

FOR USE AS AN EXHAUST FILTER

The 425T uses two distinct media layers sewn and welded together to form the cube. The first media layer is a 1.5" white/green/white triple 45/15/6 denier polyester media. This polyester media is treated on the inside with a special tackifier to help hold the paint particles to the media as they enter the filter. The second media layer is a tightly needed 1/4" 6 denier polyester media. This layer prevents the fine particles from exiting the filter.

Cube filters have a distinct advantage over flat pads (more surface area). An increase in surface area increases the amount of paint that can be captured in a given area and reduces the restriction to airflow. Cube filters are an ideal choice as a secondary level of protection against overspray. This second layer of defense aids in decreasing maintenance on exhaust equipment, reducing fire hazards due to exhaust buildup and decreasing the amount of overspray in the environment.

cubes are available with 1, 2, or 3 pockets. Each pocket further increases the paint holding capacity. There is also a choice of self-sealing headers or 7/8" metal headers.

Each media pack is welded around a 9 gauge wire support frame. The self supportive media is overlapping the frame by 1/2", allowing the excess media to work as a gasket when the filter is installed.
