## 2. FRONT PANEL FACILITIES

### SPEAKERS SWITCH

A combination of the power ON/OFF switch and the speaker system selector switch.

POWER OFF . . . The equipment is off.

A . . . . . The speaker systems plugged into the A speaker sockets is in operation.

SPKR OFF . . . . All speaker systems off. Useful for listening through headphones.

B . . . . . The speaker systems plugged into the B speaker sockets is in operation.

C . . . . . The speaker systems plugged into the C speaker sockets is in operation.

A + B . . . . . Both speaker systems A and B are energized.

A + C . . . . . Both speaker systems A and C are energized.

### PHONES JACK

Use this to plug in stereo headphones.

A full selection of high-performance headphones is available from Pioneer.

### BASS & TREBLE CONTROLS

Used for adjusting bass and treble.

Clockwise (counterclockwise) turning of these controls from the FLAT position will boost (diminish) tone. Also, only the left (right) channel can be adjusted by turning the front (rear) part while the other part is being held.

Adjustment of both channels or only the left channel is made by click-stops. For normal listening, set it to the FLAT position.

### FILTER SWITCHES

LOW: Setting this switch to ON will eliminate low noises such as record rumble, hum, or other interference. The switch is normally set to OFF unless the filter is required.

HIGH: Setting this switch to ON will eliminate high noises, such as record scratch, static noise from fluorescent lamps, or other interference. The switch is normally set to OFF unless the filter is required.

Note that the switches are ON when pushed.

### BALANCE CONTROL

This knob is used for adjusting the stereo balance. When the volume of the right channel speaker is smaller, turn the knob clockwise toward RIGHT: when left channel volume is smaller, turn the knob counterclockwise toward LEFT. For normal listening, set it to the NORM position.

### FM MUTING SWITCH

This switch is used to suppress noise between FM stations. In a fringe area, however, this switch should be kept OFF because it may suppress the desired station signal at the same time. Note that this switch is OFF when it is pushed, and ON when released.

### AUDIO MUTING SWITCH

In position ON (switch pushed), the volume will be attenuated by 20dB. Push once again to restore the volume to its former level.

### SIGNAL METER

This meter indicates the optimum tuning point for AM and FM stations. When the needle deflects all the way to the right, the station has been properly tuned in.

### FM TUNING METER

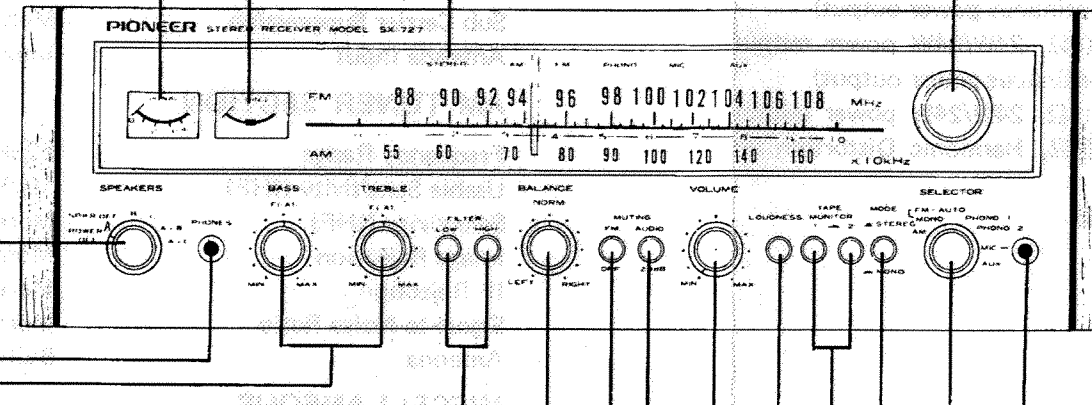

When tuning in an FM mono or FM stereo broadcast, this meter should be used to make the tuning perfect. After the desired station has been properly tuned in with the SIGNAL METER, adjust the TUNING KNOB so that the needle comes to the center.

### FM STEREO INDICATOR

This lamp will light when an FM stereo broadcast is tuned in.

### TUNING KNOB

Used to tune in the desired station.

### VOLUME CONTROL

The volume increases when this knob is turned clockwise.

### LOUDNESS SWITCH

When listening at low volume level, set this switch ON position. This emphasizes the extreme ends of the sound spectrum, giving a more natural sound contour.

### TAPE MONITOR SWITCHES (1 and 2)

These switches are set to ON for monitoring of a recording in progress or playback of recorded tapes with tape decks.

Note that the switches are ON when pushed.

1 This switch is set to ON for using a tape deck plugged into TAPE 1 MON jacks and TAPE 1 REC jacks or TAPE REC/P.B. connector.

2 This switch is set to ON for using a tape deck plugged into TAPE 2 MON jacks and TAPE 2 REC jacks.

NOTE: For phonograph records, or broadcasts, leave these switches in OFF position. If the switches are set to ON, no sound will be heard.

### MIC JACK

Accepts the plug of the microphone. Use a suitable microphone with a 1/4 in. (6mm) standard plug.

### SELECTOR SWITCH

Choose the program source.

AM . . . . . AM reception.

FM MONO . . . . . FM monophonic reception only.

FM AUTO . . . . . FM reception with automatic switching for either stereo or monophonic programs.

PHONO 1 . . . . . For playing records on a turntable plugged into the PHONO 1 jacks.

PHONO 2 . . . . . Same as above, for PHONO 2 jacks.

MIC . . . . . Microphone sound can be reproduced.

AUX . . . . . For playing signals fed to the AUX jacks.

### MODE SWITCH

STEREO . . . . . Normal stereo when the switch is not pushed.

MONO . . . . . Monophonic play with left and right channel input signals mixed and reproduced from both channel speakers.

## 6. PARTS AND PCB LOCATION

## 7. DIAL CORD STRINGING

1. Set the tuning capacitor to maximum capacitance.
2. Tie one end of the string to dial pulley.
3. Wind the string  $\frac{1}{2}$  turns around the tuning pulley.
4. Pull the string around the small pulleys A and B, then wind it 2 turns around the tuning shaft.
5. Lead the string around the small pulleys C and D, then fasten string to the dial pointer.
6. Lead the string around the small pulley E.
7. Finally, tie the end of the string to remaining side of spring on the tuning pulley.
8. Tune receiver to low end. Fasten dial pointer to string so that it indicates low end on dial scale.

## 8. ALIGNMENT PROCEDURE

The following alignments are required only in very rare cases and should never be attempted without the proper test equipment. Also, only non-metallic tools must be used.

### 8-1 REQUIRED INSTRUMENTS

- Sweep generator: Center marker frequencies 10.7MHz, 455kHz
- Oscilloscope:
- AC VTVM
- AM/FM signal generator
- FM multiplex signal generator, preferably with RF output

### 8-2 FM 10.7 MHz ALIGNMENT

8. Set generator frequency and tuning dial to 106MHz.
9. Adjust trimmer capacitor CT4 first, then adjust CT1, CT2, CT3 for maximum reading on VTVM.
10. Repeat these alignments several times until satisfactory reading is obtained.
11. Finally, adjust T1 core for maximum reading on VTVM.

### 8-4 FM MPX DECODER ALIGNMENT

1. Set SELECTOR switch on front panel to FM AUTO.
2. Connect RF output of FM multiplex signal generator to 300 $\Omega$  antenna input.
3. Adjust MPX generator as follows:

Signal Mode	Deviation
L+R	40.5kHz
19kHz (pilot)	7.5kHz
4. Connect AC VTVM to TAPE REC jack on rear panel.
5. Set generator signal mode to L-R (sub), adjust core of T6 (located on FM/AM unit) to obtain maximum reading on VTVM.
6. Set generator signal mode to L. Adjust VR2 (located on FM/AM unit) for minimum crosstalk on R channel TAPE REC output.
7. Set generator signal mode to R. Repeat above adjustment for minimum crosstalk on L channel.

Fig. 1

Fig. 2

### 8-5 MUTING THRESHOLD LEVEL ALIGNMENT

1. Set SELECTOR switch to FM MONO.
2. Turn FM MUTING switch to ON.
3. Connect FM signal generator to 300Ω antenna input.
4. Connect AC VTVM to TAPE REC jack.
5. Set output level of generator to 25dB (20μV), with ±22.5kHz deviation, and 400Hz or 1kHz modulation.
6. Tune receiver accurately to generator frequency.
7. Adjust VR1 on FM/AM unit exactly on the borderline between muting and non-muting.

### 8-6 AM 455kHz ALIGNMENT

1. Set SELECTOR switch on front panel to AM.
2. Connect 455kHz sweep generator to pin 15. Adjust generator output level to 60dB (1mV).
3. Connect vertical oscilloscope input to either L or R of TAPE REC jack.
4. Set tuning dial to high end position.
5. Adjust cores of CF4 and T5 for maximum gain and symmetrical pattern on oscilloscope.

### 8-7 AM TRACKING ALIGNMENT

1. Set SELECTOR switch to AM position.
