| Security | Toll fraud, the unauthorized use of your telecommunications system by an unauthorized party (for example, persons other than your company's employees, agents, subcontractors, or persons working on your company's behalf), can result in substantial additional charges for your telecommunications services. You are responsible for the security of your system. There may be a risk of toll fraud associated with your telecommunications system. You are also responsible for programming and configuring your equipment to prevent unauthorized use. Your system administrator should read all documents provided with this product to fully understand the features that can introduce the risk of toll fraud and the steps that can be taken to reduce that risk. Lucent Technologies does not warrant that this product is immune from or will prevent unauthorized use of common-carrier telecommunication services or facilities accessed through or connected to it. Lucent Technologies will not be responsible for any charges that result from such unauthorized use. |
| Trademarks | DEFINITY, MERLIN, MERLIN LEGEND, PARTNER, SYSTIMAX, and TransTalk are registered trademarks of Lucent Technologies. Supra is a registered trademark of Plantronics, Inc. |
| Warranty | Lucent Technologies provides a limited warranty for this product; see Appendix A. |
| Ordering Information | The order number for this book is 503-801-166. The order number for the <i>MDW 9031/9031DCP Wireless Pocket Phone Quick Reference</i> is 503-801-165. To order additional copies of these reference materials, call 1-800-457-1235 or 317-322-6791. To order parts and accessories, see "Ordering Replacement and Optional Parts" in Chapter 4. |

Customer Support

In the continental U.S., call 1-800-628-2888 if you need assistance when installing the Model 117A4 Carrier to use your MDW 9031 Wireless Pocket Phone with a PARTNER, MERLIN, or MERLIN LEGEND System. Consultation charges may apply.

In the continental U.S., call 1-800-225-7585 if you need assistance when installing the Model 117A4 Carrier to use your MDW 9031/9031DCP Wireless Pocket Phone with a DEFINITY System, or contact the Lucent Customer Care Center at 1-800-242-2121. Consultation charges may apply.

For all other systems, follow the procedure you normally use to obtain support for your communications system.

Outside the continental U.S., contact your Lucent Technologies Representative or local Authorized Dealer.

1 Introduction

About TransTalk[®] 9000 Products

Congratulations on the purchase of your new TransTalk 9000 Digital Wireless System **MDW 9031/9031DCP Pocket Phone**. MDW stands for “Multi-Line Digital Wireless.” The MDW 9031/9031DCP Pocket Phones are the latest additions to the TransTalk 9000 family of wireless products, which also includes the MDW 9000 Telephone, the MDW 9010 Telephone, the MDW 9030P Pocket Phone, and the MDW9031 Dual Zone Pocket Phone. All of these phones are designed to Lucent Technologies’ high standards for convenience, reliability, and innovation.

TransTalk 9000 products are designed to work with your communications system (PARTNER[®], PARTNER II, PARTNER Plus, PARTNER Advanced Communications System, MERLIN[®], MERLIN II, MERLIN Plus, MERLIN LEGEND[®], System 25, System 75, System 85, or DEFINITY[®]) to provide wireless flexibility.

What Is a Wireless Phone?

A wireless phone has no handset cord and no telephone line cord, so it is portable. This portability lets you move around freely, without giving up the features of a wired phone. With a wireless phone, you can make and receive calls even when you are away from your desk, thus remaining accessible and responsive to your customers and coworkers as you move around your work area. Time-sensitive work issues will not have to be postponed until you are back at your desk. You can also reduce the number of (sometimes costly) phone calls you must return.

TransTalk 9000 System

Your wireless phone’s **handset** is linked with your communications system through a matching **radio module**, *not* through the **battery charger** where the handset sits for charging. Each handset can be used only with the radio module packaged with the handset. The handset and the radio module each have the same unique security code and serial number (on the bottom of the radio module and inside the battery compartment of the handset) to identify the matching pair. There is built-in and secure automatic registration between the handset and radio module, so that your system is ready to use after powering up.

Your TransTalk System may have from 1 to 30 wireless phones. In order to use multiple wireless phones within the same zone (area of coverage), you also need a **carrier** (also known as a backplane). A carrier holds up to six radio modules and synchronizes radio signals for proper operation of multiple phones, ensuring consistent voice quality and range. If you have a key system (for example, PARTNER or MERLIN), you can link up to three carriers supporting up to 18 wireless phones in a single zone; if you have a PBX system (for example, DEFINITY), you can link up to five carriers, supporting up to 30 wireless phones in a single zone. Linked carriers are automatically synchronized with each other.

The TransTalk 9000 System enables you to use several different phone and carrier models in the same zone; however, there are some compatibility issues to consider. You need to know the following:

- The name of the MDW phone (9000, 9010, 9030P, or 9031, 9031DCP, 9031 Dual Zone), located in the battery compartment of the handset. (For an MDW 9000 phone, you also need to know the Apparatus Code, also located in the battery compartment of the handset.)
- The model number of your carrier, located on the left side of the carrier.

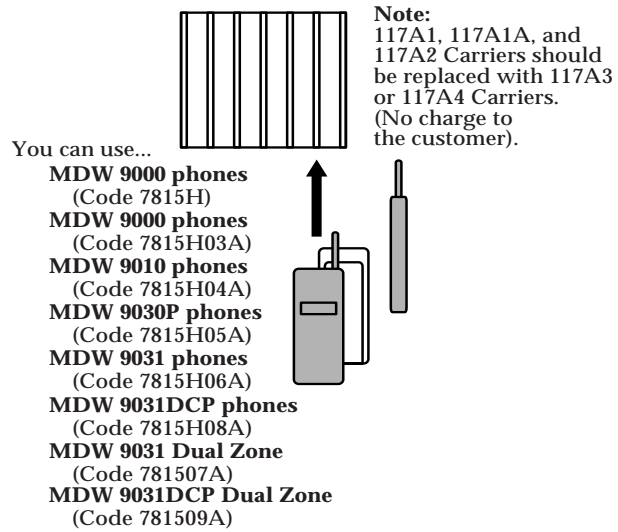

The following illustrations show which phone models and carriers can be used together:

Single Carrier Installation

If you have a **Model 117A1 Carrier...**

If you have a **Model 117A3 Carrier, or Model 117A4 Carrier...**

Note: You can use Code 7815H phones *together* with other phones *only* in a Model 117A3 or Model 117A4 *single* carrier installation.

Multiple (5 Max) Carrier Installation

If you have multiple **Model 117A3 or Model 117A4 System Expansion Carriers** (or both)...

Use only...

MDW 9010 phones
(Code 7815H04A)

MDW 9030P phones
(Code 7815H05A)

MDW 9031 phones
(Code 7815H06A)

MDW 9031DCP phones
(Code 7815H08A)

MDW 9031 Dual Zone
(Code 781507A)

Note:
Fourth and fifth carriers can be used only with PBX extensions.

Note: Multiple carrier installations *must* use MDW 9010 phones, MDW 9030P phones, and/or MDW 9031/9031DCP phones. MDW 9000 phones cannot be used in multiple carrier installations.

About the MDW 9031/9031DCP Pocket Phone

The MDW 9031/9031DCP Pocket Phone is not only wireless, but it is also lightweight and pocket-sized. A removable carrying clip and a lanyard are provided with the handset. You can use either the clip or the lanyard for hands-free portability. The MDW 9031/9031DCP also has a headset connector to accommodate an optional headset.

You can be notified of an incoming call by either an alerter (which rings) or a vibrator, or both. There is a five-line, user-activated backlit display that shows information you would see on a wired system phone's display (with the exception of the time), icons representing various handset functions (such as the alerter and the vibrator), and the status of up to 12 telephone lines. The MDW 9031/9031DCP provides Redial, Hold, Mute, Transfer, and Conference buttons, and allows you to program additional features on unused line buttons.

Privacy Information

The MDW 9031/9031DCP Pocket Phone is designed to protect the privacy and security of your voice conversation. The phone uses continuously changing radio frequencies and digital encoding techniques to make it impossible for eavesdropping to occur through the use of commercially available analog radio scanners.

Where Can You Use Your Pocket Phone?

The MDW 9031/9031DCP Pocket Phone can be used in most typical office buildings, warehouses, malls, and even outdoor areas such as loading docks. *The location of the radio module greatly affects the performance of the MDW 9031/9031DCP. Read the "Positioning a Radio Module or Carrier(s)" section in Chapter 2 to determine the best place to install the radio module.* Repeat the tests several times with the radio module positioned in a different location each time. To perform the tests, all you need is an electrical outlet for the radio module and a charged battery pack in the handset.

Parts List

Along with this book and the MDW 9031/9031DCP Pocket Phone Quick Reference, the box should contain the items shown below. If it does not, call for customer support as described in the *Copyright and Legal Notices* at the beginning of this book.

Handset

Battery Pack

Standard
Battery Pack
Carrying Clip

Extended
Battery Pack
Carrying Clip

Radio Module

Battery Charger

11-foot (3.4 m)
Power Cord/AC Adapter
for Battery Charger

Wall Spacers (2)

Phillips Head
Wood Screws (2)

14-foot (4.2 m)
Telephone Line Cord

8-inch (0.5 m) Lanyard

Additional Parts

The following parts *may* be necessary, depending upon your installation.

This Kit of Parts is required only when a single (stand-alone) MDW 9031/9031DCP Pocket Phone is installed:

These additional parts are required when two or more MDW 9031/9031DCP Pocket Phones are installed in the same zone:

For information about ordering parts, see "Ordering Replacement and Optional Parts" in Chapter 4.

Spare Battery and Headset

One nickel metal hydride battery pack, which provides up to 3 hours of talk time, comes with your MDW 9031/9031DCP Pocket Phone. For extended phone usage, you should purchase an additional battery pack. If you require full business-day use, you can purchase an extended battery pack. Although thicker and heavier than the standard battery pack, the extended battery pack provides 8-9 hours of talk time when fully charged. You can store the extra battery pack in the spare battery compartment of the battery charger. Then, when the battery pack in the handset is low, you can switch battery packs.

To help you answer calls, an optional Supra[®] 9031 headset or a Radium (over-the-ear) headset can be attached to a quick-disconnect adapter cord, which you can insert into the connector on the bottom of the handset to allow hands-free conversation. For instructions for connecting the headset, see "Using a Headset" in Chapter 3.

For ordering information, see "Ordering Replacement and Optional Parts" in Chapter 4.

2 Installing the MDW 9031/9031DCP Pocket Phone

Important Safety Instructions

This book contains instructions related to safety labels on the product:

WARNING:

WARNING indicates the presence of a hazard that can cause severe or fatal personal injury if the hazard is not avoided.

CAUTION:

CAUTION indicates the presence of a hazard that will or can cause minor personal injury or property damage if not avoided.

This phone is designed to provide trouble-free performance without any special maintenance procedures. To reduce the risk of accidental damage:

- Keep the phone in an area free of dust, smoke, and moisture; do not block the air vents by placing objects on top of the radio module.
- Do not place the phone or battery charger near a heating duct, radiator, or other heat source, and do not drop or expose it to excessive shock or vibration.
- Unplug the battery charger, radio module, or carrier if its power cord is damaged, if liquid is spilled into it, or if its housing becomes cracked or otherwise damaged.
- To clean your phone, wipe the outside housing with a soft, dust-free cloth. If absolutely necessary, you may use a cloth slightly dampened with a mild soap-and-water solution. Dry quickly with a soft cloth.

CAUTION:

Your phone contains sensitive electronic parts. Never submerge it in any kind of liquid, and never use liquid or aerosol cleaners, detergents, alcohols, solvents, abrasive cleaners, or an excessive amount of water when cleaning the housing and faceplate. To do so could result in irreparable damage.

Guidelines for Safe and Efficient Operation

Your wireless telephone is a radio transmitter and receiver. When the phone is turned on, it receives and sends out radio frequency (RF) energy. The phone operates in the frequency range of 902-928 MHz. Your hand-held wireless telephone uses the digital TDD mode. The power is transmitted in bursts at a 200 Hz pulsed repetition rate. The peak envelope transmit power is 325 mW or less.

Exposure to Radio Frequency Energy

The design of your wireless telephone complies with the latest Institute of Electrical and Electronic Engineers (IEEE) and the American National Standards Institute (ANSI) safety levels with respect to human exposure to RF energy. Of course, if you would like to limit RF exposure even further, you may choose to control the duration of your calls.

 **CAUTION:****Cardiac Pacemakers**

The MDW 9031/9031DCP handset is a radio device and, like all radio devices, should not be placed next to a pacemaker.

Preliminary studies performed at the US Food and Drug Administration (FDA) and elsewhere have shown that when digital cellular telephones are placed very close to implanted cardiac pacemakers, interference with the operation of the implanted pacemaker can occur. These preliminary studies show that interference does not occur when there is a reasonable distance between the telephone and the implanted pacemaker and stops when the phone is turned off or moved so that it is more than 6 inches (15 cm) from the pacemaker. Digital cellular telephones operate at 0.6W. TransTalk wireless telephones operate at a lower peak power of 325 mW or less (100 mW, on an average).

Until more is known, the FDA suggests that people with pacemakers may want to take some simple precautions when using or carrying digital wireless telephones. They should ensure that there is ample distance between the digital wireless telephone and the pacemaker—by not placing the phone next to the pacemaker implant (for example, in a shirt or a coat pocket directly over the pacemaker implant) when the phone is on and ready to receive a call and by holding it to the ear opposite the side of the body where the pacemaker is implanted when using the phone. They should consult their physicians or medical device manufacturers to determine if additional precautions are necessary.

Hearing Aid Compatibility

Most electronic equipment, such as equipment in hospitals, is shielded from RF energy. RF energy from wireless telephones, however, may affect some electronic equipment.

Although the TransTalk wireless telephone is compatible with inductively coupled hearing aids, a physician or hearing aid manufacturer should be consulted to determine if a hearing aid is adequately shielded from external RF energy. The operation of inadequately shielded medical devices may be adversely affected when a portable wireless telephone is operating in close proximity.

Basic Safety Precautions for Installation and Use

Always follow these basic safety precautions when installing or using this product to reduce risk of injury from fire or electric shock.

 **WARNING:**

Installation of this equipment for In-Range Out of Building (IROB) conditions requires the use of protectors. See the documentation that came with your communications system for more information.

 **CAUTION:**

This equipment is for installation on Lucent Technologies PARTNER, PARTNER Plus, PARTNER II, PARTNER Advanced Communications System, MERLIN, MERLIN Plus, MERLIN II, MERLIN LEGEND, System 25, System 75, System 85, and DEFINITY Communications Systems only.

- Read and understand all instructions in this book before using this product.
- Observe all warnings and instructions marked on the product.
- Do not use the product near water or when you are wet. If the product comes in contact with any liquids, unplug the power cord and telephone line cords immediately. Do not plug the product back in until it has dried thoroughly.
- Never push objects of any kind into this product through housing slots, since the objects may touch hazardous voltage points or short out parts that could result in a risk of electric shock. Never spill liquid of any kind on the phone.
- If you suspect a gas leak, report it immediately, but use a phone away from the area in question. The phone's electrical contacts could generate a tiny spark. While unlikely, it is possible that this spark could ignite a heavy concentration of gas. This product is not approved for use in areas labeled by the Occupational Safety and Health Administration (OSHA) as "explosive environments." Only "Explosive Atmosphere Telephones" may be used in such hazardous environments.
- Unplug this product from wall outlets and telephone jacks before cleaning. Clean exposed parts with a soft, damp cloth. Do not use liquid or aerosol cleaners.
- Unplug this product from the wall outlet, remove the telephone line cord from the modular wall jack or communications system switch/control unit, and refer servicing to qualified service personnel under the following conditions:
 - ~ When the power cord or plug is damaged or frayed.
 - ~ If the product does not operate normally by following the operating instructions. Adjust only those controls that are covered by the operating instructions, since improper adjustment of other controls may result in damage and will often require extensive work by a qualified technician to restore the product to normal operation.
 - ~ If the product has been dropped and the housing has been damaged.
- This product should be serviced by a qualified service center when service or repair work is required. Do not open the product; there are no user-serviceable components inside.
- Always unplug the power cord/AC adapter for the carrier(s) from the wall outlet when:
 - ~ Removing a radio module.
 - ~ Moving a radio module to a new slot in the carrier.
 - ~ Installing a new radio module.
 - ~ Connecting or disconnecting telephone line cords.
 - ~ Adding a carrier.
- Use only the type of battery pack shipped with this product or sold as an optional part. (See "Ordering Replacement and Optional Parts" in Chapter 4.)

WARNING:

The rechargeable battery pack may contain elements that are harmful to the environment (for example, nickel). Do not burn or puncture the battery pack. As with other batteries of this type, burning or puncturing could release toxic material which could cause injury. Do not dispose of the battery pack in household garbage. For information about recycling or proper disposal, consult your local solid waste (garbage) collection or disposal organization.

Additional Safety Instructions for Installation Personnel

- Install the product to meet all environmental and electrical requirements listed in Appendix C.
- All wiring that connects to this equipment and becomes part of the building wiring must be a minimum of CLASS 2 or UL (Underwriters Laboratories) Listed Communications cable.
- Do not install telephone wiring during a lightning storm.
- Do not install telephone jacks in a wet location unless the jack is specifically designed for wet locations. Never touch uninsulated telephone wires or terminals unless the telephone line has been disconnected at the network interface.
- Use caution when installing or modifying telephone lines.
- Install this product securely on a stable surface. Damage may result if the product falls.
- Never place this product near or over a radiator or heat register.
- Slots and openings in the housing and the back or bottom are provided for ventilation. To protect the housing from overheating, these openings must not be blocked or covered. Therefore, do not place the product on a bed, sofa, rug, or other similar surface. Also, do not place this product in an enclosed area unless proper ventilation is provided.
- Install this product in a protected location where no one can step on or trip over power cords and telephone line cords. Do not place objects on the cords that may cause damage or abrasion.
- Do not allow anything to rest on the power cord. Do not locate this product where the cord will be abused by persons walking on it. Do not overload wall outlets, since this increases the risk of fire or electric shock. Do not staple or otherwise attach the power cord to building surfaces.
- Use only the power supply (Comcode 847713583) shipped with this product for the battery charger.
- Use only the power supply (Comcode 847523404) shipped with this product for the radio module.
- Use only the power supply (Comcode 847224227) shipped with the carrier.
- Use only the correct power source. If you are not sure of the power supply to your location, consult your local power company.

- This product uses a 3-prong plug. Such plugs are designed for your safety. Do not attempt to defeat this purpose. If your wall outlet will not accept the plug, the outlet should be replaced by an electrician.

**WARNING:**

Failure to properly ground this product will result in a risk of electrical shock, which can cause serious personal injury. This product requires a 3-prong AC outlet for safe operation. You should have your outlet checked by a qualified electrician (see “AC Outlet Check” below) before connecting this equipment.

AC Outlet Check

Have a qualified electrician check all of the outlets into which the MDW 9031/9031DCP radio modules or carriers, as well as the communications system switch/control unit, will be plugged. The electrician should check that the hot, neutral, and ground wires are properly connected to the outlet by using a circuit tester.

The outlet can also be tested using a voltmeter to take the measurements as shown:

If the outlet does not meet the electrical specifications for grounded outlets, your MDW 9031/9031DCP Pocket Phone may not operate properly.

Note: If there is no current to the outlet or the voltages are not correct, the problem should be corrected by a qualified electrician.

Go to “Installation Overview for Radio Modules and Carriers.”

Installation Overview for Radio Modules and Carriers

This section explains how to install radio modules and carriers. You should proceed through this section in the following order:

- 1 “Radio Module/Switch Wiring”
- 2 “Key Components”
- 3 “Positioning a Radio Module or Carrier(s)”
- 4 “Using Wireless Test Mode” (in Chapter 3)
- 5 Choose one of the following paths, depending upon which components you are installing:
 - ~ If you are installing a **single radio module**, go to “Installing a Single Radio Module.”
 - ~ If you are installing **one or more carriers** (from two to 24 radio modules), go to “Understanding Carriers.”

Note: The illustrations in this chapter depict PARTNER System hardware; your hardware may differ from these illustrations.

Radio Module/Switch Wiring

If your installation requires customized wiring, the wiring technician should match the Pin numbers with the switch interfaces as follows:

| Switch Interface | Pin # |
|------------------------|-------|
| ATL (MERLIN, DEFINITY) | 1, 2 |
| ETR (PARTNER) | 3, 6 |
| T/R (Tip/Ring) | 5, 4 |

Installation Overview for Radio Modules and Carriers Installing the MDW 9031/9031DCP Pocket

Key Components

Each **radio module** communicates with a corresponding handset. The matching sets are identified by a serial number located on the bottom of the radio module and in the battery compartment of the handset.

⚠ CAUTION:

A **carrier** (Model 117A3 or Model 117A4) is required when installing two or more MDW 9031/9031DCP Pocket Phones.

2 Installing the MDW 9031/9031DCP Pocket Phone Installation Overview for Radio Modules

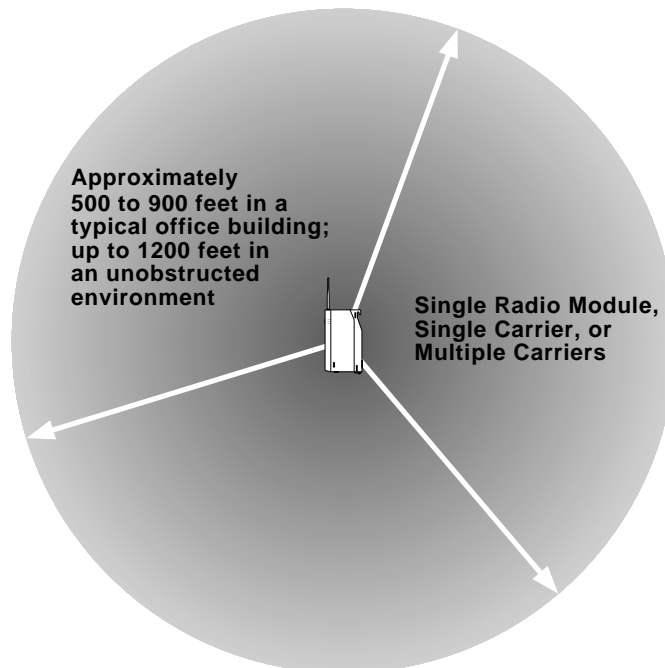

Using the **expansion cable** provided with each carrier, you can link up to five carriers.

Positioning a Radio Module or Carrier(s)

Each of your handsets and its corresponding radio module operates within a single zone of coverage:

The range depends on your particular operating environment. For indoor use, walls between the handset and the radio module will reduce the phone's range. Avoid concentrations of structural metal, such as steel and aluminum, and reinforced concrete.

Note: The MDW 9031/9031DCP Pocket Phone has a built-in testing feature that you can use before final installation to help determine proper placement of the radio module. To perform the tests, all you need is an electrical outlet for the radio module and a charged battery pack in the handset (you do not need a communications system switch/control unit). The tests are described in "Using Wireless Test Mode" in Chapter 3.

General Positioning Rules

Failure to observe the following rules regarding location and use will result in poor performance of your MDW 9031/9031DCP Pocket Phone.

- Position the radio module or carrier(s) in a central location, relative to the handset(s) usage area, leaving at least **6 feet (1.8 m)** between the radio module or carrier(s) and the communications system switch/control unit or other wired phones. If your switch/control unit is located in a remote location, you may have to run a telephone line cord from your switch/control unit to the centrally positioned radio module or carrier(s). The line cord maximum length is 1,000 feet (305 m) of 26-gauge cable.
- Place the radio module or carrier(s) high on the wall for optimum voice quality and range. Allow 6 to 12 inches (15.2 to 30.5 cm) of space between the top of the antenna on the radio module and the ceiling.

2 Installing the MDW 9031/9031DCP Pocket Phone Installation Overview for Radio Modules

- Never install the radio module or carrier(s) above a drop, suspended ceiling.
- Do not locate the radio module or carrier(s) within 3 feet (0.9 m) of any large metal object, and be sure no metal objects are in the line of sight to the operating area of the handset.
- **Do not locate the radio module or carrier(s) within 6 feet (1.8 m) of equipment with microprocessors, such as answering machines, personal computers, and fax machines; control units, communications system switches, or other phones (especially speakerphones); competing radio devices such as wireless bar-code scanners; electromagnetic equipment such as electric motors; or electrical main power feeds, junction boxes, circuit-breaker panels, fuse boxes, or 220-volt power lines.**
- Be sure the radio module or carrier(s) does not share the same power line as equipment with microprocessors such as answering machines, personal computers, and fax machines or electromagnetic equipment such as electric motors.
- If your communications system uses an uninterruptible power supply, such as a backup generator, you may want to connect the radio module or carrier(s) to that power supply.
- Installing a single radio module on a shelf or desk is not recommended, because it greatly reduces the range and quality of the transmission.
- Install a single radio module within 3 feet (0.9 m) of either side of, and within 6 to 8 feet (1.8 to 2.4 m) above, a properly grounded, 3-prong electrical outlet that is not controlled by an on/off switch.
- You can install a single radio module in a remote location using a telephone line cord to connect the radio module to the communications system switch/control unit. **IROBs must be used for out-of-building installations.**

Additional Rules for Installing a Single Radio Module Only

 **CAUTION:**
A radio module cannot be installed outdoors.

Additional Rules for Installing One or More Carriers

- Install carrier(s) within 15 feet (5 m) of either side of, and within 6 to 8 feet (1.8 to 2.4 m) above, a properly grounded, 3-prong electrical outlet that is not controlled by an on/off switch.
- **Choose a location where handset users will not approach the carrier(s) within a radius of 6 feet (1.8 m) for 1 or 2 carriers or 10 feet (3 m) for 3 carriers.**
- When installing multiple carriers:
 - ~ Install multiple carriers 1 foot (0.3 m) optimally to 4 feet (1.2 m) apart.
 - ~ Install multiple carriers on the same horizontal axis (do not install one carrier higher or lower than another).
 - ~ Install the control carrier as the leftmost carrier, using only the expansion cables provided.
 - ~ Slot 6 of an 117A3 control carrier must always contain a radio module to pass the synchronization signal to the next carrier.

**CAUTION:**

Carrier(s) cannot be installed outdoors.

Go to “Using Wireless Test Mode” in Chapter 3.

Installing a Single Radio Module

- Install a single radio module high on a wall, leaving 6 to 12 inches (15.2 to 30.5 cm) between the top of the antenna and the ceiling.
- See “Key Components” earlier in this chapter for additional picture detail.

To install a single radio module:

- 1** Perform the tests described in “Using Wireless Test Mode” in Chapter 3 to determine the optimal placement of the radio module. To perform the tests, all you need is an electrical outlet for the radio module and a charged battery pack in the handset.
- 2** Check to be sure the radio module’s power cord is unplugged from the wall outlet before continuing.

- 3 Detach the rubber feet from the shipping card. Apply them to marked areas on the underside of the radio module.

- 4 Place the wall-mounting plate against the wall. Choose a location backed by a wooden stud (if unavailable, use toggle bolts instead of the supplied wood screws). Lightly tap a nail into the wall to start holes. Then screw the plate flush to the wall. Place the radio module over the plate, then slide it downward to lock it into place.

Note: Do not remove the plastic cap covering the radio module's card edge.

- 5 Insert one end of the telephone line cord into an extension jack or terminal/station connector on your communications system switch/control unit (refer to your communications system manual for the proper location).

- 6 Insert the radio module's power cord into the side of the radio module. Insert the other end of the telephone line cord into the bottom of the radio module.

- 7 Plug the power cord/AC adapter into a properly grounded, 3-prong wall outlet that is not controlled by an on/off switch.

⚠ CAUTION:

Never connect or disconnect the telephone line cord while the radio module is plugged into the wall outlet.

Single Radio Module Installation Self-Test

Verify that the **POWER** and **PASS** LEDs on the radio module light. If the radio module's **PASS** LED does not light:

- 1 Unplug the power cord/AC adapter from the wall outlet.
- 2 Wait 15 seconds.
- 3 Plug it in again.

- 4 If the radio module's **PASS** LED still does not light, refer to Chapter 5, "Troubleshooting."

Note: The RADIO LED also may light upon installation; however, since the RADIO LED has no significance during installation, ignore its operation.

The RADIO LED indicates a connection between the handset and the radio module; it lights when the handset is being used as long as the battery pack in the handset is charged.

Understanding Carriers

When you install more than one radio module in a single zone, you must mount the radio modules in a carrier, so that their signals will be synchronized. A carrier can hold up to six radio modules. The MDW 9031/9031DCP Pocket Phone is designed to work with either of two carrier models: Model 117A3, and Model 117A4.

Note: If you currently own a Model 117A1, 117A1A, or 117A2 carrier, Lucent Technologies will replace it with a Model 117A3 or Model 117A4 at no charge.

If you want to install more than six radio modules, you will need more than one carrier. Systems configured as key systems (for example, PARTNER or MERLIN) can accommodate up to 18 radio modules (three carriers); PBX systems can accommodate up to 24 radio modules (four carriers).

In any multiple-carrier installation, the leftmost carrier acts as the *control* carrier, and the remaining carriers act as *expansion* carriers, passing along the synchronization signal from the control carrier. Multiple carrier installations require that you use Model 117A3 or Model 117A4 carriers, or both.

The Model 117A3 and Model 117A4 carriers are similar in general appearance, but the installation procedure for the two models differs somewhat. A label on the left side of the carrier identifies the carrier model number.

If you are installing **one model** of carrier, go to **either** of the following sections:

- If installing a Model 117A3 carrier, go to “Understanding Your Model 117A3 Carrier.”
- If installing a Model 117A4 carrier, go to “Understanding Your Model 117A4 Carrier.”

If you are installing **both carrier models**, read **both** of these sections.

Understanding Your Model 117A3 Carrier

The installation of a Model 117A3 carrier differs in three ways from the installation of a Model 117A4 carrier:

- You may need to adjust the power DIP switch.
- You **must** set the Control/Expansion DIP switch.
- If you use the 117A3 as the *control* carrier, you **must** have a radio module installed in Slot 6 of that carrier in order to pass the synchronization signal on to the next carrier.

As the following illustration shows, each Model 117A3 carrier has two user-adjustable DIP switches—one in Slot 2 that controls the power levels, and another in Slot 4 that specifies whether this particular carrier is functioning as a control or an expansion carrier.

Go to **either** of the following sections:

- If you need to adjust the 117A3 carrier's range to prevent overlapping with other wireless products, go to "Setting the 117A3 Carrier Power Level."
- To skip that section, go to "Setting the 117A3 Carrier Control/Expansion DIP Switch."

Setting the 117A3 Carrier Power Level

If your MDW 9031/9031DCP Pocket Phones are interfering with other wireless products in use or if you anticipate that they will, you can adjust the carrier's range by setting each 117A3 carrier's power DIP switch, located in Slot 2.

The power DIP switch must be adjusted while the carrier is without power and while Slot 2 is empty. You can adjust it before mounting the carrier on the wall.

Use a nonmetallic, pointed object to set each 117A3 carrier's DIP switch according to the following table.

Note: You must set the DIP switch for all of the 117A3 carriers to the same setting.

| Desired Range (approximate) | Power DIP Switch Settings |
|--|---|
| (Maximum power setting)–500 to 900 feet (152 to 274 m) |  |
| 300 to 500 feet (91 to 152 m) |  |
| 150 to 300 feet (46 to 91 m) |  |
| 100 to 150 feet (31 to 46 m) |  |

Go to "Setting the 117A3 Carrier Control/Expansion DIP Switch."

**Setting the 117A3
Carrier
Control/Expansion DIP
Switch**

The Model 117A3 carrier can serve as either a control or an expansion carrier. Whether you install one or more 117A3 carriers, you must set the Control/Expansion DIP switch in Slot 4 of each 117A3 carrier to indicate which role that carrier is filling.

The leftmost carrier, no matter what model number it is, must be the *control* carrier, and the remaining carriers are *expansion* carriers. The control carrier acts as the “lead” carrier—its transmit and receive patterns control the expansion carriers, ensuring that all of the linked carriers function as a single system.

It is recommended that you determine which carrier is to be the control carrier and which, if any, will be expansion carriers; then set the Control/Expansion DIP switch(es) before mounting the carrier(s) on the wall.

Use a nonmetallic, pointed object to set each 117A3 carrier's DIP switch according to the following table.

Note: Only one carrier (the leftmost carrier) can be the control carrier; the other carriers must be expansion carriers.

| To designate the carrier as a... | Use this setting for the DIP switch... |
|---|---|
| control carrier (one carrier only) |  |
| expansion carrier (one or more additional carriers) |  |

Go to **one** of the following:

- If you are installing a **single 117A3 carrier**, go to "Installing a Single Carrier."
- If you are installing **multiple 117A3 carriers**, go to "Installing Multiple Carriers."
- If you are also installing **one or more 117A4 carriers**, go to "Understanding Your Model 117A4 Carrier."

Understanding Your Model 117A4 Carrier

The Model 117A4 carrier differs from the 117A3 in that it does *not* require that Slot 6 contain a radio module in order to pass the signal from the control carrier to the next carrier. It also does not have Power and Control/Expansion DIP switches to set. The 117A4 automatically adjusts its power level and senses whether it is being used as a control or an expansion carrier.

As the following illustration shows, the 117A4 does have an additional LED located on the right side of the carrier, the **CONTROL/EXPANSION LED**; this is used to determine whether the cabling was installed correctly.

The following chart explains the label that identifies the jacks and LEDs on the 117A4 carrier. (The IN and OUT jacks and the OUT OF SYNC LED also appear on the 117A3 carrier.)

| Label | Explanation |
|-------------------|---|
| IN | Designates the modular jack that accepts the modular plug and cable from the preceding carrier to the left. If the jack is in use, this carrier is an “expansion” carrier. |
| OUT | Designates the modular jack that accepts a modular plug and cable to connect this carrier to the next carrier to the right. This carrier can be either a “control” carrier (if it is the leftmost carrier) or an “expansion” carrier. |
| OUT OF SYNC | Designates the upper of two LEDs. If the LED is not lit, the carrier is “in sync.” If the LED glows red, the carrier is out of synchronization. Call Customer Support as described in the <i>Copyright and Legal Notices</i> at the beginning of this book. |
| CONTROL/EXPANSION | Designates the lower of two LEDs. The color of the LED indicates the carrier configuration: Control carrier = green LED Expansion carrier = amber LED The light pattern indicates whether the carrier is operational: Glowing steadily = no problem Blinking = no radio module(s) in the carrier |

The label at the top of the right side of the carrier is provided to help you interpret the LED lights. The first three lines on this label refer to LEDs on the control carrier, the next three lines refer to the LEDs on each of the expansion carriers, and the last two lines apply to all carriers.

| SYNC and CONTROL/EXP LED Codes | |
|---|----------------------------|
|  | CONTROL MODE - <i>OK</i> |
|  | CONTROL UNIT OUT OF SYNC |
|  | CONTROL MODE NO RMs |
|  | <i>Blinking</i> |
|  | EXPANSION MODE - <i>OK</i> |
|  | EXPANSION UNIT OUT OF SYNC |
|  | EXPANSION MODE NO RMs |
|  | <i>Blinking</i> |
|  | UNIT BAD |
|  | UNIT BAD |
|  | UNIT BAD |
|  | UNIT BAD |

- Key**
-  Unlighted
 -  Lighted, green
 -  Lighted, red
 -  Lighted, amber
 -  Blinking, green
 -  Blinking, amber

**OUT OF SYNC
CONTROL/
EXPANSION**

Go to **either** of the following:

- If installing a **single carrier**, go to “Installing a Single Carrier.”
- If installing **multiple carriers**, go to “Installing Multiple Carriers.”

Installing a Single Carrier

If you are installing a **Model 117A3 carrier**, be sure you have read the following sections and have set the DIP switches:

- “Understanding Your Model 117A3 Carrier”
- “Setting the 117A3 Carrier Power Level”
- “Setting the 117A3 Carrier Control/Expansion DIP Switch”

Then go to **either** of the following:

- “Installing a Single Carrier on a Shelf or Desk”
- “Installing a Single Carrier on a Wall”

If you are installing a **Model 117A4 carrier**, be sure you have read “Understanding Your Model 117A4 Carrier.”

Then go to **either** of the following:

- “Installing a Single Carrier on a Shelf or Desk”
- “Installing a Single Carrier on a Wall”

Installing a Single Carrier on a Shelf or Desk

- You will not receive optimum performance if the unit is placed on a desk or low shelf.
- Install the unit as high as possible, leaving 6 to 12 inches (15.2 to 30.5 cm) between the top of the antenna and the ceiling, if on a high shelf.
- Never install or remove a radio module from a carrier that is plugged into a wall outlet (hot insertion).
- See “Key Components” earlier in this chapter for additional picture detail.

To install a single carrier:

- 1 Perform the tests described in “Using Wireless Test Mode” in Chapter 3 to determine the optimal placement of the radio module. To perform the tests, all you need is an electrical outlet for the radio module and a charged battery pack in the handset.
- 2 Check to be sure the carrier’s power cord is unplugged from the wall outlet before continuing.
- 3 Remove the plastic cap covering each radio module’s card edge before installing the radio modules in the carrier.

- 4 Starting from the leftmost slot (#1), insert each radio module into the carrier by hooking it onto the radio module mounting rod. Slowly swing the radio module's card edge into the card edge connector on the back of the carrier.

- 5 When the card edge is fully seated, a snap lock on the bottom of the radio module will engage.

- 6 Insert a telephone line cord into the bottom of each radio module.

- 7 Slide the telephone line cords through the rear exit slots on the bottom of the carrier. Cords originating from Modules 1 and 6 can share exit slots with cords from Modules 2 and 5, respectively.

- 8 Insert the free end of the telephone line cord into the appropriate extension jack or terminal/station connector on your communications system switch/control unit (refer to your communications system manual for the proper location).

- 9 Insert the carrier's AC adapter cord into the left side of the carrier.

- 10 Place the carrier on its feet towards the back of the shelf or desk, making sure it is in a stable position. Be sure the telephone line cords come out the rear exit slots in the back of the unit. Arrange the power cord and telephone line cords beneath the shelf or desk, so no one can step on them or trip over them.

- 11 Insert the carrier's power cord into the AC adapter, then plug the power cord into a properly grounded, 3-prong wall outlet that is not controlled by an on/off switch.

If appropriate, you can wall-mount the AC adapter using its attached wall-mounting bracket.

⚠ CAUTION:

Never connect or disconnect telephone line cords, or insert or remove radio modules, while the carrier is plugged into the wall outlet.

- 12 Go to “Single Carrier Installation Self-Test” (page 40).

Installing a Single Carrier on a Wall

- Install the unit high on a wall, leaving 6 to 12 inches (15.2 to 30.5 cm) between the top of the antenna and the ceiling.
- Never install or remove a radio module from a carrier that is plugged into a wall outlet (hot insertion).
- See “Key Components” earlier in this chapter for additional picture detail.

To wall-mount a single carrier:

- 1 Perform the tests described in “Using Wireless Test Mode” in Chapter 3 to determine the optimal placement of the radio module. To perform the tests, all you need is an electrical outlet for the radio module and a charged battery pack in the handset.
- 2 Check to be sure the carrier’s power cord is unplugged from the wall outlet before continuing.
- 3 Place the carrier against the wall. Choose a location backed by a wooden stud (if unavailable, use toggle bolts instead of the supplied wood screws). Hold the carrier straight; use a level if needed. Using a nail or pencil, mark screw locations through the four wall-mount holes.

Start the screws, leaving the screw heads protruding approximately ½ inch (12 mm) from the wall. Place the carrier assembly over the screws, then slide it downward to lock it into place. Tighten the screws.

- 4 Remove the plastic cap covering each radio module's card edge before inserting the radio modules into the carrier.

- 5 Starting from the leftmost slot (#1), insert each radio module into the carrier by hooking it onto the radio module mounting rod. Slowly swing the radio module's card edge into the card edge connector on the back of the carrier.

- 6 When the card edge is fully seated, a snap lock on the bottom of the radio module will engage.

- 7 Insert a telephone line cord into the bottom of each radio module.

- 8 Slide the telephone line cords through the cable manager slot on the left front of the carrier.

- 9 Insert the free end of each telephone line cord into the appropriate extension jack or terminal/station connector on your communications system switch/control unit (refer to your communications system manual for the proper location).

- 10 Plug the carrier's AC adapter cord into the left side of the carrier.

- 11 Insert the carrier's power cord into the AC adapter, then plug the power cord into a properly grounded, 3-prong wall outlet that is not controlled by an on/off switch.

If appropriate, you can wall-mount the AC adapter using its attached wall-mounting bracket.

⚠ CAUTION:

Never connect or disconnect telephone line cords, or insert or remove radio modules, while the carrier is plugged into the wall outlet.

- 12 Go to “Single Carrier Installation Self-Test” (page 40).

Single Carrier Installation Self-Test

To perform a single carrier self-test:

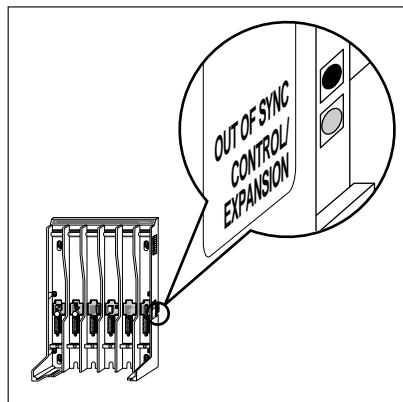

- 1 A single carrier must always function as a control carrier. Wait a few seconds, then check the LED(s) on the right side of the carrier:
 - ~ Model 117A4:

Compare the **OUT OF SYNC** and **CONTROL/EXPANSION** LEDs against the top three lines on the “SYNC and CONTROL/EXP LED Codes” label.
 - ~ Model 117A3:

The 117A3 has no **CONTROL/EXPANSION** LED. The **OUT OF SYNC** LED should not be lit.

- 2 If the **OUT OF SYNC** LED is lit, power down, wait at least 15 seconds, and then repower the carrier. If the LED is still lit, follow the suggestions in the “Installation Problems” section of Chapter 5, “Troubleshooting.” If the LED is still lit, call Customer Support as described in the *Copyright and Legal Notices* at the beginning of this book.

- 3 If you are using a Model 117A4 carrier, verify that the carrier's **CONTROL/EXPANSION** LED is lit and that its color is green. This is correct for a single-carrier installation.
- 4 Verify that the **POWER** and **PASS** LEDs on each radio module are lit. If a radio module's **PASS** LED does not light, power down the carrier and the module, wait 15 seconds, and repower the module and then the carrier. If the **PASS** LED still does not light, refer to Chapter 5, "Troubleshooting."

Note: The RADIO LED also may light upon installation; however, since the RADIO LED has no significance during installation, ignore its operation.

The RADIO LED indicates a connection between the handset and the radio module; it lights when the handset is being used as long as the battery pack in the handset is charged.

Go to "Handset."

Installing Multiple Carriers

- Install each carrier high on a wall, leaving 6 to 12 inches (15.2 to 30.5 cm) between the top of the antennas and the ceiling.
- Install each carrier 1 foot (0.3 m) optimally to 4 feet (1.2 m) from its neighboring carrier.
- Never install or remove a radio module from a carrier that is plugged into a wall outlet (hot insertion).
- See "Key Components" earlier in this chapter for additional picture detail.

Multiple-carrier installation involves several stages:

- Mounting the carriers on the wall and cabling them.
- Installing a single radio module in each carrier.
- Installing the remaining radio modules.

The most efficient method for installing carriers and their radio modules is to perform self-tests after each stage of the installation. This enables you to spot any problems at an early stage and to avoid the necessity for deinstalling the components in order to solve problems.

Mounting and Cabling Multiple Carriers

Perform the tests described in “Wireless Test Mode” in Chapter 3 to determine the optimal placement of the radio module. To perform the tests, all you need is an electrical outlet for the radio module and a charged battery pack in the handset.

If you are installing 117A3 carriers and need to adjust the power setting to avoid interference from other wireless products, see “Setting the 117A3 Carrier Power Level.” Also make sure you have set the Control/Expansion DIP switch correctly (see “Setting the 117A3 Carrier Control/Expansion DIP Switch”).

To mount and connect cable for multiple carriers:

- 1 Check to be sure the carrier’s power cord is unplugged from the wall outlet before continuing.
- 2 Choose a location backed by a wooden stud for the carrier (if unavailable, use toggle bolts instead of the supplied wood screws).

Note: The leftmost carrier must be the control carrier; all of the others are expansion carriers.

Place the carrier against the wall, leaving enough room to the right for additional carrier(s) if applicable. Hold the carrier straight; use a level if needed. Using a nail or pencil, mark screw locations through the four wall-mount holes. Start the screws, leaving the screw heads protruding approximately ½ inch (12 mm) from the wall.

- 3 Repeat Steps 1 through 3 for each carrier, leaving 1 foot (0.3 m) optimally to 4 feet (1.2 m) between carriers.

- 4 Place the carrier assembly over the screws, then slide it downward to lock it into place. Be sure that the leftmost carrier is the control carrier. Tighten the screws. Repeat for each carrier.
- 5 Connect an expansion cable to the OUT jack of the control carrier.

- 6 Insert the free end of the expansion cable into the IN jack of the expansion carrier immediately to the right of the control carrier.

Note: Although installing an expansion cable into the wrong IN or OUT jack will not harm either carrier, doing so causes all handsets to work improperly and the OUT OF SYNC LED to light.

- 7 If you have a second expansion carrier:
 - a Connect an expansion cable to the OUT jack of expansion carrier #1.
 - b Insert the free end of the expansion cable into the IN jack of expansion carrier #2.

See “Key Components” earlier in this chapter for an illustration of a four-carrier setup.

- 8 Plug an AC adapter cord into the left side of each carrier.

- 9 Insert each carrier's power cord into its AC adapter.

If appropriate, you can wall-mount each AC adapter using its attached wall-mounting bracket.

- 10 Plug each carrier's power cord into one of the following power sources that is not controlled by an on/off switch:
- ~ Surge-suppressor strip.
 - ~ Properly grounded, 3-prong wall outlets. (See "wall outlets" in the following chart for the order in which to power up the carriers.)

11 Power the carriers as follows:

| If the carriers are plugged into... | Then... |
|-------------------------------------|---|
| one surge suppressor strip | Power the strip. <i>Result: All the carriers will turn on simultaneously.</i> |
| wall outlets | Plug in the power for the carriers in this order:  |

⚠ CAUTION:
 Never connect or disconnect expansion cables or telephone line cords, or insert or remove radio modules, while the carrier is plugged into the wall outlet.

12 Go to "Multiple Carrier Mounting and Cabling Self-Test" (page 46).

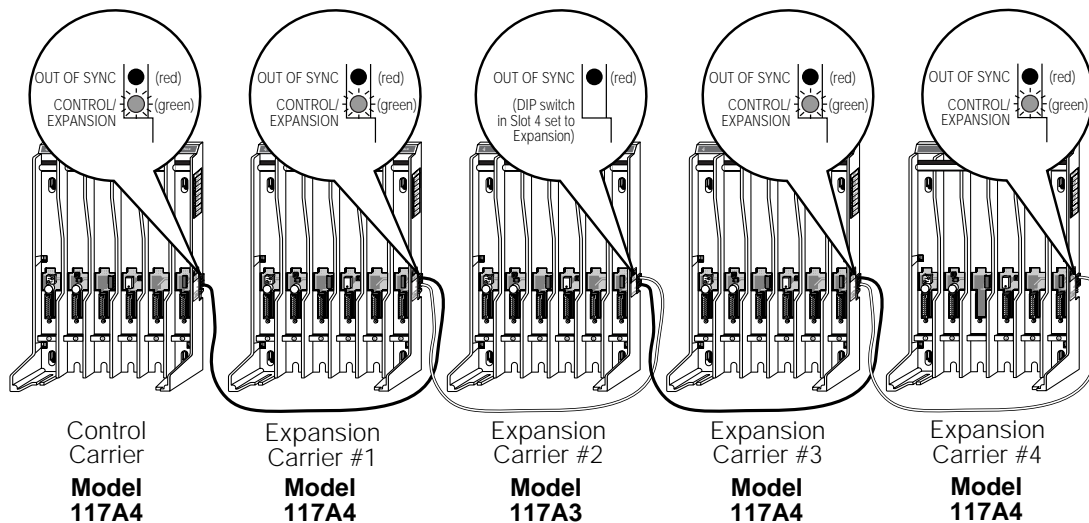

Multiple Carrier Mounting and Cabling Self-Test

To perform a multiple carrier mounting and cabling self-test:

- 1 Wait a few seconds after powering up the carriers, then verify that the red **OUT OF SYNC** LEDs on all carriers are lit. This is normal when no radio modules have yet been installed. The **CONTROL/EXPANSION** LEDs (Model 117A4 only) should also be lit and blinking:
 - ~ Model 117A4 control carrier = green blinking
 - ~ Model 117A4 expansion carrier(s) = green blinking

A Model 117A3 carrier has no **CONTROL/EXPANSION** LED, but the DIP switch in Slot 4 of the carrier must be set correctly to either Control or Expansion.

- 2 The following illustration shows the correct LED status for a five-carrier installation with no radio modules installed. This sample installation has four 117A4 carriers—one acting as the control carrier and the other three acting as expansion carriers—and one 117A3 carrier acting as an expansion carrier.

- 3 At this stage of your installation, verify the LEDs displayed match the third of the SYNC and CONTROL/EXP LED Codes label, depending on whether the carrier is the control or an expansion carrier.
- 4 If the LEDs on your installation do not reflect this pattern, there is probably a mistake in the cabling. Power down the carriers and check that you have correctly followed Steps 6 through 8 in “Mounting and Cabling Multiple Carriers.” If you are still having problems, see Chapter 5, “Troubleshooting.”

- 5 If your LEDs match the pattern in the illustration, you can feel confident that your carriers are cabled correctly.
- 6 Go to “Installing a Single Radio Module in Each Carrier” (page 48).

Installing a Single Radio Module in Each Carrier

To install a single radio module in each carrier:

- 1 Power down the carriers.
- 2 Remove the plastic cap covering each radio module's card edge before inserting the radio modules into the carriers.

- 3 Working from left to right, insert a radio module into the first slot (Slot 1) of each carrier; hook each radio module onto the mounting rod. Slowly swing the radio module's card edge into the card edge connector on the back of the carrier. (Exception: use Slot 6 instead of Slot 1 for a Model 117A3 control carrier.)

Note: Slot 6 of a Model 117A3 control carrier must always contain a radio module to pass the synchronization signal to the next carrier.

A Model 117A4 carrier does not require Slot 6 to be filled.

- 4 When the card edge is fully seated, a snap lock on the bottom of the radio module will engage.

- 5 Insert a telephone line cord into the bottom of each radio module.

- 6 Slide the telephone line cords through the cable manager slot on the left front of each carrier.

- 7 Insert the free end of each telephone line cord into the appropriate extension jack or terminal/station connector on your communications system switch/control unit (refer to your communications system manual for the proper location).

- 8 Power the carriers as follows:

| If the carriers are plugged into... | Then... |
|-------------------------------------|---|
| one surge suppressor strip | Power the strip. <i>Result:</i> All the carriers will turn on simultaneously. |
| wall outlets | Plug in the power for the carriers in this order:  |

⚠ CAUTION:

Never connect or disconnect expansion cables or telephone line cords, or insert or remove radio modules, while the carrier is plugged into the wall outlet.

Keep in mind that a Model 117A3 control carrier must have a module in Slot 6 in order to synchronize correctly with the remaining carrier(s).

- 9 Go to “[Installation Self-Test with a Single Radio Module in Each Carrier](#)” (page 51).

Installation Self-Test with a Single Radio Module in Each Carrier

To perform an installation self-test with a single radio module in each carrier:

- 1 Wait a few seconds after powering up the carriers, then verify that the carriers' **OUT OF SYNC** LEDs are not lit.
- 2 The following illustration shows the correct LED lights for a five-carrier installation with one radio module installed in each carrier. This sample installation has four 117A4 carriers—one acting as the control carrier and the other three acting as expansion carriers—and one 117A3 carrier acting as an expansion carrier.

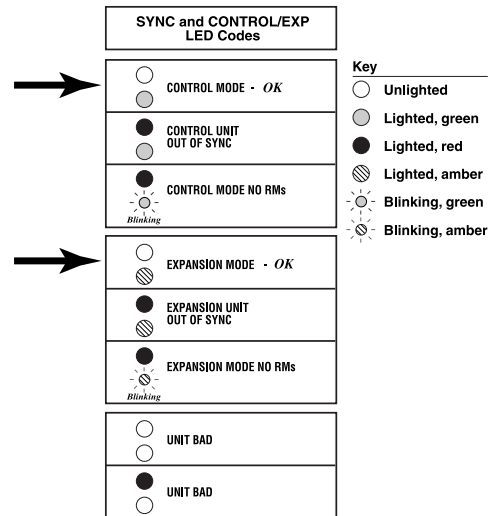

When correct installation procedures are followed and one radio module is present in each carrier, the red **OUT OF SYNC** LEDs will not be lit on any carrier, no matter which model. The other LEDs will be lit as follows:

- ~ Model 117A4 control carrier **CONTROL/EXPANSION** LED = green
- ~ Three Model 117A4 expansion carriers **CONTROL/EXPANSION** LED = amber
- ~ The radio modules' **PASS** and **POWER** LEDs = green

The Model 117A3 expansion carrier has no **CONTROL/EXPANSION** LED, but the DIP switch in Slot 4 of the carrier is set to Expansion.

- 3 At this stage of your installation, verify that the LEDs displayed match the first or fourth lines of the SYNC and CONTROL/EXP LED Codes label.

- 4 If an **OUT OF SYNC** LED is lit, power down, wait at least 15 seconds, and then reprogram the carriers in order from left to right, as described in Step 8 in "Installing a Single Radio Module in Each Carrier." If the LED is still lit, follow the suggestions in the "Installation Problems" section of Chapter 5, "Troubleshooting." If the LED is still lit, call Customer Support as described in the *Copyright and Legal Notices* at the beginning of this book.

- 5 The **PASS** and **POWER** LEDs on all radio modules should be lit and green. If a radio module's **PASS** LED is not lit:
- Power down the carriers.
 - From the wall outlet, unplug the power cord/AC adapter of the radio module that did not light.
 - Wait 15 seconds.
 - Plug in the radio module's power cord again.
 - Repower the carriers, following the proper left-to-right order.

If the **PASS** LED is still not lit, follow the suggestions in the "Installation Problems" section of Chapter 5, "Troubleshooting." If the LED is still not lit, call Customer Support as described in the *Copyright and Legal Notices* at the beginning of this book.

- 6 Verify that LEDs match the pattern in the illustration in Step 2; if so, you can feel confident that the carriers are cabled correctly and that the installed radio modules are all functional.
- 7 Go to "Installing the Remaining Radio Modules" (page 54).

Installing the Remaining Radio Modules

To install the remaining radio modules:

- 1 Power down the carriers.
- 2 Remove the plastic cap covering each radio module's card edge before inserting the radio modules into the carriers.

- 3 Beginning with the first empty slot and working from left to right, insert a radio module into each slot of the control carrier. Hook each radio module onto a mounting rod. Slowly swing the radio module's card edge into the card edge connector on the back of the carrier.

Note: Slot 6 of a Model 117A3 control carrier must always contain a radio module to pass the synchronization signal to the next carrier.

A Model 117A4 carrier does not require Slot 6 to be filled.

- 4 When the card edge is fully seated, a snap lock on the bottom of the radio module will engage.

- 5 Repeat Steps 3 and 4 for each expansion carrier, until each radio module is inserted into a carrier.

Note: Fill all six slots of the current carrier before inserting radio modules into the next carrier.

- 6 Insert a telephone line cord into the bottom of each radio module.

- 7 Slide the telephone line cords through the cable manager slot on the left front of the carrier.

- 8 Insert the free end of each telephone line cord into the appropriate extension jack or terminal/station connector on your communications system switch/control unit (refer to your communications system manual for the proper location).

9 Power the carriers as follows:

| If the carriers are plugged into... | Then... |
|-------------------------------------|---|
| one surge suppressor strip | Power the strip. <i>Result: All the carriers will turn on simultaneously.</i> |
| wall outlets | Plug in the power for the carriers in this order:  |

⚠ CAUTION:

Never connect or disconnect expansion cables or telephone line cords, or insert or remove radio modules, while the carrier is plugged into the wall outlet.

10 Go to “Installation Self-Test for Remaining Radio Modules” (page 58).

Installation Self-Test for Remaining Radio Modules

To perform an installation self-test for the remaining radio modules:

- 1 Wait a few seconds after powering up the carriers, then verify that the carriers' **OUT OF SYNC** LEDs are not lit.

- 2 At this stage of your installation, again verify that the LEDs displayed match the first or fourth lines of the SYNC and CONTROL/EXP LED Codes label, depending on whether the carrier is the control or an expansion carrier. (Keep in mind that a Model 117A3 carrier does not have a **CONTROL/EXPANSION** LED.)

- 3 If an **OUT OF SYNC** LED is lit, power down, wait at least 15 seconds, and then repower the carriers in order from left to right, as described in Step 9 in “Installing the Remaining Radio Modules.” If the LED is still lit, follow the suggestions in the “Installation Problems” section of Chapter 5, “Troubleshooting.” If the LED is still lit, call Customer Support as described in the *Copyright and Legal Notices* at the beginning of this book.

- 4 The **PASS** and **POWER** LEDs on all radio modules should be lit and green, indicating that all of the radio modules are functional. If a radio module's **PASS** LED is not lit:
- Power down the carriers.
 - From the wall outlet, unplug the power cord/AC adapter of the radio module that did not light.
 - Wait 15 seconds.
 - Plug in the radio module's power cord again.
 - Repower the carriers, following the proper left-to-right order.

If the **PASS** LED is still not lit, follow the suggestions in the “Installation Problems” section of Chapter 5, “Troubleshooting.” If the LED is still not lit, call Customer Support as described in the *Copyright and Legal Notices* at the beginning of this book.

- 5 Go to “[Handset](#)” (page 60).

Handset

This section explains how to install the handset battery pack, change the communications system setting, and fill out the handset label.

Inserting and Removing the Handset's Battery Pack

To insert and remove the battery pack:

- 1 To insert the battery pack into the handset, insert the two small rectangular tabs located along the bottom back edge of the handset into the two rectangular holes along the bottom front edge of the battery pack.

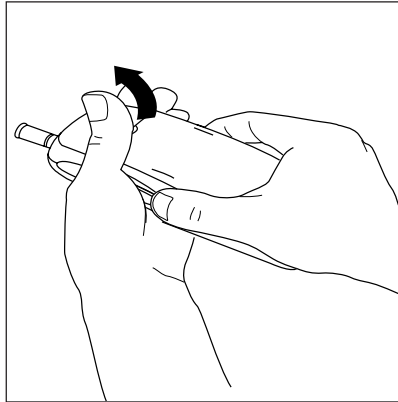

- 2 Press the battery pack downward until it clicks into place.

The battery pack must be charged prior to using the handset. See “Battery Charger” later in this chapter for instructions.

- 3 To remove the battery pack, slide the spring latch upward (away from the battery pack). While holding the latch up, grasp both sides of the battery pack, then gently pull the battery pack upward and out.

Changing the Communications System Setting

The communications system you use determines what information the MDW 9031/9031DCP Pocket Phone can display and how the phone lines and programmable/intercom/drop buttons are identified. (For the MDW 9031, see the appropriate “Button Mapping” topics in the “MDW 9031 Compatibility” section in Chapter 6. For the MDW 9031DCP, see the “Button Mapping” topic in the “MDW 9031DCP Compatibility” section in Chapter 6.)

The MDW 9031 is factory-set to work with the PARTNER communications system. **If you are using PARTNER as your communications system, skip this section; if you are using a different communications system, you will need to change the setting.**

The MDW 9031DCP is factory-set to work with the DEFINITY communications system.

To change the communications system setting, use the following procedure to enter Local Mode and then Button Mapping Mode:

- 1 Make sure the handset is turned off.
- 2 Press and hold the Select button () for three seconds.
- 3 While still holding , press .

The handset beeps twice, and the top line of the display shows **LCL:P** (unless you have already changed it from the default setting).

- Press and hold "M" (Ⓜ) for three seconds to enter Button Mapping Mode.

The handset display shows one of the following:

| | |
|---------------|---|
| MAP:P | PARTNER Systems |
| MAP:D | DEFINITY Systems, System 25, System 75, and System 85 Note: The MDW 9031DCP should only be set to MAP:D for DEFINITY. |
| MAP:M1 | All MERLIN Systems (except MERLIN 410 and MERLIN 820), including MERLIN LEGEND |
| MAP:M2 | MERLIN 410 and MERLIN 820 |

- Press (⬆) repeatedly to cycle through the settings until the display appropriate for your communications system is shown.
- Press (On/Off) when the correct setting is displayed.

The top line of the display shows information appropriate to the communications system you are using.

- To verify your setting, repeat Steps 1–3. The top line of the display should appear as follows, depending upon your communications system:

| | |
|--|---------------|
| PARTNER Systems | LCL:P |
| DEFINITY Systems, System 25, System 75, and System 85 | LCL:D |
| All MERLIN Systems (except MERLIN 410 and MERLIN 820), including MERLIN LEGEND | LCL:M1 |
| MERLIN 410 and MERLIN 820 | LCL:M2 |

For a description of the button mapping between the MDW 9031/9031DCP Pocket Phone and the wired telephones for your communications system, or to program features on buttons, see the appropriate "Button Mapping" topics in Chapter 6.

Filling Out the Handset Label

MDW 9031/9031DCP Pocket Phone display shows the status of up to 12 lines or programmable/intercom/drop buttons. Since the MDW 9031/9031DCP is compatible with several different communications systems, diagrams of the button mappings for these systems are provided in Chapter 6.

Note: The MDW 9031DCP is compatible only with DEFINITY.

MDW 9031/9031DCP has a label on the back of the handset near the top where you can record:

- Your extension number.
- The mapping of your MDW 9031/9031DCP line buttons to those on a wired phone for your communications system.

Note: Use a pencil or ballpoint pen on the label, in case you want to erase the information later. Do not use felt-tip or other types of non-erasable markers. Also, do not remove the label.

To fill out the handset label:

- 1 Write your extension number on the label.
- 2 Locate the section in Chapter 6 that describes the button mapping for your communications system; then copy the mapping to the label for ease of reference.
- 3 Go to “Battery Charger” (page 64).

Battery Charger

This section explains how to choose a location for the battery charger and install it. It also explains how to insert and remove a battery pack.

Positioning the Battery Charger

The battery charger can be placed on a desk, or it can be mounted on a wall. Before you install the battery charger, note the following considerations:

- Locate the battery charger within 5 feet (1.6 m) of a properly grounded, 3-prong electrical outlet that is not controlled by an on/off switch.
- If your communications system uses an uninterruptible power supply, such as a backup generator, you may want to connect the battery charger to that power supply.
- Do not locate the battery charger where it will be exposed to direct sunlight or water.

WARNING:

The rechargeable battery pack may contain elements that are harmful to the environment (for example, nickel). Do not burn or puncture the battery. As with other batteries of this type, burning or puncturing could release toxic material that could cause injury. Do not dispose of it in household garbage. For information about recycling or proper disposal, consult your local solid waste (garbage) collection or disposal organization.

Installing the Battery Charger

- If you are wall-mounting the battery charger, follow Steps 1 through 7.
- If you are desk-mounting the battery charger, follow only Steps 1, 5, and 7.

To install the battery charger:

- 1 Check to make sure the battery charger's power cord is unplugged from the wall outlet before continuing. If you are desk-mounting, skip to Step 5.
- 2 To wall-mount, place the battery charger's wall-mounting template (located on the last page of this book) against the wall. Choose a location backed by a wooden stud (if unavailable, use toggle bolts instead of the supplied wood screws). Hold the template straight; use a level if needed.
- 3 Mark the locations for the two wall-mounting screws, and then remove the template from the wall. Lightly tap a nail into the wall to start the holes.
- 4 Place the screw through the wall spacers so that the screw head nests in the indentation on the spacer. Start the screws, and screw them in until the wall spacers rest against the wall.

- 5 Insert the battery charger's power cord/AC adapter into the battery charger. If you are desk-mounting the battery charger, skip to Step 7.

- 6 Place the keyhole-shaped openings in the back of the battery charger over the screw heads and wall spacers, then slide the battery charger downward into the groove in the wall spacers to lock it into place.

- 7 Plug the battery charger's power cord/AC adapter into a properly grounded, 3-prong wall outlet that is not controlled by an on/off switch.

Inserting a Battery Pack into the Spare Battery Compartment

Slide the battery pack (or an optional extended battery pack) into the spare battery compartment until it is firmly seated with the back of the battery pack against the back of the spare battery compartment. **Do not force the battery pack down.** The battery pack should slide easily into the slot.

Correct positioning of the battery pack in the charger is important to ensure proper charging. The bottom end of either battery pack also has two small round holes that must align with two guide pins on the bottom of the spare battery compartment. When a battery pack is positioned correctly in the spare battery compartment, the **SPARE** LED on the front of the battery charger lights.

The spare battery compartment has a vertical ridge on each side that serves as a “guide rail” for positioning the standard battery pack.

The extended battery pack slides down into the spare battery compartment.

Removing a Battery Pack from the Spare Battery Compartment

To remove a battery pack from the spare battery compartment of the charger, lift the battery pack up and out.

Inserting the Handset into the Battery Charger's Handset Cradle

Correct positioning of the handset in the charger is important to ensure proper charging:

- 1 Position the handset (with either battery pack attached) so that the two small round holes in the bottom of the handset fit over the two guide pins on the bottom of the handset cradle.
- 2 Rock the handset back into the cradle until it is firmly seated with the back of the handset battery pack against the back of the handset cradle.

When the handset has been inserted correctly, the following occur:

- The **HANDSET LED** lights.
- If the handset was turned on, the **ON** icon in the display is no longer visible.
- Any call that was in progress is terminated.
- After 15 seconds, the handset enters the energy-saving "sleep" mode.

Removing the Handset from the Handset Cradle

To remove the handset from the handset cradle, lift it out.

3 Using the MDW 9031/9031DCP Pocket Phone

Important Safety Instructions

Please see “Important Safety Instructions” at the beginning of Chapter 2.

Handset

The MDW 9031/9031DCP Pocket Phone supports normal operation of all of the features of the switch as far as is practical within the limitations of its reduced size and power and the nature of wireless operation. There are very few differences in operation between the wireless MDW 9031/9031DCP Pocket Phone and a wired deskset.

This chapter describes the handset and how to use it. It also explains how to use a headset.

Handset Controls

Headset On/Off

Press to turn the headset on if the headset is plugged in. **ON** appears in handset display. To turn off, press again. Turn on to make or answer a call, and turn off to "hang up."

Lanyard Loop

Attach lanyard for carrying handset.

Volume Control

Press "+" to increase or "-" to decrease volume of receiver or alerter.

On/Off

Press to turn the handset on. **ON** appears in handset display. To turn off, press again. Turn on to make or answer a call, and turn off to "hang up."

Feat/P
(Feature/Program)

Press to use dial-code features (PARTNER[®] Systems only) or to enter programming mode.

Exit (9031DCP Only)

Press the Feat/P twice to Exit the Softkey menu.

Conf (Conference)

Press to conference in (add) another party to your call.

Trans (Transfer)

Press to transfer a call to another extension.

Hold

Press to put a call on hold.

Receiver

Receives the sound of your caller's voice, unless a headset is connected.

Antenna

Extend fully or retract fully to use handset. Extend fully to maximize the handset range and voice quality.

Handset Display with Backlighting

Displays status of lines and range. For a detailed description, see "Handset Display" later in this chapter.

Column

Use together with Select button to choose a line or programmable/intercom/drop button.

Scroll (9031DCP Only)

When the Selection rectangle is in the top row, press to toggle between the first and second line of the display.

Redial

Press to redial the last number manually dialed from the handset.

Select

Use to move the Selection rectangle, and, together with Column buttons, to choose a line or programmable/intercom/drop button. Also use to wake-up the phone.

Mute

Press to turn the microphone off for privacy.

Headset Connector

Plug in the headset adapter to use the headset.

Column and Select Buttons

The MDW 9031/9031DCP Pocket Phone can display the status of up to 10 lines/intercom/programmable buttons, but the number of lines supported by compatible communications system switches varies. However, it has only 4 selection buttons (the Column buttons). The Select button (▲) is used in conjunction with the Column buttons (△) to increase the available selections to 12. Each Column button (△) affects one of the three lines or programmable/intercom/drop buttons directly above it, as shown in the illustration below.

Each time you press the Select button (▲), the Selection rectangle moves to another row (cycling through the three rows in turn). The Column buttons (△) each represent one of the four lines or programmable/intercom/drop buttons *in the row enclosed by the Selection rectangle*.

For example, suppose your handset shows the Selection rectangle around the middle row of lines. If you press the second Column button from the left (shaded in the illustration above), you select Line 2, as indicated by the truncated triangle in the illustration.

Note: If you have a communications system other than PARTNER, the line you select is indicated by a small rectangle instead of the triangle, as shown below:

See “Manually Selecting a Line or Programmed Button” and “Preselecting a Line” later in this chapter for more information about the Column and Select buttons.

Handset Display (with Backlighting)

The MDW 9031/9031DCP Pocket Phone display has one 16-alphanumeric-character line and four lines of icons to provide you with status information. The display provides Backlighting (a programmable option) either when the handset is turned on or when the  button is pressed. See “Changing the Handset Setting.” later in this chapter. The Backlighting lasts for 10 seconds, if no other button is pressed when the handset is turned on.

Note: This illustration is intended to show you what all of the indicators look like, but you will never see all of the line status indicators illuminated at once.

- 1 This line of the display gives you the information you would see on a wired system phone's display, except that the time is not provided. The information varies according to which communications system you are using. For example, the display may show the current date, the number you are calling, or Caller ID information (if the system supports this feature). This display line is also used for feedback when testing and programming the handset. See “Display Messages” later in this chapter for more information about messages.
- 2 **MSG** icon indicates that you have a message.
- 3 **RANGE** icon indicates that the handset is out of range or almost out of range. The handset also beeps. For more information, see “Range Indicators” later in this chapter.
- 4 **ON** icon indicates that the handset has been turned on by pressing .
- 5 **Battery** icon flashes to indicate a low battery condition. The handset also emits 2 beeps. For more information, see “Low Battery Indicator” later in this chapter.
- 6 **No Ring** icon indicates that the alerter is disabled. If the alerter is enabled, no icon is displayed.
- 7 **MUTE** icon indicates that the handset microphone was turned off by pressing .
- 8 **Line Status Indicators** show the status of line or programmable/intercom/drop buttons. See Chapter 6 for button-mapping information. Also see “Line Status Indicators” later in this chapter.
- 9 **Selection rectangle** indicates the active row for line or programmable/intercom/drop button selection. See “Column and Select Buttons” earlier in this chapter.

When the display is blank, the handset is either turned off or in the power-saving “sleep” mode. You can activate the display and Backlighting (if programmed) by pressing **On/Off**, turning the handset on, or by pressing **▲** to “wake it up.”

Display Messages

The top line of the handset display uses up to 16 alphanumeric characters to provide messages such as the following:

- **LCL:P** (or **LCL:D**, **LCL:M1**, or **LCL:M2**) indicates that the handset is in Local Mode, and tells which communications system the button mapping is set to emulate:

| | |
|---------------|--|
| LCL:P | PARTNER Systems |
| LCL:D | DEFINITY Systems, System 25, System 75, and System 85 |
| LCL:M1 | All MERLIN Systems (except MERLIN 410 and MERLIN 820), including MERLIN LEGEND |
| LCL:M2 | MERLIN 410 and MERLIN 820 |

- **WIRELESS TEST** indicates that the handset is in Wireless Test Mode; **1** through **10** are used to measure signal strength and voice quality in Wireless Test Mode.
- **VIBR** indicates that the vibrator is enabled to notify you of incoming calls.
- **PSEL** indicates that Line Preselection is enabled.
- **PRESELECTION:ON** or **PRESELECTION:OFF** is displayed when you enter Preselection Mode, and indicates the status of the Line Preselection option.
- **CHANGE BUTTN MAP** is an error message indicating that the handset is set for the wrong communications system. See “Changing the Communications System Setting” in Chapter 2 for instructions for changing the setting.
- **MAP:P** (or **MAP:D**, **MAP:M1**, or **MAP:M2**) is displayed when you enter Button Mapping Mode, and indicates the communications system to which the MDW 9031/9031DCP buttons are currently mapped:

| | |
|---------------|---|
| MAP:P | PARTNER Systems |
| MAP:D | DEFINITY Systems, System 25, System 75, and System 85 Note: The MDW 9031DCP should only be set to MAP:D for DEFINITY. |
| MAP:M1 | All MERLIN Systems (except MERLIN 410 and MERLIN 820), including MERLIN LEGEND |
| MAP:M2 | MERLIN 410 and MERLIN 820 |

- **RANGE** is an error message indicating that the handset is not communicating with its radio module. See Chapter 5, “Troubleshooting,” for help in resolving this problem.

Line Status Indicators There are 12 status indicators; each one corresponds to a specific outside line or programmable/intercom/drop button. (The function of these status indicators varies, depending on the communications system you are using—see the Button Mapping topic for the appropriate communications system switch in Chapter 6, “MDW 9031/9031DCP Pocket Phone Compatibility.”) The status indicators show either a truncated triangle or a rectangle, signifying the following activity:

For PARTNER Systems:

A **rectangle** () is the equivalent of a red LED on a wired system phone.

A truncated **triangle** () is the equivalent of a green LED on a wired system phone.

For all other Systems:

A **rectangle** () is the equivalent of a green LED on a wired system phone.

A truncated **triangle** () is the equivalent of a red LED on a wired system phone.

Range Indicators For maximum range and voice quality, always fully extend the antenna before placing or answering a call. **The antenna must be either fully retracted (for short range) or fully extended (for maximum range) to use the Pocket Phone.**

The handset provides an audible and a visual signal to alert you when the handset is near the end of the range of the radio module. Depending on how far away the handset is from the radio module, the signals function as follows:

- The handset emits two beeps and flashes the **RANGE** indicator continuously.

Out of optimal range. You have walked into an area that is near the end of the operating range of the radio module. You can continue your conversation or initiate a call, but you are likely to experience a degradation in voice quality.

- The handset emits five sets of beeps and displays the **RANGE** indicator.

Loss of communication link. You have walked into an area that is out of the operating range of the radio module. You must bring the handset within range of the radio module within several seconds or the handset will turn off. If the handset turns off, it appears that your call was disconnected; however, it was only placed on Hold. To talk with your party, move back toward the radio module, press , then proceed as you would for any call placed on Hold.

- When you try to make a call, the handset emits two beeps and flashes the **RANGE** indicator twice; then the handset automatically turns off.

Cannot establish communication link. You are completely out of range of the radio module. To make the call, move back towards the radio module and try again.

Refer to Chapter 5, “Troubleshooting,” for additional information about out-of-range conditions.

Low Battery Indicator The standard battery pack has approximately three hours of continuous talk time after being fully charged. The optional extended battery pack has approximately eight hours of continuous talk time after being fully charged.

When the handset is On and the battery power is low, the handset will emit two beeps and the **Battery** icon in the handset display will flash. When this occurs, you have five minutes or less of talk time left. At this point, you can either:

- Complete your call, turn the handset off, and recharge the battery pack, or
- If you have a charged spare battery pack, place your call on Hold and replace the handset battery pack with the spare battery pack. Wait 6 to 10 seconds, then turn the handset on and proceed as you would for any call placed on Hold.

Note: When the battery power is low, the two beeps will sound each time either **On/Off** button is pressed until either the battery is drained or you replace the battery. If you continue talking, the handset will turn off when the battery pack is drained. Your call will be placed on Hold automatically so that you can swap battery packs or pick up the call on another telephone.

Volume Control

To increase or decrease the volume of the handset alerter or the receiver (earpiece):

- **Alerter:** Press the “+” or the “-” button while the MDW 9031/9031DCP is awake but turned *off*. If the display is dark (the phone is in “sleep” mode), press  to wake it up, then press the “+” or the “-” button.
- **Receiver:** Press the “+” or the “-” button while the MDW 9031/9031DCP is turned *on*.

Carrying Your Pocket Phone

The MDW 9031/9031DCP Pocket Phone has a loop in the upper corner to accommodate the included lanyard. You can attach the lanyard, as illustrated above, and slip the lanyard over your wrist to guard against dropping the phone. A leather carrying case is also available separately (see “Ordering Replacement and Optional Parts” in Chapter 4).

Each battery pack (standard or extended) also comes with its own detachable clip that you can attach to the back of the battery pack, enabling you to attach the phone to your belt or purse strap. Be sure to use the clip that matches the battery pack; they are not interchangeable.

You have either a metal or a plastic carrying clip. Follow the appropriate procedure on the next page to attach the clip to the battery pack.

Attaching the Metal Carrying Clips

To attach the metal carrying clip to the battery pack, do the following:

- 1 Remove the battery pack from the handset, as described in “Inserting and Removing the Handset's Battery Pack” in Chapter 2.

- 2 Place the two metal tabs on the clip into the slots on the battery pack, with the “hooks” toward the bottom of the battery pack.
- 3 Slide the clip toward the bottom of the battery pack to engage the hooks.

- 4 Reinsert the battery pack in the handset, as described in “Inserting and Removing the Handset's Battery Pack” in Chapter 2.

Attaching the Plastic Clips

To attach the plastic clips to the battery pack, do the following:

- 1 Remove the battery pack from the handset, as described in “Inserting and Removing the Handset's Battery Pack” in Chapter 2.
- 2 Hold the battery pack so that the back of the battery pack is facing you.
- 3 Hold the carrying clip so that it looks like the letter “T.”

4 Latch the right edge of the clip into the corresponding groove on the inner side of the battery pack.

5 Push the left edge of the belt clip and snap it into the corresponding groove on the inner side of the battery pack.

6 Reinsert the battery pack in the handset, as described in “Inserting and Removing the Handset’s Battery Pack” in Chapter 2.

Antenna

The MDW 9031/9031DCP Pocket Phone comes with a user-replaceable, flexible, retractable antenna. For maximum range and voice quality, always fully extend the antenna before placing or answering a call. You can receive a call (if you are within range of the radio module) without extending the antenna, but you may get a **RANGE** indication. The antenna must be fully extended for optimal performance.

Changing the Handset Settings

You can use Local Mode to change the handset settings for these functions:

- Communications system button mapping
- Vibrator

- Line Preselection
- Backlighting
- Alerter

Local Mode also gives you access to Local Test Mode (which enables you to test the alerter, vibrator, and display) and Wireless Test Mode (which enables you to test sound clarity, signal strength, and voice quality). While in Local Mode, the MDW 9031/9031DCP can still receive notification of incoming calls.

To access Local Mode, use the following procedure:

- 1 Make sure the handset is turned off.
- 2 Press and hold the Select button () for three seconds.
- 3 While still holding , press **On/Off**.

The handset beeps twice, and the display shows the handset settings. For example, the following display indicates that the handset:

- ~ Is using button mapping for a PARTNER switch.
- ~ Has the vibrator and Line Preselection enabled.
- ~ Has the alerter disabled.

| | | | |
|--------|---|---|---|
| LCL: P | | VIBR PSEL | |
| | |  |  |
| 5 | 6 | 7 | 8 |
| 1 | 2 | 3 | 4 |
| A | B | C | D |

- 4 To exit Local Mode, press **On/Off**.

Changing the Communications System Button Mapping Setting

If the MDW 9031/9031DCP Pocket Phone is set to use the wrong communications system, an error message saying **CHANGE BUTTN MAP** shows on the top line of the handset display each time the **On/Off** button is pressed. If you see this message, use the procedure described in “Changing the Communications System Setting” in Chapter 2 to specify the correct communications system setting.

Enabling or Disabling the Vibrator

The vibrator vibrates to alert you to an incoming call in situations where you do not want to disturb others with an audible ring. You can enable or disable the vibrator using the following procedure:

- 1 Make sure the handset is turned off.
- 2 Press and hold the Select button () for three seconds.

- 3 While still holding (▲), press (On/Off).

The handset beeps twice, and the display shows the handset settings, indicating that you are now in Local Mode. (While in Local Mode, the MDW 9031/9031DCP can still receive notification of incoming calls.)

If the vibrator is enabled, the **VIBR** icon appears in the display. For example:

If the vibrator is disabled, no icon appears.

- 4 Press "V" (Ⓟ) on the dialpad to enable or disable the vibrator.
 5 Press (On/Off) to exit Local Mode.

Note: Both the alerter and the vibrator can be disabled at the same time. In this case the only notification you have of an incoming call is that a line status indicator (a truncated triangle or a rectangle, depending on your communications system) flashes in the display.

Enabling or Disabling Line Preselection

Line Preselection lets you choose the line or button you want to use before turning the handset on. For example, suppose your phone is ringing but you want to pick up a call that is holding on another line instead of the ringing call. In normal operation, the communications system automatically connects you to the ringing line as soon as you turn on the handset. With Line Preselection enabled, you can select the line you want to connect to *before* turning on the handset.

Notes: Enabling Line Preselection lets the user retrieve both lines of display by pressing the Column button programmed for SCROLL, without turning the handset "on."

Under certain conditions, the communications system tries to turn on a speaker; for example, if you use Line Preselection to select a button programmed for speed-dialing. Since the MDW 9031/9031DCP Pocket Phone has no speaker, the system causes the ON icon in the handset display to flutter, and the handset emits a continuous double beep. You must press (On/Off) to complete the connection.

When Line Preselection is enabled, you do not have to use it; however you cannot use it unless it is enabled.

To enable Line Preselection, use the following procedure:

- 1 Make sure the handset is turned off.
- 2 Press and hold the Select button (▲) for three seconds.

- 3 While still holding , press **On/Off**.

The handset beeps twice, and the display shows the handset settings, indicating you are in Local Mode. (While in Local Mode, the MDW 9031/9031DCP can still receive notification of incoming calls.)

If Line Preselection is enabled, **PSEL** appears on the top line of the display. For example:

| | | | |
|-------|---|---|---|
| LCL:P | | VIBR | PSEL |
| | |  |  |
| 5 | 6 | 7 | 8 |
| 1 | 2 | 3 | 4 |
| A | B | C | D |

If Line Preselection is disabled, no icon appears.

- 4 Press and hold "P" () for three seconds.

The handset display shows **PRESELECTION:ON** if Line Preselection is enabled or **PRESELECTION:OFF** if Line Preselection is disabled. For example:

| | | | |
|------------------|---|---|---|
| PRESELECTION: ON | | | |
| | |  |  |
| 5 | 6 | 7 | 8 |
| 1 | 2 | 3 | 4 |
| A | B | C | D |

- 5 To toggle between ON and OFF to enable or disable Line Preselection, press .
- 6 To exit Local Mode, press **On/Off**.

Enabling or Disabling Backlighting

Backlighting for the display is factory set to ON for the MDW 9031/9031DCP Pocket Phone. To toggle the Backlighting features OFF (and ON), use the following procedure:

- 1 Make sure the handset is turned off.
- 2 Press and hold the Select button () for three seconds.
- 3 While still holding , press **On/Off**.

The handset beeps twice, and the display shows the handset settings, indicating you are in Local Mode. (While in Local Mode, the MDW 9031/9031DCP can still receive notification of incoming calls.)

- a Press "L" () for "Lighting." The Backlighting toggles ON or OFF each time you press the .
- b After setting the correct Backlighting state, press **On/Off** for normal Pocket Phone use.

Enabling or Disabling the Alerter

The alerter is an audible signal to notify you of an incoming call. If a call comes in while the phone is idle, the handset rings. If you are already on a call, the handset chirps softly. You can adjust the volume of the alerter by pressing the “+” button or the “-” button on the side of the handset *when the phone is turned off*. You can enable or disable the alerter using the following procedure:

- 1 Make sure the handset is turned off.
- 2 Press and hold the Select button () for three seconds.
- 3 While still holding , press .

The handset beeps twice, and the display shows the handset settings, indicating you are in Local Mode. (While in Local Mode, the MDW 9031/9031DCP can still receive notification of incoming calls.)

If the alerter is disabled, the **No Ring** icon (a bell with a line through it) appears in the second line of the display. For example:

If the alerter is enabled, the icon is not displayed. For example:

- 4 Press “A” () on the dialpad to enable or disable the alerter.
- 5 Press  to exit Local Mode.

Note: Both the alerter and the vibrator can be disabled at the same time. In this case the only notification you have of an incoming call is that a line status indicator (a truncated triangle or a rectangle, depending on your communications system) flashes in the display.

Test Modes

You can use Local Test Mode and Wireless Test Mode to verify that your handset is working properly and that the MDW 9031/9031DCP System is performing optimally.

Using Local Test Mode

You can use Local Test Mode to activate the audio warning signal, the vibrator, and all visual indicators on the handset display, enabling you to test the following:

- Does the audio warning signal work?
- Does the vibrator vibrate?
- Is the display operational?
- Are the visuals bright and clear?

Note: While in Local Test Mode, the MDW 9031/9031DCP *cannot* make or receive calls.

To use Local Test Mode:

- 1 Make sure the handset is turned off.
- 2 Press and hold the Select button () for three seconds.
- 3 While still holding , press .

The handset beeps twice, and the display shows the handset settings, indicating you are in Local Mode. (While in Local Mode, the MDW 9031/9031DCP can still receive notification of incoming calls.)

- 4 Press  to enter Local Test Mode.

The handset emits two beeps, the vibrator vibrates, and *all* indicators on the display appear (including the rectangles and truncated triangles), as shown below.

If the beeps do not sound, the vibrator does not vibrate, or the indicators do not appear, repeat Steps 1–4. If you still have problems, call for customer support as described on the inside front cover of this book.

- 5 To exit both Local Test Mode and Local Mode, press  once.

Note: You must exit Local Test Mode to reinstate proper call handling.

Using Wireless Test Mode

You can determine sound clarity, signal strength, and voice quality using Wireless Test Mode.

You should use Wireless Test Mode to help you locate the best place to install the radio module(s) to optimize the performance of your MDW 9031/9031DCP Pocket Phone. Repeat the tests several times, with the radio module positioned in a different location each time.

By performing the tests as you walk around the area in which the handset will be used, you can determine the handset's range and the voice quality throughout the area of coverage. To perform the tests, all you need is an electrical outlet for the radio module and a charged battery pack in the handset. You can perform the tests multiple times and in any order; and you can exit at any time by pressing **On/Off**.

Note: Ignore anything that displays if you press 4 while in Wireless Test Mode. These displays are for Lucent Technologies technicians' use only.

To use Wireless Test Mode:

- 1 Make sure the handset is turned off.
- 2 Press and hold the Select button (**▲**) for three seconds.
- 3 While still holding **▲**, press **On/Off**.

The handset beeps twice, and the display shows the handset settings, indicating you are in Local Mode. (While in Local Mode, the MDW 9031/9031DCP can still receive notification of incoming calls.)

- 4 Press "W" (**Ⓜ**) to enter Wireless Test Mode.

WIRELESS TEST appears on the top line of the handset display.

The handset beeps twice and, if the vibrator is enabled, it vibrates; then you hear a simulated dial tone. This dial tone continues until you exit Wireless Test Mode. While in this mode, the MDW 9031/9031DCP *cannot* make or receive calls.

- 5 To identify the matching radio module for this handset, press **Ⓜ**.

The display indicates in which slot in the individual carrier (**SLOT: n**) the matching radio module is located, using a number (*n*) from 1 to 6. A stand-alone radio module is shown as **0**. For example, the display below shows a radio module in slot 4:

- 6 To determine **sound clarity**, listen to the simulated dial tone as you walk around.

A clear, steady tone indicates good sound clarity.

- 7 To determine **signal strength**, press $\text{\textcircled{1}}$.

The display shows the signal strength (**SIG**) for both the handset (**HS**) and the base (**B**) (the radio module) at the moment that $\text{\textcircled{1}}$ was pressed, using a number from 1 to 10, as shown in the following display:

The higher the number, the stronger the signal, as shown in the following table. You can press $\text{\textcircled{1}}$ again to show a subsequent signal-strength reading. Each time you press $\text{\textcircled{1}}$, you get a new reading.

| Display Number | Signal Strength Is |
|----------------|--------------------------------|
| 10 | Strong |
| 9 | Strong |
| 8 | Strong |
| 7 | Very Good |
| 6 | Very Good |
| 5 | Good |
| 4 | Good to Fair |
| 3 | Fair |
| 2 | Near end of range |
| 1 | Near end of range/loss of link |

- 8 To determine **voice quality**, press $\text{\textcircled{2}}$.

The display shows the voice quality (**QUAL**) for both the handset (**HS**) and the base (**B**) (the radio module) using a number from 1 to 10, as shown in the following display:

The higher the number, the better the voice quality, as shown in the table below. A low number may indicate potential interfering devices (such as another radio transmitter) in the area. You can press **2** again to show a subsequent voice-quality reading. Each time you press **2**, you get a new reading.

| Display Number | Voice Quality Is |
|----------------|---|
| 10 | Very Good |
| 9 | Very Good/almost error free |
| 8 | Errors, but not noticeable in normal speech |
| 7 | Errors, but not noticeable in normal speech |
| 6 | Noticeable noise |
| 5 | Noticeable noise |
| 4 | Noisy but intelligible speech |
| 3 | Noisy but intelligible speech |
| 2 | Garbled speech |
| 1 | Unintelligible speech |

9 To determine **power level**, press **5**.

The display shows the power level to which the handset (**HS**) and the base (**B**) (the radio module) have adjusted. The power level adjusts from low power (1) to high power (8) as the Pocket Phone is moved farther from its base. The following display shows the Pocket Phone at its highest setting:

```

CUR PW: HS=8 B=8
ON [||||]

```

10 To exit Wireless Test Mode and Local Mode, press **On/Off**.

Performance /Range Test in Wireless Test Mode

Using the signal-strength test and the voice-quality test together, you can determine:

- if the installation has been done correctly.
- if the handsets and bases are working properly.
- the range in which your MDW 9031/9031DCP Pocket Phone performs best at your site.

Close Up Test

At no more than 5 to 10 feet (1.5 to 3.1 m) from its radio module, use the following procedure:

- 1 Make sure the handset is turned off.
- 2 Press and hold the Select button () for three seconds.
- 3 While still holding , press .

The handset beeps twice, and the display shows the handset settings, indicating you are in Local Mode. (While in Local Mode, the MDW 9031/9031DCP can still receive notification of incoming calls.)

- 4 To enter Wireless Test Mode, press “W” ().

Note: In a multiple TransTalk installation, put all of the handsets in Wireless Test Mode at the same time. This allows you to observe if all handsets are working properly together.

WIRELESS TEST appears on the top line of the handset display. The handset beeps twice and vibrates, then you hear a simulated dial tone. This dial tone continues until you exit Wireless Test Mode. While in this mode, the MDW 9031/9031DCP *cannot* make or receive calls. For more information, see “Using Wireless Test Mode” in Chapter 3.

For all sets, do the following:

- 5 Press .

The display should show a **9** or **10** for signal strength (an occasional 8 is acceptable). If it does not, see Chapter 5, “Troubleshooting,” for help with range problems.

- 6 Press .

The display should show a **9** or **10** for voice quality (an occasional 8 is adaptable). If it does not, see Chapter 5, “Troubleshooting,” for help with range problems and/or voice quality problems.

Note: If you are seeing numbers lower than 8–10 for either signal strength or voice quality while performing the Close Up Test, please refer to either the “Installing a Single Carrier” section or “Installing Multiple Carriers” section in Chapter 2, or Chapter 5, “Troubleshooting.” This will ensure that your installation meets all installation and environmental requirements.

Edge of Range Test

- 1 Periodically check the signal strength and voice quality as you walk away from the radio module. Each time you press  or , you get a new reading.

When you see a signal strength of **3** at a power level of **8**, you are at the “edge of range” for the MDW 9031/9031DCP Pocket Phone. The distance will vary depending on the environment, building structure, and other factors. The range in an average office building is 500 to 700 feet (152.5 to 213.5 m). If, however, dense walls intervene, the distance could be less.

- 2 With a signal strength of **3**, press **2** to check the voice quality. When the voice quality is **7** or **8**, the voice connection should be satisfactory. This is the edge of your usable range.

The following diagram illustrates this Performance/Range test.

Go to **either** of the following sections:

- If installing **one MDW 9031/9031DCP Pocket Phone**, go to “Installing a Single Radio Module” in Chapter 2.
- If installing **one or more carriers**, go to “Understanding Carriers” in Chapter 2.

“Waking Up” the Phone

In addition to “On” and “Off,” the MDW 9031/9031DCP has an energy-saving “sleep” or “standby” mode. The MDW 9031/9031DCP “goes to sleep” 15 seconds after activity ceases (that is, after an alert stops ringing or after you hang up).

The **On/Off** and **(▲)** buttons “wake up” the phone. The headset and handset **On/Off** buttons turn the phone on, and the Select button (**(▲)**) signals the phone that activity is occurring. You can activate the display to see whether you have a message or to check whether your alerter is enabled without actually turning the phone on (if the communications system is very busy, for instance) by pressing **(▲)**.

Making a Call

To make a call using your MDW 9031/9031DCP, use the following procedure:

- 1 Press the handset **On/Off** button (or the headset **On/Off** button if you have the headset attached) to turn the phone on.
 - ~ The MDW 9031/9031DCP seizes an available line and a truncated triangle or a small rectangle (depending on your communications system) appears around that line in the handset display.
 - ~ You hear a dial tone.
- 2 Dial the call as you would on a wired system phone.
- 3 To end the call, press the **On/Off** button.

After 15 seconds, unless there is other activity on the phone, the handset goes into the energy-saving “sleep” mode.

Answering a Call

When you receive a call on your MDW 9031/9031DCP Pocket Phone, you hear a ringing tone if your alerter is enabled, or you feel a vibration in the handset if the vibrator is enabled, or both. To answer the call, use the following procedure:

- 1 Press the handset **On/Off** button (or the headset **On/Off** button if you have the headset attached) to turn the phone on.

You are automatically connected to the ringing line.
- 2 Speak into the handset to converse with your caller.
- 3 To end the call, press the **On/Off** button.

After 15 seconds, unless there is other activity on the phone, the handset goes into the energy-saving “sleep” mode.

Manually Selecting a Line or Programmed Button

When you are making or answering a call, the MDW 9031/9031DCP automatically selects the line for you. In some situations, however, you may want to select a particular line (for example, to use an “800” line). To select a particular line or programmable/intercom/drop button, use the following procedure:

- 1 Press **On/Off**.

The **ON** icon displays steadily, and you are connected to an available line.
- 2 If the Selection rectangle in the handset display is not surrounding the row that includes the line or button you want to use, press **▲** one or more times until the rectangle encloses that row. (See “Column and Select Buttons” earlier in this chapter for more information.)
- 3 Press the **△** button that corresponds to the line or button within the Selection rectangle that you want to select.

You are connected to the line or you have access to the button you chose.

To deselect the line or button, press **On/Off**.

For information about assigning features to buttons, see “Programming Features for PARTNER, MERLIN, and MERLIN LEGEND Systems” in Chapter 6.

Preselecting a Line

You may sometimes want to select a line other than the line to which the communications system automatically connects you. To preselect a line, you must first enable Line Preselection. See “Enabling or Disabling Line Preselection” earlier in this chapter.

Once Line Preselection is enabled, use the following procedure:

- 1 If the handset is “asleep,” press **⏻** to wake it up and activate the display.
- 2 If the Selection rectangle in the handset display is not surrounding the row that includes the line you want to use, press **⏻** repeatedly until the rectangle encloses that row. (See “Column and Select Buttons” earlier in this chapter for more information.)
- 3 Press the **△** button that corresponds to the line within the Selection rectangle that you want to select.

The **ON** icon flashes in the display and the handset emits double beeps.

- 4 Press **On/Off**.

The **ON** icon displays steadily, and you are connected to the line you chose.

Accessing Certain Voice Mail Systems with a DEFINITY System

Note: This section only applies to the MDW 9031 Pocket Phone.

After dialing into some voice mail systems (for example, Octel 200/250, 300/350), the MDW 9031 Pocket Phone may not provide touch tones in order to access the voice mail system prompts. If you experience this problem after dialing into your voice mail system, press the **Feat/P** button twice. After pressing the **Feat/P** button twice, your Pocket Phone will generate touch tones and you will be able to navigate within your voice mail system. When you end your call to your voice mail system, or press any non-dialpad button on your Pocket Phone (that is, Conf, Trans, Hold, Redial, Mute), your MDW 9031 will stop generating touch tones behind the voice mail system. You will need to re-enter **Feat/P** whenever you dial into these voice mail systems or after you have pressed a non-dialpad button.

Using a Headset

Lucent Technologies offers the Supra 9031 headset, which is specifically designed for use with your MDW 9031/9031DCP wireless phone or the Radium (over-the-ear) headset. A headset assists in call answering and provides hands-free operation.

For ordering information, see “Ordering Replacement and Optional Parts” in Chapter 4.

⚠ CAUTION:

Plug **ONLY** the Supra 9031 headset cord or the Radium headset cord into the headset adapter.

Note: Calls cannot be heard on the handset receiver when the headset is plugged in to the headset adapter. The handset microphone is also deactivated. The range of the handset is slightly diminished when you are using a headset. You may need to move closer to the radio module or move the radio module closer to you.

If desired, you can disconnect the headset from the handset without dropping the call, either by unplugging the headset adapter from the handset or by releasing the Quick Disconnect plug from the headset adapter cord. You can then use the handset as you normally would.

Using the Headset On/Off Button

The headset On/Off button near the antenna becomes active **only** when the headset is plugged into the headset connector. The headset On/Off button is identical in function to the **On/Off** button near the dialpad.

Answering Calls with a Headset

When you receive a call, you will hear a ringing tone or feel a vibration coming from the handset (you will not hear a tone from the headset itself).

To answer a call:

- 1 Press either the headset On/Off button near the antenna or the **On/Off** button near the dialpad.

Placing Calls with a Headset

To place a call with a headset:

- 1 Press the On/Off button near the antenna or the **On/Off** button near the dialpad to access an available line.

The microphone and earpiece in the handset are disabled.

- 2 Dial the call as you would on a wired system phone.
- 3 Press either the On/Off button near the antenna or the **On/Off** button near the dialpad to end the call.

Battery Charger

The battery charger charges battery packs in the spare battery compartment and in the handset. If both are present at the same time, charging in the spare battery compartment is suspended until the battery pack in the handset is fully charged. To enable extended phone usage, you should purchase an extra battery pack and store it in the charger, so that you always have a charged battery pack to switch to, if necessary. This section describes the battery charger and explains how to use battery packs properly.

Note: Do not touch, push, or pull any exposed battery contacts.

Battery Charger Features

The battery charger offers these features:

- The **spare battery compartment** refreshes the battery pack automatically by fully *discharging* it before *recharging* it. This process reduces or eliminates the potential “memory” effect. Memory effect, which reduces a battery’s capacity, occurs over time when you repeatedly recharge a battery before it is fully discharged.
- The **handset cradle** charges a battery pack in the handset.
- The **REFRESH** button, when pressed, refreshes the handset battery pack in the handset cradle by fully *discharging* the battery pack before *recharging* it.
- The **REFRESH LED** and the **HANDSET LED** light when the **REFRESH** button is pressed and stay lit until the battery pack finishes *discharging*.
- The **HANDSET LED**, when lit, indicates that the handset battery pack is installed in the handset, and the handset is in the handset cradle.
- The **SPARE LED**, when lit, indicates that a battery pack is in the spare battery compartment.

Note: Before you use the MDW 9031/9031DCP Pocket Phone handset for the first time, the battery pack must be charged.

The color of the battery charger’s LEDs indicates the state of the corresponding battery pack, as shown in the following table:

| Battery charger LED shows... | If it is the SPARE LED, the battery pack in the spare battery compartment... | If it is the HANDSET LED, the battery pack in the Handset... | If it is the REFRESH LED, the Refresh button was pressed, and the Handset battery pack... |
|--|---|---|---|
| Steady orange | Is charging | Is charging | N/A |
| Steady green | Is fully charged | Is fully charged | N/A |
| Flashing red See Note below. | Has one of the following problems: Is not seated properly in the charger Has dirty contacts Is defective | Has one of the following problems: Is not seated properly in the charger Has dirty contacts Is defective | N/A |
| Steady red | Is in the Discharge portion of the Refresh cycle | Is in the Discharge portion of the Refresh cycle | Is in the Discharge portion of the Refresh cycle |
| <p>Note: If either the SPARE LED or the HANDSET LED is flashing red, both battery packs must be removed from the charger to clear the flashing-red condition. Address the possible problems for one battery pack at a time to determine whether one is bad.</p> <p>Note: The SPARE LED may turn amber instead of red when jostled in the spare battery charging compartment. Remove the battery then place it back into the charger to clear the condition.</p> | | | |

Extending Battery Life

The battery charger will charge a battery pack in the handset if you simply insert the handset in the battery charger’s handset cradle; however, the Refresh process fully discharges the battery pack before recharging it, thereby ensuring the best possible charge and the longest talk time.

“Memory effect” reduces a battery's capacity and can occur when you repeatedly recharge a battery pack before it is fully discharged. The nickel metal hydride battery pack shipped with your MDW 9031/9031DCP is resistant to the memory effect. Even so, it is recommended that you refresh your battery pack at least once a week.

The following table shows how long refreshing takes using a Model 40B charger, depending on how much charge is left in the battery pack when you insert it into the charger and press the **REFRESH** button:

| Battery Pack | Battery-Pack Charge State | Discharge Time | Recharge Time | Total Time |
|-----------------------|--|----------------|---------------|-------------|
| Standard Battery Pack | Low charge (Battery icon is lit) | 0.5 hours | 1.25 hour | 1.75 hours |
| | Full charge | 3 hours | 1.25 hour | 4.25 hours |
| Extended Battery Pack | Low charge (Battery icon is lit) | 0.5 hours | 3.25 hours | 3.75 hours |
| | Full charge | 8 hours | 3.75 hours | 11.75 hours |

Note that your handset will consume power both during talk time (when the handset is turned on) and during standby time (when the handset is turned off, but out of the battery charger). The following chart illustrates typical power usage:

| Battery Use at Full Charge | | |
|----------------------------|-----------------------|--------------------------|
| Type | Approximate Talk Time | Approximate Standby Time |
| Standard Battery Pack | 3 hours | 22 hours |
| Extended Battery Pack | 8 hours | 72 hours |

If the new battery does not give you full talk time as shown in the table above, refresh the battery several times until the full talk time returns.

As a guideline, you can expect a 1-hour reduction in talk time for every 7 hours of standby time. Similarly, you can expect a 7-hour reduction in standby time for every hour of talk time.

It is recommended that you purchase a second battery pack to use as a spare. With the spare battery pack in the spare battery compartment of the battery charger, you are assured of always having a fresh, usable battery pack.

The following steps will ensure an uninterrupted supply of power to your MDW 9031/9031DCP Pocket Phone:

- If you have only one battery pack, be sure to refresh it at least once a week. You can refresh it by:
 - ~ Placing it in the spare battery compartment of the battery charger.
 - ~ Leaving it in the handset, placing the handset in the handset cradle of the battery charger, and pressing the **REFRESH** button.
- If you have two battery packs, exchange them between the handset and the spare battery compartment at least once a week, so each battery pack is automatically refreshed. (Alternate the battery packs even if the handset battery never flashes the **Battery** icon in the handset display to indicate a low battery condition.)
- The average battery life for both the standard and the extended battery packs is approximately one year, assuming that the battery is discharged and charged once a day. If the battery packs are discharged and charged twice a day, the life expectancy is approximately six months.

Note: Depending on the level of memory effect that the battery pack has, it is sometimes necessary to refresh the battery pack twice:

Insert the battery pack in the spare battery compartment of the battery charger and leave it there until the **SPARE** LED is steady green. Remove the battery pack from the charger, then reinsert it, and leave it until the **SPARE** LED is steady green a second time.

Or, with the battery pack in the handset, insert the handset in the handset cradle, press **REFRESH**, and leave it there until the **HANDSET** LED is steady green. Remove the handset from the handset cradle, then reinsert it, press **REFRESH** again, and leave it until the **HANDSET** LED is steady green a second time.

4 Maintaining the MDW 9031/9031DCP Pocket Phone

Important Safety Instructions

Please see “Important Safety Instructions” at the beginning of Chapter 2.

Removing Radio Module from Carrier

- Slot 6 of a Model 117A3 control carrier must always contain a radio module to pass the synchronization signal to the next carrier.
- See “Key Components” in Chapter 2 for additional picture detail.

To remove a radio module from the carrier:

- 1 Unplug the carrier(s) power cord/AC adapter from the wall outlet.

Note: When power is disconnected from the radio module or carrier, the receiver and alerter volumes are reset to the factory default settings.

4 Maintaining the MDW 9031/9031DCP Pocket Phone Removing Radio Module from Carrier

- 2 Unplug the telephone line cord from the bottom of the radio module.

- 3 Press up and hold the snap lock on the bottom rear of the radio module.

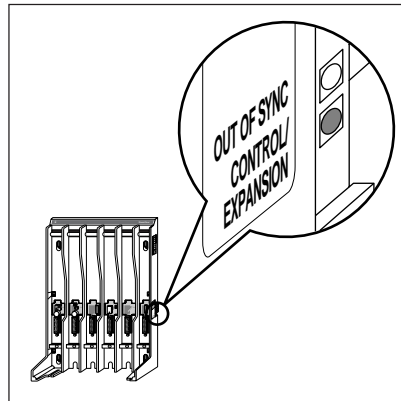

- 4 Slowly swing the radio module's card edge out of the card edge connector on the back of the carrier, releasing the snap lock when clear. Unhook the radio module from the radio module mounting rod by gently lifting upward.

- 5 If you removed a radio module from Slot 6 of an 117A3 control carrier, you must insert another radio module into this slot. Failure to do so will cause the carriers to be unsynchronized.
- 6 Repower the carrier. If you have multiple carriers, repower them in order from left to right, as shown below:

- 7 Wait a few seconds, then verify that the carrier's **OUT OF SYNC** LED is not lit. If the LED is lit, power down, wait at least 15 seconds, and then repower the carrier. If the LED is still lit, follow the suggestions in the "Installation Problems" section of Chapter 5, "Troubleshooting." If the LED is still lit, call Customer Support as described in the *Copyright and Legal Notices* at the beginning of this book.

- 8 For any Model 117A4 carriers, verify that the **CONTROL/EXPANSION** LED is lit. For the control carrier, this LED is green. For an expansion carrier, this LED is amber.
- 9 Reset the receiver and alerter volumes that reverted to the default settings when the system was powered down (see "Changing the Handset Settings" in Chapter 3).

Swapping Extensions

If you want to change your phone's extension number assignment, make sure the radio module or carrier(s) is unplugged before you unplug the telephone line cord from the communications system switch/control unit.

Power down and then repower the carrier(s) after all extension changes are made.

To swap extensions:

- 1 Unplug the carrier(s) power cord/AC adapter from the wall outlet.

Note: When power is disconnected from the radio module or carrier, the receiver and alerter volumes are reset to the factory default settings.

- 2 Unplug the telephone line cords from the communications system switch/control unit for the extensions that you want to change.
- 3 Insert the telephone line cords for the extensions that you want to change into the desired extension jack or terminal/station connector on your communications system switch/control unit.

- 4 Repower the carrier. If you have multiple carriers, repower them in order from left to right, as shown below:

- 5 Wait a few seconds, then verify that the carrier's **OUT OF SYNC** LED is not lit. If the LED is lit, power down, wait at least 15 seconds, and then repower the carrier. If the LED is still lit, follow the suggestions in the "Installation Problems" section of Chapter 5, "Troubleshooting." If the LED is still lit, call Customer Support as described in the *Copyright and Legal Notices* at the beginning of this book.

- 6 For any Model 117A4 carriers, verify that the **CONTROL/EXPANSION** LED is lit. For the control carrier, this LED is green. For an expansion carrier, this LED is amber.
- 7 Reset the receiver and alerter volumes that reverted to the default settings when the system was powered down (see "Changing the Handset Settings" in Chapter 3).

Replacing Antenna

If the antenna on your MDW 9031/9031DCP Pocket Phone handset becomes damaged, you can order a replacement antenna (see “Ordering Replacement and Optional Parts” later in this chapter), and replace it yourself.

To replace the antenna:

- 1 Fully retract the antenna.
- 2 Grasping the base of the antenna, unscrew it by turning it counterclockwise.
- 3 Grasping the base of the new antenna, screw it into the handset in a clockwise direction.

Ordering Replacement and Optional Parts

To order replacement parts or optional equipment in the continental U.S., call the Lucent Direct or National Parts Sales Center toll free. When ordering, please use the part numbers shown in the following table.

Note: The pocket phone accessories listed in this table can be used with the MDW9031, MDW 9031DCP, and MDW 9031 Dual Zone Pocket Phones.

| Item | Lucent Direct 1-800-451-2100 | National Parts Sales Center 1-800-222-PART |
|--|---------------------------------|--|
| MDW 9031 Pocket Phone (stand-alone); includes Radio Module and Kit of Parts | 3204-07B | 108046525 (for Pocket Phones) 107586828 (for Kit of Parts) |
| MDW 9031 Pocket Phone System (requires carrier); includes Radio Module, but not Kit of Parts | 3204-W7B | 108046525 |
| Retractable Flex Antenna for MDW 9031 Pocket Phone Headset | NA | 847713450 |
| Standard Battery Pack; includes Carrying Clip | 32045A | 107733107 |
| MDW 9031DCP Pocket Phone (standalone) | 3229-01D | 108401514 |
| MDW 9031DCP Pocket Phone System (requires carrier) | 3229-WID | 108401514 |
| Standard Battery Metal Carrying Clip | 32046 | 847773140 |
| Standard Battery Plastic Carrying Clip | 3204-BCS | 848172847 |
| Extended Battery Pack; includes Carrying Clip | 32049A | 107733115 |
| Extended Battery Metal Carrying Clip | 3204-CLP | 847773157 |
| Extended Battery Plastic Carrying Clip | 3204-BCX | 848441390 |

| Lanyard | NA | 407183417 |
| MDW 9031 Pocket Phone Leather Carrying Case | 32043A | 847877487 |
| MDW 9031 Pocket Phone Leather Carrying Case customized for headset use | 32090A | 848026092 |
| Battery Charger; includes Power Cord/AC Adapter | 3279-3BC | 108386921 |
| Power Cord/AC Adapter for Battery Charger [11 foot (3.4 m)] | NA | 408082204 |
| Carrier; includes: Power Cord and AC Adapter for Carrier [25 foot (7.6 m)] Expansion Cable for Multiple-Carrier Installation [6 foot (1.8 m)] | 3204-CR3A | 107907289 (for 117A3) 107955122 (for 117A4) |
| Power Cord and AC Adapter for Carrier [25 foot (7.6 m)] | NA | 847224227 |
| Expansion Cable for Multiple-Carrier Installation [6 foot (1.8 m)] | 32035A | 847667870 |
| Telephone Line Cord [8 foot (2.4 m)] | NA | 103786794 |
| Supra Binaural Headset (no Adapter) | 3275-SU2 | 409094746 |
| Supra 9031 Headset with Quick Disconnect Adapter | 3275-042/A | 407713718 (for Headset) 848047965 (for Adapter) |
| MDW 9031 Adapter for Supra Binaural and Supra 9030/9031 Headsets | 3204-ADP | 848047965 |
| Radium (Over-the-Ear) Headset with Adapter | 3275-042/A | 407720739 (for Headset) 848047965 (for Adapter) |
| Kit of Parts (for stand-alone installations); includes Power Cord/AC Adapter for Radio Module [11 foot (3.4 m)] | D-182866 | 107586828 |

Outside the continental U.S., contact your Lucent Technologies Representative or local Authorized Dealer.

5 Troubleshooting

Procedures

If you have a problem with your MDW 9031/9031DCP Pocket Phone, you may be able to solve it by following the procedures included in this chapter. If you cannot resolve the problem, call Customer Support as described in the *Copyright and Legal Notices* at the beginning of this book.

The problems in this chapter are organized as follows:

- Installation
- Handset
- Battery
- Voice Quality
- Range
- Battery Charger

Installation Problems

| Symptom | Possible Causes | Possible Solutions |
|--|--|---|
| One or more OUT OF SYNC LEDs is lit, radio module PASS LEDs are not lit, or both. | <p>Expansion cable is installed in the wrong IN or OUT jack, or it is not fully inserted into the correct jack.</p> <p>Carriers were not powered in the correct order.</p> <p>Telephone line cord was disconnected and reconnected without powering down, waiting 15 seconds, and repowering the carrier(s).</p> | <ol style="list-style-type: none"> 1 Verify that all expansion cables are fully inserted in the correct IN and OUT jacks. 2 Check CONTROL/EXPANSION LEDs for correct color. (See “Understanding Your Model 117A4 Carrier” in Chapter 2.) 3 Ensure that each carrier has at least one radio module installed. If the control carrier is a Model 117A3, ensure that there is a radio module in that carrier’s Slot 6. 4 Power down all carriers, wait 15 seconds, repower the control carrier, then repower the expansion carriers in order, from left to right. |
| After you plug the radio module or carrier into an electrical outlet, one or more radio module POWER and PASS LEDs do not light. | <p>Radio module or carrier(s) is plugged into an electrical outlet controlled by a switch.</p> <p>Power cord of radio module is not inserted properly.</p> <p>Power cord of carrier(s) is not inserted properly.</p> <p>Power cord of radio module or carrier(s) is defective.</p> | <p>Plug the radio module or carrier(s) into an outlet not controlled by a switch.</p> <p>Unplug the radio module’s power cord/AC adapter from the electrical outlet and from the radio module. Wait 15 seconds. Carefully reinsert the power cord/AC adapter into the radio module and into the electrical outlet. Repeat for each radio module.</p> <p>Unplug the carrier’s power cord from the electrical outlet. Unplug the AC adapter from the carrier and from the power cord. Carefully reinsert the AC adapter into the carrier and into the power cord. Repeat for each carrier. After waiting 15 seconds, plug the power cord back into the electrical outlet. (If you have multiple carriers, repower the control carrier first, and then power the expansion carriers in order from left to right; or use a surge-protector strip to repower all the carriers at one time.)</p> <p>Call for Customer Support.*</p> |

*See “Customer Support” in the *Copyright and Legal Notices* at the beginning of this book

| Symptom | Possible Causes | Possible Solutions |
|--|---|---|
| After you plug the radio module into an electrical outlet, the radio module's POWER LED lights, but the PASS LED does not light. | Radio module is malfunctioning. | Replace the radio module. |
| After you plug the carrier into an electrical outlet, the PASS LED of one or more radio modules does not light. | Radio modules are out of synchronization. Radio module is malfunctioning. | Power down the carrier, wait 15 seconds, and repower it. If you have multiple carriers, repower the control carrier first, and then power the expansion carriers in order from left to right; or use a surge-protector strip to repower all of the carriers at one time. If the problem persists, call for Customer Support.* 1 Remove all but one radio module from the carrier. (See "Removing Radio Module from Carrier" in Chapter 4.) 2 Test each radio module individually, verifying that the POWER and PASS LEDs on each radio module light when the carrier is powered. 3 If the PASS LED does not light, the radio module is malfunctioning. Replace the radio module and handset. |
| A defective radio module was replaced, and now all the handsets have less range than before, and the voice quality has deteriorated. | Radio module was inserted without first powering down the carrier. Carrier is out of synchronization. | Power down the carrier, wait 15 seconds, and repower it. If you have multiple carriers, repower the control carrier first, and then power the expansion carriers in order from left to right; or use a surge-protector strip to repower all of the carriers at one time. If the problem persists, call for Customer Support.* |
| When turned on, the handset display shows lines going on hold and line selections changing without any buttons being pressed. | Electrical outlets may not be up to specifications. Electrical problems, such as no ground or floating ground, can cause the switch to send or receive spurious current, causing problems in switch protocol. | Verify that the outlets for the communications system switch and for the carrier(s) meet electrical requirements. (See "AC Outlet Check" in Chapter 2.) |

*See "Customer Support" in the *Copyright and Legal Notices* at the beginning of this book

| Symptom | Possible Causes | Possible Solutions |
|---|--|--|
| <p>LEDs on the carriers were displaying correctly according to the three self tests in "Installing Multiple Carriers" when you installed the carriers and radio modules, but now the LED conditions have changed.</p> | <p>Radio module is malfunctioning.</p> | <p>Locate the malfunctioning radio module by using the following procedure:</p> <ol style="list-style-type: none"> 1 Power down all carriers. 2 Remove the rightmost radio module. 3 Wait 15 seconds. 4 Repower the carriers in order from left to right. 5 Repeat the above steps as often as necessary, removing the modules one by one, working from right to left, until the LED conditions revert back to one of the following: <ul style="list-style-type: none"> • With no radio modules in the carriers: <ul style="list-style-type: none"> ~ OUT OF SYNC = all lit ~ CONTROL/EXPANSION = all blinking (green) or • With one or more radio modules in each carrier: <ul style="list-style-type: none"> ~ OUT OF SYNC = not lit ~ CONTROL/EXPANSION = all lit ~ Control carrier = green ~ Expansion carrier(s) = amber <p>The last radio module that you removed before the lights reverted to the proper display is the malfunctioning one.</p> <ol style="list-style-type: none"> 1 Power down the carriers again. 2 Replace the malfunctioning radio module with a good one. 3 Repower the carriers again, in order from left to right, to verify that the replacement module functions properly. If the LEDs match one of the displays described in Step 5, the radio module is functioning as it should. 4 Power down the carriers again. 5 Reinsert the remaining radio modules into their slots. 6 Repower the carriers again, in order from left to right. |

Handset Problems

| Symptom | Possible Causes | Possible Solutions |
|---|---|---|
| After you press On/Off , display does not show anything. | <p>There is no battery pack in the handset.</p> <p>Battery pack is not inserted properly in the handset.</p> <p>Battery pack is not charged.</p> <p>Battery pack is defective.</p> | <p>Insert a battery pack in the handset.</p> <p>Reinsert the battery pack in the handset.</p> <p>Place the handset with its battery into the handset cradle until fully charged, or remove the handset battery pack, and place it in the battery charger's spare battery compartment until fully charged. If you have a charged battery pack, use it while the other battery pack recharges.</p> <p>Call Customer Support for a replacement battery.*</p> |
| After you press On/Off , handset double beeps, RANGE flashes in the display, and then display goes blank. | <p>Handset is out of range of its matching radio module.</p> <p>Serial numbers for the handset and the radio module do not match.</p> <p>Another electrical device or metal walls are causing interference.</p> <p>Radio module is not powered.</p> | <ul style="list-style-type: none"> • Fully extend the handset antenna. • Move the handset closer to the radio module. <p>The handset and radio module must be a matched pair.</p> <p>Remove the electrical device that is causing interference, or move the handset or the radio module to another location.</p> <p>Power the radio module.</p> |
| After you press On/Off , dial tone is not heard. | <p>Telephone line cord is not plugged into the radio module.</p> <p>Communications system switch is not operating properly.</p> <p>Station wiring is incorrect.</p> | <p>Power down the radio module or carrier(s). Wait 15 seconds. Plug the telephone line cord into the radio module, then repower the radio module or carrier(s).</p> <p>Check the wiring for the switch and verify that the switch has power.</p> <p>Check your station wiring, referring to the table in "Radio Module/Switch Wiring" in Chapter 2 and your switch manual's station port wiring configuration.</p> |

*See "Customer Support" in the *Copyright and Legal Notices* at the beginning of this book

| Symptom | Possible Causes | Possible Solutions |
|---|---|---|
| You can hear the party on the other end, but they cannot hear you. MUTE appears in the handset display. | (Mute) button was pressed inadvertently. | Press (Mute) again to turn off the mute feature. |
| When placed in the battery charger's handset cradle, the handset does not turn off. | Battery charger is plugged into an electrical outlet controlled by a switch, and the switch is turned off. Battery charger's power cord is not inserted or is not inserted properly. | Plug the battery charger into an outlet not controlled by a switch. <ol style="list-style-type: none"> 1 Unplug the power cord/AC adapter from the electrical outlet. 2 Disconnect the power cord/AC adapter from the battery charger. 3 Carefully reconnect the power cord/AC adapter to the battery charger. 4 Plug the power cord/AC adapter back into the electrical outlet. |
| Handset does not ring or vibrate. | Alerter is disabled and vibrator is disabled. | Enable the alerter and/or the vibrator. |
| After you press (On/Off) or (▲) , display does not light. | Handset must be programmed for backlighting. | Enable the backlighting. (See "Enabling or Disabling Backlighting" in Chapter 3.) |
| After you press (On/Off) or (▲) , the handset does not wake up or turn on. | Battery pack may not be charged. Battery pack may have malfunctioned. | If you have one, try a different battery pack. Call for Customer Support.* |
| Your handset shows CHANGE BUTTN MAP in the display when you try to use it. | Your handset is not mapped to the correct switch. If your handset is mapped to the correct switch, but you are still getting the message, your station wiring is incorrect. | Change the handset button mapping. (See "Changing the Communications System Setting" in Chapter 2.) Check your station wiring, referring to the table in "Radio Module/Switch Wiring" in Chapter 2 and your switch manual's station port wiring configuration. |

* See "Customer Support" in the *Copyright and Legal Notices* at the beginning of this book

Battery Problems

| Symptom | Possible Causes | Possible Solutions |
|---|---|---|
| Battery icon appears in the handset display. | This is normal operation for the MDW 9031 Pocket Phone. | No action is required. |
| Battery icon flashes in the handset display and the handset beeps twice. | Battery power is low. | You have 5 minutes or less of talk time left. Either: <ul style="list-style-type: none"> • Complete your call, turn the handset off, and recharge the battery pack. • If you have a fully charged spare battery pack, place your call on Hold. Swap the battery packs. Wait 6 to 10 seconds, then turn the handset on and proceed as you would for any call placed on Hold. |
| Handset battery pack does not last as long as it used to under similar conditions. | Battery pack needs to be refreshed. | When the Battery icon flashes, insert the handset with its battery into the handset cradle and press the REFRESH button, or insert the handset battery pack into the spare battery compartment until the SPARE LED is steady green. |
| You get less than 3 hours of talk time when you use a standard battery pack that was refreshed. | Battery pack needs to be refreshed a second time. | Refresh the battery pack. |
| You get less than 8 hours of talk time when you use an extended battery pack that was refreshed. | Battery pack needs to be refreshed a second time. | Refresh the battery pack. |
| When a battery pack or the handset with battery pack is placed in the charger, the appropriate LED (SPARE or HANDSET) does not light. | Battery pack may have malfunctioned. | Try a different battery pack if you have one. Call for Customer Support.* |

*See "Customer Support" in the *Copyright and Legal Notices* at the beginning of this book

| Symptom | Possible Causes | Possible Solutions |
|--|--|---|
| The SPARE LED in the spare battery charging compartment turns amber instead of red. | The battery pack was jostled while in the battery charger. | Remove then replace the battery pack in the charger. |
| The power cord does not fit the battery charger. | The model 40B battery charger is not compatible with the older model 40A power cord. | Check the label of the power cord for a code that matches the Power Cord entry in the “Ordering Replacement and Optional Parts” list in Chapter 4. If they don’t match, you have an older power cord. Follow the instructions in Chapter 4 for ordering the correct cord. |

Voice Quality Problems

| Symptom | Possible Causes | Possible Solutions |
|--|---|--|
| Handset voice quality and range are not as good as they were before. | <p>A competing radio device (for example, a wireless bar-code scanner) has been installed in the area. Both products are competing for the same air space and will conflict when both are being used.</p> <p>Carrier(s) are out of synchronization (the OUT OF SYNC LED is lit).</p> <p>Antenna of the radio module is too close to the ceiling.</p> | <p>Place the handset in Wireless Test Mode as described in Chapter 3. If the signal strength and voice quality readings are low, look for a newly installed radio device nearby. Remove it or move your handset's matching radio module at least 6 feet (1.8 m) away from the potential interference.</p> <p>For a single-carrier installation:</p> <ol style="list-style-type: none"> 1 Power down. 2 Wait 15 seconds, then repower the carrier. <p>For a multiple-carrier installation:</p> <ol style="list-style-type: none"> 1 Verify that all expansion cables are fully inserted in the correct IN and OUT jacks. 2 Check CONTROL/EXPANSION LEDs for correct color. (See "Understanding Your Model 117A4 Carrier" in Chapter 2.) 3 Ensure that each carrier has at least one radio module installed. If the control carrier is a Model 117A3, ensure that there is a radio module in Slot 6. 4 Power down all carriers, wait 15 seconds, repower the control carrier, then repower the expansion carriers in order, from left to right. <p>Reinstall the radio module or carrier(s) so that the top of the radio module antenna is 6 to 12 inches (15.2 to 30.5 cm) from the ceiling.</p> |

| Symptom | Possible Causes | Possible Solutions |
|---|--|--|
| (Continued) | You have a malfunctioning radio module. | <ol style="list-style-type: none"> 1 Remove all but one radio module from the carrier. (See “Removing Radio Module from Carrier” in Chapter 4.) 2 Test each radio module individually, verifying that the POWER and PASS LEDs on each radio module lights when the carrier is powered, and that the OUT OF SYNC LED is not lit. 3 If the PASS LED does not light, the radio module is malfunctioning. Replace the radio module and handset. |
| Voice quality in a specific location is poor and noisy. | Handset is too close to the carrier(s). | Move the handset at least 6 feet (1.8 m) away for a one- or two-carrier setup, or 10 feet (3.1 m) away for a three-carrier setup. |
| Voice quality for calls is lower than expected. | <p>Handset antenna is only partially extended.</p> <p>There are environmental limitations.</p> <p>You are using different models of handsets and the mix is incompatible with the carrier.</p> | <p>Fully extend the handset antenna.</p> <p>Reinstall the radio module or carrier away from electrical equipment and as high as possible on the wall [but with radio module antennas 6 to 12 inches (15.2 to 30.5 cm) from the ceiling]. (See “General Positioning Rules” in Chapter 2 for more information.)</p> <p>See “TransTalk 9000 System” in Chapter 1.</p> |

| Symptom | Possible Causes | Possible Solutions |
|--|--|---|
| <p>Volume is too low at any setting and there is noise on the line.</p> | <p>Handset or radio module is not working properly.</p> <p>Connection between the radio module and the communications system switch/control unit is incorrect.</p> <p>Telephone line may be producing noise.</p> | <p>Place the handset in Wireless Test Mode and determine the signal strength and voice quality as described in Chapter 3. Use the Close-Up Test described in “Performance/Range Test in Wireless Test Mode” in Chapter 3.</p> <p>Check the connection between the radio module and the communications system switch/control unit as described in Chapter 2.</p> <p>Report line trouble to your local phone company.</p> |
| <p>Your business has two or more wireless phones installed and all handsets seem to have developed interference problems at the same time.</p> | <p>There was a recent occurrence of lightning or a power failure.</p> | <ol style="list-style-type: none"> 1 Unplug the carrier(s) power cord(s) from the electrical outlet. 2 Wait 15 seconds, then repower the carrier(s) in order, from left to right. |
| <p>You are on a call and you hear radio interference when another call rings.</p> | <p>Communications system in key mode has all lines set to ring. An incoming call “wakes up” all of the other radio modules at the same time to ring the other phones.</p> | <p>Refer to Chapter 6, “MDW 9031/9031DCP Pocket Phone Compatibility,” to reset line ringing options.</p> |
| <p>Voice quality for a call in progress degrades for more than 6 seconds (PARTNER, PARTNER Plus, PARTNER II, PARTNER Advanced Communications System in key mode, MERLIN, MERLIN Plus, and MERLIN II Systems only).</p> | <p>Line ringing options are incorrectly set for extensions with radio modules in the first expansion carrier.</p> | <p>Refer to Chapter 6, “MDW 9031/9031DCP Pocket Phone Compatibility,” to reset line ringing options.</p> |

Range Problems

| Symptom | Possible Causes | Possible solutions |
|---|---|--|
| Handset voice quality and range are not as good as they were earlier. | <p>A competing radio device (for example, a wireless bar-code scanner) has been installed in the area. Both products are competing for the same air space and will conflict when both are being used.</p> <p>Carriers (s) are out of synchronization (the OUT OF SYNC LED is lit).</p> <p>Antenna of the radio module is too close to the ceiling.</p> | <p>Place the handset in Wireless Test Mode as described in Chapter 3. If the signal strength and voice quality readings are low, look for a newly installed radio device nearby. Remove it or move your handset's matching radio module at least 6 feet (1.8 m) away from the potential interference.</p> <p>For a single-carrier installation:</p> <ol style="list-style-type: none"> 1 Power down. 2 Wait 15 seconds, then repower the carrier. <p>For a multiple-carrier installation:</p> <ol style="list-style-type: none"> 1 Verify that all expansion cables are fully inserted in the correct IN and OUT jacks. 2 Check CONTROL/EXPANSION LEDs for correct color. (See "Understanding Your Model 117A4 Carrier" in Chapter 2.) 3 Ensure that each carrier has at least one radio module installed. If the control carrier is a Model 117A3, ensure that there is a radio module in Slot 6. 4 Power down all carriers, wait 15 seconds, repower the control carrier, then repower the expansion carriers in order, from left to right. <p>Reinstall the radio module or carrier(s) so that the top of the radio module antenna is 6 to 12 inches (15.2 to 30.5 cm) from the ceiling.</p> |

| Symptom | Possible Causes | Possible solutions |
|---|---|--|
| <i>(Continued)</i> | You have a malfunctioning radio module. | <ol style="list-style-type: none"> 1 Remove all but one radio module from the carrier. (See “Removing Radio Module from Carrier” in Chapter 4.) 2 Test each radio module individually, verifying that the POWER and PASS LEDs on each radio module light when the carrier is powered, and that the OUT OF SYNC LED is not lit. 3 If the PASS LED does not light, the radio module is malfunctioning. Replace the radio module and handset. |
| Handset voice quality and range are not as good as they were earlier. | <p>Electromagnetic fields are interfering.</p> <p>There is a large metal object within 3 feet (1.2 m) of the radio module.</p> <p>There is a large metal object in the “line of sight” to the radio module.</p> | <p>Look for 110/Volt lines, fuse boxes, circuit breakers, electrical junction boxes, or similar items. Move the carrier or radio module at least 6 feet (1.8 m) away from the potential interference.</p> <p>Move the carrier or radio module at least 3 feet (1.2 m) away from the potential interference.</p> <p>Move the metal object, or move the carrier or radio module.</p> |
| Range for calls is lower than expected. | <p>Handset antenna is only partially extended.</p> <p>There are environmental limitations.</p> <p>You are using different models of handsets and the mix is incompatible with the carrier.</p> | <p>Fully extend the handset antenna.</p> <p>Reinstall the radio module or carrier away from electrical equipment and as high as possible on the wall [but with the top of the radio module antennas 6 to 12 inches (15.2 to 30.5 cm) from the ceiling]. (See “General Positioning Rules” in Chapter 2 for more information.)</p> <p>See “TransTalk 9000 System” in Chapter 1.</p> |

| Symptom | Possible Causes | Possible solutions |
|--|--|--|
| No ring on an incoming call. | <p>Handset is out of range of its matching radio module.</p> <ul style="list-style-type: none"> Station wiring is incorrect. Radio module station wiring is not connected to the switch. <p>Station port is set to NO RING</p> | <p>Move the handset closer to the radio module.</p> <p>Check your station wiring, referring to the table in “Radio Module/Switch Wiring” in Chapter 2, and your switch manual’s station port wiring configuration.</p> <p>Check your switch manual for the correct settings.</p> |
| While you are talking and walking, handset beeps and RANGE flashes in handset display. | <p>Handset antenna is not fully extended.</p> <p>You are approaching an out-of-range condition.</p> | <p>Fully extend the handset antenna.</p> <p>Move back toward the handset’s matching radio module until the display stops showing RANGE.</p> |
| While you are talking and walking, handset beeps and RANGE flashes in handset display. You keep walking away from handset’s matching radio module, handset double beeps five times, display goes blank, and your call appears to be disconnected. | <p>You are out of range of the radio module. YOUR CALL HAS NOT BEEN DISCONNECTED. IT HAS BEEN PLACED ON HOLD.</p> | <p>Move back toward the radio module. Press On/Off, then proceed as you would for any call placed on Hold.</p> |
| After placing a call on Hold, you walk away from handset’s matching radio module. Your handset beeps, handset display flashes RANGE , and your call appears to be disconnected. | <p>You are out of range of the radio module. YOUR CALL HAS NOT BEEN DISCONNECTED. IT IS STILL ON HOLD.</p> | <p>Move back toward the radio module. Press On/Off, then proceed as you would for any call placed on Hold.</p> |

Battery Charger Problems

| Symptoms | Possible Causes | Possible Solutions |
|---|--|---|
| No LEDs on battery charger light. | Battery charger is plugged into an electrical outlet controlled by a switch and the switch is turned off. | Plug the battery charger into an outlet not controlled by a switch. |
| HANDSET LED on battery charger does not light when handset is placed in battery charger. | <p>Handset is not seated properly in battery charger's handset cradle.</p> <p>Contacts in the handset cradle or on the battery pack are dirty.</p> <p>Battery pack is defective.</p> | <p>Reseat the handset in the battery charger's handset cradle, as described in Chapter 3.</p> <ol style="list-style-type: none"> 1 Verify that there are no obstructions on the handset or battery charger contacts. 2 Unplug the charger and clean the contacts with a soft eraser. 3 Clean the handset contacts with a soft eraser. <p>If you have a fully charged spare battery pack, use it to replace the battery pack in the handset.</p> <ol style="list-style-type: none"> 1 Place the questionable battery pack in the battery charger's spare battery compartment. 2 Wait one minute. If the SPARE LED flashes red, order a new battery pack. |

| Symptoms | Possible Causes | Possible Solutions |
|--|---|---|
| HANDSET LED flashes red. | <p>Battery pack is defective.</p> <p>Contacts in the handset cradle or on the battery pack are dirty.</p> <p>Handset is not seated properly in battery charger's handset cradle.</p> | <p>If you have a battery pack in the handset and one in the spare battery compartment, remove <i>both</i> battery packs from the charger to clear the red flashing LED. Then test each battery pack separately as follows:</p> <ol style="list-style-type: none"> 1 Place the battery pack in the battery charger's spare battery compartment. 2 Wait one minute. If the SPARE LED flashes red, order a new battery pack. <ol style="list-style-type: none"> 1 Verify that there are no obstructions on the handset or battery charger contacts. 2 Unplug the charger and clean the contacts with a soft eraser. 3 Clean the handset contacts with a soft eraser. <p>Reseat the handset in the battery charger's handset cradle, as described in Chapter 3.</p> |
| SPARE LED on battery charger does not light when battery pack is placed in spare battery compartment. | <p>Battery pack is not seated properly in the spare battery compartment.</p> <p>Contacts on the battery pack or in the spare battery compartment are dirty.</p> <p>Battery pack is defective.</p> | <p>Reseat the battery pack in the battery charger's spare battery compartment.</p> <ol style="list-style-type: none"> 1 Verify that there are no obstructions on the battery pack or battery charger contacts. 2 Unplug the charger and clean the contacts with a soft eraser. 3 Clean the battery pack contacts with a soft eraser. <ol style="list-style-type: none"> 1 Insert the questionable battery pack in the handset and place the handset in the handset cradle. 2 Wait one minute. If the HANDSET LED flashes red, order a new battery pack. |

| Symptoms | Possible Causes | Possible Solutions |
|--|---|--|
| <p>SPARE LED on battery charger flashes red.</p> | <p>Battery pack is defective.</p> <p>Contacts on the battery pack or in the battery charger's spare battery compartment are dirty.</p> <p>Battery pack is not seated properly in the spare battery compartment.</p> | <p>If you have a battery pack in the handset and one in the spare battery compartment, remove <i>both</i> battery packs from the charger to clear the red flashing LED. Then test each battery pack separately as follows:</p> <ol style="list-style-type: none"> 1 Insert the battery pack in the handset and place the handset in the battery charger's handset cradle. 2 Wait one minute. If the HANDSET LED flashes red, order a new battery pack. <ol style="list-style-type: none"> 1 Verify that there are no obstructions on the battery pack or battery charger contacts. 2 Unplug the charger and clean the contacts with a soft eraser. 3 Clean the battery pack contacts with a soft eraser. <p>Reseat the battery pack in the battery charger's spare battery compartment, as described in Chapter 3.</p> |
| <p>Handset is in the battery charger cradle and the HANDSET LED does not light.</p> | <p>Handset is not seated properly in the battery charger cradle.</p> <p>Battery power supply is not plugged in.</p> | <p>Reseat the handset in the battery charger cradle.</p> <p>Check that the charger power cord is plugged into the charger and into an electrical outlet that is not controlled by a wall switch.</p> |

6 MDW 9031/9031DCP Pocket Phone Compatibility

Overview

This chapter provides compatibility information for your Pocket Phone.

9031 Compatibility

If you are using an MDW 9031 Pocket Phone, go to the “MDW 9031 Compatibility” section for compatibility information.

9031DCP Compatibility

If you are using an MDW 9031DCP Pocket Phone, go to the “MDW 9031DCP Compatibility” section for compatibility information.

MDW 9031 Compatibility

Programming and Call Handling Instructions

The MDW 9031 Pocket Phone can display the status of up to 10 lines/intercom/programmable buttons, but the number of lines supported by compatible communications system switches varies. After you have installed your MDW 9031 and understand the controls and displays, use the programming and call handling instructions that came with your communications system; follow the user instructions for the phone type identified in the following table:

| For this release... | Of this communications system... | Use the instructions for a... |
|----------------------------------|--|---|
| R1, R2, R3, R4 | PARTNER | MLS-12D phone* (Apparatus code 7311H) |
| R1, R3, R4, R4.1 | PARTNER II | |
| R1, R2, R3, R4, R4.1 | PARTNER Plus | |
| R1, R2 | PARTNER Advanced Communications System | |
| FP 1&2 | MERLIN (206, 410) | BIS-22D phone (Apparatus code 7315H) Note: The MDW 9031 display and mail capabilities will function only if your system supports: 1 Analog/Hybrid display sets. 2 Hybrid pack connections with necessary tone generation for AUDIX/VOICE MAIL interaction. Consult your System Administration manuals for this compatibility. If your system does not support the items above, consult the System Administration manual for the BIS-10 phone (Apparatus Code 7303S). |

Note: For the MDW 9031DCP, see the MDW 9031DCP Compatibility section later in this chapter.

Legend: R=Release, V-Version, FP=Feature Package, FM=Feature Module, G=Generic

* PARTNER Plus or PARTNER II Release 4.1 Communications System users can order documentation for the MLS telephones by calling 1-800-457-1235 or 1-317-361-5353 and asking for Order Number 107794331.

Note: The MDW 9031 Pocket Phone is fully compatible with the PARTNER family of communication systems. For the remaining communications systems, however, you must carefully note the functional differences between your wireless phone and the phone type identified in the table above. Differences are summarized on the following pages.

Some systems do not support display features. In these cases, the display is not available; the MDW 9031 works as a nondisplay set.

Programming Features for PARTNER, MERLIN, and MERLIN LEGEND Systems

On all PARTNER, MERLIN, and MERLIN LEGEND systems, you can assign a feature to an available button (a button that does not have a line or another feature assigned to it):

- 1 To enter programming mode, turn on the handset, press **(Intercom)**, then press **(Feat/P)** followed by **@ @**.
- 2 Press the Select button (**▲**) to move the Selection rectangle to the row of line indicators containing the available button.
- 3 Press the Column button (**△**) under the button that you want.
- 4 Program the feature (using the procedure described in the manual for your PARTNER, MERLIN, or MERLIN LEGEND Communications Systems).

Note: Some features provide a visual indication in the handset display that the feature is turned on. Be aware that if you turn off the handset while using one of these features, you may forget that the feature is on. To verify the status of such a feature, you can simply press the **▲** button to “wake up” the phone and activate the display.

- 5 To exit programming mode, press **(Feat/P)** followed by **@ @** or turn off the handset.

Note: The above instructions do not apply to System 25, System 75, System 85, and DEFINITY Systems, because in those systems, features are assigned by the System Administrator.

Communications System Compatibility

This section describes some communications system-dependent programming to help you optimize the performance of your MDW 9031 Pocket Phone. It also describes how the buttons on a wired phone for your communications system map to the buttons on your MDW 9031. Turn to the information appropriate to your communications system:

- PARTNER
- MERLIN
- System 25, System 75, System 85, and DEFINITY

Note: For all systems configured as key systems (for example, PARTNER or MERLIN), only three carriers are allowed. For all systems configured as PBX systems (for example, DEFINITY), you can use up to five carriers.

PARTNER Systems

Button Mapping for PARTNER Systems

On PARTNER Systems, the MDW 9031 emulates an MLS-12D telephone. The following diagram illustrates the button assignments on an MLS-12D phone and the corresponding assignments on the MDW 9031 Pocket Phone.

Setting the Line Ringing Options for PARTNER Systems

Use the following guidelines to ensure optimal voice quality when using MDW 9031 Pocket Phones with a PARTNER, PARTNER Plus, PARTNER II, or PARTNER Advanced Communications System in key mode:

Note: For PARTNER II hybrid systems that use pooled lines, set the Line Ringing options as described in the following table if more than six MDW 9031 Pocket Phone handsets have the same pooled line appearance.

| Telephone Communications System | TransTalk 9000 System with Two Carriers (one control and one expansion carrier) | TransTalk 9000 System with Three Carriers (one control and two expansion carriers) |
|--|---|---|
| PARTNER | <ol style="list-style-type: none"> 1 Set Line Ringing for each extension that has a radio module in the control carrier to Ring. 2 Set Line Ringing for each extension that has a radio module in the expansion carrier to No Ring. (Install an external audible alert for these extensions.) | Not applicable; PARTNER supports up to 12 phones. |
| PARTNER Plus PARTNER II PARTNER Advanced Communications System | <ol style="list-style-type: none"> 1 Set Line Ringing for each extension that has a radio module in the control carrier to Ring. 2 Set Line Ringing for each extension that has a radio module in the expansion carrier to Delayed Ring. | <ol style="list-style-type: none"> 1 Set Line Ringing for each extension that has a radio module in the control carrier to Ring. 2 Set Line Ringing for each extension that has a radio module in the expansion carrier #1 to Delayed Ring. 3 Set Line Ringing for each extension that has a radio module in the expansion carrier #2 to No Ring. (Install an external audible alert for these extensions.) |

The MDW 9031 does not have a speaker; therefore, it does not support voice announce/page and call groups.

MERLIN Systems

- On MERLIN II and MERLIN LEGEND Systems, you must connect your wireless phone to an available jack on either a 408 outside line/analog telephone module or an 008 analog telephone module.
- Since the MDW 9031 does not have a speaker function, the Voice Announce feature must be disabled. It is recommended that you use MERLIN 206/410/820 Systems installed with Feature Package 2 with your wireless phone, so that you can disable that feature.
- Since the MDW 9031 has no speaker function, it should not be assigned to a paging group.

- To program the Ringing Option feature, use the “triangle” and “rectangle” indicators in the display as the equivalent of red and green LEDs, respectively.
- For MERLIN II System users, if you program an Auto Intercom button, idle line preference must be set to intercom.
- If any of your incoming lines has the call waiting feature, use the Recall feature (letter “C” in the display) and press it before you pick up a waiting call. You can dial **#50** before you pick up a waiting call on the following: MERLIN 206/410/820 Systems only with Feature Package 2, and all MERLIN Plus, MERLIN II, and MERLIN 1030/3070 Systems. Pressing the **On/Off** button disconnects the call.
- The **Feat/P** button on the MDW 9031 allows you only to enter programming mode. It does not work when using MERLIN LEGEND System features. To use MERLIN LEGEND System feature codes with this phone, program any available button as a System Feature button. This enables you to use the wide array of MERLIN LEGEND System features by turning the set on, pressing the System Feature button, and dialing the appropriate “*” code number.

Note: MERLIN LEGEND does not support Caller ID and some other Display features to Analog/Hybrid terminals, such as the MDW 9031.

Button Mapping for MERLIN Systems except MERLIN 410 and MERLIN 820

On all MERLIN Systems, the MDW 9031 emulates a Model BIS-22D phone (Apparatus Code 7315H). The BIS-22D button assignments, however, differ depending on the MERLIN System used. The following diagram illustrates the BIS-22D button assignments and the corresponding assignments on the MDW 9031 for all MERLIN Systems *except MERLIN 410 and MERLIN 820*. (See the next section for button mapping for MERLIN 410 and MERLIN 820 Systems).

The button labeled C and the button labeled D on the MDW 9031 Pocket Phone display automatically default to the buttons labeled C (Recall) and D (Drop), respectively, on the 7315H phones.

Button Mapping for MERLIN 410 and MERLIN 820 Systems

The following diagram illustrates the button assignments on a BIS-22D phone used for *MERLIN 410 and 820 Systems* and the corresponding assignments on the MDW 9031 Pocket Phone. (See the previous section for button mapping for all other MERLIN Systems, including MERLIN LEGEND Systems).

The button labeled C and the button labeled D on the MDW 9031 Pocket Phone display automatically default to the buttons labeled C (Recall) and D (Drop), respectively, on the 7315H phones.

Setting the Line Ringing Options for MERLIN Systems

Use the following guidelines to ensure optimal voice quality when using MDW 9031 Pocket Phones with MERLIN, MERLIN Plus, and MERLIN II:

| Telephone Communications System | TransTalk 9000 System with Two Carriers (one control and one expansion carrier) | TransTalk 9000 System with Three Carriers (one control and two expansion carriers) |
|------------------------------------|--|---|
| MERLIN MERLIN II MERLIN Plus | <ol style="list-style-type: none"> 1 Set Line Ringing for each extension that has a radio module in the control carrier to Ring. 2 Set Line Ringing for each extension that has a radio module in the expansion carrier to Delayed Ring. | <ol style="list-style-type: none"> 1 Set Line Ringing for each extension that has a radio module in the control carrier to Ring. 2 Set Line Ringing for each extension that has a radio module in the expansion carrier #1 to Delayed Ring. 3 Set Line Ringing for each extension that has a radio module in the expansion carrier #2 to No Ring. (Install an external audible alert for these extensions.) |

Note: For MERLIN LEGEND Systems that use pooled lines, set the Line Ringing options as described in the above table, if more than six MDW 9031 Pocket Phone handsets have the same pooled line appearance. The above Line Ringing options are not necessary for MERLIN LEGEND Systems that use the TransTalk MDW 9031 Pocket Phones as PBX extensions; these systems can support up to five carriers.

System 25, System 75, System 85, and DEFINITY Systems

This phone must be administered as a BIS-22D MERLIN set (Apparatus Code 7315H) for the following systems:

- System 25
- System 75—R1V1, R1V2, and R1V3
- System 85—R2V1, R2V2, R2V3, and R2V4
- DEFINITY G1 (R1V4)
- DEFINITY G2—G2.1 and G2.2—(R2V5, R2V6)
- DEFINITY G3 Version 1 (R1V5)
- DEFINITY G3 Version 1.1 and Version 2

Native terminal administration is provided in DEFINITY G3 Version 3.

Note: The MDW 9031 display and mail capabilities will function fully only if your system supports:

- Analog/Hybrid display sets.
- Hybrid pack connections with necessary tone generation for AUDIX/VOICE MAIL interaction.

Consult your System Administration manuals for this compatibility. If your system does not support the items above, consult the System Administration manual for the BIS-10 phone (Apparatus Code 7303S).

Accessing Certain Voice Mail Systems with a DEFINITY System

- After dialing into some voice mail systems (for example, Octel 200/250, 300/350), the non-DCP MDW 9031 Pocket Phone may not provide touch tones in order to access the voice mail system prompts. If you experience this problem after dialing into your voice mail system, press the **Feat/P** button twice. After pressing the **Feat/P** button twice, your Pocket Phone will generate touch tones and you will be able to navigate within your voice mail system. When you end your call to your voice mail system, or press any non-dialpad button on your Pocket Phone (that is, Conf, Trans, Hold, Redial, Mute), your MDW 9031 will stop generating touch tones behind the voice mail system. You will need to re-enter **Feat/P** whenever you dial into these voice mail systems or after you have pressed a non-dialpad button.
 - To connect the communications system switch and the MDW 9031 Pocket Phone, use the following:
 - ~ An ANN17B Hybrid pack in conjunction with a DS-1 carrier for older communications system switches that do not accommodate Universal modules (System 85 -R2V1, R2V2, R2V3, and R2V4)
 - ~ Either a TN762B Hybrid pack or a ZTN79 ATL pack for System 25
 - ~ A TN762B Hybrid pack for newer communications system switches that accommodate Universal modules:
 - System 75—R1V1, R1V2, and R1V3
 - DEFINITY G1 (R1V4)
 - DEFINITY G1 (R1V5)
 - DEFINITY G3 Version 1.1 and Version 2
 - DEFINITY G3 Version 3
 - ~ Either a TN762B (in a universal mod carrier) or an ANN17B (in a traditional mod carrier) Hybrid pack for DEFINITY G2 (G2.1 and G2.2), depending upon the actual hardware configuration.
- Note:** For DEFINITY G2.1 and G2.2, General Terminal Administration (GTA) can be used to set up “custom” set types so that administration can be done using that custom set type.
- System 25 users cannot program Recall for use with systems such as Centrex.
 - Only the System Administrator can assign features. Use the following guidelines:
 - ~ Do not assign the following features: Auto Answer, Inspect, Directory, Next, Local, Call, and Manual Callback Queuing.
 - ~ If programming the Flex DSS or Repertory Dial feature, dial the number to be recorded and push the button you are assigning to the feature. You will hear three short beeps and a dial tone to confirm programming.

- ~ If you are programming numbers for the Station Speed Dial feature, dial the numbers to be stored and then dial the Personal Speed Dialing code (#20 through #39), including the #. Listen for a confirmation tone followed by a dial tone.
- ~ It is recommended that you do not use features that require visuals to be updated while the set is turned off.

Button Mapping for System 25, System 75, System 85, and DEFINITY Systems

On System 25, System 75, System 85, and DEFINITY Systems, the MDW 9031 emulates a BIS-22D phone (Apparatus Code 7315H). The following diagram illustrates the BIS-22D button assignment, and the corresponding assignments on the MDW 9031 for DEFINITY Systems, System 25, System 75, and System 85.

The 7315H phones are programmed for DEFINITY systems using four STATION Administration screens. Enter **7315H** in the Type field on the first screen to bring up the following two screens.

```

For DEFINITY Systems, you must assign the Scroll and Display features to buttons. If you assign the Disp-Norm feature to Button 7, the Scroll feature to Button 8, and have line Preselection enabled, the user will be able to toggle between the first and second line of the display information.

If your users do not need these features, assign them to “nonappearing” MDW 9031 Pocket Phone buttons; the buttons represented by the numbers 1 through 8 on the Pocket Phone display can then be used for features the users want. The Scroll and Display features shown on Page 4 of the STATION Administration screens are assigned to buttons 11 and 12 (which cannot be accessed from MDW 9031 Pocket Phones).

Setting the Line Ringing Options for System 25, System 75, System 85, and DEFINITY Systems

Use the following guidelines to ensure optimal voice quality when using MDW 9031 Pocket Phones with System 25, System 75, System 85, and DEFINITY Systems:

| Telephone Communications System | TransTalk 9000 System with Two Carriers (One Control and One to Four Expansion Carriers) |
|---|---|
| System 25 System 75 System 85 DEFINITY Systems | <ol style="list-style-type: none"> <li data-bbox="704 720 1312 814">1 When TransTalk handsets are configured as individual PBX extensions, no Line Ringing options are necessary. <li data-bbox="704 835 1312 1016">2 When TransTalk handsets are configured in pooled PBX or group PBX extensions (for example, Splits or Skills), where all incoming calls ring all handsets at the same time, refer to “Setting the Line Ringing Options for PARTNER Systems” earlier in this chapter. |

Note: For System 25, System 75, System 85, and DEFINITY Systems that use pooled lines, set the Line Ringing options as described in the above table if more than six MDW 9031 Pocket Phone handsets have the same pooled line appearance.

MDW 9031DCP Compatibility

Programming and Call Handling Instructions

The MDW 9031DCP Pocket Phone can display the status of up to 10 lines/intercom/programmable buttons, but the number of lines supported by compatible communications system switches varies. After you have installed your MDW 9031DCP and understand the controls and displays, use the programming and call handling instructions that came with your communications system; follow the user instructions for the phone type identified below:

| For this release | Of this communications system... | Use the instructions for a... |
|------------------|----------------------------------|-------------------------------|
| G1, G2, G3 | DEFINITY | 8410D |

Programming Features for DEFINITY Systems

Consult your DEFINITY switch administration documentation for the 8410D to program features on the MDW 9031DCP phone.

Communications System Compatibility

This section describes some communications system-dependent programming to help you optimize the performance of your MDW 9031DCP Pocket Phone. It also describes how the buttons on a wired phone for the DEFINITY System map to the buttons on your MDW 9031DCP.

The MDW 9031DCP phone works with the following DCP circuit packs:

- TN2181 (16 port, 2-wire)
- TN2224 (24 port, 2-wire)

DEFINITY Systems

This phone must be administered as an 8410D phone for the DEFINITY Systems.

The 8410D phones are programmed for DEFINITY Systems using four STATION Administration screens. Enter **8410D** in the Type field on the first screen to bring up the following two screens.

```

add station next                               Page 1 of 4   SPE B

Note: All Softkey button assignments should be initially removed
when administering an MDW 9031DCP terminal. The desired Softkey
features can then be properly programmed on the DCP Pocket Phone
Programmable buttons (buttons 1-7). Button 8 is a firmware-
programmed hard Scroll button on the MDW 9031DCP phone.

```

Button Mapping for DEFINITY Systems

On DEFINITY Systems, the MDW 9031DCP should be aliased as an 8410D phone. The following diagram illustrates the 8410D button assignment, and the corresponding assignments on the MDW 9031DCP for DEFINITY systems.

Setting the Line Ringing Options for DEFINITY Systems

Use the following guidelines to ensure optimal voice quality when using MDW 9031DCP Pocket Phones with DEFINITY Systems:

| Telephone Communications System | TransTalk 9000 System with Two Carriers (One Control and One to Four Expansion Carriers) |
|---------------------------------|---|
| DEFINITY Systems | <ol style="list-style-type: none"> 1 When TransTalk 9031DCP handsets are configured as individual PBX extensions, no Line Ringing options are necessary. 2 When TransTalk 9031DCP handsets are configured in pooled PBX or group PBX extensions (multiple 9031DCP handsets as members of coverage answer groups), where all incoming calls ring all handsets at the same time, refer to “Setting the Line Ringing Options for PARTNER Systems” earlier in this chapter. |

Note: For DEFINITY Systems that use pooled lines, set the Line Ringing options as described in the above table if more than six MDW 9031DCP Pocket Phone handsets have the same pooled line appearance.

A Warranty and Repair Information

Lucent Technologies Limited Warranty and Limitation of Liability

Lucent Technologies warrants to you, the customer, that your wireless telephone system will be in good working order on the date Lucent Technologies or its Authorized Dealer delivers or installs the system, whichever is later ("Warranty Date"). If you notify Lucent Technologies or its Authorized Dealer within one year of the Warranty Date that your system is not in good working order, Lucent Technologies will without charge to you, repair or replace, at its option, the system components that are not in good working order. Repair or replacement parts may be new or refurbished and will be provided on an exchange basis. If Lucent Technologies determines that your system cannot be repaired or replaced, Lucent Technologies will remove the system and, at your option, refund the purchase price of your system or apply the purchase price towards the purchase of another Lucent Technologies system.

If you purchased your system directly from Lucent Technologies, Lucent Technologies will perform warranty repair in accordance with the terms and conditions of the specific type of Lucent Technologies maintenance coverage you selected. A written explanation of Lucent Technologies types of maintenance coverage may be obtained from Lucent Technologies by calling 1-800-247-7000 (in the continental U.S. only). If you purchased your system from a Lucent Technologies Authorized Dealer, contact your dealer for the details of the maintenance plan applicable to your system.

This Lucent Technologies limited warranty covers damage to the system caused by power surges. Unless otherwise expressly agreed to in a written agreement signed by Lucent Technologies, Lucent Technologies will not be responsible under this limited warranty for damages resulting from:

- Failure to follow Lucent Technologies installation, operation, or maintenance instructions;
- Unauthorized system modification, movement, or alteration;
- Unauthorized use of common carrier communication services accessed through the system;
- Abuse, misuse, or negligent acts or omissions of the customer and persons under the customer's control; or
- Acts of third parties and acts of God. LUCENT TECHNOLOGIES OBLIGATION TO REPAIR, REPLACE, OR REFUND, AS SET FORTH ABOVE, IS YOUR EXCLUSIVE REMEDY.

EXCEPT AS SPECIFICALLY SET FORTH ABOVE, LUCENT TECHNOLOGIES, ITS AFFILIATES, SUPPLIERS, AND DEALERS MAKE NO WARRANTIES, EXPRESS OR IMPLIED, AND SPECIFICALLY DISCLAIM ANY WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

Limitation of Liability

Except as provided below, the liability of Lucent Technologies and its affiliates and suppliers for any claims, losses, damages, or expenses from any cause whatsoever (including acts or omissions of third parties), regardless of the form of action, whether in contract, tort, or otherwise, shall not exceed the lesser of: (1) the direct damages proven; or (2) the repair cost, replacement cost, license fee, annual rental charge, or purchase price, as the case may be, of the equipment that directly gives rise to the claim. Except as provided below, Lucent Technologies and its affiliates and suppliers shall not be liable for any incidental, special, reliance, consequential, or indirect loss or damage incurred in connection with the equipment. As used in this paragraph, consequential damages include, but are not limited to, the following: lost profits, lost revenues, and losses arising out of unauthorized use (or charges for such use) of common carrier telecommunications services or facilities accessed through or connected to the equipment. For personal injury caused by Lucent Technologies negligence, Lucent Technologies liability shall be limited to proven damages to person. No action or proceeding against Lucent Technologies or its affiliates or suppliers may be commenced more than twenty four (24) months after the cause of action accrues. THIS PARAGRAPH SHALL SURVIVE FAILURE OF AN EXCLUSIVE REMEDY.

Repair Information

Outside the continental U.S., contact your Lucent Technologies Representative or local Authorized Dealer for warranty and repair information applicable to your system.

In-Warranty Repairs

If you purchased or leased your system directly from Lucent Technologies, Lucent Technologies will repair it free of charge during the one-year warranty period. Simply call for Customer Support as instructed in the *Copyright and Legal Notices* at the beginning of this book.

Business-Day service is standard during the warranty period. Business-Day service is performed during normal business hours. (Around-the-Clock service is not available for phones.)

If you purchased or leased your system through a Lucent Technologies Authorized Dealer, contact your dealer for repairs.

Post-Warranty Repairs

If you purchased the system from Lucent Technologies and you have a post-warranty service contract, Lucent Technologies service is provided under the terms of that contract.

To significantly reduce unexpected repair costs after the warranty period, you can purchase a post-warranty service contract from Lucent Technologies. If you do not have a contract, Lucent Technologies service is provided on a time-and-materials basis by calling for customer support as instructed on the inside front cover of this book. A contract provides to you, within the applicable coverage period and response times, service calls with no charge for parts and labor on covered repairs. To order a post-warranty service contract, call 1-800-247-7000 (in the continental U.S. only).

If you leased your system from Lucent Technologies, Business-Day service is included in your lease.

If you purchased or leased your system through a Lucent Technologies Authorized Dealer, contact your dealer for repairs.

B Regulatory Information

This appendix contains information about the Federal Communications Commission and Industry Canada.

FCC Part 15 Rules

The Lucent Technologies MDW 9031/9031DCP Wireless Pocket Phone has been tested and has been found to comply with *FCC Part 15 Rules*. These specifications are designed to provide reasonable protection against harmful interference in a commercial or residential installation. This wireless telephone generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If the telephone does cause harmful interference to radio or television reception, which can be determined by turning the telephone off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Where it can be done safely, reorient the receiving television or radio antenna.
- To the extent possible, relocate the television, radio, or other receiver with respect to the telephone.
- Plug the telephone into an electrical outlet that is not on the same circuit as one used by the radio or television.

IC RSS-210 Compliance

This device complies with RSS-210 of Industry Canada. Operation is subject to the following two conditions:

- This device may not cause interference.
- This device must accept any interference including interference that may cause undesirable operation of the device.

The user is cautioned that modifications to this telephone, not expressly approved by Lucent Technologies, could void the user's authority to operate the equipment.

Hearing Aid Compatibility

This wireless telephone is compatible with inductively coupled hearing aids.

C Specifications

| GENERAL | | | |
|--------------------------------|---|--|----------------------------------|
| Model: | MDW 9031/9031DCP Wireless Pocket Phone | | |

Battery Charger Wall-Mounting Template

Use the template below to position the screws for mounting your MDW 9031/9031DCP Pocket Phone battery charger:

- 1 Cut out the template along the dotted line.
- 2 Lightly affix the template to the wall with tape where you want to attach the battery charger. If possible, choose a location that will position at least one of the screw holes over a wall stud.
- 3 Mark the wall.
- 4 Position a wall spacer on each of the two wood screws provided, and insert the screws in the wall as far as they will go at the places you marked.

Note: *If you cannot locate a wall stud for one of the screws, use molly bolts or another type of hollow-wall fastener. Be sure to place the wall spacers on the screws before inserting them permanently.*
