

46" Plasma Monitor

*A new era of multimedia presentations.
Introducing the new Philips BDS4611 plasma monitor. The cost effective alternative for your large display needs.*

A person receives over 70% of all information in the blink of an eye.....the Philips plasma's high-quality image reproduction will grab the attention of crowds, from public space to retail shops.

PHILIPS

BDS4611 Plasma Monitor

technical specifications

No Fan Cooling = no sound. For ultra quiet, 0dB operation the Philips BDS4611 plasma monitor features a new chassis layout and PDP panel offering improved power efficiency and cooling.

External control input-output. (RS-232C) enables control from a remote computer of many screen functions. In addition, the BDS4611 has a self-diagnostic mode that makes it possible to check the screen through peripherals connected via the RS-232C.

DVI input terminal for direct digital RGB input. The BDS4611 incorporates a DVI input terminal, enabling direct digital input of RGB signals. It delivers clear, high-quality image output with virtually no flicker or jitter.

No front keys. Display operation and settings is done through the RS232 computer connection or by remote control. This avoids unauthorised adjustments when the display is positioned in a public space.

NO	Resolution Horizontal (KHz)	Horizontal Frequency (Hz)	Vertical Frequency (MHz)	Dot Clock Frequency	Remark
1	720x400	31.47	70.08	25.17	DOS

The Philips Guarantee

The Philips range of advanced plasma monitors combines reliability and unsurpassed performance with a host of technological innovations. All of which ensures that you enjoy an impressive picture. What else do you expect from the innovative world leader in sound and vision technology.

Light output of a PDP module gradually decreases over long-term use. Do not display static images for prolonged periods: otherwise phosphor burn might appear on a part of the panel. Phosphor burn is not covered by the warranty.

The plasma display panel consists of fine pixel elements (cells). Although Philips produces these plasma displays with more than 99.99% of their cells active, there may be some cells that do not produce light or remain lit after they should have turned off.
