

# TARGUS USB 2.0 CD-ROM SLIM EXTERNAL DRIVE

# Introduction

Thank you for purchasing the Targus Targus USB 2.0 DVD/CD-RW Slim External Drive that allows you to read audio and data CDs. After installing the Targus drive, you can use it at any time by connecting the supplied Universal Serial Bus (USB) Y-cable to your computer's USB ports.

This user's guide describes how to connect and operate the Targus drive. In addition to this user's guide, this package contains:

- Targus Targus USB 2.0 DVD/CD-RW Slim External Drive
- USB Y-cable

# **System Requirements**

To use the Targus drive, your computer must meet the following hardware requirements and run one of the operating systems listed below.

#### **Hardware**

- PC with an Intel<sup>®</sup> Pentium<sup>®</sup> processor or equivalent and a hard disk drive
- 64 MB RAM or higher, depending on the operating system
- Two (2) USB 1.1 or 2.0 interface ports

NOTES: When connected to USB version 1.1 ports, the drive's performance level will be less than optimal. For best results, connect the driver to USB version 2.0 ports.

THE TARGUS DRIVE RECEIVES ITS POWER FROM YOUR COMPUTER'S USB PORTS. YOU MUST HAVE A MINIMUM OF TWO USB PORTS TO USE THE DRIVE, THEY MUST BE IN FULL COMPLIANCE WITH THE USB SPECIFICATIONS AND SUPPLY A MINIMUM OF 5V/500MA OF POWER.

### **Operating System**

Windows<sup>®</sup> Me/2000/XP

# **Connecting the Drive and Installing the Drivers**

NOTES: Installing the Targus drive may change internal drive letter assignments.

YOU CAN CONNECT THE TARGUS DRIVE TO YOUR COMPUTER VIA A HUB OR PORT REPLICATOR AS LONG AS THE DEVICE HAS ITS OWN AC POWER ADAPTER.

The Y-cable that connects the Targus drive to your computer has two USB type A connector ends, one single and one with a USB pass-through.

The connector with the USB pass-through supports up- and downstream data flow between your computer and supported devices connected to the pass-through connector and provides power to the drive. The single connector supports up- and downstream data flow between the drive and your computer and also provides power to the drive.

CAUTIONS: AVOID CONNECTING A HIGH POWER DEVICE, SUCH AS A PRINTER OR SCANNER, TO YOUR COMPUTER VIA THE Y-CABLE'S PASS-THROUGH END AS THE DEVICE MAY NOT WORK PROPERLY AND/OR CAUSE THE TARGUS DRIVE TO STOP WORKING TEMPORARILY. FOR BEST RESULTS, CONNECT ONLY LOW POWER DEVICES, SUCH AS A MOUSE OR KEYBOARD, TO THE PASS-THROUGH END.

IF USING A HUB OR PORT REPLICATOR, THE USB PORTS ON THE DEVICE MUST PROVIDE AT LEAST 500 MA, PER PORT, FOR THE TARGUS DRIVE TO WORK PROPERLY. ALSO, FOR BEST RESULTS, TURN OFF ANY HIGH POWER DEVICES ON THE HUB OR PORT REPLICATOR WHILE USING THE DRIVE.

NOTE: NOT ALL USB HUBS AND PORT REPLICATORS WILL SUPPORT THE USE OF THIS DRIVE WITH THE Y-CABLE. IF YOUR HUB OR PORT REPLICATOR DOES NOT ALLOW THE DRIVE TO FUNCTION, THE DRIVE WILL NEED TO BE ATTACHED DIRECTLY TO THE USB PORTS ON YOUR COMPUTER.

When the USB type A connectors are used together, the Y-cable provides enough power to run the Targus drive, eliminating the need for an AC power adapter.

1 Using the supplied Y-cable, connect the USB type A connector with the USB pass-through into a USB port on your computer.

Y-cable with USB type A and B connector ends

- 2 Connect the single USB type A connector into another USB port on your computer for additional power to the drive.
- 3 Connect the cable's USB type B connector (the single end) into the Targus drive.
  Your computer's operating system automatically detects the new hardware and begins installing the appropriate default drivers.
- 4 Follow the on-screen instructions to complete the driver installation.

You can now begin using the drive.

- 1 Turn on your computer and press the drive's eject button to open the tray.

- 3 Close the media tray by gently pushing it until it clicks into place.

To remove a disc, grasp it by the edges and gently pull up until the disc is released.

# Removing a Disc Using the Emergency Eject Feature

CAUTION: Use the emergency eject mechanism only if the Targus drive is not connected to your computer or if the computer's battery is flat and there is no power available for the eject button. Excessive use of the emergency eject mechanism may damage it and cause the mechanism to stop working.

To manually remove a disc when there is no power to your computer:

- 1 Gently insert a slim, straight object, such as a straightened paper clip, into the emergency eject hole until you feel some resistance.
- 2 Remove the paper clip.

3 Carefully open the tray by hand.

### **Hot Swapping**

You can connect and disconnect the Targus drive while the computer is running. When connecting the Targus drive, first connect the Type A connectors of the Y-cable and then connect the Type B.

When disconnecting, remove the Type B connector from the drive first.

### **Playing Audio CDs**

To play audio CDs, use the Windows Media™ Player included in your computer's operating system.

The Targus drive supports digital audio extraction (DAE) for audio CD playback. This allows you to listen to audio CDs via your computer's built-in audio system without connecting external devices, such as headphones or speakers. To use this method, the digital audio feature in Windows Media Player must be enabled.

You can also listen to audio CDs by connecting headphones or external speakers to the audio out jack on the Targus drive. However, you must disable the digital audio feature in Windows Media Player, otherwise you will continue to hear audio through your computer.

To enable or disable the digital audio feature, refer to the Windows® operating system manual that came with your computer or select the Help option in Windows Media Player.

# Things to Remember
