1 Connector Specifications

1.1 Camera Link Connector

SDR (3M) or equivalent

This product is a PoCL type.

When a frame grabber is PoCL compliant, DO NOT SUPPLY POWER FROM THE I/O CONNECTOR. When a frame grabber is NOT PoCL compliant, supply power from the I/O connector.

Pin Assignment

Pin No.	Signal Name	Pin No.	Signal Name
1	+12V	14	GND
2	X0-	15	X0+
3	X1-	16	X1+
4	X2-	17	X2+
5	Xclk-	18	Xclk+
6	X3-	19	X3+
7	SerTC+	20	SerTC-
8	SerTFG-	21	SerTFG+
9	CC1-(TRG)	22	CC1+(TRG)
10	CC2+	23	CC2-
11	CC3-	24	CC3+
12	CC4+	25	CC4-
13	GND	26	+12V

1.2 Power-I/O Connector

- > HR10A-7R-6PB (Hirose) or equivalent
- > This connector is for the power supply (12Vdc) and input /output signals.
- ➤ Use HR10A-7P-6S (Hirose) or equivalent for the cable side.

Pin Assignment

Pin No.	Signal Name	IN / OUT	Voltage				
PIII NO.	Signal Name	IN / OUT		Low Voltage	High Voltage		
1	GND	IN		0V			
2	I/O-1	IN/OUT	IN	0 to +0.5	+2.5 to +5.0V		
2	1/0-1	IIV/OUT	OUT	0V	+3.3V		
3	I/O-2	IN/OUT	IN	0 to +0.5	+2.5 to +5.0V		
3	1/0-2	114/001	OUT	0V	+3.3V		
4	4 I/O-3 IN/OUT		IN	0 to +0.5	+2.5 to +5.0V		
4	1/0-3	IIN/OUT	OUT	0V	+3.3V		
5	1/0-4	IN/OUT	IN	0 to +0.5	+2.5 to +5.0V		
5	1/0-4	IIV/OUT	OUT	0V	+3.3V		
6	+12Vdc	IN		+12Vdc			

- Input/output signals can be assigned through the camera setting communication (see table 4).
- > Trigger input signal can be assigned either on Camera Link connector (CC1) or on the No. 2 pin of the IO connector through the camera setting communication.

IO Signal Patterns

	Com	mand No.		HR10A-7R-6F	PB (Hirose)

2 Camera Output Timing Charts

2.1 Normal Mode (Setting 10H: 1XX0XXXX)

	Normal Full Scanning			Partial Full Scanning		1/2 Partial Scanning			1/4 Partial Scanning															
Clock Speed	Normal	x2/3	x1/3	Normal	x2/3	x1/3	Normal	x2/3	x1/3	Normal	x2/3	x1/3												
(MHz)																								
Frame	80 0	59.4	29.9																					
Rate	89.9 (90)	(60)	(30)	94.4	62.9 31.5	62.9 31.5	.9 31.5	31.5	.9 31.5	9 31.5	62.9 31.5	31.5	31.5	31.5	62.9 31.5	62.9 31.5	31.5	31.5	180.1 120.1	120.1	20.1 60.1	360.3	240.2	120.1
(Hz)	(90)	(00)	(30)																					

**Clock Speed: 36.8181 MHz (Normal), 24.5454 MHz (x2/3), 12.2727 MHz (x1/3)

2.1.1 Horizontal Timing

1 CLK = 81.4816 ns at 30fps 1 CLK = 40.7408 ns at 60fps 1 CLK = 27.1605 ns at 90fps

2.1.2 Vertical Timing

2.1.2.1 Normal Full Scanning (setting 10H: 1XX00XXX, 11H: XXX0X000)

```
1 H = 63.5556 \mu s, 29.9700 Hz at 30fps
1 H = 31.7778 \mu s, 59.9400 Hz at 60fps
1 H = 21.1852 \mu s, 89.9100 Hz at 90fps
```

2.1.2.2 Partial Full Scanning (setting 10H: 1XX01XXX, 11H: XXX0X000)

```
1 H = 63.5556 \mu s, 31.4685 Hz at 30fps
1 H = 31.7778 \mu s, 62.9370 Hz at 60fps
1 H = 21.1852 \mu s, 94.4055 Hz at 90fps
```

^{*} By transferring the blanking period pixels at a high rate, the frame rate of the partial full scanning can be increased compared to that of the normal full scanning.

2.1.2.3

1/2 Partial Scanning

(setting 10H: 1XX01XXX, 11H: XXX0X001)

1 H = 63.5556 μ s, 60.0544 Hz at 30fps 1 H = 31.7778 μ s, 120.108 Hz at 60fps 1 H = 21.1852 μ s, 180.163 Hz at 90fps

2.1.2.4

1/4 Partial Scanning

(setting 10H: 1XX01XXX, 11H: XXX0X010)

1 H = 63.5556 μ s, 120.108 Hz at 30fps 1 H = 31.7778 μ s, 240.217 Hz at 60fps 1 H = 21.1852 μ s, 360.326 Hz at 90fps

2.1.2.5

Variable Partial Scanning

(Setting 10H: 1XX01XXX, 11H: XXX0X111)

2.2 Binning Mode

(setting 10H: 1XX1XXXX)

	Binning Full Scanning		Binning Partial Full Scanning		Binning 1/2 Partial Scanning		Binning 1/4 Partial Scanning					
Clock Speed (MHz)	Normal	x2/3	x1/3	Normal	x2/3	x1/3	Normal	x2/3	x1/3	Normal	x2/3	x1/3
Frame Rate (Hz)	180.2	120.1	60.1	186.6	124.4	62.2	337.2	224.8	112.4	597.5	398.3	199.2

**Clock Speed: 36.8181 MHz (Normal), 24.5454 MHz (x2/3), 12.2727 MHz (x1/3)

2.2.1 Horizontal Timing

1 CLK = 81.4816 ns at 30fps

1 CLK = 40.7408 ns at 60fps

1 CLK = 27.1605 ns at 90fps

2.2.2 Vertical Timing

2.2.2.1 Binning Full Scanning (setting 10H: 1XX10XXX, 11H: XXX0X000)

```
1 H = 63.5556 \mu s, 60.0544 Hz at 30fps
1 H = 31.7778 \mu s, 120.108 Hz at 60fps
1 H = 21.1852 \mu s, 180.163 Hz at 90fps
```

2.2.2.2 Binning Partial Full Scanning (setting 10H: 1XX11XXX, 11H: XXX0X000)

1 H = 63.5556 μ s, 62.1907 Hz at 30fps 1 H = 31.7778 μ s, 124.381 Hz at 60fps 1 H = 21.1852 μ s, 186.572 Hz at 90fps

2.2.2.3

Binning 1/2 Partial Scanning

(setting 10H: 1XX11XXX, 11H: XXX0X001)

1 H = 63.5556 μ s, 112.378 Hz at 30fps 1 H = 31.7778 μ s, 224.775 Hz at 60fps 1 H = 21.1852 μ s, 337.162 Hz at 90fps

2.2.2.4

Binning 1/4 Partial Scanning

(setting 10H: 1XX11XXX, 11H: XXX0X010)

1 H = 63.5556 μ s, 199.167 Hz at 30fps 1 H = 31.7778 μ s, 398.335 Hz at 60fps 1 H = 21.1852 μ s, 597.503 Hz at 90fps

2.3 Data Order on the Camera Link Output

DA0~DA9: 10 bit data for one pixel

DA0~DA7: 8bit data for one pixel

2.4 1 Taps Transferring Image (1X-1Y)

2.5 Pixel Transferring Image

Pixeln of Data: nth pixel being transferred

3 Camera Operational Mode

3.1 Normal Mode

In this mode, the images are output continuously.

3.1.1 Frame Exposure

3.1.2 Electric Shutter

3.2 Pulse Width Trigger Mode

In this "pulse width trigger mode" with positive polarity, the camera exposure starts at the rising edge of the trigger signal and stops at the falling edge of the trigger signal. Therefore, in the case that the exposure positive polarity is selected, the actual exposure occurs when the trigger signal is at high state.

3.2.1 Pulse Width Trigger Mode (V-Reset)

- Note 1: The camera does NOT switch to normal mode when the long exposure mode is selected.

 This timing chart shows when the long exposure mode selected.
- Note 2: The internal VD signal is reset immediately after the exposure is finished as depicted, and the video output original is sent out according to that reset VD timing.
- Note 3: The exposure time is controlled by the pulse width of the trigger signal as depicted.

3.2.2 Pulse Width Trigger Mode (Non-Reset)

- Note 1: The camera does NOT switch to normal mode when the long exposure mode is selected.
 - This timing chart shows with the long exposure mode selected.
- Note 2: The internal VD signal does not reset by the trigger signal.
 - The video output signal is sent out at the next internal VD timing.
- Note 3: The exposure time is controlled by the pulse width of the trigger signal as depicted.
- Note 4: The FVAL signal does not output when the exposure by the trigger signal does not exists.

3.2.3 Exposure Timing

Notes: The trigger signal equal to or shorter than 30 CLK is removed by the filtering system.

Input trigger signal has to be more than 31 CLK pulse width.

The exposure starts 63 CLK after the rising edge of the trigger signal.

3.3 Edge Preset Trigger Mode

In this "edge preset trigger mode", the camera exposure starts at the rising edge of the trigger signal like the "pulse width trigger mode" in the previous sections. However, in this mode, the exposure duration time is based on the preset value stored by the by the camera setting communication.

3.3.1 Edge Preset Trigger Mode (V-Reset)

- Note 1: The camera does NOT switch to the normal mode when the long exposure mode is selected.

 This timing chart shows when the long exposure mode is selected.
- Note 2: The internal VD signal is reset immediately after the exposure is finished as depicted and the video output signal is sent out according to the reset VD timing.
- Note 3: The exposure time is preset by the camera setting communication as "shutter speed".

3.3.2 Edge Preset Trigger Mode (Non-Reset)

- Note 1: The camera does NOT switch to normal mode when the long exposure mode is selected.

 This timing chart shows when the long exposure mode selected.
- Note 2: The internal VD signal does not reset by the trigger signal.

 The video output signal is sent out at the next internal VD timing.
- Note 3: The exposure time is preset by the camera setting communication as "shutter speed".
- Note 4: The FVAL signal does not output when the exposure by the trigger signal does not exists.

3.3.3 Exposure Timing

Notes: The trigger signal equal to or shorter than 30 CLK is removed by the filtering system. Input trigger signal has to be more than 31 CLK pulse width.

The exposure starts 63 CLK after the rising edge of the trigger signal.

3.4 H Reset Mode

Normally, video noise appears when the beginning of trigger signal is applied before finishing the video read-out of the previous frame. This noise is caused by the SUB pulse, which is activated to clear all residual charges on the CCD prior to a new exposure. By selecting this "H. Reset Mode", the camera automatically holds the actual activation of trigger until the next horizontal blanking period. By doing this, the SUB pulse is activated during the horizontal blanking period and the noise in image can be avoided.

Note: Due to the principal of this operation, there can be maximum "1 H" of delay of actual trigger signal.

4 Communication Protocol

This camera has a communication function that enables external devises, such as a PC, to control the camera's functions.

Please use the "R-CLinkCtrl" communication software, or the following communication protocol to communicate to the camera:

4.1 Communication Method

UART (RS232C) , binary communication

4.2 Communication Settings

	Settings
Baud Rate	9,600 bps / 38,400 bps / 57,600 bps / 115,200 bps
Data Bit	8 bit
Parity	None
Stop Bit	1 bit
Flow Control	None

4.3 Communication Format

The Sending data format from the PC to the camera is as follows:

SOF	Device Code	Read/Write	Page Selection	Command Code	Data Length	Data	EOF
(8bit)	(6bit)	(1bit)	(1bit)	(8bit)	(8bit)	(R: 1 byte) (W: n bytes)	(8bit)

The Receiving Data format from the camera is as follows:

• After sending the Read Command:

SOF	Data Length	Data	EOF
(8bit)	(8bit)	(n bytes)	(8bit)

After sending the Write Command:

SOF	Data Length	Receiving Code	EOF
(8bit)	(8bit) "00"	(1 byte)	(8bit)

The description of the format is as follows.

Name	Descriptions
SOF	Start of Frame. Always set or receive the value as "02H"
Device Code	This indicates the destination of communication.
	Set "000000" when accessing the camera's function settings
	Set "100000" when accessing the camera's extended function settings.
	Please refer to the "Camera Command List" and "Description of the Camera Control
	Commands".
Read / Write	This specifies "Read" or "Write" to command numbers.
	Set (or receive) "0" to send the read command.
	Set (or receive) "1" to send the write command.
Page Selection	This specifies page selection (access selection to registers or EEPROM) of command.
	Set "0" to access the command register of the camera.
	Read command: To obtain the current data from the command register.
	Write command: To set a data into the command register.
	The previously stored data is replaced by this data. However, the data in the EEPROM is not
	replaced.
	Set "1" to access the EEPROM of the camera.
	Read command: To read stored data from the EEPROM.
	Write command: To store data into the EEPROM as default value.
	The camera returns the receiving code "01H" to the PC after storing data in the EEPROM.
Command	This indicates the contents of the data sent or received. Refer to the following page for the
Code	details.
Data Length	This indicates the data length (unit: byte).
	Description France
	Receiving Frame:
	The data length is dependent on each read command sent. The data length is defined as "00H" when sending the write command.
	The data length is defined as "001" when sending the write command. The data length of error response is defined as "00H".
	The data length of error response is defined as "our .
	Sending frame:
	The data length is 1 byte dummy data when sending the read command, and that data is
	not referenced.
	The data length is dependent on each "write command" sent.
Data	This indicates write data or read data according to command type.
EOF	End of Frame. Always set or receive the value as "03H"
Receiving Code	This indicates results of the command sent
	01H: OK (ACK), 10H: NG (NAC), 11H: Connection error with peripheral device
	12H: Command number error (Not matching),
	13H: Communication frame error, 14H: Time out error,
	17H: EEPROM write error

[Example Code] Reading the data from the command 00H

Command to send: 02H, 00H, 00H, 01H, 00H, 03H

SOF	Device Code	Read/Write	Page Selection	Command Code	Data Length	Data	EOF
(8bit)	(6bit)	(1bit)	(1bit)	(8bit)	(8bit)	(1byte)	(8bit)
02H		00H		00H	01H	00H	03H

Command to receive upon a successful communication: 02H, 01H, 00H, 03H (assuming the data is 00H)

SOF	Data Length	Data	EOF
(8bit)	(8bit)	(n bytes)	(8bit)
02H	01H	00H	03H

[Sequence for the saving commands to the EEPROM]

Please use the following sequence for saving the commands to the EEPROM.

- 1) Set "1" to the 80H.0 to enable writing to the EEPROM.
- 2) Send the save data with the page selection "1".
- 3) The camera sends back one of the following receiving codes after writing the EEPROM.

01H: OK

17H: EEPROM write error

4) 80.0H is cleared to "0" automatically after writing the EEPROM.

Note1: The data cannot be saved to the EEPROM when 80H.0 is "0".

Note2: When saving the consecutive sequence of commands, the above steps, 1) to 4), are necessary only once.

i.e.) saving the commands "10H, 11H, 12H, 13H", or "22H, 23H, 24H", etc.

Note3: When saving the non-consecutive sequence of commands, the above steps, 1) to 4), are necessary for the same number of times.

i.e.) saving the commands "10H, 13H, 19H, 1BH" or "20H, 23H, 25H", etc.

4.4 Camera Control Command

4.4.1 Camera Command List

- The data unit of the each command is 1 byte (8bit).
- The data can be saved to the EEPROM if there is an "X" in the "Save to EEPROM" column in the following list.
- The camera initializes based on the stored data in the EEPROM when the power is applied.

Command No.	R/W	Save to EEPROM	Function	Initial Data	Data Range
00 to 0FH			Reserved	-	-
10H	R/W	Х	Camera function mode 1 (8bit: D[70])	9	0 to 255
11H	R/W	Х	Camera function mode 2 (8bit: D[70])	32 (20H)	0 to 255
12H	R/W	Х	Camera function mode 3 (8bit: D[70])	0	0 to 255
13H			Reserved	-	-
14H	R/W	Х	Communication mode (8bit: D[70])	1	0 to 3

4.4.2 Descriptions of the Camera Control Commands

(The <u>underline settings</u> are the factory default settings)

Command No.		C	Command Descriptions	
10H:	[Camera func	tion mode setting 1] Initial data:	09H	
MOD1[70]	Sets the following camera function mode.			
	D[70]			
	D7 D6	D5 D4 D3 D2 D	1 D0	
	D7:	Continuous / Trigger Mode	0: Auto	1: Manual
	D6:	Trigger Polarity	0: Positive	1: Negative
	D5:	Trigger Mode	0: Edge Preset	1: Pulse Width
	D4:	Binning Mode	0: OFF (Normal)	1: ON (Binning)
	D3:	Scanning Mode	0: Full scanning	1: Partial scanning
	D2 to D0:	Reset Mode	000: Non-Reset	001: V-Reset
			010~111: No function	
			(Prohibited setting. Ple	ease do not use these)
	When D7 is s	et to "0: Auto", a camera will det	ect its operational mode bas	ed on the input trigger signal.
	If the input trig	ger signal is kept at high, the ca	amera operates in the continu	uous mode, assuming the trigger polarity
	is set to positi	ve.		
11H:	[Camera func	tion mode setting 2] Initial data:	32 (20H)	
MOD2[70]	Sets the following camera function modes.			
	D[70]			
	D7 D6	D5 D4 D3 D2 D	1 D0	
	D7	HD / VD direction 00	OH: SP2 and SP3 as inputs	01H: SP2 and SP3 as outputs
		10	to 11H: (Prohibited setting.	Do not set these values)
	D6 to D5	Frame rate 00	OH: 60fps	<u>01H: 90fps</u>
			0H: 30fps	11H: No function
	D4		<u>OFF</u>	1: ON
	D3	Function Mode <u>0:</u>	Trigger Mode	1: Continuous Mode
	D2 to D0:		00: Full scanning	001: 1/2 partial scanning
			10: 1/4 partial scanning	111: Variable partial scanning
	ed setting. Do not set these values)			
	Function mod	e is enabled when the "Continuo	ous/Trigger" mode selection	(MOD[7] is manual (set as 1).
	No video outp	out without the trigger signal inpu	ut while the camera works wi	th the trigger mode.

Command No.		Command Descriptions		
12H:	[Camera function mode setting 3] Initial data: 0			
MOD3[70]	Sets the following camera function modes.			
	D[70]			
	D7 D6 D5 D4 D3 D2	D1 D0		
	D7~D6: Video Out	00: 10bit	01: 8bit	
		10: 12bit		
		11: No function (Prohib	oited setting. Do not set these values)	
	D5: Trigger-in connector selection	0: Camera Link (CC1)	1: /IO connector (No.2 Pin)	
	D4~D3: Exposure Start Mode	00: Normal	01: Reserved trigger	
		10 ~11: H reset		
	D2~D1: No Function	Set always "000"		
	D0 Look-up table (Gamma)	<u>00: OFF</u>	01: ON	
14H:	[Communication mode] Initial Data: 01H			
UART[70]	Sets the communication modes.			
	D[70]			
	D7 D6 D5 D4 D3 D2	D1 D0		
	D7~D2: No Function Se	et always "000000"		
	D1~D0: Communication Mode 00	: 38,400 bps	01: 9,600 bps	
	10	: 57,600 bps	11: 115,200 bps	
1CH:	[AGC maximum limit] Initial data: 255, data	range: 0 to 255		
AGCMAX[70]	Sets the maximum limit for the AGC.			
1DH:	[Target Brightness for ALC] Initial data: 128,	data range: 0 to 255		
ALCTRGT [70]	Sets the target brightness for the ALC functi	on (Auto Luminance Cont	trol).	
1EH:	[ALC mode] Initial data: 0			
ALCMODE[70]	Sets the ALC modes.			
	D[70]			
	D7 D6 D5 D4 D3 D2	D1 D0		
		<u>0: OFF</u>	1: ON	
		Set always "00000"		
		0: OFF	1: ON	
	D0 AE (Auto Exposure)	<u>0: OFF</u>	1: ON	
	When using AE combined with the long exposure, exposure time is controlled regardless of the frame rate.			
	Therefore, the frame rate varies depending	on the exposure time.		

Command No.	Command Descriptions
20H:	[Exposure time (H) of the electronic shutter] Initial Data: SVR[150] = 0, Data Range: 0 to 4095
SVR[70] 21H:	Sets the preset shutter speed (or CCD exposure time) for electronic shutter.
SVR[158]	The preset shutter speed is defined by the following formula.
	Exposure time (shutter speed) = SVR[150] x (1H cycle time) + SHR[150] x (1CLK cycle time)
	Notes:
	 The camera works with the shutter off position (maximum frame exposure time) when both SVR and SHR are set at "0".
	The camera works with the minimum shutter speed when this value is set to 0 and the value of SHR is set between 1 and 306.
	3. The value is replaced with 4095 automatically when the value set greater than 4095.
22H:	[Exposure time (CLK) of the electronic shutter] Initial Data: SHR[150] = 0, Data Range: 0 to 779
SHR[70] 23H:	Sets the preset shutter speed (or CCD exposure time) for electronic shutter.
SHR[158]	The previous section, the preset shutter speed is defined by the following formula:
	Preset shutter speed = SVR[150] x (1H cycle time) + SHR[150] x (1CLK cycle time)
	Note 1: The camera works with the shutter off position (maximum frame exposure time) when both SVR and SHR are set at "0".
	Note 2: The camera works with the minimum shutter speed when SVR is set to 0 and this value is set between 1 and 306.
	Note 3: The value replaces by 779 automatically when the value set greater than 779.
24H:	[Start line of the variable partial scanning] Initial Data: PSR[150] = 0, Data Range: 0 to 493
PSR[70] 25H:	Sets the start line number of the variable partial scanning area.
PSR[158]	Actual start line of the partial scanning = this value + 1
	Note 1: The camera works with full scanning mode when the value of (PSR[] + PWR[]) is greater than 494. Note 2: The value replaces by 493 automatically when the value set greater than 493
	1.12.2 I 12.12.15p.accc 2, 150 dateaccan, mich als value out grouter than 100
26H: PWR[70]	[Effective line numbers in the variable partial scanning] Initial Data: PWR[150] = 494, Data Range: 0 to 494 Sets the number of the total effective lines (image height) in the variable partial scanning mode.
27H:	Ni-to-a-
PWR[158]	Notes: 1. The value replaces by 404 outerestically when the value set greater than 404
	 The value replaces by 494 automatically when the value set greater than 494. The camera works with full scanning mode when the value of (PSR[] + PWR[]) is greater than 2058.

Command No.	Command Descriptions			
28H:	[Delay time for the trigger] Initial Data: DLY[70] = 0, Data Range: 0 to 65,535			
DLY[70]	Sets the delay time from the trigger input signal to the start of the exposure.			
29H				
DLY[158]	At 90 fps: Delay time (us) = 74 x 0.0271606 * DLY[70] = 2.0099 (us) * DLY[70],			
	At 60 fps: Delay time (us) = 74 x 0.0407408 * DLY[70] = 3.0148 (us) * DLY[70],			
	At 30 fps: Delay time (us) = 74 x 0.0814816 * DLY[70] = 6.0296 (us) * DLY[70],			
	where CLK = pixel clock.			
30H	[CDS gain] Initial Data: PGA[70] = 0, data range: 0 to 255			
PGA[70]	Sets the CDS gain (programmable analog gain).			
	CDS gain (dB) = ((PGA[70] + GOFS[70]) * 2 * 0.0351) + 6			
	*GOFS[70]: The gain offset (The value of the address 32H)			
31H DGB[70]	[Digital gain] Initial Data: The factory adjusted value, data Range: 0 to 255			
DGB[70]	Output level = (input level - CLAMP[70]) * (1 + DGB[70] / 128) + clamp level			
	*CLAMP[70]: clamp level (The value of the address 38H)			
32H	[Gain offset] Initial Data: The factory adjusted value, data range: 0 to 255			
GOFS[70]				
38H:	[Clamp level] Initial Data: CLAMP[70] = 9, Data Range: 0 to 255			
CLAMP[70]	Sets the clamp level value of the black level.			
	At 12-bit output: Clamp level = CLAMP[70] x 8 + 56			
	At 10 bit output: Clamp level = (CLAMP[70] x 8 + 56) / 4			
	At 8-bit output: Clamp level = (CLAMP[70] x 8 + 56) / 16			
3EH: TP0[70]	[Test pattern level] Initial data: 768 (300H), data range: 0 to 1023			
3FH:TP0[98]	Sets the output level of the test pattern 4: Raster (variable level) in 10-bit output format.			
54H:	[Delay time (us) for the strobe signal]			
STRBDLY[70]	Initial data: STRBDLY[230] = 0, data range: 0 to 2,000,000			
55H: STRBDLY[158]				
56H:				
STRBDLY[2316]				
58H:	[Strobe signal polarity] Initial data: IOSIGNAL POL[70] = 00H,			
STRBPOL[70]	Sets the strobe signal polarity.			
	D[70]			
	D7 D6 D5 D4 D3 D2 D1 D0			
	D7 to D1 No Function Always set as "0000000"			
	D0: Strobe signal polarity 0: Non-invert 1: Invert			

Command No.	Command Descriptions	
78H:	[Test pattern selection] Initial data: TESTP[70] = 00H	
TESTP[70]	Sets the test pattern output from the camera.	
	D[70]	
	D7 D6 D5 D4 D3 D2 D1 D0	
	D7 to D5 No Function Always set as "000"	
	·	01H: Gray scale
	02H: Horizontal ramp wave	03H: Uniform gray level
		(100% white)
	,	05H: Color bar
	(variable level) 06H: Vertical ramp wave	Others: Black
	Oori. Verticarramp wave	Others. Diack
79H:	[Image effect selection] Initial data: EFFCT[70] = 00H	
EFFCT[70]	Sets the image effect.	
	D[70]	
	D7 D6 D5 D4 D3 D2 D1 D0	
	D7: Negative / Positive video selection <u>0: Positive image</u> D6 No function Always set as "0"	1: Negative image
		ginal\ 01H: 11hit gradation
	D5 to D0: Image effect 00H: No effect (Original Original Origina Original Origina Origina Origina Original Orig	
	04H: 8bit gradation	
	06H: 6bit gradation	-
	08H: 4bit gradation	_
	0AH: 2bit gradation	_
	0C to 3FH: No fund	etion
	(Prohibited setti	ngs. Do not set these values)
80H:	[EEPROM control] Initial data: E2P[70] = 0	
E2P[70]	Sets the image effect.	
	DI7 01	
	D[70] D7 D6 D5 D4 D3 D2 D1 D0	
	D74 D0 H (//	
	D7 to D2: No function	Always set as "000000"
	D1: Register synchronous update with the EEPROM data D0: Write control to the EEPROM	0: Prohibited 1: Accept
	Do. White control to the EEFROW	0: Prohibited 1: Accept
	Note: This bit is cleared to "0" automatically by the internal processes after	er the execution of the command.
94H:	[Active time (us) for the strobe signal] Initial data: STRB[230] =0, data ra	ange: 0 to 2,000,000
STRB[70]	Sets active time for the strobe signal.	
95H:		
STRB[158] 96H:		
96H. STRB[2316]		
0111D[2010]		

Command No.	Command Descriptions		
A0H:	[Pixel defect correction mode] Initial data: PDC0[70] = 0		
PDC0[70]	D[70]		
	D7 D6 D5 D4 D3 D2 D1 D0		
	D7: Write the correction index $0 \rightarrow 1$		
	*Writes the coordinates of the command, A2 to A5, to the index number specified by the		
	command A1.		
	*This bit is cleared to "0" automatically after the execution of the command.		
	D6 Read the correction index $0 \rightarrow 1$		
	*Reads the coordinates of the index number specified by A1 and loads them to the command,		
	A6 to A9.		
	*This bit is cleared to "0" automatically after the execution of the command.		
	D5: Save to the EEPROM $0 \rightarrow 1$		
	*Writes the coordinates of all 16 index numbers to the EEPROM.		
	*This bit is cleared to "0" automatically after the execution of the command.		
	D4 to D2 No function Always set as "000"		
	D1 Correction indices display <u>0: OFF</u> 1: ON		
	D0 Pixel defect correction <u>0: OFF</u> 1: ON		
A1H:	[Pixel defect correction index number]Initial data: PDC1[70] = 0, data range: 0 to 15		
PDC0[70]	D[70]		
	D7 D6 D5 D4 D3 D2 D1 D0		
	D7 to D4: No function Always set as "0000"		
	D3 to D0: Index number		
A2H:	[PDC X coordinate (Write)]		
PDC_WX[70]	Initial data: PDC_WX[150] =0, data range: 0 to the number of horizontal pixels of the effective area		
A3H	Set the X coordinate of pixel defect.		
PDC_WX[158]			
A4H:	[PDC Y coordinate (Write)]		
PDC_WY[70]	Initial data: PDC_WY[150] = 0, data rage: 0 to the number of vertical pixels of the effective area		
A5H	Sets the Y coordinate of pixel defect.		
PDC_WY[158]			
A6H:	[PDC X coordinate (Read)]		
PDC_RX[70]	Initial data: PDC_RX[150] = 0, data rage: 0 to the number of vertical pixels of the effective area		
A7H	The X coordinate of pixel defect will be loaded when reading.		
PDC_RX[158]			
A8H:	[PDC Y coordinate (Read)]		
PDC_RY[70]	Initial data: PDC_RY[150] = 0, data rage: 0 to the number of vertical pixels of the effective area		
A9H	The Y coordinate of pixel defect will be loaded when reading.		
PDC_RY[158]			
C0H: [70]	[Lower limit of the electronic shutter] Initial data: 1; data range: 0 to 4,095		
C1H: [70]	Sets the upper limit of the electronic shutter in horizontal lines when using AE (auto exposure).		
C2H: [70]	[Upper limit of the electronic shutter] Initial data: 4,095; data range: 0 to 4,095		
C3H: [70]	Sets the upper limit of the electronic shutter in horizontal lines when using AE (auto exposure).		

Command No.	Comma	nd Descriptions	
C5H: [70]	[Look-up table (Gamma)] Initial data: [70] = 00H		
	D[70]		
	D7 D6 D5 D4 D3 D2 D1 D0		
		<u>ys set as "00000"</u>	
	D2: Look-up table (RAM) <u>0: Of</u>		
	D1: Look-up table upload <u>0: R/</u>	AM only 1: RAM and ROM	
	D0: No function <u>Alwa</u>	ys set as "0"	
F0H:[70]	[Signal selection for the I/O connector] Initial data: [70] = the value of 00H, data range: 0 to 15 Sets the signals of the I/O connector. D[70] D7 D6 D5 D4 D3 D2 D1 D0		
	D7 to D4: No function	Always set as "0000"	
	D3~D0: The signals of the /IO connector select	tion <u>0H: Option 0</u> 1H: Option 1	
		2H: Option 2 3H: Option 3	
		4H: Option 4 5H: Option 5	
		6H: Option 6	
		7H to FH: No function	
		(Prohibited settings. Do not set these values)	
	Please refer to the table 3 I/O Connector Settings for	the details.	

Revision History

Rev	Date	Changes	Note
1.00	2012/06/20	Initial Release	
1.01		Updated	
		Camera Output Timing	
		Horizontal Timing	
		Communication Protocol	
		20-21H SVR	
		78H Test pattern	
		79H Pasteurization	
		Deleted F1H command due to test use only
