## Instruction Manual Manual de Instrucciones Manuel d'Instructions

**PP5000P**

ESPAÑOL

### **WARNING:**

Read and follow all Safety Rules and Operating Instructions before using this product. Failure to do so can result in serious injury. Refer to your original manual for additional Warnings and Operating Instructions.

### **ADVERTENCIA:**

Lea el manual de instrucciones y siga todas las advertencias e instrucciones de seguridad. El no hacerlo puede resultar en lesiones graves. Refiera a su manual original para las Instrucciones de Funcionamiento y las Advertencias adicionales.

### **AVERTISSEMENT:**

Lire le manuel d'instructions et bien respecter tous les avertissements et toutes les instructions de sécurité. Tout défaut de le faire pourrait entraîner des blessures graves. Référez-vous à votre manuel original pour des Avertissements et des Instructions d'Utilisation additionnels.

Poulan PRO  
7349 Statesville Road  
Charlotte, NC 28269

FRANÇAIS

**115261026** Rev. 2 6/15/10 BRW

## IDENTIFICATION OF SAFETY SYMBOLS

**⚠ DANGER:** To prevent electrocution, do not use near electrical wires or power lines. Keep pruner at least 30 feet (10 meters) away from all power lines.

**⚠ DANGER:** Falling objects can cause severe head injury. Wear head protection when operating this unit. Do not stand beneath branch being cut.

**⚠ WARNING:** Avoid kickback which can result in serious injury. Kickback is the backward, upward or sudden forward motion of the guide bar occurring when the chain near the upper tip of the guide bar contacts any object such as a log or branch, or when the wood closes in and pinches the chain in the cut. Contacting a foreign object in the wood can also result in loss of control.

**⚠ WARNING:** Do not operate pruner from a ladder or unstable support. Always cut with both feet on solid ground to prevent being pulled off balance.

**⚠ WARNING:** This unit can be dangerous! Careless or improper use can cause serious injury.

Read the operator's manual before use. Failure to follow instructions could result in serious injury. Save operator's manual.

Wear protective gear. Always use steel-toed safety footwear with non-slip soles; snug-fitting clothing; heavy, long pants, and long sleeves; heavy-duty, non-slip gloves; eye protection marked Z87 such as non-fogging, vented goggles or face screen; an approved safety hard hat; and sound barriers (ear plugs or mufflers) to protect your hearing. Regular users should have hearing checked regularly as engine noise can damage hearing. Always use shoulder strap when operating unit.

## IDENTIFICATION OF SAFETY SYMBOLS

Hazard zone. Keep children, bystanders, and animals a minimum of 50 feet (15 meters) away from the work area. Do not allow other people or animals to be near when starting or operating the pruner.

Carefully plan your pruning operation in advance. Do not start cutting until you have a clear work area, secure footing, and a planned retreat path.

Do not operate a pruner with one hand. Serious injury to the operator, helpers, bystanders or any combination of these persons may result from one-handed operation. A pruner is intended for two-handed use.

## SAFETY RULES

**⚠ WARNING:** When using an electric pruner or any other electric gardening appliance, basic safety precautions must always be followed to reduce the risk of fire, electric shock, and serious injury. Read and follow all instructions.

**⚠ WARNING:** Always disconnect spark plug wire and place wire where it cannot contact spark plug (or disconnect powerhead from power source) to prevent accidental starting when setting up, transporting, adjusting or making repairs except carburetor adjustments.

Because a pruner is a high-speed wood-cutting tool, special safety precautions must be observed to reduce the risk of accidents. Careless or improper use of this tool can cause serious or even fatal injury.

### PLAN AHEAD

- Read this manual carefully until you completely understand and can follow all safety rules, precautions, and operating instructions before attempting to use the unit.
- Restrict the use of your pruner to adult users who understand and can follow safety rules, precautions, and operating instructions found on the unit and in this manual.

INSTRUCTION  
MANUAL

SAFETY INFORMATION  
ON THE UNIT

- Keep all parts of your body away from the chain when the engine is running.
- Do not handle or operate a pruner when you are fatigued, ill, or upset, or if you have taken alcohol, drugs, or medication. You must be in good physical condition and mentally alert. If you have any condition that might be aggravated by strenuous work, check with doctor before operating a pruner.

### FUEL SAFETY (for gas powerheads)

- Mix and pour fuel outdoors.
- Keep away from sparks or flames.
- Use a container approved for fuel.
- Do not smoke or allow smoking near fuel or the powerhead.
- Avoid spilling fuel or oil. Wipe up all fuel spills before starting the powerhead.
- Move at least 10 feet (3 meters) away from fueling site before starting powerhead engine.
- Stop engine and allow to cool before removing fuel cap.
- Remove fuel cap slowly.

### ELECTRICAL SAFETY (for electric powerheads)

**⚠ WARNING:** Avoid a dangerous environment. To reduce the risk of electrical shock, do not use in rain, in damp or wet locations, or around swimming pools, hot tubs, etc. Do not expose to snow, rain, or water to avoid the possibility of electrical shock. Do not use on wet surfaces. Do not handle extension cord plug or unit with wet hands.

- Use only a voltage supply as shown on the nameplate of the unit.
- Avoid dangerous situations. Do not use in presence of flammable liquids or gases to avoid creating a fire or explosion and/or causing damage to unit.
- Avoid dangerous environments. Do not use in unventilated areas or where dust or explosive vapors can build up.
- To reduce the risk of electric shock, the powerhead may have a polarized plug (one blade is wider than the other); if so, it will require the use of a polarized extension cord. The appliance plug will fit into a polarized extension cord only one way. If the plug does not fit fully into the extension cord, reverse the plug. If the plug still does not fit, obtain a correct polarized extension cord. A polarized extension cord will require the use of a polarized wall outlet. This plug will fit into the polarized wall outlet only one way. If plug does not fit fully into the wall outlet, reverse the plug. If it still does not fit, contact a qualified electrician to install the proper wall outlet. Do not change the equipment plug, extension cord receptacle, or extension cord plug in any way.
- To reduce risk of electrical shock, use extension cords specifically marked as suitable for outdoor appliances having electrical rating not less than the rating of unit. Cord must be marked with suffix "W-A" (in Canada "W"). Make sure your extension cord is in good condition. Inspect extension cord before use and replace if damaged. Do not use a damaged cord. Cord insulation must be intact with no cracks or deterioration. Plug connectors must be undamaged. The extension cord used to reach the power source must be heavy enough to carry current from the power source the full length of the extension cord to the unit. An undersized extension cord will cause a drop in line voltage resulting in loss of power and overheating. If in doubt, use the next heavier gauge. The lower the gauge number, the heavier the cord.
- Do not use multiple cords.
- Do not abuse cord. Never carry the unit by the extension cord or yank extension cord to disconnect unit. To unplug, grasp the plug, not the cord. Do not use cord as a handle, close a door on cord, or pull cord around sharp edges or corners. Do not expose cords to heat, oil, or water.
- Keep the extension cord clear of operator and obstacles at all times.
- Tie cord to cord retainer and connect to recessed plug as shown in this manual to prevent damage to unit and/or extension cord and to reduce the possibility of the extension cord disconnecting from the unit during operation.
- Do not attempt to repair unit. Inspect the insulation and connectors on the powerhead and extension cord before each use. If there is any damage, do not use until damage is repaired by your authorized service dealer.
- Do not use the powerhead if the switch does not turn the unit on and off properly.

Have the unit repaired by your authorized service dealer.

- Do not use with damaged cord or plug. If powerhead is not working as it should, has been dropped, damaged, left outdoors, or dropped into water, return it to your authorized service dealer for repair.
- Avoid unintentional starting of the unit. Never carry unit with your finger on the switch. Be sure the switch is in the off position and never touch the switch when connecting extension cord.
- Unplug the unit from the power source when not in use, before servicing, and when changing accessories and/or attachments.
- Avoid any body contact with any grounded conductor, such as metal fences, or pipes, to avoid the possibility of electric shock.
- Ground Fault Circuit Interrupter (GFCI) protection should be provided on the circuit or outlet to be used for the powerhead. Receptacles are available having built-in GFCI protection and may be used for this measure of safety.

#### UNIT/MAINTENANCE SAFETY

**WARNING:** Disconnect powerhead spark plug (or disconnect powerhead from power source) before performing maintenance.

- Inspect entire unit before each use. Replace damaged parts. Check for fuel leaks. Make sure all fasteners are in place and securely fastened.
- Maintain unit according to recommended procedures.
- Use only recommended Poulan PRO parts and accessories.
- Be sure chain stops moving when engine idles (see CARBURETOR ADJUSTMENTS section of powerhead manual).
- Keep others away when making carburetor adjustments.
- Never start the unit with the clutch housing removed. The clutch can fly off and cause serious injury.
- Keep the handles dry, clean, and free of oil or fuel mixture.
- Keep fuel and oil caps, screws, and fasteners securely tightened.
- Have all maintenance and service not explained in this manual performed by an authorized service dealer.

#### OPERATE YOUR PRUNER SAFELY

- Operate the pruner only in a well-ventilated outdoor area.
- Do not use a pruner to cut down trees or any portion of the tree trunk.
- Only use for pruning limbs or branches overhead not greater than 6 inches (15 cm) in diameter.
- Do not cut small brush and saplings with the pruner. Slender matter may catch in the chain and be whipped toward you, pulling you off balance.
- Make sure the chain will not make contact with any object while starting the engine. Never try to start the unit when the guide bar is in a cut.

- Do not put pressure on the pruner at the end of the cut. Applying pressure can cause you to lose control when the cut is completed.
- Do not run the unit at high speed when not pruning.
- If you strike or become entangled with a foreign object, stop the engine immediately and check for damage. Have any damage repaired by an authorized service dealer before attempting further operations.
- Do not operate a pruner that is damaged, improperly adjusted, or not completely and securely assembled. Always replace bar and chain immediately if it becomes damaged, broken or is otherwise removed.
- Always stop the unit when work is delayed or when walking from one cutting location to another. Stop the engine before setting the unit down.
- Use only in daylight or good artificial light.
- Use only for jobs explained in this manual.

## KICKBACK

**⚠ WARNING:** Avoid kickback which can result in serious injury. **Kickback** is the backward, upward or sudden forward motion of the guide bar occurring when the chain near the upper tip of the guide bar contacts any object such as a log or branch, or when the wood closes in and pinches the chain in the cut. Contacting a foreign object in the wood can also result in loss of control.

- **Rotational Kickback** can occur when the moving chain contacts an object at the upper tip of the guide bar. This contact can cause the chain to dig into the object, which stops the chain for an instant. The result is a lightning fast, reverse reaction which kicks the guide bar up and back toward the operator.
- **Pinch-Kickback** can occur when the wood closes in and pinches the moving chain in the cut along the top of the guide bar and the chain is suddenly stopped. This sudden stopping of the chain results in a reversal of the chain force used to cut wood and causes the pruner to move in the opposite direction of the chain rotation. The pruner is driven straight back toward the operator.
- **Pull-in** can occur when the moving chain contacts a foreign object in the wood in the cut along the bottom of the guide bar and the chain is suddenly stopped. This sudden stopping pulls the pruner forward and away from the operator and could easily cause the operator to lose control of the pruner.

## REDUCE THE CHANCE OF KICKBACK

- Recognize that kickback can happen. With a basic understanding of kickback, you can reduce the element of surprise which contributes to accidents.
- Never let the moving chain contact any object at the tip of the guide bar.
- Keep the working area free from obstructions such as other trees, branches, rocks, stumps, etc. Eliminate or avoid any obstruction that your chain could hit while you are cutting. When cutting a branch, do

not let the guide bar contact branch or other objects around it.

- Keep your chain sharp and properly tensioned. A loose or dull chain can increase the chance of kickback occurring. Follow manufacturer's chain sharpening and maintenance instructions. Check tension at regular intervals with the engine stopped, never with the engine running. Make sure the bar clamp nut is securely tightened after tensioning the chain.
- Begin and continue cutting at full speed. If the chain is moving at a slower speed, there is greater chance of kickback occurring.
- Cut one branch at a time.
- Use extreme caution when re-entering a previous cut.
- Do not attempt cuts starting with the tip of the bar (plunge cuts).
- Watch for shifting of wood or other forces that could close a cut and pinch or fall into chain.
- Use the Reduced-Kickback Guide Bar and Low-Kickback Chain specified for your unit.

## MAINTAIN CONTROL

- Keep a good, firm grip on the pruner with both hands when the engine is running and don't let go. A firm grip will help you reduce kickback and maintain control. Keep the fingers of your left hand encircling and your left thumb under the assist handle. Keep your right hand completely around the throttle handle whether you are right handed or left handed.
- Stand with your weight evenly balanced on both feet.
- Stand slightly to the left side of the pruner to keep your body from being in a direct line with the cutting chain.

## KICKBACK SAFETY FEATURES

The following features are included on your pruner to help reduce the hazard of kickback; however, such features will not totally eliminate this danger. As a pruner user, do not rely only on safety devices. You must follow all safety precautions, instructions, and maintenance in this manual to help avoid kickback and other forces which can result in serious injury.

- Reduced-Kickback Guide Bar, designed with a small radius tip which reduces the size of the kickback danger zone on the bar tip.

Reduced Kickback Symmetrical Guide Bar

Symmetrical Guide Bar

- Low-Kickback Chain, designed with a contoured depth gauge and guard link which deflect kickback force and allow wood to gradually ride into the cutter.

**TRANSPORTING AND STORAGE**

- Do not grasp or hold exposed blade.
- Stop powerhead before leaving work area.
- Allow powerhead and gearbox to cool before storing or transporting it in a vehicle.
- Store unit and fuel in area where fuel vapors cannot reach sparks or open flames from water heaters, electric motors or switches, furnaces, etc.
- Store attachment so blade cannot accidentally cause injury.
- Store attachment indoors, out of reach of children.

If situations occur which are not covered in this manual, use care and good judgment. If you need assistance, call 1-800-554-6723.

**SPECIAL NOTICE:** Exposure to vibrations through prolonged use of gasoline powered hand tools could cause blood vessel or nerve damage in the fingers, hands, and joints of people prone to circulation disorders or abnormal swellings. Prolonged use in cold weather has been linked to blood vessel damage in otherwise healthy people. If symptoms occur such as numbness, pain, loss of strength, change in skin color or texture, or loss of feeling in the fingers, hands, or joints, discontinue the use of this tool and seek medical attention. An anti-vibration system does not guarantee the avoidance of these problems. Users who operate power tools on a continual and regular basis must monitor closely their physical condition and the condition of this unit.

**SAVE THESE INSTRUCTIONS**

**ASSEMBLY**

**WARNING:** If received assembled, repeat all steps to ensure your unit is properly assembled and all fasteners are secure. Examine parts for damage. Do not use damaged parts.

**NOTE:** If you need assistance or find parts missing or damaged, call 1-800-554-6723.

**TOOLS REQUIRED**

- Hex wrench (provided)

**INSTALLING PRUNER ATTACHMENT**

**CAUTION:** When removing or installing attachments, place the unit on a flat surface for stability.

1. Loosen the coupler by turning the knob counterclockwise.

2. Remove the shaft cap from the pruner attachment (if present).
3. Position locking/release button of attachment into guide recess of coupler.
4. Push the attachment into the coupler until the locking/release button snaps into the primary hole.
5. Before using the unit, tighten the knob securely by turning clockwise.

**WARNING:** Make sure the locking/release button is locked in the primary hole and the knob is securely tightened before operating the unit. Using the wrong hole could lead to serious injury or damage to the unit.

## SHOULDER STRAP ASSEMBLY

**⚠ WARNING:** Proper shoulder strap and handle adjustments are required before use. The shoulder strap clamp must be installed as shown above the assist handle on the upper shaft (powerhead end of unit).

**NOTE:** The lower shoulder strap clamp has two spacer tabs attached. These tabs are provided to adapt this attachment for use with powerheads that have a 1" diameter upper shaft (the shoulder strap clamp will not tighten down securely on the 1" diameter upper shaft without using these spacer tabs). The tabs must be broken off completely before use and placed over the screw holes on the lower shoulder strap clamp. These tabs are not needed for powerheads with a 7/8" upper shaft.

### LOWER SHOULDER STRAP CLAMP

1. Place the upper shoulder strap clamp over the upper shaft above the handlebar.
2. Position the lower shoulder strap clamp under the upper shaft and align the upper and lower clamp screw holes (use spacer tabs between upper and lower clamps if necessary to secure clamp, i.e. for 1" diameter upper shaft).

3. Insert two screws into the screw holes.
  4. Secure shoulder strap clamp by tightening screws with the hex wrench.
  5. Try on shoulder strap and adjust for fit and balance before starting the engine or beginning a cutting operation.
  6. Insert your right arm and head through the shoulder strap and allow it to rest on your left shoulder. Make sure the danger sign is on your back and the hook is to the right side of your waist.
- NOTE:** A one-half twist is built in the shoulder strap to allow the strap to rest flat on the shoulder.
7. Adjust the strap, allowing the hook to be about 3 - 6 inches (8 - 15 cm) below the waist.
  8. Fasten the strap hook to the upper clamp and lift the tool to the operating position.

## ADJUSTING THE ASSIST HANDLE

**⚠ WARNING:** When adjusting the assist handle, be sure it remains directly above the coupler on the engine end shaft to ensure proper balancing of unit.

# OPERATION

## KNOW YOUR PRUNER ATTACHMENT

READ THIS INSTRUCTION MANUAL AND SAFETY RULES BEFORE OPERATING YOUR PRUNER ATTACHMENT. Compare the illustrations with your attachment to familiarize yourself with the location of the various controls and adjustments. Save this manual for future reference.

### PRUNER

The PRUNER is designed for removal of limbs and branches overhead not greater than 6 inches (15 cm) in diameter.

### CHAIN TENSION

It is normal for a new chain to stretch during first 15 minutes of operation. You should check your chain tension frequently. See CHAIN TENSION in the SERVICE AND ADJUSTMENTS section.

### OPERATING THE COUPLER

Your powerhead is equipped with a coupler which enables optional attachments to be installed. The optional attachments are:

	MODEL:
Edger .....	PP1000E
Cultivator .....	PP2000T
Blower .....	PP3000B
Pruner .....	PP5500P
Brushcutter* .....	PP4000C

\*not designed for use with electric powerheads

**WARNING:** Always disconnect powerhead spark plug (or disconnect powerhead from power source) before removing or installing attachments.

### REMOVING PRUNER ATTACHMENT (OR OTHER OPTIONAL ATTACHMENTS)

**CAUTION:** When removing or installing attachments, place the powerhead and attachment on a flat surface for stability.

1. Loosen the coupler by turning the knob counterclockwise.

2. Press and hold the locking/release button.

3. While securely holding the upper shaft, pull the attachment straight out of the coupler.

### INSTALLING OPTIONAL ATTACHMENTS

1. Remove the shaft cap from the attachment (if present) and discard.
2. Position locking/release button of attachment into guide recess of upper shaft coupler.
3. Push the attachment into the coupler until the locking/release button snaps into the primary hole.
4. Before using the unit, tighten the knob securely by turning clockwise.

**⚠ WARNING:** Make sure the locking/release button is locked in the primary hole and the knob is securely tightened before operating the unit. Using the wrong hole could lead to serious injury or damage to the unit.

### BAR AND CHAIN LUBRICATION

The bar and chain require lubrication. The chain oiler provides continuous lubrication to the chain and guide bar. Be sure to fill the bar oil tank before use (Capacity = 4.6 fl. oz.). Lack of oil will quickly ruin the bar and chain. Too little oil will cause overheating shown by smoke coming from the chain and/or discoloration of the bar. The oil output is automatically metered during operation.

Genuine Poulan or Poulan PRO bar and chain oil is recommended to protect your unit against excessive wear from heat and friction. Poulan or Poulan PRO oil resists high temperature thinning. If Poulan or Poulan PRO bar and chain oil is not available, use a good grade SAE 30 oil.

- Never use waste oil for bar and chain lubrication.
- Always stop the engine before removing the oil cap.

### INSTALLING ATTACHMENT HANGER

An attachment hanger is provided for storage when attachment is not in use.

To install hanger on attachment:

1. Remove the shaft cap from the attachment (if present) and discard.
2. Press and hold the locking/release button.
3. Push hanger onto the attachment until the locking/release button snaps into the hole.

### OPERATING POSITION

ALWAYS WEAR:

**⚠ DANGER:** Do not extend arms above shoulders while pruning. Do not stand beneath branch being cut.

**⚠ WARNING:** Always wear head, eye, hearing, foot and body protection to reduce the risk of injury when operating this unit. When operating unit, clip shoulder strap onto clamp, stand as shown and check for the following:

- Extend your left arm and hold assist handle with your left hand.
- Hold throttle grip with your right hand with finger on throttle trigger.
- Keep engine end below waist level.
- Keep shoulder strap pad centered on your left shoulder and danger sign centered on your back.
- Maintain full weight of tool on your left shoulder.

### PRUNING

**⚠ WARNING:** Be alert for and guard against kickback. Do not allow the moving chain to contact any other branches or objects at the nose of the guide bar when pruning. Allowing such contact can result in serious injury.

### IMPORTANT POINTS

- Work slowly, keeping both hands firmly gripped on the pruner. Maintain secure footing and balance.
- Plan cut carefully. Check direction branch will fall.
- Watch out for springpoles. Springpoles are small size limbs which can catch the chain and whip toward you or pull you off balance. Use extreme caution when cutting small size limbs or slender material.
- Watch out for branches immediately behind the branch being pruned. If the chain hits the rear branch, damage to the unit may occur.
- Be alert for springback. Watch out for branches that are bent or under pressure. Avoid being struck by the branch or the pruner when the tension in the wood fibers is released.
- Keep a clear work area. Frequently clear branches out of the way to avoid tripping over them.
- Long branches should be removed in several pieces.

### PRUNING TECHNIQUE

When ready to cut, accelerate to full throttle and apply a light cutting pressure. DO NOT use back and forth sawing action.

**NOTE:** When making the second and third cuts, rest the foot of the pruner against the tree limb that is being cut to prevent whipping of the branch.

1. Make the first cut 6 inches from the tree trunk on the bottom of the limb. Use top of guide bar to make this cut. Cut 1/3 through the diameter of the limb.

2. Next, move 2 - 4 inches farther out on the limb and make a second cut **all the way** through the limb.
3. Then, make a final cut leaving a 1 - 2 inch collar from the trunk of the tree to avoid damage to the tree.

## MAINTENANCE

**WARNING:** Always stop unit and disconnect spark plug wire (or disconnect powerhead from power source) before performing maintenance.

### CHECK FOR DAMAGED OR WORN PARTS

Contact an authorized service dealer for replacement of damaged or worn parts.

- Oil tank - Discontinue use of pruner attachment if oil tank shows signs of damage or leaks.

### CHECK FOR LOOSE FASTENERS AND PARTS

- Bar clamp nut
- Fasteners

### INSPECT AND CLEAN UNIT AND DECALS

- After each use, inspect complete unit for loose or damaged parts. Clean the unit and decals using a damp cloth with a mild detergent.
- Wipe off unit with a clean dry cloth.

### CHECK CHAIN TENSION

**WARNING:** Wear protective gloves when handling chain. The chain is sharp and can cut you even when it is not moving. Make chain adjustments with lower end supported. Chain tension is very important. Chains stretch during use. This is especially true during the first few times you use your pruner. Always check chain tension each time you use and refuel your unit.

1. Use a screwdriver to move chain around guide bar to ensure kinks do not exist. The chain should rotate freely.

Chain Adjustment Tool

2. Loosen bar clamp nut until it is finger tight against the bar clamp.

3. Turn adjusting screw clockwise until chain solidly contacts bottom of guide bar rail. Then, turn adjusting screw an additional 1/4 turn.

Adjusting Screw - 1/4 Turn

4. Using a screwdriver, roll chain around guide bar to ensure all links are in bar groove.
5. Lift up tip of guide bar to check for sag. Release tip of guide bar, then turn adjusting screw 1/4 turn clockwise. Repeat until sag does not exist.
6. While lifting tip of guide bar, tighten bar clamp nut securely with a wrench.

7. Use a screwdriver to move chain around guide bar.
8. If chain does not rotate, it is too tight. Slightly loosen bar clamp nut and loosen chain by turning the adjusting screw 1/4 turn counterclockwise. Retighten bar clamp nut.
9. If chain is too loose, it will sag below the guide bar and needs to be tightened following above procedure.

**WARNING:** DO NOT operate the pruner if the chain is loose. If the pruner is operated with a loose chain, the chain could jump off the guide bar and result in serious injury.

### CHECK CHAIN SHARPNESS

A sharp chain makes wood chips. A dull chain makes a sawdust powder and cuts slowly. See CHAIN SHARPENING in the SERVICE AND ADJUSTMENTS section.

### BAR MAINTENANCE

If your pruner cuts to one side, has to be forced through the cut, or been run with an improper amount of bar lubrication it may be necessary to service your bar. A worn bar will damage your chain and make cutting difficult. After each use, ensure ON/STOP switch is in the STOP position, then clean all sawdust from the guide bar and sprocket hole. To maintain guide bar:

- Move ON/STOP switch to the STOP position and disconnect spark plug (or disconnect powerhead from power source).

- Loosen and remove bar clamp nut and chain brake. Remove bar and chain from pruner.
- Clean the oil holes and bar groove after each 5 hours of operation.

Remove Sawdust From Guide Bar Groove

- Burring of guide bar rails is a normal process of rail wear. Remove these burrs with a flat file.
- When rail top is uneven, use a flat file to restore square edges and sides.

Worn Groove

Correct Groove

Replace guide bar when the groove is worn, the guide bar is bent or cracked, or when excess heating or burring of the rails occurs. If replacement is necessary, use only the guide bar specified for your pruner in the repair parts list.

### LUBRICATION

- See GUIDE BAR AND CHAIN OIL under the OPERATION section.

## SERVICE AND ADJUSTMENTS

**WARNING:** Always stop unit and disconnect spark plug wire (or disconnect powerhead from power source) before performing maintenance, service, or adjustments except for carburetor adjustments.

### CHAIN SHARPENING

**WARNING:** Improper chain sharpening techniques and/or depth gauge maintenance will increase the chance of kickback which can result in serious injury.

**WARNING:** Wear protective gloves when handling chain. The chain is sharp and can cut you even when it is not moving. Conditions which indicate the need for chain sharpening:

- Reduction in size of wood chips. The size of the wood chip will decrease as the chain gets duller until it becomes more like a powder than a chip. Note that dead or rotted wood will not produce a good chip.

- Saw cuts to one side or at an angle.
- Saw has to be forced through the cut.

### Tools required:

- 3/16 inch (4,5 mm) diameter round file and file holder
- Flat file
- Depth gauge tool

### TO SHARPEN CHAIN:

1. Move ON/STOP switch to the STOP position and disconnect spark plug (or disconnect powerhead from power source).
2. Check chain for proper tension. Adjust chain tension if necessary. See CHECK CHAIN TENSION section.
3. Sharpen cutters.

- To sharpen the cutters, position the file holder level (90°) so that it rests on the top edges of the cutter and depth gauge.

**NOTE:** The chain has both left and right hand cutters.

- Align the 30° file holder marks parallel with the bar and to the center of the chain.

- Sharpen cutters on one side of the chain first. File from the inside of each cutter to the outside. Then, turn the chain saw around and repeat the process for the other side of the chain.
- File on the forward stroke only. Use 2 or 3 strokes per cutting edge.
- Keep all cutters the same length when filing.
- File enough to remove any damage to cutting edges (side plate and top plate of cutter).

- File chain to meet the specifications as shown.

Right

Wrong

**WARNING:** Maintain the proper hook angle according to the manufacturer's specifications for the chain you are using. Improper hook angle will increase the chance of kickback which can result in serious injury.

- Place gauge tool on cutter.
- If the depth gauge is higher than the depth gauge tool, file it level to the top of the depth gauge tool.
- Maintain rounded front corner of depth gauge with a flat file.

**NOTE:** The very top of the depth gauge should be flat with the front half rounded off with a flat file.

If you require further assistance or are unsure about performing this procedure, contact your authorized service dealer or call our customer assistance help line at 1-800-554-6723.

### CHAIN REPLACEMENT

**WARNING:** Wear protective gloves when handling chain. The chain is sharp and can cut you even when it is not moving.

It is normal for a new chain to stretch during the first 15 minutes of operation. You should recheck your chain tension frequently and adjust the chain tension as required. See CHAIN TENSION section. Replace the old chain when it becomes worn or damaged. Use only the Low-Kickback replacement chain specified in the repair parts list.

#### TO REPLACE CHAIN:

- Move ON/STOP switch to the STOP position and disconnect spark plug (or disconnect powerhead from power source).
- Remove bar clamp nut.
- Remove bar clamp.
- Turn adjusting screw by hand counterclockwise until adjusting pin just touches the stop.
- Slide guide bar behind sprocket until guide bar stops against sprocket.
- Remove the old chain.
- Carefully remove new chain from package. Hold chain with the drive links as shown.

8. Place chain over sprocket, fitting the drive links in the sprocket.
9. Fit bottom of drive links between the teeth in the sprocket in the nose of the guide bar.
10. Fit chain drive links into bar groove.

11. Pull guide bar forward until chain is snug in guide bar groove. Ensure all drive links are in the bar groove.
12. Now, install bar clamp making sure the adjusting pin is positioned in the lower hole in the guide bar.

13. Install bar clamp nut and finger tighten only. Do not tighten any further at this point. Proceed to the CHAIN ADJUSTMENT section.

### CHAIN ADJUSTMENT

See CHECK CHAIN TENSION in MAINTENANCE section.

### USER REPLACEABLE SERVICE PARTS

Use only recommended user replaceable service parts as listed below:

REPLACEMENT PART	PART NUMBER
Bar	530044908
Chain	952051549
Hex Nut	530015917
Oil Cap	530053072
Bar Adjusting Screw/Pin Kit	530069611

## STORAGE

**WARNING:** Perform the following steps after each use:

- Allow attachment to cool before storing or transporting.
- Store attachment with all guards in place. Position attachment so that any sharp object cannot accidentally cause injury.
- Store the attachment in a dry, well ventilated area out of the reach of children.

### SEASONAL STORAGE

Prepare attachment for storage at end of season or if it will not be used for 30 days or more.

If your pruner attachment is to be stored for a period of time:

- Clean the entire attachment.
- Lightly oil external metal surfaces and guide bar.
- Oil the chain and wrap it in heavy paper or cloth.
- Check entire attachment for loose screws or nuts. Replace any damaged, worn or broken parts.
- At the beginning of the next season, use only fresh fuel having the proper gasoline to oil ratio.

## LIMITED WARRANTY

**Poulan PRO**, a division of Husqvarna Consumer Outdoor Products N.A., Inc., warrants to the original consumer purchaser that each new **Poulan PRO** brand gasoline tool or attachment is free from defects in material and workmanship and agrees to repair or replace under this warranty any defective gasoline product or attachment as follows from the original date of purchase.

**2 YEARS** - Parts and Labor, when used for household purposes.

**90 DAYS** - Parts and Labor, when used for commercial, professional, or income producing purposes.

**30 DAYS** - Parts and Labor, if used for rental purposes.

This warranty is not transferable and does not cover damage or liability caused by improper handling, improper maintenance or alteration, or the use of accessories and/or attachments not specifically recommended by **Poulan PRO** for this tool. This warranty does not cover bars, chains or parts that will wear and require replacement with reasonable use during the warranty period. This warranty does not cover pre-delivery setup or normal adjustments explained in the instruction manual. This warranty does not cover transportation costs.

In the event you have a claim under this warranty, you must return the product to an authorized service dealer.

Should you have any unanswered questions concerning this warranty, please contact:

**Poulan PRO**, a division of Husqvarna  
Consumer Outdoor Products N.A., Inc.  
7349 Statesville Road  
Charlotte, NC 28269  
1-800-554-6723

In Canada, contact:

**Poulan PRO**

850 Matheson Blvd. West  
Mississauga, Ontario L5V 0B4

Giving the model number, serial number and date of purchase of your product and the name and address of the authorized dealer from whom it was purchased.

THIS WARRANTY GIVES YOU SPECIFIC LEGAL RIGHTS, AND YOU MAY HAVE OTHER RIGHTS WHICH VARY FROM STATE TO STATE.

NO CLAIMS FOR CONSEQUENTIAL OR OTHER DAMAGES WILL BE ALLOWED, AND THERE ARE NO OTHER EXPRESS WARRANTIES EXCEPT THOSE EXPRESSLY STIPULATED HEREIN.

SOME STATES DO NOT ALLOW LIMITATIONS ON HOW LONG AN IMPLIED WARRANTY LASTS OR THE EXCLUSION OR LIMITATIONS OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE LIMITATIONS OR EXCLUSION MAY NOT APPLY TO YOU.

This is a limited warranty within the meaning of that term as defined in the Magnuson-Moss Act of 1975.

The policy of **Poulan PRO** is to continuously improve its products. Therefore, **Poulan PRO** reserves the right to change, modify, or discontinue models, designs, specifications, and accessories of all products at any time without notice or obligation to any purchaser.
