1. READ ALL INSTRUCTIONS BEFORE USE.
2. Follow all warnings and instructions marked on the product.
3. Unplug this product from wall outlet when not in use and before cleaning.  
Do not immerse appliance in water or other liquid. Use a soft sponge and mild detergent when cleaning the inside of the pan or kneading blade. The cabinet may be cleaned with a cloth, dampened with a mild soap and water solution.
4. Do not touch hot surfaces. Use mitts when handling hot materials, and allow metal parts to cool before cleaning.
5. Close supervision is necessary when any appliance is used near children.
6. Do not allow anything to rest on power cord. Do not plug in cord where persons may walk on, or trip over it.
7. Do not operate any appliance with a damaged cord or plug. Refer servicing of appliance to an authorized Panasonic service center if the unit should malfunction or be damaged in any manner.
8. This appliance is not intended for commercial use. It is for household use only.
9. The use of attachments not recommended by manufacturer may cause damage or injury.
10. Avoid contacting moving parts.
11. Do not use outdoors. Do not use appliance for other than intended use.
12. Do not let cord hang over edge of table or counter, or touch hot surfaces.
13. Do not place on or near a hot gas or electric burner, or in a heated oven.
14. To disconnect, grip plug and pull from wall outlet. Never pull on cord.
15. The unit may vibrate or move during the kneading process. Do NOT place the unit near the edge of a countertop. Place the unit securely where movement of the unit will not cause it to fall off the countertop.

# SAVE THESE INSTRUCTIONS

## Note:

- A. A short power-supply cord is provided to reduce the risk resulting from becoming entangled in or tripping over a longer cord.
- B. Extension cords are available and may be used if care is exercised in their use.
- C. If extension cord is used:
  - (1) the marked electrical rating of the extension cord should be at least as great as the electrical rating of the appliance,  
and
  - (2) the longer cord should be arranged so that it will not drape over the countertop or tabletop where it can be pulled on by children or tripped over unintentionally.
- D. This appliance has a polarized plug (one blade is wider than the other). As a safety feature, this plug will fit in a polarized outlet only one way. If the plug does not fit fully in the outlet, reverse the plug. If it still does not fit, contact a qualified electrician.  
Do not attempt to defeat this safety feature.

**DOUGH RAISIN** . . . . The unit automatically prepares dough as in the DOUGH option. A beeper sounds to let you know when to add dried fruits as in the BAKE RAISIN option.

A 13-hour timer allows you to prepare everything the night before and wake up to the aroma of freshly baked bread. (Certain BAKE options only). The result may differ when the timer is used.  
 The beep sounds eight times when baking on the BAKE option or rising of dough on the DOUGH option is completed.  
 The beep also sounds in the BAKE RAISIN and DOUGH RAISIN option, when the machine pauses for 1 minute during the kneading process to add the raisins, chopped dried fruits and / or nuts.

## How to clean

Before cleaning the unit, unplug and allow the unit to cool.

	<p><b>Body and Lid</b>  Body and lid should be wiped clean with a damp cloth. Use only mild liquid detergent. For baked-on materials, use a non scratch scourer and detergent on the interior.  Do not use cleansers, steel wool pads, or other abrasive materials.  Do not use benzine, thinner, alcohol, etc.</p> <p><b>Temperature sensor</b>  Wipe gently and avoid deforming the temperature sensor.</p> <p><b>Yeast dispenser</b>  Wipe clean with a dry cloth. If a damp cloth is used, the dispenser must be dry completely before reuse.</p>
	<p><b>Bread pan and kneading blade</b>  If the kneading blade cannot be easily removed from the pan by twisting the mounting shaft, pour lukewarm water into the cooled pan and allow to soak for 5—10 minutes. Remove the blade. Always remove the blade and wash the pan with mild, liquid detergent after each use.  <b>DO NOT SUBMERGE THE PAN IN WATER.</b>  Do not use other abrasive materials or the pan may be scratched.  These parts are not dishwasher safe.</p>
	<p><b>Measuring cup and spoon</b>  Rinse and wipe dry.</p>

1. Be sure that the unit and the bread pan have dried completely before storing.
2. On the interior of the body some discolouration may occur with use.

# Slicing and storing the bread

Cool the bread on a wire rack before slicing or storing.

## Slicing homemade bread

Homemade bread can be cut with a bread knife.

Place the loaf on its side and cut with a sawing motion.

## Storing homemade bread

After cooling the bread completely at room temperature, wrap it in a foil or a plastic bag to preserve freshness.

To enjoy the taste of freshly baked homemade bread, try to consume your bread as soon as possible.

For longer storage, wrap well and store in the freezer.

It is better to slice the loaf before freezing.

# Leakage of bread ingredients from the bread pan

With extended use, a small quantity of ingredients may leak out from the outlet of the bread pan. This is normal. The bread pan is designed so that the ingredients in the kneader mounting shaft unit may be discharged to prevent rotation stoppage.

When the kneader mounting shaft does not rotate, it is necessary to replace the kneader mounting shaft unit with a new one.

Consult with your authorised Panasonic Service Centre for servicing or for purchase of replacement parts.

# Ingredients

Since the bread program on your Automatic *Bread Bakery*® is completely computerised, the success of your loaf depends on the quantity and quality of the ingredients

## Flour:

Wheat flour provides the bulk and structure of bread. Flour is classified into two types, strong flours which are milled from hard wheat and weak flours which are milled from soft wheat. The difference in the two types of wheat is the content of proteins that form gluten (gluten is the important constituent of bread which provides its structure and its stretchy, chewy texture. Gas which is released during fermentation is trapped within the elastic network of gluten, thus making the dough rise. Gluten development mostly takes place during dough kneading).

**Strong flours** contain a high content of protein necessary for the development of gluten. Always use strong flour - labelled as suitable for bread making when using the recipes in this book.

**Weak flour** such as cake flour and pastry flour, are less in protein content and are suitable for products which have a light, crumbly texture and do not require much gluten development.

**All purpose flour** is used for many purposes, as the name suggests, in home baking. It is slightly weaker than bread flour. In our recipes, it is blended with the bread flour and not used alone.

**Self rising flour** is a white flour to which baking powder and sometimes salt have been added.

*Weak flours, all purpose flour and self-rising flour may not be substituted for bread flour in the included recipes.*

**Whole wheat flour** is made by grinding the entire wheat kernel, including the bran and germ. 100% whole wheat bread or breads containing a high percentage of whole wheat flour will be lower in height and heavier in texture than bread baked with a high percentage of bread flour. This is because the gluten strands are cut by the edges of bran flakes and the germ, rich in minerals, inhibits fermentation.

**Rye flour** contains some proteins but these do not form sufficient gluten. Therefore, bread baked with rye flour will be dense and heavy. When a recipe in this book calls for rye flour, do not use more than the stated quantity, as it could overload the motor.

**Other flour:** Products milled from other grains are occasionally used in bread. i.e. corn meal, rice, millet, soy, oat, buckwheat and barley flours. These do not contain protein that form sufficient gluten and therefore they should not be substituted for bread flour in the recipes. For gluten free bread making see page 6. Do not add more than the stated amount in the following recipes, otherwise a good result will not be achieved.

## Sugars:

Sugars or sweetening agents have the following purposes in bread making:

- They add sweetness and flavour.
- They add softness and fineness to the texture.
- They give crust colour.
- They contribute to keeping qualities by retaining moisture.
- They provide food for yeast.

Besides granulated sugar or caster sugar, brown sugar, honey and molasses can be substituted in the recipes. Recipes including fruit generally require less added sugar due to the high sugar content of the fruit.

## Fats:

The major purpose of fats in bread baking are:

- They tenderize the bread.
- They add flavour and richness.
- They contribute to keeping qualities by retaining moisture.

Any fat can be used, however, we recommend butter for the best flavour and texture.

# Ingredients

## Milk and milk products:

Their main purposes are:

- They enhance flavour.
- They increase the nutritional value of bread.
- Milk solids include protein, lactose (milk sugar), and minerals.

Most recipes call for the use of milk powder.

NEVER use fresh milk on the overnight programme.

Otherwise it may sour during the rest time, spoiling the final flavour.

## Salt:

Salt has the following functions in bread baking.

- It strengthens gluten structure and makes it more stretchable.
- It inhibits yeast growth.
- It enhances the flavour.

Therefore, too much salt will inhibit fermentation whereas too little will result in weak gluten structure.

Both will result in a bread with low volume and poor texture. Use ordinary table salt. DO NOT USE coarsely GROUND SALT.

## Liquid:

Cold tap water should be avoided. (For BAKE RAPID, lukewarm water should be used, especially during the very cold winter months.)

Cold fresh milk can be substituted to improve the keeping quality and nutritional value of the loaf, which will have a softer browner crust.

NEVER use fresh milk on the overnight program.

Always measure the liquid stated in the recipe carefully, using the measuring cup provided.

TOO MUCH LIQUID will cause the dough to collapse, giving a poor appearance.

## Yeast

Yeast is a microscopic organism that acts as a leavening agent. It acts on sugars and converts them into carbon dioxide gas. This gas causes the dough to rise. The alcohol produced by yeast is evaporated during baking. Yeast is a living organism and yeast is killed by high temperatures. Yeast is usually added to the dough preliminary to fermentation and may be added to the dough at any time during the fermentation process.

For *Bread*, use **fresh yeast** or **fermenting powder**. Instant yeast is not dissolved in the bread.

As there is no yeast to activate, the sensor will not detect yeast during the fermentation process.

We use the yeast in our recipes to make a loaf.

Yeast must be stored in a cool, dry place.

For longer storage, yeast can be stored in a refrigerator.

60°F to 70°F ..... Best growth (fermentation and proofing temperatures for bread growth)  
70°F to 90°F ..... Best growth (fermentation and proofing temperatures for bread growth)  
Above 120°F ..... Yeast is killed

## Chemical leaveners

Chemical leaveners are those that release gases produced by chemical reactions. Chemical leaveners used in this book are baking soda (sodium bicarbonate) and baking powder.

## Tips for baking whole wheat and multigrain breads

The result of breads, such as whole wheat breads and multigrain breads, are affected greatly by the quality of ingredients, especially the flour. The flour quality is affected by the keeping methods, the temperature, humidity, etc. Another important factor about the flour is that its quality also differs from year to year, season to season due to the quality of the wheat crop affected by the weather.

Sometimes due to bad weather conditions, the crop may not grow with as much gluten forming properties as it would require to produce flour for making excellent breads.

When the quality of flour is poor, the bread may not rise, or collapse after rising due to weak gluten. In such cases, take the following measures to obtain better results.

1. At least  $\frac{1}{8}$  of the flour (about 7 oz.) should be white bread flour, rather than whole wheat flour.  
and/or 2. Reduce  $\frac{1}{8}$  cup to  $\frac{1}{4}$  cup of water from the regular amount.

If above still does/do not solve problems,

3. Reduce the amount of dry yeast to 1 teaspoon.

The loaf produced by above methods may be low or small.
