### User's Manual

**HE-3200** 

English

# Important Safety Information

Please read this manual carefully before using the projector and keep the manual handy for future reference.

CAUTION: TO REDUCE THE RISK OF ELECTRIC SHOCK, DO NOT REMOVE COVER. NO USER-SERVICEABLE PARTS INSIDE. REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.

This symbol warns the user that uninsulated voltage within the unit may have sufficient magnitude to cause electric shock. Therefore, it is dangerous to make any kind of contact with any part inside of this unit.

This symbol alerts the user that important literature concerning the operation and maintenance of this unit has been included. Therefore, it should be read carefully in order to avoid any problems.

The above cautions are given on the bottom of the product.

#### CAUTION

To turn off main power, be sure to remove the plug from

the power outlet. The power outlet socket should be installed as near to the

equipment as possible, and should be easily accessible.

#### WARNING

TO PREVENT FIRE OR SHOCK HAZARDS, DO NOT EXPOSE THIS UNIT TO RAIN OR MOISTURE. ALSO DO NOT USE THIS UNIT'S POLARIZED PLUG WITH AN EX-TENSION CORD RECEPTACLE OR OTHER OUTLETS, UNLESS THE PRONGS CAN BE FULLY INSERTED. RE-FRAIN FROM OPENING THE CABINET AS THERE ARE HIGH-VOLTAGE COMPONENTS INSIDE. REFER SER-VICING TO QUALIFIED SERVICE PERSONNEL.

#### **DOC** compliance Notice

This Class B digital apparatus meets all requirements of the Canadian Interference-Causing Equipment Regulations.

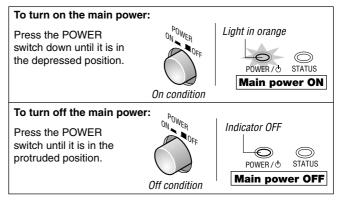

#### WARNING

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorientate or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

#### Turning ON or OFF Main Power

Make all hookups before turning on the main power.

#### Installation

- Allow at least 10 cm (3.9 inch) of space between the projector top panel and its surroundings.
- Also allow at least 10 cm (3.9 inch) of other spaces around the projector.
- The projector should be placed on a flat, level surface and in a dry area free from dust and moisture.
- The projector should always be handled with care. Dropping or jarring the projector could damage internal components.
- If you wish to have the projector installed on the ceiling do not attempt to install the projector yourself. The projector must be installed in accordance with any local building codes by gualified technicians in order to ensure proper operation and reduce the risk of bodily injury.
- Do not place this product near water, near a bathtub, in a wet basement or near a swimming pool and the like.

#### **Power supply**

- The projector is designed to operate on a power supply of 100-240V AC, 50/60Hz. Ensure that your power supply fits this requirement before attempting to use your projector.
- Handle the power cable carefully and avoid excessive bending. A damaged cord can cause electric shock or fire.
- If the projector is not be used for an extended period of time, disconnect the plug from the power outlet. Do not unplug the power cable from the wall outlet under the following circumstances, doing so may cause damage to the projector:

#### Cleaning

- Unplug the projector before cleaning.
- Use a blower or lens paper to clean the lens, and be careful not to scratch or mar the lens.

#### Lamp Replacement

Be sure to replace the lamp when the message "Replace The Lamp" appears on the screen. If you continue to use the lamp after 1100 hours of usage, the lamp will not turn on. To replace the lamp, follow all instructions on page E-46.

#### **Fire and Shock Precautions**

- The openings should never be covered or blocked by placing the product on a bed. sofa. rug. or other similar surface.
- Prevent foreign objects such as paper clips and bits of paper from falling into the projector. Do not attempt to retrieve any objects that fell into the projector.
- Do not insert any metal objects such as a wire or screwdriver into the projector. If something should fall into the projector, immediately disconnect the power cord from the projector and have the object removed by a qualified service person.
- Do not place any liquids on top of the projector.

Do not look into the lens while the projector is on. Serious damage to your eyes could result.

# **IMPORTANT SAFETY INSTRUCTIONS**

#### 1) Read these instructions.

All the safety and operating instructions should be read before the product is operated.

#### 2) Keep these instructions.

The safety and operating instructions should be retained for future reference.

#### 3) Heed all warnings.

All warnings on the product and in the operating instructions should be adhered to.

#### 4) Follow all instructions.

All instructions should be followed.

#### 5) Do not use this apparatus near water.

Do not use this product near water, near a bathtub, in a wet basement or near a swimming pool and the like.

#### 6) Cleaning

Clean only with dry cloth.

#### 7) Ventilation

Do not block any ventilation openings. Install in accordance with the manufacturer's instructions.

#### 8) Heat

Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.

#### 9) Grounding or Polarization

Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.

#### 10) Power-Cable Protection

Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the apparatus.

#### 11) Attachments/Accessories

Only use attachments/accessories specified by the manufacturer.

#### 12) Transportation

Use only with the cart, stand, tripod, bracket, or table specified by the manufacturer, or sold with the apparatus. When a cart is used, use caution when moving the cart/apparatus combination to avoid injury from tip-over.

#### 13) Lightning

Unplug this apparatus during lightning storms or when unused for long periods of time.

#### 14) Servicing

Refer all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as power-supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.

## **Major Features**

### **High Image Quality**

Use of a Digital Micromirror Device (DMD<sup>™</sup>) chip that is based on Texas Instrument's Digital Light Processing (DLP<sup>™</sup>) technology enables images of high contrast and high detail.

- DLP technology gives rise to devices that exhibit high response speed, which in turn enables excellent moving picture characteristics and smooth images.
- Use of a high-performance progressive scan converter provides reproduction of film-like images.
- Built-in color filters of high purity permit the reproduction of vivid color images.

### **Quiet Design**

PLUS Vision Corporation's quiet design technology has resulted in a great reduction of fan noise which allows quiet performance that doesn't interfere with the enjoyment of movie watching in an indoor environment.

### **Installation Flexibility**

The compact design (of about B5 paper size:  $182 \times 257 \text{ mm} / 7.2 \times 10.1 \text{ inch}$ ) and mere 2 kg / 4.4 lbs weight has resulted in a projector that can be carried anywhere indoors for room-to-room portability.

## **Accessories Check**

Remove the main unit and the accessories from the box and check that the following items are included. Should an accessory be missing, please contact your store of purchase.

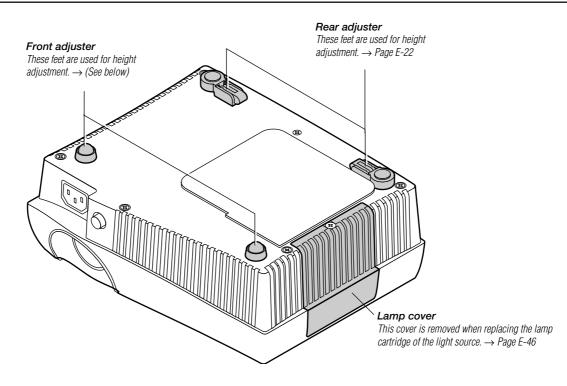

## **Names of the Main Unit Parts**

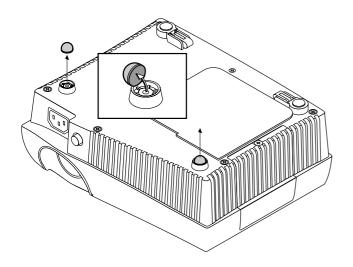

### **Attaching the Supplied Adjusters**

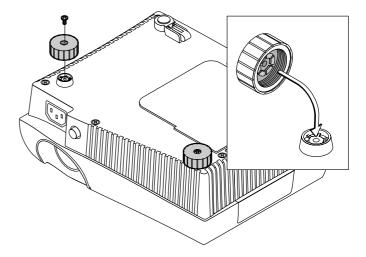

The supplied adjusters are required for vertical adjustment of the projector. See  $\to$  Page E-22 about "Using the Adjusters"

1. Remove a rubber pad of each front foot.

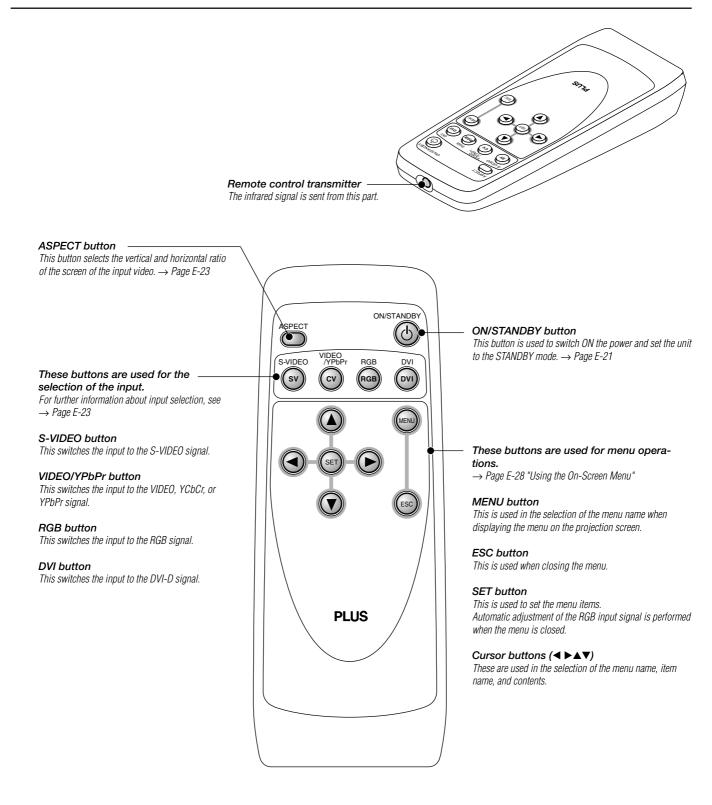

**Note:** The rubber pads are bonded. Being carful not to mar the plastic part of the front feet, remove the rubber pads.

2. After putting projections on the back of the supplied adjuster into depressions of the front feet, tighten the screws.

### **Names of the Remote Control Parts**

Note: Handling of the Remote Control

- \* Do not drop the remote control or handle it inappropriately.
- \* Do not expose the remote control to water or other liquids. Should the remote control become wet, wipe it dry immediately.

\* Try to avoid use in hot and/or humid locations.

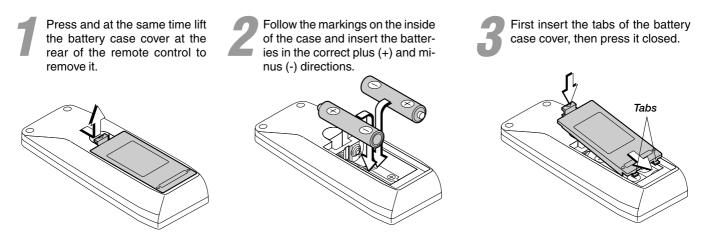

\* Some operations (such as menu operations) are available only through the use of the remote control and attention should be given to its careful use.

<sup>\*</sup> Remove the batteries from the remote control when it is not going to be used for a long period.

## **Preparing the Remote Control**

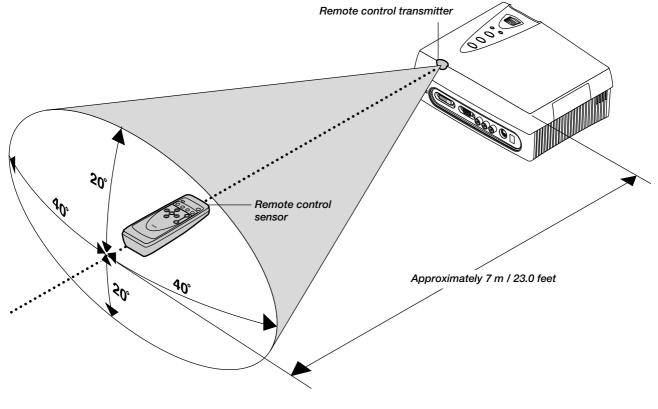

### **Inserting the Batteries**

When using the remote control for the first time, install the batteries that were supplied. When replacing batteries, purchase two of the same type of AA battery.

### **Remote Control Range**

Point the remote control toward the remote control sensor located at the rear of the main unit and operate. The range over which the main unit will receive the remote control signal is roughly as follows: within  $20^{\circ}$  above and  $20^{\circ}$  below a line perpendicular with respect to the sensor and within  $40^{\circ}$  to the left and  $40^{\circ}$  to the right. The transmission range is about 7 m / 23.0 feet.

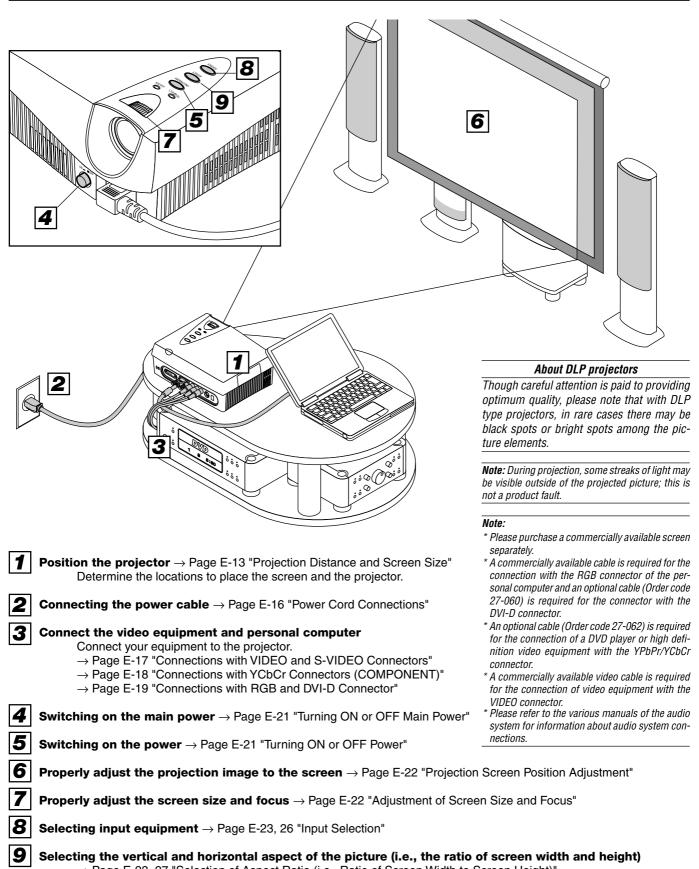

#### Note:

\* Exposure of the main unit's remote control sensor or the remote control transmitter to bright light or the obstruction of the signal by an obstacle located in the pathway may prevent operation.

The remote control will not function when the batteries are exhausted.

## The Procedure Up to Projecting to the Screen

## **Placement Guide**

Use this information as a guide to find the rough screen size when the projector is placed at a certain location, or to find out the approximate size of a screen that will be required.

The projection distance over which focussing is adjustable is 1.2 m (3.9 feet) to 7.6 m (24.9 feet) from the lens surface of the main unit. The projector should be placed within this range.

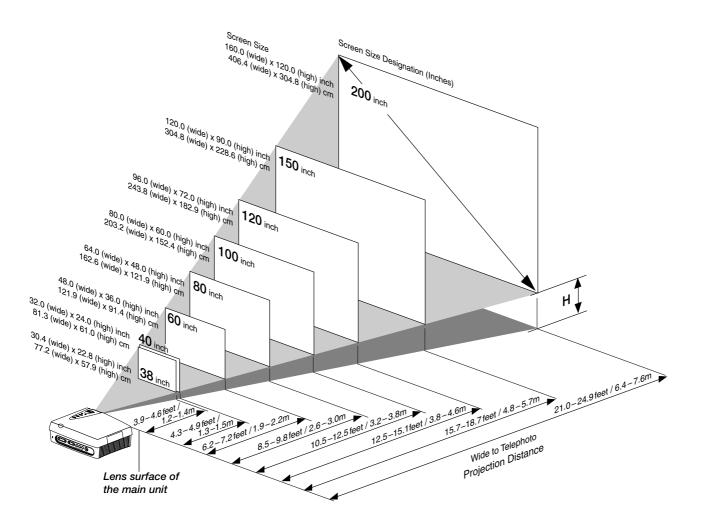

#### 1 **Projection Distance and Screen Size**

#### Screens with 4:3 Aspect Ratio (at an output size of 800 x 600)

This projection screen aspect ratio supports multiple uses.

The screen is placed within the projection distance range that corresponds to the screen size designation. Within this range, the screen size can be adjusted with the zoom ring.

Note: This is the projection distance (at an output size of 800 x 600) for aspect ratio settings of "Full" or "Auto." The projection distance will differ when "Thru" or other settings have been selected and the image is projected to fill the screen. When establishing a fixed placement, the distance could be outside the zoom adjustment range and a test projection should be conducted.  $\rightarrow$  Page E-24 "Input Screen and Aspect Ratio Selection Screen"

#### H dimension: Height from center of projector lens to bottom edge of screen. 200 inch: 23.9 inch/60.6 cm 150 inch: 17.9 inch/45.5 cm 120 inch: 14.3 inch/36.4 cm

100 inch: 11.9 inch/30.3 cm 80 inch: 9.6 inch/24.3 cm 60 inch: 7.2 inch/18.2 cm 40 inch: 4.8 inch/12.1 cm 38 inch: 4.5 inch/11.5 cm

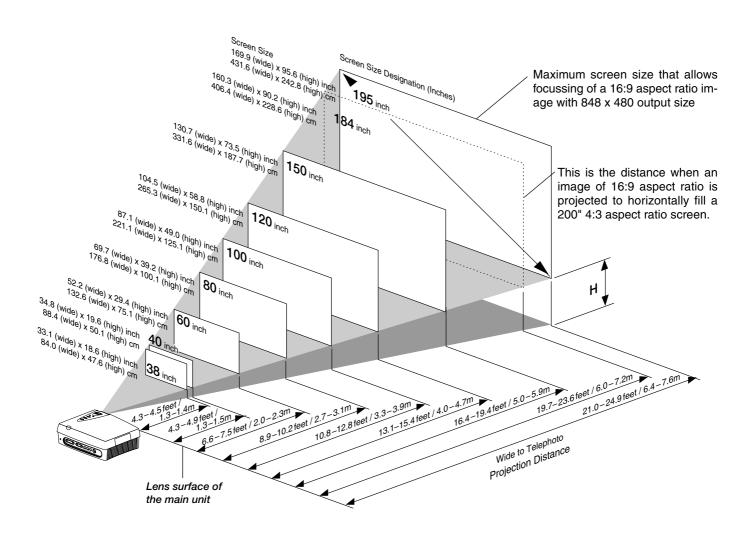

#### Screens with 16:9 Aspect Ratio (at an output size of 848 x 480)

These are the projection distances for screens of 16:9 aspect ratio used for the viewing of DVD and other squeezed screen applications.

This projector uses an output size of 848 x 480 pixels for home theater applications and enables the projection of a high definition 16:9 aspect ratio.

The screen is placed within the projection distance range that corresponds to the screen size designation. Within this range, the screen size can be adjusted with the zoom ring.

Note: This is the projection distance when an aspect ratio of [16:9] has been selected. Selection of "Full", "Auto" or other settings at this projection distance will result in the top and bottom of the image extending beyond the screen. When establishing a fixed placement, the distance could be outside the zoom adjustment range and a test projection should be conducted.  $\rightarrow$  Page E-24 "Input Screen and Aspect Ratio Selection Screen"

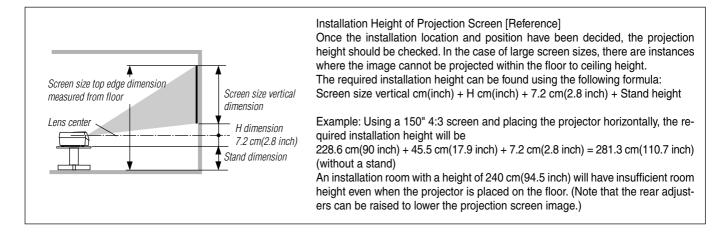

#### H dimension: Height from center of projector lens to bottom edge of screen.

195 inch: 35.8 inch/91.5 cm 100 inch: 18.3 inch/46.8 cm 38 inch: 7.0 inch/17.8 cm

80 inch: 14.7 inch/37.3 cm

184 inch: 33.8 inch/84.9 cm 150 inch: 27.5 inch/69.8 cm 60 inch: 11.0 inch/28.0 cm 120 inch: 22.0 inch/56.4 cm 40 inch: 7.3 inch/18.6 cm

#### Note:

- \* Determine the screen size after checking the height and width of the room in which the screen will be installed as well as checking that there are no obstacles located in the path between the lens and the screen.
- \* The larger the screen size becomes, the darker the image will be.
- Placing the projector to the rear of the screen to project the image will require the use of a translucent type screen.
- \* The height from the feet of the main unit to the center of the lens is 7.2 cm (2.8inch).
- \* There is a tolerance of ±5% due to design values.

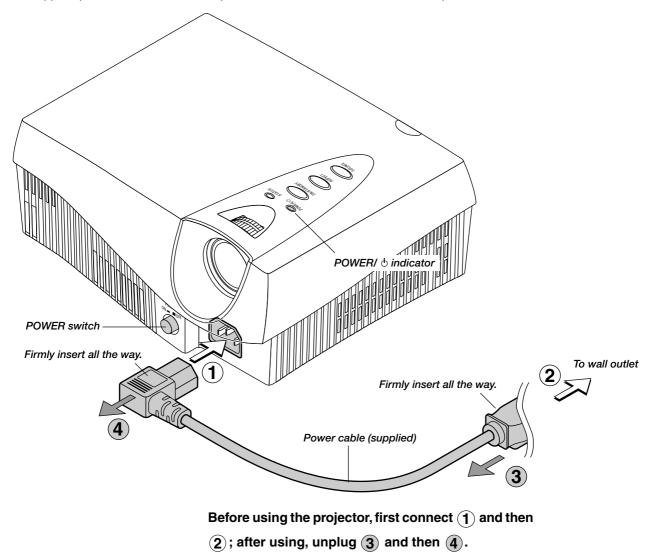

#### Attention!

- Do not install in location that will reach high or low temperatures. (Operation temperature: within 5°C (41°F) to 35°C (95°F))
- To raise the projection screen position, place the unit on a stable and strong support.
- Make efforts to ensure that sunlight or room illumination does not strike the screen. The more such extraneous light is shielded, the higher the contrast and more attractive the image that will be obtained.

## **Power Cable Connections**

### **2** Power Cable Connections

Use the supplied power cord to connect the power connector of the main unit with the power outlet.

#### Attention!

For pluggable equipment, install the projector as near to the power outlet socket that is easily accessible.

Do not switch off the main power or disconnect the power cable unless the POWER/  $\diamond$  indicator is lit orange. Doing so could shorten the life of the lamp or possibly cause the unit to malfunction. When the unit is set to off (and the LED is not lit) using the menu [Setup]  $\rightarrow$  [LED] items, the indicator flashes green for 1 minute, then goes off. Likewise, at this time the main power should not be switched off and the power cord should not be disconnected.

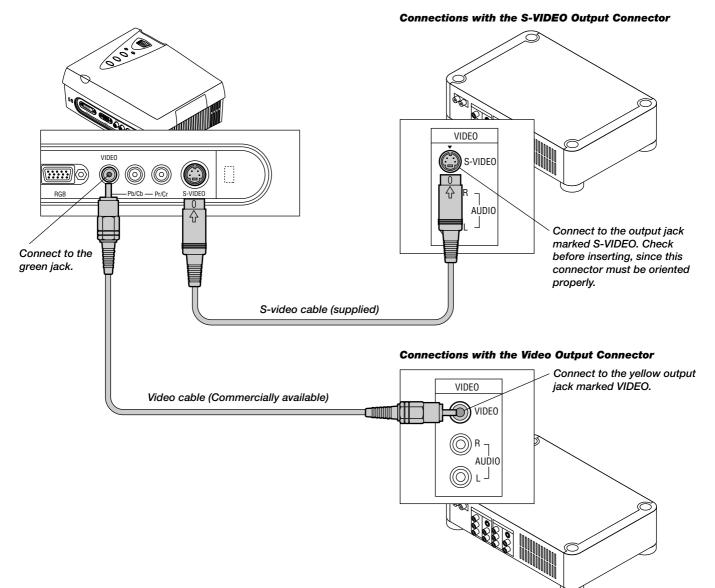

## **Connecting Video Equipment and Personal Computers**

By connecting this unit with video equipment and using a DVD player or other source in combination with an audio/video amplifier and speaker system will allow you to enjoy convincing home theater. Connecting the unit to a personal computer will permit presentation data to be projected as a large screen display in conferences and lectures.

#### **3** Connections with VIDEO and S-VIDEO Connectors

These are connections made with equipment that is equipped with a video output connector or an S-video output connector such as video decks, DVD players, laser disc players, TV tuners, etc.

Connect such equipment to the VIDEO or S-VIDEO connector of this projector.

#### Note:

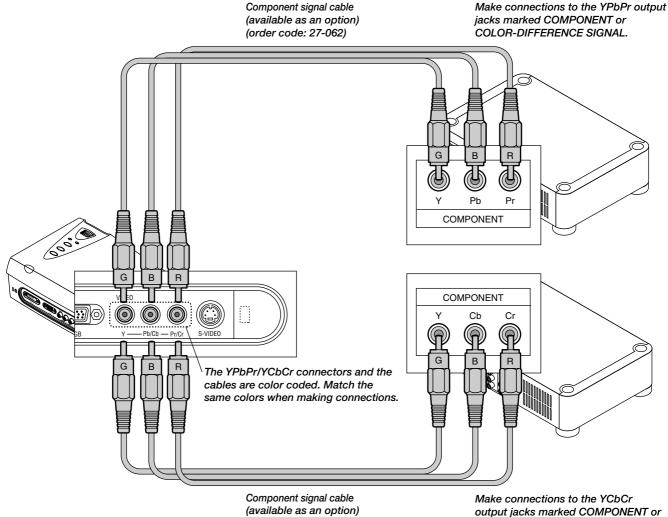

- \* Connection can be made with the S1 video and S2 video output connectors, but the control signals will not be operable in the projector depending on video equipment.
- \* Please refer to the various manuals for information about video equipment and audio/video amplifier and speaker system connections.

#### Attention!

Before making connections, check that the main power supply is switched off for the projector and the equipment that is to be connected.

#### **Connections with YCbCr/YPbPr Connectors** 3

These are connections made with equipment such as DVD players that have YCbCr output connectors or YPbPr output connectors. Make connections with the YPbPr/YCbCr connectors of this projector.

(order code: 27-062)

output jacks marked COMPONENT or COLOR-DIFFERENCE SIGNAL.

Note:

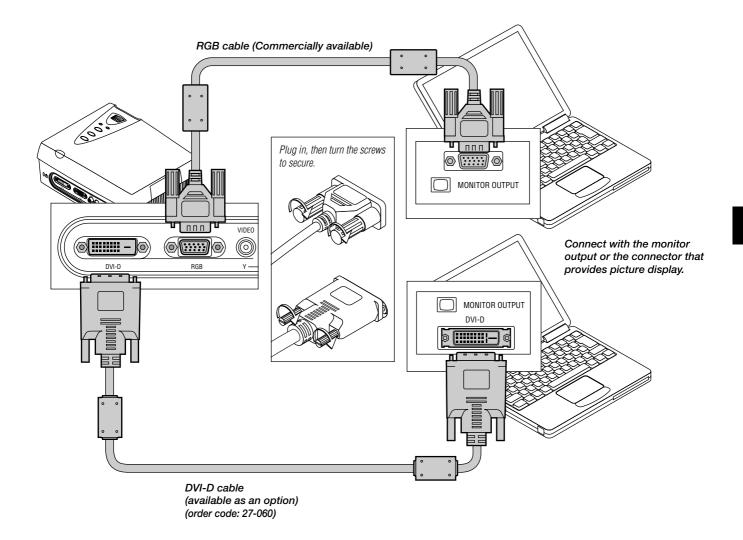

- When inputting a YPbPr signal, format selection or color space selection may be required.  $\rightarrow$  page E-38
- \* Please refer to the various manuals for information about video equipment and audio/video amplifier and speaker system connections.

#### **3** Connection with RGB and DVI-D Connector

These connections are made with personal computers that have a monitor output RGB connector (analog signal) or a DVI-D connector (digital signal). Connect personal computers having a mini D-Sub 15-pin RGB connector to the RGB connector of the projector and connect personal computers having a DVI standard DVI-D connector to the DVI-D connector of the projector.

#### Check the following before making connections.

- \* The resolution through this unit is S-VGA 800 x 600 dots. VGA is enlarged and displayed and XGA is compressed and displayed. Input of resolutions higher than S-XGA will not be displayed. Such resolutions should be converted to a displayable resolution at the personal computer side. Check with the "Table of Supported Frequencies" on Page E-49.
- \* The setting method of the personal computer will vary depending on your personal computer. For information, read the instruction manual for your personal computer, read the on-line help, or contact the manufacturer of your personal computer.

#### Note:

- \* This unit uses a digital interface 24-pin DVI-D connector. Digital signal TMDS (Transition Minimized Differential Signalling) of the DVI (Digital Visual Interface) standard is used. (Analog RGB signals cannot be input.)
- \* Personal computers that are not equipped with a DVI-D connector require a digital graphics board furnished with a DVI-D connector.
- \* Before making connections, turn off the main power to the projector and all the connected equipment.

#### **Obtaining an External Output Signal from a Notebook Computer.**

When projection will be with a notebook computer connected, knowledge will be required for the cable connection and notebook computer startup procedure as well as the operation that follows notebook startup. Please consult the instruction manual of your notebook computer or the on-line help while performing the following procedure.

#### **1** Check whether a signal is being sent from the notebook computer to the projector.

An indication appearing on the liquid crystal display of the notebook computer does not necessarily mean that an external output signal is- being output.

**Reference:** When the frequency under [Info.] of the projector menu is displayed as 0 kHz, 0 Hz, it indicates that an external output signal is not being output from the personal computer.  $\rightarrow$  Page E-43 "Viewing the Lamp Timer/Resolution and Frequency"

### 2 Should a signal not be output from the notebook computer, please try the operation described below.

For an IBM PC/AT, DOS/V computer, press the [Fn] key plus any one of the [F1] to [F12] keys. (See the table below.)

Manufacturer	Model	Key
akia	All computers	Fn + F2
COMPAQ	ARMADA Series	Fn + F4
	PRESARIO Series	Fn + F3
DELL	All computers	Fn + F8
FUJITSU	All computers	Fn + F10
GATEWAY	All computers	Fn + F3
IBM	All computers	Fn + F7
NEC	All computers	Fn + F3
Panasonic	All computers	Fn + F3
SHARP	All computers	Fn + F5
SONY	All computers	Fn + F7
SOTEC	All computers	Fn + F3
TOSHIBA	All computers	Fn + F5

*Note: Table information is current to June 2001.* 

**Note:** When the liquid crystal display of the notebook computer and the projector are displayed at the same time, the projected image might not be correct even though the liquid crystal screen shows a proper display. Should this occur, stop the simultaneous display of the notebook computer and try the mode with external output only. (Try an operation such as that described in aforementioned Step 2 and try closing the liquid crystal panel which might result in external output only.)

# **Turning ON or OFF Main Power**

#### ON/STANDBY button

00

#### 4 Turning ON or OFF Main Power

### Before turning the main power, check that the power is switched off the equipment that is to be connected and the connection is finished.

#### To turn on the main power:

Press the POWER switch down until it is in the depressed position.

Light in orange

Power/d STATUS

POWER/ & indicator

#### To turn off the main power:

Press the POWER switch until it is in the protruded position.

POWER switch

### 5 Turning ON or OFF Power

The ON/STANDBY buttons of the main unit and the remote control have the same function. A description using the main unit button is provided here.

#### To turn on the power:

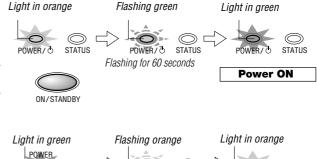

Press the ON/STANDBY button for about 2 seconds. The projection screen will brighten in about 40 seconds.

**Note:** When the unit is set to off (and the LED is not lit) using the menu [Setup]  $\rightarrow$  [LED] items, the indicator flashes green for 60 seconds, then goes off.

#### Setting standby mode

Press and hold down the ON/STANDBY button for about 2 seconds.

To switch on the power again, leave at least 60 seconds before doing so.

#### Attention!

Do not switch off the main power or disconnect the power cable unless the POWER/ b indicator is lit orange. Doing so could shorten the life of the lamp or possibly cause the unit to malfunction.
 When the unit is set to ON (and the LED is not lit) using the menu [Setup] → [LED] items, the indicator flashes green for

*in the unit is set to ON (and the LED is not if) using the mena* [Setup]  $\rightarrow$  [LED] terms, the indicator mashes green for 1 minute, then goes off. Likewise, at this time the main power should not be switched off.

• To save power, switch off the main power when not in use. When the main unit or remote control ON/STANDBY button is used to set the projector to the standby mode (POWER/  $\diamond$  indicator is lit orange), the cooling fan continues to operate.

#### Note:

- \* When a signal is not being input while projecting onto the projection screen, "No Signal" is displayed to indicate the condition. The background color of the screen will be blue at this time. The background color can be changed to black by via [Setup] → [Background] of the menu. → Page E-40 "Background Color Settings"
- \* When the power is switched on, the input selection and aspect selection conditions will be the same as the conditions that existed when the power was switched off.
- \* Adjustments and setting values that were made via menu operations will be stored even when the main power has been switched off or the power cord has been disconnected.

#### When the power won't switch on

- \* When the internal temperature is abnormally high, the power will not be switched on to protect the equipment. Wait for a while and then try switching on the power again.
- \* *Should the STATUS indicator be lit or flashing, please see "When the STATUS Indicator Is Lit/Flashing" on Page E-45.*

# **Adjustment of the Projection Screen**

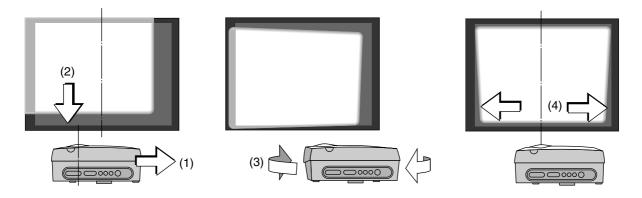

Operations include the adjustment of the image position that is projected to the screen and the adjustment of the focus as well as the input selection and the selection of the aspect ratio.

Perform these operations with the power of the connected equipment switched on and the video signal input to the projector.

### 6 Projection Screen Position Adjustment

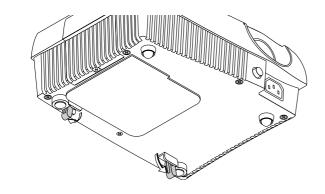

#### Adjust the projection image to the screen

- (1) If the image is shifted to the left or right, move the main unit horizontally. (Align the center of the screen and the center of the lens of the main unit.)
- (2) If the image is shifted vertically, move the image up or down with the adjuster.
- (3) A projection image such as that illustrated in the diagram is the result of the projector not being perpendicular to the screen. Set the projector so that it is pointing straight toward the screen.
- (4) If the image shows keystone distortion, adjust using menu operations. → Page E-39 "Adjustment of Keystone Distortion"

#### **Using the Adjusters**

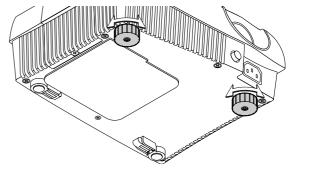

**To lower the projection position:** Raise the rear adjusters up

#### To raise the projection position:

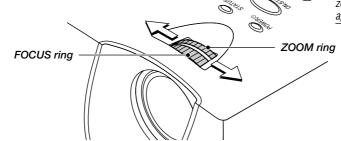

Attach the supplied two adjusters to the front feet. See page E-9 "Attaching the Supplied Adjusters".

After folding the rear adjusters, rotate the right/left front adjuster to fine-adjust the height. (Adjustable range: 0 to 5 mm/ 0 to 0.2 inch)

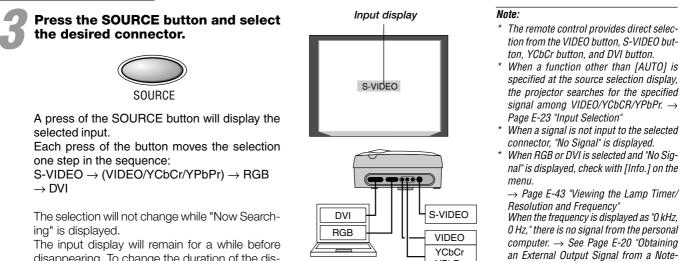

### 7 Adjustment of Screen Size and Focus

Turn the zoom ring and adjust the screen size, then turn the focus ring and adjust the focus.

**Note:** The zoom ring allows adjustment of approximately 20% of the maximum screen size. (When the zoom ring is at the center position, an adjustment of approximately ±10% will be possible.)

#### 8 Input Selection

The input display will remain for a while before disappearing. To change the duration of the display, see  $\rightarrow$  Page E-41 "On-Screen Display Duration Setting."

#### Selection of Aspect Ratio (i.e., Ratio of Screen Width to Screen Height)

9

Press the ASPECT button and select the desired aspect ratio.

A press of the button will display the aspect selection display.

The aspect ratio is the ratio of the width and height of the screen.

Aspect Selection Display

#### Note:

book Computer."

YPbPr

- \* The aspect ratio selection display will not appear unless a signal is input. Play the video of the equipment.
- \* Match the aspect ratio of the image of the connected equipment with the aspect ratio of the projected image of this unit, or adjust the image of a 16:9 aspect to the desired format.
- \* When the aspect ratio differs, a circle, for example, will be projected as an ellipse.
- \* The selected aspect ratio for each input is stored.

[VIDEO, S-VIDEO, YCbCr and YPbPr Input Selection]

Aspect	/	S-VIDEO
	Full	-
	16:9(LB)	
	16:9	
	Real	
	Thru	

#### [RGB and DVI Input Selection]

Aspect		DVI
f F	ull	
A	uto	
10	6:9	
[ т	hru	

Cursor: Displays the currently selected contents position.

Press the ASPECT button during the appearance of the aspect selection display and make the selection.

Each press of the button moves the cursor and switches the aspect ratio.

A diagram of the a sample image with different aspect ratios is carried on the next page. The aspect selection display will remain for a while before disappearing.

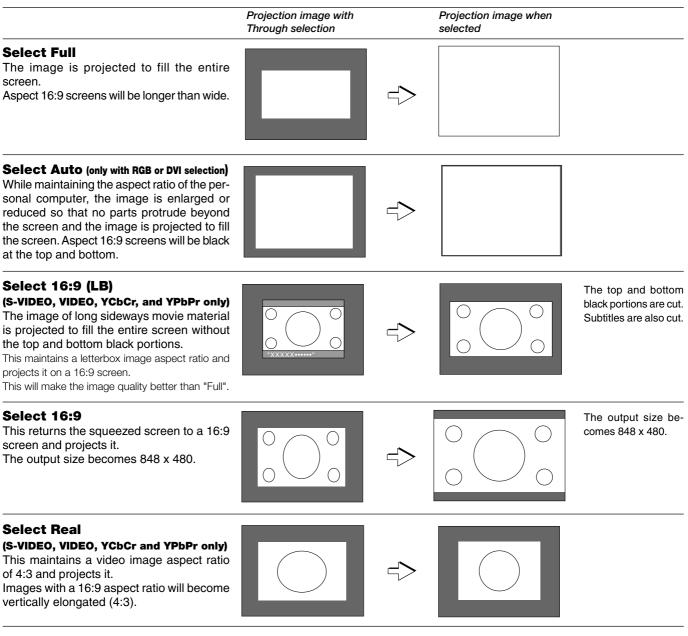

To change the duration of the display, see  $\rightarrow$  Page E-41 "On-Screen Display Duration Setting."

#### Note:

- \* For information about operation with the remote control, see  $\rightarrow$  Page E-25 "Operation with the Remote Control"
- \* To adjust or set the brightness, picture, or other matters, display the menu on the projection screen and perform the operation. → Page E-28 "Using the On-Screen Menu"

#### This completes the projection screen adjustments.

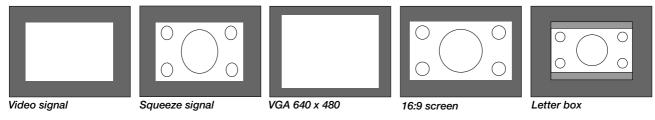

#### Input Screen and Aspect Ratio Selection Screen

#### Select Thru

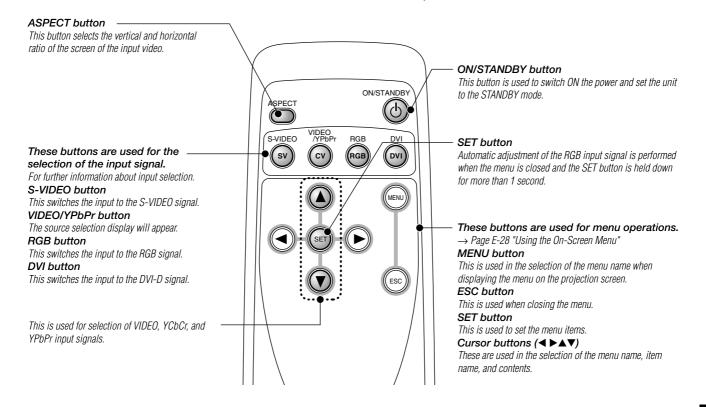

This projects the input image as is. When the input resolution is higher than that of the projector (800 x 600), the image will extend beyond the screen, and when lower, the image will be smaller than the screen. Video images may have a different aspect ratio.

#### [Display Examples]

## **Operation with the Remote Control**

Point the remote control toward the remote control sensor of the main unit and operate.

### **Turning ON Power/STANDBY**

Press the POWER button of the main unit and turn on the main power.

#### To turn on the power:

Check that the POWER/  ${\rm \oplus}$  indicator of the main unit is lit orange.

Press the ON/STANDBY button for about 2 seconds.

The power will be switched on, the indicator will flash green (for one minute) and then the indicator will be lit green. The projection screen will brighten in about 40 seconds.

#### Setting standby mode:

Press and hold down the ON/STANDBY button for about 2 seconds.

The indicator will flash orange (for 60 seconds) and then be lit orange.

Light in green

**Note:** To save electrical power when not using the unit, switch off the main power. When doing so, wait until the flashing orange indicator is lit steadily.

Light in orange

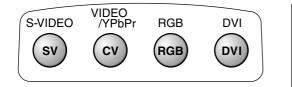

#### Attention!

When switching off the main power or disconnecting the power cable

First press ON/STANDBY button of the remote control or the main unit to set the standby mode (in which the indicator will be lit orange) and then switch off the main power. If the main power of the main unit is switched off without setting the standby mode, this could shorten the life of the lamp or possibly cause damage due to the heat of the lamp.

#### **Input Selection**

#### Press the desired input selection button.

#### S-VIDEO button

A press of the button will switch the input to the S-VIDEO input signal.

#### **VIDEO/YPbPr** button

The source selection display will appear. (If the source selection display is not displayed, press the button again.) \* [AUTO] is selected at the initial setting.

A press of the SET button causes the source selection display to disappear and starts an automatic search of the VIDEO/YCbCr/YPbPr input signal.

\* The input display at the [AUTO] setting will be [Video/YCbCr/YPbPr].

#### **RGB** button

A press of this button switches the unit to the RGB input signal.

#### **DVI** button

A press of this button switches the unit to the DVI input signal.

The input display will remain on for a while before disappearing. To change the duration of the display, see  $\rightarrow$  Page E-41 "On-Screen Display Duration Setting."

#### VIDEO/YCbCr/YPbPr Signal Selection

The input signal is specified directly and projected.

A press of the VIDEO/YPbPr button displays the source selection display. (If the source selection display is not displayed, press the button again.)

Select the signal with the cursor  $(\blacktriangle \nabla)$  button or the VIDEO/YPbPr button.

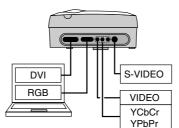

A press of the SET button causes the source selection display to disappear, performs a search for the specified signal and projects it.

#### Input selection display

#### Note:

- \* When the power is switched on, the input selection conditions that existed when the power was switched off will be in effect.
- \* When a signal is not input to the selected connector, "No Signal" is displayed.
- \* When RGB or DVI is selected and "No Signal" is displayed, check with [Info.] on the menu.

 $\rightarrow$  Page E-43 "Viewing the Lamp Timer/ Resolution and Frequency"

When the frequency is displayed as "0 kHz, 0 Hz," there is no signal from the personal computer. —> See Page E-20 "Obtaining an External Output Signal from a Notebook Computer."

#### Source selection display

#### Note: \* When

- \* When the source selection is specified as [AUTO], upon switching to the VIDEO/ YCbCr/YPbPr signal, a search for the signals will be made in order and it may take a while before the signal is displayed. The signal can be projected quickly when it has been specified directly.
- \* Conversely, for example, when connection is made to a video system that switches the input signal from a YCbCr signal to a YPbPr signal, having previously set the source selection to [AUTO], another press of the VIDEO/YPbPr button (i.e., the SOURCE button on the projector) will perform automatic identification of the signal.

#### **Operation** with the Remote Control

### Selection of Aspect Ratio (i.e., Ratio of Screen Width to Screen Height)

### Press the ASPECT button and select the desired aspect ratio.

A press of the button will display the aspect selection display.

The aspect ratio is the ratio of the width and height of the screen.

Aspect Selection Display

#### Note:

- \* The aspect ratio selection display will not appear unless a signal is input. Play the video of the equipment.
- \* Match the aspect ratio of the image of the connected equipment with the aspect ratio of the projected image of this unit, or adjust the image of a 16:9 aspect to the desired format.
- \* When the aspect ratio differs, a circle, for example, will be projected as an ellipse.
- \* The selected aspect ratio for each input is stored.

#### [VIDEO, S-VIDEO, YCbCr and YPbPr Input Selection]

Aspect		S-VIDEO
	Full	
	16:9(LB)	
	16:9	
	Real	
	Thru	

#### [RGB, DVI Input Selection]

Aspect		DVI
-	Full	
	Auto	
	16:9	
	Thru	

Cursor: Displays the currently selected contents position.

Press the ASPECT button while the aspect selection display is shown and make the selection. Each press of the button moves the cursor and switches the aspect ratio. Also the selection can be made with the cursor ( $\Delta \nabla$ ) buttons.

A diagram of the a sample image with different aspect ratios is carried on the next page. The aspect selection display will remain for a while before disappearing. To change the duration of the display, see  $\rightarrow$  Page E-41 "On-Screen Display Duration Setting."

### Automatic Adjustment of the Input Signal

This automatically adjusts the projected RGB signal to an optimum condition. Only the RGB, DVI and YPbPr (480p) signals can be automatically adjusted.

Holding down the SET button for more than 1 second starts the automatic adjustment.

During the adjustment, [AUTO] is display at the center of the screen.

When the menu is displayed, the button that is associated with the menu item will be operational; therefore, press the ESC button to close the menu before making this adjustment.

- Note:
- \* This automatically adjusts the stripe patterns, color infidelity, and flicker which arise from pixel shift.

When proper adjustment cannot be obtained with automatic adjustment upon pressing the SET button, please adjust manually.

manually. See E-35 "Adjusting the Clock Frequency of the Input Signal" and "Adjusting the Phase of the Input Signal".

# **Using the On-Screen Menu**

Only menu operation methods will be described here.

Refer to this page should you need to clarify matters during menu operations.

See the various pages for information about menu functions and performing adjustments and settings.

To perform adjustments and settings, the video is projected and adjustments are made to the optimum condition.

The remote control should be pointed toward the remote control sensor of the projector and operated.

To return the various items that have been changed with the menu to their default values (i.e., the condition that existed at the time of purchase), see  $\rightarrow$  Page E-43 "Returning to Standard Settings."

### Names and functions of the buttons used in menu operations

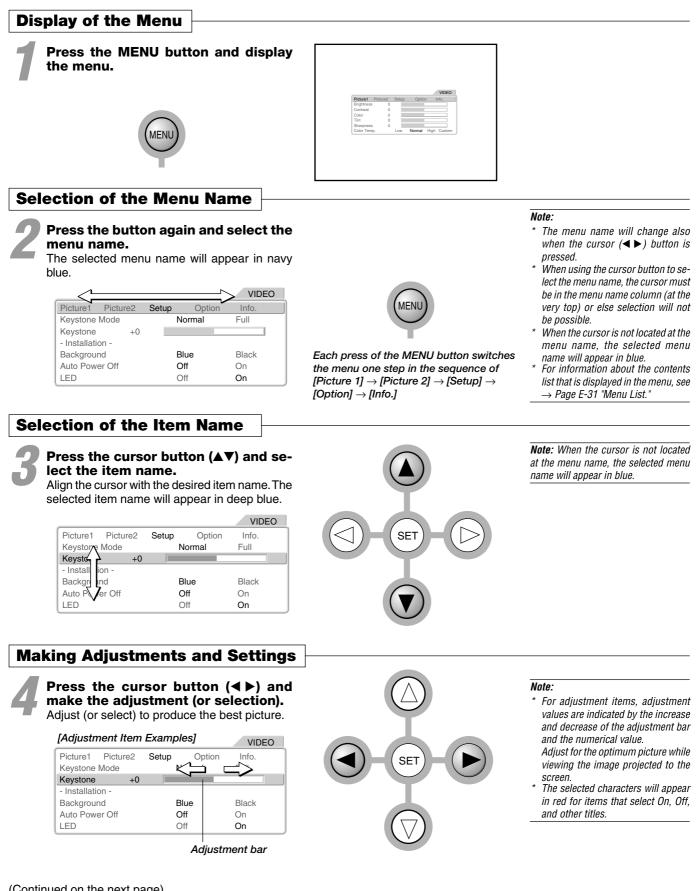

#### Names and functions of the menu screens

#### Menu names

These are the menu headings. When a menu is selected, there is a switch to the heading screen. The selected menu name appears in blue. Keystone	+0			
- Installatio	on -			
Backgrour	nd		Blue	Black
Auto Powe	er Off		Off	On
LED			Off	On

3) Press the SET button to finalize. The sub menu will close.

#### Exit

The selected menu name will appear in navy blue.

#### Note:

\* Even without pressing the ESC button, waiting a while will result in the menu closing (when the display duration setting has elapsed).

\* The adjustment and setting values will be stored even when the power is switched off or the power cord is disconnected.

### This is a list of menu item names. See the reference page for information about the adjustment and setting method.

#### The display contents of the item name will differ depending on the input selection.

Indications such as those below appear along side the input selections (i.e., input signals) that permit adjustment or setting.

(Various inputs allowed) Adjustment or setting is permitted for any input that is selected. (The item name will appear in the menu.)

VIDEO, S-VIDEO, and YCbCr Adjustment or setting is permitted only when the "VIDEO, S-VIDEO, and YCbCr" indication appears at the time of the listed input selection. (In this case, the item name will be displayed only when a VIDEO, S-VIDEO, or YCbCr signal is input.

#### **Clock frequency**

#### RGB and YPbPr

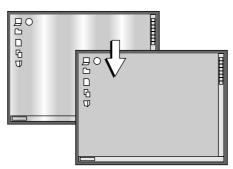

### Adjusting the Clock Frequency of the Input Signal

This is adjusted when light and dark vertical bands appear on the projection screen of the RGB and YPbPr input signal.

This is usually adjusted automatically at the time of signal selection; however, this adjustment is made when the automatic adjustment cannot effectively make the adjustment.

Press the cursor  $(\blacktriangle)$  buttons and align the cursor with [Clock frequency], then use the cursor buttons  $(\blacktriangleleft)$  to remove the vertical bands and render the screen brightness uniform.

#### Note:

\* A light and dark striped pattern will appear when there is lack of correspondence between the input signal and the pixel position of the projector. This is adjusted by the adjustment of the clock frequency.

When the image extends beyond the screen or is smaller than the screen, check whether the [Aspect] setting is set to "Full." → Pages E-23 and E-27 "Selection of Aspect Ratio (i.e., Ratio of Screen Width to Screen Height)

#### Phase

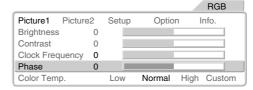

RGB and YPbPr

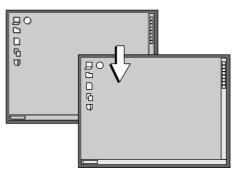

### Adjusting the Phase of the Input Signal

This is adjusted when a color shift or flickering appears on the projection screen of the RGB or YPbPr input signal.

This is usually adjusted automatically at the time of signal selection; however, this adjustment is made when the automatic adjustment cannot effectively make the adjustment.

Press the cursor ( $\blacktriangle$ ) buttons and align the cursor with [Phase], then use the cursor buttons ( $\blacktriangleleft$ ) to make the color shift or flickering inconspicuous.

# **Input Video Adjustments [Picture 2]**

These functions adjust the input video signal.

 $\text{See} \rightarrow \text{Page E-28}$  "Using the On-Screen Menu" for information about performing menu operations.

VIDEO, S-VIDEO and YCbCr

#### Adjusting the Sharpness of the Video Image

This adjustment is used to reduce the roughness and provide a clear picture.

Press the cursor button ( $\blacktriangle \lor$ ) and align the cursor with the desired item, then adjust with the cursor ( $\blacktriangleleft \triangleright$ ) button.

Adjust to your preference while viewing the picture. Adjustment can be made from 0 to level 4.

**Note:** The higher the level, the more proper it is for high resolution.

RGB

#### **Zoom Filter**

Various inputs allowed -

#### Adjusting the Sharpness When Expanding/Compressing

This adjusts the sharpness of the picture at the time of pixel conversion in the selection of the aspect ratio.

Press the cursor button ( $\blacktriangle$ ) and align the cursor with the desired item, then adjust with the cursor ( $\blacktriangleleft$ ) button.

Adjust to your preference while viewing the picture. Adjustment can be made from 0 (OFF) to level 4.

### **ProScan Mode**

VIDEO, S-VIDEO and YCbCr

#### **ProScan Mode Settings**

Set this according to the movie material.

Press the cursor button ( $\blacktriangle$ ) and align the cursor with the [ProScan Mode], then select with the ( $\blacktriangleleft$ ) button.

Video: This setting progressive an input signal on the assumption that it is a normal interlaced signal.

**Auto:** This setting automatically determines whether an input signal is the movie material(24 frames) or the video material (normal interlaced signal) to use progressive scanning.

**Note:** The greater the number of adjustment level becomes, the sharper an image is. The closer to 0 the number of adjustment level becomes, the softer an image is.

#### Pan

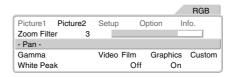

#### YPbPr, RGB and DVI

#### **Movement of Screen Display Position**

This is used to move the screen position at the time of RGB, DVI and YPbPr input selection.

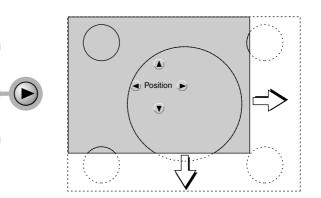

Press the cursor button ( $\blacktriangle$ ) and align the cursor with [Pan], then press the SET button. The menu display will close and the cursor display will appear.

Adjust the screen position horizontally with the cursor  $(\blacktriangleleft \triangleright)$  button and vertically with the cursor  $(\blacktriangle \lor)$  button.

#### Note:

The display position can only be moved when a large picture with a resolution of 800 x 600 or greater is displayed in the through mode.

VIDEO

#### Gamma

#### Various inputs allowed -

#### **Gamma Settings**

These are settings of the tone of the image.

Press the cursor  $(\blacktriangle \forall)$  button and align the cursor with [Gamma], then select with the cursor  $(\blacktriangleleft \triangleright)$  button.

Video: This is a gamma adjustment value suited to video signals.

Film: This is a gamma adjustment value suited to movies. Graphics: This is a gamma adjustment value suited to graphics such as computer images.

#### **Custom adjustments**

This adjustment permits the creation of a desired gamma curve.

This is performed while viewing the target image. Select [Custom] with the cursor  $(\blacktriangleleft \triangleright)$  button, then press the SET button.

The custom adjustment screen will be displayed.

- 1. Press the cursor (▲) button and align the cursor with the index.
- 2. Select the adjustment point with the cursor (◀►) button.
- 3. Select the color that is to be adjusted with the cursor (▲▼) button, then adjust with the cursor (◀►) button.

When required, adjust other adjustment points in the same manner.

4. Press the SET button to finalize. The custom adjustment screen will close.

#### Note:

VIDEO

- The projector will automatically switch to the standby mode when the "No Signal" display has been projected for about 5 minutes
- Some video equipment such as video tape decks are designed to display a blue background when playback has finished. In this instance, the projector is receiving a signal and so it does not produce its own background.
- To project an image again, press the ON/STANDBY button and switch on the power.

#### LED

#### Various inputs allowed

This setting is used when the light of the POWER/ STANDBY indicator (LED) of the main unit is objectionable during projection in a dark room.

Press the cursor  $(\mathbf{A}\mathbf{\nabla})$  button and align the cursor with [LED], then make the selection with the cursor  $(\blacktriangleleft \triangleright)$ button.

Off: Switches off the LED. On: Lights the LED.

#### Attention!

When this function is used to switch off the LED and the background color is set to black, the projector may mistakenly be assumed to be in the standby mode. Do not mistakenly switch off the main power or disconnect the power cord. Doing so may shorten the life of the lamp and cause breakdown.

## **Resetting, Storing, and Information [Info.]**

This function performs resetting and the display of information for the method of using the user memory, the default values of adjustments and settings, and the lamp timer.

See  $\rightarrow$  Page E-28 "Using the On-Screen Menu" for information about performing menu operations.

#### Preparation

Press the MENU button to display the menu, then select [Info.].

#### **User Memory**

Various inputs allowed

#### **Saving and Loading of Video Adjustments**

This function saves video adjustment and setting values, and can load them when required. Saving can be performed independently for the inputs of VIDEO, S-VIDEO, YCbCr, YPbPr, RGB and DVI.

**Items that can be saved:** Menu items of [Picture 1] and [Picture 2]

#### Saving

- 1. Project the saved image and adjust the menu items of [Picture 1] and [Picture 2]. The menu can be closed without causing problems. When closing, select [Info.] of the menu.
- Press the cursor (▲▼) button and align the cursor with [User Memory], then press the cursor (◀►) button and select [Save], finally press the SET button.
- 3. The message display will change to "Save User Memory." Press the SET button.
- (Press the SET button while the message is displayed.)

This will save the video adjustment and setting values of the current input mode.

#### Loading

- 1. Project the image that you want to save.
- Press the cursor (▲▼) button and align the cursor with [User Memory], then press the cursor (◀►) button and select [Load], finally press the SET button.
- 3. The message display will change to "Load User Memory." Press the SET button. (Press the SET button while the message is displayed.)

This will change the image to that of the loaded adjustment and setting values.

#### Lamp Timer Reset

Various inputs allowed

#### **Resetting the Lamp Timer**

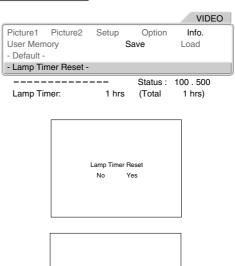

This reset is used when replacing the lamp cartridge. Be certain to reset this, since it is used in the display of the lamp timer.

- 1. Press the cursor  $(\blacktriangle \nabla)$  button and align the cursor with [Lamp Timer Reset], then press the SET button. The message display will change to "Lamp Timer Reset."
- 2. While the message is being displayed, select "No" or "Yes" with the cursor  $(\blacktriangleleft \triangleright)$  button, then press the SET button.

The message will change to [Press "SET" to Lamp Timer Reset].

3. While the message is being displayed, press the SET button.

This will reset the lamp timer and set the time to 0.

"SET" to Lamp Timer Res

Note: Items that cannot be specified for each input will be returned to the initial settings.

Note: When the video adjustments have not been returned to the defaults, use the user memory. See  $\rightarrow$  Page E-42 "Saving and Loading" of Video Adjustments."

Note: The projector will no longer start when the lamp timer exceeds 1,100 hours. As a result, it will not be possible to reset the lamp timer through timer operations. Should this situation arise. set to the standby condition and press the SOURCE button and the ASPECT button of the main unit at the same time for at least 5 seconds. When reset, the STATUS indicator will go off.

#### Info.

#### Viewing the Lamp Timer/Resolution and Frequency

This function is used to check the lamp timer (for a check of the lamp cartridge replacement time) and the resolution and frequency at the time of RGB or DVI input.

Try directing the remote control toward the remote control sensor from a close distance and operating it. If there is difficulty in changing settings, the batteries are weak. Replace the batteries with new ones.</li> </ul>	E-11 E-11 - E-11
STATUS indicator lights or flashes	* There might be a fault with the projector.	E-45
POWER/ <sup>ტ</sup> indicator is off while projecting	* Has the LED been set to off?	E-40

## When the STATUS Indicator Is Lit/Flashes

The faults described below are being indicated when the indicators of the projector control panel are lit or flashing.

Indicator Display	Projector Condition	Action to Be Taken	
Off	Normal operation	* It is time to replace the lamp. Replace with a new lamp.	
Lit	Time for lamp replacement	* Is the lamp cover attached properly? If not, attach it properly.	
Flashing at 1-second intervals (0.5 s lit / 0.5 s off)	Cover is open	* The thermal protector has been activated. If the room temperature is high, move the projector to a cool location. If the internal temperature of the projec- tor is high, check the cooling fan ventilation holes and clean them if they are obstructed.	
Flashing once every 4 sec- onds (2 s lit / 2 s off)	Temperature error	<ul> <li>* The thermal protector has been activated. If the room temperature is high move the projector to a cool location. If the internal temperature of the projector is high, check the cooling fan ventilation holes and clean them if they are obstructed.</li> <li>* When the thermal protector is activated and the unit is set to the standby mode and soon thereafter the power is switched ON, the unit may not power up. Should this occur, wait for one minute and then switch it ON again.</li> </ul>	
	Lamp lighting voltage fault	* The lamp lighting voltage fault detection protector has been activated. Wait for at least one minute and switch on the power again. If the unit still does not operate, please contact your store of purchase.	
Flashing once every 8 sec- onds (4 s lit / 4 s off)	Fan fault	* The cooling fan has stopped. Consult your PLUS dealer.	
Flashing once every 12 sec- onds (6 s lit / 6 s off)	Lamp power error	* The lamp does not light. First turn off the main power, then wait at least one minute, then switch on the power again. If the unit still does not operate, consult your dealer.	

#### **Thermal Protector**

When the internal temperature of the projector becomes abnormally high, the STATUS indicator will flash (at an interval of once every 4 seconds).

At the same time, the temperature protector is activated and the projector power may be switched off. Should this occur, proceed with the following actions.

- 1. Switch off the power and disconnect the power plug from the wall outlet.
- Check the following matters and take the required measures.
   When the projector is being used in a location that has a high ambient temperature, install it in a cool location. Check the outflow and intake holes and clean them if they are obstructed.
- 3. Wait about 60 minutes until the temperature of the projector drops. If after having performed the above matters, the problem still has not been solved, consult your PLUS dealer.

### **Replacing the Lamp Cartridge**

After the lamp has been operating for 1000 hours or longer, the STATUS indicator will light and the message "Replace The Lamp" will appear on the screen. Also, when 1,100 hours is exceeded, the warning "Warning! System Shutdown" will be displayed for 10 seconds.

Should this happen, it is time to replace the lamp cartridge. Please specify the following information when ordering a replacement lamp cartridge:

Replacement lamp model HE-3100L Part number: 27-050

### CAUTION

When replacing the lamp cartridge, switch off the power and check that the POWER/d indicator has changed to steady orange. Switch off the power switch of the projector, disconnect the power plug from the outlet, and wait about 60 minutes (for the lamp cartridge to cool) before replacing.

**NOTE:** The projector lamp has its usable life.

The rated lamp life is about 1000 hours. How-

ever, it may become shorter depending on the

(The rated lamp life is the average life of the

lamps produced and tested, under the test con-

Lamp cover

ditions of our company, for a long term.)

conditions of usage.

Wait at least 60 minutes for the lamp cartridge to cool.

- DO NOT TOUCH THE LAMP CARTRIDGE immediately after it has been used. It will be extremely hot.
- Do not remove any screws except for those mentioned in the instructions below.
- Do not touch the lamp. Doing so may shorten the lamp life.
- The lamp may explode if improperly mishandled.
- If lamp has reached the end of its usable life, the lamp bulb may shatter. When this happens, an explosive sound can be heard and pieces of glass may be scattered in the lamp cartridge. Do not touch them as the pieces of glass may cause injury. If this happens, contact your dealer or the store where the projector was purchased.

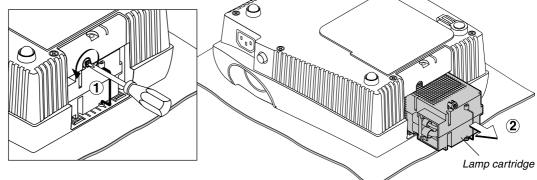

**Preparation:** Unplug the projector. Prepare the new lamp cartridge and a plus-headed screwdriver. Lay a soft cloth sheet underneath the projector with its upside down to prevent scratches.

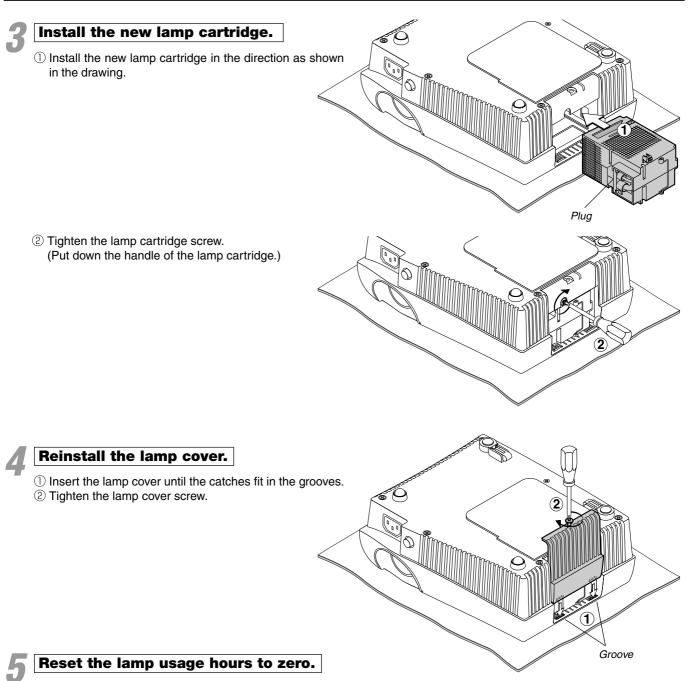

#### Remove the lamp cover.

- ① Loosen the lamp cover screw until it turns freely.
- 2 Remove the lamp cover.

- ① Loosen the lamp cartridge screw until it turns freely.
- ② Hold the handle of the lamp cartridge and then pull out the lamp cartridge.

From the menu, select [Info.]  $\rightarrow$  [Lamp Timer Reset] and then reset the lamp usage hours. See "Resetting the Lamp Timer" on page E-43.

**NOTE:** When the projector lamp has exceeded 1100 hours of operation, the projector will not turn on. This means you cannot reset the lamp usage on the menu. Should this happen, press SOURCE and ASPECT on the projector cabinet for at least of 5 seconds at the same time when the projector is in standby mode. When the lamp usage is reset, the STATUS indicator goes off.

[This completes the lamp replacement.]

#### Attention!

- \* Be certain to disconnect the power plug from the power outlet before cleaning.
- \* Do not spray or otherwise expose the projector, lens, or screen to volatile substances such as insecticides. Doing so could cause them to undergo qualitative changes or the coatings may peel, etc.

#### **Cleaning a Soiled Projector Main Unit**

- \* Wipe with a lint-free, soft, dry cloth. When very dirty, wipe with a cloth that has been moistened with a diluted neutral detergent, then finish with a dry cloth. If a chemically-treated cloth is going to be used, please follow any written warnings.
- \* Do not wipe with thinner, benzene, or other solvents. Doing so could cause them to undergo qualitative changes or the coatings may peel, etc.
- \* When removing the dust of the outflow and intake holes, use the brush attachment on a vacuum cleaner to clean out the dust. Avoid using the vacuum directly without attaching the adapter as well as the use of a nozzle adapter.
- \* Do not scratch or otherwise hit the projector body with your nails or other hard object, since this will cause scratches.

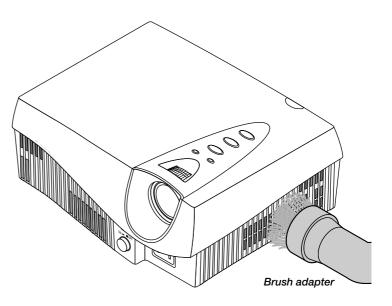

#### **Dirty Lens**

The lens surface has been treated with a special coating. Consult your PLUS dealer for cleaning.

#### **Dust of the Intake and Outflow Holes**

Dust that collects in the intake and outflow holes will obstruct the ventilation and cause the internal temperature to rise which could cause damage. Clean this area carefully. As a guideline, clean at least every 100 hours.

- \* Switch off the power with the ON/STANDBY button and check that the POWER/  $\circ$  indicator has changed to a steadily lit orange, then switch off the main power with the POWER switch of the main unit. Finally, disconnect the power cord.
- \* Clean out the holes from the outside using a vacuum cleaner. Use the brush adapter of the vacuum cleaner to do this. Avoid using the vacuum directly without attaching the adapter as well as the use of a nozzle adapter.

#### **Cleaning the Inside of the Projector**

Cleaning of the inside of the projector is required about once a year. Failure to clean over a long period while dust has collected inside the projector could cause a fire or breakdown. Do not clean the inside of the projector by yourself. Be sure to consult your PLUS dealer.

### **Table of Supported Frequencies**

This projector automatically identifies the input signal from the personal computer and selects the optimum supported resolution from the table below. Note that a manual adjustment may be required depending on the input signal. Please see "Adjusting the Clock Frequency of the Input Signal" and "Adjusting the Phase of the Input Signal" on Page E-35.

Signal	Resolution	Frequ	Frequency		Support	
0		Horizontal(kHz)	Vertical(Hz)	Analog	Digital	
VESA	640 x 350	31.5	70.1	0	_	
	640 x 350	37.9	85.1	0	—	
	720 x 350	31.5	70.0	0	_	
	640 x 400	31.5	70.1	0	—	
	640 x 400	37.9	85.1	0	—	
	720 x 400	31.5	70.0	0	0	
	720 x 400	37.9	85.0	0	_	
	640 x 480	31.5	60.0	0	0	
	640 x 480	37.9	72.8	0	_	
	640 x 480	37.5	75.0	0	_	
	640 x 480	43.3	85.0	0	_	
	800 x 600	35.2	56.3	0	_	
	800 x 600	37.9	60.3	0	0	
	800 x 600	46.9	75.0	0	_	
	800 x 600	48.1	72.2	0	_	
	800 x 600	53.7	85.1	0	_	
	1024 x 768	48.4	60.0	0	0	
	1024 x 768	56.5	70.1	0	_	
	1024 x 768	57.7	72.0	0	_	
	1024 x 768	60.0	75.0	0	_	
	1024 x 768	68.7	85.0	0	_	
NEC(PC9800)	640 x 400	24.8	56.4	0	_	
	640 x 400	31.5	70.1	0	_	
	640 x 480	31.5	60.0	0	_	
	640 x 480	37.5	75.0	0	_	
	800 x 600	37.9	60.3	0	_	
	800 x 600	46.9	75.0	0	_	
	1120 x 750	50.0	60.1	0	_	
	1024 x 768	56.5	70.1	0	_	
	1024 x 768	60.0	75.0	0	_	
Apple Macintosh®	640 x 480	35.0	66.7	0	_	
(MAC 16")	832 x 624	49.7	74.5	0	_	
(MAC 19")	1024 x 768	60.2	74.9	0	_	
(MAC 21")	1152 x 870	68.7	75.1	0	_	
SUN	1152 x 900	61.8	66.0	0	_	
SGI	1024 x 768	49.7	60.4	0	_	
	1152 x 900	71.7	76.1	0	_	

\* Factory presets have been set to the standard signals for the display resolution/frequency, but depending on the personal computer adjustment may be required.

○ : Supported frequencies

- : Unsupported frequencies

 Proper display may not be possible for composite sync signals, sync-on-green sync signals, etc.

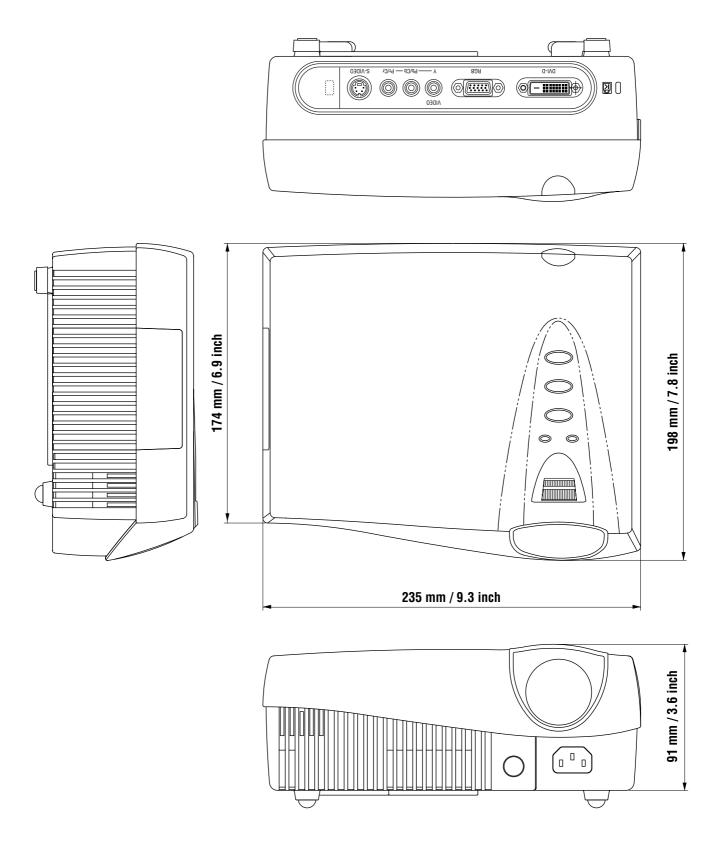

### **Specifications**

Model Name	HE-3200		
Display Method	Single Chip Digital Micromirror Device (DMD™)		
DMD Panel			
	508,800 pixels (848×600)		
Lens	Manual zoom, Manual focus		
20110	F=3.0-3.3 f=21.5 - 25.8mm		
Lamp	130W High Performance Compact Lamp		
Image Size	Min. 32" (Throw distance 1.2m / 3.9 feet : Tele) Max. 200" (Throw distance 6.4m / 20.9 feet : Wide)		
Color Reproduction	Full color, 16.7 million colors simultaneously		
Light Output	450 ANSI lumens (normally white)		
Contrast Ratio	700:1 (Full on/off)		
Scanning Frequency	Horizontal : 15 – 85 kHz		
0 . ,	Vertical : 50 – 85 Hz		
Functions	Zoom (Manual), Focus (Manual), Projection angle, Source select (S-Video/Video/YCbCr/YPbPr/RGB/DVI),		
	Aspect, Standby On/Off, Projection orientation, Digital keystone correction, Brightness, Contrast, Color,		
	Tint, Sharpness, Color temperature, Gamma correction, RGB signal automatic position and phase adjustment		
Digital RGB Input	T.M.D.S-compliant (single link only)		
Input Terminal	DVI-D 24 pin $\times$ 1		
RGB Signal	VGA : 640 $ imes$ 480 Throughput image / Magnified image		
	S-VGA : 800 $ imes$ 600 Throughput image		
	XGA : 1024 $ imes$ 768 Throughput image / Compressed image		
Analog RGB Input	Separate signal system		
Video signal	Analog : 0.7Vp-p / 75Ω		
Sync signal	Separate : TTL Level (Positive / Negative)		
Input Terminal	RGB Mini D-Sub (15 pin)		
RGB Signal	VGA : 640 × 480 Throughput image / Magnified image		
	S-VGA : 800×600 Throughput image		
	XGA : 1024 × 768 Throughput image / Compressed image		
Video Input	Composite, S-Vide, Component (YCbCr)		
Color System	NTSC 3.58, NTSC 4.43, PAL, PAL N, PAL M, PAL60, SECAM		
Video signal	Composite : 1.0Vp-p/75Ω S-Video : Υ (1.0Vp-p/75Ω), C (0.286Vp-p/75Ω)		
	Component : Y-signal (1.0Vp-p / 75 $\Omega$ ), Cb, Cr signal : 0.7Vp-p (75 $\Omega$ )		
Input Terminal	Composite : RCA×1 (Shared with comonent-Y)		
input forminal	S-Video connector : Mini DIN 4 pin		
	Component : RCA×3		
DVT Input	Component (YPbPr)		
Video signal	Y signal : 1.0Vp-p / 75Ω, Pb, Pr signal : 0.7Vp-p / 75Ω		
Input Terminal	RCA × 3 (Shared with YCbCr)		
DVT Input	480p, 576p, 720p, 1080i		
Horizontal Resolution	NTSC : 400 lines or more		
Environment	Operating temperature : 5 – 35°C / 41 – 95°F, 30 – 85% humidity (no-condensing)		
	Storage temperature : -10 - 60°C / 14 - 140°F, 10 - 85% humidity (no-condensing)		
Power Requirement	100 – 240V AC, 50 / 60Hz		
Input Current	2.0A		
Power Consumption	200 W (STANDBY 18W)		
Dimensions	235 (W) $\times$ 91 (H) $\times$ 198 (D) mm (not including protrusion)		
	9.3 (W) $\times$ 3.6 (H) $\times$ 7.8 (D) inch (not including protrusion)		
Weight	Approximately 2.0kg / 4.4 lbs		
Regulations	UL Approved (UL 6500, CSA-E60065)		
	Meets FCC Class B requirements Meets EMC Directive (EN55022, EN55024)		
	Meets Low Voltage Directive (EN60065)		
	CE		

The specifications are subject to change without notice.
