following rules.</p> <ul style="list-style-type: none"> <li>• <i>packet_content_mask</i> – Specifies that the switch will mask the packet header beginning with the offset value specified as follows: <ul style="list-style-type: none"> <li>• <i>offset_0-79</i> - Enter a value in hex form to mask the packet from byte 0 to byte 79.</li> </ul> </li> </ul>
<b>Parameters</b>	<p><i>port</i> &lt;portlist&gt; - Specifies the port number on the Switch to permit or deny access for the rule.</p> <p><i>permit</i> – Specifies that packets that match the access profile are permitted to be forwarded by the Switch.</p> <ul style="list-style-type: none"> <li>• <i>priority</i> &lt;value 0-7&gt; – This parameter is specified if you want to re-write the 802.1p default priority previously set in the Switch, which is used to determine the CoS queue to which packets are forwarded to. Once this field is specified, packets accepted by the Switch that match this priority are forwarded to the CoS queue specified previously by the user.</li> <li>• <i>{replace_priority}</i> – Enter this parameter if you want to re-write the 802.1p default priority of a packet to the value entered in the Priority field, which meets the criteria specified previously in this command, before forwarding it on to the specified CoS queue. Otherwise, a packet will have its incoming 802.1p user priority re-written to its original value before being forwarded by the Switch.</li> </ul> <p><i>rx_rate</i> – Use this to limit Rx bandwidth for the profile being configured. This rate is implemented using the following equation – 1 value = 64kbit/sec. (ex. If the user selects a rx</p>

## config access\_profile

rate of 10 then the ingress rate is 640kbit/sec.) The user may select a value between 1-156249 or no limit. The default setting is no limit.

*deny* – Specifies that packets that do not match the access profile are not permitted to be forwarded by the Switch and will be filtered.

*time\_range <range\_name 32>* – Choose this parameter and enter the name of the Time Range settings that has been previously configured using the **config time\_range** command. This will set specific times when this access rule will be enabled or disabled on the Switch.

*delete access\_id <value 1-256>* – Use this command to delete a specific rule from the Ethernet profile. Up to 256 rules may be specified for the Ethernet access profile.

**Restrictions** Only administrator-level users can issue this command.

Example usage:

To configure the access profile with the profile ID of 1 to filter frames on port 7 that have IP addresses in the range between 10.42.73.0 to 10.42.73.255:

```
DES-3028P:4# config access_profile profile_id 1 add access_id 1 ip source_ip 10.42.73.1 port 7 deny
Command: config access_profile profile_id 1 add access_id 1 ip source_ip 10.42.73.1 port 7 deny
```

Success.

```
DES-3028P:4#
```

## show access\_profile

Purpose	Used to display the currently configured access profiles on the Switch.
Syntax	<b>show access_profile profile_id &lt;value 1-256&gt;</b>
Description	The <b>show access_profile</b> command is used to display the currently configured access profiles.
Parameters	<i>profile_id</i> – Specify the profile id to display only the access rules configuration for a single profile ID. The user may enter a profile ID number between 1 and 256.
Restrictions	None.

Example usage:

To display all of the currently configured access profiles on the Switch:

```
DES-3028P:4#show access_profile
Command: show access_profile

Access Profile Table
=====
Profile ID : 101                               Type: IPv4 Frame Filter - ICMP
=====
Masks  Option          Source IP  Dest. IP  DSCP Prot
-----
Total Profile Entries: 1

Total Rule Entries: 0

DES-3028P:4#
```

## create cpu\_access\_profile

Purpose	Used to create an access profile specifically for <b>CPU Interface Filtering</b> on the Switch and to define which parts of each incoming frame's header the Switch will examine. Masks can be entered that will be combined with the values the Switch finds in the specified frame header fields. Specific values for the rules are entered using the <b>config cpu_access_profile</b> command, below.
Syntax	<b>create cpu_access_profile</b> <value 1-3> [ethernet {vlan   source_mac <macmask>   destination_mac <macmask>   802.1p   ethernet_type}   ip {vlan   source_ip_mask <netmask>   destination_ip_mask <netmask>   dscp   [icmp {type   code}   igmp { type }   tcp {src_port_mask <hex 0x0-0xffff>   dst_port_mask <hex 0x0-0xffff>   flag_mask [ all   {urg   ack   psh   rst   syn   fin}] }   udp {src_port_mask <hex 0x0-0xffff>   dst_port_mask <hex 0x0-0xffff>}   protocol_id_mask <hex 0x0-0xff> {user_define <hex 0x0-0xffffffff>}}]   packet_content_mask {offset_0-15 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_16-31 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_32-47 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_48-63 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_64-79 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>}]
Description	The <b>create cpu_access_profile</b> command is used to create an access profile used only for CPU Interface Filtering. Masks can be entered that will be combined with the values the Switch finds in the specified frame header fields. Specific values for the rules are entered using the <b>config cpu_access_profile</b> command, below.
Parameters	<p><i>ethernet</i> – Specifies that the Switch will examine the layer 2 part of each packet header.</p> <ul style="list-style-type: none"> <li><i>vlan</i> – Specifies that the Switch will examine the VLAN part of each packet header.</li> <li><i>source_mac</i> &lt;macmask&gt; - Specifies to examine the source MAC address mask.</li> <li><i>destination_mac</i> &lt;macmask&gt; - Specifies to examine the destination MAC address mask.</li> <li><i>802.1p</i> - Specifies that the Switch will examine the 802.1p priority value in the frame's header.</li> <li><i>ethernet_type</i> – Specifies that the Switch will examine the Ethernet type value in each frame's header.</li> </ul> <p><i>ip</i> – Specifies that the switch will examine the IP address in each frame's header.</p> <ul style="list-style-type: none"> <li><i>vlan</i> – Specifies a VLAN mask.</li> <li><i>source_ip_mask</i> &lt;netmask&gt; – Specifies an IP address mask for the source IP address.</li> <li><i>destination_ip_mask</i> &lt;netmask&gt; – Specifies an IP address mask for the destination IP address.</li> <li><i>dscp</i> – Specifies that the Switch will examine the DiffServ Code Point (DSCP) field in each frame's header.</li> <li><i>icmp</i> – Specifies that the Switch will examine the Internet Control Message Protocol (ICMP) field in each frame's header. <ul style="list-style-type: none"> <li><i>type</i> – Specifies that the Switch will examine each frame's ICMP Type field.</li> <li><i>code</i> – Specifies that the Switch will examine each frame's ICMP Code field.</li> </ul> </li> <li><i>igmp</i> – Specifies that the Switch will examine each frame's Internet Group Management Protocol (IGMP) field. <ul style="list-style-type: none"> <li><i>type</i> – Specifies that the Switch will examine each frame's IGMP Type field.</li> </ul> </li> <li><i>tcp</i> – Specifies that the Switch will examine each frames Transport Control Protocol (TCP) field. <ul style="list-style-type: none"> <li><i>src_port_mask</i> &lt;hex 0x0-0xffff&gt; – Specifies a TCP port mask for the source port.</li> <li><i>dst_port_mask</i> &lt;hex 0x0-0xffff&gt; – Specifies a TCP port mask for the destination port.</li> </ul> </li> <li><i>flag_mask</i> [ all   {urg   ack   psh   rst   syn   fin}] – Enter the appropriate flag_mask parameter. All incoming packets have TCP port numbers contained in them as the forwarding criterion. These numbers have flag bits associated with them which are parts of a packet that determine what to do with the packet. The user may deny packets by denying certain flag bits within the packets. The user may choose between <b>all</b>, <b>urg</b> (urgent), <b>ack</b> (acknowledgement), <b>psh</b> (push), <b>rst</b> (reset), <b>syn</b> (synchronize) and <b>fin</b> (finish).</li> <li><i>udp</i> – Specifies that the switch will examine each frame's Universal Datagram Protocol (UDP) field.</li> </ul>

## create cpu access\_profile

- *src\_port\_mask* <hex 0x0-0xffff> – Specifies a UDP port mask for the source port.
- *dst\_port\_mask* <hex 0x0-0xffff> – Specifies a UDP port mask for the destination port.
- *protocol\_id\_mask* <hex 0x0-0xffffffff> – Specifies that the Switch will examine each frame's Protocol ID field using the hex form entered here.
  - *user\_define\_mask* <hex 0x0-0xffffffff> – Specifies that the rule applies to the IP protocol ID and the mask options behind the IP header.
- *packet\_content\_mask* – Specifies that the Switch will mask the packet header beginning with the offset value specified as follows:
  - *offset\_0-15* - Enter a value in hex form to mask the packet from byte 0 to byte 15.
  - *offset\_16-31* - Enter a value in hex form to mask the packet from byte 16 to byte 31.
  - *offset\_32-47* - Enter a value in hex form to mask the packet from byte 32 to byte 47.
  - *offset\_48-63* - Enter a value in hex form to mask the packet from byte 48 to byte 63.
  - *offset\_64-79* - Enter a value in hex form to mask the packet from byte 64 to byte 79.

*profile\_id* <value 1-3> – Enter an integer between 1 and 3 that is used to identify the CPU access profile to be created with this command.

Restrictions Only administrator-level users can issue this command.

Example usage:

To create a CPU access profile:

```
DES-3028P:4# create cpu access_profile profile_id 1 ip vlan source_ip_mask 20.0.0.0
destination_ip_mask 10.0.0.0 dscp icmp type code
Command: create cpu access_profile profile_id 1 ip vlan source_ip_mask 20.0.0.0
destination_ip_mask 10.0.0.0 dscp icmp type code

Success.

DES-3028P:4#
```

## delete cpu access\_profile

Purpose	Used to delete a previously created CPU access profile.
Syntax	<b>delete cpu access_profile profile_id &lt;value 1-3&gt;</b>
Description	The <b>delete cpu access_profile</b> command is used to delete a previously created CPU access profile.
Parameters	<i>profile_id</i> <value 1-3> – Enter an integer between 1 and 3 that is used to identify the CPU access profile to be deleted with this command. This value is assigned to the access profile when it is created with the <b>create cpu access_profile</b> command.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To delete the CPU access profile with a profile ID of 1:

```
DES-3028P:4#delete cpu access_profile profile_id 1
Command: delete cpu access_profile profile_id 1

Success.

DES-3028P:4#
```

## config cpu access\_profile

Purpose	Used to configure a CPU access profile used for CPU Interface Filtering and to define specific values that will be used to by the Switch to determine if a given packet should be forwarded or filtered. Masks entered using the <b>create cpu access_profile</b> command will be combined, using a logical AND operational method, with the values the Switch finds in the specified frame header fields. Specific values for the rules are entered using the <b>config cpu access_profile</b> command, below.
Syntax	<b>config cpu access_profile profile_id &lt;value 1-3&gt; [add access_id &lt;value 1-5&gt; [ ethernet {vlan &lt;vlan_name 32&gt;   source_mac &lt;macaddr&gt;   destination_mac &lt;macaddr&gt;   802.1p &lt;value 0-7&gt;   ethernet_type &lt;hex 0x0-0xffff&gt; }   ip {vlan &lt;vlan_name 32&gt;   source_ip &lt;ipaddr&gt;   destination_ip &lt;ipaddr&gt;   dscp &lt;value 0-63&gt;   [icmp {type &lt;value 0-255&gt;   code &lt;value 0-255&gt;}   igmp {type &lt;value 0-255&gt;}   tcp {src_port &lt;value 0-65535&gt;   dst_port &lt;value 0-65535&gt;   urg   ack   psh   rst   syn   fin }   udp {src_port &lt;value 0-65535&gt;   dst_port &lt;value 0-65535&gt;}   protocol_id &lt;value 0-255&gt; {user_define&lt;hex 0x0-0xffffffff&gt;}}]   packet_content {offset_0-15 &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt;   offset_16-31 &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt;   offset_32-47 &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt;   offset_48-63 &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt;   offset_64-79 &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; } } port [&lt;portlist&gt;   all] [permit   deny] {time_range &lt;range_name 32&gt;}   delete access_id &lt;value 1-5&gt;]</b>
Description	The <b>config cpu access_profile</b> command is used to configure a CPU access profile for CPU Interface Filtering and to enter specific values that will be combined, using a logical AND operational method, with masks entered with the <b>create cpu access_profile</b> command, above.
Parameters	<p><i>profile_id &lt;value 1-3&gt;</i> – Enter an integer used to identify the access profile that will be configured with this command. This value is assigned to the access profile when it is created with the <b>create access_profile</b> command. The profile ID sets the relative priority for the profile and specifies an index number that will identify the access profile being created with this command. Priority is set relative to other profiles where the lowest profile ID has the highest priority.</p> <p><i>add access_id &lt;value 1-5&gt;</i> – Adds an additional rule to the above specified access profile. The value is used to index the rule created.</p> <p><i>ethernet</i> – Specifies that the Switch will look only into the layer 2 part of each packet.</p> <ul style="list-style-type: none"> <li><i>vlan &lt;vlan_name 32&gt;</i> – Specifies that the access profile will apply to only to this VLAN.</li> <li><i>source_mac &lt;macaddr&gt;</i> – Specifies that the access profile will apply to this source MAC address.</li> <li><i>destination_mac &lt;macaddr&gt;</i> – Specifies that the access profile will apply to this destination MAC address.</li> <li><i>ethernet_type &lt;hex 0x0-0xffff&gt;</i> – Specifies that the access profile will apply only to packets with this hexadecimal 802.1Q Ethernet type value in the packet header.</li> </ul> <p><i>ip</i> – Specifies that the Switch will look into the IP fields in each packet.</p> <ul style="list-style-type: none"> <li><i>vlan &lt;vlan_name 32&gt;</i> – Specifies that the access profile will apply to only this VLAN.</li> <li><i>source_ip &lt;ipaddr&gt;</i> – Specifies that the access profile will apply to only packets with this source IP address.</li> <li><i>destination_ip &lt;ipaddr&gt;</i> – Specifies that the access profile will apply to only packets with this destination IP address.</li> <li><i>dscp &lt;value 0-63&gt;</i> – Specifies that the access profile will apply only to packets that have this value in their Type-of-Service (DiffServ code point, DSCP) field in their IP packet header</li> <li><i>icmp</i> – Specifies that the Switch will examine the Internet Control Message Protocol (ICMP) field within each packet.</li> </ul>

## config cpu access\_profile

- *igmp* – Specifies that the Switch will examine the Internet Group Management Protocol (IGMP) field within each packet.
- *tcp* – Specifies that the Switch will examine the Transmission Control Protocol (TCP) field within each packet.
  - *src\_port* <value 0-65535> – Specifies that the access profile will apply only to packets that have this TCP source port in their TCP header.
  - *dst\_port* <value 0-65535> – Specifies that the access profile will apply only to packets that have this TCP destination port in their TCP header.

*protocol\_id* <value 0-255> – Specifies that the Switch will examine the Protocol field in each packet and if this field contains the value entered here, apply the following rules.

*udp* – Specifies that the Switch will examine the Transmission Control Protocol (TCP) field within each packet.

- *src\_port* <value 0-65535> – Specifies that the access profile will apply only to packets that have this UDP source port in their header.
- *dst\_port* <value 0-65535> – Specifies that the access profile will apply only to packets that have this UDP destination port in their header.

*protocol\_id* <value 0-255> – Specifies that the Switch will examine the protocol field in each packet and if this field contains the value entered here, apply the following rules.

- *user\_define\_mask* <hex 0x0-0xffffffff> – Specifies that the rule applies to the IP protocol ID and the mask options behind the IP header.

*packet\_content\_mask* – Specifies that the Switch will mask the packet header beginning with the offset value specified as follows:

- *offset\_0-76* - Enter a value in hex form to mask the packet from byte 0 to byte 76.

*permit* | *deny* – Specify that the packet matching the criteria configured with command will either be permitted entry to the cpu or denied entry to the CPU.

*time\_range* <range\_name 32> – Choose this parameter and enter the name of the Time Range settings that has been previously configured using the **config time\_range** command. This will set specific times when this access rule will be enabled or disabled on the Switch.

*delete access\_id* <value 1-5> - Use this to remove a previously created access rule in a profile ID.

### Parameters

### Restrictions

Only administrator-level users can issue this command.

Example usage:

To configure CPU access list entry:

```
DES-3028P:4#config cpu access_profile profile_id 5 add access_id 1
ip vlan default source_ip 20.2.2.3 destination_ip 10.1.1.252 dscp 3
icmp type 11 code 32 deny
```

```
Command: config cpu access_profile profile_id 10 add access_id 1
ip vlan default source_ip 20.2.2.3 destination_ip 10.1.1.252 dscp 3
icmp type 11 code 32 deny
```

Success.

```
DES-3028P:4#
```

## delete cpu access\_profile

**Purpose** Used to delete a previously created CPU access profile.

**Syntax** **delete cpu access\_profile profile\_id** <value 1-3>

**Description** The **delete cpu access\_profile** command is used to delete a previously

**delete cpu access\_profile**

	created CPU access profile.
Parameters	<i>profile_id</i> <value 1-3> – Enter an integer between 1 and 3 that is used to identify the CPU access profile to be deleted with this command. This value is assigned to the access profile when it is created with the <b>create cpu access_profile</b> command.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To delete the CPU access profile with a profile ID of 1:

```
DES-3028P:4#delete cpu access_profile profile_id 1
Command: delete cpu access_profile profile_id 1

Success.

DES-3028P:4#
```

**show cpu\_access\_profile**

Purpose	Used to view the CPU access profile entry currently set in the Switch.
Syntax	<b>show cpu_access_profile profile_id &lt;value 1-3&gt;</b>
Description	The <b>show cpu_access_profile</b> command is used view the current CPU interface filtering entries set on the Switch.
Parameters	<i>profile_id</i> <value 1-3> – Enter an integer between 1 and 3 that is used to identify the CPU access profile to be deleted with this command. This value is assigned to the access profile when it is created with the <b>create cpu access_profile</b> command.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To show the CPU filtering state on the Switch:

```
DES-3028P:4#show cpu access_profile profile_id 2
Command: show cpu access_profile profile_id 2

CPU Interface Filtering state: Disabled

Access Profile Table

=====
Total Profile Entries: 0
Total Rule Entries: 0

DES-3028P:4#
```

**enable cpu\_interface\_filtering**

Purpose	Used to enable CPU interface filtering on the Switch.
Syntax	<b>enable cpu_interface_filtering</b>
Description	This command is used, in conjunction with the <b>disable cpu_interface_filtering</b> command below, to enable and disable CPU interface filtering on the Switch.
Parameters	None.

**enable cpu\_interface\_filtering**

Restrictions	Only administrator-level users can issue this command.
--------------	--------------------------------------------------------

Example Usage:

To enable CPU interface filtering:

```
DES-3028P:4#enable cpu_interface_filtering
Command: enable cpu_interface_filtering

Success.

DES-3028P:4#
```

**disable cpu\_interface\_filtering**

Purpose	Used to disable CPU interface filtering on the Switch.
Syntax	<b>disable cpu_interface_filtering</b>
Description	This command is used, in conjunction with the <b>enable cpu_interface_filtering</b> command above, to enable and disable CPU interface filtering on the Switch.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example Usage:

To disable CPU filtering:

```
DES-3028P:4#disable cpu_interface_filtering
Command: disable cpu_interface_filtering

Success.

DES-3028P:4#
```

## TIME RANGE COMMANDS

The Time Range commands are used in conjunction with the Access Profile commands listed in the previous chapter to determine a starting point and an ending point, based on days of the week, when an Access Profile configuration will be enabled on the Switch. Once configured here, the time range are to be applied to an access profile rule using the **config access\_profile profile\_id** command.

**NOTE:** The Time Range commands are based on the time settings of the Switch. Make sure to configure the time for the Switch appropriately for these commands using commands listed in the following chapter, **Time and SNTP Commands**.

The Time Range commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config time_range	<range_name 32> [hours start_time <time hh:mm:ss> end_time <time hh:mm:ss> weekdays <daylist>   delete]
show time_range	

Each command is listed, in detail, in the following sections.

### config time\_range

Purpose	Used to configure a time range in which an access profile rule is to be enabled.
Syntax	<b>config time_range &lt;range_name 32&gt; [hours start_time &lt;time hh:mm:ss&gt; end_time &lt;time hh:mm:ss&gt; weekdays &lt;daylist&gt;   delete]</b>
Description	This command is to be used in conjunction with an access profile rule to determine a period of time when an access profile and an associated rule are to be enabled on the Switch. Remember, this time range can only be applied to one period of time and also, it is based on the time set on the Switch.
Parameters	<p><i>range_name 32</i> – Enter a name of no more than 32 alphanumeric characters that will be used to identify this time range on the Switch. This range name will be used in the <b>config access_profile profile_id</b> command to identify the access profile and associated rule to be enabled for this time range.</p> <p><i>hours</i> – This parameter is used to set the time in the day that this time range is to be set using the following parameters:</p> <ul style="list-style-type: none"> <li><i>start time &lt;time hh:mm:ss&gt;</i> - Use this parameter to identify the starting time of the time range, in hours, minutes and seconds, based on the 24-hour time system.</li> <li><i>end time &lt;time hh:mm:ss&gt;</i> - Use this parameter to identify the ending time of the time range, in hours, minutes and seconds, based on the 24-hour time system.</li> </ul> <p><i>weekdays</i> – Use this parameter to determine the days of the week to set this time range.</p> <ul style="list-style-type: none"> <li><i>&lt;daylist&gt;</i> - The user may set the days of the week here to set this time range in the three letter format (mon, tue, wed...). To specify a day range, separate the daylist using a dash (mon-fri would mean Monday through Friday). To specify a list of days in a week, separate the daylist using a comma, with no spaces (mon,tue,fri would mean Monday, Tuesday and Friday).</li> </ul> <p><i>delete</i> – Use this parameter to delete a previously configured time range from the system.</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure the time range time1 to be between 6:30 a.m. and 9:40 p.m., Monday to Friday:

```
DES-3028P:4#config time_range time1 hours start_time 6:30:00 end_time
21:40:00 weekdays mon-fri
Command: config time_range time1 hours start_time 6:30:00 end_time
21:40:00 weekdays mon-fri

Success.

DES-3028P:4#
```

## show time\_range

Purpose	To view the current configurations of the time range set on the Switch.
Syntax	<b>show time_range</b>
Description	This command is used to display the currently configured time range(s) set on the Switch.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To view the current time range settings.

```
DES-3028P:4#show time_range
Command: show time_range

Time Range information
-----
Range name   : time1
Weekdays    : Mon,Tue,Wed,Thu,Fri
Start time   : 06:30:00
End time     : 21:40:00

Total entries: 1

DES-3028P:4#
```

## SAFEGUARD ENGINE COMMANDS

Periodically, malicious hosts on the network will attack the Switch by utilizing packet flooding (ARP Storm) or other methods. These attacks may increase the CPU utilization beyond its capability. To alleviate this problem, the Safeguard Engine function was added to the Switch's software.

The Safeguard Engine can help the overall operability of the Switch by minimizing the workload of the Switch while the attack is ongoing, thus making it capable to forward essential packets over its network in a limited bandwidth. When the Switch either (a) receives too many packets to process or (b) exerts too much memory, it will enter an **Exhausted** mode. When in this mode, the Switch will perform the following tasks to minimize the CPU usage:

- a. It will limit bandwidth of receiving ARP packets.
- b. It will limit the bandwidth of IP packets received by the Switch.

IP packets may also be limited by the Switch by configuring only certain IP addresses to be accepted. This method can be accomplished through the CPU Interface Filtering mechanism explained in the previous section. Once the user configures these acceptable IP addresses, other packets containing different IP addresses will be dropped by the Switch, thus limiting the bandwidth of IP packets. To keep the process moving fast, be sure not to add many conditions on which to accept these acceptable IP addresses and their packets, this limiting the CPU utilization.

Once in Exhausted mode, the packet flow will decrease by half of the level that caused the Switch to enter Exhausted mode. After the packet flow has stabilized, the rate will initially increase by 25% and then return to a normal packet flow.

**NOTICE:** When the Safeguard Engine is enabled, the Switch will allot bandwidth to various traffic flows (ARP, IP) using the FFP (Fast Filter Processor) metering table to control the CPU utilization and limit traffic. This may limit the speed of routing traffic over the network.

The Safeguard Engine commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config safeguard_engine	{state [enable   disable]   utilization {rising <value 20-100>   falling <value 20-100>}   trap_log [enable   disable]   mode [strict   fuzzy]}
show safeguard_engine	

Each command is listed, in detail, in the following sections.

### config safeguard\_engine

Purpose	To configure ARP storm control for system.
Syntax	<b>{state [enable   disable]   utilization {rising &lt;value 20-100&gt;   falling &lt;value 20-100&gt;}   trap_log [enable   disable]   mode [strict   fuzzy]}</b>
Description	Use this command to configure Safeguard Engine to minimize the effects of an ARP storm.
Parameters	<p><i>state [enable   disable]</i> – Select the running state of the Safeguard Engine function as enable or disable.</p> <p><i>cpu_utilization</i> – Select this option to trigger the Safeguard Engine function to enable based on the following determinates:</p> <p><i>rising &lt;value 20-100&gt;</i> - The user can set a percentage value of the rising CPU utilization which will trigger the Safeguard Engine function. Once the CPU utilization rises to this percentage, the Safeguard Engine mechanism will initiate.</p> <p><i>falling &lt;value 20-100&gt;</i> - The user can set a percentage value of the falling CPU utilization which will trigger the Safeguard Engine function to cease. Once the CPU utilization falls to this percentage, the Safeguard Engine mechanism will shut down.</p> <p><i>trap_log [enable   disable]</i> – Choose whether to enable or disable the sending of messages to the device's SNMP agent and switch log once the Safeguard Engine has been activated by a high CPU utilization rate.</p> <p><i>mode [strict   fuzzy]</i> – Toggle between <i>strict</i> and <i>fuzzy</i> mode.</p>

**config safeguard\_engine**

Restrictions	Only administrator-level users can issue this command.
--------------	--------------------------------------------------------

Example usage:

To configure the safeguard engine for the Switch:

```
DES-3028P:4#config safeguard_engine state enable utilization rising 45
Command: config safeguard_engine state enable utilization rising 45

Success.

DES-3028P:4#
```

**show safeguard\_engine**

Purpose	Used to display current Safeguard Engine settings.
Syntax	<b>show safeguard_engine</b>
Description	This will list the current status and type of the Safeguard Engine settings currently configured.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To display the safeguard engine status:

```
DES-3028P:4#show safeguard_engine
Command: show safeguard_engine

Safeguard Engine State      : Disabled
Safeguard Engine Current Status : Normal mode
=====
CPU utilization information:
Rising Threshold (20-100)   : 30%
Falling Threshold (20-100)  : 20%
Trap/Log State              : Disabled
Mode                        : Fuzzy

DES-3028P:4#
```

## TRAFFIC SEGMENTATION COMMANDS

Traffic segmentation allows users to further sub-divide VLANs into smaller groups of ports that will help to reduce traffic on the VLAN. The VLAN rules take precedence, and then the traffic segmentation rules are applied.

Command	Parameters
config traffic_segmentation	[<portlist>] forward_list [null   <portlist>]
show traffic_segmentation	<portlist>

Each command is listed, in detail, in the following sections.

config traffic_segmentation	
Purpose	Used to configure traffic segmentation on the Switch.
Syntax	<b>config traffic_segmentation</b> [<portlist>] forward_list [null   <portlist>]
Description	The <b>config traffic_segmentation</b> command is used to configure traffic segmentation on the Switch.
Parameters	<p>&lt;portlist&gt; – Specifies a port or range of ports that will be configured for traffic segmentation.</p> <p>forward_list – Specifies a range of ports that will receive forwarded frames from the ports specified in the portlist, above.</p> <ul style="list-style-type: none"> <li>• null – No ports are specified</li> <li>• &lt;portlist&gt; – Specifies a range of ports for the forwarding list. This list must be on the same Switch previously specified for traffic segmentation (i.e. following the &lt;portlist&gt; specified above for <b>config traffic_segmentation</b>).</li> </ul>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure ports 1 through 10 to be able to forward frames to port 11 through 15:

```
DES-3028P:4# config traffic_segmentation 1-10 forward_list 11-15
Command: config traffic_segmentation 1-10 forward_list 11-15

Success.

DES-3028P:4#
```

show traffic_segmentation	
Purpose	Used to display the current traffic segmentation configuration on the Switch.
Syntax	<b>show traffic_segmentation</b> <portlist>
Description	The <b>show traffic_segmentation</b> command is used to display the current traffic segmentation configuration on the Switch.
Parameters	<portlist> – Specifies a port or range of ports for which the current traffic segmentation configuration on the Switch will be displayed.
Restrictions	The port lists for segmentation and the forward list must be on the same Switch.

Example usage:

To display the current traffic segmentation configuration on the Switch.

```
DES-3028P:4#show traffic_segmentation
Command: show traffic_segmentation

Traffic Segmentation Table

## TIME AND SNTP COMMANDS

The Simple Network Time Protocol (SNTP) (an adaptation of the Network Time Protocol (NTP)) commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config sntp	{primary <ipaddr>   secondary <ipaddr>   poll-interval <int 30-99999>}
show sntp	
enable sntp	
disable sntp	
config time	<date ddmmmyyyy > <time hh:mm:ss >
config time_zone	{operator [+   -]   hour <gmt_hour 0-13>   min <minute 0-59>}
config dst	[disable   repeating {s_week <start_week 1-4,last>   s_day <start_day sun-sat>   s_mth <start_mth 1-12>   s_time <start_time hh:mm>   e_week <end_week 1-4,last>   e-day <end_day sun-sat>   e_mth <end_mth 1-12>   e_time <end_time hh:mm>   offset [30   60   90   120]}   annual {s_date <start_date 1-31>   s_mth <start_mth 1-12>   s_time <start_time hh:mm>   e_date <end_date 1-31>   e_mth <end_mth 1-12>   e_time <end_time hh:mm>   offset [30   60   90   120]}]
show time	

Each command is listed, in detail, in the following sections.

config sntp	
Purpose	Used to setup SNTP service.
Syntax	<b>config sntp {primary &lt;ipaddr&gt;   secondary &lt;ipaddr&gt;   poll-interval &lt;int 30-99999&gt;}</b>
Description	Use this command to configure SNTP service from an SNTP server. SNTP must be enabled for this command to function (See enable sntp).
Parameters	<p><i>primary</i> – This is the primary server from which the SNTP information will be taken.</p> <p>&lt;ipaddr&gt; – The IP address of the primary server.</p> <p><i>secondary</i> – This is the secondary server the SNTP information will be taken from in the event the primary server is unavailable.</p> <p>&lt;ipaddr&gt; – The IP address for the secondary server.</p> <p><i>poll-interval &lt;int 30-99999&gt;</i> – This is the interval between requests for updated SNTP information. The polling interval ranges from 30 to 99,999 seconds.</p>
Restrictions	Only administrator-level users can issue this command. SNTP service must be enabled for this command to function ( <i>enable sntp</i> ).

Example usage:

To configure SNTP settings:

```
DES-3028P:4#config sntp primary 10.1.1.1 secondary 10.1.1.2 poll-interval 30
Command: config sntp primary 10.1.1.1 secondary 10.1.1.2 poll-interval 30

Success.

DES-3028P:4#
```

## show sntp

Purpose	Used to display the SNTP information.
Syntax	<b>show sntp</b>
Description	This command will display SNTP settings information including the source IP address, time and poll interval.
Parameters	None.
Restrictions	None.

Example usage:

To display SNTP configuration information:

```
DES-3028P:4#show sntp
Command: show sntp

Current Time Source   : System Clock
SNTP                  : Disabled
SNTP Primary Server   : 10.1.1.1
SNTP Secondary Server : 10.1.1.2
SNTP Poll Interval    : 30 sec

DES-3028P:4#
```

## enable sntp

Purpose	To enable SNTP server support.
Syntax	<b>enable sntp</b>
Description	This will enable SNTP support. SNTP service must be separately configured (see <b>config sntp</b> ). Enabling and configuring SNTP support will override any manually configured system time settings.
Parameters	None.
Restrictions	Only administrator-level users can issue this command. SNTP settings must be configured for SNTP to function ( <b>config sntp</b> ).

Example usage:

To enable the SNTP function:

```
DES-3028P:4#enable sntp
Command: enable sntp

Success.

DES-3028P:4#
```

**disable sntp**

Purpose	To disable SNTP server support.
Syntax	<b>disable sntp</b>
Description	This will disable SNTP support. SNTP service must be separately configured (see <b>config sntp</b> ).
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To disable SNTP support:

```
DES-3028P:4#disable sntp
Command: disable sntp

Success.

DES-3028P:4#
```

**config time**

Purpose	Used to manually configure system time and date settings.
Syntax	<b>config time &lt;date ddmmyyyy&gt; &lt;time hh:mm:ss&gt;</b>
Description	This will configure the system time and date settings. These will be overridden if SNTP is configured and enabled.
Parameters	<i>date</i> – Express the date using two numerical characters for the day of the month, three alphabetical characters for the name of the month, and four numerical characters for the year. For example: 03aug2003.  <i>time</i> – Express the system time using the format hh:mm:ss, that is, two numerical characters each for the hour using a 24-hour clock, the minute and second. For example: 19:42:30.
Restrictions	Only administrator-level users can issue this command. Manually configured system time and date settings are overridden if SNTP support is enabled.

Example usage:

To manually set system time and date settings:

```
DES-3028P:4#config time 30jun2003 16:30:30
Command: config time 30jun2003 16:30:30

Success.

DES-3028P:4#
```

**config time\_zone**

Purpose	Used to determine the time zone used in order to adjust the system clock.
Syntax	<b>config time_zone {operator [+   -]   hour &lt;gmt_hour 0-13&gt;   min &lt;minute 0-59&gt;}</b>
Description	This will adjust system clock settings according to the time zone. Time zone settings will adjust SNTP information accordingly.
Parameters	<i>operator</i> – Choose to add (+) or subtract (-) time to adjust for time zone relative to GMT. <i>hour</i> – Select the number of hours different from GMT. <i>min</i> – Select the number of minutes difference added or subtracted to adjust the time zone.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure time zone settings:

```
DES-3028P:4#config time_zone operator + hour 2 min 30
Command: config time_zone operator + hour 2 min 30

Success.

DES-3028P:4#
```

**config dst**

Purpose	Used to enable and configure time adjustments to allow for the use of Daylight Savings Time (DST).
Syntax	<b>config dst [disable   repeating {s_week &lt;start_week 1-4,last&gt;   s_day &lt;start_day sun-sat&gt;   s_mth &lt;start_mth 1-12&gt;   s_time start_time hh:mm&gt;   e_week &lt;end_week 1-4,last&gt;   e_day &lt;end_day sun-sat&gt;   e_mth &lt;end_mth 1-12&gt;   e_time &lt;end_time hh:mm&gt;   offset [30   60   90   120]}   annual {s_date start_date 1-31&gt;   s_mth &lt;start_mth 1-12&gt;   s_time &lt;start_time hh:mm&gt;   e_date &lt;end_date 1-31&gt;   e_mth &lt;end_mth 1-12&gt;   e_time &lt;end_time hh:mm&gt;   offset [30   60   90   120]}]</b>
Description	DST can be enabled and configured using this command. When enabled this will adjust the system clock to comply with any DST requirement. DST adjustment effects system time for both manually configured time and time set using SNTP service.  <i>disable</i> - Disable the DST seasonal time adjustment for the Switch. <i>repeating</i> - Using repeating mode will enable DST seasonal time adjustment. Repeating mode requires that the DST beginning and ending date be specified using a formula. For example, specify to begin DST on Saturday during the second week of April and end DST on Sunday during the last week of October. <i>annual</i> - Using annual mode will enable DST seasonal time adjustment. Annual mode requires that the DST beginning and ending date be specified concisely. For example, specify to begin DST on April 3 and end DST on October 14. <i>s_week</i> - Configure the week of the month in which DST begins. <ul style="list-style-type: none"> <li>• <i>&lt;start_week 1-4,last&gt;</i> - The number of the week during the month in which DST begins where 1 is the first week, 2 is the second week and so on, last is the last week of the month.</li> </ul> <i>e_week</i> - Configure the week of the month in which DST ends.

## config dst

Parameters	<ul style="list-style-type: none"> <li>• <code>&lt;end_week 1-4,last&gt;</code> - The number of the week during the month in which DST ends where 1 is the first week, 2 is the second week and so on, last is the last week of the month.</li> </ul> <p><code>s_day</code> - Configure the day of the week in which DST begins.</p> <ul style="list-style-type: none"> <li>• <code>&lt;start_day sun-sat&gt;</code> - The day of the week in which DST begins expressed using a three character abbreviation (sun, mon, tue, wed, thu, fri, sat)</li> </ul> <p><code>e_day</code> - Configure the day of the week in which DST ends.</p> <ul style="list-style-type: none"> <li>• <code>&lt;end_day sun-sat&gt;</code> - The day of the week in which DST ends expressed using a three character abbreviation (sun, mon, tue, wed, thu, fri, sat)</li> </ul> <p><code>s_mth</code> - Configure the month in which DST begins.</p> <ul style="list-style-type: none"> <li>• <code>&lt;start_mth 1-12&gt;</code> - The month to begin DST expressed as a number.</li> </ul> <p><code>e_mth</code> - Configure the month in which DST ends.</p> <ul style="list-style-type: none"> <li>• <code>&lt;end_mth 1-12&gt;</code> - The month to end DST expressed as a number.</li> </ul> <p><code>s_time</code> - Configure the time of day to begin DST.</p> <ul style="list-style-type: none"> <li>• <code>&lt;start_time hh:mm&gt;</code> - Time is expressed using a 24-hour clock, in hours and minutes.</li> </ul>
	<p><code>e_time</code> - Configure the time of day to end DST.</p> <ul style="list-style-type: none"> <li>• <code>&lt;end_time hh:mm&gt;</code> - Time is expressed using a 24-hour clock, in hours and minutes.</li> </ul> <p><code>s_date</code> - Configure the specific date (day of the month) to begin DST.</p> <ul style="list-style-type: none"> <li>• <code>&lt;start_date 1-31&gt;</code> - The start date is expressed numerically.</li> </ul> <p><code>e_date</code> - Configure the specific date (day of the month) to begin DST.</p> <ul style="list-style-type: none"> <li>• <code>&lt;end_date 1-31&gt;</code> - The end date is expressed numerically.</li> </ul> <p><code>offset [30   60   90   120]</code> - Indicates number of minutes to add or to subtract during the summertime. The possible offset times are 30,60,90,120. The default value is 60</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure daylight savings time on the Switch:

```
DES-3028P:4#config dst repeating s_week 2 s_day tue s_mth 4
s_time 15:00 e_week 2 e_day wed e_mth 10 e_time 15:30 offset 30
Command: config dst repeating s_week 2 s_day tue s_mth 4 s_time
15:00 e_week 2 e_day wed e_mth 10 e_time 15:30 offset 30

Success.

DES-3028P:4#
```

## show time

Purpose	Used to display the current time settings and status.
Syntax	<b>show time</b>
Description	This will display system time and date configuration as well as display current system time.
Parameters	None.
Restrictions	None.

Example usage:

To show the time currently set on the Switch's System clock:

```
DES-3028P:4#show time
Command: show time

Current Time Source : System Clock
Current Time       : 1 Days 01:39:17
Time Zone         : GMT +02:30
Daylight Saving Time : Repeating
Offset in minutes  : 30
  Repeating From   : Apr 2nd Tue 15:00
                  To   : Oct 2nd Wed 15:30
  Annual From     : 29 Apr 00:00
                  To   : 12 Oct 00:00

DES-3028P:4#
```

## ARP COMMANDS

The ARP commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
create arprentry	<ipaddr> <macaddr>
config arprentry	<ipaddr> <macaddr>
delete arprentry	{[<ipaddr>   all]}
show arprentry	{ipif [System]   ipaddress <ipaddr>   static}
config arp_aging time	<value 0-65535>
clear arptable	

Each command is listed, in detail, in the following sections.

### create arprentry

Purpose	Used to make a static entry into the ARP table.
Syntax	<b>create arprentry &lt;ipaddr&gt; &lt;macaddr&gt;</b>
Description	This command is used to enter an IP address and the corresponding MAC address into the Switch's ARP table.
Parameters	<ipaddr> – The IP address of the end node or station. <macaddr> – The MAC address corresponding to the IP address above.
Restrictions	Only administrator-level users can issue this command. The Switch supports up to 255 static ARP entries.

Example Usage:

To create a static arp entry for the IP address 10.48.74.121 and MAC address 00:50:BA:00:07:36:

```
DES-3028P:4#create arprentry 10.48.74.121 00-50-BA-00-07-36
Command: create arprentry 10.48.74.121 00-50-BA-00-07-36

Success.

DES-3028P:4#
```

### config arprentry

Purpose	Used to configure a static entry in the ARP table.
Syntax	<b>config arprentry &lt;ipaddr&gt; &lt;macaddr&gt;</b>
Description	This command is used to configure a static entry in the ARP Table. The user may specify the IP address and the corresponding MAC address of an entry in the Switch's ARP table.
Parameters	<ipaddr> – The IP address of the end node or station. <macaddr> – The MAC address corresponding to the IP address above.
Restrictions	Only administrator-level users can issue this command.

## Example Usage:

To configure a static ARP entry for the IP address 10.48.74.12 and MAC address 00:50:BA:00:07:36:

```
DES-3028P:4#config arprentry 10.48.74.12 00-50-BA-00-07-36
Command: config arprentry 10.48.74.12 00-50-BA-00-07-36

Success.

DES-3028P:4#
```

**delete arprentry**

Purpose	Used to delete a static entry into the ARP table.
Syntax	<b>delete arprentry</b> {[<ipaddr>   all]}
Description	This command is used to delete a static ARP entry, made using the <b>create arprentry</b> command above, by specifying either the IP address of the entry or all. Specifying <i>all</i> clears the Switch's ARP table.
Parameters	<ipaddr> – The IP address of the end node or station. all – Deletes all ARP entries.
Restrictions	Only administrator-level users can issue this command.

## Example Usage:

To delete an entry of IP address 10.48.74.121 from the ARP table:

```
DES-3028P:4#delete arprentry 10.48.74.121
Command: delete arprentry 10.48.74.121

Success.

DES-3028P:4#
```

**config arp\_aging time**

Purpose	Used to configure the age-out timer for ARP table entries on the Switch.
Syntax	<b>config arp_aging time</b> <value 0-65535>
Description	This command sets the maximum amount of time, in minutes, that an ARP entry can remain in the Switch's ARP table, without being accessed, before it is dropped from the table.
Parameters	<i>time</i> <value 0-65535> – The ARP age-out time, in minutes. The value may be set in the range of 0-65535 minutes with a default setting of 20 minutes.
Restrictions	Only administrator-level users can issue this command.

## Example Usage:

To configure ARP aging time:

```
DES-3028P:4#config arp_aging time 30
Command: config arp_aging time 30

Success.

DES-3028P:4#
```

**show arpentry**

Purpose	Used to display the ARP table.
Syntax	<b>show arpentry {ipif [System]   ipaddress &lt;ipaddr&gt;   static}</b>
Description	This command is used to display the current contents of the Switch's ARP table.
Parameters	<p><i>ipif [System]</i> – The name of the IP interface the end node or station for which the ARP table entry was made, resides on.</p> <p><i>ipaddress &lt;ipaddr&gt;</i> – The network address corresponding to the IP interface name above.</p> <p><i>static</i> – Displays the static entries to the ARP table.</p>
Restrictions	None.

Example Usage:

To display the ARP table:

```
DES-3028P:4#show arpentry
Command: show arpentry

ARP Aging Time : 30

Interface      IP Address      MAC Address      Type
-----
System         10.0.0.0        FF-FF-FF-FF-FF-FF  Local/Broadcast
System         10.1.1.169      00-50-BA-70-E4-4E  Dynamic
System         10.1.1.254      00-01-30-FA-5F-00  Dynamic
System         10.9.68.1       00-A0-C9-A4-22-5B  Dynamic
System         10.9.68.4       00-80-C8-2E-C7-45  Dynamic
System         10.10.27.51     00-80-C8-48-DF-AB  Dynamic
System         10.11.22.145    00-80-C8-93-05-6B  Dynamic
System         10.11.94.10     00-10-83-F9-37-6E  Dynamic
System         10.14.82.24     00-50-BA-90-37-10  Dynamic
System         10.15.1.60      00-80-C8-17-42-55  Dynamic
System         10.17.42.153    00-80-C8-4D-4E-0A  Dynamic
System         10.19.72.100    00-50-BA-38-7D-5E  Dynamic
System         10.21.32.203    00-80-C8-40-C1-06  Dynamic
System         10.40.44.60     00-50-BA-6B-2A-1E  Dynamic
System         10.42.73.221    00-01-02-03-04-00  Dynamic
System         10.44.67.1      00-50-BA-DA-02-51  Dynamic
System         10.47.65.25     00-50-BA-DA-03-2B  Dynamic
System         10.50.8.7       00-E0-18-45-C7-28  Dynamic
System         10.90.90.90     00-01-02-03-04-00  Local
System         10.255.255.255  FF-FF-FF-FF-FF-FF  Local/Broadcast

Total Entries = 20

DES-3028P:4#
```

## clear arptable

Purpose	Used to remove all dynamic ARP table entries.
Syntax	<b>clear arptable</b>
Description	This command is used to remove dynamic ARP table entries from the Switch's ARP table. Static ARP table entries are not affected.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

### Example Usage:

To remove dynamic entries in the ARP table:

```
DES-3028P:4#clear arptable
```

```
Command: clear arptable
```

```
Success.
```

```
DES-3028P:4#
```

## ROUTING TABLE COMMANDS

The routing table commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
create iproute	[default] <ipaddr> {<metric 1-65535>}
delete iproute	[default]
show iproute	{<network_address>   static}

Each command is listed, in detail, in the following sections.

### create iproute default

Purpose	Used to create IP route entries to the Switch's IP routing table.
Syntax	<b>create iproute [default] &lt;ipaddr&gt; {&lt;metric 1-65535&gt;}</b>
Description	This command is used to create a default static IP route entry to the Switch's IP routing table.
Parameters	<p>&lt;ipaddr&gt; – The gateway IP address for the next hop router.</p> <p>&lt;metric 1-65535&gt; – Allows the entry of a routing protocol metric entry representing the number of routers between the Switch and the IP address above. The default setting is 1.</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To add the default static address 10.48.74.121, with a metric setting of 1, to the routing table:

```
DES-3028P:4#create iproute default 10.48.74.121 1
Command: create iproute default 10.48.74.121 1

Success.

DES-3028P:4#
```

### delete iproute default

Purpose	Used to delete a default IP route entry from the Switch's IP routing table.
Syntax	<b>delete iproute [default]</b>
Description	This command will delete an existing default entry from the Switch's IP routing table.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To delete the default IP route 10.53.13.254:

```
DES-3028P:4#delete iproute default 10.53.13.254
```

```
Command: delete iproute default 10.53.13.254
```

```
Success.
```

```
DES-3028P:4#
```

## show iproute

Purpose	Used to display the Switch's current IP routing table.
Syntax	<b>show iproute {&lt;network_address&gt;   static}</b>
Description	This command will display the Switch's current IP routing table.
Parameters	<network_address> - The network IP address. <i>static</i> – Select a static IP route.
Restrictions	None.

Example usage:

To display the contents of the IP routing table:

```
DES-3028P:4#show iproute
```

```
Command: show iproute
```

### Routing Table

IP Address/Netmask	Gateway	Interface	Hops	Protocol
-----	-----	-----	---	-----
0.0.0.0	10.1.1.254	System	1	Default
10.0.0.0/8	10.48.74.122	System	1	Local

```
Total Entries: 2
```

```
DES-3028P:4#
```

## MAC NOTIFICATION COMMANDS

The MAC notification commands in the Command Line Interface (CLI) are listed, in the following table, along with their appropriate parameters.

Command	Parameters
enable mac_notification	
disable mac_notification	
config mac_notification	{interval <int 1-2147483647>   historysize <int 1-500>}
config mac_notification ports	[<portlist>   all] [enable   disable]
show mac_notification	
show mac_notification ports	<portlist>

Each command is listed, in detail, in the following sections.

### enable mac\_notification

Purpose	Used to enable global MAC address table notification on the Switch.
Syntax	<b>enable mac_notification</b>
Description	This command is used to enable MAC address notification without changing configuration.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To enable MAC notification without changing basic configuration:

```
DES-3028P:4#enable mac_notification
Command: enable mac_notification

Success.

DES-3028P:4#
```

### disable mac\_notification

Purpose	Used to disable global MAC address table notification on the Switch.
Syntax	<b>disable mac_notification</b>
Description	This command is used to disable MAC address notification without changing configuration.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To disable MAC notification without changing basic configuration:

```
DES-3028P:4#disable mac_notification
Command: disable mac_notification

Success.

DES-3028P:4#
```

## config mac\_notification

Purpose	Used to configure MAC address notification.
Syntax	<b>config mac_notification {interval &lt;int 1-2147483647&gt;   historysize &lt;int 1-500&gt;}</b>
Description	MAC address notification is used to monitor MAC addresses learned and entered into the FDB.
Parameters	<i>interval</i> <sec 1-2147483647> - The time in seconds between notifications. The user may choose an interval between 1 and 2,147,483,647 seconds. <i>historysize</i> <1-500> - The maximum number of entries listed in the history log used for notification.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure the Switch's MAC address table notification global settings:

```
DES-3028P:4#config mac_notification interval 1 historysize 500
Command: config mac_notification interval 1 historysize 500

Success.

DES-3028P:4#
```

## config mac\_notification ports

Purpose	Used to configure MAC address notification status settings.
Syntax	<b>config mac_notification ports [&lt;portlist&gt;   all] [enable   disable]</b>
Description	MAC address notification is used to monitor MAC addresses learned and entered into the FDB.
Parameters	<portlist> - Specify a port or range of ports to be configured. <i>all</i> - Entering this command will set all ports on the system. <i>[enable   disable]</i> - These commands will enable or disable MAC address table notification on the Switch.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To enable port 7 for MAC address table notification:

```
DES-3028P:4#config mac_notification ports 7 enable
Command: config mac_notification ports 7 enable

Success.

DES-3028P:4#
```

## show mac\_notification

Purpose	Used to display the Switch's MAC address table notification global settings.
Syntax	<b>show mac_notification</b>
Description	This command is used to display the Switch's MAC address table notification global settings.

**show mac\_notification**

Parameters None.  
Restrictions None.

Example usage:

To view the Switch's MAC address table notification global settings:

```
DES-3028P:4#show mac_notification
Command: show mac_notification

Global Mac Notification Settings

State      : Enabled
Interval   : 1
History Size : 1

DES-3028P:4#
```

**show mac\_notification ports**

Purpose Used to display the Switch's MAC address table notification status settings.  
Syntax **show mac\_notification ports <portlist>**  
Description This command is used to display the Switch's MAC address table notification status settings.  
Parameters <portlist> - Specify a port or group of ports to be viewed.  
Entering this command without the parameter will display the MAC notification table for all ports.  
Restrictions None.

Example usage:

To display all port's MAC address table notification status settings:

```
DES-3028P:4#show mac_notification ports
Command: show mac_notification ports

Port # MAC Address Table Notification State
-----
1          Disabled

## ACCESS AUTHENTICATION CONTROL COMMANDS

The TACACS / XTACACS / TACACS+ / RADIUS commands allows secure access to the Switch using the TACACS / XTACACS / TACACS+ / RADIUS protocols. When a user logs in to the Switch or tries to access the administrator level privilege, he or she is prompted for a password. If TACACS / XTACACS / TACACS+ / RADIUS authentication is enabled on the Switch, it will contact a TACACS / XTACACS / TACACS+ / RADIUS server to verify the user. If the user is verified, he or she is granted access to the Switch.

There are currently three versions of the TACACS security protocol, each a separate entity. The Switch's software supports the following versions of TACACS:

- TACACS (Terminal Access Controller Access Control System) — Provides password checking and authentication, and notification of user actions for security purposes utilizing via one or more centralized TACACS servers, utilizing the UDP protocol for packet transmission.
- Extended TACACS (XTACACS) — An extension of the TACACS protocol with the ability to provide more types of authentication requests and more types of response codes than TACACS. This protocol also uses UDP to transmit packets.
- TACACS+ (Terminal Access Controller Access Control System plus) — Provides detailed access control for authentication for network devices. TACACS+ is facilitated through Authentication commands via one or more centralized servers. The TACACS+ protocol encrypts all traffic between the Switch and the TACACS+ daemon, using the TCP protocol to ensure reliable delivery.

The Switch also supports the RADIUS protocol for authentication using the Access Authentication Control commands. RADIUS or Remote Authentication Dial In User Server also uses a remote server for authentication and can be responsible for receiving user connection requests, authenticating the user and returning all configuration information necessary for the client to deliver service through the user. RADIUS may be facilitated on this Switch using the commands listed in this section.

In order for the TACACS / XTACACS / TACACS+ / RADIUS security function to work properly, a TACACS / XTACACS / TACACS+ / RADIUS server must be configured on a device other than the Switch, called a *server host* and it must include usernames and passwords for authentication. When the user is prompted by the Switch to enter usernames and passwords for authentication, the Switch contacts the TACACS / XTACACS / TACACS+ / RADIUS server to verify, and the server will respond with one of three messages:

- A) The server verifies the username and password, and the user is granted normal user privileges on the Switch.
- B) The server will not accept the username and password and the user is denied access to the Switch.
- C) The server doesn't respond to the verification query. At this point, the Switch receives the timeout from the server and then moves to the next method of verification configured in the method list.

The Switch has four built-in *server groups*, one for each of the TACACS, XTACACS, TACACS+ and RADIUS protocols. These built-in *server groups* are used to authenticate users trying to access the Switch. The users will set *server hosts* in a preferable order in the built-in *server group* and when a user tries to gain access to the Switch, the Switch will ask the first *server host* for authentication. If no authentication is made, the second *server host* in the list will be queried, and so on. The built-in *server group* can only have hosts that are running the specified protocol. For example, the TACACS *server group* can only have TACACS *server hosts*.

The administrator for the Switch may set up five different authentication techniques per user-defined *method list* (TACACS / XTACACS / TACACS+ / RADIUS / local / none) for authentication. These techniques will be listed in an order preferable, and defined by the user for normal user authentication on the Switch, and may contain up to eight authentication techniques. When a user attempts to access the Switch, the Switch will select the first technique listed for authentication. If the first technique goes through its *server hosts* and no authentication is returned, the Switch will then go to the next technique listed in the server group for authentication, until the authentication has been verified or denied, or the list is exhausted.

Please note that user granted access to the Switch will be granted normal user privileges on the Switch. To gain access to admin level privileges, the user must enter the *enable admin* command and then enter a password, which was previously configured by the administrator of the Switch.

**NOTE:** TACACS, XTACACS and TACACS+ are separate entities and are not compatible. The Switch and the server must be configured exactly the same, using the same protocol. (For example, if the Switch is set up for TACACS authentication, so must be the host server.)

The Access Authentication Control commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
enable authen_policy	
disable authen_policy	
show authen_policy	
create authen_login method_list_name	<string 15>
config authen_login	[default   method_list_name <string 15>] method {tacacs   xtacacs   tacacs+   radius   server_group <string 15>   local   none}
delete authen_login method_list_name	<string 15>
show authen_login	{default   method_list_name <string 15>   all}
create authen_enable method_list_name	<string 15>
config authen_enable	[default   method_list_name <string 15>] method {tacacs   xtacacs   tacacs+   radius   server_group <string 15>   local_enable   none}
delete authen_enable method_list_name	<string 15>
show authen_enable	[default   method_list_name <string 15>   all]
config authen application	{console   telnet   ssh   http   all} [login   enable] [default   method_list_name <string 15>]
show authen application	
create authen server_group	<string 15>
config authen server_group	[tacacs   xtacacs   tacacs+   radius   <string 15>] [add   delete] server_host <ipaddr> protocol [tacacs   xtacacs   tacacs+   radius]
delete authen server_group	<string 15>
show authen server_group	<string 15>
create authen server_host	<ipaddr> protocol [tacacs   xtacacs   tacacs+   radius] {port <int 1-65535>   key [<key_string 254>   none]   timeout <int 1-255>   retransmit <int 1-255>}
config authen server_host	<ipaddr> protocol [tacacs   xtacacs   tacacs+   radius] {port <int 1-65535>   key [<key_string 254>   none]   timeout <int 1-255>   retransmit <int 1-255>}
delete authen server_host	<ipaddr> protocol [tacacs   xtacacs   tacacs+   radius]
show authen server_host	
config authen parameter response_timeout	<int 0-255>
config authen parameter attempt	<int 1-255>
show authen parameter	
enable admin	
config admin local_enable	

Each command is listed, in detail, in the following sections.

**enable authen\_policy**

Purpose	Used to enable system access authentication policy.
Syntax	<b>enable authen_policy</b>
Description	This command will enable an administrator-defined authentication policy for users trying to access the Switch. When enabled, the device will check the method list and choose a technique for user authentication upon login.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To enable the system access authentication policy:

```
DES-3028P:4#enable authen_policy
Command: enable authen_policy

Success.

DES-3028P:4#
```

**disable authen\_policy**

Purpose	Used to disable system access authentication policy.
Syntax	<b>disable authen_policy</b>
Description	This command will disable the administrator-defined authentication policy for users trying to access the Switch. When disabled, the Switch will access the local user account database for username and password verification. In addition, the Switch will now accept the local enable password as the authentication for normal users attempting to access administrator level privileges.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To disable the system access authentication policy:

```
DES-3028P:4#disable authen_policy
Command: disable authen_policy

Success.

DES-3028P:4#
```

**show authen\_policy**

Purpose	Used to display the system access authentication policy status on the Switch.
Syntax	<b>show authen_policy</b>
Description	This command will show the current status of the access authentication policy on the Switch.
Parameters	None.
Restrictions	None.

Example usage:

To display the system access authentication policy:

```
DES-3028P:4#show authen_policy
Command: show authen_policy

Authentication Policy: Enabled

DES-3028P:4#
```

## create authen\_login method\_list\_name

Purpose	Used to create a user defined method list of authentication methods for users logging on to the Switch.
Syntax	<b>create authen_login method_list_name &lt;string 15&gt;</b>
Description	This command is used to create a list for authentication techniques for user login. The Switch can support up to eight method lists, but one is reserved as a default and cannot be deleted. Multiple method lists must be created and configured separately.
Parameters	<string 15> - Enter an alphanumeric string of up to 15 characters to define the given <i>method list</i> .
Restrictions	Only administrator-level users can issue this command.

Example usage:

To create the method list "Trinity.":

```
DES-3028P:4#create authen_login method_list_name Trinity
Command: create authen_login method_list_name Trinity

Success.

DES-3028P:4#
```

## config authen\_login

Purpose	Used to configure a user-defined or default <i>method list</i> of authentication methods for user login.
Syntax	<b>config authen_login [default   method_list_name &lt;string 15&gt;] method {tacacs   xtacacs   tacacs+   radius   server_group &lt;string 15&gt;   local   none}</b>
Description	This command will configure a user-defined or default <i>method list</i> of authentication methods for users logging on to the Switch. The sequence of methods implemented in this command will affect the authentication result. For example, if a user enters a sequence of methods like <i>tacacs – xtacacs – local</i> , the Switch will send an authentication request to the first <i>tacacs</i> host in the server group. If no response comes from the server host, the Switch will send an authentication request to the second <i>tacacs</i> host in the server group and so on, until the list is exhausted. At that point, the Switch will restart the same sequence with the following protocol listed, <i>xtacacs</i> . If no authentication takes place using the <i>xtacacs</i> list, the <i>local</i> account database set in the Switch is used to authenticate the user. When the local method is used, the privilege level will be dependant on the local account privilege configured on the Switch.

## config authen\_login

### Parameters

Successful login using any of these methods will give the user a “user” privilege only. If the user wishes to upgrade his or her status to the administrator level, the user must implement the *enable admin* command, followed by a previously configured password. (See the **enable admin** part of this section for more detailed information, concerning the **enable admin** command.)

*default* – The default method list for access authentication, as defined by the user. The user may choose one or a combination of up to four(4) of the following authentication methods:

- *tacacs* – Adding this parameter will require the user to be authenticated using the *TACACS* protocol from the remote *TACACS server hosts* of the *TACACS server group* list.
- *xtacacs* – Adding this parameter will require the user to be authenticated using the *XTACACS* protocol from the remote *XTACACS server hosts* of the *XTACACS server group* list.
- *tacacs+* – Adding this parameter will require the user to be authenticated using the *TACACS+* protocol from the remote *TACACS+ server hosts* of the *TACACS+ server group* list.
- *radius* – Adding this parameter will require the user to be authenticated using the *RADIUS* protocol from the remote *RADIUS server hosts* of the *RADIUS server group* list.
- *server\_group <string 15>* – Adding this parameter will require the user to be authenticated using a user-defined server group previously configured on the Switch.
- *local* – Adding this parameter will require the user to be authenticated using the local *user account* database on the Switch.
- *none* – Adding this parameter will require no authentication to access the Switch.

*method\_list\_name* – Enter a previously implemented method list name defined by the user. The user may add one, or a combination of up to four (4) of the following authentication methods to this method list:

- *tacacs* – Adding this parameter will require the user to be authenticated using the *TACACS* protocol from a remote *TACACS* server.
- *xtacacs* – Adding this parameter will require the user to be authenticated using the *XTACACS* protocol from a remote *XTACACS* server.
- *tacacs+* – Adding this parameter will require the user to be authenticated using the *TACACS+* protocol from a remote *TACACS+* server.
- *radius* – Adding this parameter will require the user to be authenticated using the *RADIUS* protocol from a remote *RADIUS* server.
- *server\_group <string 15>* – Adding this parameter will require the user to be authenticated using a user-defined server group previously configured on the Switch.
- *local* – Adding this parameter will require the user to be authenticated using the local *user account* database on the Switch.
- *none* – Adding this parameter will require no authentication to access the Switch.

**NOTE:** Entering *none* or *local* as an authentication protocol will override any other authentication that follows it on a method list or on the default method list.

**config authen\_login**

Restrictions	Only administrator-level users can issue this command.
--------------	--------------------------------------------------------

Example usage:

To configure the user defined method list “Trinity” with authentication methods TACACS, XTACACS and local, in that order.

```
DES-3028P:4#config authen_login method_list_name Trinity method tacacs xtacacs local
Command: config authen_login method_list_name Trinity method tacacs xtacacs local

Success.

DES-3028P:4#
```

Example usage:

To configure the default method list with authentication methods XTACACS, TACACS+ and local, in that order:

```
DES-3028P:4#config authen_login default method xtacacs tacacs+ local
Command: config authen_login default method xtacacs tacacs+ local

Success.

DES-3028P:4#
```

**delete authen\_login method\_list\_name**

Purpose	Used to delete a previously configured user defined method list of authentication methods for users logging on to the Switch.
Syntax	<b>delete authen_login method_list_name &lt;string 15&gt;</b>
Description	This command is used to delete a list for authentication methods for user login.
Parameters	<string 15> - Enter an alphanumeric string of up to 15 characters to define the given <i>method list</i> to delete.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To delete the method list name “Trinity”:

```
DES-3028P:4#delete authen_login method_list_name Trinity
Command: delete authen_login method_list_name Trinity

Success.

DES-3028P:4#
```

**show authen\_login**

Purpose	Used to display a previously configured user defined method list of authentication methods for users logging on to the Switch.
Syntax	<b>show authen_login [default   method_list_name &lt;string 15&gt;   all]</b>
Description	This command is used to show a list of authentication methods for user login.

**show authen\_login**

Parameters	<p><i>default</i> – Entering this parameter will display the default method list for users logging on to the Switch.</p> <p><i>method_list_name</i> &lt;string 15&gt; - Enter an alphanumeric string of up to 15 characters to define the given <i>method list</i> to view.</p> <p><i>all</i> – Entering this parameter will display all the authentication login methods currently configured on the Switch.</p> <p>The window will display the following parameters:</p> <ul style="list-style-type: none"> <li>▪ Method List Name – The name of a previously configured method list name.</li> <li>▪ Priority – Defines which order the method list protocols will be queried for authentication when a user attempts to log on to the Switch. Priority ranges from 1(highest) to 4 (lowest).</li> <li>▪ Method Name – Defines which security protocols are implemented, per method list name.</li> <li>▪ Comment – Defines the type of Method. <i>User-defined Group</i> refers to server group defined by the user. <i>Built-in Group</i> refers to the TACACS, XTACACS, TACACS+ and RADIUS security protocols which are permanently set in the Switch. <i>Keyword</i> refers to authentication using a technique INSTEAD of TACACS / XTACACS / TACACS+ / RADIUS which are local (authentication through the user account on the Switch) and none (no authentication necessary to access any function on the Switch).</li> </ul>
Restrictions	None.

Example usage:

To view the authentication login method list named Trinity:

```
DES-3028P:4#show authen_login method_list_name Trinity
Command: show authen_login method_list_name Trinity

Method List Name  Priority  Method Name  Comment
-----
Trinity           1         tacacs+      Built-in Group
                  2         tacacs       Built-in Group
                  3         Darren       User-defined Group
                  4         local        Keyword

DES-3028P:4#
```

**create authen\_enable method\_list\_name**

Purpose	Used to create a user-defined method list of authentication methods for promoting normal user level privileges to Administrator level privileges on the Switch.
Syntax	<b>create authen_enable method_list_name &lt;string 15&gt;</b>
Description	This command is used to promote users with normal level privileges to Administrator level privileges using authentication methods on the Switch. Once a user acquires normal user level privileges on the Switch, he or she must be authenticated by a method on the Switch to gain administrator privileges on the Switch, which is defined by the Administrator. A maximum of eight (8) enable method lists can be implemented on the Switch.
Parameters	<string 15> - Enter an alphanumeric string of up to 15 characters to define the given <i>enable method list</i> to create.

**create authen\_enable method\_list\_name**

Restrictions	Only administrator-level users can issue this command.
--------------	--------------------------------------------------------

Example usage:

To create a user-defined method list, named “Permit” for promoting user privileges to Administrator privileges:

```
DES-3028P:4#create authen_enable method_list_name Permit
```

```
Command: show authen_login method_list_name Permit
```

```
Success.
```

```
DES-3028P:4#
```

**config authen\_enable**

Purpose	Used to configure a user-defined method list of authentication methods for promoting normal user level privileges to Administrator level privileges on the Switch.
Syntax	<b>config authen_enable [default   method_list_name &lt;string 15&gt;] method {tacacs   xtacacs   tacacs+   radius   server_group &lt;string 15&gt;   local_enable   none}</b>
Description	<p>This command is used to promote users with normal level privileges to Administrator level privileges using authentication methods on the Switch. Once a user acquires normal user level privileges on the Switch, he or she must be authenticated by a method on the Switch to gain administrator privileges on the Switch, which is defined by the Administrator. A maximum of eight (8) enable method lists can be implemented simultaneously on the Switch.</p> <p>The sequence of methods implemented in this command will affect the authentication result. For example, if a user enters a sequence of methods like <i>tacacs – xtacacs – local_enable</i>, the Switch will send an authentication request to the first <i>TACACS</i> host in the server group. If no verification is found, the Switch will send an authentication request to the second <i>TACACS</i> host in the server group and so on, until the list is exhausted. At that point, the Switch will restart the same sequence with the following protocol listed, <i>xtacacs</i>. If no authentication takes place using the <i>xtacacs</i> list, the <i>local_enable</i> password set in the Switch is used to authenticate the user.</p> <p>Successful authentication using any of these methods will give the user an “Admin” level privilege.</p>
Parameters	<p><i>default</i> – The default method list for administration rights authentication, as defined by the user. The user may choose one or a combination of up to four (4) of the following authentication methods:</p> <ul style="list-style-type: none"> <li>▪ <i>tacacs</i> – Adding this parameter will require the user to be authenticated using the <i>TACACS</i> protocol from the remote <i>TACACS server hosts</i> of the <i>TACACS server group</i> list.</li> <li>▪ <i>xtacacs</i> – Adding this parameter will require the user to be authenticated using the <i>XTACACS</i> protocol from the remote <i>XTACACS server hosts</i> of the <i>XTACACS server group</i> list.</li> <li>▪ <i>tacacs+</i> – Adding this parameter will require the user to be authenticated using the <i>TACACS+</i> protocol from the remote <i>TACACS+ server hosts</i> of the <i>TACACS+ server group</i> list.</li> <li>▪ <i>radius</i> – Adding this parameter will require the user to be authenticated using the <i>RADIUS</i> protocol from the remote</li> </ul>

**config authen\_enable**

RADIUS server hosts of the RADIUS server group list.

- *server\_group <string 15>* - Adding this parameter will require the user to be authenticated using a user-defined server group previously configured on the Switch.
- *local\_enable* - Adding this parameter will require the user to be authenticated using the local *user account* database on the Switch.
- *none* – Adding this parameter will require no authentication to access the Switch.

*method\_list\_name* – Enter a previously implemented method list name defined by the user (**create authen\_enable**). The user may add one, or a combination of up to four (4) of the following authentication methods to this method list:

- *tacacs* – Adding this parameter will require the user to be authenticated using the TACACS protocol from a remote TACACS server.
- *xtacacs* – Adding this parameter will require the user to be authenticated using the XTACACS protocol from a remote XTACACS server.
- *tacacs+* – Adding this parameter will require the user to be authenticated using the TACACS+ protocol from a remote TACACS+ server.
- *radius* - Adding this parameter will require the user to be authenticated using the RADIUS protocol from a remote RADIUS server.
- *server\_group <string 15>* - Adding this parameter will require the user to be authenticated using a user-defined server group previously configured on the Switch.
- *local\_enable* - Adding this parameter will require the user to be authenticated using the local *user account* database on the Switch. The local enable password of the device can be configured using the “**config admin local\_password**” command.
- *none* – Adding this parameter will require no authentication to access the administration level privileges on the Switch.

Restrictions

Only administrator-level users can issue this command.

Example usage:

To configure the user defined method list “Permit” with authentication methods TACACS, XTACACS and local, in that order.

```
DES-3028P:4#config authen_enable method_list_name Trinity method tacacs xtacacs local
Command: config authen_enable method_list_name Trinity method tacacs xtacacs local
```

Success.

```
DES-3028P:4#
```

Example usage:

To configure the default method list with authentication methods XTACACS, TACACS+ and local, in that order:

```
DES-3028P:4#config authen_enable default method xtacacs tacacs+ local
Command: config authen_enable default method xtacacs tacacs+ local
```

Success.

DES-3028P:4#

**delete authen\_enable method\_list\_name**

Purpose	Used to delete a user-defined method list of authentication methods for promoting normal user level privileges to Administrator level privileges on the Switch.
Syntax	<b>delete authen_enable method_list_name &lt;string 15&gt;</b>
Description	This command is used to delete a user-defined method list of authentication methods for promoting user level privileges to Administrator level privileges.
Parameters	<i>&lt;string 15&gt;</i> - Enter an alphanumeric string of up to 15 characters to define the given <i>enable method list</i> to delete.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To delete the user-defined method list “Permit”

```
DES-3028P:4#delete authen_enable method_list_name Permit
Command: delete authen_enable method_list_name Permit

Success.

DES-3028P:4#
```

**show authen\_enable**

Purpose	Used to display the method list of authentication methods for promoting normal user level privileges to Administrator level privileges on the Switch.
Syntax	<b>show authen_enable [default   method_list_name &lt;string 15&gt;   all]</b>
Description	This command is used to delete a user-defined method list of authentication methods for promoting user level privileges to Administrator level privileges.
Parameters	<p><i>default</i> – Entering this parameter will display the default method list for users attempting to gain access to Administrator level privileges on the Switch.</p> <p><i>method_list_name &lt;string 15&gt;</i> - Enter an alphanumeric string of up to 15 characters to define the given <i>method list</i> the user wishes to view.</p> <p><i>all</i> – Entering this parameter will display all the authentication login methods currently configured on the Switch.</p> <p>The window will display the following parameters:</p> <ul style="list-style-type: none"> <li>▪ Method List Name – The name of a previously configured method list name.</li> <li>▪ Priority – Defines which order the method list protocols will be queried for authentication when a user attempts to log on to the Switch. Priority ranges from 1(highest) to 4 (lowest).</li> <li>▪ Method Name – Defines which security protocols are implemented, per method list name.</li> <li>▪ Comment – Defines the type of Method. <i>User-defined Group</i> refers to <i>server groups</i> defined by the user. <i>Built-in Group</i> refers to the TACACS, XTACACS, TACACS+ and RADIUS security protocols which are permanently set in the Switch. <i>Keyword</i> refers to authentication using a technique INSTEAD of TACACS/XTACACS/TACACS+/RADIUS which are local (authentication through the <i>local_enable</i> password on the Switch)</li> </ul>

**show authen\_enable**

and none (no authentication necessary to access any function on the Switch).

Restrictions           None.

Example usage:

To display all method lists for promoting user level privileges to administrator level privileges.

```
DES-3028P:4#show authen_enable all
Command: show authen_enable all

Method List Name  Priority  Method Name  Comment
-----
Permit            1         tacacs+      Built-in Group
                  2         tacacs       Built-in Group
                  3         Darren       User-defined Group
                  4         local        Keyword

default           1         tacacs+      Built-in Group
                  2         local        Keyword

Total Entries : 2

DES-3028P:4#
```

**config authen application**

Purpose	Used to configure various applications on the Switch for authentication using a previously configured method list.
Syntax	<b>config authen application [console   telnet   ssh   http   all] [login   enable] [default   method_list_name &lt;string 15&gt;]</b>
Description	This command is used to configure Switch configuration applications (console, telnet, ssh, web) for login at the user level and at the administration level ( <i>authen_enable</i> ) utilizing a previously configured method list.
Parameters	<p><i>application</i> – Choose the application to configure. The user may choose one of the following five options to configure.</p> <ul style="list-style-type: none"> <li>▪ <i>console</i> – Choose this parameter to configure the command line interface login method.</li> <li>▪ <i>telnet</i> – Choose this parameter to configure the telnet login method.</li> <li>▪ <i>ssh</i> – Choose this parameter to configure the Secure Shell login method.</li> <li>▪ <i>http</i> – Choose this parameter to configure the web interface login method.</li> <li>▪ <i>all</i> – Choose this parameter to configure all applications (console, telnet, ssh, web) login method.</li> </ul> <p><i>login</i> – Use this parameter to configure an application for normal login on the user level, using a previously configured method list.</p> <p><i>enable</i> – Use this parameter to configure an application for upgrading a normal user level to administrator privileges, using a previously configured method list.</p> <p><i>default</i> – Use this parameter to configure an application for user authentication using the default method list.</p> <p><i>method_list_name &lt;string 15&gt;</i> - Use this parameter to configure an application for user authentication using a previously</p>

## config authen application

	configured method list. Enter a alphanumeric string of up to 15 characters to define a previously configured method list.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure the default method list for the web interface:

```
DES-3028P:4#config authen application http login default
Command: config authen application http login default
```

Success.

```
DES-3028P:4#
```

## show authen application

Purpose	Used to display authentication methods for the various applications on the Switch.
Syntax	<b>show authen application</b>
Description	This command will display all of the authentication method lists (login, enable administrator privileges) for Switch configuration applications (console, telnet, SSH, web) currently configured on the Switch.
Parameters	None.
Restrictions	None.

Example usage:

To display the login and enable method list for all applications on the Switch:

```
DES-3028P:4#show authen application
Command: show authen application
```

Application	Login Method List	Enable Method List
Console	default	default
Telnet	Trinity	default
SSH	default	default
HTTP	default	default

```
DES-3028P:4#
```

## create authen server\_host

Purpose	Used to create an authentication server host.
Syntax	<b>create authen server_host &lt;ipaddr&gt; protocol [tacacs   xtacacs   tacacs+   radius] {port &lt;int 1-65535&gt;   key [&lt;key_string 254&gt;   none]   timeout &lt;int 1-255&gt;   retransmit &lt; 1-255&gt;}</b>
Description	This command will create an authentication server host for the TACACS/XTACACS/TACACS+/RADIUS security protocols on the Switch. When a user attempts to access the Switch with authentication protocol enabled, the Switch will send authentication packets to a remote TACACS/XTACACS/TACACS+/RADIUS server host on a remote host. The TACACS/XTACACS/TACACS+/RADIUS server host will then verify or deny the request and return the appropriate message to the Switch.

**create authen server\_host**

	<p>More than one authentication protocol can be run on the same physical server host but, remember that TACACS/XTACACS/TACACS+/RADIUS are separate entities and are not compatible with each other. The maximum supported number of server hosts is 16.</p>
Parameters	<p><i>server_host</i> &lt;ipaddr&gt; - The IP address of the remote server host to add.</p> <p><i>protocol</i> - The protocol used by the server host. The user may choose one of the following:</p> <ul style="list-style-type: none"> <li>▪ <i>tacacs</i> - Enter this parameter if the server host utilizes the TACACS protocol.</li> <li>▪ <i>xtacacs</i> - Enter this parameter if the server host utilizes the XTACACS protocol.</li> <li>▪ <i>tacacs+</i> - Enter this parameter if the server host utilizes the TACACS+ protocol.</li> <li>▪ <i>radius</i> - Enter this parameter if the server host utilizes the RADIUS protocol.</li> </ul> <p><i>port</i> &lt;int 1-65535&gt; - Enter a number between 1 and 65535 to define the virtual port number of the authentication protocol on a server host. The default port number is 49 for TACACS/XTACACS/TACACS+ servers and 1812 and 1813 for RADIUS servers but the user may set a unique port number for higher security.</p> <p><i>key</i> &lt;key_string 254&gt; - Authentication key to be shared with a configured TACACS+ or RADIUS server only. Specify an alphanumeric string up to 254 characters.</p> <p><i>timeout</i> &lt;int 1-255&gt; - Enter the time in seconds the Switch will wait for the server host to reply to an authentication request. The default value is 5 seconds.</p> <p><i>retransmit</i> &lt;int 1-255&gt; - Enter the value in the retransmit field to change how many times the device will resend an authentication request when the server does not respond.</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To create a TACACS+ authentication server host, with port number 1234, a timeout value of 10 seconds and a retransmit count of 5.

```
DES-3028P:4#create authen server_host 10.1.1.121 protocol tacacs+ port 1234 timeout 10 retransmit 5
```

```
Command: create authen server_host 10.1.1.121 protocol tacacs+ port 1234 timeout 10 retransmit 5
```

Success.

```
DES-3028P:4#
```

**config authen server\_host**

Purpose	Used to configure a user-defined authentication server host.
Syntax	<b>create authen server_host</b> <ipaddr> <b>protocol</b> [ <b>tacacs</b>   <b>xtacacs</b>   <b>tacacs+</b>   <b>radius</b> ] { <b>port</b> <int 1-65535>   <b>key</b> [<key_string 254>   <b>none</b> ]   <b>timeout</b> <int 1-255>   <b>retransmit</b> < 1-255>}
Description	This command will configure a user-defined authentication server host for the TACACS/XTACACS/TACACS+/RADIUS security protocols on the Switch. When a user attempts to access the Switch with the authentication protocol enabled, the Switch will send authentication packets to a remote

**config authen server\_host**

	<p>TACACS/XTACACS/TACACS+/RADIUS server host on a remote host. The TACACS/XTACACS/TACACS+/RADIUS server host will then verify or deny the request and return the appropriate message to the Switch. More than one authentication protocol can be run on the same physical server host but, remember that TACACS/XTACACS/TACACS+/RADIUS are separate entities and are not compatible with each other. The maximum supported number of server hosts is 16.</p>
Parameters	<p><i>server_host</i> &lt;ipaddr&gt; - The IP address of the remote server host the user wishes to alter.</p> <p><i>protocol</i> - The protocol used by the server host. The user may choose one of the following:</p> <ul style="list-style-type: none"> <li>▪ <i>tacacs</i> - Enter this parameter if the server host utilizes the TACACS protocol.</li> <li>▪ <i>xtacacs</i> - Enter this parameter if the server host utilizes the XTACACS protocol.</li> <li>▪ <i>tacacs+</i> - Enter this parameter if the server host utilizes the TACACS+ protocol.</li> <li>▪ <i>radius</i> - Enter this parameter if the server host utilizes the RADIUS protocol.</li> </ul> <p><i>port</i> &lt;int 1-65535&gt; - Enter a number between 1 and 65535 to define the virtual port number of the authentication protocol on a server host. The default port number is 49 for TACACS/XTACACS/TACACS+ servers and 1812 and 1813 for RADIUS servers but the user may set a unique port number for higher security.</p> <p><i>key</i> &lt;key_string 254&gt; - Authentication key to be shared with a configured TACACS+ or RADIUS server only. Specify an alphanumeric string up to 254 characters or choose none.</p> <p><i>timeout</i> &lt;int 1-255&gt; - Enter the time in seconds the Switch will wait for the server host to reply to an authentication request. The default value is 5 seconds.</p> <p><i>retransmit</i> &lt;int 1-255&gt; - Enter the value in the retransmit field to change how many times the device will resend an authentication request when the server does not respond. This field is inoperable for the TACACS+ protocol.</p>
Restrictions	Only administrator-level users can issue this command.

## Example usage:

To configure a TACACS+ authentication server host, with port number 4321, a timeout value of 12 seconds and a retransmit count of 4.

```
DES-3028P:4#config authen server_host 10.1.1.121 protocol tacacs+
port 4321 timeout 12 retransmit 4
Command: config authen server_host 10.1.1.121 protocol tacacs+ port
4321 timeout 12 retransmit 4

Success.

DES-3028P:4#
```

**delete authen server\_host**

Purpose	Used to delete a user-defined authentication server host.
Syntax	<b>delete authen server_host</b> <ipaddr> protocol [ <b>tacacs</b>   <b>xtacacs</b>   <b>tacacs+</b>   <b>radius</b> ]

**delete authen server\_host**

Description	This command is used to delete a user-defined authentication server host previously created on the Switch.
Parameters	<p><i>server_host</i> &lt;<i>ipaddr</i>&gt; - The IP address of the remote server host to be deleted.</p> <p><i>protocol</i> – The protocol used by the server host the user wishes to delete. The user may choose one of the following:</p> <ul style="list-style-type: none"> <li>▪ <i>tacacs</i> – Enter this parameter if the server host utilizes the TACACS protocol.</li> <li>▪ <i>xtacacs</i> - Enter this parameter if the server host utilizes the XTACACS protocol.</li> <li>▪ <i>tacacs+</i> - Enter this parameter if the server host utilizes the TACACS+ protocol.</li> <li>▪ <i>radius</i> - Enter this parameter if the server host utilizes the RADIUS protocol.</li> </ul>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To delete a user-defined TACACS+ authentication server host:

```
DES-3028P:4#delete authen server_host 10.1.1.121 protocol tacacs+
Command: delete authen server_host 10.1.1.121 protocol tacacs+

Success.

DES-3028P:4#
```

**show authen server\_host**

Purpose	Used to view a user-defined authentication server host.
Syntax	<b>show authen server_host</b>
Description	<p>This command is used to view user-defined authentication server hosts previously created on the Switch.</p> <p>The following parameters are displayed:</p> <p>IP Address – The IP address of the authentication server host.</p> <p>Protocol – The protocol used by the server host. Possible results will include TACACS, XTACACS, TACACS+ or RADIUS.</p> <p>Port – The virtual port number on the server host. The default value is 49.</p> <p>Timeout - The time in seconds the Switch will wait for the server host to reply to an authentication request.</p> <p>Retransmit - The value in the retransmit field denotes how many times the device will resend an authentication request when the TACACS server does not respond. This field is inoperable for the tacacs+ protocol.</p> <p>Key - Authentication key to be shared with a configured TACACS+ server only.</p>
Parameters	None.
Restrictions	None.

Example usage:

To view authentication server hosts currently set on the Switch:

```

DES-3028P:4#show authn server_host
Command: show authn server_host

IP Address  Protocol  Port  Timeout  Retransmit  Key
-----
10.53.13.94  TACACS   49    5         2           No Use

Total Entries : 1

DES-3028P:4#

```

## create authn server\_group

Purpose	Used to create a user-defined authentication server group.
Syntax	<b>create authn server_group &lt;string 15&gt;</b>
Description	This command will create an authentication server group. A server group is a technique used to group TACACS/XTACACS/TACACS+/RADIUS server hosts into user defined categories for authentication using method lists. The user may add up to eight (8) authentication server hosts to this group using the <b>config authn server_group</b> command.
Parameters	<string 15> - Enter an alphanumeric string of up to 15 characters to define the newly created server group.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To create the server group “group\_1”:

```

DES-3028P:4#create authn server_group group_1
Command: create authn server_group group_1

Success.

DES-3028P:4#

```

## config authn server\_group

Purpose	Used to configure a user-defined authentication server group.
Syntax	<b>config authn server_group [tacacs   xtacacs   tacacs+   radius   &lt;string 15&gt;] [add   delete] server_host &lt;ipaddr&gt; protocol [tacacs   xtacacs   tacacs+   radius]</b>
Description	This command will configure an authentication server group. A server group is a technique used to group TACACS/XTACACS/TACACS+/RADIUS server hosts into user defined categories for authentication using method lists. The user may define the type of server group by protocol or by previously defined server group. Up to eight authentication server hosts may be added to any particular group
Parameters	<p><i>server_group</i> - The user may define the group by protocol groups built into the Switch (TACACS/XTACACS/TACACS+/RADIUS), or by a user-defined group previously created using the <i>create authn server_group</i> command.</p> <ul style="list-style-type: none"> <li>▪ <i>tacacs</i> – Use this parameter to utilize the built-in TACACS server protocol on the Switch. Only server hosts utilizing the TACACS protocol may be added to this group.</li> <li>▪ <i>xtacacs</i> – Use this parameter to utilize the built-in XTACACS server protocol on the Switch. Only server hosts utilizing the</li> </ul>

**config authen server\_group**

XTACACS protocol may be added to this group.

- *tacacs+* – Use this parameter to utilize the built-in TACACS+ server protocol on the Switch. Only server hosts utilizing the TACACS+ protocol may be added to this group.
- *radius* – Use this parameter to utilize the built-in RADIUS server protocol on the Switch. Only server hosts utilizing the RADIUS protocol may be added to this group.
- *<string 15>* - Enter an alphanumeric string of up to 15 characters to define the previously created server group. This group may add any combination of server hosts to it, regardless of protocol.

*add/delete* – Enter the correct parameter to add or delete a server host from a server group.

*server\_host <ipaddr>* - Enter the IP address of the previously configured server host to add or delete.

*protocol* – Enter the protocol utilized by the server host. There are three options:

- *tacacs* – Use this parameter to define the protocol if the server host is using the TACACS authentication protocol.
- *xtacacs* – Use this parameter to define the protocol if the server host is using the XTACACS authentication protocol.
- *tacacs+* – Use this parameter to define the protocol if the server host is using the TACACS+ authentication protocol.
- *radius* – Use this parameter to define the protocol if the server host is using the RADIUS authentication protocol.

**Restrictions** Only administrator-level users can issue this command.

Example usage:

To add an authentication host to server group “group\_1”:

```
DES-3028P:4# config authen server_group group_1 add server_host
10.1.1.121 protocol tacacs+
```

```
Command: config authen server_group group_1 add server_host
10.1.1.121 protocol tacacs+
```

```
Success.
```

```
DES-3028P:4#
```

**delete authen server\_group**

**Purpose** Used to delete a user-defined authentication server group.

**Syntax** **delete authen server\_group <string 15>**

**Description** This command will delete an authentication server group.

**Parameters** *<string 15>* - Enter an alphanumeric string of up to 15 characters to define the previously created server group to be deleted.

**Restrictions** Only administrator-level users can issue this command.

Example usage:

To delete the server group “group\_1”:

```
DES-3028P:4#delete server_group group_1
```

```
Command: delete server_group group_1
```

```
Success.
```

```
DES-3028P:4#
```

## show authen server\_group

Purpose	Used to view authentication server groups on the Switch.
Syntax	<b>show authen server_group &lt;string 15&gt;</b>
Description	This command will display authentication server groups currently configured on the Switch. This command will display the following fields: Group Name: The name of the server group currently configured on the Switch, including built in groups and user defined groups. IP Address: The IP address of the server host. Protocol: The authentication protocol used by the server host.
Parameters	<i>&lt;string 15&gt;</i> - Enter an alphanumeric string of up to 15 characters to define the previously created server group to be viewed. Entering this command without the <i>&lt;string&gt;</i> parameter will display all authentication server groups on the Switch.
Restrictions	None.

Example usage:

To view authentication server groups currently set on the Switch.

```
DES-3028P:4#show authen server_group
```

```
Command: show authen server_group
```

```

Group Name  IP Address                Protocol
-----
radius      -----
tacacs      -----
tacacs+     -----
xtacacs     -----

```

```
Total Entries : 4
```

```
DES-3028P:4#
```

## config authen parameter response\_timeout

Purpose	Used to configure the amount of time the Switch will wait for a user to enter authentication before timing out.
Syntax	<b>config authen parameter response_timeout &lt;int 0-255&gt;</b>
Description	This command will set the time the Switch will wait for a response of authentication from the user.
Parameters	<i>response_timeout &lt;int 0-255&gt;</i> - Set the time, in seconds, the Switch will wait for a response of authentication from the user attempting to log in from the command line interface or telnet interface. <i>0</i> means there won't be a time-out. The default value is 30 seconds.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure the response timeout for 60 seconds:

```
DES-3028P:4# config authen parameter response_timeout 60
Command: config authen parameter response_timeout 60

Success.

DES-3028P:4#
```

### config authen parameter attempt

Purpose	Used to configure the maximum number of times the Switch will accept authentication attempts.
Syntax	<b>config authen parameter attempt &lt;int 1-255&gt;</b>
Description	This command will configure the maximum number of times the Switch will accept authentication attempts. Users failing to be authenticated after the set amount of attempts will be denied access to the Switch and will be locked out of further authentication attempts. Command line interface users will have to wait 60 seconds before another authentication attempt. Telnet users will be disconnected from the Switch.
Parameters	<i>parameter attempt &lt;int 1-255&gt;</i> - Set the maximum number of attempts the user may try to become authenticated by the Switch, before being locked out.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To set the maximum number of authentication attempts at 5:

```
DES-3028P:4# config authen parameter attempt 5
Command: config authen parameter attempt 5

Success.

DES-3028P:4#
```

### show authen parameter

Purpose	Used to display the authentication parameters currently configured on the Switch.
Syntax	<b>show authen parameter</b>
Description	This command will display the authentication parameters currently configured on the Switch, including the response timeout and user authentication attempts. This command will display the following fields: Response timeout – The configured time allotted for the Switch to wait for a response of authentication from the user attempting to log in from the command line interface or telnet interface. User attempts: The maximum number of attempts the user may try to become authenticated by the Switch, before being locked out.
Parameters	None.
Restrictions	None.

Example usage:

To view the authentication parameters currently set on the Switch:

```
DES-3028P:4#show authen parameter
```

```
Command: show authen parameter
```

```
Response Timeout : 60 seconds
```

```
User Attempts      : 5
```

```
DES-3028P:4#
```

## enable admin

Purpose	Used to promote user level privileges to administrator level privileges.
Syntax	<b>enable admin</b>
Description	This command is for users who have logged on to the Switch on the normal user level, to become promoted to the administrator level. After logging on to the Switch users will have only user level privileges. To gain access to administrator level privileges, the user will enter this command and will have to enter an authentication password. Possible authentication methods for this function include TACACS, XTACACS, TACACS+, RADIUS, user defined server groups, local enable (local account on the Switch), or no authentication ( <i>none</i> ). Because XTACACS and TACACS do not support the enable function, the user must create a special account on the server host which has the username "enable", and a password configured by the administrator that will support the "enable" function. This function becomes inoperable when the authentication policy is disabled.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To enable administrator privileges on the Switch:

```
DES-3028P:4#enable admin
```

```
Password: *****
```

```
DES-3028P:4#
```

## config admin local\_enable

Purpose	Used to configure the local enable password for administrator level privileges.
Syntax	<b>config admin local_enable</b>
Description	This command will configure the locally enabled password for the <b>enable admin</b> command. When a user chooses the " <i>local_enable</i> " method to promote user level privileges to administrator privileges, he or she will be prompted to enter the password configured here that is set locally on the Switch.
Parameters	< <i>password 15</i> > - After entering this command, the user will be prompted to enter the old password, then a new password in an alphanumeric string of no more than 15 characters, and finally prompted to enter the new password again for confirmation. See the example below.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure the password for the "local\_enable" authentication method.

```
DES-3028P:4#config admin local_enable
Command: config admin local_enable

Enter the old password:
Enter the case-sensitive new password:*****
Enter the new password again for confirmation:*****
Success.

DES-3028P:4#
```

## SSH COMMANDS

The steps required to use the Secure Shell (SSH) protocol for secure communication between a remote PC (the SSH Client) and the Switch (the SSH Server), are as follows:

- Create a user account with admin-level access using the **create account admin <username> <password>** command. This is identical to creating any other admin-level user account on the Switch, including specifying a password. This password is used to login to the Switch, once secure communication has been established using the SSH protocol.
- Configure the user account to use a specified authorization method to identify users that are allowed to establish SSH connections with the Switch using the **config ssh authmode** command. There are three choices as to the method SSH will use to authorize the user, and they are password, publickey and hostbased.
- Configure the encryption algorithm that SSH will use to encrypt and decrypt messages sent between the SSH Client and the SSH Server.
- Finally, enable SSH on the Switch using the **enable ssh command**.

After following the above steps, users can configure an SSH Client on the remote PC and manage the Switch using secure, in-band communication.

The Secure Shell (SSH) commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
enable ssh	
disable ssh	
config ssh authmode	[password   publickey   hostbased] [enable   disable]
show ssh authmode	
config ssh server	{maxsession <int 1-8>   contimeout <sec 120-600>   authfail <int 2-20>   rekey [10min   30min   60min   never]}
show ssh server	
config ssh user	<username> authmode [hostbased [hostname <domain_name>   hostname_IP <domain_name> <ipaddr>]   password   publickey]
show ssh user authmode	
config ssh algorithm	[3DES   AES128   AES192   AES256   arcfour   blowfish   cast128   twofish128   twofish192   twofish256   MD5   SHA1   RSA   DSA] [enable   disable]
show ssh algorithm	
config ssh regenerate hostkey	

Each command is listed, in detail, in the following sections.

**enable ssh**

Purpose	Used to enable SSH.
Syntax	<b>enable ssh</b>
Description	This command allows users to enable SSH on the Switch.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Usage example:

To enable SSH:

```
DES-3028P:4#enable ssh
Command: enable ssh

Success.

DES-3028P:4#
```

**disable ssh**

Purpose	Used to disable SSH.
Syntax	<b>disable ssh</b>
Description	This command allows users to disable SSH on the Switch.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Usage example:

To disable SSH:

```
DES-3028P:4# disable ssh
Command: disable ssh

Success.

DES-3028P:4#
```

**config ssh authmode**

Purpose	Used to configure the SSH authentication mode setting.
Syntax	<b>config ssh authmode [password   publickey   hostbased] [enable   disable]</b>
Description	This command will allow users to configure the SSH authentication mode for users attempting to access the Switch.

## config ssh authmode

Parameters	<p><i>password</i> – This parameter may be chosen if the administrator wishes to use a locally configured password for authentication on the Switch.</p> <p><i>publickey</i> - This parameter may be chosen if the administrator wishes to use a publickey configuration set on a SSH server, for authentication.</p> <p><i>hostbased</i> - This parameter may be chosen if the administrator wishes to use a host computer for authentication. This parameter is intended for Linux users requiring SSH authentication techniques and the host computer is running the Linux operating system with a SSH program previously installed.</p> <p><i>[enable   disable]</i> - This allows users to enable or disable SSH authentication on the Switch.</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To enable the SSH authentication mode by password:

```
DES-3028P:4#config ssh authmode password enable
Command: config ssh authmode password enable

Success.

DES-3028P:4#
```

## show ssh authmode

Purpose	Used to display the SSH authentication mode setting.
Syntax	<b>show ssh authmode</b>
Description	This command will allow users to display the current SSH authentication set on the Switch.
Parameters	None.
Restrictions	None.

Example usage:

To view the current authentication mode set on the Switch:

```
DES-3028P:4#show ssh authmode
Command: show ssh authmode

The SSH authmode:
Password      : Enabled
Publickey     : Enabled
Hostbased     : Enabled

DES-3028P:4#
```

## config ssh server

Purpose	Used to configure the SSH server.
Syntax	<b>config ssh server {maxsession &lt;int 1-8&gt;   timeout &lt;sec 120-600&gt;   authfail &lt;int 2-20&gt;   rekey [10min   30min   60min   never]}</b>
Description	This command allows users to configure the SSH server.

## config ssh server

Parameters	<p><i>maxsession</i> &lt;int 1-8&gt; - Allows the user to set the number of users that may simultaneously access the Switch. The default setting is 8.</p> <p><i>contimeout</i> &lt;sec 120-600&gt; - Allows the user to set the connection timeout. The user may set a time between 120 and 600 seconds. The default is 120 seconds.</p> <p><i>authfail</i> &lt;int 2-20&gt; - Allows the administrator to set the maximum number of attempts that a user may try to logon utilizing SSH authentication. After the maximum number of attempts is exceeded, the Switch will be disconnected and the user must reconnect to the Switch to attempt another login.</p> <p><i>rekey</i> [10min   30min   60min   never] - Sets the time period that the Switch will change the security shell encryptions.</p>
Restrictions	Only administrator-level users can issue this command.

Usage example:

To configure the SSH server:

```
DES-3028P:4# config ssh server maxsession 2 contimeout 300 authfail 2
Command: config ssh server maxsession 2 contimeout 300 authfail 2

Success.

DES-3028P:4#
```

## show ssh server

Purpose	Used to display the SSH server setting.
Syntax	<b>show ssh server</b>
Description	This command allows users to display the current SSH server setting.
Parameters	None.
Restrictions	None.

Usage example:

To display the SSH server:

```
DES-3028P:4# show ssh server
Command: show ssh server

The SSH server configuration
max Session           : 8
Connection timeout   : 300
Authfail attempts     : 2
Rekey timeout         : never
port                  : 22

DES-3028P:4#
```

## config ssh user

Purpose	Used to configure the SSH user.
Syntax	<b>config ssh user &lt;username 15&gt; authmode [hostbased [hostname_IP &lt;domain_name 32&gt; &lt;ipaddr&gt;]   password   publickey]</b>

**config ssh user**

Description	This command allows users to configure the SSH user authentication method.
Parameters	<p><b>&lt;username 15&gt;</b> - Enter a username of no more than 15 characters to identify the SSH user.</p> <p><b>authmode</b> – Specifies the authentication mode of the SSH user wishing to log on to the Switch. The administrator may choose between:</p> <p><b>hostbased</b> – This parameter should be chosen if the user wishes to use a remote SSH server for authentication purposes. Choosing this parameter requires the user to input the following information to identify the SSH user.</p> <ul style="list-style-type: none"> <li><b>hostname &lt;domain_name 32&gt;</b> - Enter an alphanumeric string of up to 32 characters identifying the remote SSH user.</li> <li><b>hostname_IP &lt;domain_name 32&gt; &lt;ipaddr&gt;</b> - Enter the hostname and the corresponding IP address of the SSH user.</li> </ul> <p><b>password</b> – This parameter should be chosen to use an administrator defined password for authentication. Upon entry of this command, the Switch will prompt the user for a password, and then to retype the password for confirmation.</p> <p><b>publickey</b> – This parameter should be chosen to use the publickey on a SSH server for authentication.</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure the SSH user:

```
DES-3028P:4# config ssh user Trinity authmode password
Command: config ssh user Trinity authmode password

Success.

DES-3028P:4#
```

**show ssh user authmode**

Purpose	Used to display the SSH user setting.
Syntax	<b>show ssh user authmode</b>
Description	This command allows users to display the current SSH user setting.
Parameters	None.
Restrictions	None.

Example usage:

To display the SSH user:

```
DES-3028P:4#show ssh user authmode
Command: show ssh user authmode

Current Accounts:
UserName           Authentication      Host Name          Host IP
-----
Trinity            Password
```

DES-3028P:4#

**Note:** To configure the SSH user, the administrator must create a user account on the Switch. For information concerning configuring a user account, please see the section of this manual entitled **Basic Switch Commands** and then the command, **create account**.

## config ssh algorithm

Purpose	Used to configure the SSH algorithm.
Syntax	<b>config ssh algorithm [3DES   AES128   AES192   AES256   arcfour   blowfish   cast128   twofish128   twofish192   twofish256   MD5   SHA1   RSA   DSA] [enable   disable]</b>
Description	This command allows users to configure the desired type of SSH algorithm used for authentication encryption.
Parameters	<p><i>3DES</i> – This parameter will enable or disable the Triple_Data Encryption Standard encryption algorithm.</p> <p><i>AES128</i> - This parameter will enable or disable the Advanced Encryption Standard AES128 encryption algorithm.</p> <p><i>AES192</i> - This parameter will enable or disable the Advanced Encryption Standard AES192 encryption algorithm.</p> <p><i>AES256</i> - This parameter will enable or disable the Advanced Encryption Standard AES256 encryption algorithm.</p> <p><i>arcfour</i> - This parameter will enable or disable the Arcfour encryption algorithm.</p> <p><i>blowfish</i> - This parameter will enable or disable the Blowfish encryption algorithm.</p> <p><i>cast128</i> - This parameter will enable or disable the Cast128 encryption algorithm.</p> <p><i>twofish128</i> - This parameter will enable or disable the twofish128 encryption algorithm.</p> <p><i>twofish192</i> - This parameter will enable or disable the twofish192 encryption algorithm.</p> <p><i>MD5</i> - This parameter will enable or disable the MD5 Message Digest encryption algorithm.</p> <p><i>SHA1</i> - This parameter will enable or disable the Secure Hash Algorithm encryption.</p> <p><i>RSA</i> - This parameter will enable or disable the RSA encryption algorithm.</p> <p><i>DSA</i> - This parameter will enable or disable the Digital Signature Algorithm encryption.</p> <p><i>[enable   disable]</i> – This allows the user to enable or disable algorithms entered in this command, on the Switch.</p>
Restrictions	Only administrator-level users can issue this command.

Usage example:

To configure SSH algorithm:

```
DES-3028P:4# config ssh algorithm Blowfish enable
Command: config ssh algorithm Blowfish enable

Success.

DES-3028P:4#
```

**show ssh algorithm**

Purpose	Used to display the SSH algorithm setting.
Syntax	<b>show ssh algorithm</b>
Description	This command will display the current SSH algorithm setting status.
Parameters	None.
Restrictions	None.

Usage Example:

To display SSH algorithms currently set on the Switch:

```
DES-3028P:4#show ssh algorithm
```

```
Command: show ssh algorithm
```

```
Encryption Algorithm
```

```
3DES           :Enabled
AES128         :Enabled
AES192         :Enabled
AES256         :Enabled
ARC4           :Enabled
Blowfish       :Enabled
Cast128        :Enabled
Twofish128     :Enabled
Twofish192    :Enabled
Twofish256    :Enabled
```

```
Data Integrity Algorithm
```

```
MD5           :Enabled
SHA1          :Enabled
```

```
Public Key Algorithm
```

```
RSA           :Enabled
DSA           :Enabled
```

```
DES-3028P:4#
```

## SSL COMMANDS

**Secure Sockets Layer** or **SSL** is a security feature that will provide a secure communication path between a host and client through the use of authentication, digital signatures and encryption. These security functions are implemented through the use of a *ciphersuite*, which is a security string that determines the exact cryptographic parameters, specific encryption algorithms and key sizes to be used for an authentication session and consists of three levels:

1. **Key Exchange:** The first part of the cyphersuite string specifies the public key algorithm to be used. This Switch utilizes the Rivest Shamir Adleman (RSA) public key algorithm and the Digital Signature Algorithm (DSA), specified here as the *DHE\_DSS* Diffie-Hellman (DHE) public key algorithm. This is the first authentication process between client and host as they “exchange keys” in looking for a match and therefore authentication to be accepted to negotiate encryptions on the following level.
2. **Encryption:** The second part of the ciphersuite that includes the encryption used for encrypting the messages sent between client and host. The Switch supports two types of cryptology algorithms:
  - **Stream Ciphers** – There are two types of stream ciphers on the Switch, RC4 with 40-bit keys and RC4 with 128-bit keys. These keys are used to encrypt messages and need to be consistent between client and host for optimal use.
  - **CBC Block Ciphers** – CBC refers to Cipher Block Chaining, which means that a portion of the previously encrypted block of encrypted text is used in the encryption of the current block. The Switch supports the 3DES\_EDE encryption code defined by the Data Encryption Standard (DES) to create the encrypted text.
3. **Hash Algorithm:** This part of the ciphersuite allows the user to choose a message digest function which will determine a Message Authentication Code. This Message Authentication Code will be encrypted with a sent message to provide integrity and prevent against replay attacks. The Switch supports two hash algorithms, *MD5* (Message Digest 5) and *SHA* (Secure Hash Algorithm).

These three parameters are uniquely assembled in four choices on the Switch to create a three layered encryption code for secure communication between the server and the host. The user may implement any one or combination of the ciphersuites available, yet different ciphersuites will affect the security level and the performance of the secured connection. The information included in the ciphersuites is not included with the Switch and requires downloading from a third source in a file form called a *certificate*. This function of the Switch cannot be executed without the presence and implementation of the certificate file and can be downloaded to the Switch by utilizing a TFTP server. The Switch supports SSLv3 and TLSv1. Other versions of SSL may not be compatible with this Switch and may cause problems upon authentication and transfer of messages from client to host.

Command	Parameters
enable ssl	{ciphersuite {RSA_with_RC4_128_MD5   RSA_with_3DES_EDE_CBC_SHA   DHE_DSS_with_3DES_EDE_CBC_SHA   RSA_EXPORT_with_RC4_40_MD5}}
disable ssl	{ciphersuite {RSA_with_RC4_128_MD5   RSA_with_3DES_EDE_CBC_SHA   DHE_DSS_with_3DES_EDE_CBC_SHA   RSA_EXPORT_with_RC4_40_MD5}}
config ssl cachetimeout timeout	<value 60-86400>
show ssl	
show ssl certificate	
show ssl cachetimeout	
download ssl certificate	<ipaddr> certfilename <path_filename 64> keyfilename <path_filename 64>

Each command is listed, in detail, in the following sections.

**enable ssl**

Purpose	To enable the SSL function on the Switch.
Syntax	<b>enable ssl {ciphersuite {RSA_with_RC4_128_MD5   RSA_with_3DES_EDE_CBC_SHA   DHE_DSS_with_3DES_EDE_CBC_SHA   RSA_EXPORT_with_RC4_40_MD5}}</b>
Description	This command will enable SSL on the Switch by implementing any one or combination of listed ciphersuites on the Switch. Entering this command without a parameter will enable the SSL status on the Switch. Enabling SSL will disable the web-manager on the Switch.
Parameters	<p><i>ciphersuite</i> - A security string that determines the exact cryptographic parameters, specific encryption algorithms and key sizes to be used for an authentication session. The user may choose any combination of the following:</p> <ul style="list-style-type: none"> <li>• <i>RSA_with_RC4_128_MD5</i> – This ciphersuite combines the RSA key exchange, stream cipher RC4 encryption with 128-bit keys and the MD5 Hash Algorithm.</li> <li>• <i>RSA_with_3DES_EDE_CBC_SHA</i> - This ciphersuite combines the RSA key exchange, CBC Block Cipher 3DES_EDE encryption and the SHA Hash Algorithm.</li> <li>• <i>DHE_DSS_with_3DES_EDE_CBC_SHA</i> - This ciphersuite combines the DSA Diffie Hellman key exchange, CBC Block Cipher 3DES_EDE encryption and SHA Hash Algorithm.</li> <li>• <i>RSA_EXPORT_with_RC4_40_MD5</i> - This ciphersuite combines the RSA Export key exchange, stream cipher RC4 encryption with 40-bit keys.</li> </ul> <p>The ciphersuites are enabled by default on the Switch, yet the SSL status is disabled by default. Enabling SSL with a ciphersuite will not enable the SSL status on the Switch.</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To enable SSL on the Switch for all ciphersuites:

**DES-3028P:4#enable ssl**

**Command: enable ssl**

**Note: Web will be disabled if SSL is enabled.**

**Success.**

**DES-3028P:4#**

**NOTE:** Enabling SSL on the Switch will enable all ciphersuites. To utilize a particular ciphersuite, the user must eliminate other ciphersuites by using the **disable ssl** command along with the appropriate ciphersuites.

**NOTE:** Enabling the SSL function on the Switch will disable the port for the web manager (port 80). To log on to the web based manager, the entry of the URL must begin with *https://*. (ex. *https://10.90.90.90*).

**disable ssl**

Purpose	To disable the SSL function on the Switch.
Syntax	<b>disable ssl {ciphersuite {RSA_with_RC4_128_MD5   RSA_with_3DES_EDE_CBC_SHA   DHE_DSS_with_3DES_EDE_CBC_SHA   RSA_EXPORT_with_RC4_40_MD5}}</b>
Description	This command will disable SSL on the Switch and can be used to disable any one or combination of listed ciphersuites on the Switch.
Parameters	<p><i>ciphersuite</i> - A security string that determines the exact cryptographic parameters, specific encryption algorithms and key sizes to be used for an authentication session. The user may choose any combination of the following:</p> <ol style="list-style-type: none"> <li>1. <i>RSA_with_RC4_128_MD5</i> – This ciphersuite combines the RSA key exchange, stream cipher RC4 encryption with 128-bit keys and the MD5 Hash Algorithm.</li> <li>2. <i>RSA_with_3DES_EDE_CBC_SHA</i> - This ciphersuite combines the RSA key exchange, CBC Block Cipher 3DES_EDE encryption and the SHA Hash Algorithm.</li> <li>3. <i>DHE_DSS_with_3DES_EDE_CBC_SHA</i> - This ciphersuite combines the DSA Diffie Hellman key exchange, CBC Block Cipher 3DES_EDE encryption and SHA Hash Algorithm.</li> <li>4. <i>RSA_EXPORT_with_RC4_40_MD5</i> - This ciphersuite combines the RSA Export key exchange, stream cipher RC4 encryption with 40-bit keys.</li> </ol>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To disable the SSL status on the Switch:

```
DES-3028P:4#disable ssl
```

```
Command: disable ssl
```

```
Success.
```

```
DES-3028P:4#
```

To disable ciphersuite *RSA\_EXPORT\_with\_RC4\_40\_MD5* only:

```
DES-3028P:4#disable ssl ciphersuite RSA_EXPORT_with_RC4_40_MD5
```

```
Command: disable ssl ciphersuite RSA_EXPORT_with_RC4_40_MD5
```

```
Success.
```

```
DES-3028P:4#
```

**config ssl cachetimeout timeout**

Purpose	Used to configure the SSL cache timeout.
Syntax	<b>config ssl cachetimeout timeout &lt;value 60-86400&gt;</b>
Description	This command will set the time between a new key exchange between a client and a host using the SSL function. A new SSL session is established every time the client and host go through a key exchange. Specifying a longer timeout will allow the SSL session to reuse the master key on future connections with that particular host, therefore speeding up the negotiation process.

**config ssl cachetimeout timeout**

Parameters	<i>timeout &lt;value 60-86400&gt;</i> - Enter a timeout value between 60 and 86400 seconds to specify the total time an SSL key exchange ID stays valid before the SSL module will require a new, full SSL negotiation for connection. The default cache timeout is 600 seconds
Restrictions	Only administrator-level users can issue this command.

Example usage:

To set the SSL cachetimeout for 7200 seconds:

```
DES-3028P:4#config ssl cachetimeout timeout 7200
Command: config ssl cachetimeout timeout 7200

Success.

DES-3028P:4#
```

**show ssl cachetimeout**

Purpose	Used to show the SSL cache timeout.
Syntax	<b>show ssl cachetimeout</b>
Description	Entering this command will allow the user to view the SSL cache timeout currently implemented on the Switch.
Parameters	None.
Restrictions	None.

Example usage:

To view the SSL cache timeout on the Switch:

```
DES-3028P:4#show ssl cachetimeout
Command: show ssl cachetimeout

Cache timeout is 600 second(s).

DES-3028P:4#
```

**show ssl**

Purpose	Used to view the SSL status and the certificate file status on the Switch.
Syntax	<b>show ssl</b>
Description	This command is used to view the SSL status on the Switch.
Parameters	None.
Restrictions	None.

Example usage:

To view the SSL status on the Switch:

```

DES-3028P:4#show ssl
Command: show ssl

SSL Status                               Disabled
RSA_WITH_RC4_128_MD5                     0x0004 Enabled
RSA_WITH_3DES_EDE_CBC_SHA                 0x000A Enabled
DHE_DSS_WITH_3DES_EDE_CBC_SHA            0x0013 Enabled
RSA_EXPORT_WITH_RC4_40_MD5               0x0003 Enabled

DES-3028P:4#

```

## show ssl certificate

Purpose	Used to view the SSL certificate file status on the Switch.
Syntax	<b>show ssl certificate</b>
Description	This command is used to view the SSL certificate file information currently implemented on the Switch.
Parameters	None.
Restrictions	None.

Example usage:

To view certificate file information on the Switch:

```

DES-3028P:4# show ssl certificate
Command: show ssl certificate

Loaded with RSA Certificate!

DES-3028P:4#

```

## download ssl certificate

Purpose	Used to download a certificate file for the SSL function on the Switch.
Syntax	<b>download ssl certificate &lt;ipaddr&gt; certfilename &lt;path_filename 64&gt; keyfilename &lt;path_filename 64&gt;</b>
Description	This command is used to download a certificate file for the SSL function on the Switch from a TFTP server. The certificate file is a data record used for authenticating devices on the network. It contains information on the owner, keys for authentication and digital signatures. Both the server and the client must have consistent certificate files for optimal use of the SSL function. The Switch only supports certificate files with .der file extensions.
Parameters	<p><i>&lt;ipaddr&gt;</i> - Enter the IP address of the TFTP server.</p> <p><i>certfilename &lt;path_filename 64&gt;</i> - Enter the path and the filename of the certificate file users wish to download.</p> <p><i>keyfilename &lt;path_filename 64&gt;</i> - Enter the path and the filename of the key exchange file users wish to download.</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To download a certificate file and key file to the Switch:

```
DES-3028P:4#download ssl certificate 10.53.13.94 certfilename  
c:/cert.der keyfilename c:/pkey.der  
Command: download ssl certificate 10.53.13.94 certfilename c:/cert.der  
keyfilename c:/pkey.der
```

```
Certificate Loaded Successfully!
```

```
DES-3028P:4#
```

## D-LINK SINGLE IP MANAGEMENT COMMANDS

Simply put, D-Link Single IP Management is a concept that will stack switches together over Ethernet instead of using stacking ports or modules. Switches using D-Link Single IP Management (labeled here as SIM) must conform to the following rules:

SIM is an optional feature on the Switch and can easily be enabled or disabled. SIM grouping has no effect on the normal operation of the Switch in the user's network.

There are three classifications for switches using SIM. The **Commander Switch(CS)**, which is the master switch of the group, **Member Switch(MS)**, which is a switch that is recognized by the CS a member of a SIM group, and a **Candidate Switch(CaS)**, which is a switch that has a physical link to the SIM group but has not been recognized by the CS as a member of the SIM group.

A SIM group can only have one Commander Switch(CS).

All switches in a particular SIM group must be in the same IP subnet (broadcast domain). Members of a SIM group cannot cross a router.

A SIM group accepts one Commander Switch (numbered 0) and up to 32 switches (numbered 0-31).

There is no limit to the number of SIM groups in the same IP subnet (broadcast domain), however a single switch can only belong to one group.

If multiple VLANs are configured, the SIM group will only utilize the default VLAN on any switch.

SIM allows intermediate devices that do not support SIM. This enables the user to manage a switch that are more than one hop away from the CS.

The SIM group is a group of switches that are managed as a single entity. The DES-3028/28P/52/52P may take on three different roles:

**Commander Switch(CS)** – This is a switch that has been manually configured as the controlling device for a group, and takes on the following characteristics:

- It has an IP Address.
- It is not a Commander Switch or Member Switch of another Single IP group.
- It is connected to the Member Switches through its management VLAN.

**Member Switch(MS)** – This is a switch that has joined a single IP group and is accessible from the CS, and it takes on the following characteristics:

- It is not a CS or MS of another IP group.
- It is connected to the CS through the CS management VLAN.

**Candidate Switch(CaS)** – This is a switch that is ready to join a SIM group but is not yet a member of the SIM group. The Candidate Switch may join the SIM group through an automatic function of the DES-3028/28P/52/52P, or by manually configuring it to be a MS of a SIM group. A switch configured as a CaS is not a member of a SIM group and will take on the following characteristics:

- It is not a CS or MS of another Single IP group.
- It is connected to the CS through the CS management VLAN.

The following rules also apply to the above roles:

1. Each device begins in the Commander state.
2. CS's must change their role to CaS and then to MS, to become a MS of a SIM group. Thus the CS cannot directly be converted to a MS.
3. The user can manually configure a CS to become a CaS.
4. A MS can become a CaS by:
  - a. Being configured as a CaS through the CS.
  - b. If report packets from the CS to the MS time out.
5. The user can manually configure a CaS to become a CS
6. The CaS can be configured through the CS to become a MS.

After configuring one switch to operate as the CS of a SIM group, additional DES-3028/28P/52/52P Switches may join the group by either an automatic method or by manually configuring the Switch to be a MS. The CS will then serve as the in band entry point for access to the MS. The CS's IP address will become the path to all MS's of the group and the CS's Administrator's password, and/or authentication will control access to all MS's of the SIM group.

With SIM enabled, the applications in the CS will redirect the packet instead of executing the packets. The applications will decode the packet from the administrator, modify some data, then send it to the MS. After execution, the CS may receive a response packet from the MS, which it will encode and send back to the administrator.

When a CS becomes a MS, it automatically becomes a member of the first SNMP community (include read/write and read only) to which the CS belongs. However if a MS has its own IP address, it can belong to SNMP communities to which other switches in the group, including the CS, do not belong.

### The Upgrade to v1.6

To better improve SIM management, the DES-3028/28P/52/52P Switches have been upgraded to version 1.6 in this release. Many improvements have been made, including:

The Commander Switch (CS) now has the capability to automatically rediscover member switches that have left the SIM group, either through a reboot or web malfunction. This feature is accomplished through the use of Discover packets and Maintain packets that previously set SIM members will emit after a reboot. Once a MS has had its MAC address and password saved to the CS's database, if a reboot occurs in the MS, the CS will keep this MS information in its database and when a MS has been rediscovered, it will add the MS back into the SIM tree automatically. No configuration will be necessary to rediscover these switches. There are some instances where pre-saved MS switches cannot be rediscovered. For example, if the Switch is still powered down, if it has become the member of another group, or if it has been configured to be a Commander Switch, the rediscovery process cannot occur.

This version will support multiple switch upload and downloads for firmware, configuration files and log files, as follows:

- Firmware – The switch now supports multiple MS firmware downloads from a TFTP server.
- Configuration Files – This switch now supports multiple downloading and uploading of configuration files both to (for configuration restoration) and from (for configuration backup) MS's, using a TFTP server..
- Log – The switch now supports uploading multiple MS log files to a TFTP server.

**NOTE:** For more details regarding improvements made in SIMv1.6, please refer to the White Paper located on the D-Link website.

The SIM commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
enable sim	
disable sim	
show sim	{[candidates {<candidate_id 1-100>}   members {<member_id 1-32>}   group {commander_mac <macaddr>}]   neighbor}}
reconfig	{member_id <value 1-32>   exit}
config sim_group	[add <candidate_id 1-100> {<password>}   delete <member_id 1-32>]
config sim	[[{commander {group_name <groupname 64>   candidate}   dp_interval <sec 30-90>   hold_time <sec 100-255>}]
download sim_ms	[firmware_from_tftp   configuration_from_tftp] <ipaddr> <path_filename> {members <mslist 1-32>   all}
upload sim_ms	[configuration_to_tftp   log_to_tftp] <ipaddr> <path_filename> {members <mslist>   all}

Each command is listed, in detail, in the following sections.

**enable sim**

Purpose	Used to enable Single IP Management (SIM) on the Switch
Syntax	<b>enable sim</b>
Description	This command will enable SIM globally on the Switch. SIM features and functions will not function properly unless this function is enabled.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To enable SIM on the Switch:

```
DES-3028P:4#enable sim
Command: enable sim

Success.

DES-3028P:4#
```

**disable sim**

Purpose	Used to disable Single IP Management (SIM) on the Switch
Syntax	<b>disable sim</b>
Description	This command will disable SIM globally on the Switch.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To disable SIM on the Switch:

```
DES-3028P:4#disable sim
Command: disable sim

Success.

DES-3028P:4#
```

**show sim**

Purpose	Used to view the current information regarding the SIM group on the Switch.
Syntax	<b>show sim</b> {[candidates {<candidate_id 1-100>}   members {<member_id 1-32>}   group {commander_mac <macaddr>}}   neighbor]}
Description	This command will display the current information regarding the SIM group on the Switch, including the following: SIM Version - Displays the current Single IP Management version on the Switch. Firmware Version - Displays the current Firmware version on the Switch. Device Name - Displays the user-defined device name on the Switch.

**show sim**

	MAC Address - Displays the MAC Address of the Switch.
	Capabilities – Displays the type of switch, be it Layer 2 (L2) or Layer 3 (L3).
	Platform – Switch Description including name and model number.
	SIM State –Displays the current Single IP Management State of the Switch, whether it be enabled or disabled.
	Role State – Displays the current role the Switch is taking, including Commander, Member or Candidate. A Stand-alone switch will always have the commander role.
	Discovery Interval - Time in seconds the Switch will send discovery packets out over the network.
	Hold time – Displays the time in seconds the Switch will hold discovery results before dropping it or utilizing it.
Parameters	<p><i>candidates &lt;candidate_id 1-100&gt;</i> - Entering this parameter will display information concerning candidates of the SIM group. To view a specific candidate, include that candidate's ID number, listed from 1 to 100.</p> <p><i>members &lt;member_id 1-32&gt;</i> - Entering this parameter will display information concerning members of the SIM group. To view a specific member, include that member's id number, listed from 1 to 32.</p> <p><i>group {commander_mac &lt;macaddr&gt;}</i> - Entering this parameter will display information concerning the SIM group. To view a specific group, include the commander's MAC address of the group.</p> <p><i>neighbor</i> – Entering this parameter will display neighboring devices of the Switch. A SIM neighbor is defined as a switch that is physically connected to the Switch but is not part of the SIM group. This screen will produce the following results:</p> <p style="padding-left: 40px;">Port – Displays the physical port number of the commander switch where the uplink to the neighbor switch is located.</p> <p style="padding-left: 40px;">MAC Address – Displays the MAC Address of the neighbor switch.</p> <p style="padding-left: 40px;">Role – Displays the role(CS, CaS, MS) of the neighbor switch.</p>
Restrictions	None.

Example usage:

To show the SIM information in detail:

```

DES-3028P:4#show sim
Command: show sim

Group Name       : default
SIM Version      : VER-1.61
Firmware Version : 1.00-B22
Device Name      :
MAC Address      : 00-35-26-11-11-00
Capabilities     : L2
Platform        : DES-3028P L2 Switch
SIM State       : Enabled
Role State      : Commander
Discovery Interval : 60 sec
Hold Time       : 180 sec

DES-3028P:4#

```

To show the candidate information in summary, if the candidate ID is specified:

```

DES-3028P:4#show sim candidates
Command: show sim candidates

ID  MAC Address          Platform /
   -----          -----
   Hold   Firmware   Device Name
   Time   Version
   ----   -
1  00-01-02-03-04-00  DES-3028 L2 Switch  40   1.00-B22  The Man

```

Example usage:

To view SIM neighbors:

```

DES-3028P:4#show sim neighbor
Command: show sim neighbor

Neighbor Info Table

```

Port	MAC Address	Role
-----	-----	-----
23	00-35-26-00-11-99	Commander
23	00-35-26-00-11-91	Member
24	00-35-26-00-11-90	Candidate
Total Entries: 3		
DES-3028P:4#		

<b>reconfig</b>	
Purpose	Used to connect to a member switch, through the commander switch, using Telnet.
Syntax	<b>reconfig {member_id &lt;value 1-32&gt;   exit}</b>
Description	This command is used to reconnect to a member switch using Telnet.
Parameters	<i>member_id</i> <value 1-32> - Select the ID number of the member switch to configure. <i>exit</i> – This command is used to exit from managing the member switch and will return to managing the commander switch.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To connect to the MS, with member ID 2, through the CS, using the command line interface:

```
DES-3028P:4#reconfig member_id 2
Command: reconfig member_id 2

DES-3028P:4#
```

<b>config sim_group</b>	
Purpose	Used to add candidates and delete members from the SIM group.
Syntax	<b>config sim_group [add &lt;candidate_id 1-100&gt; {&lt;password&gt;}   delete &lt;member_id 1-32&gt;]</b>
Description	This command is used to add candidates and delete members from the SIM group by ID number.
Parameters	<i>add</i> <candidate_id 1-100> <password> - Use this parameter to change a candidate switch (CaS) to a member switch (MS) of a SIM group. The CaS may be defined by its ID number and a password (if necessary). <i>delete</i> <member_id 1-32> - Use this parameter to delete a member switch of a SIM group. The member switch should be defined by ID number.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To add a member:

```
DES-3028P:4#config sim_group add 2
Command: config sim_group add 2

Please wait for ACK...
GM Config Success !!!
```

**Success.**

**DES-3028P:4#**

To delete a member:

**DES-3028P:4# config sim\_group delete 1**

**Command: config sim\_group delete 1**

**Please wait for ACK...**

**Success.**

**DES-3028P:4#**

## config sim

Purpose	Used to configure role parameters for the SIM protocol on the Switch.
Syntax	<b>config sim</b> [[ <b>commander {group_name &lt;groupname 64&gt;}</b> ]   <b>candidate</b> ]   <b>dp_interval &lt;sec 30-90&gt;</b>   <b>hold_time &lt;sec 100-255&gt;</b> }]
Description	This command is used to configure parameters of switches of the SIM.
Parameters	<p><i>commander</i> – Use this parameter to configure the commander switch (CS) for the following parameters:</p> <p><i>candidate</i> – Used to change the role of a CS (commander) to a CaS (candidate).</p> <ul style="list-style-type: none"> <li>▪ <i>dp_interval &lt;30-90&gt;</i> – The user may set the discovery protocol interval, in seconds that the Switch will send out discovery packets. Returning information to the CS will include information about other switches connected to it. (Ex. MS, CaS). The user may set the <i>dp_interval</i> from 30 to 90 seconds.</li> <li>▪ <i>hold_time &lt;100-255&gt;</i> – Using this parameter, the user may set the time, in seconds, the Switch will hold information sent to it from other switches, utilizing the discovery interval protocol. The user may set the hold time from 100 to 255 seconds.</li> </ul>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To change the time interval of the discovery protocol:

**DES-3028P:4# config sim dp\_interval 30**

**Command: config sim dp\_interval 30**

**Success.**

**DES-3028P:4#**

To change the hold time of the discovery protocol:

```
DES-3028P:4# config sim hold_time 120
Command: config sim hold_time 120

Success.

DES-3028P:4#
```

To transfer the CS (commander) to be a CaS (candidate):

```
DES-3028P:4# config sim candidate
Command: config sim candidate

Success.

DES-3028P:4#
```

To transfer the Switch to be a CS:

```
DES-3028P:4# config sim commander
Command: config sim commander

Success.

DES-3028P:4#
```

To update the name of a group:

```
DES-3028P:4# config sim commander group_name Trinity
Command: config sim commander group_name Trinity

Success.

DES-3028P:4#
```

## download sim

Purpose	Used to download firmware or configuration file to an indicated device.
Syntax	<b>download sim_ms [firmware_from_tftp   configuration_from_tftp] &lt;ipaddr&gt; &lt;path_filename&gt; {members &lt;mslist 1-32&gt;   all}</b>
Description	This command will download a firmware file or configuration file to a specified device from a TFTP server.
Parameters	<p><i>firmware</i> – Specify this parameter to download firmware to members of a SIM group.</p> <p><i>configuration</i> – Specify this parameter to download a switch configuration to members of a SIM group.</p> <p><i>&lt;ipaddr&gt;</i> – Enter the IP address of the TFTP server.</p> <p><i>&lt;path_filename&gt;</i> – Enter the path and the filename of the firmware or switch on the TFTP server.</p> <p><i>members</i> – Enter this parameter to specify the members to which the user prefers to download firmware or switch configuration files. The user may specify a member or members by adding one of the following:</p> <ul style="list-style-type: none"> <li>▪ <i>&lt;mslist&gt;</i> - Enter a value, or values to specify which members of the SIM group will receive the firmware or switch configuration.</li> <li>▪ <i>all</i> – Add this parameter to specify all members of the SIM group will receive the firmware or switch configuration.</li> </ul>

## download sim

**Restrictions** Only administrator-level users can issue this command.

Example usage:

To download firmware:

```
DES-3028P:4# download sim_ms firmware_from_tftp 10.53.13.94 c:/des3028.had all
Command: download sim_ms firmware_from_tftp 10.53.13.94 c:/des3028.had all

This device is updating firmware. Please wait several minutes...

Download Status :

ID   MAC Address      Result
---  -
1    00-36-28-10-35-00 Success

DES-3028P:4#
```

To download configuration files:

```
DES-3028P:4# download sim_ms configuration_from_tftp 10.53.13.94 c:/des3028.txt all
Command: download sim_ms firmware_from_tftp 10.53.13.94 c:/des3028.txt all

This device is updating configuration. Please wait several minutes...

Download Status :

ID   MAC Address      Result
---  -
1    00-01-02-03-04-00 Success
2    00-07-06-05-04-03 Success
3    00-07-06-05-04-03 Success

DES-3028P:4#
```

## upload sim\_ms

Purpose	User to upload a configuration file to a TFTP server from a specified member of a SIM group.
Syntax	<b>upload sim_ms [configuration_to_tftp   log_to_tftp] &lt;ipaddr&gt; &lt;path_filename&gt; [members &lt;mslist&gt;   all]</b>
Description	This command will upload a configuration file to a TFTP server from a specified member of a SIM group.
Parameters	<p>&lt;ipaddr&gt; - Enter the IP address of the TFTP server to which to upload a configuration file.</p> <p>&lt;path_filename&gt; - Enter a user-defined path and file name on the TFTP server to which to upload configuration files.</p> <p>&lt;member_id 1-32&gt; - Enter this parameter to specify the member to which to upload a switch configuration file. The user may specify a member or members by adding the ID number of the specified member.</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To upload configuration files to a TFTP server:

DES-3028P:4# upload sim\_ms configuration\_to\_tftp 10.55.47.1 D:\configuration.txt 1

Command: upload sim\_ms configuration 10.55.47.1 D:\configuration.txt 1

This device is upload configuration. Please wait several minutes ...

Upload Status :

ID	MAC Address	Result
1	00-A1-51-34-26-00	Success

DES-3028P:4#

## SMTP COMMANDS

SMTP or Simple Mail Transfer Protocol is a function of the Switch that will send switch events to mail recipients based on e-mail addresses entered using the commands below. The Switch is to be configured as a client of SMTP while the server is a remote device that will receive messages from the Switch, place the appropriate information into an e-mail and deliver it to recipients configured on the Switch. This can benefit the Switch administrator by simplifying the management of small workgroups or wiring closets, increasing the speed of handling emergency Switch events and enhancing security by recording questionable events occurring on the Switch.

The Switch plays four important roles as a client in the functioning of SMTP:

- The server and server virtual port must be correctly configured for this function to work properly. This is accomplished in the **config smtp** command by properly configuring the *server* and *server\_port* parameters.
- Mail recipients must be configured on the Switch. This information is sent to the server which then processes the information and then e-mails Switch information to these recipients. Up to 8 e-mail recipients can be configured on the Switch using the **config smtp** command by configuring the *add mail\_receiver* and *delete mail\_receiver* parameters.
- The administrator can configure the source mail address from which messages are delivered to configured recipients. This can offer more information to the administrator about Switch functions and problems. The personal e-mail can be configured using the **config smtp** command and setting the *self\_mail\_addr* parameter.
- The Switch can be configured to send out test mail to first ensure that the recipient will receive e-mails from the SMTP server regarding the Switch. To configure this test mail, the SMTP function must first be enabled using the **enable smtp** command and then by entering the **smtp send\_testmsg** command. All recipients configured for SMTP will receive a sample test message from the SMTP server, ensuring the reliability of this function.

### THE SWITCH WILL SEND OUT E-MAIL TO RECIPIENTS WHEN ONE OR MORE OF THE FOLLOWING EVENTS OCCUR:

- When a cold start occurs on the Switch.
- When a port enters a link down status.
- When a port enters a link up status.
- When SNMP authentication has been denied by the Switch.
- When a switch configuration entry has been saved to the NVRAM by the Switch.
- When an abnormality occurs on TFTP during a firmware download event. This includes *in-process*, *invalid-file*, *violation*, *file-not-found*, *complete* and *time-out* messages from the TFTP server.
- When a system reset occurs on the Switch.

Information within the e-mail from the SMTP server regarding switch events includes:

- The source device name and IP address.
- A timestamp denoting the identity of the SMTP server and the client that sent the message, as well as the time and date of the message received from the Switch. Messages that have been relayed will have timestamps for each relay.
- The event that occurred on the Switch, prompting the e-mail message to be sent.
- When an event is processed by a user, such as save or firmware upgrade, the IP address, MAC address and User Name of the user completing the task will be sent along with the system message of the event occurred.
- When the same event occurs more than once, the second mail message and every repeating mail message following will have the system's error message placed in the subject line of the mail message.

The following details events occurring during the Delivery Process.

- Urgent mail will have high priority and be immediately dispatched to recipients while normal mail will be placed in a queue for future transmission.
- The maximum number of untransmitted mail messages placed in the queue cannot exceed 30 messages. Any new messages will be discarded if the queue is full.
- If the initial message sent to a mail recipient is not delivered, it will be placed in the waiting queue until its place in the queue has been reached, and then another attempt to transmit the message is made.
- The maximum attempts for delivering mail to recipients is three. Mail message delivery attempts will be tried every five minutes until the maximum number of attempts is reached. Once reached and the message has not been successfully delivered, the message will be dropped and not received by the mail recipient.
- If the Switch shuts down or reboots, mail messages in the waiting queue will be lost.

The SMTP commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
enable smtp	
disable smtp	
config smtp	{server <ipaddr>   server_port <tcp_port_number 1-65535>   self_mail_addr <mail_addr 64>   [add mail_receiver <mail_addr 64>   delete mail_receiver <index 1-8>]}
show smtp	
smtp send_testmsg	

Each command is listed, in detail, in the following sections.

### enable smtp

Purpose	Used to enable the Switch as a SMTP client.
Syntax	<b>enable smtp</b>
Description	This command, in conjunction with the <b>disable smtp command</b> will enable and disable the Switch as a SMTP client without changing configurations.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To enable SMTP on the Switch.

```
DES-3028:4#enable smtp
Command: enable smtp

Success.

DES-3028:4#
```

### disable smtp

Purpose	Used to disable the Switch as a SMTP client.
Syntax	<b>disable smtp</b>
Description	This command, in conjunction with the <b>enable smtp command</b> will enable and disable the Switch as a SMTP client without changing configurations.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To disable SMTP on the Switch.

```
DES-3028:4#disable smtp
Command: disable smtp

Success.

DES-3028:4#
```

**config smtp**

Purpose	Used to configure necessary information in setting up the Switch as an SMTP client.
Syntax	<b>config smtp {server &lt;ipaddr&gt;   server_port &lt;tcp_port_number 1-65535&gt;   self_mail_addr &lt;mail_addr 64&gt;   [add mail_receiver &lt;mail_addr 64&gt;   delete mail_receiver &lt;index 1-8&gt;]}</b>
Description	This command will allow the user to set the necessary parameters to configure the SMTP server and mail recipients. This command must be completely configured properly for the SMTP function of the switch to correctly operate.
Parameters	<p><i>server &lt;ipaddr&gt;</i> - Enter the IP address of the SMTP server on a remote device.</p> <p><i>server_port &lt;tcp_port_number 1-65535&gt;</i> - Enter the virtual port number that the Switch will connect with on the SMTP server. The common port number for SMTP is 25.</p> <p><i>self_mail_addr &lt;mail_addr 64&gt;</i>- Enter the e-mail address from which mail messages will be sent. This address will be the from address on the e-mail message sent to a recipient. Only one self mail address can be configured for this Switch. This string can be no more that 64 alphanumeric characters.</p> <p><i>add mail_receiver &lt;mail_addr 64&gt;</i> - Choose this parameter to add mail recipients to receive e-mail messages from the Switch. Up to 8 e-mail addresses can be added per Switch.</p> <p><i>delete mail_receiver &lt;index 1-8&gt;</i> - Choose this parameter to delete mail recipients from the configured list receiving e-mail messages from the Switch. Up to 8 e-mail addresses can be added per Switch.</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure the SMTP settings:

```
DES-3028:4#config smtp server 166.99.66.33 server_port 25 add mail receiver
darren_tremblett@nhl.com
Command: config smtp server 166.99.66.33 server_port 25 add mail receiver
darren_tremblett@nhl.com

Success.

DES-3028:4#
```

**show smtp**

Purpose	Used to view configured parameters for the SMTP function on the Switch.
Syntax	<b>show smtp</b>
Description	This command will display parameters configured for SMTP on the Switch, including server information, mail recipients and the current running status of SMTP on the Switch.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To view the SMTP parameters currently configured on the Switch:

**DES-3028:4#show smtp**

**Command: show smtp**

**smtp status: Enabled**  
**smtp server address : 166.99.66.33**  
**smtp server port : 25**  
**self mail address: smtp@30XX.dev**

<b>Index</b>	<b>Mail Receiver Address</b>
-----	-----
1	darren_tremblett@nhl.com
2	dave@yeehaw.com
3	administrator@dlink.com
4	fattony@themob.com
5	
6	
7	
8	

**DES-3026:4#**

## smtp send\_testmsg

Purpose	Used to send a test message to mail recipients configured on the Switch.
Syntax	<b>smtp send_testmsg</b>
Description	This command is used to send test messages to all mail recipients configured on the Switch, thus testing the configurations set and the reliability of the SMTP server.
Parameters	None.
Restrictions	Only administrator-level users can issue this command.

Example usage:

To send a test mail message to all configured mail recipients.

**DES-3028:4# smtp send\_testmsg**

**Command: smtp send\_testmsg**

**Subject: This is a SMTP test.**

**Content: Hello everybody!!**

**Sending mail, please wait...**

**Success.**

**DES-3028:4#**

## PoE COMMANDS

DES-3028P and the DES-3052P support Power over Ethernet (PoE) as defined by the IEEE 802.3af specification. Ports 1-24 supply 48 VDC power to PDs over Category 5 or Category 3 UTP Ethernet cables. The DES-3028P and the DES-3052P follow the standard PSE pinout *Alternative A*, whereby power is sent out over pins 1, 2, 3 and 6. The DES-3028P and the DES-3052P works with all D-Link 802.3af capable devices.

The DES-3028P and the DES-3052P include the following PoE features:

- d) The auto-discovery feature recognizes the connection of a PD (Powered Device) and automatically sends power to it.
- e) The auto-disable feature will occur under two conditions: first, if the total power consumption exceeds the system power limit; and second, if the per port power consumption exceeds the per port power limit.
- f) The active circuit protection feature automatically disables the port if there is a short. Other ports will remain active.

PDs receive power according to the following classification:

Class	Max power used by PD
0	0.44 to 12.95W
1	0.44 to 3.84W
2	3.84 to 6.49W
3	6.49 to 12.95W

PSE provides power according to the following classification:

Class	Max power provided by PSE
0	15.4W
1	4.0W
2	7.0W
3	15.4W

The PoE commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config poe system	{power_limit <value 37-370>   power_disconnect_method [deny_next_port   deny_low_priority_port]}
config poe ports	[all   <portlist>] {state [enable   disable]   priority [critical   high   low]   power_limit [class_0   class_1   class_2   class_3]   user_define <value 1000-16800>}}
show poe	[system   ports {<portlist>}]

**NOTE:** The maximum PoE power limit for the DES-3028P is 185W and the maximum PoE power limit for the DES-3052P 370W.

Each command is listed in detail in the following sections.

config poe system	
<b>Purpose</b>	Used to configure the parameters for the whole PoE system.
<b>Syntax</b>	<b>config poe system {power_limit &lt;value 37-370&gt;   power_disconnect_method [deny_next_port   deny_low_priority_port]}</b>
<b>Description</b>	Allows the user to configure the parameters for the whole PoE

**config poe system**

	system.
<b>Parameters</b>	<p><i>power_limit</i> - The power limit parameter allows the user to configure the power budget of whole PoE system. The minimum setting is 37 W and the maximum is 370W (depending on the power supplier's capability). Default setting is 370 W.</p> <p><i>power_disconnect_method</i> -This parameter is used to configure the power management disconnection method. When the total consumed power exceeds the power budget, the PoE controller initiates a port disconnection to prevent overloading the power supply. The controller uses one of the following two ways to implement the disconnection:</p> <p>g) <i>deny_next_port</i> - After the power budget has been exceeded, the next port attempting to power up is denied, regardless of its priority.</p> <p>h) <i>deny_low_priority_port</i> - After the power budget has been exceeded, the next port attempting to power up, causes the port with the lowest priority to shut down (to allow high-priority ports to power up).</p> <p>The default setting is <i>deny_next_port</i>.</p>
<b>Restrictions</b>	User Account Command Level – Administrator and Operator

Example usage:

To config the PoE System on the Switch:

```
DES-3028P:4#config poe system power_limit 185
power_disconnect_method deny_next_port
Command: config poe system power_limit 185
power_disconnect_method deny_next_port

Success.

DES-3028P:4#
```

**config poe ports**

<b>Purpose</b>	Used to configure the PoE port settings.
<b>Syntax</b>	<b>config poe ports [all   &lt;portlist&gt;] {state [enable   disable]   priority [critical   high   low]   power_limit [class_0   class_1   class_2   class_3   user_define &lt;value 1000-16800&gt;]}</b>
<b>Description</b>	The <b>config poe ports</b> command is used to configure the PoE port settings.
<b>Parameters</b>	<p>&lt;portlist&gt; -Specifies a range of ports to be configured or all the ports.</p> <p><i>all</i> – Specifies that all ports on the Switch will be configured for PoE.</p> <p><i>state</i> - Enables or disables the PoE function on the Switch.</p> <p><i>priority</i> - Setting the port priority affects power-up order and shutdown order. <b>Power-up order</b>: When the Switch powers-up or reboots, the ports are powered up according to their priority (<i>critical</i> first, then <i>high</i> and finally <i>low</i>). <b>Shutdown order</b>: When the power limit has been exceeded, the ports will shut down according to their priority if the power disconnect method is set to <i>deny_low_priority_port</i>.</p> <ul style="list-style-type: none"> <li><i>critical</i> – Specifying this parameter will nominate these ports has having the highest priority for all configured PoE</li> </ul>

**config poe ports**

ports. These ports will be the first ports to receive power and the last to disconnect power.

- *high* – Specifying this parameter will nominate these ports as having the second highest priority for receiving power and shutting down power.
- *low* – Specifying this parameter will nominate these ports as having the lowest priority for receiving and shutting down power. These ports will be the first ports to have their power disconnected if the *power\_disconnect\_method* chosen in the **config poe system** command is *deny\_low\_priority\_port*.

*power\_limit* – Allows the user to configure the per-port power limit. If a port exceeds its power limit, the PoE system will shut down that port. The minimum user-Defined setting is 1000mW and maximum is 16800mW. The default setting is 15400mW. The user may also choose to define a power class by which to set the power limit, based on the PSE table at the beginning of this section.

- *class\_0* – Choosing this class will set the maximum port limit at 15.4W.
- *class\_1* – Choosing this class will set the maximum port limit at 4.0W.
- *class\_2* – Choosing this class will set the maximum port limit at 7.0W.
- *class\_3* – Choosing this class will set the maximum port limit at 15.4.0W.
- *user\_define* – Choosing this parameter will allow the user to set a power limit between 1000 and 16800mW with a default value of 15400mW.

**Restrictions**

User Account Command Level – Administrator and Operator

Example usage:

To config the Switch's ports for PoE:

```
DES-3028P:4#config poe ports 1-3 state enable priority critical power_limit class_0
```

```
Command: config poe ports 1-3 state enable priority critical power_limit class_0
```

Power limit has been set to 15400mW(Class 0 PD upper power limit 12.95W + power loss on cable).

Success.

```
DES-3028P:4#
```

**show poe system**

**Purpose** Used to display the setting and actual values of the whole PoE system.

**Syntax** **show poe [system | ports {<portlist>}]**

**Description** Display the settings, actual values and port configuration of the whole PoE system.

**Parameters** *system* – Choosing this parameter will display the system settings for PoE, such as switch power limit, consumption, remaining useable power and the power disconnection method.

*ports* – Choosing this parameter will display the settings for PoE on a port-by-port basis.

*portlist* – Enter a port or range of ports to be displayed for their PoE settings.

**show poe system**

Restrictions          None.

Example usage:

To display the power settings for the switch system:

```
DES-3028P:4#show poe system
Command: show poe system

PoE System Information
-----
Power Limit           : 185(watts)
Power Consumption     : 0(watts)
Power Remained        : 185(watts)
Power Disconnection Method : Deny Next Port

If power disconnection method is set to deny next port, then the system can not utilize
out its maximum power capacity. The maximum unused watt is 19W.

DES-3028P:4#
```

Example usage:

To display the power settings for the switch's ports

```
DES-3028P:4#show poe ports
Command: show poe ports

Port State      Priority      Power Limit(mW)
  Class      Power(mW)   Voltage(decivolt)  Current (mA)
  Status
=====
 1  Enabled  Critical      12000(User-Defined)
   0         0             0                   0
   OFF : Non-standard PD connected
 2  Enabled  Critical      12000(User-Defined)
   0         0             0                   0
   OFF : Interim state during line detection
 3  Enabled  Critical      12000(User-Defined)
   0         0             0                   0
   OFF : Interim state during line detection
 4  Enabled  Low           15400(User-Defined)
   0         0             0                   0
   OFF : Interim state during line detection
 5  Enabled  Low           15400(User-Defined)
   0         0             0                   0
   OFF : Interim state during line detection
 6  Enabled  Low           15400(User-Defined)
   0         0             0                   0
   OFF : Interim state during line detection

## COMMAND HISTORY LIST

The switch history commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
?	
dir	
config command_history	<value 1-40>
show command_history	

Each command is listed, in detail, in the following sections.

?	
Purpose	Used to display all commands in the Command Line Interface (CLI).
Syntax	? {<command>}
Description	This command will display all of the commands available through the Command Line Interface (CLI).
Parameters	{<command>} – Entering the question mark with an appropriate command will list all the corresponding parameters for the specified command, along with a brief description of the commands function and similar commands having the same words in the command.
Restrictions	None.

## Example usage

To display all of the commands in the CLI:

```
DES-3028P:4#?
..
?
clear
clear arptable
clear counters
clear fdb
clear log
clear port_security_entry port
config 802.1p default_priority
config 802.1p user_priority
config 802.1x auth_mode
config 802.1x auth_parameter ports
config 802.1x auth_protocol
config 802.1x capability ports
config 802.1x init
config 802.1x reauth
config access_profile profile_id
config account
config admin local_enable
config arp_aging time
config arprentary
config authen application
CTRL+C ESC q Quit SPACE n Next Page ENTER Next Entry a All
```

To display the parameters for a specific command:

```
DES-3028P:4# config stp
Command:? config stp

Command: config stp
Usage: {maxage <value 6-40> | maxhops <value1-20> | hellotime <value 1-10> | forwarddelay <value 4-30> | txholdcount <value 1-10> | fbpdu [enable | disable] | lbd [enable | disable] | lbd_recover_timer [0 | <value 60-1000000>]}
Description: Used to update the STP Global Configuration.
config stp instance_id
config stp mst_config_id
config stp mst_ports
config stp ports
config stp priority
config stp version

DES-3028P:4#
```

**dir**

Purpose	Used to display all commands in the Command Line Interface (CLI).
Syntax	<b>dir</b>
Description	This command will display all of the commands available through the Command Line Interface (CLI).
Parameters	None.
Restrictions	None.

## Example usage:

To display all commands:

```

DES-3028P:4#dir
..
?
clear
clear arptable
clear counters
clear fdb
clear log
clear port_security_entry port
config 802.1p default_priority
config 802.1p user_priority
config 802.1x auth_mode
config 802.1x auth_parameter ports
config 802.1x auth_protocol
config 802.1x capability ports
config 802.1x init
config 802.1x reauth
config access_profile profile_id
config account
config admin local_enable
config arp_aging time
config arpentry
config authen application
CTRL+C ESC q Quit SPACE n Next Page ENTER Next Entry a All

```

## config command\_history

Purpose	Used to configure the command history.
Syntax	<b>config command_history &lt;value 1-40&gt;</b>
Description	This command is used to configure the command history.
Parameters	<value 1-40> – The number of previously executed commands maintained in the buffer. Up to 40 of the latest executed commands may be viewed.
Restrictions	None.

### Example usage

To configure the command history:

```

DES-3028P:4#config command_history 20
Command: config command_history 20

Success.

DES-3028P:4#

```

## show command\_history

Purpose	Used to display the command history.
Syntax	<b>show command_history</b>
Description	This command will display the command history.
Parameters	None.
Restrictions	None.

### Example usage

To display the command history:

```
DES-3028P:4#show command_history  
Command: show command_history
```

```
?  
? show  
show vlan  
show command history
```

```
DES-3028P:4#
```

# TECHNICAL SPECIFICATIONS

## General

<b>Protocols</b>	<p>IEEE 802.3 10BASE-T Ethernet          IEEE 802.3u 100BASE-TX Fast Ethernet          IEEE 802.3ab 1000BASE-T Gigabit Ethernet          IEEE 802.3z 1000BASE-T (SFP “Mini GBIC”)          IEEE 802.1D Spanning Tree          IEEE 802.1D/S/W Spanning Tree          IEEE 802.1Q VLAN          IEEE 802.1p Priority Queues          IEEE 802.1X Port Based Network Access Control          IEEE 802.3ad Link Aggregation Control          IEEE 802.3x Full-duplex Flow Control          IEEE 802.3 NWay auto-negotiation          IEEE802.3af standard (only for POE)</p>
<b>Fiber-Optic</b>	<p>SFP (Mini GBIC) Support:          DEM-310GT (1000BASE-LX)          DEM-311GT (1000BASE-SX)          DEM-314GT (1000BASE-LH)          DEM-315GT (1000BASE-ZX)          DEM-210 (Single Mode 100BASE-FX)          DEM-211 (Multi Mode 100BASE-FX)</p> <p>WDM Transceivers Supported:          DEM-330T (TX-1550/RX-1310nm), up to 10km, Single-Mode          DEM-330R (TX-1310/RX-1550nm), up to 10km, Single-Mode          DEM-331T (TX-1550/RX-1310nm), up to 40km, Single-Mode          DEM-331R (TX-1310/RX-1550nm), up to 40km, Single-Mode</p>
<b>Standards</b>	CSMA/CD
<b>Data Transfer Rates:</b>	Half-duplex      Full-duplex
<b>Ethernet</b>	10 Mbps          20Mbps
<b>Fast Ethernet</b>	100Mbps          200Mbps
<b>Gigabit Ethernet</b>	n/a                2000Mbps
<b>Topology</b>	Star
<b>Network Cables</b>	<p>Cat.5 Enhanced for 1000BASE-T          UTP Cat.5, Cat. 5 Enhanced for 100BASE-TX          UTP Cat.3, 4, 5 for 10BASE-T          EIA/TIA-568 100-ohm screened twisted-pair (STP)(100m)</p>
<b>Number of Ports</b>	<p>DES-3028/DES-3028P: 24 x 10/100Base-T Ports                                    2 x 1000Base-T/SFP Combo Ports                                    2 x 1000Base-T ports</p> <p>DES-3052/DES-3052P: 48 x 10/100Base-T Ports                                    2 x 1000Base-T/SFP Combo Ports                                    2 x 1000Base-T ports</p>

### Physical and Environmental

<b>Internal Power Supply</b>	Input: 100~240V, AC/10A, 50~60Hz Output: DES-3028/DES-3052: 12V, 3.3A (Max) DES-3028P: 12V, 3.3A/50V, 3.7A (Max) DES-3052P: 12V, 10.5A/50V, 7.5A (Max)
<b>Power Consumption</b>	DES-3028 – 25W DES-3052 – 26W DES-3028P – 217W DES-3052P – 395W
<b>DC Fans</b>	DES-3028/DES-3052 – None DES-3028P – one 8.5cm fan and one 17cm fan DES-3052P – one 5cm fan, one 8.3cm fan, and one 17cm fan
<b>Operating Temperature</b>	0 - 40°C
<b>Storage Temperature</b>	-40 - 70°C
<b>Humidity</b>	5 - 95% non-condensing
<b>Dimensions</b>	DES-3028: 441(W) x 207(D) x 44(H) mm DES-3028P/3052/3052P: 441(W) x 309(D) x 44(H) mm
<b>Weight</b>	DES-3028 – 2.36kg (5.20lbs) DES-3028P – 4.5kg (9.9lbs) DES-3052 – 3.85kg (8.48lbs) DES-3052P – 5.70kg (12.56lbs)
<b>EMI</b>	CE Class A, FCC Class A, C-Tick, VCCI
<b>Safety</b>	CB Report, UL

### Performance

<b>Transmission Method</b>	Store-and-forward
<b>Packet Buffer</b>	512 KB per device
<b>Packet Filtering/ Forwarding Rate</b>	14,881 pps (10M port) 148.810 pps (100M port) 1,488,100 pps (1Gbps port)
<b>MAC Address Learning</b>	Automatic update. Supports 8K MAC address
<b>Priority Queues</b>	4 Priority Queues per port.
<b>Forwarding Table Age Time</b>	Max age: 10-1000000 seconds. Default = 300.

### PoE Features

PoE Capable Ports	DES-3028P:Random 12 ports DES-3052P:Random 24 ports																																				
Power feeding for PoE	DES-3028P: Per port →15.4W (Default), Output capacity for DES-3028P→185W Power consumption→Max. 225W DES-3052P: Per port →15.4W (Default), Output capacity for DES-3052P→370W Power consumption→Max. 500W																																				
PoE Specification	<p>Supplies power to PD device up to 15.4W per port, meeting IEEE802.3af standards and more sufficiently is able to provide power to PD devices</p> <p>Auto discovery feature, automatically recognize the connection of PD device and immediately sends power to it</p> <p>Auto disable port if the port current is over 350mA while other ports remain active</p> <p>Active circuit protection, automatically disables the port if there is a short while other ports remain active</p> <p>PD should be able to receive the power following the classification below</p> <table border="1"> <thead> <tr> <th>Class</th> <th>Usage</th> <th>Max power used by PD</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>Default</td> <td>0.44 to 12.95W</td> </tr> <tr> <td>1</td> <td>Optional</td> <td>0.44 to 3.84W</td> </tr> <tr> <td>2</td> <td>Optional</td> <td>3.84 to 6.49W</td> </tr> <tr> <td>3</td> <td>Optional</td> <td>6.49 to 12.95W</td> </tr> <tr> <td>4</td> <td>Not allowed</td> <td>Reserved</td> </tr> </tbody> </table> <p>PSE should be provide the power following the classification below</p> <table border="1"> <thead> <tr> <th>Class</th> <th>Usage</th> <th>Max power used by PD</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>Default</td> <td>15.4W</td> </tr> <tr> <td>1</td> <td>Optional</td> <td>4.0W</td> </tr> <tr> <td>2</td> <td>Optional</td> <td>7.0W</td> </tr> <tr> <td>3</td> <td>Optional</td> <td>15.4W</td> </tr> <tr> <td>4</td> <td>Reserved</td> <td>15.4W</td> </tr> </tbody> </table> <p>DES-3028P/DES-3052P should follow the standard PSE pin-out standard of Alternative A which is sending out power over number 1,2,3,6 pins of 8 wires of CAT5 UTP cable</p> <p>DES-3028P/DES-3052P works with all D-Link 802.3af capable devices</p> <p>9. DES-3028P/DES-3052P works with all non-802.3af capable D-Link AP, IP Cam and IP phone via DWL-P50</p>	Class	Usage	Max power used by PD	0	Default	0.44 to 12.95W	1	Optional	0.44 to 3.84W	2	Optional	3.84 to 6.49W	3	Optional	6.49 to 12.95W	4	Not allowed	Reserved	Class	Usage	Max power used by PD	0	Default	15.4W	1	Optional	4.0W	2	Optional	7.0W	3	Optional	15.4W	4	Reserved	15.4W
Class	Usage	Max power used by PD																																			
0	Default	0.44 to 12.95W																																			
1	Optional	0.44 to 3.84W																																			
2	Optional	3.84 to 6.49W																																			
3	Optional	6.49 to 12.95W																																			
4	Not allowed	Reserved																																			
Class	Usage	Max power used by PD																																			
0	Default	15.4W																																			
1	Optional	4.0W																																			
2	Optional	7.0W																																			
3	Optional	15.4W																																			
4	Reserved	15.4W																																			

## LED Indicators

Location	LED Indicative	Color	Status	Description	
Per Device	Power	Green	Solid Light	Power On	
			Light off	Power Off	
	Console	Green	Solid Light	Console on	
			Blinking	POST is in progress/ POST is failure.	
			Light off	Console off	
"Mode Select Button"	Link/Act/ Speed	Green	Solid Light	Link/Act/Speed Mode	
	PoE	Green	Solid Light	PoE Mode	
LED Per 10/100 Mbps Port	Link/Act/Speed	Green/Amber	Solid Green	When there is a secure 100Mbps Fast Ethernet connection (or link) at any of the ports.	
			Blinking Green	When there is reception or transmission (i.e. Activity—Act) of data occurring at a Fast Ethernet connected port.	
			Solid Amber	When there is a secure 10Mbps Ethernet connection (or link) at any of the ports.	
			Blinking Amber	When there is reception or transmission (i.e. Activity—Act) of data occurring at an Ethernet connected port.	
			Light off	No link	
	PoE	Green	Solid Green	Powered device is connected.	
			Blinking	Port has detected a error condition	
			Light off	Powered Device may receive power from an AC power source or no 802.3af PD is found.	
	LED Per GE Port	Link/Act/Speed mode for 1000BASE-T ports	Green/Amber	Solid Green	When there is a secure 1000Mbps connection (or link) at any of the ports.
				Blinking Green	When there is reception or transmission (i.e. Activity--Act) of data occurring at a 1000Mbps connected port.
Solid Amber				When there is a secure 10/100Mbps Fast Ethernet connection (or link) at any of the ports.	
Blinking Amber				When there is reception or transmission (i.e. Activity—Act) of data occurring at a Fast Ethernet connected port.	
Light off				No link	
Link/Act/Speed mode for SFP ports		Green/Amber	Solid Green	When there is a secure 1000Mbps connection (or link) at the ports.	
			Blinking Green	When there is reception or transmission (i.e. Activity--Act) of data occurring at a 1000Mbps connected port.	
			Solid Amber	When there is a secure 100Mbps connection (or link) at any of the ports.	

			Blinking Amber	When there is reception or transmission (i.e. Activity—Act) of data occurring at the ports.
			Light off	No link

## Power

Feature	Detailed Description
Internal Power Supply	AC Input: 100 - 240 VAC, 50-60 Hz

## Performance

Feature	Detailed Description
Wire speed on all FE/GE ports	Full-wire speed (full-duplex) operation on all FE/GE ports
Forwarding Mode	Store and Forward
Switching Capacity	12.8Gbps for DES-3028/DES-3028P 17.6Gbps for DES-3052/DES-3052P
64 Byte system packet forwarding rate	9.5 million packets per second for DES-3028/DES-3028P 13.1 million packets per second for DES-3052/DES-3052P
Priority Queues	4 Priority Queues per port
MAC Address Table	Supports 8K MAC address
Packet Buffer Memory	4M bits

## Port Functions

Feature	Detailed Description
Console Port	DCE RS-232 DB-9 for out-of-band configuration of the software features
24 x 10/100BaseT ports 48 x 10/100BaseT ports (Power over LAN support)	Compliant to following standards, IEEE 802.3 compliance IEEE 802.3u compliance Support Half/Full-Duplex operations All ports support Auto MDI-X/MDI-II cross over IEEE 802.3x Flow Control support for Full-Duplex mode, Back Pressure when Half-Duplex mode, and Head-of-line blocking prevention. Compliant IEEE802.3af standard(only for PoE)
Combo ports in the front panel	2 combo 1000BASE-T/SFP ports  1000BASE-T ports compliant to following standards: IEEE 802.3 compliance IEEE 802.3u compliance IEEE 802.3ab compliance Support Full-Duplex operations IEEE 802.3x Flow Control support for Full-Duplex mode, back pressure when Half-Duplex mode, and Head-of-line blocking prevention  SFP Transceivers Supported:

	<p>DEM-310GT (1000BASE-LX)                  DEM-311GT (1000BASE-SX)                  DEM-314GT (1000BASE-LH)                  DEM-315GT (1000BASE-ZX)                  DEM-210 (Single Mode 100BASE-FX)                  DEM-211 (Multi Mode 100BASE-FX)</p> <p>-WDM Transceiver Supported:                  1.DEM-330T (TX-1550/RX-1310nm), up to 10km, Single-Mode                  2.DEM-330R (TX-1310/RX-1550nm), up to 10km, Single-Mode                  3.DEM-331T (TX-1550/RX-1310nm), up to 40km, Single-Mode                  4.DEM-331R (TX-1310/RX-1550nm), up to 40km, Single-Mode</p> <p>Compliant to following standards:                  IEEE 802.3z compliance                  IEEE 802.3u compliance</p>
<p>2 1000BASE-T ports in the front panel</p>	<p>1000BASE-T ports compliant to following standards:                  1. IEEE 802.3 compliance                  2. IEEE 802.3u compliance                  3. IEEE 802.3ab compliance                  4. Support Full-Duplex operations                  5. IEEE 802.3x Flow Control support for Full-Duplex mode, back pressure when Half-Duplex mode, and Head-of-line blocking prevention</p>

**Pin Assignment for Data/Power Pairs: (alternative A MDI-X)**

PIN#	Signal	Descriptions
1	Receive+ & Power-	0V
2	Receive- & Power-	0V
3	Transmit+ & Power+	+48V
4		
5		
6	Transmit- & Power+	+48V
7		
8
