AccuShield™ phosphor protection

just one look.

Re-energize your eyes while being captivated by NEC's PlasmaSync residential plasma displays. The image is so powerful and engaging you won't believe what you are seeing. Engineered to be the definitive multimedia home theater, the PlasmaSync residential plasma displays provide superior image quality, realistic colors, broad compatibility, flexible connections and built-in stereo-audio. Simply put, they can place your programs center stage and keep you on the edge of your seat.

superior image quality.

Designed specifically for residential use, the PlasmaSync combines **true HDTV resolution** and NEC's outstanding image quality to give you the definitive tool for watching images with power and clarity. Our exclusive **Capsulated Color Filter technology** provides extremely realistic and saturated colors as well as enhanced contrast. Color realism is enhanced by **AccuCrimson**, a filter technology that produces the purest shade of red possible in a plasma display.

NEC's **Advanced AccuBlend** scan conversion provides precise interpolation of information ranging from video, HD and PC signals in **multiple aspect ratio modes**. This enables the plasma to display clear, readable images even in non-native resolutions.

And **AccuShield phosphor protection system** helps your screen stay protected from image retention with the most comprehensive set of built-in modes including programmable Orbiter, Inverse RGB, All-White, Pixel Refresh, Brightness Limiter and Soft Focus.

never compromising
technology for
style

broad signal and source compatibility .

The PlasmaSync residential plasma displays let you connect to and display signals from virtually any input source. They are compatible with conventional video formats including NTSC and also support all major HDTV standards. This is complemented by a comprehensive input panel with connections for up to 8 different sources including a 25-pin DVI digital input connector that supports HDCP and three assignable audio inputs.

advanced video processing.

Thrilling performances start with amazing action and the PlasmaSync residential plasma displays draw you into to it with real life clarity. Mass Area Superior Sampling (MASS) delivers high quality images and allows smooth reproduction for clear, precise color by eliminating jagged lines and color bleeds. Finally, proper scaling is selected for the input signal resolution resulting in the most accurate image reproduction possible. The new Scan Converter changes input signals in accordance with the resolution of the display. This makes a dramatic difference resulting in even the smallest of details being perfectly clear. The motion-compensated 3D scan conversion provides smooth, lifelike display of video sources and a 3-2 pull down converter enhances the appearance of content originally produced in 24 frame/second film.

And to go even further to achieve ultimate color using our Color Tune Technology. It is now possible to adjust individual colors without affecting the white balance. Fine tune the blues in skies or the greens in the trees. You'll experience all the rich textures from outdoors into your living room. Control even the darkest of images using the Gamma-12 feature. With over 4,000 shades of gray you can manage the picture's brightness and enhance the image's overall quality.

Color Temperature controls the tone of the whites in the image. Four preset modes are available which select a specific color temperature. If finer adjustments are needed simply switch into the professional mode for more advanced tuning.

sleek silver design.

The minimal size of the silver bezel ensures that the focus is always on the image and not on what is framing it.

built-in stereo audio.

NEC has included an internal 8 watt (42XM2/S) or 9 watt (50XM3/S and 61XM2/S) stereo amplifier and optional external speakers that attach to the sides of the display to provide a seamlessly integrated audio solution.

c r i s p , c l e a r , c l a r i t y

easy to use.

A wired/wireless handheld remote control and convenient front bezel controls provide access to all display functions via an intuitive, easy to navigate on-screen menu system. Plus, complete RS232 external control is available for every display function. The RS232 system provides two-way communication to verify the execution of commands.

quiet operation.

Engineered with silence as a priority these displays produce a noise level of only 22dB, these XGA models perform quietly in any environment resulting in the message being heard.

service and support.

The PlasmaSync series is supported by NEC's industry leading service and support programs.

Specifications

Model Number	PX-42XM2A/S PX-50XM3A/S PX-61XM2PA/S	Diagonal Screen Size 42" Diagonal Screen Size 50" Diagonal Screen Size 61"
Screen Aspect Ratio	16 to 9	
Active Screen Area	42XM2/S 36.3 in x 20.4 in, 921mm x 518 mm 50XM3/S 43.5 in x 24.5 in, 1106 mm x 622 mm 61XM2/S 53.2 in x 29.9 in, 1351 mm x 760 mm	
Native Pixel Resolution	42XM2/S at 1024 x 768 50XM3/S and 61XM2/S 1365 x 768
