Technical Information- Dishwasher

JDB4000AWB MDB5600AWB JDB4000AWQ MDB5600AWQ JDB4000AWS MDB5600AWS JDB4000AWW MDB5600AWW

Due to possibility of personal injury or property damage, always contact an authorized technician for servicing or repair of this unit. Refer to Service Manual 16021814.

CAUTION

All safety information must be followed as provided in Service Manual 16021814.

WARNING

To avoid risk of electrical shock, personal injury, or death, disconnect power to dishwasher before servicing, unless testing requires power.

Component Specifications

WARNING

To avoid risk of electrical shock, personal injury, or death, disconnect power to dishwasher before servicing, unless testing requires it.

Illustration	Component	Test Procedure	Results				
	Dishwasher Motor CCW rotation only viewed from shaft end. 1/3HP 120V/60hz, 3.2 amps, 3250 RPM Main Wattage, 285 watts Start Wattage, 1115 watts	Measure resistance from ST5 (Motor Common – blue) to ST8 (Motor Main - yellow)	3 to 4 Ω				
	Control Board	See Component Specifications/ Membrane Readings for troubleshooting/pin-out instructions.					
	Water valve 120V/60hz, 7 watts 1.13 ± .10 gpm at 20- 120 psi	Measure resistance from J6 Pin 4 Aqua (Float switch) to ST4 Black (Common)	1.1 k Ω (This value assumes the float switch is closed).				
	Vent wax motor 120V with 1/4" actuation stroke within 60 seconds	Measure resistance from J6 Pin 1 Purple (Vent) to ST4 Black (Common)	1.2 k Ω				
	Dispenser wax motor 120V with 1/4" actuation stroke within 60 seconds	Measure resistance from J6 Pin 3 Tan (Dispenser) to ST4 Black (Common)	2 k Ω				

Component Specifications

WARNING

To avoid risk of electrical shock, personal injury, or death, disconnect power to dishwasher before servicing, unless testing requires power.

Illustration	Component	Test Procedure	Results
	Limit Thermostat	Close on Temperature drop @ 149°F ± 7°F (Temp)	0Ω = Closed Infinite Ω = Open
	Sensor/Thermistor	$10 \text{K}\Omega \pm 3\%$ at 77°F and $2.4 \text{ k}\Omega \pm 6.5\%$ at 140°F J5 pin 1 - Orange (Temp) to J5 Pin 4 - Red (Neutral)	$\begin{array}{ll} \text{Infinite } \Omega = \text{Open} \\ \text{0 } \Omega & = \text{Closed} \end{array}$
	Heater/Heating Element 120v/60hz, 650 watts ± 5% in air, 830 watts ± 5% in coldwater	Measure resistance from ST1 Red/Black (Heater) to ST11 White (Common)	16 Ω (This value assumes the high limit thermostat is closed).
	Drain Motor 120v/60hz	Measure resistance from ST6 Gray (Drain) to ST4 Black (Common)	25 Ω

Component Readings/Testing

WARNING

To avoid risk of electrical shock, personal injury, or death, disconnect power to dishwasher before servicing, unless testing requires power.

Manual Function Test

A Manual Function Test may be started by pressing the **Normal Wash** key 5 times followed by the **Start** key within 6 seconds.

The **Normal Wash** LED will **Flash** 3 times indicating manual test mode is active. Specific keypads will turn on or off a component as follows:

Heavy Wash	wash Motor
Normal Wash	Drain Motor
Light Wash	Water Valve
Rinse Only	Soap Dispenser (cycle once)
	Rinse Aid (cycle twice)
Sanitize	Vent
Heated Dry	Heating Element

When a component is activated by pressing a specific keypad, the LED above the keypad will be **On**. The test will cancel 120 seconds after the last keypad is pressed. The display (if available) will show '99' until the remaining timeout period is less than 99 seconds. At this point it will countdown until the mode times out, is cancelled, or another key is pressed. To cancel test, press the **Start / Cancel** keypad.

Sales Floor Demo Mode

Press Extra Rinse keypad 5 times within 6 seconds. The LEDs will illuminate in a progressive order until all are lit. All LED's will stay on for 1 second then all go off simultaneously. The display (if available) will begin at '50' and sequence down to '0' at a 1 second interval and repeat until this mode is terminated. This mode will repeat.

To cancel, press the Start / Cancel keypad.

Diagnostic Tips

To check control LEDs, enter **Sales Floor Demo Mode**. If control fails to perform as described, replace control. To check control and components, enter **Field Service Test**. If control fails to perform sequence as described, and a fault is detected, determine failure as described in the **Field Service Test**. If a load component failure has been diagnosed, proceed to the **Manual Function Test**. To check individual load components for proper operation, enter **Manual Function Test**. Follow test procedure as described. Repair or replace component as needed.

Note: The High Current or Low Current Motor Error may be detected during a wash cycle selected by a consumer. If this happens, the control will go into a 30 second auto restart mode and shut down if the unit is not able to restart the motor.

Membrane Readings (Front Only Controls)

Connector	Measure Between
J1	Pin 9 - Pin 5
J1	Pin 9 - Pin 6

An unpressed switch will read as an open circuit.

* On select models

Field Service Test

A Field Service Test may be started by pressing the **Heavy Wash** key 5 times followed by the **Start** key within 6 seconds. This test must be performed with clean water to insure proper sensor performance.

"88" will appear in the display (if available*) and the following sequence of events will occur:

SECONDS	FUNCTIONS / ACTIVE LOADS
106	Vent Wax Motor/Water Valve
5	Thermistor check/Turbidity Sensor check &
	calibration - no loads active.
120	Wash Motor/Vent Wax Motor/Dispenser Wax Motor
180	Wash Motor/Heater/Vent Wax Motor
120	Drain Pump
4	Water Valve

Time frame for Thermistor/Turbidity Sensor check & calibration may vary slightly.

The Field Service Test will not repeat. The **Heavy Wash** LED will **Flash** during the test mode. Indicator lights (except **Heavy Wash** and the Display) will illuminate per Sales Floor Demo Mode. If the dishwasher door is opened during the test, the test sequence will pause, and resume when the door is closed. To the cancel test, press the **Start / Cancel** keypad.

The control has been designed to test the Sensor Memory and Motor. During the Field Service Test, if a fault has been detected, the test will abort any time after the motor current has been checked and 2 or more LED's will begin to Flash. A Memory / Software Check will occur immediately after the test is started. The (See Note**) LED and one of the following:

Turbidity Sensor - failure - Rinse Only LED Thermistor - failure - Heavy Wash LED Motor - high current - Normal Wash LED Motor - low current - Light Wash LED Memory Failure - Heated Dry LED

Membrane Readings (Front & Top Controls)

Wash Motor . 1/3 HP motor,

120V / 60hz, 3.2 amps, 3250 RPM Main wattage, 285 watts

Start wattage, 1115 watts

120V / 60hz, 7 watts 1.13 ± .10 gpm at 20 - 120 psi

Heating Element 120V / 60hz, 650 watts ± 5% in air

830 watts ± 5% in cold water

Limit Thermostat

SPST ¼" terminal switch Close at 149° \pm 7°F (65.0° \pm 3.9°C) Open at 164° \pm 4°F (73.3° \pm 2.3°C)

Thermistor

Resistance and tolerance: 10k ohms \pm 3% at 77°F (25°C) and 2.4k ohms \pm 6.5% at 140°F (60°C)

Vent - 120V continuous duty 1/4" Wax Motors

actuation stroke within 90 seconds Detergent & Rinse Aid - 120V incremental duty with $\frac{1}{4}$ " actuation

stroke within 90 seconds

300V / 50 - 60hz Capacitor

185°F(85°C), 15µf + 10% / -5%

Drain Motor 45 watts Notes
1. All times are approximate.
2. Temperature checks force a maximum 20 minute heating delay to reach the desired temperature.
3. The Auto Clean cycle definition gives the minimum and maximum possible cycle lengths. Actual cycle length and executed cycle functions will vary based on the sensor input.
4. Fill length varies between different models.
