

10001 POWER AMPLIFIER

Product Description

The Crest Audio 10001 is an extremely high-power amplifier designed to meet the most stringent needs of professional use in concert touring, high quality sound reinforcement, and professional fixed installations.

Crest Audio's Power Density™ engineering philosophy allows the 10001 to have one of the highest power-to-weight ratios available at any price, while maintaining superior performance. The 10001 is fully compatible in design with the other Crest Audio Professional Series amplifiers, Crest Audio's Octal Socket Accessories, and the NexSys® computer-controlled audio system.

A four rack-space amplifier, the 10001 uses forced-air to cool channel heat sinks mounted in a back-to-back tunnel configuration. Stereo, parallel, and bridged mono modes are chosen with a rear-panel Mode Select switch. Actively balanced XLR input connections and solderless output connectors are provided for each channel.

Design and Construction

The 10001 is built exclusively in Crest Audio's own USA manufacturing facility, with internal components selected for premium quality and proven durability. Each modular subassembly is pre-tested, and the assembled 10001 receives a rigorous "hot room" burn-in before thorough final checkout on precision test equipment.

The no-compromise approach in the 10001's electrical design and mechanical construction provides the ultimate in reliability and performance. Only high-grade components are used for the modular sub-assemblies in this ultra-strong, 12 gauge steel single piece chassis.
