A pedometer is a great motivational tool to track your distance, the number of steps you take and how many calories you burn. This pocket pedometer features advanced 2D Smart Sensor technology - so it knows exactly when you're taking a step. It's more accurate than other pedometers which use the simple pendulum design. Use this in your pocket, back or hip for added convenience. The seven-day memory helps you keep track of your daily activity to help you reach your fitness goals.

Your HJ-112 GOsmart Pocket Pedometer comes with the following components:

Pedometer
Screwdriver
Strap
Clip
Holder
Battery (CR2032)

AEROBIC STEP FUNCTION

This Pocket Pedometer counts all steps and separately counts aerobic steps, which are defined as:

- **Walking more than 60 steps per minute**
- **Continuously walking for more than 10 minutes**

The pedometer separately displays both total steps and aerobic steps. Aerobic steps will be counted in total steps for the day.

NOTE: Taking a rest for less than 1 minute during continuous walking for more than 10 minutes is considered as continuous walking.

CALORIE DISPLAY

Correction coefficient for calorie display

	Man	Woman
20's	1.10	1.07
30's	1.05	1.01
40's	1.02	.97
50's	1.01	.95
60's	1.00	.95
70's	.98	.96
80's	.95	.95

The calorie display indicates a calorie consumed by walking and calculated from the weight, stride distance, number of steps, and walking speed.

The calorie display increment is one minute. If you want to know the target calorie value, multiply the displayed calorie by the coefficient in the table shown below.

Example of correction:

For a woman in her 50's with the calorie display of 300, the consumed calorie is calculated as follows.

$$300 \times 0.95 = 285 \text{ kcal}$$

STRIDE LENGTH MEASUREMENT

Measure your stride length before beginning to set the pedometer.

How to measure your stride length

1. Walk 10 steps with your normal stride as illustrated below.

2. Measure the distance from START to END in inches.

3. Calculate your stride length by dividing the total distance by 10.

Example:

Total distance = 320"

$320 \div 10 = 32$ inches (2 feet 8 inches)

Conversion Chart

12 inches = 1 foot

24 inches = 2 feet

36 inches = 3 feet

48 inches = 4 feet
