# ACCULINK 3151 CSU Quick Reference

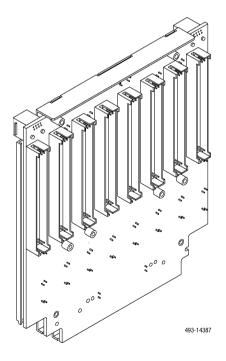

Document Number 3151-A2-GL11-40

February 1998

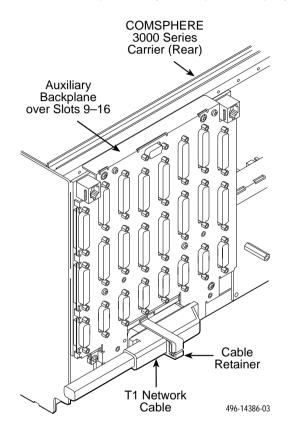

# **Quick Start Procedure**

The following procedure is for experienced CSU users who are familiar with the 3151 CSU installation process and have no special requirements for their application. See the *ACCULINK 315x Channel Service Unit Operator's Guide* (3150-A2-GB21) for more information. A copy is included with the Auxiliary Backplane.

 Install the Auxiliary Backplane onto the 3000 Series Carrier. See the ACCULINK 3151 CSU and 3161 DSU/CSU General Information Guide (3100-A2-GK40) for installation procedures.

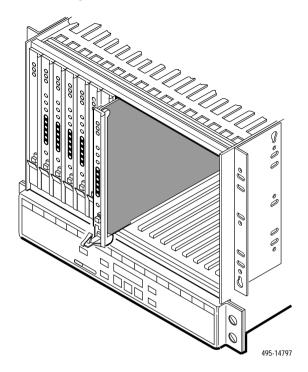

- Attach the DTE cable (DB15) to the appropriate DTE connector on the Auxiliary Backplane. (See the COMSPHERE 3000 Series Carrier Installation Manual (3000-A2-GA31) for detailed cable and connector information.) Connect the other end of the DTE cable to the customer premises equipment.
- **3.** Attach the network cable to the Auxiliary Backplane using either a 50-pin cable or the T1 Network Interface Adapter. Connect the other end of the network cable to the connection provided by the telephone company.

4. Turn on the power to the 3000 Series Carrier.

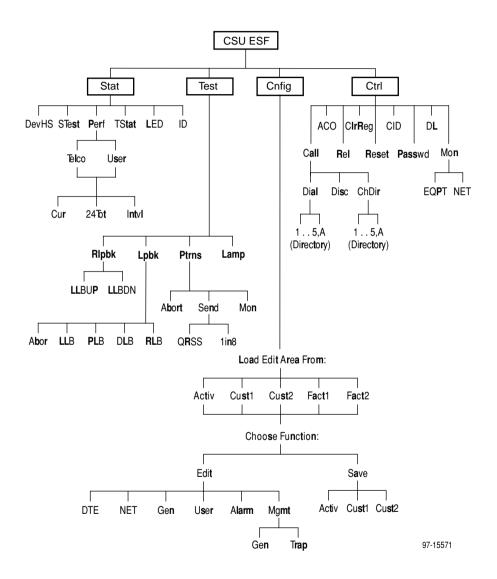

**5.** Insert the CSU circuit card into the appropriate slot in the carrier. The power-up self-test begins.

- 6. If you intend to use front panel emulation, connect the cable from the PC to Port 2 on the Auxiliary Backplane using the COM port adapter and COM-port-to-PC cable.
- 7. The Factory 1 configuration for ESF framing format and B8ZS line coding format is the default configuration and is appropriate for most networks. If this configuration does not work for you, try the Factory 2 configuration for D4 framing format and AMI line coding format. To further customize configuration options, refer to *Changing Configuration Options* in Chapter 3, *Operation*, and Appendix C, *Configuration Options*, in the ACCULINK 315x Channel Service Unit Operator's Guide.
- 8. During the power-up self-test, the FAIL LED flashes, then all LEDs blink twice. When the test is complete, verify that the CSU is functional by observing that the OK, NETWORK SIG, and DTE SIG LEDs are lit.

# **Configuration Options**

Configuration options are accessed from the Cnfig branch of the front panel menu.
