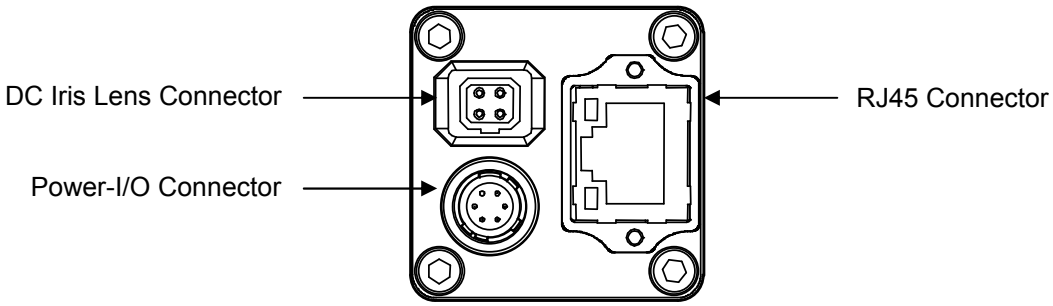
User's Guide

RICOH COMPANY, LTD.

RICOH

Table of Contents

1 Connector Specifications



1.1 RJ45 Connector

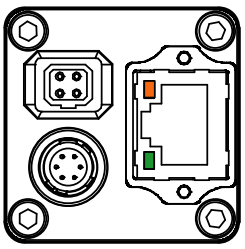
This product is NOT a PoE type. Apply power (+10.8 to +26.4Vdc) ONLY through the I/O connector.

Pin Assignment:

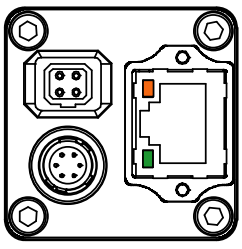
Pin No.	Signal Name
1	TA+
2	TA-
3	TB+
4	TC+
5	TC-
6	TB-
7	TD+
8	TD-

LED Information:

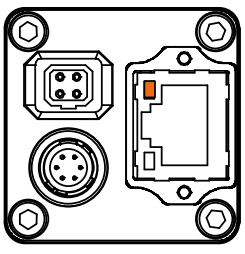
Green LED	Yellow LED	Status
Green Light ON	Orange Light ON	Power ON
Green Light ON	Orange Light Blinking	1Gb Transferring
Light OFF	Orange Light Blinking	100 Mb Transferring



The camera is powered-on



Green light: ON
Yellow light: Blinking
1 Gb Transferring



Green light: OFF
Yellow light: Blinking
100 Mb Transferring

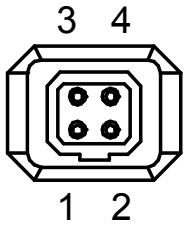
Please use a 1Gb supported NIC, HUB and LAN cable. Check that the NIC and HUB being used is "1Gb transferring".
Damaging or mishandling the CAT5e cable may cause the transferring speed to change from 1Gb to 100Mb. If this happens, please replace the CAT5e cable.

1.2 DC Iris Lens Connector

- M1951 (EMUDEN) or equivalent.

Pin Assignment

Pin No.	Signal Name
1	DAMP-
2	DAMP+
3	DRIVE+
4	DRIVE-

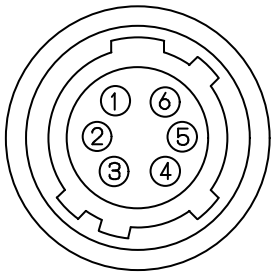


1.3 Power-I/O Connector

- HR10A-7R-6PB（Hirose）or equivalent
- This connector is for the power supply (12Vdc) and input /output signals.
- Use HR10A-7P-6S (Hirose) or equivalent for the cable side.

Pin Assignment

Pin No.	Signal Name	IN / OUT	Voltage
1	GND	IN	0V
2	I/O-1	OUT	+3.3V LVTTL
3	I/O-2	OUT	+3.3V LVTTL
4	TRG_In-	IN	Smaller than 1.0V (Opt. Isolated -)
5	TRG_In+	IN	+3.0 to +26.4V (Opt. Isolated +)
6	POWER IN	IN	+10.8 to +26.4 Vdc



- Output signals can be assigned through the camera setting communication. (Device Code = 00H, Command = F0H and F1H)

IO Signal Patterns for Pin No.2 (I/O-1) and Pin No.3 (I/O-2)

Command No.				HR10A-7R-6PB (Hirose)
F0H[3..0]	F1[3]	F0H[7..4]	F1[4]	I/O-1 (Pin No.2) / I/O-2 (Pin No.3)
For I/O-1 (Pin No. 2)		For I/O-2 (Pin No.3)		
0H (initial setting)	-	0H	-	FrameTriggerWait (initial setting for I/O-1)
1H	Set Value	1H	Set Value	UserOutput
2H	-	2H (initial setting)		ExposureActive (initial setting for I/O-2)
3H	-	3H	-	TriggerAuxiliary
4H	-	4H		TriggerInternal
5H	-	5H		SensorReadOut
6H	-	6H		StrobeSignal
7H-FH	-	7H-FH	-	For Test Use Only

Note: I/O-1 can be assigned only by F0H[3..0] and F1[3], and I/O-2 can be assigned only by F0H[7..4] and F1[4].

1) FrameTriggerWait

The user can check the camera condition (camera exposure and image output processing by the trigger signal with this FrameTriggerWait signal).
This signal is LOW for the period from the trigger input signal to the image output.

a) High status (3.3V): No processing by the trigger signal. The camera accepts the trigger signal.
b) Low status (0V): The camera is exposed and the image output processes by the trigger signal.

The camera default setting is the input trigger signal is INVALID while at the low status of this signal. When the exposure starts while the image output by the next trigger signal, please change the camera setting (Device code: 00H, Command No. :13H) to accept the trigger signal while the image outputs.
The noise appears on the image when the exposure begins while the image is output. The noise appears on the image when the start exposure while the image is output. In this case, please change the “H reset” for the exposure start mode (Device code: 00H, Command No. : 12H) to change the exposure start point to the next HD timing.

2) UserOutput

The status of the UserOutput signal can change with the “UserOutputValue”.

a) High status (3.3V)
b) Low status (0V).

3) ExposureActive

The user can check the exposure time with the ExposureActive signal.

a) High status (3.3V): The camera is exposing
b) Low status (0V): The camera is not exposed

4) TriggerAuxiliary

The TriggerAuxiliary signal is the input trigger signal.

5) TriggerInternal

The TriggerInternal signal is the input trigger signal with the trigger delay time.

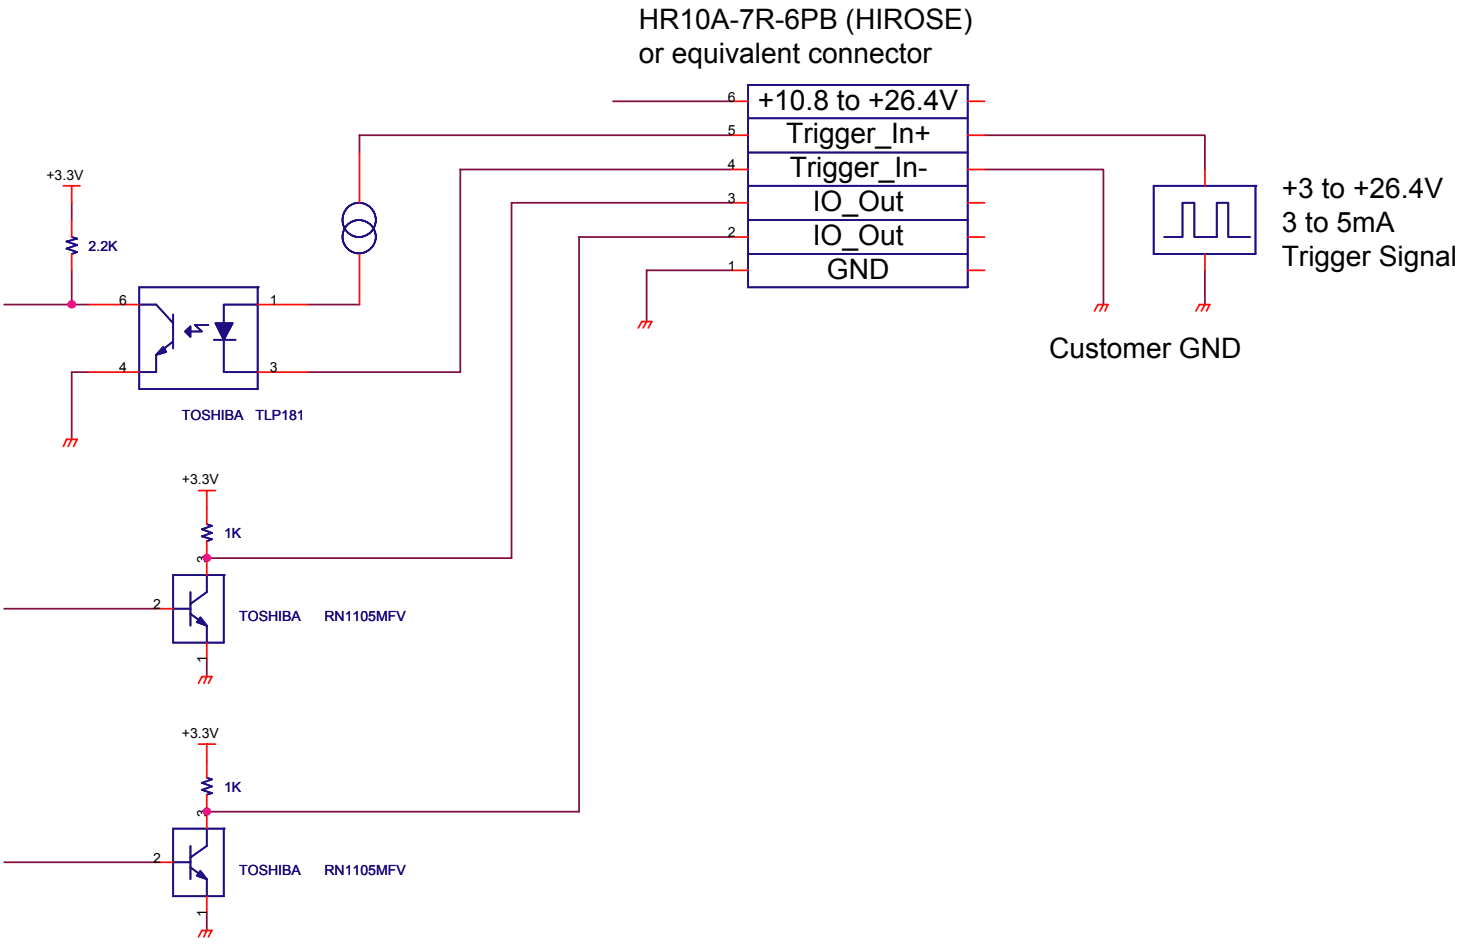
6) SensorReadOut

The SensorReadOut signal is the FVAL signal, which is the image output period of the time.

7) StrobeSignal

The StrobeSignal signal is the strobe control signal.

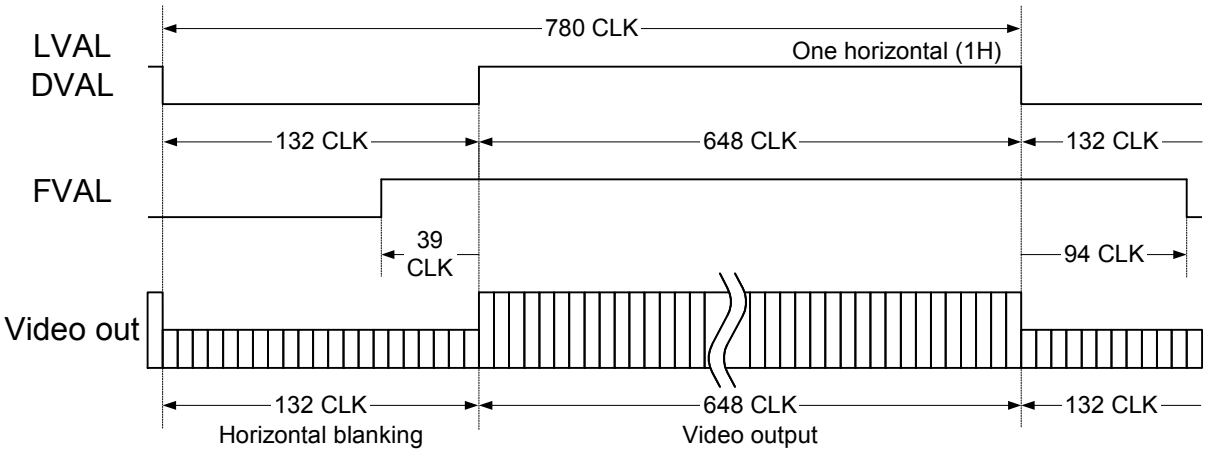
1.3.1 Equivalent Circuit for the Input Pin of the I/O Connector



2 Camera Output Timing Charts

2.1 Horizontal Timing

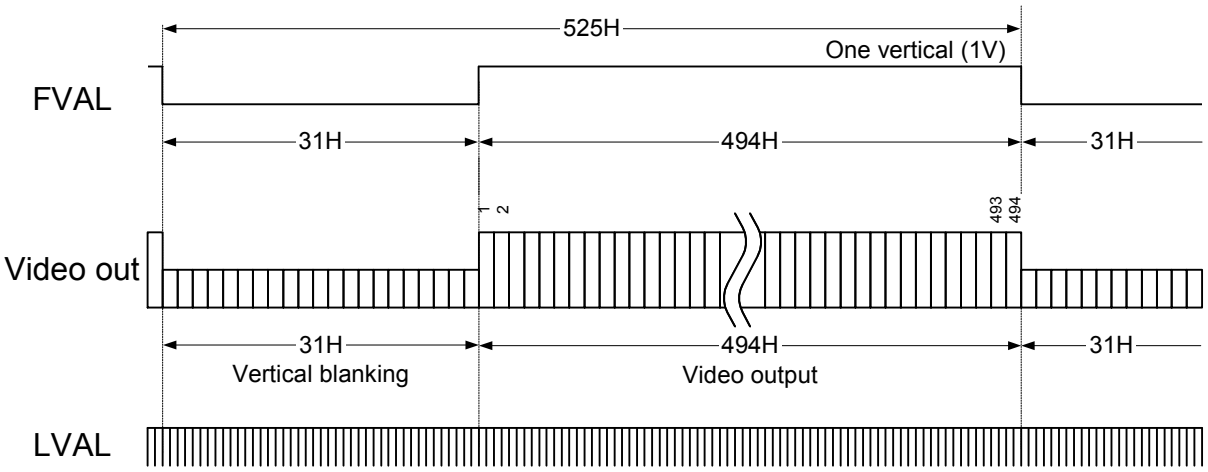
1 CLK = 27.1605 nseconds



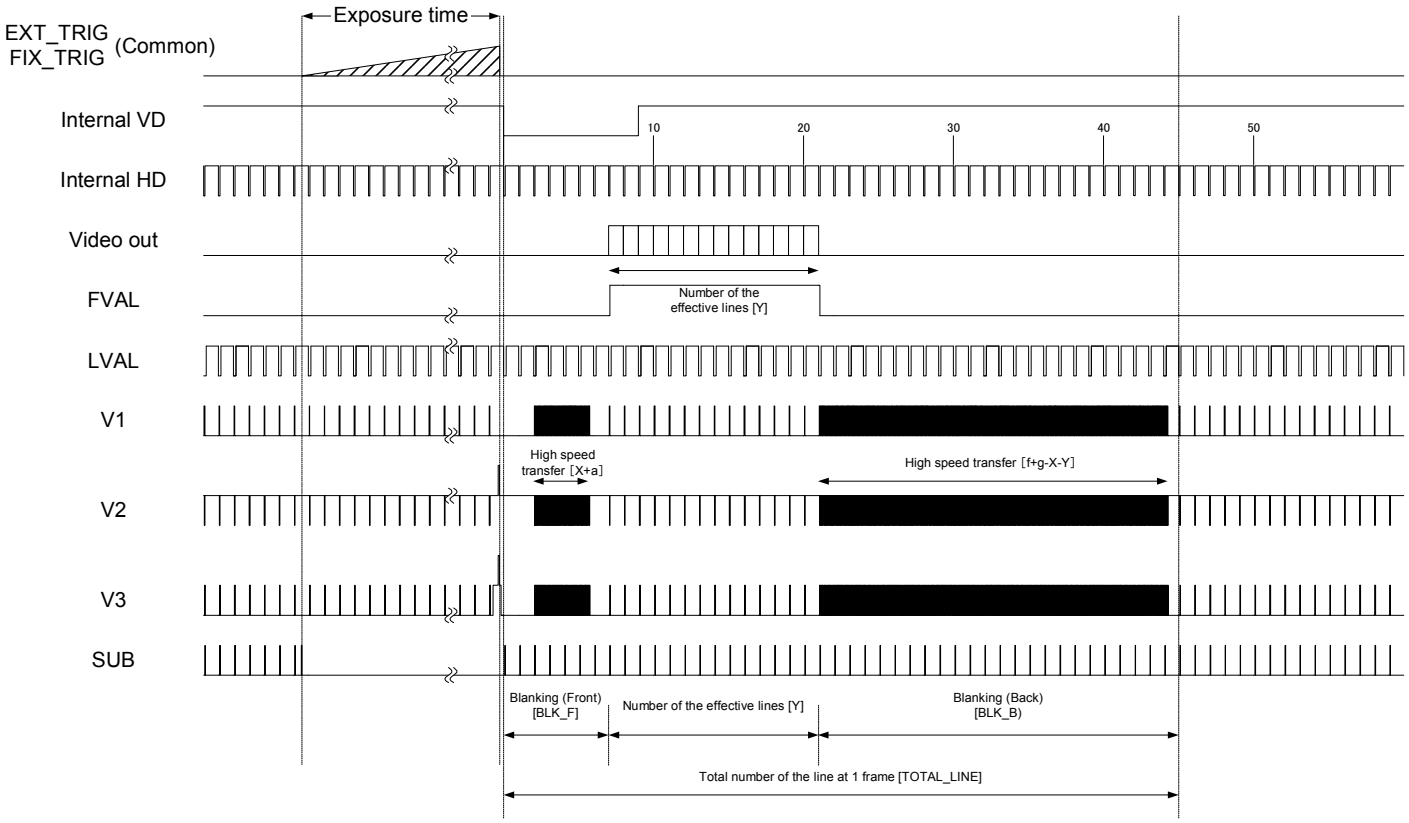
2.2 Vertical Timing

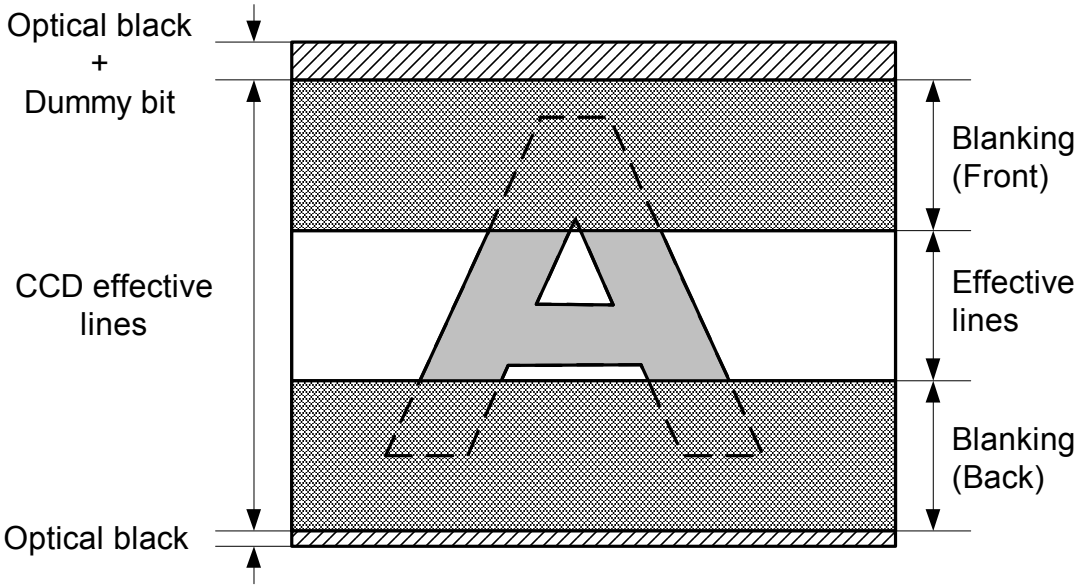
2.2.1 Full Scanning

1 H = 21.1852 µseconds, 89.910172 Hz

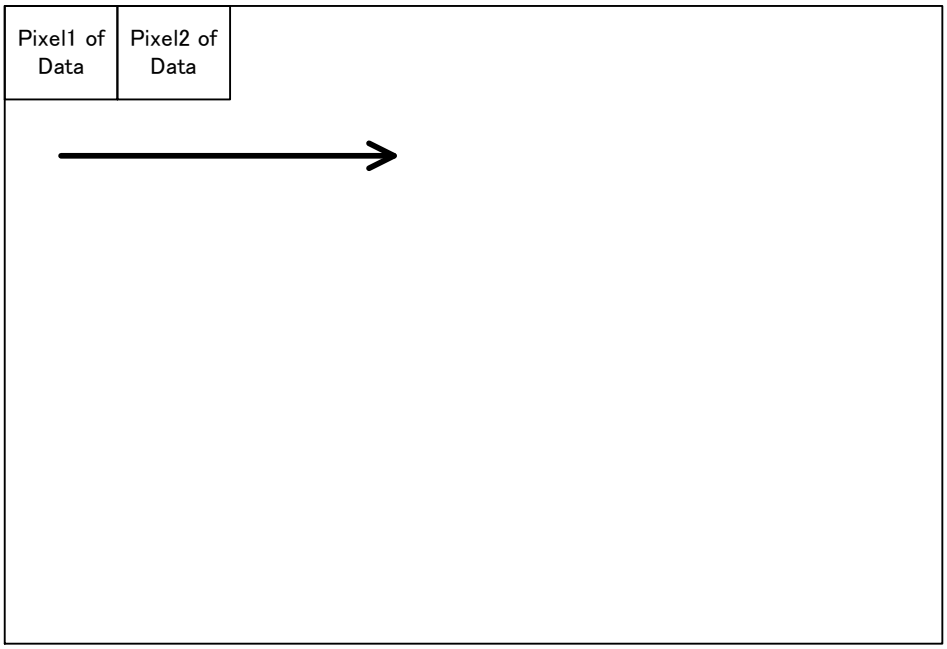


2.2.2 AOI (Area of Interest)





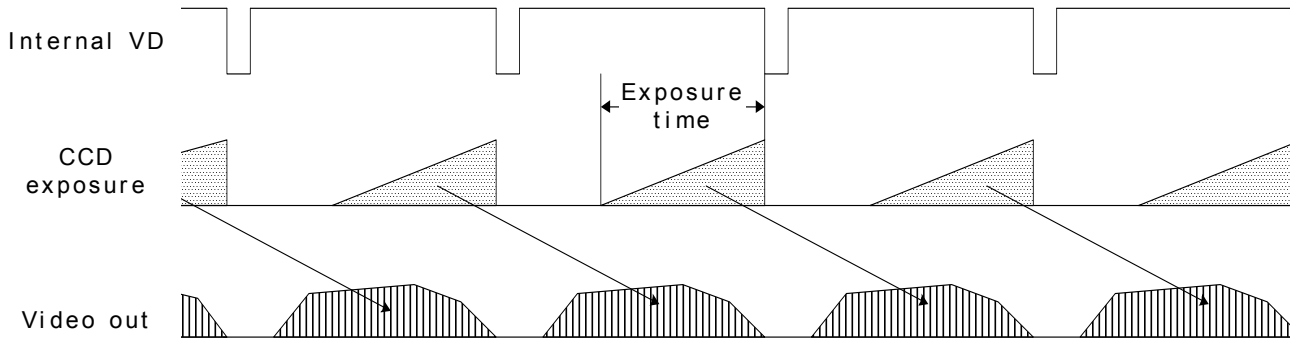
2.3 Pixel Transferring Image



Pixel (n) of Data: nth pixel being transferred

3 Camera Operational Modes

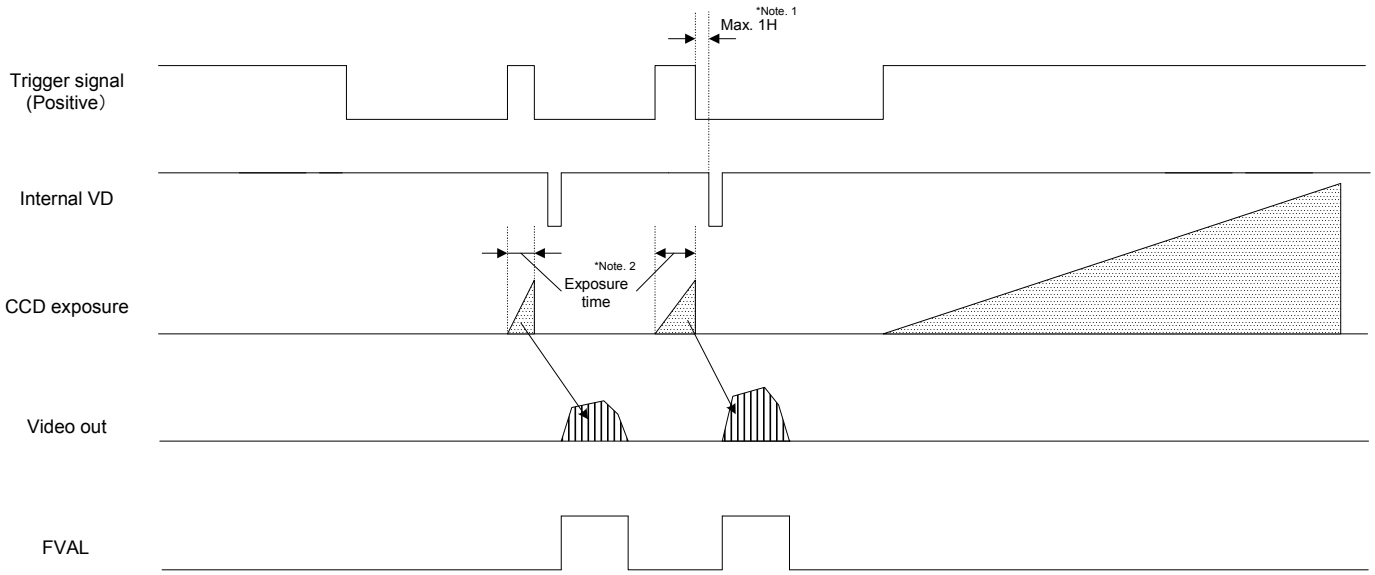
3.1 Normal Mode



3.2 Pulse Width Trigger Mode

In this trigger mode with positive polarity, the camera exposure starts at the rising edge of the trigger pulse and stops at the falling edge of the trigger pulse. Therefore, if positive polarity exposure is selected, the exposure periods are the high states of the trigger pulse.

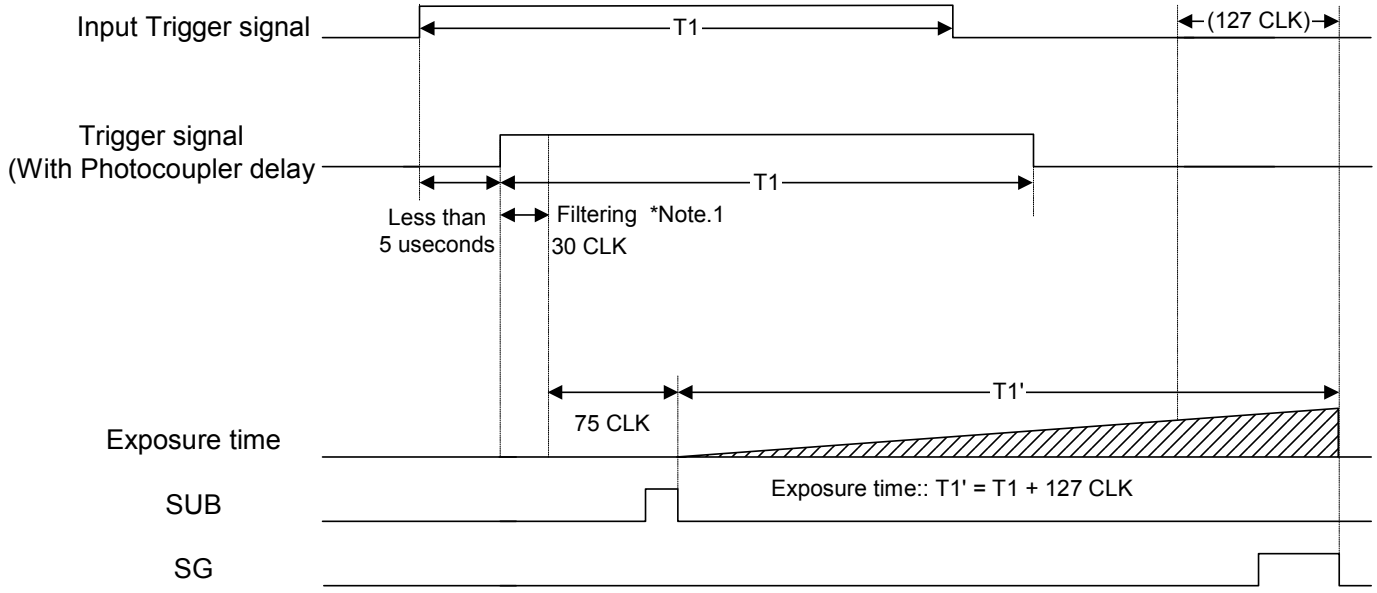
3.2.1 Timing



Note 1: The video output is going to be V reset by the next internal HD signal immediately after the exposure is finished. The exposure time is set by the pulse width of the trigger signal.

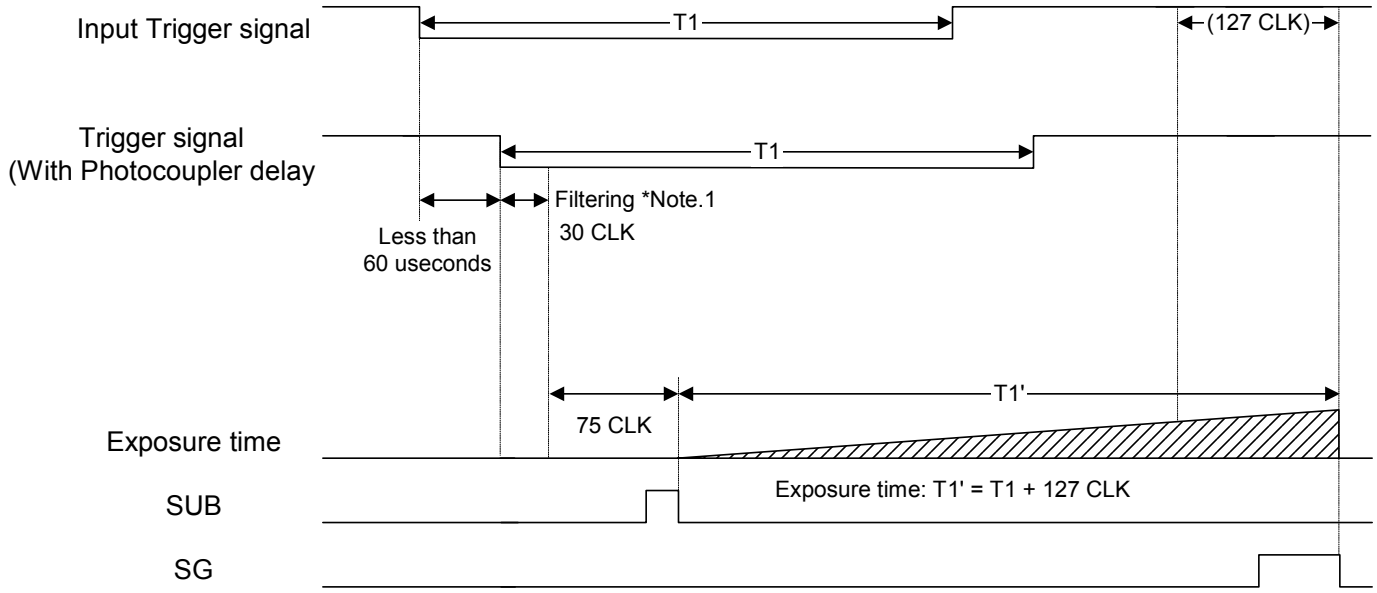
Note 2: The FVAL signal does not output when the exposure by the trigger signal does not exist.

3.2.2 Exposure Timing with the Positive Polarity Trigger Signal



Note 1: The trigger signal will be removed by the filtering if the pulse width of the input trigger signal is less than 30 CLK. Please input a trigger signal with more than 31 CLK pulse width.
Note 2: The exposure will start 105 CLK after the rising edge of the trigger signal.

3.2.3 Exposure Timing with the Negative Polarity Trigger Signal



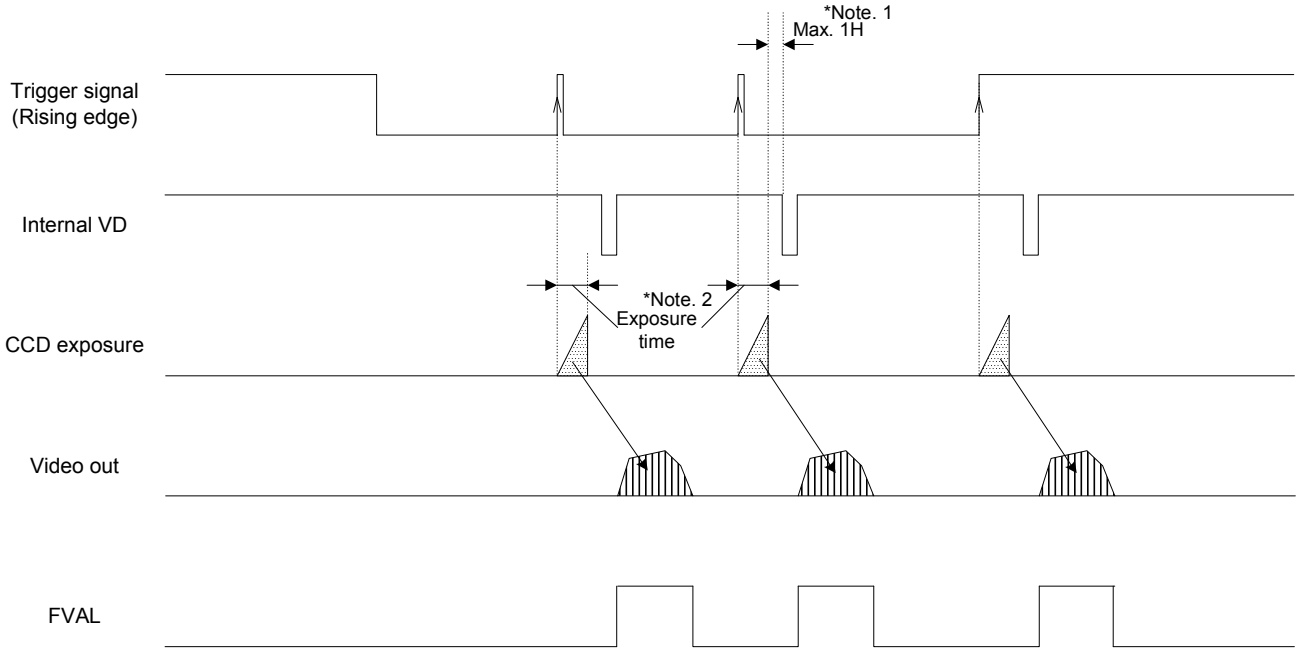
Note 1: The trigger signal will be removed by the filtering if the pulse width of the input trigger signal is less than 30 CLK. Please input a trigger signal with more than 31 CLK pulse width.

Note 2: The exposure will start 105 CLK after the rising edge of the trigger signal.

3.3 Edge Preset Trigger Mode

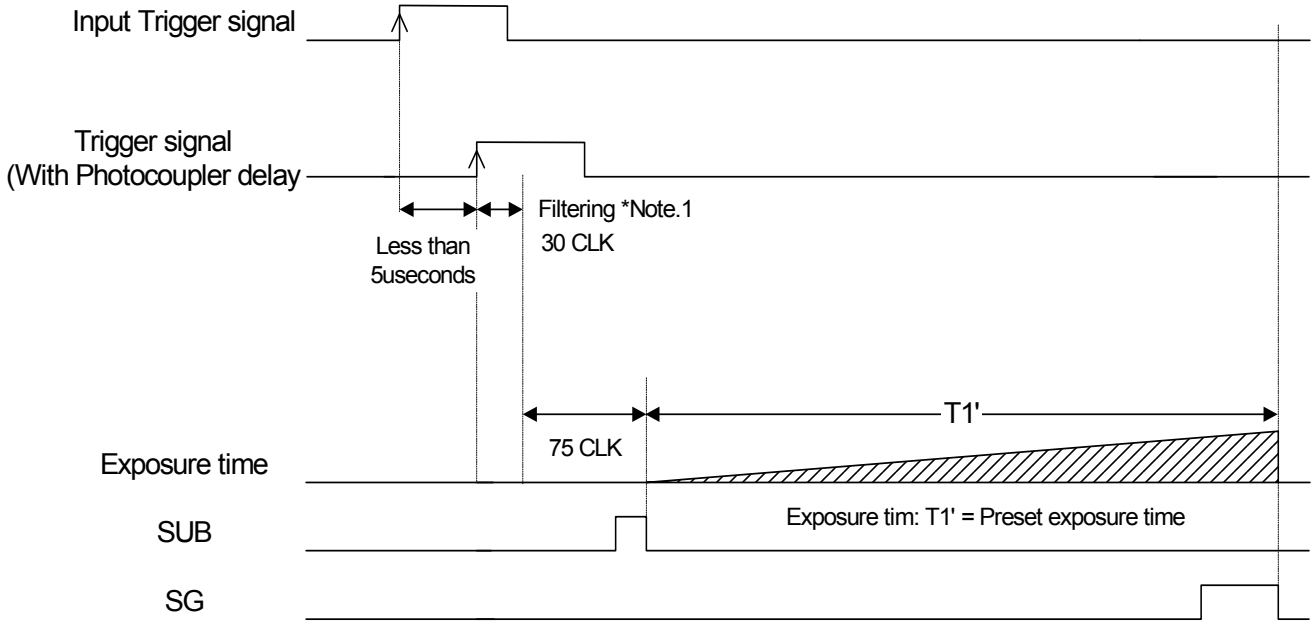
In this “edge preset trigger mode”, the camera exposure starts at the rising edge of the trigger signal like the “pulse width trigger mode” in the previous sections. However, in this mode, the exposure duration time is based on the preset value stored by the by the camera setting communication.

3.3.1 Timing



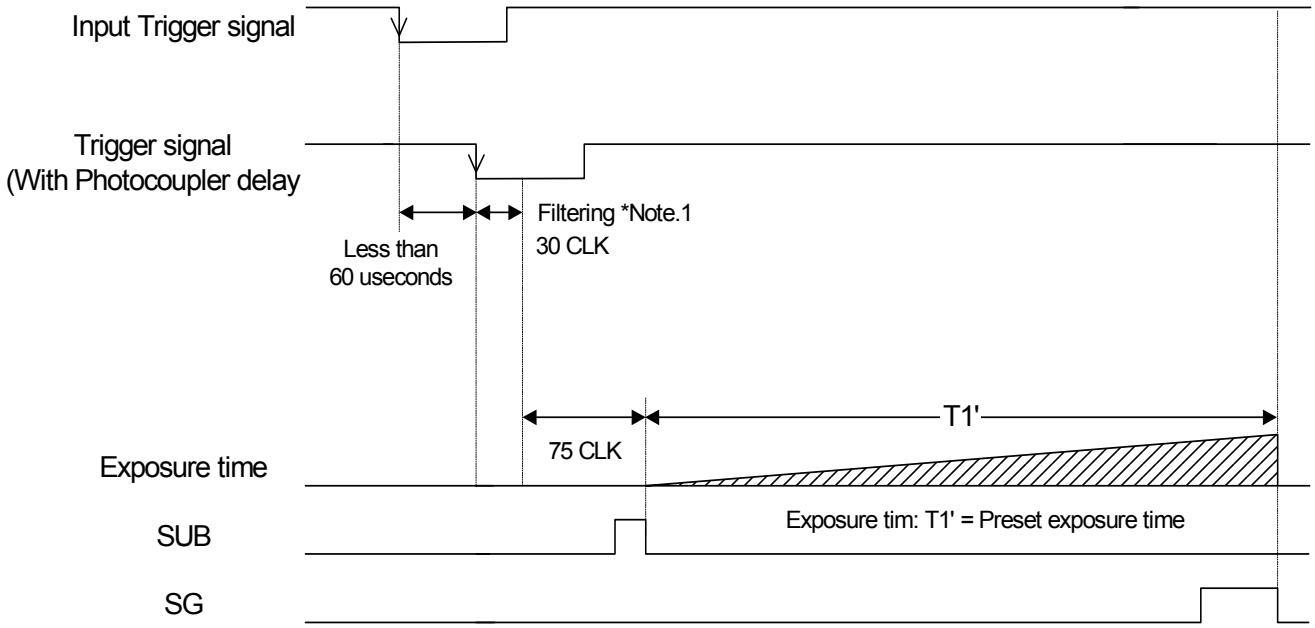
Note 1: The video output will be V reset by the next internal HD signal immediately after the exposure is finished.
Note 2: The exposure time is set by the preset electronic shutter speed.

3.3.2 Exposure Timing with the Positive Polarity Trigger Signal



Note 1: The trigger signal will be removed by the filtering if the pulse width of the input trigger signal is less than 30 CLK. Please input a trigger signal with more than 31 CLK pulse width.
Note 2: The exposure will start 105 CLK after the rising edge of the trigger signal.

3.3.3 Exposure Timing with the Negative Polarity Trigger Signal

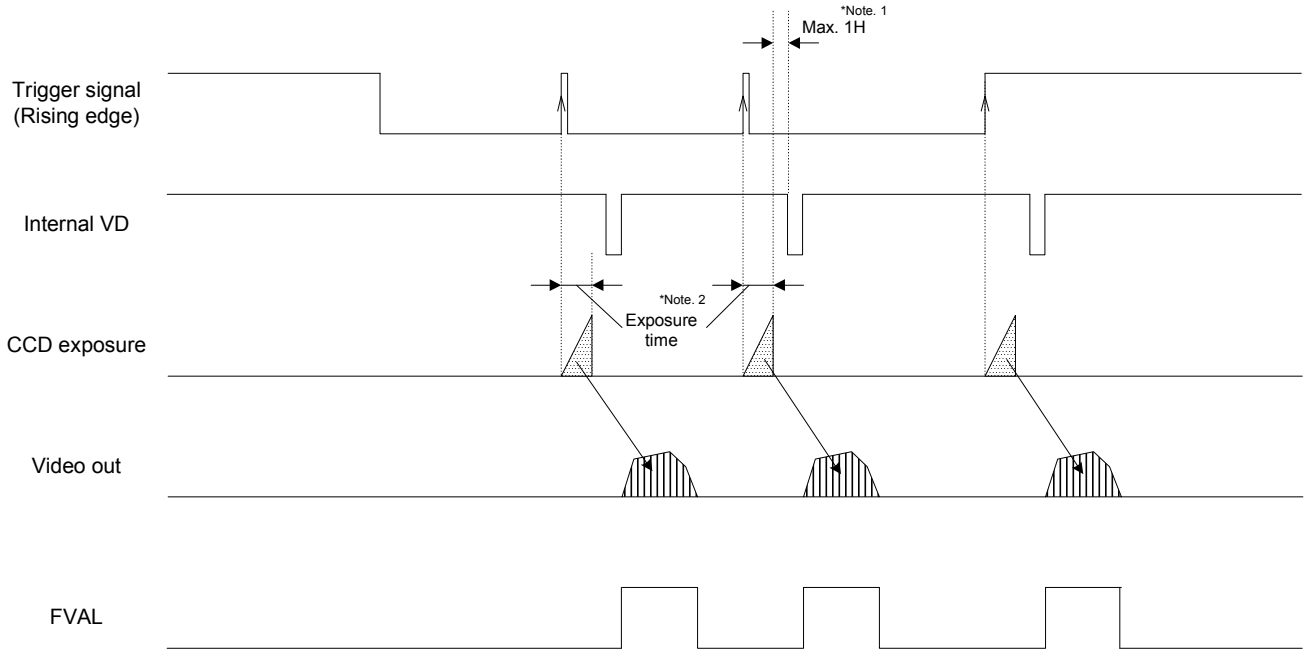


Note 1: The trigger signal will be removed by the filtering if the pulse width of the input trigger signal is less than 30 CLK. Please input a trigger signal with more than 31 CLK pulse width.
Note 2: The exposure will start 105 CLK after the rising edge of the trigger signal.

3.4 Edge Preset Trigger Mode (Trigger Input While the Image Is Out)

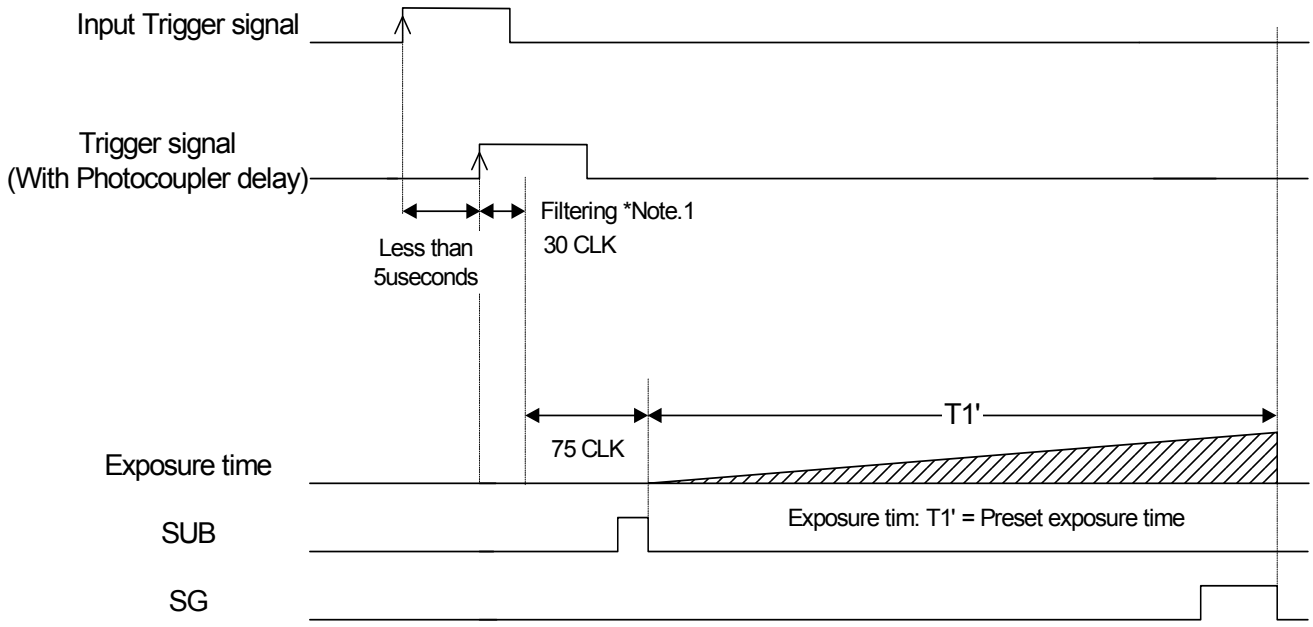
In this trigger mode, the camera exposure starts at the rising edge of the trigger pulse.
If trigger signal input is required while the image is out, then it is necessary to disable the trigger signal mask with the communication.
To avoid generating additional noise on the image, it is necessary to set the "H reset" at the exposure start mode.

3.4.1 Timing



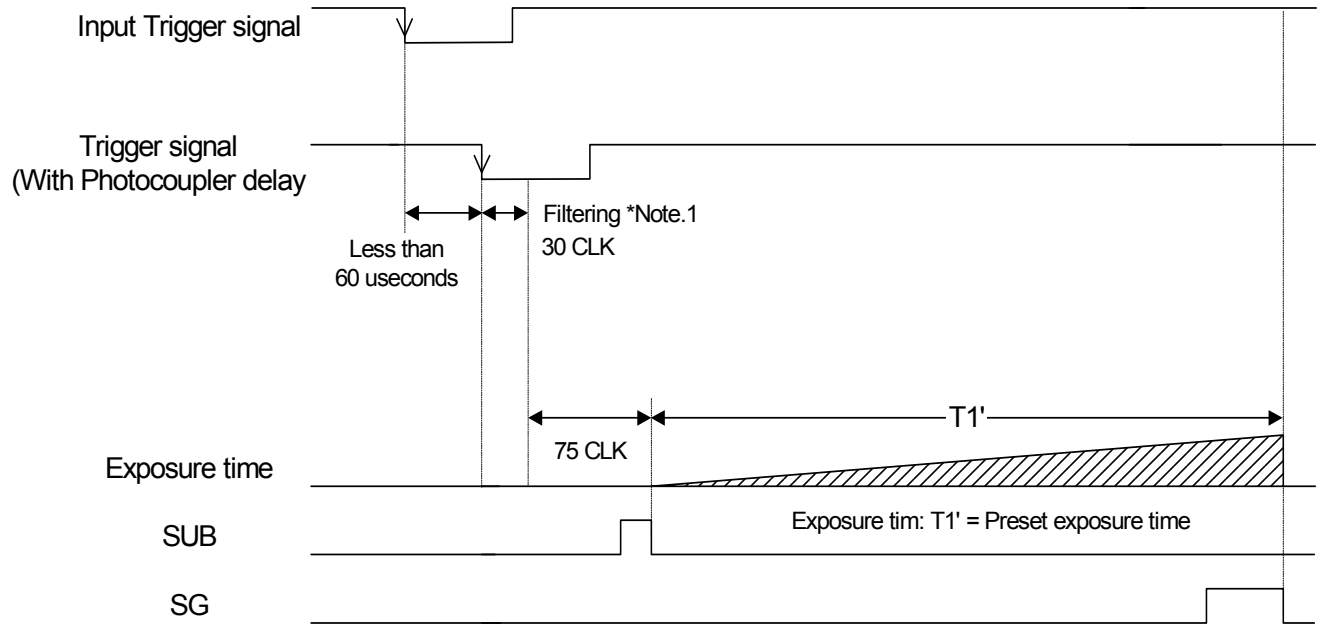
Note 1: The video output will be V reset by the next internal HD signal immediately after the exposure is finished.
Note 2: The exposure time is set by the preset electronic shutter speed.

3.4.2 Exposure Timing with the Positive Polarity Trigger Signal



Note 1: The trigger signal will be removed by the filtering if the pulse width of the input trigger signal is less than 30 CLK. Please input a trigger signal with more than 31 CLK pulse width.
Note 2: The exposure will start 105 CLK after the rising edge of the trigger signal.

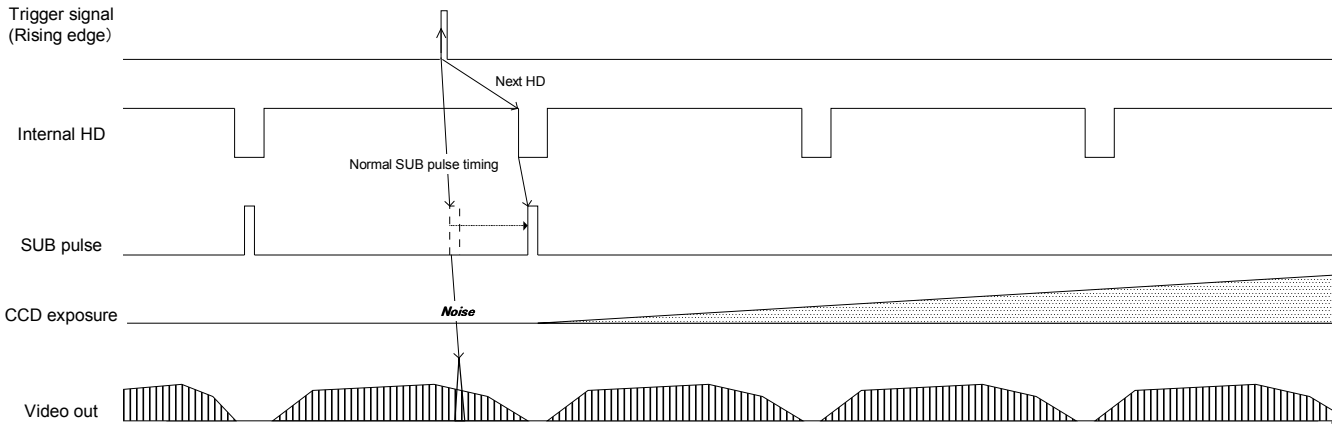
3.4.3 Exposure Timing with the Negative Polarity Trigger Signal



Note 1: The trigger signal will be removed by the filtering if the pulse width of the input trigger signal is less than 30 CLK. Please input a trigger signal with more than 31 CLK pulse width.
Note 2: The exposure will start 105 CLK after the rising edge of the trigger signal.

3.5 H Reset Mode

In this mode, the exposure can be start during the video is out from the camera without the horizontal noises. Therefore, generates the SUB pulse to sweep the charges during the horizontal blanking to prevent from getting horizontal noises.
The image is getting the horizontal noises caused by generates the SUB pulse during the video out in normal mode, which is this mode is OFF.
The maximum delay to start exposure from the trigger input is 1H.



4 Communication Protocol

This camera has a communication function that enables external devises, such as a PC, to control the camera's functions.
Please use the "R-GigE-Software" communication software, or the following communication protocol to communicate to the camera:

4.1 Communication Method

UART（RS232C）,binary communication

4.2 Communication Settings

	Settings
Baud Rate	115,200 bps
Data Bit	8 bit
Parity	None
Stop Bit	1 bit
Flow Control	None

4.3 Communication Format

The Sending data format from the PC to the camera is as follows:

SOF	Device Code	Read/Write	Page Selection	Command Code	Data Length	Data	EOF
(8bit)	(6bit)	(1bit)	(1bit)	(8bit)	(8bit)	(R: 1 byte, dummy) (W: n bytes)	(8bit)

The Receiving Data format from the camera is as follows:

- After sending the Write Command:

SOF	Data Length	Receiving Code	EOF
(8bit)	(8bit) "00H"	(1 byte)	(8bit)

- After sending the Read Command:

SOF	Data Length	Data	EOF
(8bit)	(8bit)	(n bytes)	(8bit)

The description of the format is as follows.

Name	Descriptions
SOF	Start of Frame. Always set or receive the value as “02H”
Device Code	This indicates the destination of communication. Set “000000” when accessing the camera’s function settings Set “100000” when accessing the camera’s extended function settings. Please refer to the “Camera Command List” and “Description of the Camera Control Commands”.
Read / Write	This specifies “Read” or “Write” to command numbers. Set (or receive) “0” to send the read command. Set (or receive) “1” to send the write command.
Page Selection	This specifies page selection (access selection to registers or EEPROM) of command. Set “0” to access the command register of the camera. Read command: To obtain the current data from the command register. Write command: To set a data into the command register. The previously stored data is replaced by this data. However, the data in the EEPROM is not replaced. Set ”1” to access the EEPROM of the camera. Read command: To read stored data from the EEPROM. Write command: To store data into the EEPROM as default value. The camera returns the receiving code “01H” to the PC after storing data in the EEPROM.
Command Code	This indicates the contents of the data sent or received. Refer to the following page for the details.
Data Length	This indicates the data length (unit: byte). Receiving Frame: The data length is dependent on each read command sent. The data length is defined as “00H” when sending the write command. The data length of error response is defined as “00H”. Sending frame: The data length is 1 byte dummy data when sending the read command, and that data is not referenced. The data length is dependent on each “write command” sent.
Data	This indicates write data or read data according to command type.
EOF	End of Frame. Always set or receive the value as “03H”
Receiving Code	This indicates results of the command sent 01H: OK (ACK), 10H: NG (NAC), 12H: Command number error (Not matching), 13H: Communication frame error (only for Gamma data upload), 14H: Time out error (Two seconds), 15H: Check sum error (only for Gamma data upload), 16H: Data length error (Not matching), 17H: EEPROM write error

【Example Code】Reading the data from the command 00H

- Command to send: 02H, 00H, 00H, 01H, 00H, 03H

SOF	Device Code	Read/Write	Page Selection	Command Code	Data Length	Data	EOF
(8bit)	(6bit)	(1bit)	(1bit)	(8bit)	(8bit)	(1byte)	(8bit)
02H	**00H**			**00H**	**01H**	**00H**	**03H**

- Command to receive upon a successful communication: 02H, 01H, 00H, 03H (assuming the data is 00H)

SOF	Data Length	Data	EOF
(8bit)	(8bit)	(n bytes)	(8bit)
02H	**01H**	**00H**	**03H**

【Sequence for the saving commands to the EEPROM】

Please use the following sequence for saving the commands to the EEPROM.

1) Set “1” to the 80H.0 to enable writing to the EEPROM.

2) Send the save data with the page selection “1”.

3) The camera sends back one of the following receiving codes after writing the EEPROM.
   01H: OK
   17H: EEPROM write error

4) 80.0H is cleared to “0” automatically after writing the EEPROM.

Note1: The data cannot be saved to the EEPROM when 80H.0 is “0”.

Note2: When saving the consecutive sequence of commands, the above steps, 1) to 4), are necessary only once.

i.e.) saving the commands “10H, 11H, 12H, 13H”, or “22H, 23H, 24H”, etc.

Note3: When saving the non-consecutive sequence of commands, the above steps, 1) to 4), are necessary for the same number of times.

i.e.) saving the commands “10H, 13H, 19H, 1BH” or “20H, 23H, 25H”, etc.

4.4 Camera Control Command

- The data unit of the each command is 1 byte (8bit).
- The data can be saved to the EEPROM if there is an “X” in the “Save to EEPROM” column in the following list.
- The camera initializes based on the stored data in the EEPROM when the power is applied.

4.4.1 Camera Command List (Device Code: 000000)

Device Code = 000000					
Command No.	**R/W**	**Save to EEPROM**	**Function**	**Initial Data**	**Data Range**
00 to 0FH			*Reserved*	-	-
10H	R/W	x	*camera function mode 1 (8bit: D[7..0])*	89H	
11H	R/W	x	*camera function mode 2 (8bit: D[7..0])*	0FH	
12H	R/W	x	*camera function mode 3 (8bit: D[7..0])*	00H	
13H	R/W	x	*camera function mode 4 (8bit: D[7..0])*	60H	
14 to 15H			*reserved*	-	-
16H	R/W	x	*software trigger mode (8bit: D[7..0])*	80H	
17H	R/W	x	*image data reset (8bit: D[7..0])*	00H	
18H			*reserved*	-	-
19H	R/W	x	*image output format (8bit: D[7..0])*	01H	
1A to 1FH			*reserved*	-	-
20H	R/W	x	*exposure time (us) of the electronic shutter (24bit: D[7..0])*	0	0 to 16,777,215

F2 to FFH			*reserved*	-	-

4.4.2 Camera Command List (Device Code: 100000)

Device Code = 100000					
Command No.	**R/W**	**Save to EEPROM**	**Function**	**Initial Data**	**Data Range**
00 to 1FH			*reserved*	-	-
20H	R/W	x	*exposure mode (8bit: D[7..0])*	00H	
21H	R/W	x	*AGC maximum limit (8bit: D[7..0])*	255	0 to 255
22H			*reserved*	-	-
23H	R/W	x	*upper limit of the auto electronic shutter (20bit: D[7..0])*	11,122	0 to 16,777,215
24H	R/W	x	*upper limit of the auto electronic shutter (20bit: D[15..8])*		
25H	R/W	x	*upper limit of the auto electronic shutter (20bit: D[20..16])*		
26H	R/W	x	*lower limit of the auto electronic shutter (20bit: D[7..0])*	1	0 to 16,777,215
27H	R/W	x	*lower limit of the auto electronic shutter (20bit: D[15..8])*		
28H	R/W	x	*lower limit of the auto electronic shutter (20bit: D[20..16])*		
29H	R/W	x	*weight1 for ALC (8bit: D[7..0])*	11H	D3 to D0: 0 to 15 D7 to D4: 0 to 15
2AH	R/W	x	*weight2 for ALC (8bit: D[7..0])*	11H	
2BH	R/W	x	*weight3 for ALC (8bit: D[7..0])*	1AH	
2CH	R/W	x	*weight4 for ALC (8bit: D[7..0])*	11H	
2DH	R/W	x	*weight5 for ALC (8bit: D[7..0])*	01H	D3 to D0: 0 to 15 D7 to D4: 0
2EH	R/W	x	*target brightness for ALC (8bit: D[7..0])*	128	0 to 255
2FH	R/W	x	*ALC peak-average (8bit: D[7..0])*	0	0 to 255
30H	R/W	x	*vertical_1 position for the ALC weight area (16bit: D[7..0])*	32	0 to 493
31H	R/W	x	*vertical_1 position for the ALC weight area (16bit: D[15..8])*		
32H	R/W	x	*vertical_2 position for the ALC weight area (16bit: D[7..0])*	196	0 to 493
33H	R/W	x	*vertical_2 position for the ALC weight area (16bit: D[15..8])*		
34H	R/W	x	*vertical_3 position for the ALC weight area (16bit: D[7..0])*	298	0 to 493
35H	R/W	x	*vertical_3 position for the ALC weight area (16bit: D[15..8])*		
36H	R/W	x	*vertical_4 position for the ALC weight area (16bit: D[7..0])*	462	0 to 493
37H	R/W	x	*vertical_4 position for the ALC weight area (16bit: D[15..8])*		
38H	R/W	x	*horizontal_1 position for the ALC weight area (16bit: D[7..0])*	36	0 to 647
39H	R/W	x	*horizontal_1 position for the ALC weight area (16bit: D[15..8])*		
3AH	R/W	x	*horizontal_2 position for the ALC weight area (16bit: D[7..0])*	252	0 to 647
3BH	R/W	x	*horizontal_2 position for the ALC weight area (16bit: D[15..8])*		
3CH	R/W	x	*horizontal_3 position for the ALC weight area (16bit: D[7..0])*	396	0 to 647
3DH	R/W	x	*horizontal_3 position for the ALC weight area (16bit: D[15..8])*		
3EH	R/W	x	*horizontal_4 position for the ALC weight area (16bit: D[7..0])*	612	0 to 647
3FH	R/W	x	*horizontal_4 position for the ALC weight area (16bit: D[15..8])*		
40 to 4FH			*reserved*	-	-
50H	R/W	x	*Y_offset for AOI (8bit: D[7..0])*	0	2 <= Y <= 494, where Y = offset + height
51H	R/W	x	*Y_offset for AOI (16bit: D[15..8])*		
52H	R/W	x	*height for AOI (8bit: D[7..0])*	494	
53H	R/W	x	*height for AOI (16bit: D[15..8])*		

Device Code = 100000					
Command No.	**R/W**	**Save to EEPROM**	**Function**	**Initial Data**	**Data Range**
54H	R/W	x	*X_offset for AOI (8bit: D[7..0])*	0	8 <= X <= 648, where X = offset + width
55H	R/W	x	*X_offset for AOI (16bit: D[15..8])*		
56H	R/W	x	*width for AOI (8bit: D[7..0])*	648	
57H	R/W	x	*width for AOI (16bit: D[15..8])*		
58 to 5FH			*reserved*	-	-
60H	R/W	x	*camera mode1 (8bit: D[7..0])*	00H	
61 to 91H			*reserved*	-	-
92H	R/W	x	*iris lens manual adjustment (8bit: D[7..0])*	01H	
93 to FFH			*reserved*	-	-

4.4.3 Descriptions of the Camera Control Commands (Device code: 000000);

(The underline settings are the factory default settings)

<table>
<tr><th>Command No.</th><th>Command Description</th></tr>
<tr><td>10H:
MOD1[7..0]</td><td>[camera function mode 1] Initial data: MOD1[7..0] = 89H
Sets the camera function mode.
D[7..0]
<table>
<tr><td>D7</td><td>D6</td><td>D5</td><td>D4</td><td>D3</td><td>D2</td><td>D1</td><td>D0</td></tr>
</table>

D7: No Function — Always set as “1”
D6: Trigger Polarity — 0: Positive; 1: Negative
D5: Trigger Mode — 0: Edge Preset; 1: Pulse Width
D4: Binning Mode — 0: OFF (Normal); 1: ON (Binning)
D3 to D0: No Function — Always set as “1001”

Note 1: The trigger polarity is automatically set to positive when using the software trigger; the trigger polarity cannot be changed.</td></tr>
<tr><td>11H:
MOD2[7..0]</td><td>[Camera function mode 2] Initial data: MOD2[7..0] = 0FH
Sets the camera function mode.
D[7..0]

PriorityMode	100000	20H.0	ALC control method priority
ALCIrisLens	100000	20H.1	Iris lens control method
Min_ShutterTime	100000	26-28H	The lower limit of the electronic shutter for auto shutter (us)
Max_ShutterTime	100000	23-25H	The upper limit of the electronic shutter for auto shutter (us)
AGCRange	100000	21H	AGC maximum limit
TargetBrightness	100000	2EH	Target brightness for ALC
ALC_Peak_Average	100000	2FH	ALC peak-average
DigitalGain	000000	31H	The digital gain
ALCWeight1	100000	29H.0-3	Weight1 for ALC
ALCWeight2	100000	29H.4-7	Weight2 for ALC
ALCWeight3	100000	2AH.0-3	Weight3 for ALC
ALCWeight4	100000	2AH.4-7	Weight4 for ALC
ALCWeight5	100000	2BH.0-3	Weight5 for ALC
ALCWeight6	100000	2BH.4-7	Weight6 for ALC
ALCWeight7	100000	2CH.0-3	Weight7 for ALC
ALCWeight8	100000	2CH.4-7	Weight8 for ALC
ALCWeight9	100000	2DH.0-3	Weight9 for ALC
ALCWindowV1	100000	30-31H	Vertical1 position for the ALC weight area (pixel)
ALCWindowV2	100000	32-33H	Vertical2 position for the ALC weight area (pixel)
ALCWindowV3	100000	34-35H	Vertical3 position for the ALC weight area (pixel)
ALCWindowV4	100000	36-37H	Vertical4 position for the ALC weight area (pixel)
ALCWindowH1	100000	38-39H	Horizontal1 position for the ALC weight area (pixel)
ALCWindowH2	100000	3A-3BH	Horizontal2 position for the ALC weight area (pixel)
ALCWindowH3	100000	3C-3DH	Horizontal3 position for the ALC weight area (pixel)
ALCWindowH4	100000	3E-3FH	Horizontal4 position for the ALC weight area (pixel)

Caution:
Width, Height and PixelFormat all affect the image data size.
Please use command name defined by GenICam when changing these values, as exampled in the following sample code.

In the case to change the Width

```
BOOL SetWidth( PvDevice *pDevice, PvInt64 lValue )
{
PvGenInteger* lGenInteger = dynamic_cast<PvGenInteger*>( pDevice->GetGenParameters()->Get( "Width" ) );
PvResult lResult = lGenInteger->SetValue(lValue);
return lResult.IsOK();
}
```
