

**R**Russound®

# CAV6.6-S2 System

6-Zone, 6-Source  
Audio/Video Controller Amplifier

INSTRUCTION MANUAL

# IMPORTANT SAFEGUARDS

**WARNING: TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK, DO NOT EXPOSE THIS APPLIANCE TO RAIN OR MOISTURE.**

**CAUTION: TO REDUCE THE RISK OF ELECTRIC SHOCK, DO NOT REMOVE COVER. NO USER - SERVICEABLE PARTS INSIDE. REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.**

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

## POWER CORD NOTICE FOR INTERNATIONAL OPERATION

For 230V, 50Hz operation please select the power cord for your area. Select the plug for your area at one end and a IEC320 connector at the other. It is not necessary to make any other changes. If you have any questions please call Russound Inc. at 1-800-638-8055 or 603-659-5170

## Safety Instructions:

1. Read Instructions - All the safety and operating instructions should be read before the appliance is operated.
2. Retain Instructions - The safety and operating instructions should be retained for future reference.
3. Heed Warnings - All warnings on the appliance in the operating instructions should be adhered to.
4. Follow Instructions - All operating and user instructions should be followed.
5. Water and Moisture - The appliance should not be used near water; for example, near a bathtub, wash-bowl, kitchen sink, laundry tub, in a wet basement, or near a swimming pool.
6. Carts and Stands - The appliance should be used only with a cart or stand that is recommended by the manufacturer. An appliance and cart combination should be moved with care. Quick stops, excessive force and uneven surfaces may cause the appliance and cart combination to overturn.
7. Wall or ceiling Mounting - The appliance should be mounted to a wall or ceiling only as recommended by the manufacturer.
8. Ventilation - The appliance should be situated so that its location or position does not interfere with its proper ventilation. For example, the appliance should not be situated on a bed, sofa, rug, or similar surface that may block the ventilation openings, or placed in a built-in installation, such as a bookcase or cabinet that may impede the flow of air through the ventilation openings.

9. Heat - The appliance should be situated away from heat sources such as radiators, heat registers, stoves, or other appliances (including amplifiers) that produce heat.
10. Power Sources - The appliance should be connected to a power supply only of the type described in the operating instructions or as marked on the appliance.
11. Grounding or Polarization - Precaution should be taken so that the grounding or polarization means of an appliance is not defeated.
12. Power Cord Protection - Power supply cords should be routed so that they are not likely to be walked on or pinched by items placed upon or against them, paying particular attention to cords at plugs, receptacles, and the point where they exit from the appliance.
13. Cleaning - The appliance should be cleaned only as recommended by the manufacturer.
14. Non-use Periods - The power cord of the appliance should be unplugged from the outlet when left unused for a long period of time.
15. Object and Liquid Entry - Care should be taken so that objects do not fall and liquids are not spilled into the enclosure through the openings.
16. Damage Requiring Service - The appliance should be serviced by qualified service personnel when:
  - A. The power supply cord or the plug has been damaged; or
  - B. Objects have fallen, liquid has been spilled into the appliance; or
  - C. The appliance has been exposed to rain; or
  - D. The appliance does not appear to operate normally; or
  - E. The appliance has been dropped or the enclosure is damaged.
17. Servicing - The user should not attempt to service the appliance beyond that described in the operating instructions. All other servicing should be referred to qualified service personnel.

## Precautions:

1. Power – WARNING: BEFORE TURNING ON THE POWER FOR THE FIRST TIME, READ THE FOLLOWING SECTION CAREFULLY. All models are designed for use with either AC120V, 60Hz or AC240, 50Hz voltages. The unit will autoswitch to either of these voltages
2. Do Not Touch The CAV6.6 With Wet Hands – Do not handle the CAV6.6 or power cord when your hands are wet or damp. If water or any other liquid enters the CAV6.6 cabinet, take the CAV6.6 to a qualified service person for inspection.
3. Location of CAV6.6 – Place the CAV6.6 in a well - ventilated location. Take special care to provide plenty of ventilation on all sides of the CAV6.6 especially when it is placed in an audio rack. If ventilation is blocked, the CAV6.6 may overheat and malfunction. Do not expose the CAV6.6 to direct sun light or heating units as the CAV6.6 internal components temperature may rise and shorten the life of the components. Avoid damp and dusty places.
4. Care – From time to time you should wipe off the front and side panels of the cabinet with a soft cloth. Do not use rough material, thinners, alcohol or other chemical solvents or cloths since this may damage the finish or remove the panel lettering.

# USER SECTION

## Component Guides

Explains front panel features of the CAV6.6 controller, UNO-S2 keypad, optional UNO-S1 keypad and UNO-LRC1 remote control.

## Operation

Step-by-step outline of the system's normal operation, plus a look at adjustable features available through the User Menu.

## PRODUCT INTRODUCTION

Thank you for choosing the Russound® CAV6.6-S2 System to enhance your home with distributed audio and video. This system's state-of-the-art features and components blend seamlessly with your unique lifestyle and preferences.

Besides distributing and controlling six A/V sources to six rooms (zones), your CAV6.6-S2 System offers many features that increase your enjoyment of living. Here are several features that you may find particularly beneficial.

### **Favorites**

The UNO™-S2 keypad's F1 and F2 buttons are preset favorites. These easy-to-set buttons make it possible to hear your favorite radio station or watch your favorite satellite channel at just the right volume in your room with just a button push. Want something new? Just re-save the Favorite with a new choice.

### **Do Not Disturb**

The Do Not Disturb mode prevents unwanted interruptions in your room and stops changes to your selected A/V source. You may have a nursery or study that you want to keep quiet, or maybe you are watching a DVD and don't want it interrupted. Simply set the Do Not Disturb mode to "on" using the User Menu, and be free from paging, Party Mode interaction and system-wide functions like "All On" or "All Off."

### **Party Mode**

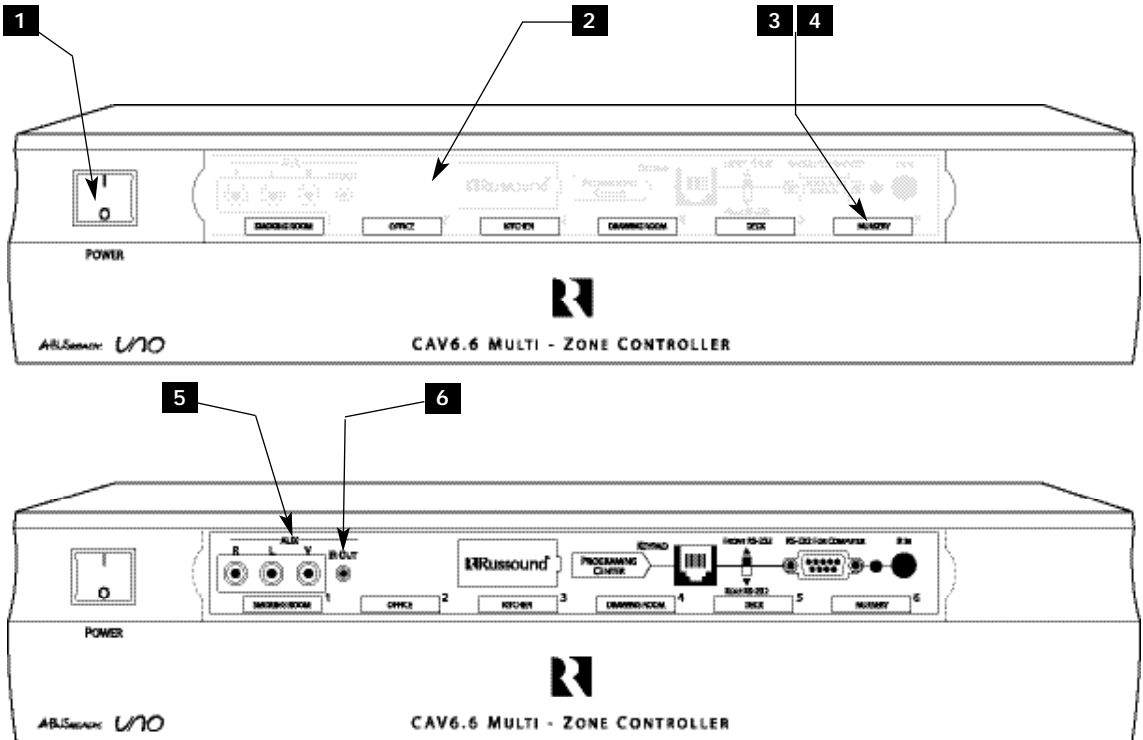

Ready to set the mood? In Party Mode, you just pick the source and the sound settings and hear the music throughout all the rooms. The Master keypad simultaneously controls all the keypads in all the rooms to effortlessly select or control the components. A great benefit of the Party Mode feature is the ability to transfer the Master keypad mode to any keypad in the system. If the living room is the center of the party, use that room's keypad as Master. If the party moves to the sunroom and porch, that room's keypad can be set to Master instead.

### **Front (Aux) A/V In**

This handy feature lets you easily hook up an additional temporary audio/video source through the front of the controller. This way, your teenager can set up a game console when his friends come over, and easily take it down without having to leave the games set up in the living room. Or your family can watch the video camera playback of the holiday gathering while everyone is still there.

Here at Russound we are proud to continue providing innovative and intuitive A/V product solutions to the world. When you link the industry-leading CAV6.6-S2 system with Russound's commitment to its products and customers, you have truly made – "the right connection."

**CAV6.6 Controller-Front Panel**

- 1** MAIN POWER SWITCH - Supplies power to the CAV6.6
- 2** REMOVABLE COVER LENS - Covers the connections on the front of the CAV6.6
- 3** ROOM LED ON/OFF INDICATORS - Indicates when a room is on (green) or off (red)
- 4** ROOM LABEL WINDOW - Holds the selected room Label (included)
- 5** AUX A/V LINE INPUTS - Supports connection of a seventh A/V source to the CAV6.6
- 6** AUX IR OUT PORT - Connects IR emitter for IR control of the Aux A/V source component

# USER COMPONENT GUIDE

## CAV6.6 Controller-Front Panel

### Front A/V AUX Connections

The AUX Input is located to the right of the power switch on the front panel. Connect the Left, Right, and Video Input Connectors to the source component using quality RCA signal cables.

The AUX IR jack adjacent to the line input accepts an IR Emitter with a 1/8" plug (e.g., Russound 845.1 IR emitter). The emitter's other end attaches to the IR window of the component to control the auxiliary source.

**UNO-S2 Keypad-Front Panel**

- 1** LCD PANEL - 12-character backlit display shows status of the room, source, volume, and more
- 2** SOURCE SELECT BUTTON - Scrolls through the sources directly connected to the CAV6.6. Press and hold brings up the USER MENU for loudness, bass, treble, etc.
- 3** VOLUME UP/DOWN BUTTONS - Raises and lowers the volume for the room
- 4** IR RECEIVER - Receives IR signals and passes them to the controller and source equipment. Also used when operating the UNO Keypad by using the UNO-LRC1 remote
- 5** COMMAND KEYS - Pressing the command keys controls the source equipment
- 6** POWER BUTTON - Turns room ON or OFF when pressed once, press and hold a second time will turn on or off all CAV6.6 rooms
- 7** F1 AND F2 BUTTONS - Selects Favorite 1 or Favorite 2 - preset user-selected favorite settings per room

# USER COMPONENT GUIDE

## Optional UNO-S1 Keypad-Front Panel

- 1** LCD PANEL - 5-character backlit display shows source, volume and room status (messages scroll, then display first 5 characters of message)
- 2** SOURCE SELECT - Scrolls through the available sources. Press and hold brings up the USER MENU for loudness, bass, treble, etc.
- 3** VOLUME UP/DOWN BUTTONS - Raises and lowers the volume for the room
- 4** IR RECEIVER - Receives IR signals and passes them to the controller and source equipment. Also used when operating the UNO Keypad by using the UNO-LRC1 remote
- 5** POWER BUTTON - Turns room ON or OFF when pressed once, press and hold a second time will turn on or off all rooms
- 6** COMMAND KEYS - Pressing the command keys controls the source equipment

 - **FORWARD** (press)  
 - **DISC, CHANNEL UP** (press and hold)

 - **REVERSE** (press)  
 - **DISC, CHANNEL DOWN** (press and hold)

## UNO-LRC1 Remote Control

- 1** LOCAL DEVICE BUTTONS - Select local source to be controlled by UNO-LRC1.
- 2** SETUP - Use for programming UNO-LRC1 using the built-in library or by learning-in codes.
- 3** UNO SOURCE BUTTON - Selects UNO Keypad for control by UNO-LRC1.
- 4** ROOM ON/OFF - Turns room on and off while in the UNO mode.
- 5** NUMBER BUTTONS - Buttons (0-9) for direct selection of channels or tracks.
- 6** INPUT - Scrolls through sources connected to the CAV6.6 while in the UNO mode.
- 7** COMMAND KEYS - Control the VCR, DVD, or CD player with these buttons.
- 8** INPUT - Directly select A/V sources connected to the CAV6.6 while in the UNO mode.
- 9** F1 AND F2 BUTTONS - Selects Favorite 1 or Favorite 2 preset selections.
- 10** CURSOR KEYS - Issues IR commands for source equipment, allowing movement through menus and program screens.
- 11** VOLUME UP/DOWN - Raises and lowers the volume for the room you are in.

# USER OPERATION

## CAV6.6 Controller

### Main Power and Zone Status

The power switch for the CAV6.6 controller is "on" in the up position. Any active room is indicated on the front of the controller by a green backlit label, which shows red when the room is inactive. In most basic installations, all functions and room settings are controlled through the corresponding UNO System Keypads.

## UNO-S2 Keypad

-  - **POWER**
-  - **STOP**
-  - **PAUSE**
-  - **FAVORITE 1**
-  - **FAVORITE 2**
-  - **SOURCE**
-  - **VOLUME UP**
-  - **VOLUME DOWN**
-  - **DISC, CHANNEL UP**
-  - **DISC, CHANNEL DOWN**
-  - **FORWARD**
-  - **REVERSE**
-  - **PLAY**
-  - **IR RECEIVER**

- 1** MODE:
  - "DND"- Do Not Disturb
  - "SHARED"- Same source selected in multiple rooms
  - "SYS-ON"- Indicates system on
  - "PARTY"- Party Mode enabled
  - "MASTER"- Master Keypad in Party Mode
- 2** 12-character display
- 3** Volume Indicator
- 4** Indicates the middle of setting range

## UNO-S2 Keypad Button Functions

### Zone On/Off

Press and release  to turn on the UNO System Keypad. This also turns on the corresponding CAV6.6's room, and any presets previously assigned will be activated, including settings for bass, volume, last source selected, etc. Press and release  to turn off the UNO System Keypad. This will also put the corresponding CAV6.6's room into a standby state.

### System All On/Off

An "All On" command is issued by pressing  and holding for 3 seconds, after an initial room has been turned on. An "All Off" command can be issued to all rooms by pressing and holding  after the room has been turned off.

### System On Indicator

When the room is off, but the system is on in another room,  is illuminated by a green backlight and the "SYS ON" icon remains visible.

### Source Select Button

 scrolls through the six A/V source inputs and the Aux source. To change sources, press and release . As the sources are sequentially selected, each source's name appears on the keypad LCD panel. When a source is selected in more than one room, the "SHARED" icon will appear on all UNO Keypads using that source.

 is also used to enter the User Menu with a press and hold action. (See next page for User Menu)

### Volume Up/Down Buttons

The room's audio output is adjusted using .

### F1 and F2 Buttons

The  and  buttons are user favorite presets. These presets can be selected at any time to recall source selection, volume, and favorite channel, disk, etc. To store a favorite preset: first, adjust the room settings and select a source to be stored. Next, press and hold the desired  or  button until SAVED is displayed on the LCD panel. Now a press and release of the button will recall the favorite preset. To set a favorite numbered disk or channel, use  or  to select a disk or channel (e.g., channel 45). Wait for the keypad to show the source name, then press and hold the F1 or F2 within 15 seconds of setting the numeric selection to save the setting.

### Command Keys

The command keys allow control of the selected source at the UNO Keypad. The command keys are activated with a press and release, or press and hold to access secondary functions.

# USER OPERATION

## UNO-S2 User Menu - Setting Preferences

The User Menu allows the user to adjust the audio properties and control functions of a particular room.

The following keys are used to navigate and make changes while using the User Menu:

To enter the User Menu, press and hold  during normal operation. To exit the User Menu, press and release .

-  Adjust feature setting (increment).
-  Adjust feature setting (decrement).
-  Go to next feature.
-  Go to previous feature.
-  View current feature setting.

The following features make up the User Menu:

BASS  TREBLE  LOUDNESS  BALANCE   
 TURN ON VOL  BG COLOR  DO NOT  
DSTRB  PARTY MODE  FRONT A/V IN 

### Feature and Setting:

- 1. BASS**  
-10 < Bass:Flat > +10
- 2. TREBLE**  
-10 < Treble:Flat > +10
- 3. LOUDNESS** (more bass, fuller sound)  
On or Off
- 4. BALANCE**  
Left -10 < Center > Right +10
- 5. TURN ON VOL** (default room volume level)  
0 to 100
- 6. BG COLOR** (keypad background light)  
Amber or Green or Off

### 7. DO NOT DSTRB - On or Off (default)

Do Not Disturb means do not disturb this room or selected source. This stops pages from being sent to this room, stops an "All Off," "All On" or Party Mode command from affecting this room.

When another UNO Systems Keypad selects the same source, a DND icon will appear alerting the user the source is in Do Not Disturb mode.

### 8. PARTY MODE - Master (Enable) or Off (Disable)

When in "PARTY MODE" the system is primarily controlled by a "MASTER" keypad. Party Mode links all rooms to the same source which is selected by the Master Keypad room. Any keypad in the system can become a Master keypad (if enabled) but only one Master Keypad may exist at a time in Party Mode. Selecting Master keypad mode from another keypad will transfer Master keypad control to that room and release it from the first. When the source selected in the Master keypad room is changed then the source for all rooms changes as well.

Volume level changes at the Master Keypad will be reflected in all rooms in Party Mode. Non-Master zones in Party Mode can temporarily override Master Keypad volume level adjustments for their particular room preference. F1 and F2 favorite presets selected from the Master Keypad will be enabled in all rooms in Party Mode. Master Keypad will not change Bass, Treble, or Loudness adjustments for any other rooms other than the Master Keypad room. Every other keypad will still operate its respective bass, treble, balance and loudness adjustments for that room.

### 9. FRONT (AUX) A/V IN - Enabled or Disabled

Allows the system to select a seventh source option through the controller's front panel AUX connection for use with camcorders, game consoles, etc.

## Optional UNO-S1 Keypad Button Functions

The optional UNO-S1 keypad operates in a similar manner as the UNO-S2 keypad.

### Zone On/Off

Press and release  to turn on the UNO System Keypad. This also turns on the corresponding CAM6.6's room, and any presets previously assigned will be activated, including settings for bass, volume, last source selected, etc. Press and release  to turn off the UNO System Keypad. This will also put the corresponding CAM6.6's room into a standby state.

### System All On/Off

An "All On" command is issued by pressing  and holding for 3 seconds, after an initial room has been turned on. An "All Off" command can be issued to all rooms by pressing and holding  after the room has been turned off.

### System On Indicator

When the room is off, but the system is on in another room,  is illuminated by a green backlight and the "SYS ON" icon remains visible.

### Source Select Button

 scrolls through the six audio source inputs. To change sources, press and release . As the sources are sequentially selected, each source's name appears on the keypad LCD

panel. When a source is selected in more than one room, the "SHARED" icon will appear on all UNO Keypads using that source.  is also

used to enter the User Menu with a press and hold action. (See next page for User Menu)

### Volume Up/Down Buttons

The room's audio output is adjusted using .

### Command Keys

The command keys   allow control of the selected source at the UNO Keypad. The command keys are activated with a press and release, or press and hold to access secondary functions.

# USER OPERATION

## Optional UNO-S1 User Menu - Setting Preferences

The UNO-S1 User Menu allows the user to adjust the audio properties and control functions of a particular room.

To enter or exit the User Menu, press and hold  during normal operation. The following keys are used to navigate and make changes while using the User Menu:

-  Press and hold to adjust feature setting (increment)
-  Press and hold to adjust feature setting (decrement)
-  Go to next feature.
-  Go to previous feature.
-  View current feature setting.

### UNO-S1 User Menu

Note: When within the UNO-S1 User Menu, if no keys are pressed, the display will revert back to its runtime display.

The following features make up the User Menu:

Bass  Treb  Loud  Bal  OnVol   
Bkgnd  DND  Party  FrtAV 

### Feature and Setting:

1. **Bass** -10 < Bass:Flat > +10
2. **Treb (Treble)** -10 < Treble:Flat > +10
3. **Loud (Loudness)** (more bass, fuller sound)  
On or Off
4. **Bal (Balance)** Left 10 < Center > Right 10
5. **OnVol (Turn on Volume)** (default room volume level) 0 to 100 (in steps of 2)
6. **Bkgnd (Background Color)** (keypad background light) Amber or Green or Off
7. **DND (Do Not Disturb)** - On or Off (default)

Do Not Disturb means do not disturb this room or selected source. This stops pages from being sent to this room, stops an "All Off," "All On" or

Party Mode command from affecting this room. When another UNO Systems Keypad selects the same source, a DND message will scroll on the LCD panel, alerting the user the source is in Do Not Disturb mode.

### 8. Party (Party Mode) - Master or Off

When in "PARTY MODE" the system is primarily controlled by a "MASTER" Keypad. Party Mode links all rooms to the same source which is selected by the Master Keypad room. Any keypad in the system can become a Master Keypad (if enabled) but only one Master Keypad may exist at a time in Party Mode. Selecting Master Keypad mode from another keypad will transfer Master Keypad control to that room and release it from the first. When the source selected in the Master Keypad room is changed then the source for all rooms changes as well. The keypad will scroll a PARTY message on the LCD panel. It will scroll a MASTR message in lieu of PARTY if Master is enabled.

Volume level changes at the Master Keypad will be reflected in all rooms in Party Mode. Non-Master zones in Party Mode can temporarily override Master Keypad volume level adjustments for their particular room preference. Master Keypad will not change Bass, Treble, or Loudness adjustments for any other rooms other than the Master Keypad room. Every other keypad will still operate its respective bass, treble, balance and loudness adjustments for that room.

### 9. FrtAV (Front A/V Aux In) - Enabled/Disabled

Allows the system to select a seventh source option through a controller's front panel AUX connection for use with camcorders, game consoles, etc.

# INSTALLER SECTION

## **Getting Started**

Includes an installation overview, including tools needed and wiring instructions.

## **Component Guides**

Reviews front and back panel features of the CAV6.6 controller and the UNO-S2 keypad.

## **Keypad Installation**

Explains UNO-S2 keypad installation and wiring.

## **Making Connections**

Details front and back panel connections of the controller and the keypad.

## **Firmware Updates**

Overview of firmware update procedures for UNO-S2 and CAV6.6, and PC Power Tool program.

## **System Installation Overview**

Outlines the programming planning process, and includes information forms to complete prior to programming.

## **Installation Menu**

Explains the programming menus that set up controller, keypad, source, and zone operations.

## **Setup Menu Flow Charts**

Presents the programming menus in a graphical flow chart format.

Do not connect the controller's main power feed until all other connections have been made and verified. Live connection or removal of the keypad wiring or other wiring when the system is powered can cause communication problems in the network. Double-check terminations during each phase of the installation to prevent accidental damage. Incorrect wiring is the number one cause for non-warranty product damage.

# INSTALLER

## GETTING STARTED

### Unpacking the System Components

- Keep the original carton and packing materials for future shipment or storage.
- Check for any visible signs of damage. If you encounter any concealed damage, consult your Russound dealer before proceeding to install the unit.
- Retain the sales receipt as it establishes the duration of the limited warranty and provides information for insurance purposes.

### CAV6.6-S2 System Components:

- 1 (one) CAV6.6 Controller/Amplifier
- 6 (six) UNO-S2 System Control Keypads
- 1 (one) UNO-LRC1 Learning/Preprogrammed Remote Control
- 6 (six) 845.1 Micro Emitters

### Tools needed for installation:

- Drill with a 1/2" x 6" drill bit
- Keyhole saw
- Flat head screwdriver (medium size)
- Phillips Screwdriver (cordless recommended)
- 110 punchdown tool (included)
- Modular RJ-45 crimper and connectors
- Pair of diagonal cutters or wire strippers
- Stud finder
- Steel wire fish tape
- Cable staples
- PLASTIC double-gang electrical work boxes

### System Installation Considerations

There are several factors to consider before installing the Russound CAV6.6-S2 system:

- What are the intended listening zones, and what zones require audio and video distribution or audio only?
- Are A-BUS<sup>®</sup> sub-zones needed? A-BUS sub-zones are only available for zones 1 - 4. The A-KP2 amplified keypad can provide direct source selection for only the first four sources when in 'Multi' source mode.
- What system options and accessories might be required for features such as paging, local sources, etc.?
- From where in each zone will the user prefer to control the system? Where will the keypads be located? Where will the speakers be located?
- Where will the source equipment be located? The CAV6.6 must have proper ventilation above and below for air circulation and heat dissipation. A rack-mount location may require fans and vents.

### Connection Tips

- It is recommended that the CAV6.6 and the source equipment be plugged into a dedicated 20-amp circuit with an isolated ground. A power line conditioner can reduce interference problems caused by noise found in some electrical systems.
- Disconnect all live power cords before making connections to the controller.
- Verify that all connections and polarity are correct.
- Keep all power cords away from all signal cables to prevent humming from induced noise.
- Choose reliable signal cables/patch cords.
- Label all wires with room location at both ends of the wire.

## RJ-45 Connections

The CAT-5 T568A wiring standard shown on the right is used for the RJ-45 terminations.

## Keypad Wiring

For the UNO keypad, the following connections are used to terminate the CAT-5 wire to the 110 punchdown on the keypad:

<u>CAT-5 WIRE COLOR</u>	<u>TYPE</u>
Brown . . . . .	+12V
Brown/White . . . . .	+12V
Green . . . . .	Ground
Green/White . . . . .	Status In
Orange . . . . .	Ground
Orange/White . . . . .	IR Out
Blue . . . . .	COM A
Blue/White . . . . .	COM B

- To determine the amount of CAT-5 wire required for the system installation, first decide how many keypads will be used, then determine the distance between each intended keypad location to the intended CAV6.6 location. The maximum recommended wire run length is 250 feet for each UNO Keypad.
- Make sure that the entire wire path between keypads and CAV6.6 is clear and not obstructed by a floor ceiling joist, or masonry wall which can't be drilled through.

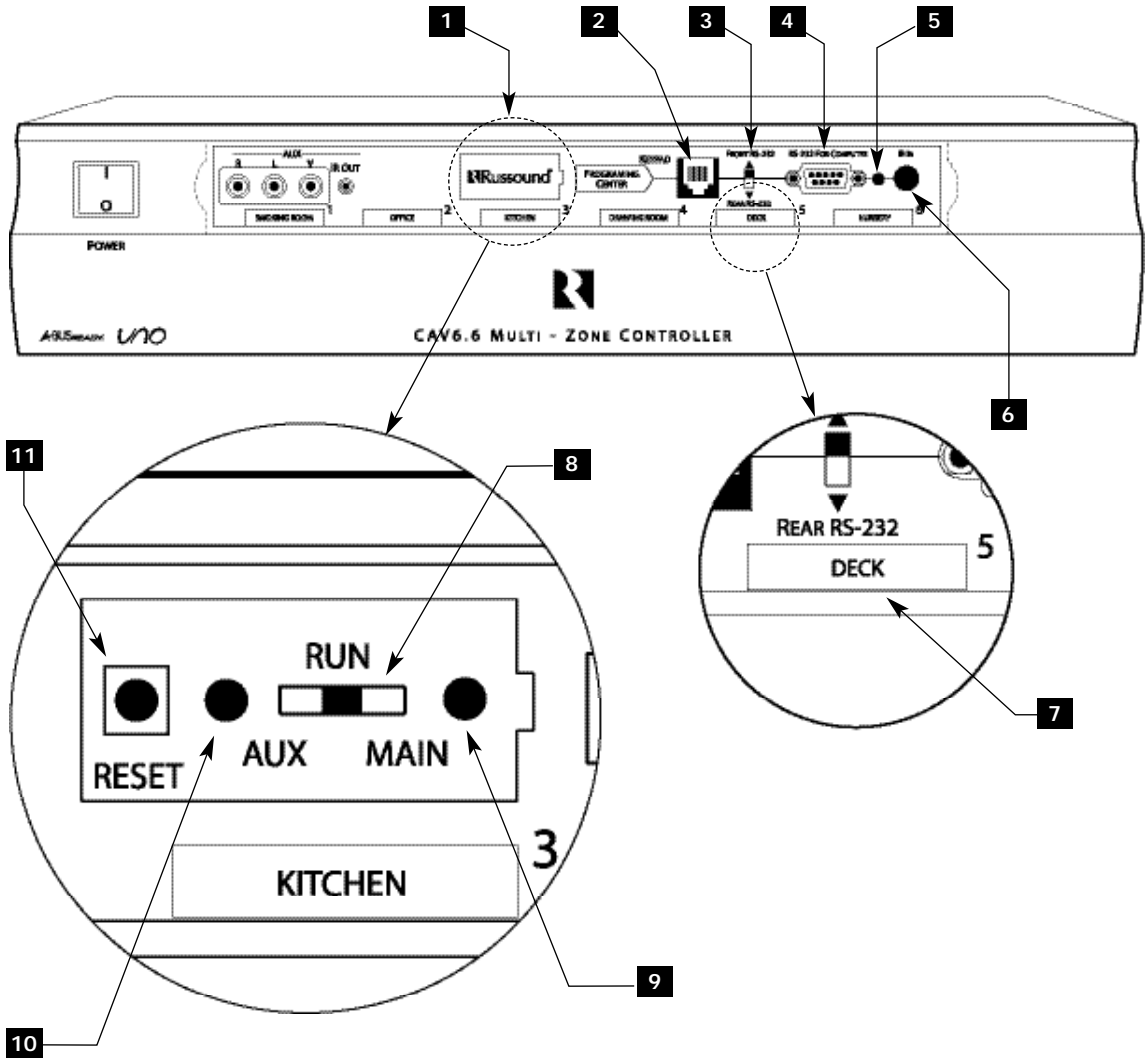

- Confirm ahead of time that you can drill an outlet hole easily and in an unobtrusive spot to connect wires with the CAV6.6.
- Label wires with keypad and room location. This simplifies CAV6.6 hook-up once the keypads and speakers are installed.
- If you plan to use an additional IR receiver with an UNO keypad, first determine the location of the IR receiver, then measure the distance from the intended location to the UNO keypad location. Incorporating optional IR receivers will require additional wire. Consult the selected IR receiver model's manual for the specific wire needs.

## Speaker Wiring

- Standard 16-gauge 4-conductor stranded speaker wire can be run up to to 125 feet; 14-gauge wire can be run up to 250 feet.
- When running wire, pay particular attention to the following areas:
  - Avoid locations concealing pipes, heating ducts and AC wiring in the general vicinity.
  - Avoid running wires close to house electrical wiring for any distance. If you have to run them parallel, make sure to space the wires at least two feet from the AC line.

# INSTALLER COMPONENT GUIDE

## CAV6.6 Controller-Front Panel

## **CAV6.6 Controller-Front Panel**

- 1** PROGRAM SELECTOR COVER - Protects the Program Selector Switch
- 2** KEYPAD PROGRAMMING PORT - Accepts an RJ-45 terminated UNO keypad to program certain features of the CAV6.6
- 3** FRONT/REAR RS-232 SWITCH - Selects front or rear RS-232 connection for optional PC connection during programming
- 4** RS-232 INTERFACE - The RS-232 Interface on the front and on the rear, allows the zones to be controlled by PC or other devices that have an RS-232 Interface. The RS-232 Interface also allows for software updates
- 5** IR CONFIRMATION LED - IR Learning and preprogrammed IR output confirmation LED.
- 6** IR RECEIVER - Receives IR signal when learning IR codes into the CAV6.6
- 7** ZONE LABEL - Selectable backlit labels identify active zones
- 8** OS PROGRAM SELECTOR SWITCH - Selects between Main and Aux Micro-controller IC when updating the CAV6.6 OS software.
- 9** MAIN LED - Illuminates when the Main Micro-Controller IC is selected to be programmed
- 10** AUX LED - Illuminates when the AUX IC is selected to be programmed
- 11** RESET BUTTON - Resets the CAV6.6 when OS updates are completed

# INSTALLER COMPONENT GUIDE

## CAV6.6 Controller-Rear Panel

- 1** ZONE 12VDC TRIGGER OUT - 12VDC 50ma is available whenever the corresponding zone is turned on
- 2** UNO KEYPAD PORTS - One UNO Keypad Port for each of the six CAV6.6 Zones
- 3** 24VDC 2.5A INPUT - Provides power to the A-BUS READY SUB-ZONES when used with a 24VDC 2.5A power supply (e.g., Russound A-PS)
- 4** ZONE AUDIO/VIDEO OUTPUTS - Variable line audio with fixed video, used to connect to an external amplifier and television monitor
- 5** AUDIO/VIDEO SOURCE LOOP OUTPUTS - Six sets of buffered Audio/Video Line Level Loop Output connections
- 6** AC 240V-AC 110V Switch - Switches A/C input Voltage between 110VAC and 240VAC
- 7** AC 120/240 INPUT - Grounded 3-terminal plug detachable power cord connection for the CAV6.6
- 8** FUSE HOLDER - Holds a replaceable fuse for A/C input connection  
110VAC operation-F 3A H 250V, 240VAC operation-F 1.25A H 250V
- 9** SOURCE IR OUTPUTS - Six routed source-specific IR Output jacks allow for IR control of source equipment

## **CAV6.6 Controller-Rear Panel**

- 10** SPEAKER OUTPUTS - Connect 8 Ohm speakers for each zone by using detachable color-coded modular snap connectors
- 11** AUDIO/VIDEO INPUTS - Six sets of Audio/Video Line Level input connections for CAV6.6 source components
- 12** ACC IR OUTPUT - ACC IR Output jack will pass all IR signals from all keypads
- 13** PAGE LINE LEVEL AUDIO GAIN CONTROL - Adjusts the Line Level Audio Page Input
- 14** PAGE A/V INPUTS - RCA jacks allow for one Audio/Video Page Input. Signal sensing is used on Page Audio In to initiate a page
- 15** PAGE 12VDC TRIGGER OUT - Page Trigger Out supplies 12VDC whenever 12VDC is applied to the Page 12VDC Trigger In
- 16** PAGE 12VDC TRIGGER IN - Applying 12VDC to the Page 12VDC Trigger In jack will activate Audio/Video Page for assigned CAV6.6 Zones and initiate a page (overrides signal sense)
- 17** HOME THEATER 12VDC TRIGGER IN - 12VDC input jack notifies the CAV6.6 that additional A/V components are active, e.g., home theater equipment
- 18** 12VDC TRIGGER OUT - 12VDC 50ma Trigger Out turns on when any zone is on
- 19** A-BUS READY SUB-ZONES - A-BUS Amplified Control Modules and Hubs can be added for additional sub-zones of audio (Zones 1 to 4 only)
- 20** R-NET LINK IN AND LINK OUT - Links multiple CAV6.6's, also links future Russound components that are R-NET compatible
- 21** RS-232 INTERFACE - The RS-232 Interface on the rear and on the front, allows the zones to be controlled by PC or other devices that have an RS-232 Interface. The RS-232 Interface also allows for software updates and programming

# INSTALLER COMPONENT GUIDE

## UNO-S2 Keypad-Front Panel

- 1** SETUP BUTTON - Activates Installer Setup Mode for the UNO-S2 keypad
- 2** OS UPDATE PORT - Port used for UNO keypad OS software updates

## UNO-S2 Keypad-Rear Panel

- 1** EXTERNAL IR RECEIVER IN CONNECTOR - Connection for an external IR Receiver.
- 2** OS UPDATE JUMPER - Selects "Run" or "OS Update" mode.
- 3** RESET BUTTON - Reset whenever changing from RUN to OS update
- 4** 110 PUNCHDOWN CONNECTOR - Termination for CAT-5 connection between the UNO-S2 Keypad and the CAV6.6 controller.

# INSTALLER

## UNO-S2 KEYPAD-INSTALLATION

### Keypad Location

The best infrared remote performance is achieved with the keypad away from any direct sunlight, plasma TV, and low voltage lighting controls. Also consider convenience when choosing a location.

Choose a place that is easily seen from the position where a person is most likely to be located.

Check whether or not you can route the wire to the location you have chosen.

### Keypad Installation

To install a double-gang keypad, you will need to use a UL/CSA approved plastic double-gang electrical box (Do not use metal boxes).

Route CAT-5 wire to the junction box from the CAV6.6.

Use the supplied 110 punchdown tool to connect each wire to its corresponding color labeled on the punchdown terminal.

Ensure jumper settings on keypads are in the run positions.

Mount the keypad in the electrical box and attach the cover plate. Repeat the steps until all keypads are installed.

# INSTALLER

## UNO-S2 KEYPAD-INSTALLATION

### UNO-S2 Keypad Connections

#### CAT-5 Connection

The UNO-S2 Keypad uses a 110-punchdown terminal to provide a simple installation and strong connection for CAT-5 cable's eight conductors. Punchdown terminals require the use of a punchdown tool which has been provided with the keypad kit. Attach the CAT-5 cable to the 110-punchdown terminal on the UNO-S2 Keypad as shown, matching the conductor colors to the connection color guide. The keypad will not operate properly if the terminations deviate from the required connection order.

#### ⚠ Caution:

Take care when using an impact 110 punchdown tool, as this may overspread the contact points. Use of the impact tool may propel stray bits of wire and jacket into the keypad's chassis and possibly cause a short in the circuitry. Gently shake or blow

#### OS Update Port

The OS Update Port is used to update the UNO-S2 Keypad operating system software in the future. When an update is released, it will be available online through the Document Center at [www.russound.com](http://www.russound.com). Look for the Technical Documents under Multi-source/Multi-room products. The programming cable is available from Russound, Part #2500-120633.

#### Jumper Setting

The jumper settings on the back of the UNO-S2 Keypad can be set for "Run" and "OS Update." The jumper setting must be in the "Run" position before the keypad is mounted into the junction box, and must remain set in "Run" to operate the keypad. The jumper will be set to "OS Update" only while updating the keypad's operating systems.

Punchdown Tool

CAT-5 Connections (back of keypad)

Jumper Setting (back of keypad)

OS Update Port (front of keypad)

# INSTALLER

## UNO-S2 KEYPAD-INSTALLATION

### IR Receiver Connection

The UNO-S2 keypad has an External IR Receiver In terminal for connecting an external IR receiver such as the Russound SaphIR 858, 862 Eye, or 860 Phantom. Use 2 twisted pair wire with

one pair connecting GND (GROUND) and IR (SIGNAL) and the other pair connecting ST (STATUS) and V+ (+12VDC). If the wire has a shield, connect it to ground at the UNO-S2 only.

## UNO System Keypad Port Connection

The UNO System Keypad Ports are located on the back of the CAV6.6 in the top left corner. Connections made at the UNO Keypad Ports are made using CAT-5 T568A RJ-45 wire configuration. CAT-5 is color-coded for ease of installation. For a clean installation when wiring from an UNO System Keypad Port use an RJ-45 CAT-5 patch cable to connect from the keypad port to an RJ-45 Wall Plate (optional). Using the same CAT-5 T568A RJ-45 wiring configuration, use

CAT-5 from the RJ-45 Wall Plate to the keypad. If using more than one keypad on a zone, connect a SA-ZX3 UNO System Keypad Splitter (optional) directly to the UNO System Keypad Port instead of going through the wall plate. Always use the CAT-5 T568A RJ-45 wire configuration when wiring any of the UNO System Keypad Ports. (See *Sample System Configuration 3*, page 89)

# INSTALLER

## MAKING CONNECTIONS

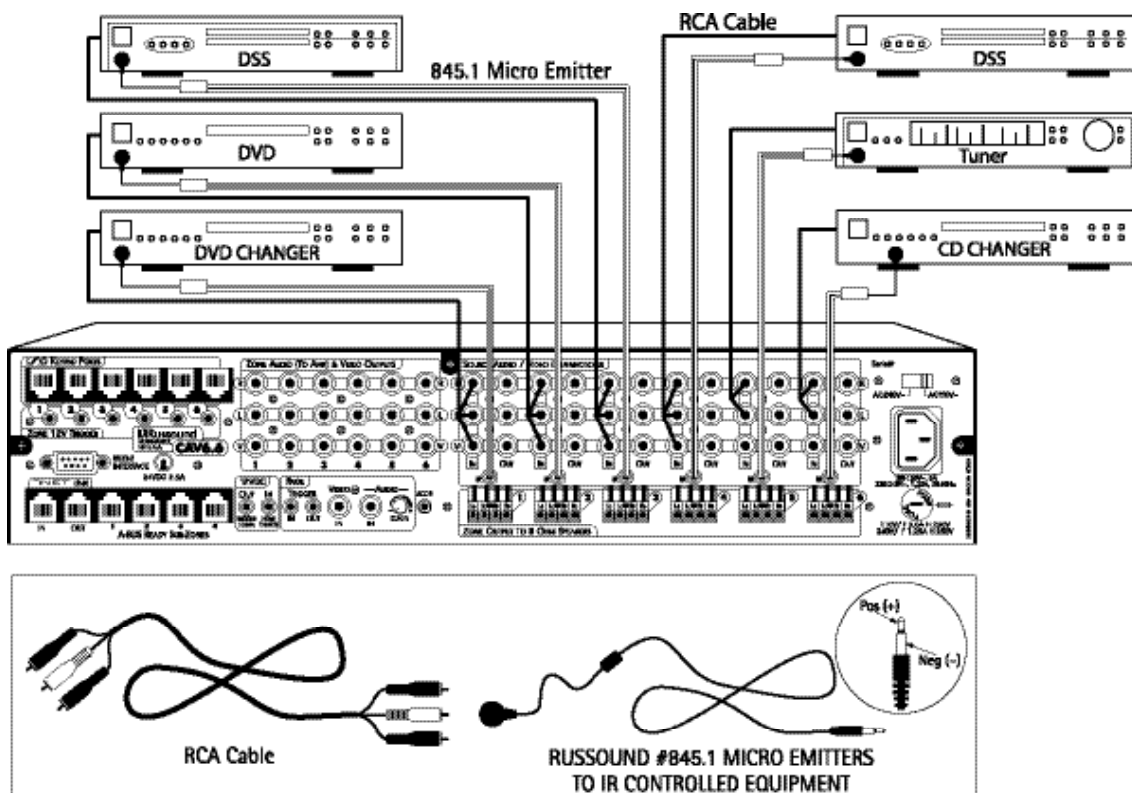

### Source Audio/Video Input Connections

The CAV6.6 supports up to six audio/video sources. The Source Inputs are located at the back panel. Connect each source output using quality RCA signal cables. Connect the Video, and the Left and Right Audio outputs from each source to the corresponding inputs on the CAV6.6 controller. Label each cable with the name of the selected source and the Source Audio/Video input number located on the CAV6.6.

### Source IR Connections

Each source component has a designated IR port on the back of the CAV6.6. This IR port is directly below the Source Audio/Video Input/Output Connections.

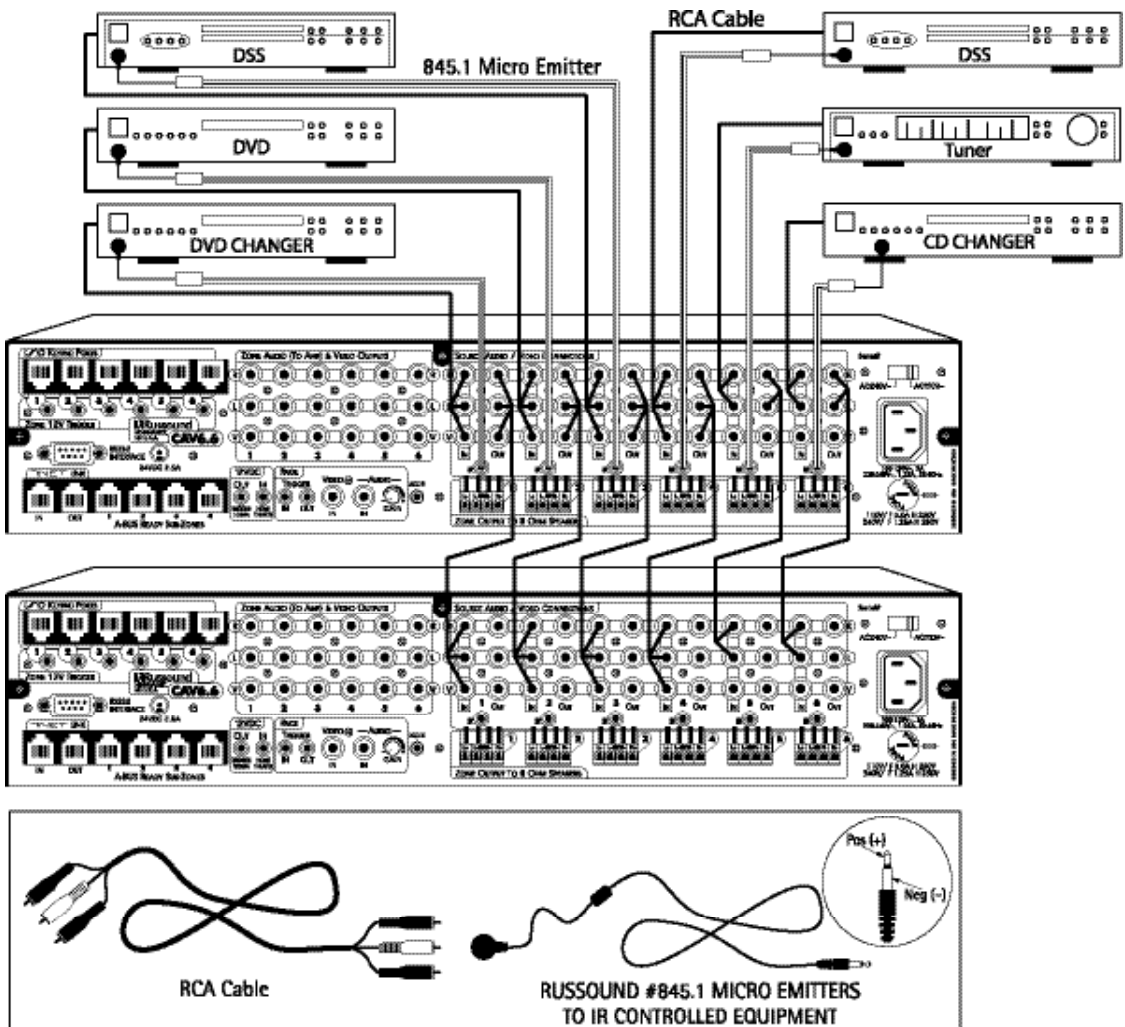

1. Using an IR emitter (the Russound 845.1 is recommended) attach the end of the emitter with the 1/8" plug to the IR emitter port below the source input.
2. Remove the adhesive back at the other end of the emitter and attach the emitter over the source component's IR window.
3. In order to control this source component with IR, the source must be selected at the key-pad receiving the command.

## Source Audio/Video Loop Output Connections

The CAV6.6 has six buffered, fixed-level audio/video source loop outputs. This source loop configuration allows the CAV6.6 to pass source signals to another component, such as a home theater receiver or to another CAV6.6 for sharing

sources in a multiple controller system. The Source Loop Outputs are located directly to the right of the Source Audio/Video Inputs. Use quality RCA signal cables to ensure quality transference of Audio/Video signals.

# INSTALLER

## MAKING CONNECTIONS

### Speaker Connections

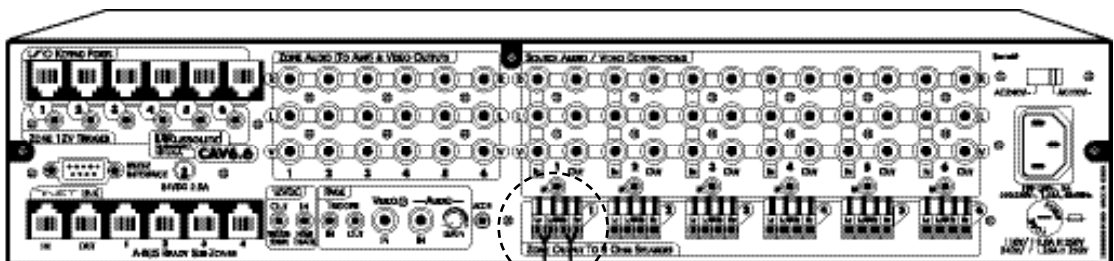

The speakers are connected to the CAV6.6 using modular snap speaker connectors. Each of these color coded connectors is designated for the speaker set of a particular amplified zone. To avoid confusion, connect one zone speaker set at a time starting with Zone 1, taking care to keep zone and speaker wire identities straight. Note: An 8 Ohm minimum speaker is required for each amplified output.

1. Pull the speaker wire conductors apart so they're separated for the first two inches from their ends.
2. Using a wire stripper, remove 1/4 inch of insulation from each conductor. Twist the strands in each conductor into tight spirals.
3. Remove the modular four-color connector for Zone 1. The color code is as follows:

- WHITE -- L+ (left channel positive)**
- GREEN -- L- (left channel negative)**
- BLACK -- R- (right channel negative)**
- RED -- R+ (right channel positive)**

Lift the black lever for each connection until it locks open and insert the proper speaker wire, matching channel and polarity for all four wires. Snap the lever down. Insert the modular connector into its designated output on the back of the CAV6.6.

4. Complete the same steps for the remaining zones. Label each set of speaker wires with the zone and location.

## ACC IR Connection

The Accessory IR jack on the rear of the CAV6.6 allows control of any source equipment without that source being selected on the keypad. The connection for the ACC IR jack is made using an IR emitter with the 1/8" plug. The Russound

845.1 single IR emitter is recommended, or use an IR connecting block such as the Russound 857 which allows multiple units to be controlled through the ACC IR Port.

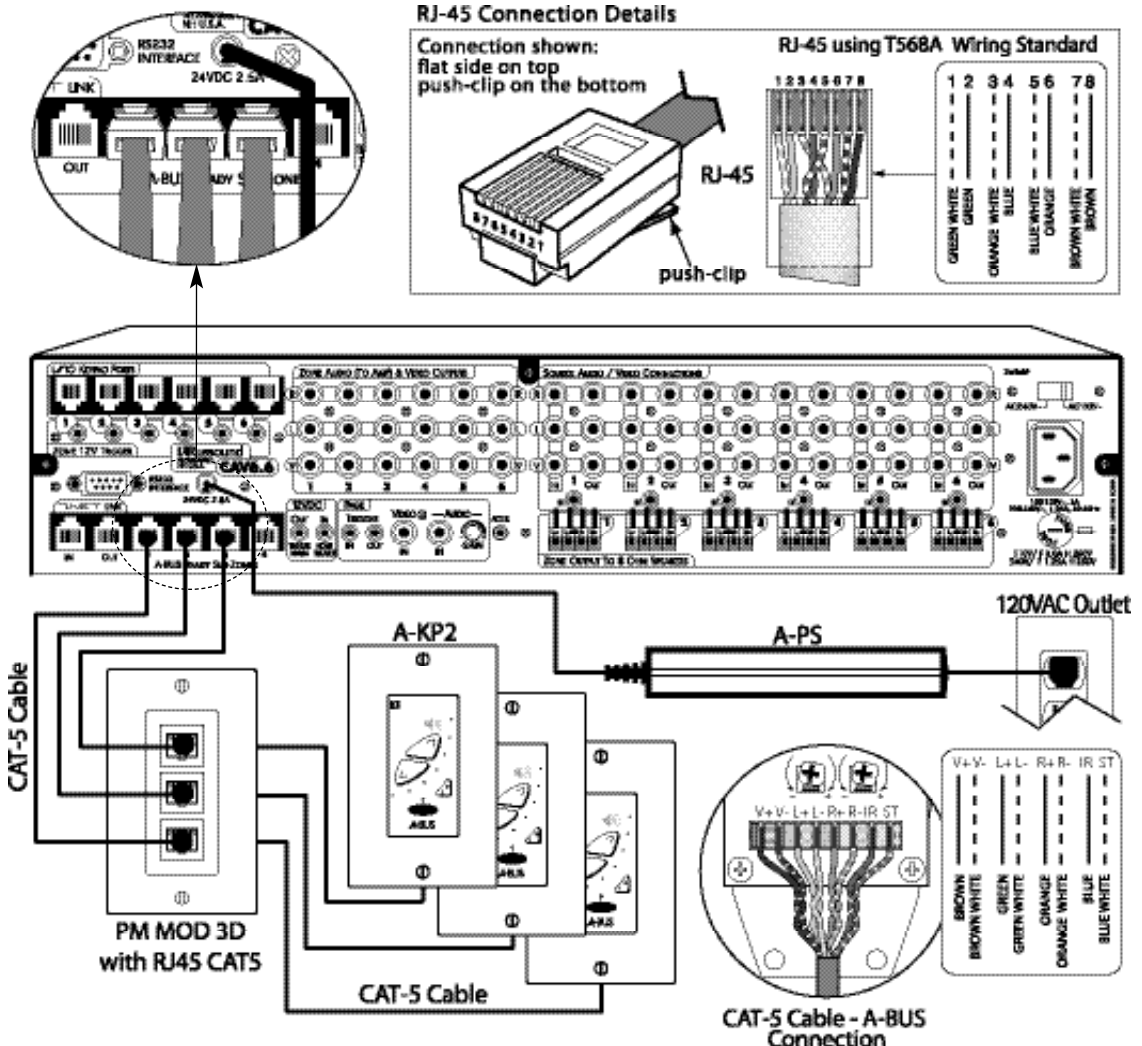

## A-BUS Ready Sub-zone Connection

A-BUS products can easily expand the CAV6.6 audio system by adding A-BUS Ready Sub-zones to the first four CAV6.6 zones. The A-BUS Ready Sub-zones are located on the back of the CAV6.6 at the bottom left corner. The A-BUS Ready Sub-zones are powered by a 24VDC power supply such as the A-PS.

Use an RJ-45 CAT-5 T568A configuration patch cable to connect the A-BUS Ready Sub-zone

port to an RJ-45 wall plate (optional) for a clean installation. Using the same T568A RJ-45 wiring configuration, attach CAT-5 from the RJ-45 wall plate to an A-BUS hub or amplified control module such as the A-KP2 keypad.

If using an A-BUS hub with the A-BUS Ready Sub-zone, the hub should be located near the CAV6.6 and wired directly instead of first going through the wall plate.

# INSTALLER

## MAKING CONNECTIONS

### 12VDC Trigger In/Out

#### 12VDC Home Theater Trigger In

This 12VDC Trigger input is used to control Power Management of the audio/video sources possibly being shared with a home theater system. When the source equipment is off and 12VDC is provided to the trigger, the sources will be turned on until it is removed. When the last zone on the CAV6.6 is turned off, 12VDC presence to the trigger input will prevent the sources from being turned off. The connections for the trigger are made using a two-conductor cable with 1/8" male mini-plug. The tip is positive (+) and the sleeve is negative (-).

#### 12VDC 50mA Trigger Out

The 12VDC 50mA trigger out can be used to engage any 12VDC trigger device or component such as the Russound ACT-1 triggered outlet. The connections for the trigger out are made using a two-conductor cable with 1/8" male mini-plug jacks at each end. The tip is positive (+) and sleeve is negative (-).

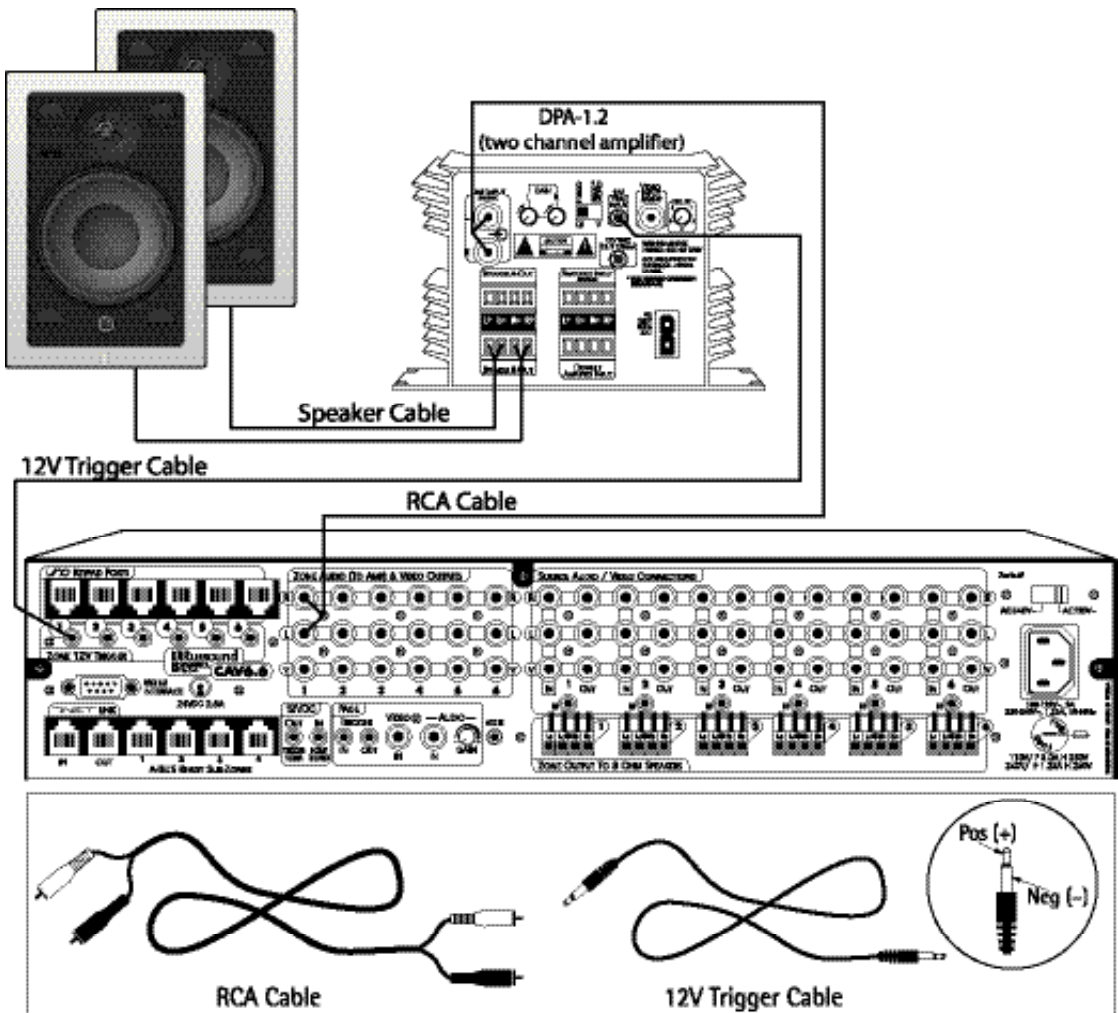

## 12VDC Trigger In/Out

### Zone 12VDC Trigger Outputs

Zone 12VDC Triggers are located directly under the UNO Keypad Ports. The 12VDC Trigger is engaged when the corresponding zone is turned on and disengaged when the zone is turned off. The trigger can be used to engage any 12VDC trigger device or component such as the

Russound DPA-1.2 amplifier. The connections for the trigger outputs are made using a two-conductor cable with 1/8" male mini-plug jacks at each end. The tip is positive (+) and sleeve is negative (-).

# INSTALLER

## MAKING CONNECTIONS

### ***12VDC Trigger In/Out***

#### **12VDC Page Trigger In**

When 12VDC is applied to the Page Trigger In, the system will page audio that is connected to the Page Audio Input and interrupt the video outputs with the page video signal. The Page Trigger In is located in the Page connection area of the CAV6.6 Controller. The connections for the trigger are made using a two-conductor cable with 1/8" male mini-plug jacks. The tip is positive (+) and sleeve is negative (-). This allows for the connection of an external paging or muting device such as the Russound DIM-1 Doorbell Interface Module. The CAV6.6 can be programmed to mute audio and video for one or all zones as preferred when the 12VDC is applied.

#### **12VDC Page Trigger Out**

Page Trigger Out 12VDC output is available under several programmable situations, such as for triggering an external amplifier, muting device or other paging component dependent on the Page Trigger In 12VDC. The connections

for the output are made using a two-conductor cable with 1/8" male mini-plug jacks at each end. The tip is positive (+) and sleeve is negative (-). The default setting for the Page Trigger Out provides 12VDC whenever 12VDC is applied to the Page Trigger In.

In some cases noise or interference may be generated by external devices that are connected to the 12 volt trigger outputs of the CAV. It may be necessary to use a ferrite bead to reduce this interference. Two to three turns of the connecting cable through the bead may be needed.

#### **Page Audio/Video In**

The Page Audio/Video Inputs accept line level audio/video signals. The paging inputs interface with the page output of a telephone, camera, or other peripheral device. Connect the audio/video signals using quality RCA cables.

# INSTALLER MAKING CONNECTIONS

## 12VDC Trigger In/Out

# INSTALLER

## MAKING CONNECTIONS

### RNET Link In and Link Out - Multiple Controllers

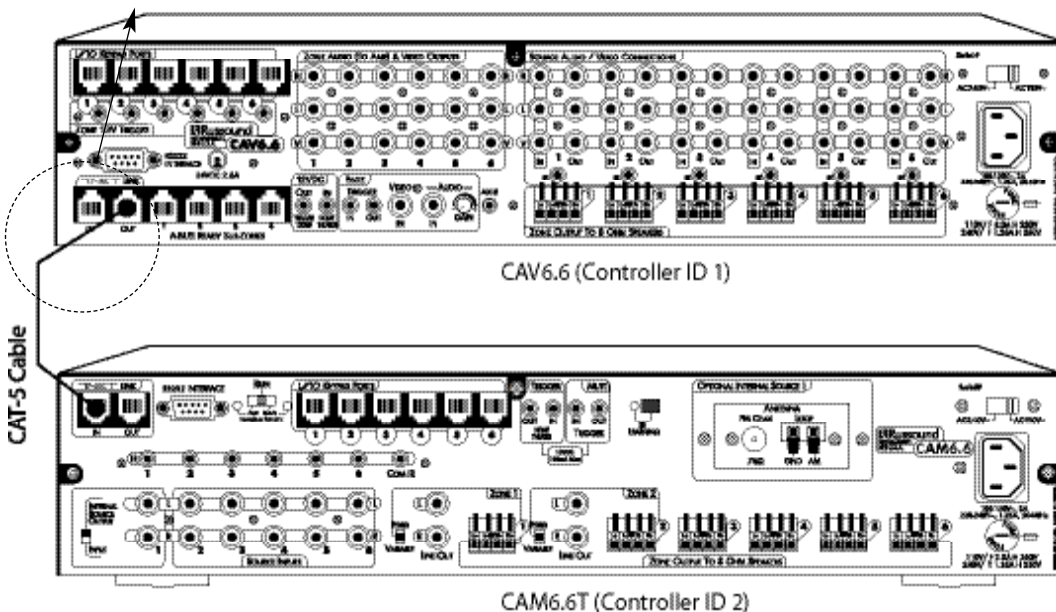

The RNET Link In and Link Out is used to connect two or more (up to 6) CAV6.6 or CAM6.6 controllers. The connection is made using a CAT-5 patch cable from the Link Out of the master controller and into the Link In of the next controller. Along with RNET data signals, the RNET Link In and Link Out jack passes the six source IR signals. The CAT-5 patch cable should not exceed 18 inches in length to avoid potential cross-talk between the source-specific IR repeating signal lines. These are only for source-specific IR remote repeating, not codes initiated from the controller's internal IR library.

*Note: If two or more CAV6.6 controllers will be connected using the RNET Link In and Link Out ports, each controller must have a unique Controller ID (see **Controller Setup - Flow Chart on page 73**) prior to being connected through the RNET ports. The Controller ID assignment must be performed during the Controller Setup section of the Installation menu.*

**Controller #1 is always the LAST controller to be powered on in a multi-controller system.**

#### RJ-45 Connection Details

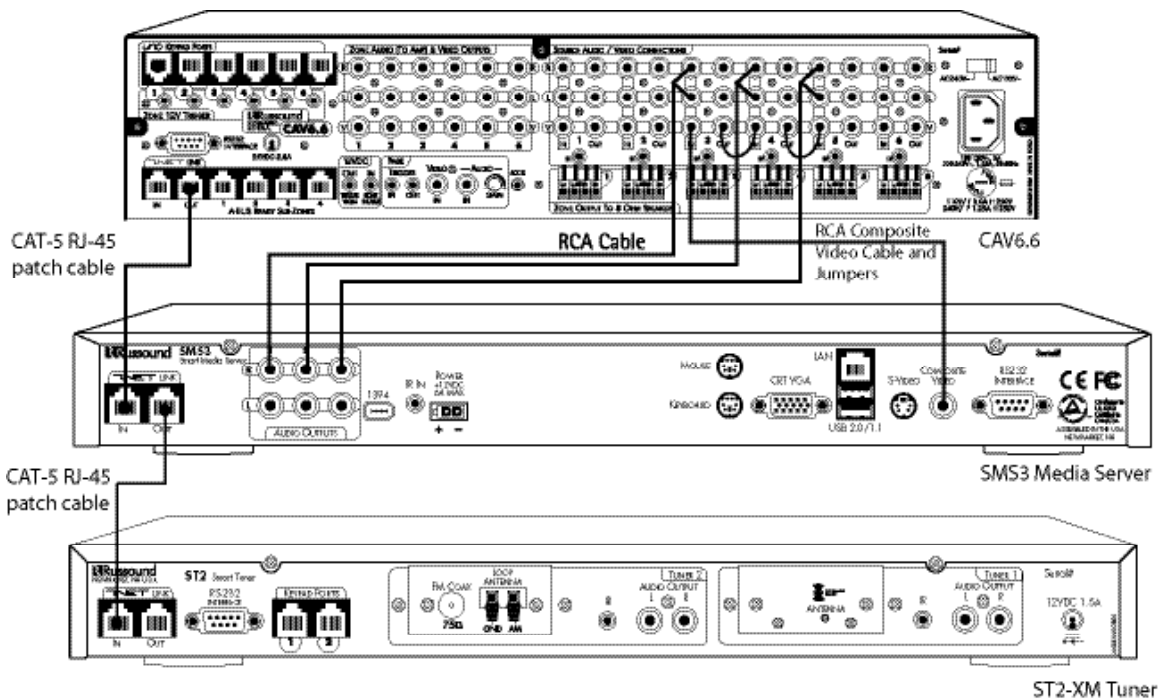

## RNET Link In and Link Out - RNET-enabled Components

The RNET Link In and Link Out is also used to connect the CAV6.6 to other Russound RNET-enabled products. The connection is made using a CAT-5 patch cable from the Link Out of the controller and into the Link In of the RNET-enabled component. Another CAT-5 patch cable can be used to link out of that component and link into another RNET-enabled component in the system.

RNET-enabled components fully integrate with CAV6.6 and CAM6.6 multi-zone systems. They communicate through the RNET Link In and Link Out connection. These components can be controlled via the UNO keypad or the UNO-LRC1 remote control, and display source information on the keypads. The CAT-5 patch cable should not exceed 18 inches in length.

# INSTALLER

## MAKING CONNECTIONS

### RS-232 Interface

The CAV6.6 supports RS-232 communication with various third-party automation systems through the RS-232 ports. These ports are also used for firmware updates, and for controller programming through the PC Power Tool software program.

The two RS-232 com ports are located on the front and the back of the CAV6.6 and use a DB-9 cable connection. Before performing

updates or programming, select a front or rear RS-232 port and set the Front/Rear RS-232 switch on the front of the controller as well. The switch is located next to the DB-9 port.

For RS-232 protocol, available firmware updates and the RNET Backup Utility, see the Document Center at [www.russound.com](http://www.russound.com). Look for the Technical Documents under Multi-source/Multi-room products.

## Programming Center Keypad Port Connection

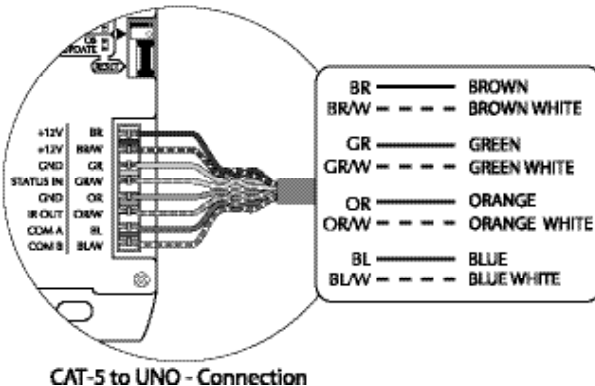

The CAV6.6 can be programmed via keypad connection using CAT-5 and the T568A RJ-45 wire configuration. An UNO-S2 Keypad can be attached to the controller at the Programming Center Keypad Port Connection.

The Programming Center Keypad Port is designed for use in local programming, specifically

for learning IR commands directly into the IR receiver on the controller's front panel. (see Learn IR flow chart on page 75).

The CAV6.6 can also be programmed from any UNO-S2 keypad connected to its keypad ports.

### RJ-45 Connection Details

# INSTALLER

## FIRMWARE UPDATES

### UNO-S2 Keypad Diagnostics Menu

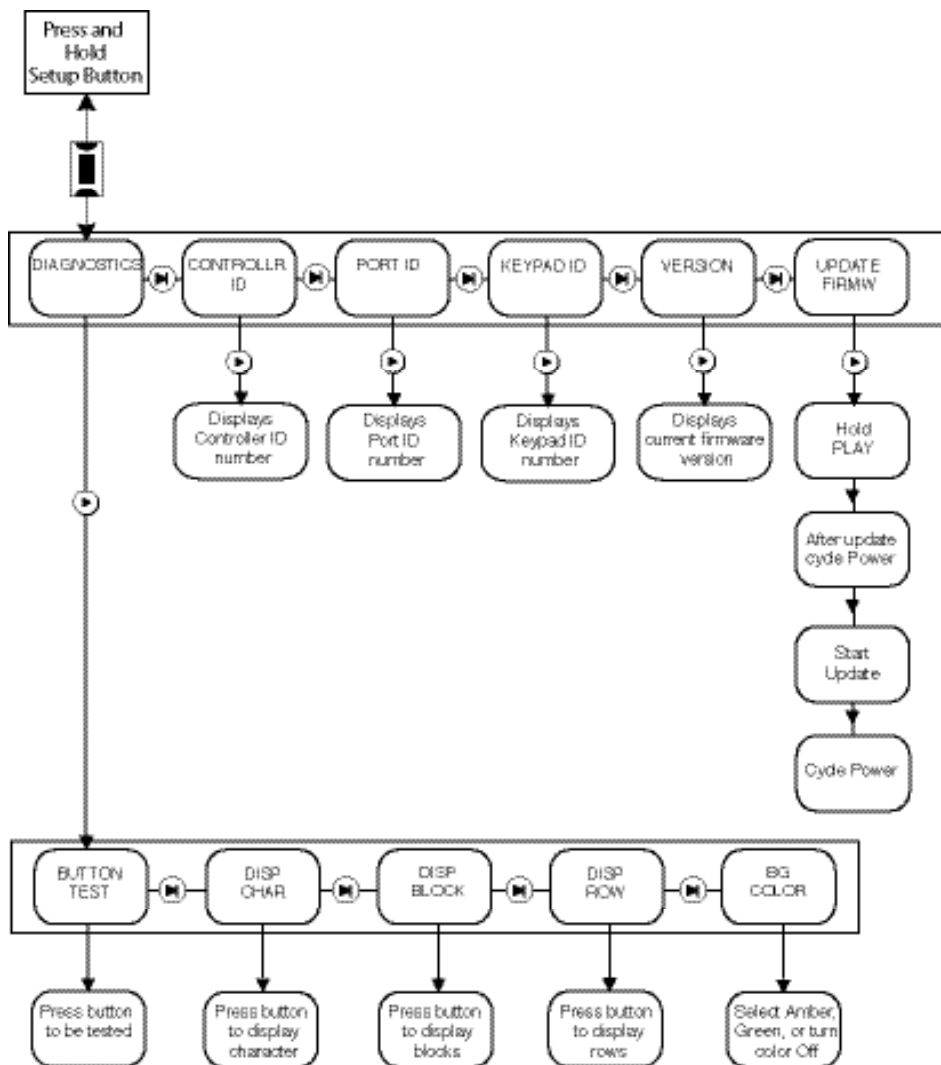

The Diagnostics Menu allows the installer to run a diagnostic check on the keypad and to verify the firmware version. The Diagnostics Menu also contains the update firmware procedure for updating the UNO-S2's firmware.

To access the Diagnostics Menu, press and hold the Setup button on the right side of the keypad until "DIAGNOSTICS" appears on the display. The

menus are outlined in the diagram below.

When finished, press and release the Setup button again (except for the Update Firmware where the power must be cycled).

**Note:** Do not change Controller ID settings in this menu. Controller ID is set in the Controller Setup menu (see Controller Setup Menu on page 73).

### UNO-S2 Keypad Firmware Update Procedure

**Note:** When a firmware update is released, it is available online at the Document Center on [www.russound.com](http://www.russound.com), in Technical Documents under Multi-zone products. The firmware update procedure may be modified, so always check for the latest version.

**Note:** Disconnect ALL RNET links in the system before proceeding with keypad update.

#### Requirements:

1. PC computer running Windows 95, 98, ME, NT, 2000, XP operating system
2. Available DB-9 serial RS-232 data port (baud rate= 38400, data bits = 8, no parity, 1 stop bit, no flow control)
3. UNO serial Programming Cable (Russound P/N 2500-120633)
4. Flash Magic - Philips IC update application (Flash Magic can be downloaded for free at: <http://www.esacademy.com/software/flashmagic/flashmagic.exe>)

**Note:** the same A/C power circuit should be used for the keypad/system and the PC. Otherwise a ground loop may affect proper data transfer.

#### Update Procedure:

Two OS update methods are available: A and B. Method A enters the OS Update mode through the keypad's Diagnostics Menu and requires no access to the rear panel of the keypad. Method B enter the OS Update mode by repositioning a jumper on the rear panel of the keypad.

#### Method A:

Enter the Diagnostics Menu by holding the "Setup" button for approximately 4 seconds until "Diagnostics" appears on the display. The Setup button is located behind the trim cover plate on the right hand side of the keypad above the OS Update port.

Once in the Diagnostics Menu, press the left or right arrow key until "UPDATE FIRMW" is displayed. Hold the "Play" key for approximately 2 seconds until

"Start Update" is displayed.

Now the keypad is ready for update.

#### Method B:

Move the OS Update jumper on the rear panel of the keypad to the Update position (on both pins).

Press the Reset button located next to the OS update jumper.

At this point, the display will be backlit and blank but the buttons will be dark.

Connect the UNO Programming Cable between the PC COM port and the keypad Update port.

#### Method A and B:

Start the Flash Magic application. If error messages appear, they are typically generated due to communication problems. Verify all connections, close Flash Magic, cycle power and restart Flash Magic.

#### Flash Magic Required Settings:

##### Section 1:

COM Port: = COM port connected to on PC

Baud Rate: = 38400

Device: = XA-G49

Oscillator Freq. {MHz}: = 12.288

##### Section 2:

"Erase blocks 0-4" should be highlighted

*Note:* If there is no firmware loaded in the keypad, check "Erase all Flash + Security." Also un-check "Set Security Bit 1-3" found in Section 4. These steps should NOT be performed if you are updating from previous firmware version.

##### Section 3:

Click "Browse" button to select the new .hex file to be used.

(Method B: press and release the keypad's Reset button again.)

##### Section 5:

Click the "Start" button to begin firmware update. The status is shown at the bottom of the window.

#### Completion:

Disconnect the Programming Cable from the keypad and the PC.

(Method B: Re-position the OS Update jumper to Run.)

Reconnect all RNET links.

Cycle main power off and on.

# INSTALLER

## FIRMWARE UPDATES

### CAV6.6 Firmware Update Procedure

**Note:** When a firmware update is released, it is available online at the Document Center on [www.russound.com](http://www.russound.com), in Technical Documents under Multi-zone products. The firmware update procedure may be modified, so always check for the latest version.

**Note:** Disconnect ALL RNET links in the system before proceeding with keypad update.

#### Requirements:

1. PC computer running Windows 95, 98, ME, NT, 2000, XP operating system
2. Available DB9 serial RS-232 data port (baud rate= 38400, data bits = 8, no parity, 1 stop bit, no flow control)
3. DB9 serial cable (male to female extension)
4. Flash Magic - Philips IC update application (Flash Magic can be downloaded for free at: <http://www.esacademy.com/software/flashmagic/flashmagic.exe>)

**Note:** the same A/C power circuit should be used for the system and the PC. Otherwise a ground loop may affect proper data transfer.

#### Update Procedure:

Remove cover lens from CAV6.6 front panel.

Remove the "Russound" program selector switch cover with a small flat blade screwdriver.

Connect the DB9 serial cable between the PC COM port and one of the DB9 ports found on the front and rear panels of the CAV6.6. Make sure the front/rear selector switch is in the corresponding position (front or rear).

Set the OS Program selector switch to AUX or Main to update. The hex file will be labeled AUX or Main; set the switch to match which file is being used.

**Note:** Most updates will require both processors to be updated - the AUX should be updated first.

Press and release the Reset button next to the OS Program selector switch, or cycle the power off and then on for the CAV6.6.

Start the Flash Magic application. If error messages appear, they are typically generated due to communication problems. Verify all connections, close Flash Magic, cycle power and restart Flash Magic.

#### Flash Magic Required Settings:

##### Section 1:

COM Port: = COM port connected to on PC

Baud Rate: = 38400

Device: = XA-G49

Oscillator Freq. {MHz}: = 12.288

##### Section 2:

"Erase blocks 0-4" should be highlighted

**Note:** If there is no firmware loaded in the CAV6.6, check "Erase all Flash + Security." Also un-check "Set Security Bit 1-3" found in Sect. 4. These steps should NOT be performed if you are updating from previous firmware version.

##### Section 3:

Click "Browse" button to select the new .hex file to be used.

**Note:** Make sure the proper hex file is selected (Main or AUX). Loading the wrong file will lock up the unit)

##### Section 4:

No boxes should be checked.

**BEFORE START,** press and release the Reset button next to the OS Program selector switch, or cycle the power off and then on for the CAV6.6.

##### Section 5:

Click the "Start" button to begin firmware update. The status is shown at the bottom of the window.

#### Completion:

Disconnect the Programming Cable from the controller and the PC.

Re-position the OS Program selector switch to "Run."

Reconnect all RNET links.

Press and release the Reset button, or cycle main power off and on to the CAV6.6 and all RNET-enabled components in the system.

### PC Power Tool Programming

The PC Power Tool is a custom software program that provides an easy way to program the CAV6.6 using a PC to upload the program settings to the controller via a serial cable.

System requirements for PC Power Tool:

1. PC computer running Windows 98, ME, 2000, XP
2. Minimum 6MB free hard disk space
3. 32MB RAM
4. CD-ROM drive
5. Available RS-232 serial port

After PC Power Tool is installed on the computer, a new project is created in the program by following the screen prompts and selecting the appropriate source and zone settings. A "Project" refers to a complete controller setup, and is saved as a file on the PC.

Once a project is ready, it must be uploaded to the CAV6.6 from the PC.

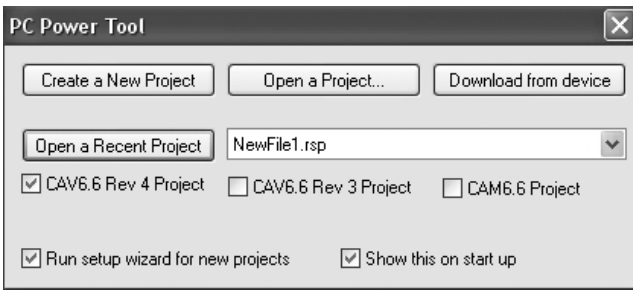

**Note:** All RNET connections must be disconnected before uploading the PC Power Tool project file to the controller.

To upload the file, connect a DB9 serial cable between the PC COM port and either the front or rear DB9 connection on the CAV6.6. The front/rear OS Program selector switch must be set as well (front or rear).

With the PC Power Tool program running, open the desired project file. Go to the "Tools" menu and select "Write to Device." A status bar will move as the project file is uploaded from the PC to the CAV6.6.

When the file is finished uploading, the status window will close. Disconnect the DB9 cable from the controller and cycle power to the CAV6.6.

PC Power Tool project files can also be downloaded from the controller to be edited or to be uploaded to other controllers.

PC Power Tool Start Screen

PC Power Tool Project Upload Status Window

# INSTALLER

## INITIAL INSTALL TEST

Before proceeding to the system programming section, it's important to conduct an initial test to determine that the hardware components are working properly.

1. Connect the speaker wires from Zone #1 to the CAV6.6 Zone #1 speaker output connectors.
2. Connect an UNO-S2 keypad to Keypad Port #1 on the rear of the CAV6.6.
3. Connect a source to the Source #1 Input on the CAV6.6 using RCA A/V patch cables.
4. Plug a supplied 845.1 IR emitter into the Source #1 IR Output Jack and adhere the emitter end to the source equipment's IR window.
5. Plug in the main power cords for the CAV6.6 and the source.
6. Turn on the main power switch on the CAV6.6 and the source.
7. Manually command the source to provide audio or use the source remote control.
8. Press the power button on the UNO-S2 keypad and select Source #1.

Congratulations – you should now hear the source through the speakers in Zone #1. Now that you have confirmed the hardware operation, you can proceed to System Programming to set up keypad source control.

If there is no sound, follow these diagnostic steps:

1. Check the source to see that it is operating properly.
2. Check the RCA A/V cable connections from the source to the Source #1 Input on the CAV6.6.
3. Check the speaker connections and verify that they are correct and are connected to the Zone #1 speaker outputs.
4. Check to see that the keypad is connected to the Zone #1 Keypad Port and verify the CAT-5 is properly terminated at both ends.

If none of these steps produce successful results, call Russound Tech Support for further assistance.

## **System Programming Overview**

This manual includes items that are designed to assist in the programming process.

### **Sample Configurations (Pages 84-95)**

A series of sample configurations are provided to showcase a variety of system designs and component options.

### **Forms (pages 51-53)**

Three blank reproducible forms are included as planning tools when determining sources, settings and zone preferences. The Source and Zone Information forms and the Macro Editor form should be completed before programming and referred to during the installation menu process. This speeds up programming time and reduces missed or incorrect entries. These forms also serve as system reference documents if future troubleshooting is needed.

### **IR Device Codes (Pages 79-81)**

This list of command type IR device codes reflects the built-in IR codes in the CAV6.6 library. During programming, these codes will be entered for each source at the "Device Code" prompt. If a code is not listed for a source, the Learn IR procedure is available to learn in and centrally store IR codes.

### **Key Functions (Pages 96-104)**

This list of key functions identifies what IR codes are supported for each command type (source) by the built-in library. "Learned Only" indicates that this function is not supported and must be learned into the CAV6.6. This list of key functions reflects the different available key functions associated with what you see on the LCD panel when performing the Key Configuration procedure in the Installation Menu. The list of functions corresponds with the command types above (e.g., Tuner, CD player, etc.).

### **Source Names (Pages 82-83)**

A list of assignable Source Names is provided for advance selection and source form completion before programming.

### **Flow Charts (Pages 67-77)**

Installation Menu flow charts provide a graphical representation of the programming process.

### **Installation Menu (Pages 54-66)**

The Installation Menu provides the step-by-step complete programming procedure for the keypad and the controller.

Although you can begin programming at any point within the Installation Menu, the following sequence is recommended for initial installations, as it progresses from the most basic requirements to the more advanced features.

#### **1. Controller Setup (CTRLR SETUP) (Page 62)**

This procedure sets the controller ID number within the system. This number must be manually set when multiple CAV6.6's are linked through R-NET within one system. This procedure is not necessary for systems with only one CAV6.6.

(continued)

# INSTALLER PROGRAMMING

## ***System Programming Overview (cont'd)***

### **2. Number of Sources (# of Sources/SOURCE SETUP) (Page 61)**

This procedure sets the number of sources used in the system. This prevents the user from selecting a source input that is not used.

### **3. Basic Setup (SOURCE SETUP) (Page 55)**

This procedure is mandatory to set up each source for keypad source control and is the cornerstone of the programming process.

### **4. Learn IR (Page 64)**

This procedure is used when the source-specific IR code is not found in the built-in IR code library. This allows IR commands to be learned into the system and centrally stored.

### **5. Macro Editor (Page 65)**

This procedure compiles multiple IR codes to be initiated by a single button press. One macro can have up to 10 commands, including other macros, and up to 132 macros can be entered.

### **6. Source Volume Trim (SOURCE SETUP) (Page 58)**

This procedure matches audio output signals for all sources for seamless switching.

### **7. Numeric IR (SOURCE SETUP) (Page 58)**

This procedure sets up control of a source that supports direct numeric commands.

### **8. Key Configuration (SOURCE SETUP) (Page 56)**

This procedure customizes individual key functions on a per-zone basis for source control.

### **9. Power Management (Page 62)**

This function incorporates IR macro commands to automatically control the power state of the sources when the system is in use or when a home theater is sharing sources. This advanced feature uses audio signal monitoring to confirm source power, which provides the user with worry-free operation.

### **10. Zone Volume Trim (ZONE SETUP) (Page 61)**

This procedure limits the maximum volume allowed in a zone, regardless of keypad volume adjustment.

### **11. System On Enable (SYSON ENABLE/ZONE SETUP) (Page 61)**

This feature allows a zone to join or opt out of an "all on" command.

### **12. Party Enable (ZONE SETUP) (Page 61)**

This feature allows a zone to join or opt out of Party Mode participation.

### **13. Master Enable (ZONE SETUP) (Page 61)**

This feature allows a zone the option of becoming a Master keypad in Party Mode.

### **14. Page Enable (ZONE SETUP) (Page 61)**

This feature allows a zone to hear or to block paging.

### **15. Page Volume (ZONE SETUP) (Page 61)**

Source Information Form

# INSTALLER

## INSTALLATION MENU

There are three item types in the installation menu:

- Menu Item –** Acts as a folder that holds procedures and/or feature parameters.
- Procedure –** A sequence of feature parameters to perform a guided operation, such as configuring an UNO key. Once you begin a procedure, the system will prompt for the needed information to complete the task.
- Feature –** The actual parameters (settings) that will change the system configuration.

The following keys on the **UNO-S2** are used to navigate and make changes while using the installation menus:

 To enter the Installation Menu, press and release the Setup Button (located on the keypad's right side) while in normal operating mode. The Setup Button is used to "back out" of the Installation Menu one level at a time. If you are performing a procedure, the Setup Button brings you back to the beginning of the procedure. Once you have reached the top level of the Installation Menu, pressing the Setup Button brings you back to normal operating mode.

-  *Adjust feature setting (increment).*
-  *Adjust feature setting (decrement).*
-  *Go to next menu / procedure / feature.* Not available while performing a procedure.
-  *Go to previous menu / procedure / feature.* Not available while performing a procedure.
-  *Enter menu / begin procedure / show current feature setting.* While performing a procedure, it is also used to advance to the next sequential feature setting once the current feature has been viewed or adjusted.

### UNO-S1 Keypad Five-character Display

The UNO-S1 keypad abbreviates information as necessary to appear in its five-character display. In the following menu procedures, the UNO-S1 five-character abbreviation is shown in parentheses underneath the 12-character version.

The following items make up the Installation Menu:

SOURCE SETUP (SrcSu)  ZONE SETUP (ZonSu)  CTRLR SETUP (CtlSu)   
POWER MGT (PwMgt)  LEARN IR (LrnIR)  MACRO EDITOR (MacEd)   
SYSTEM INFO (SInfo) 

## SOURCE SETUP (SrcSu)

Source Setup allows the system's sources to be configured.

The following items can be found in the SOURCE SETUP menu:

BASIC SETUP (BasSu)  KEY CONFIG (KeyCf)  SOURCE NAMES (SrcNm)   
SRC VOL TRIM (SrcVT)  NUMERIC IR (NumIR)  SRC SEL CMD (SrcSC)   
# OF SOURCES (#Srcs) 

### BASIC SETUP (BasSu)

*NOTE: The BASIC SETUP procedure should be performed for each source before proceeding to other source setting changes.*

This procedure uses built-in source "templates" to quickly and easily configure the source settings needed for basic operation of the source component. Before performing BASIC SETUP, connect the source components to the CAV 6.6 as outlined in the Source Connections section. Also be sure that all sources are powered on. **See Basic Setup - Flow Chart on page 67**

1. **SOURCE NUM** – Select the source to be configured.  
(Src #)
2. **SOURCE NAME** – Select the name for the source (e.g., DVD, Aux 2, Jazz, etc.).  
(Name)
3. **COMMAND TYPE** – Select the type of command template (e.g., CD, TV, etc.). Selecting the command type template will tell the CAV 6.6 how to configure the key's command and text for the source component.  
(CmdTp)
  - a. **Selected: Learned IR** Choose Learned IR if the pre-programmed IR code library does not support the source component.  
(LrnIR)
    - i. **LEARNED SRC** – Select the learned source bank to be assigned to the source component. (See Learning IR procedure for instructions on how to learn IR codes.)  
(LnSrc)

# INSTALLER

## INSTALLATION MENU

### Basic Setup (cont'd.)

- ii. **TEMPLATE TYP** – (TType)

Select the template type to define what type of source component is being used. (This will tell the CAV 6.6 how to configure the key commands and text for the source component if it is a learned source.) Procedure advances to USE NUM IR? (step 7).
  - b. **Selected: Unassigned** (Unasg)

The template for the selected source is cleared. (All key assignments and other source settings will be erased.) Procedure advances to SAVE CHANGES (step 10)
  - c. **All Other Selections:**

Procedure advances to DEVICE CODE (step 4)
- 4. **DEVICE CODE** – (DevCd)

Enter source component code number listed in this manual's Reference section.
- 5. **TEST IR?** – (TstIR)

If "Yes" is selected, the CAV 6.6 sends a power command to the source component. If "No" is selected, the procedure advances to USE NUM IR? (step 7)
- 6. **SUCCESS?** – (OK?)

If the power to the source component was turned off, select "Yes" otherwise select "No." By selecting "No" the Procedure returns to DEVICE CODE (step 4) to allow selection of another code number from the provided list.
- 7. **USE NUM IR?** – (NumIR)

Indicates the source component has numeric scrolling, such as multi-disc CD player (See NUMERIC IR Setup Procedure for advanced settings or more information). "No" advances menu to AUTO PLAY (step 9).
- 8. **HIGHEST NUM** – (High#)

Enter the highest possible number; for example, a 100-disc CD player would have a max number of 100.
- 9. **AUTO PLAY?** – (AtoPl)

"Yes" tells the CAV 6.6 to issue a PLAY command whenever the source is selected for listening. This option is skipped if the source type (COMMAND TYPE) chosen does not have a PLAY command associated with it.
- 10. **SAVE CHANGES?** – (Save?)

Select "yes" to save changes. Procedure returns to SOURCE NUM to allow configuration of another source.

### KEY CONFIG (KeyCf)

Key Configuration defines zone-specific key functions for each source. **See Key Config. - Flow Chart on page 68**

- 1. **ZONE NUM** – (Zone#)

Select the zone the key will be configured for. Changes are made for that zone only; default setting is "All Zones."

## Key Config (cont'd.)

- |   |   |
|---|---|
| <b>2. SOURCE NUM</b> –<br>(Src #)           | Select the source the key will be configured for.   |
| <b>3. SELECT A KEY</b> –<br>(SelKy)         | Using ⊕ or ⊖, select the keypad key to be configured.   |
| <b>4. KEY TYPE</b> –<br>(KeyTp)             | Either “Key Press,” “Key Hold” or “Both” will activate the command.   |
| <b>5. KEY NAME</b> –<br>(KeyNm)             | Name that appears on the keypad display when the command is activated.  |
| <b>6. COMMAND TYPE</b> –<br>(CmdTp)         | Select the type of source command (e.g., CD, TV, etc.).   |
| <b>a. Selected: Learned IR</b> –<br>(LrnIR) | Choose Learned IR if the pre-programmed IR code library does not support the source component.                                    |
| <b>i. LEARNED SRC</b> –<br>(LnSrc)          | Select the learned source bank to be assigned to the source component. Procedure advances to KEY FUNCTION (step 8)                |
| <b>b. Selected: Unassigned</b><br>(Unasg)   | The key configuration is cleared. Procedure advances to SAVE CHANGES (step 9)   |
| <b>c. Selected: Default</b><br>(Deflt)      | Default selects the same device type and device code previously setup in BASIC SETUP. Procedure advances to KEY FUNCTION (step 8) |
| <b>d. Selected: Macro:</b>                  | <b>(To build macros, see Macro Editor page 57)</b>  |
| <b>i. MACRO</b> -<br>(Macro)                | Macro loads a series of commands which are processed when activated.  |
| <b>ii. MACRO ID</b> –<br>(MacID)            | Enter the macro ID number. Menu advances to SAVE CHANGES (step 9)   |
| <b>e. All Other Selections:</b>             | Procedure advances to DEVICE CODE (step 7)  |
| <b>7. DEVICE CODE</b> –<br>(DevCd)          | Enter source component code number listed in this manual's Reference section.   |
| <b>8. KEY FUNCTION</b> –<br>(KeyFn)         | Select a function for the button.   |
| <b>9. SAVE CHANGES?</b> –<br>(Save?)        | Select “yes” to save changes. Procedure advances to ZONE NUM (step 1)   |

# INSTALLER

## INSTALLATION MENU

### SOURCE NAMES (SrcNm)

This procedure allows the installer to customize the source names for the sources attached to the CAV6.6. **See Source Setup Menu on Page 55 and Source Names/Vol Trim - Flow Chart on page 69**

- 1. SOURCE NUM –**  
(Src #) Select the source number this name will be assigned to.
- 2. SOURCE NAME –**  
(Name) Select the name. SOURCE NUM will reappear on the LCD panel; repeat the instructions for each source to be labeled.

### SRC VOL TRIM (SrcVT)

This procedure allows the installer to adjust the output level of an individual source. The output volume is adjustable by 16 dB. At 0 dB (the default setting), the volume is at max output; at -16 dB the volume is at the lowest setting possible for that source only. **See Source Setup Menu on Page 55 and Source Names/Vol Trim - Flow Chart on page 69**

- 1. SOURCE NUM –**  
(Src #) Select the source number this level will be set for.
- 2. TRIM LEVEL –**  
(Trim) 0 dB is max output volume, -16 dB is lowest setting.

### NUMERIC IR (NumIR)

Numeric IR allows the installer to program source specific number functions (Channel 12, Disk 89, etc.). **See Source Setup Menu on Page 55 and Numeric IR - Flow Chart on page 70**

- 1. SOURCE NUM –**  
(Src #) Select the source number this function will be configured for.
- 2. USE NUM IR? –**  
(NumIR) Tells the system whether the source component has numeric scrolling, such as 100-disc CD player. A selection of "no" disables Numeric IR and advances to SAVE CHANGES
- 3. HIGHEST NUM –**  
(High#) Enter the highest possible number; for example, the 100-disc CD player would have a max number of 100.
- 4. NUMERIC TEXT –**  
(NmTxt) Select Numeric descriptive text.
- 5. PREFIX CMD –**  
(Prefix) Tells the system whether a command will be issued prior to the selection of the numerical value (e.g., Disc 1,2). If "no," procedure advances to SUFFIX CMD (step 9)
- 6. COMMAND TYPE –**  
(CmdTp) Select the type of command (e.g., CD, TV, etc.).

## Numeric IR (cont'd)

- a. **Selected: Learned IR** (LrnIR) Choose Learned IR if the pre-programmed IR code library does not support the source component.
  - i. **LEARNED SRC** – (LnSrc) Select the learned source bank to be assigned to the source component. Procedure advances to KEY FUNCTION (step 8)
  - b. **Selected: Unassigned** (Unasg) The numeric IR Prefix command is cleared. Procedure advances to SUFFIX CMD (step 9)
  - c. **Selected: Default** (Deflt) Default selects the same device type and device code previously setup in BASIC SETUP. Procedure advances to KEY FUNCTION (step 8)
  - d. **Selected: Macro:** **(To build macros, see Macro Editor page 65)**
    - i. **MACRO** - (Macro) Macro loads a series of commands which are processed when activated.
    - ii. **MACRO ID** – (MacID) Enter the macro ID number. Menu advances to SUFFIX CMD (step 9)
  - e. **All Other Selections:** Procedure advances to DEVICE CODE (step 7)
- 7. **DEVICE CODE** – (DevCd) Source component code for IR control.
- 8. **KEY FUNCTION** – (KeyFn) Select a function (Disc, etc.).
- 9. **SUFFIX CMD** – (Suffix) Tells the system whether a command will be issued after the selection of the numerical value (e.g., 1, 2 *Enter*). If “no,” procedure advances to SAVE CHANGES (step 13)
- 10. **COMMAND TYPE** – (CmdTp) Select the type of source command (e.g., CD, TV, etc.).
  - a. **Selected: Learned IR** (LrnIR) Choose Learned IR if the pre-programmed IR code library does not support the source component.
  - i. **LEARNED SRC** – (LnSrc) Select the learned source bank to be assigned to the source component. Procedure advances to KEY FUNCTION (step 12)
  - b. **Selected: Unassigned** (Unasg) The numeric IR Suffix command is cleared. Procedure advances to SOURCE NUM (step 1)
  - c. **Selected: Default** (Deflt) Default selects the same device type and device code previously setup in BASIC SETUP. Procedure advances to KEY FUNCTION (step 12)
  - d. **Selected: Macro:** **(To build macros, see Macro Editor page 65)**

# INSTALLER

## INSTALLATION MENU

### Numeric IR (cont'd)

- i. **MACRO** - (Macro) Macro loads a series of commands which are processed when activated.
  - ii. **MACRO ID** - (MacID) Enter the macro ID number. Menu advances to SAVE CHANGES (step 13)
  - e. **All Other Selections:** Procedure advances to DEVICE CODE (step 11)
- 11. **DEVICE CODE** - (DevCd) Source component code for IR control.
  - 12. **KEY FUNCTION** - (KeyFn) Select a function (Enter, Play, etc.).
  - 13. **SAVE CHANGES?** - (Save?) Select "yes" to save the changes.

### SRC SEL CMD (SrcSC)

This procedure permits a command to be sent to the source component when the source component is initially selected. **See Source Setup Menu on Page 55 and Source Select Command & # Of Sources - Flow Chart on page 71**

- 1. **SOURCE NUM** - (Src #) Select the source number this command will be configured for.
- 2. **COMMAND TYPE** - (CmdTp) Select the type of source command (e.g., CD, TV, etc.).
  - a. **Selected: Learned IR** (LrnIR) Choose Learned IR if the pre-programmed IR code library does not support the source component.
    - i. **LEARNED SRC** - (LnSrc) Select the learned source bank to be assigned to the source component. Procedure advances to KEY FUNCTION (step 4)
  - b. **Selected: Unassigned** (Unasg) The source select command is cleared. Procedure advances to SAVE CHANGES (step 5)
  - c. **Selected: Default** (Deflt) Default selects the same device type and device code previously setup in BASIC SETUP. Procedure advances to KEY FUNCTION (step 4)
  - d. **Selected: Macro:** **(To build macros, see Macro Editor page 65)**
    - i. **MACRO** - (Macro) Macro loads a series of commands which are processed when activated.
    - ii. **MACRO ID** - (MacID) Enter the macro ID number. Menu advances to SAVE CHANGES (step 5)

## Source Select Command (cont'd)

- e. **All Other Selections:** Procedure advances to DEVICE CODE (step 3)
- 3. DEVICE CODE –** Source component code for IR control.  
(DevCd)
- 4. KEY FUNCTION –** Select a function (Play, Enter, etc.).  
(KeyFn)
- 5. SAVE CHANGES? –** Select “yes” to save the changes.  
(Save?)

### # OF SOURCES (#Srcs)

At this field it is necessary to enter the number of sources used in the CAV6.6 system (1 to 6). This limits the sources displayed on the keypad in the normal running mode when the source button is pressed, but also limits source selections in the configuration menus. **See Source Setup Menu on Page 55 and Source Select Command & # Of Sources - Flow Chart on page 71**

## ZONE SETUP (ZonSu)

NOTE: This procedure should be performed using the keypad installed in the zone to be configured. **See Installation Menu on Page 55 and Zone Setup - Flow Chart on page 72**

Zone Setup allows the installer to adjust properties of the UNO Keypad controlled CAV6.6 zone. This series of menus allows the system's zones to be configured for these properties:

**ZON VOL TRIM (ZonVT)  SYSON ENABLE (SysOn)  PARTY ENABLE (PtyEn)  MASTER ENABL (MstEn)  PAGE ENABLE (PagEn)  PAGE VOLUME (PagVI) **

- 1. ZON VOL TRIM -** This feature allows the installer to adjust the output volume to each zone. -16 dB (lowest) to 0 dB (max)(default).  
(ZonVT)
- 2. SYSON ENABLE -** This feature is either disabled or enabled. If disabled (default), an All On command activated from another zone will not turn on the disabled zone. If enabled, an All On command activated from another zone will turn on the enabled zone.  
(SysOn)
- 3. PARTY ENABLE -** This feature is either disabled or enabled. If disabled, Party Mode activation from another zone will not affect the disabled zone. If enabled (default), the zone will participate with Party Mode.  
(PtyEn)
- 4. MASTER ENABLE -** This feature is either disabled or enabled. If disabled, the zone cannot host a master keypad during Party Mode. If enabled (default), the zone has the option of hosting the Master keypad.  
(MstEn)

# INSTALLER INSTALLATION MENU

## Zone Setup (cont'd)

5. **PAGE ENABLE** -  
(PagEn) This feature is either disabled or enabled. It allows the option of receiving or blocking a page in a zone. If disabled, the page will not be sent to the zone. If enabled (default), the page will be sent to the zone.
6. **PAGE VOLUME** -  
(PagVl) This feature allows the installer to adjust the Page Volume for the zone, from 0 (min) to 100 (max).

## CTRLR SETUP (CtIld)

Controller Setup is the basic configuration of the controller. This setup menu selects the options for Controller ID and Factory Initialization. **See Installation Menu on Page 55 and Controller Setup - Flow Chart on page 73**

1. **CONTROLLER ID** -  
(CtIld) This defines the Controller ID for this system. The default is 1 but when multiple controllers are used, each additional controller ID must be sequential and unique and be set before being connected to the system. Note that the system must be restarted before the controller will assume the new ID.
2. **FACTORY INIT** -  
(Flnit) **WARNING: This procedure returns the controller to its original settings - use with discretion.**
- Factory Initialization allows the installer to erase all programmed settings and returns the settings to the factory default settings. All settings including source equipment IR commands will need to be reentered. An "Are you sure?" prompt and a "no" response allows the installer to cancel the reset; a "yes" at the prompt will load factory/default settings.

## POWER MGT (PwMgt)

The CAV6.6 is capable of managing the power state of the connected source equipment. The power management is configured on a source-by-source basis.

All sources that have power management enabled are initialized by a "POWER ON" command or macro which must cause the source to produce an audio signal. Power management is initialized when the first keypad is turned on or when the home theater trigger input has 12VDC present. The 12VDC trigger output is turned on when the first zone is turned on.

All sources that have power management enabled are turned off by the "POWER OFF" command after all zones have been turned off, with a timeout of five minutes. The 12VDC trigger output is turned off

## Power Management (cont'd)

one minute after that. This timeout is postponed for as long as the home theater trigger input has 12VDC present. **See Installation Menu on Page 55 and Power Management - Flow Chart on page 74**

- |   |   |
|---|---|
| <p><b>1. SOURCE NUM –</b><br/>(Src #)</p>         | Select the source number this feature will be configured for.   |
| <p><b>2. SENSE DELAY –</b><br/>(Delay)</p>        | This option tells the controller how long to wait before looking for the source's audio signal to confirm that the component responded to the command (if a macro is selected for the Power On command). A sense delay must be long enough to allow the macro to cycle through. |
| <p><b>3. POWER ON CMD –</b><br/>(OnCmd)</p>       | Tells the controller to turn on the selected source equipment (by SOURCE NUMBER) when any of the UNO System Keypads is turned on. If "no," procedure advances to POWER OFF CMD (step 7)   |
| <p><b>4. COMMAND TYPE –</b><br/>(CmdTp)</p>       | Select the type of source command (e.g., CD, TV, etc.).   |
| <p><b>a. Selected: Learned IR</b><br/>(LrnIR)</p> | Choose Learned IR if the pre-programmed IR code library does not support the source component.  |
| <p><b>i. LEARNED SRC –</b><br/>(LnSrc)</p>        | Select the learned source bank to be assigned to the source component. Procedure advances to KEY FUNCTION (step 6)  |
| <p><b>b. Selected: Unassigned</b><br/>(Unasg)</p> | The Power On command is cleared. Procedure advances to POWER OFF CMD (step 7)   |
| <p><b>c. Selected: Default</b><br/>(Deflt)</p>    | Default selects the same device type and device code previously setup in BASIC SETUP. Procedure advances to KEY FUNCTION (step 6)   |
| <p><b>d. Selected: Macro:</b></p>                 | <b>(To build macros, see Macro Editor page 65)</b>  |
| <p><b>i. MACRO –</b><br/>(Macro)</p>              | Macro loads a series of commands which are processed when activated.  |
| <p><b>ii. MACRO ID –</b><br/>(MacID)</p>          | Enter the macro ID number. Menu advances to POWER OFF CMD (step 7)  |
| <p><b>e. All Other Selections:</b></p>            | Procedure advances to DEVICE CODE (step 5)  |
| <p><b>5. DEVICE CODE –</b><br/>(DevCd)</p>        | Source component code for IR control.   |
| <p><b>6. KEY FUNCTION –</b><br/>(KeyFn)</p>       | Select a function (Play, Enter, etc.).  |

# INSTALLER

## INSTALLATION MENU

### *Power Management (cont'd)*

- 7. POWER OFF CMD –** (OfCmd) Tells the controller to turn off the selected source equipment (by SOURCE NUMBER) when the last of the UNO System Keypads is turned off. If “no,” procedure advances to SAVE CHANGES (step 11)
- 8. COMMAND TYPE –** (CmdTp) Select the type of source command (e.g., CD, TV, etc.).
- a. Selected: Learned IR** (LrnIR) Choose Learned IR if the pre-programmed IR code library does not support the source component.
    - i. LEARNED SRC –** (LnSrc) Select the learned source bank to be assigned to the source component. Procedure advances to KEY FUNCTION (step 10)
  - b. Selected: Unassigned** (Unasg) The Power Off command is cleared. Procedure advances to SAVE CHANGES (step 11)
  - c. Selected: Default** (Deflt) Default selects the same device type and device code previously setup in BASIC SETUP. Procedure advances to KEY FUNCTION (step 10)
  - d. Selected: Macro:**
    - i. MACRO –** (Macro) **(To build macros, see Macro Editor page 65)** Macro loads a series of commands which are processed when activated.
    - ii. MACRO ID –** (MacID) Enter the macro ID number. Menu advances to SAVE CHANGES (step 11)
- e. All Other Selections:** Procedure advances to DEVICE CODE (step 9)
- 9. DEVICE CODE –** (DevCd) Source component code for IR control.
- 10. KEY FUNCTION –** (KyFn) Select Keypad function.
- 11. SAVE CHANGES? –** (Save?) Select “yes” to save the changes.

## **LEARN IR (LrnIR)**

This procedure allows IR commands to be learned into the system and be centrally stored in the main controller to let the system access the same IR codes that operate the source equipment.

NOTE: IR codes must be learned in pointing the source's remote control at the CAV6.6's front panel IR receiver. Use a keypad connected to the CAV6.6's front panel programming port for convenience in navigating the Learn IR procedure menu. **See Installation Menu on Page 55 and Learn IR - Flow Chart on page 75**

## Learn IR (cont'd)

1. **LEARNED SRC** – (LnSrc) Select the source whose commands will be learned into the controller.
2. **KEY FUNCTION** – (KeyFn) Select the function to be learned or deleted.
3. **LEARN/DELETE** – (Ln/Dl) Select Learn IR Now or Delete IR. If Learn IR Now, a “USE REMOTE” prompt appears. Point the learning remote at the controller’s IR window. If Delete IR, procedure returns to LEARNED SRC (step 1)
4. **TEST IR?** – (TstIR) If “yes,” sends the learned command to the source component to test the IR. If the component responds, the IR test was a success. If the component does not respond the Code was not learned properly. If “no,” menu goes back to LEARNED SRC (step 1)
5. **SUCCESS?** - (OK?) Asks if the IR test was a success  
 IF YES - If the test was a success, specify “yes” and proceed to KEY FUNCTION (step 2)  
 IF NO - If the test was a failure, specify “no” and LEARN/DELETE (step 3) reappears on the display allowing another code to be learned in.

## MACRO EDITOR (MacEd)

This procedure is used to create a sequence of commands that are launched with one key touch or other event. Up to 132 macros can be created for the system, and each macro can contain up to 10 commands including other macros. **See Installation Menu on Page 55 and Macro Editor - Flow Chart on page 76**

1. **MACRO ID** – (MacID) Number of Macro up to 132 including any previously named macros.
2. **MACRO NAME** – (MacNm) Name of Macro (optional).
3. **COMMAND NUM** – (Cmd#) Number of Command up to 10.
4. **COMMAND TYPE** – (CmdTp) Select the type of source command (e.g., CD, TV, etc.).
  - a. **Selected: Learned IR** (LrnIR) Choose Learned IR if the pre-programmed IR code library does not support the source component.

# INSTALLER

## INSTALLATION MENU

### Macro Editor (cont'd)

- i. LEARNED SRC –**  
(LnSrc) Select the learned source bank to be assigned to the source component. Procedure advances to KEY FUNCTION (step 6)
  - b. Selected: Unassigned**  
(Unasg) Selected command and subsequent commands are cleared. Procedure advances to COMMAND NUM (step 3)
  - c. Selected: Default**  
(Deflt) Default selects the same device type and device code previously setup in BASIC SETUP. Procedure advances to KEY FUNCTION (step 6)
  - d. Selected: Macro:**
    - i. MACRO -**  
(Macro) A macro can “call” another macro if a sequence of more than 10 commands is needed.
    - ii. MACRO ID –**  
(MacID) Enter the macro ID number. Menu advances to COMMAND NUM (step 3)
  - e. Selected: Delay**  
(Delay) Enter a 1- to 60-second delay time to postpone delivery of the next command in the macro. Procedure advances to COMMAND NUM (step 3)
  - f. All Other Selections:** Procedure advances to DEVICE CODE (step 6)
- 5. DEVICE CODE –**  
(DevCd) Source component code for IR control.
- 6. KEY FUNCTION –**  
(KeyFn) Select a function (Play, etc.).

## SYSTEM INFO (SInfo)

System Info allows the installer to view the controller's manufacturing build properties.  
**See Installation Menu on Page 55 and System Info - Flow Chart on page 77**

#CONTROLLERS (#Ctls)  BUILD TIME (BTime)  BUILD DATE (Bdate)  VERSION (Ver) 

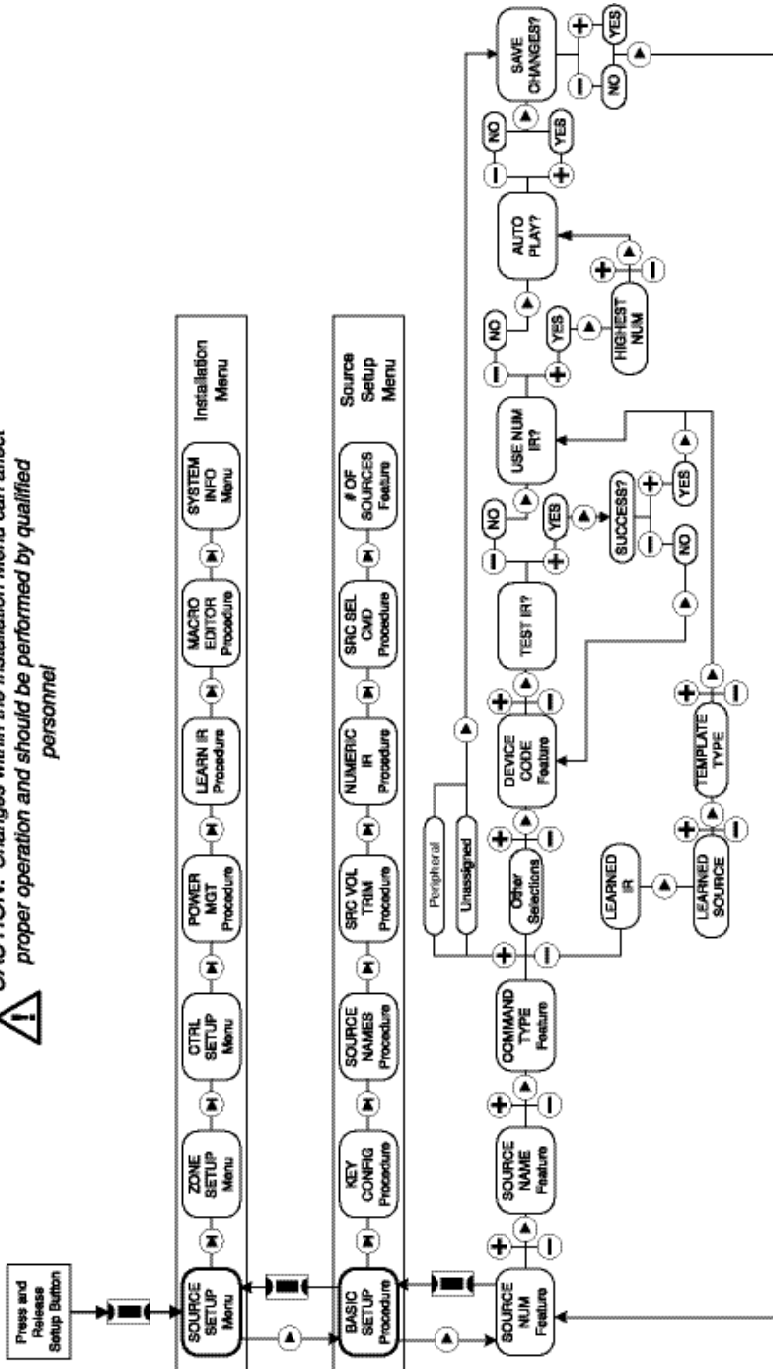

- 1. #CONTROLLERS -**  
(#Ctls) Displays the number of CAV6.6 controllers in the system.
- 2. BUILD TIME -**  
(BTime) Displays the Software Build Time of the controller.
- 3. BUILD DATE -**  
(BDate) Displays the Software Build Date of the controller.
- 4. VERSION -**  
(Ver) Displays the software version of the CAV6.6.

# SAMPLE SYSTEM CONFIGURATION 1

## **Six Zones and Six Sources**

The configuration shows how the CAV6.6 distributes audio/video throughout the house using six UNO System Keypads and six audio/video source components.

### **Source Components**

The configuration allows for any zone to select any one of the six source inputs.

### **Keypads**

The configuration uses a single UNO-S2 Keypad per zone. Each keypad is connected to the CAV6.6's Keypad Port using the RJ-45 T568A wiring configuration. Each keypad port number corresponds with the zone number. This gives complete control of the zone to one keypad.

The UNO-S2 Keypad can control the source equipment, volume for the zone, source selection, tone control, mute, and other functions. Programmable functions are also possible. The IR receiver on the keypad also allows the UNO-LRC1 and other remotes to control not only the zone but also the source equipment.

### **IR Remote control through Keypad**

To control the source components via IR from the UNO-S2 Keypad, an IR emitter must be connected from the source component to the CAV6.6. The emitter is shown connected from the IR receiver on the source component to the source component's IR emitter output port on the rear on the CAV6.6. This type of configuration allows independent control over more than one identical source component. The IR from the remote will be routed to the selected source. When using the UNO-LRC1 remote, simply select "UNO" at the top of the remote, select source 1-6 and operate the source.

### **Speakers**

Connect the speakers to the amplified CAV6.6 zones 1 through 6 using a "Home Run" from the individual amplified speaker outputs to the speakers. Use the detachable modular snap speaker connectors which are color coded and labeled for easy installation. For most installations, 16 gauge 4-conductor wire is recommended.

---

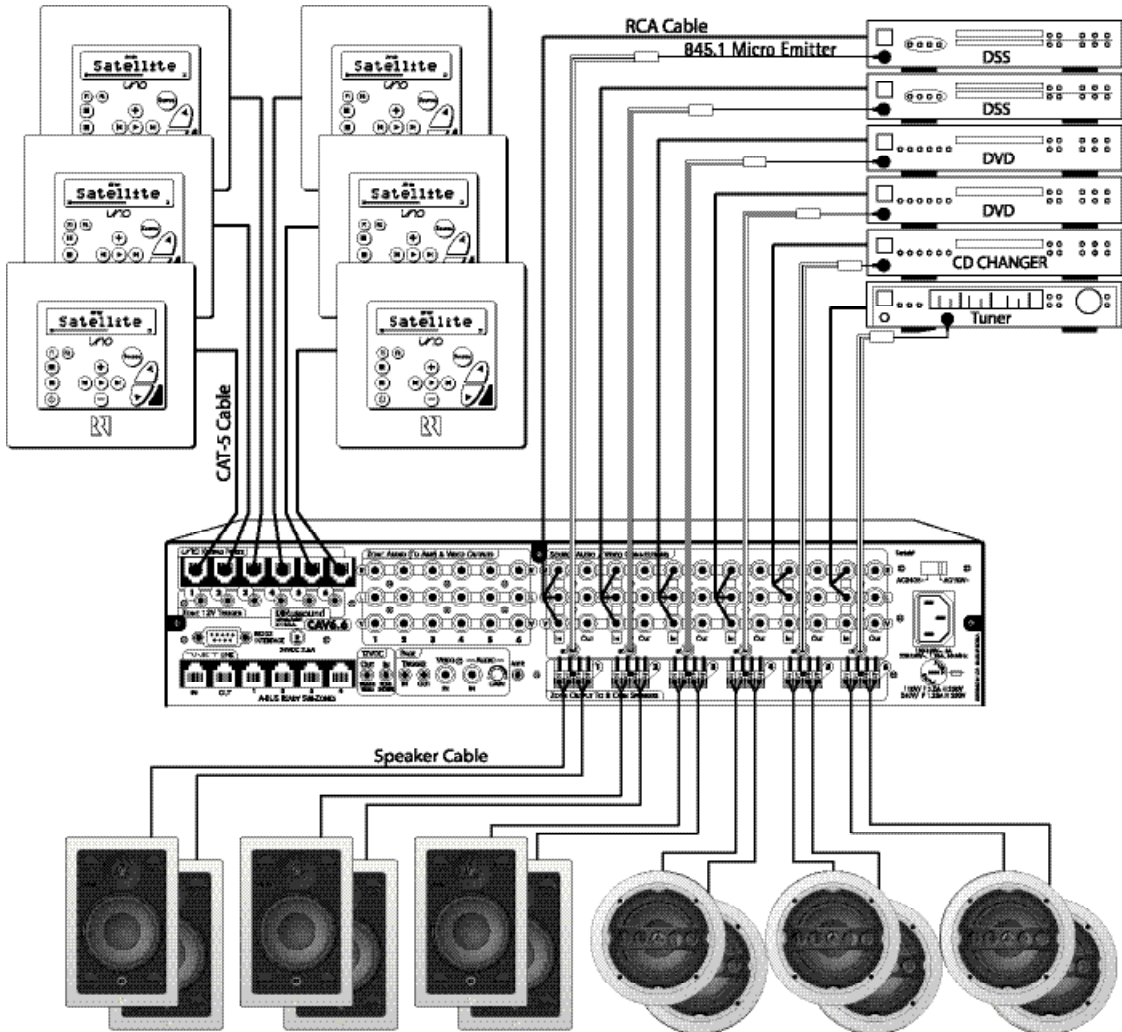

### **Components List:**

- 1 - CAV6.6 Controller
- 6 - UNO-S2 Keypads
- 3 - pair Advantage Iso-Mount™ Speakers
- 3 - pair Advantage Twist & Tilt™ Speakers
- 6 - 845.1 Micro Emitters

# SAMPLE SYSTEM CONFIGURATION 1

## Six Zones and Six Sources

## SAMPLE SYSTEM CONFIGURATION 2

### ***Integrate Multiple CAV6.6's***

This configuration uses an additional CAV6.6 to add six additional amplified zones, controlled through UNO-S2 Keypads. The source components are connected to both CAV6.6s with RCA cables using the source in/loop out to interconnect the audio/video signals.

#### **RNET Link In and Link Out**

Multiple CAV6.6s can be integrated as the two shown in this configuration. An RJ-45 CAT-5 patch cable allows for communication between the two CAV6.6s. System commands such as paging, ALL OFF, ALL ON, IR control, and PC control are transferred from one CAV6.6 to another through the Link In and Link Out Ports using the patch cable.

#### **Source Components**

The same six audio/video source components are used for both CAV6.6s. The source components are connected to the Source Audio/Video Input Connections on the first CAV6.6 while the Audio/Video Source Output Connections from the first CAV6.6 are connected to the Source Audio/Video Input Connections on the second CAV6.6.

#### **Keypads**

This configuration uses a single UNO-S2 Keypad per zone on each of the CAV6.6s. Each keypad is connected to the UNO System Keypad Port using the CAT-5 T568A RJ-45 wiring configuration. This gives complete control of each of the 12 UNO System Controlled Zones to the corresponding UNO-S2 Keypad.

Individual zone settings such as volume, source selection, on/off, tone control and amplification are controlled through the UNO System Keypad. IR controls for zone and source equipment are controlled through the UNO-S2 Keypad.

***Programming Note:*** When programming multiple controllers with identical configurations, remove the RNET link cables between controllers before starting any controller programming procedures.

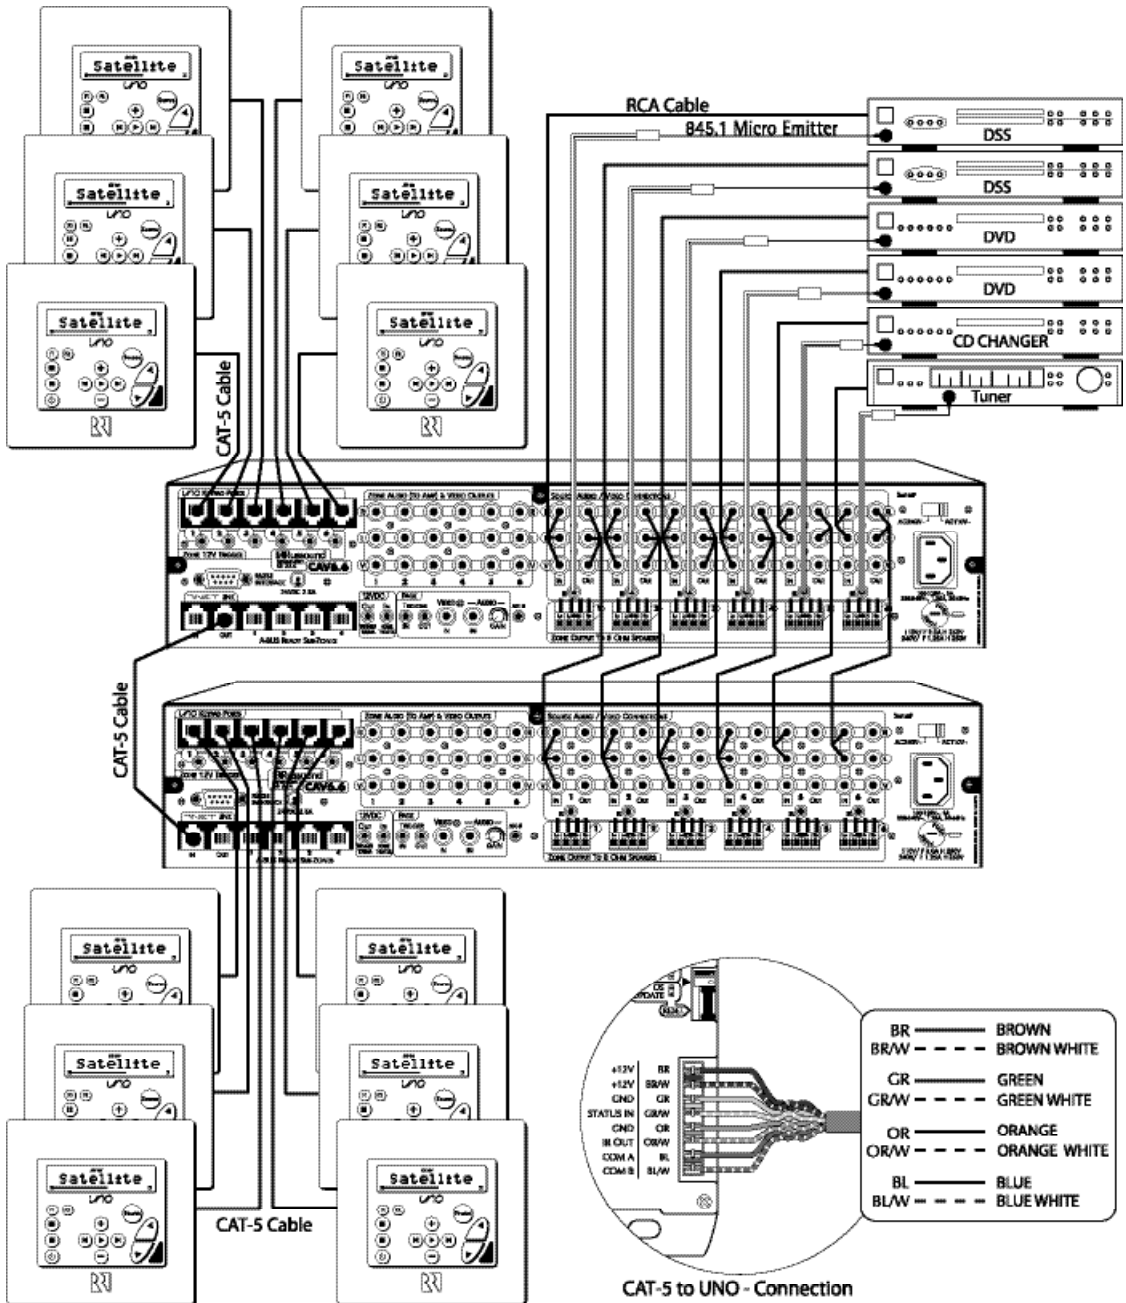

---

#### **Components List:**

- 2 - CAV6.6 Controllers
- 12 - UNO-S2 Keypads
- 6 - 845.1 Micro Emitters

# SAMPLE SYSTEM CONFIGURATION 2

## Integrate Multiple CAV6.6's

## SAMPLE SYSTEM CONFIGURATION 3

### ***Zone Keypad Expansion***

This configuration uses a SA-ZX3 Keypad Splitter hub to connect up to three UNO-S2 keypads to one CAV6.6 UNO keypad port. For clean installations, use RJ-45 CAT-5 patch cables with the T568A configuration.

To connect from the SA-ZX3 to an RJ-45 wall plate (optional), use the patch cables to wire for

the wall plate to the keypad. Connect the controller keypad port using the patch cable.

Mount the SA-ZX3 Keypad Splitter hub near the controller using screws or hook and loop fastener. The SA-ZX3 requires a 12VDC 1A power supply, such as the Russound 1201A Power Supply.

---

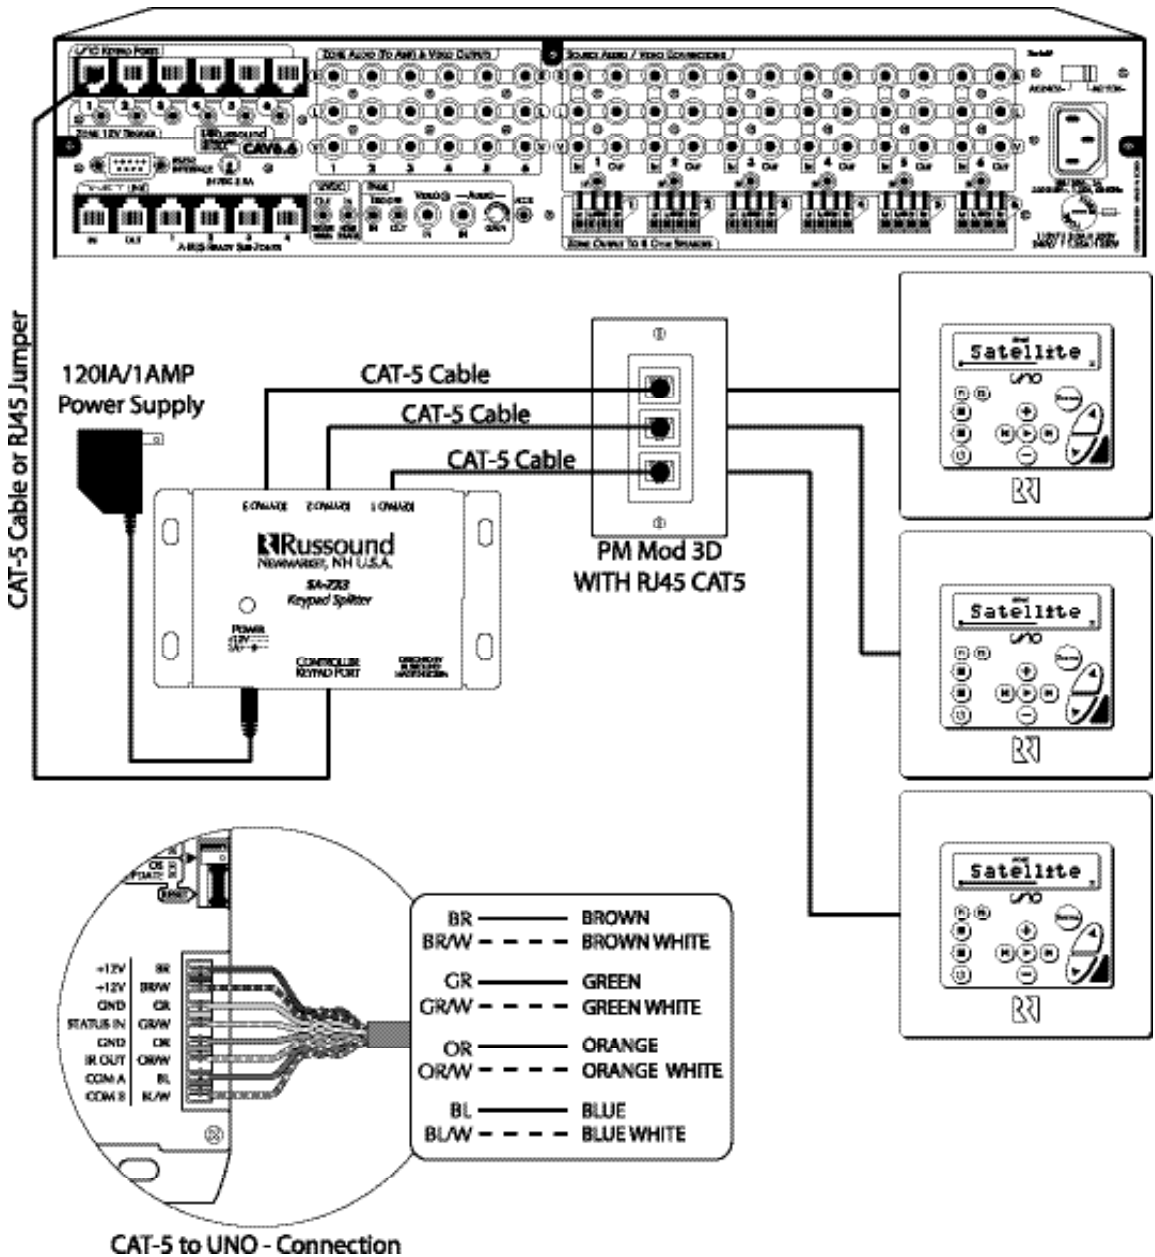

#### **Components List:**

- 1 - CAV6.6 Controller
- 3 - UNO-S2 Keypads
- 1 - SA-ZX3 Keypad Splitter
- 1 - 1201A 12VDC Power Supply
- 1 - PlateMate™ MOD3D
- 3 - MOD RJ-45 CAT-5

# SAMPLE SYSTEM CONFIGURATION 3

## Zone Keypad Expansion

# SAMPLE SYSTEM CONFIGURATION 4

## **A-BUS Ready Sub-Zone Addition**

Adding A-BUS allows sub-zoning of the audio distribution of the CAV6.6 system. This configuration demonstrates sub-zoning of the first zone through the use of an A-BUS expansion hub. Only the first four (1-4) CAV6.6 zones can be expanded using the same numbered (1-4) A-BUS Ready Sub-Zone ports.

## **Powering the A-BUS Ready Sub-Zones**

The four A-BUS Ready Sub-Zone ports must be powered by a Russound A-PS 24VDC 2.5A power supply, which is plugged into the 24VDC 2.5A POWER INPUT jack on the rear of the CAV6.6. This is only required when amplified control modules are used without an A-BUS hub.

## **A-BUS Hub**

The A-BUS Hub is used with A-BUS amplified control modules to create additional audio sub-zones and listening options. Using an A-H2 Hub connected to a CAV6.6 A-BUS Ready Sub-Zone port provides two additional A-BUS Sub-Zones. The A-H2 requires a 24VDC 2.5A Power Supply such as the Russound A-PS power supply. Mount the A-H2 near the CAV6.6 and source equipment using screws or hook and loop fastener.

---

## **Components List:**

- 1 - CAV6.6 Controller
- 1 - A-H2 A-BUS 2-Zone Single Source Surface Mount Hub
- 1 - A-PS Power Supply
- 1 - PlateMate MOD 2S
- 2 - MOD RJ-45 CAT-5
- 1 - A-VC Amplified Volume Control
- 1 - A-KP2 Amplified Keypad
- 1 - pair Advantage Iso-Mount Speakers
- 1 - pair Advantage Twist & Tilt Speakers

## **CAT-5 Connections**

The A-H2 Hub connects to the CAV6.6 A-BUS Ready Sub-Zone Port using RJ-45 CAT-5 cables. The cable connects from the CAV6.6 Sub-Zone port to the Expansion Input port on the Hub, then from the Hub keypad output to the RJ-45 wall plate.

## **Keypad Connections**

The A-BUS A-KP2 amplified keypad and the A-VC2 amplified volume control connect to the Hub via the wall plate. Use the CAT-5 T568A RJ-45 wiring configuration for these connections.

## **Multi-Source Mode Switch**

The Multi-Source Mode switch is located on the side of the A-KP2 keypad. It can be set to multi or single source. When the switch is set to "multi," it allows the selection of sources 1 through 4 on the CAV6.6. If "single" is selected, the A-KP2 will not allow source selection from the keypad, but will allow selections by IR remote.

## **Speakers**

The speakers for the A-BUS Ready Sub-Zone are connected to the individual A-BUS amplified control modules. The speaker wire is connected to the keypad using the screw terminal on the rear of the keypad.

# SAMPLE SYSTEM CONFIGURATION 4

## A-BUS Ready Sub-Zone Addition

# SAMPLE SYSTEM CONFIGURATION 5

## **Additional Amplification**

Additional amplification can be added to the CAV6.6 when more power or more speakers are desired.

This configuration adds an external amplifier to the CAV6.6. The Zone Audio (To Amp) Outputs are variably controlled by the associated UNO-S2 keypad and can be connected to an external amplifier. The figure shows an amplifier used in this manner. The configuration has five zones connected to an additional amplifier with one zone outputting to speakers.

### **Source Components**

In this configuration, three of a possible six audio/video source input components are used. The source components are connected to the source Audio/Video Input Connections at the first three inputs using quality RCA cables.

### **Zone Audio (To Amp) & Video Outputs**

In this option the Zone Audio (To Amp) Outputs for

zones 2 through 6 have the outputs connected to the inputs of an external amplifier. The speakers for these zones are run to the output of the external amplifier for each of these zones.

An amplified subwoofer is attached to the Zone Audio Output for zone 1 while its amplified CAV6.6 output speaker connection is also still intact. This allows the user to increase the output of the bass response while keeping the stereo output from the CAV6.6.

### **Keypads**

The configuration uses a single UNO-S2 Keypad per zone on the CAV6.6. Each keypad is connected to the UNO System Keypad Port using the CAT-5 T568A RJ-45 wiring configuration. This gives complete control of each of the 6 UNO System Controlled Zones to the corresponding UNO-S2 Keypad.

---

## **Components List:**

- 1 - CAV6.6 Controller
- 6 - UNO-S2 Keypads
- 1 - DPA-6.12 Multi-zone Amplifier
- 3 - pair Advantage Iso-Mount Speakers
- 3 - pair Advantage Twist & Tilt Speakers
- 3 - 845.1 Micro Emitters

# SAMPLE SYSTEM CONFIGURATION 5

## Additional Amplification

# SAMPLE SYSTEM CONFIGURATION 6

## **Home Theater**

Home Theater systems can share sources with a CAV6.6 Controller to provide additional listening and viewing options. In this configuration, the Home Theater Receiver provides a 12VDC signal to the CAV6.6 at the Home Theater 12VDC In Port. The 12VDC signal tells the controller to leave any shared home theater source equipment powered when all CAV6.6 zones are off, temporarily bypassing the source power management feature. The 12VDC connected to the CAV6.6's Home Theater trigger allows the source equipment to be left on.

### **Source Components**

In this configuration, three audio source components are used of a possible six audio/video source inputs. The source components are connected using quality RCA cables to the first three inputs.

### **Source Loop Outputs**

The Source Loop Outputs are connected to the CAV6.6 and to the Home Theater Receiver source inputs using RCA cables. This enables the source equipment to be shared between the two components.

### **Keypads**

Three UNO-S2 Keypads are connected to the CAV6.6 Controller using the CAT-5 T568A RJ-45 wiring configuration. This gives complete control of each of the three zones to the corresponding UNO-S2 Keypad.

### **Front Left and Right Speakers**

Zone 1 uses the same pair of speakers as the Home Theater front main left and right speakers. The amplified output from zone 1 connects to the input on the back of the SRM-2.1 speaker relay module. The Home Theater left and right front main speaker outputs are connected to the input on the front of the SRM-2.1. Zone 1 12V Trigger output is connected to the 12V +/- on the back of the SRM-2.1. When zone 1 is powered on, the SRM-2.1 is triggered allowing audio from zone 1 of the CAV6.6 to power the speakers. When the UNO System Keypad for zone 1 is shut off, 12VDC is no longer provided to the SRM-2.1, and the output of the SRM-2.1 is switched to the Home Theater front left and right amplified speaker output.

---

### **Components List:**

- 1 - CAV6.6 Controller
- 3 - UNO-S2 Keypads
- 1 - SRM-2.1 Speaker Relay Module
- 1 - pair Advantage Iso-Mount Speakers
- 1 - 846C 12VDC Power Supply
- 3 - 845.1 Micro Emitters

# TECHNICAL SPECIFICATION

## CAV6.6 Controller/Amplifier

Dimensions:	17"W x 12"D x 3.5"H (43 x 30.5 x 9 cm)
Weight:	18 lbs. (8.1 kg)
Power Supply:	110 or 240 VAC
Fuse Rating:	110V input; F3A H 250V US and Canada 240V input; F1.25A H 250V Europe
Frequency Response:	20Hz-20kHz +/- 0.5dB
Watts per channel:	20 Watts RMS x 12 into 8 Ohms
Total Harmonic Distortion:	0.05%
Signal to Noise Ratio:	88dB
A/V Source Inputs:	7 (Including front AUX A/V input)
A/V Source Outputs:	6
Zones:	6
A-BUS Ready Ports:	4
Source Audio Input:	5V Peak to Peak, 10k Ohms
Source Audio Loop Output:	Unity Gain, 10k Ohms
Source Video Input:	1V Peak to Peak, 75 Ohms
Source Video Loop Output:	1V Peak to Peak, 75 Ohms
Zone Video Output:	1V Peak to Peak, 75 Ohms
Zone Variable Line Audio Output:	5.6V Peak to Peak, 4 Ohms @ 1KHz
Trigger Outputs:	6 Zone, 1 Common. 12VDC 50mA each
Trigger Inputs:	1 Home Theater

## UNO-S2 Keypad

Dimensions:	3.65"W x 1.125"D x 4.3"H (9.2 x 10.9 x 2.8 cm) Fits 2 Gang UL/CSA Approved Junction Box
Weight:	6 oz. (170 g)
Power Requirements:	12 VDC 180mA
CAT-5 Connection:	110 punchdown

The Russound CAV6.6 is fully guaranteed against all defects in materials and workmanship for two (2) years from the date of purchase. During this period, Russound will replace any defective parts and correct any defect in workmanship without charge for either parts or labor.

For this warranty to apply, the unit must be installed and used according to its written instructions. If service is necessary, it must be performed by Russound. The unit must be returned to Russound at the owner's expense and with prior written permission. Accidental damage and shipping damage are not considered defects, nor is damage resulting from abuse or from servicing by an agency or person not specifically authorized in writing by Russound.

This Warranty does not cover:

- Damage caused by abuse, accident, misuse, negligence, or improper installation or operation
- Power surges and lightning strikes
- Normal wear and maintenance
- Products that have been altered or modified
- Any product whose identifying number, decal, serial number, etc. has been altered, defaced or removed

Russound sells products only through authorized Dealers and Distributors to ensure that customers obtain proper support and service. Any Russound product purchased from an unauthorized dealer or other source, including retailers, mail order sellers and online sellers will not be honored or serviced under existing Russound warranty policy. Any sale of products by an unauthorized source or other manner not authorized by Russound shall void the warranty on the applicable product.

Damage to or destruction of components due to application of excessive power voids the warranty on those parts. In these cases, repairs will be made on the basis of the retail value of the parts and labor. To return for repairs, the unit must be shipped to Russound at the owner's expense, along with a note explaining the nature of service required. Be sure to pack the unit in a corrugated container with at least three (3) inches of resilient material to protect the unit from damage in transit.

Before returning a unit for repair, call Russound at (603) 659-5170 for a Return Authorization number. Write this number on the shipping label and ship to:

Russound  
ATTN: Service  
5 Forbes Road  
Newmarket, NH 03857

Due to continual efforts to improve product quality as new technology and techniques become available, Russound/FMP, Inc. reserves the right to revise system specifications without notice.
