Troubleshooting

Symptom	Action
There are ghost images on the external monitor	The distance between the external console and the Rack LCD is too great. The maximum VGA cable distance should not exceed 20m and in some cases may need to be shorter. Replace the VGA cable with one of an appropriately short length.
Some characters entered from the keyboard do not display correctly.	The keyboard layout setting for the port does not match the keyboard you are using. On your switch, change the keyboard layout setting for the port to match the layout of the keyboard you are using.
No power or no response from the target device (KVM switch or server)	Check that all cables are securely attached in their sockets.
Erratic behavior	Update the firmware. See “Firmware Upgrade Mode” on page 12 for more information.
