

OPERATING INSTRUCTIONS MANUEL D'UTILISATION BEDIENUNGSANLEITUNG

### **R-772** Audio/Video Receiver

# CE

### Introduction

Batteries should never be thrown away or incinerated but disposed of in accordance with the local regulations concerning chemical waste.

This product and the accessories packed together constitute the applicable product according to the WEEE directive except batteries.

### System Connections

- Please be certain that this unit is unplugged from the AC outlet before making any connections.
- Since different components often have different terminal names, carefully read the operating instructions of the component connected.
- Be sure to observe the color coding when connecting audio, video and speaker cords.
- Make connections firmly and correctly. If not, it can cause loss of sound, noise or damage to the receiver.

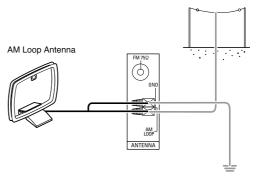

### **1.** CONNECTING ANTENNAS

 A 75Ω outdoor FM antenna may be used to further improve the reception. Disconnect the indoor antenna before replacing it with the outdoor one.

The position of the PM indoor antenna until you get the best reception of your favorite FM stations.

- Place the AM loop antenna as far as possible from the receiver, TV set, speaker cords and the AC input cord and set it to a direction for the best reception.
- If the reception is poor with the AM loop antenna, an AM outdoor antenna can be used in place of the AM loop antenna.

#### 2. CONNECTING VIDEO COMPONENTS

• The jacks of VIDEO 1 may also be connected to a DVD recorder or other digital video recording component.

For details, refer to the operating instructions of the component to be connected.

- The jacks of VIDEO 2/VIDEO 3 can also be connected to an additional video component such as a cable TV tuner or satellite system.
- Connect the jacks of VIDEO 3 to the video component in the same way.

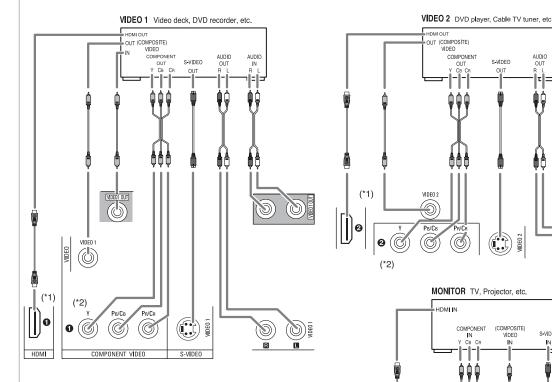

S-VIDEC

VIDEO :

(COMPOSITE)

Рв/С

S-VIDEO

- There are three types of video jacks (COMPONENT, S-VIDEO, (composite) VIDEO) for analog video connections and the HDMI connectors for digital video and audio connections. Connect them to the corresponding video jacks according to their capability.
- For your reference, the excellence in picture quality is as follows : "HDMI" > "COMPONENT" > "S-VIDEO" > "(composite) VIDEO" .
- When making COMPONENT VIDEO connections, connect "Y" to "Y", "PB/CB" to "CB"(or "B-Y", "PB") and "PR/CR" to "CR"(or "R-Y", "PR").
- When recording video program sources through VIDEO 1 OUT jacks or viewing ROOM 2 source through ROOM 2 OUT jacks, you must connect the (composite) VIDEO IN jacks to video playback components such as DVD player, cable TV tuner, etc.

(\*1)

- This unit is equipped with a function that up-converts composite video signals to S-Video signals or downconverts S-Video signals to composite video signals and outputs them from the MONITOR OUTs.
- After connecting the video components, you should set the video mode correctly, referring to the following table on page 6. (For details, refer to "When selecting the VIDEO MODE" on page 45.)

#### Continued

#### ■ Relationship between the video input signal and the video output signal

Video input signals			Video Mode	MONITOR OUTs			
COMPONENT	S-VIDEO	(COMPOSITE) VIDEO	Setting	COMPONENT*1 S-VIDEO		(COMPOSITE) VIDEO	
			Auto	Component	S-Video	Composite video*2	
0	0	0	Component	Component ×		×	
	0		S-Video	×	× S-Video		
			Composite	×	Composite video	Composite video	
0	0	×	Auto	Component	S-Video	S-Video	
0	×	0	Auto	Component	Composite video	Composite video	
0	×	×	Auto	Component ×		×	
×	0	0	Auto	× S-Video Compos		Composite video*2	
×	0	×	Auto	×	S-Video	S-Video	
×	×	0	Auto	×	Composite video	Composite video	

\*1 : Component video signal can be output from the COMPONENT MONITOR OUT jacks only.

\*2 : The OSD menu and the momentary OSD cannot be displayed via (COMPOSITE) VIDEO MONITOR OUT jack.

#### ■Note :

 The OSD menu and the momentary OSD cannot be displayed via the COMPONENT MONITOR OUT and the HDMI MONITOR OUT jacks.

#### ■ HDMI (High Definition Multimedia Interface) connection : (\*1)

- You can connect the source component (DVD player, etc.) to the display component (TV, projector, etc.) through this receiver with using a commercially available HDMI cord.
- The HDMI connection can carry uncompressed digital video signals and digital audio signals.
- The HDMI video stream signals (video signals) are theoretically compatible with DVI-D. When connecting to a TV monitor, etc., equipped with DVI-D connector, it is possible to connect using a commercially available HDMI-DVI converter cord. Since the HDMI-to-DVI connection cannot carry any audio signals, you should make audio connections to play the audio signals on the component equipped with DVI-D connector. (For details, refer to the operating instructions of its.)
- If you connect the HDMI INs to your video components, it is easier to do so following the default settings.
- If your HDMI connection is different from the default setting, you should assign the HDMI INs you used with the "When selecting the HDMI ASSIGN" procedure on page 45.
- The default settings are as follows :
- HDMI 1 : VIDEO 1, HDMI 2 : VIDEO 2

#### Copyright protection system

- This unit supports HDCP (High-bandwidth Digital Contents Protection), technology to protect copyright of digital video signals against illegal duplication. HDCP must also be supported on the components connected to this unit.
- This unit is HDMI Ver. 1.3 compatible.
- HDMI, the HDMI logo and High-Definition Multimedia Interface are trademarks or registered trademarks of HDMI licensing LLC.

#### ■Notes:

- For stable signal transfer, we recommend using HDMI cords that are a maximum of 5 meters in length.
- Among the components that support HDMI, some components can control other components via the HDMI connector.
- However, this unit cannot be controlled by another component via the HDMI connector.
- The audio signals from the HDMI connector (including the sampling frequency and bit length) may be limited by the component that is connected.
- The video signals will not be output properly if a component incompatible with HDCP is connected.
- If the resolutions of the video signals which are output from the HDMI MONITOR OUT and your monitor TV are not matched, the picture is not clear, natural or displayed. In this case, change the setting of the resolution on the source component (DVD player, etc.) to one which the monitor TV can handle. (For details, refer to the operating instructions of the source component.)
- When you want to enjoy only the picture on your TV, not the sound, you should set the HDMI AUDIO OUT to OFF not to output the digital audio signal from the HDMI MONITOR OUT of this receiver. (For details, refer to "When selecting the HDMI AUDIO OUT" on page 41.)

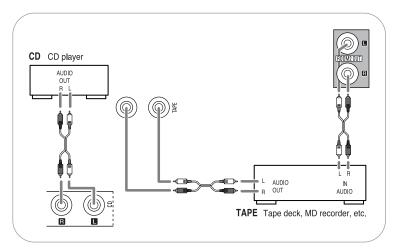

#### Component video input default settings: (\*2)

- If you connect the COMPONENT VIDEO INs to your video components, it is easier to do so following the default settings.
  If your component video connections are different from the default setting, you should assign the COMPONENT VIDEO INs you used with the "When selecting the VIDEO ASSIGN" procedure on page 45.
- The default settings are as follows:
- COMPONENT IN 1 : VIDEO 1, COMPONENT IN 2 : VIDEO 2.

#### **3.** CONNECTING AUDIO COMPONENTS

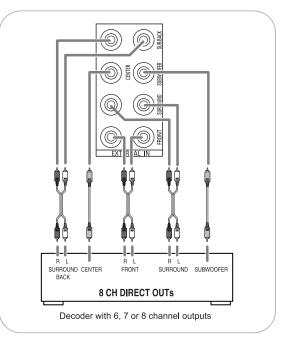

• For analog audio recording, the ROOM 2 OUT jacks can be connected to audio recording equipment such as a tape deck, an MD recorder, etc. as shown beside.

ENGLIS

### 4. CONNECTING EXTERNAL INS

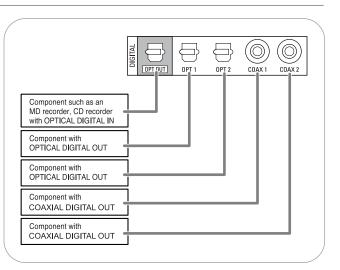

- Use these jacks to connect the corresponding outputs of a DVD player or external decorder, etc. that has 6, 7 or 8 channel analog audio outputs.
- In case of 6 or 7 channel outputs, do not connect both of the SURROUND BACK L and R inputs or the SURROUND BACK R input of this unit. (For details, refer to the operating instructions of the component to be connected.)

### 5. CONNECTING DIGITAL INS AND OUT

- The OPTICAL and the COAXIAL DIGITAL OUTs of the components that are connected to this unit can be connected to these DIGITAL INs.
- A digital input should be connected to the components such as a CD player, DVD player, etc. capable of outputting DTS Digital Surround, Dolby Digital or PCM format digital signals, etc.
- If the component with OPTICAL IN jack is connected to the OPTICAL OUT jack of this unit, you can record the high quality sound of CDs, etc. without degradation.
- For details, refer to the operating instructions of the component connected.
- When making the COAXIAL DIGITAL connection, be sure to use a 75  $\Omega$  COAXIAL cord, not a conventional AUDIO cord.
- All of the commercially available optical fiber cords cannot be used for the equipment. If there is an

optical fiber cord which cannot be connected to your equipment, consult your dealer or nearest service organization.

#### ■Notes:

- Be sure to make either a OPTICAL or a COAXIAL DIGITAL connection on each component. (You don't need to do both.)
- Depending on the digital audio signal format input into HDMI IN connector, some digital signals cannot be output from the OPTICAL OUT jack.

#### Digital input default settings

- If you connect the DIGITAL INs to your components, it is easier to do so following the default settings.
- If your DIGITAL connections are different from default settings, you should assign the DIGITAL INs you used with the "When selecting the AUDIO ASSIGN" procedure on page 45.

DC TRIGGER OUT 12V d.c 100mA

(C

 The default settings are as follows : OPTICAL IN 1 : VIDEO 1, OPTICAL IN 2 : VIDEO 2, COAXIAL IN 1 : CD, COAXIAL IN 2 : AUX.

#### 6. CONNECTING DC TRIGGER OUT

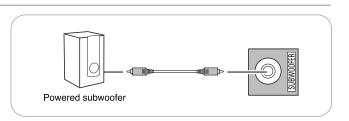

- Connect a component to DC TRIGGER OUT jack that allows DC 12V to turn on when a specific input source is selected.
- For details, refer to the operating instructions of the components to be connected.
- To link DC TRIGGER OUT with a specific input source, refer to "When selecting the DC TRIGGER" on page 46.

#### ■Note:

- This output voltage (12V d.c., 100mA) is for (status) control only, it is not sufficient for drive capability.
- When making DC TRIGGER connection, you should use the stereo mini cord, not a mono mini cord.

### 7. CONNECTING SUBWOOFER PREOUT

• To emphasize the deep bass sounds, connect a powered subwoofer.

Component to be triggered

by DC when a specific input source is selected

ENGLISH

#### 8. CONNECTING SPEAKERS

- Be sure to connect speakers firmly and correctly according to the channel(left and right) and the polarity (+ and -). If the connections are faulty, no sound will be heard from the speakers, and if the polarity of the speaker connection is incorrect, the sound will be unnatural and lack bass.
- For installing the speakers, refer to "Speaker placement" on page 10.
- After installing the speakers, first adjust the speaker settings according to your environment and speaker layout. (For details, refer to "SETTING THE SPEAKER/ROOM EQ SETUP" on page 48.)

#### ■ Surround back speakers

- When using only one surround back speaker, you should connect it to SURROUND BACK/MULTI LEFT channel.
- Because this receiver cannot drive the surround back speakers and the ROOM 2 speakers simultaneously, you should assign their power amplifier correctly depending on how to use them.
   (For details, refer to "CONNECTING ROOM 2 OUTS" on page 11 and "When selecting the AMP ASSIGN" on page 40.)

#### ■ Front Bi-Amp Connections.

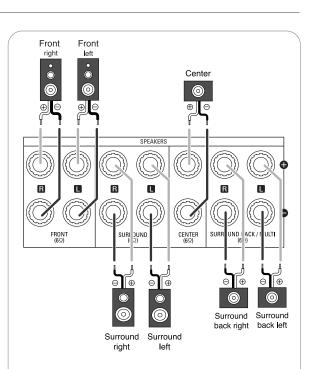

- Some speakers are equipped with two sets of input terminals, for bi-amplification.
- If no other surround back speakers are used, you can connect the FRONT and the SURROUND BACK /MULTI channels to the bi-amp-capable speakers. (For details, refer to the operating instructions of your bi-amp-capable speakers.)
- To drive the bi-amp-capable speakers, you should assign the power amplifier to "BI-AMP".

#### ■Note:

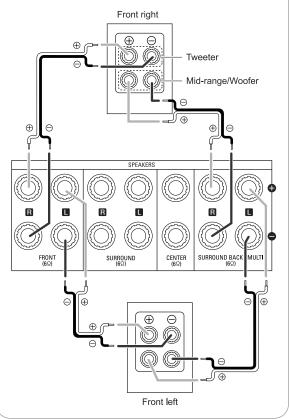

• Before making bi-amp connections, remove the short-circuiting bars from the terminals of your speakers.

#### Caution :

- Be sure to use the speakers with the impedance of 6 ohms or above.
- Do not let the bare speaker wires touch each other or any metal part of this unit. This could damage this unit and/or the speakers.

Front-Bi-Amp Connections

9

#### Speaker placement

Ideal speaker placement varies depending on the size of your room and the wall coverings, etc. The typical example of speaker placement and recommendations are as follows :

- Front left and right speakers and center speaker
- Place the front speakers with their front surfaces as flush with TV or monitor screen as possible.
- · Place the center speaker between the front left and right speakers and no further from the listening position than the front speakers.
- · Place each speaker so that sound is aimed at the location of the listener's ears when at the main listening position.

#### Surround left and right speakers

 Place the surround speakers approximately 1 meter (40 inches) above the ear level of a seated listener on the direct left and right of them or slightly behind.

#### Surround back left and right speakers

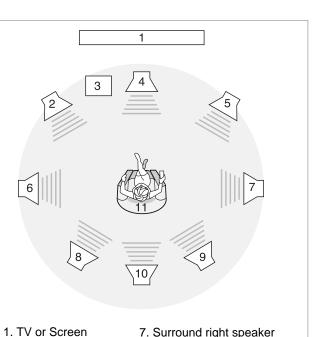

- Place the surround back speakers at the back facing the front at a narrower distance than front speakers.
- When using a single surround back speaker, place it at the rear center facing the front at a slightly higher position (0 to 20 cm ) than the surround speakers.
- · We recommend installing the surround back speaker(s) at a slightly downward facing angle. This effectively prevents the surround back channel signals from reflecting off the TV or screen at the front center, resulting in interference and making the sense of movement from the front to the back less sharp.

#### Subwoofer

 The subwoofer reproduces powerful deep bass sounds.

Place a subwoofer anywhere in the front as desired.

- Notes :
- When using a conventional TV, to avoid interference with the TV picture, use only magnetically shielded front left and right and center speakers.
- To obtain the best surround effects, the speakers except the subwoofer should be full range speakers.

- 1. TV or Screen
- 2. Front left speaker
- 8. Surround back left speaker
- 3. Subwoofer
- 4. Center speaker
- 9. Surround back right speaker
- 10. Surround center speaker 11. Listening position
- 5. Front right speaker 6. Surround left speaker

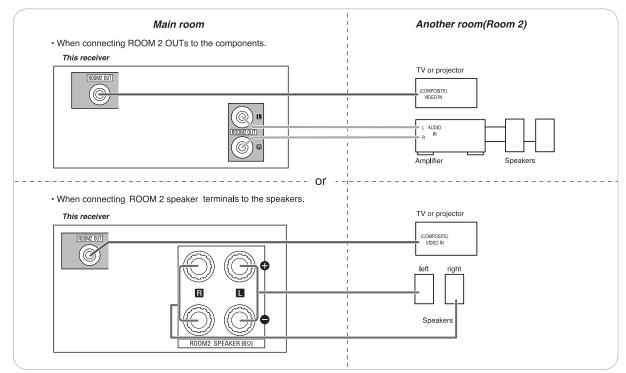

#### **9.** CONNECTING ROOM 2 OUTS

- ROOM 2 playback feature allows you to play a different program source in another room as well as one source in the main room at the same time.
- For ROOM 2 playback, connect the ROOM 2 OUT jacks to the amplifier, TV, etc. installed in another room, or connect the ROOM 2 speaker terminals to the speakers.
- Because this receiver cannot drive the surround back speakers and the ROOM 2 speakers simultaneously, you should assign their power amplifier correctly depending on how to use them. (For details, refer to "When selecting the AMP ASSIGN" on page 40.)
- When the ROOM 2 (AUDIO) OUT jacks are not connected to the ROOM 2 amplifier, you can connect these jacks to audio recording equipment such as a tape deck, an MD recorder, etc. for analog audio recording. (For details, refer to "CONNECTING AUDIO COMPONENTS" on page 7.)

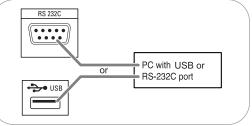

#### ■Notes:

- To minimize hum or noise, use high quality connection cords.
- You cannot use the digital audio signal for ROOM 2 playback.

#### **10.** CONNECTING PC FOR UPGRADES

- This receiver incorporates USB as well as RS-232C terminal that may be used in the future to update the operating software so that it will be able to support new digital audio formats, external control by using an external device and the like.
- Connect either USB or RS-232C terminal to your PC (you don't need to do both).

- ■Notes:

• Programming for upgrades and external control requires specialized programming knowledge and for that reason we recommend that it only be done by qualified installers. For more information on future upgrades and external control, visit the Sherwood web site at www.sherwoodamerica.com or contact your dealer.

• Do not disconnect the connection cable while updating the operating software, etc. Should this happen, it may be result in malfunction or cause damage to the unit.

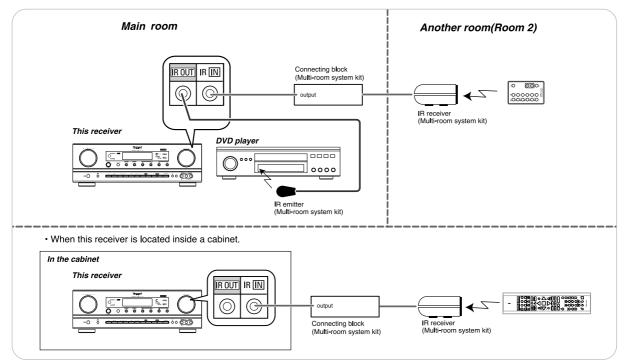

### 11. CONNECTING MULTI-ROOM SYSTEM KIT

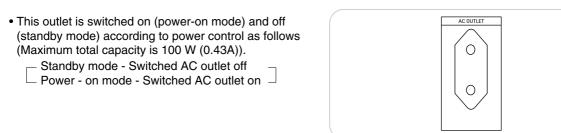

- The multi-room system kit(sold separately ) is essential for operation from a remote location . For information on the multi-room system kit, contact the Xantech corporation at 1-800-843-5465 or www.xantech.com.
- IR IN jack allows you to control this receiver from another room with the remote control unit.
- To control this receiver from another room with the remote control unit, connect the IR IN jack to the output of the connecting block.
- If this receiver is located inside a cabinet or other enclosure where the infrared beams from the remote control unit cannot enter, then operation with the remote control unit will not be possible. In such a case, connect the IR IN jack to the output of the connecting block.
- To control other compatible component from another room with the universal remote control unit, connect the IR OUT jack to the IR emitter.

#### ■Note:

 Remote operation may become unreliable if the IR receiver is exposed to strong light such as direct sunlight or inverted fluorescent.

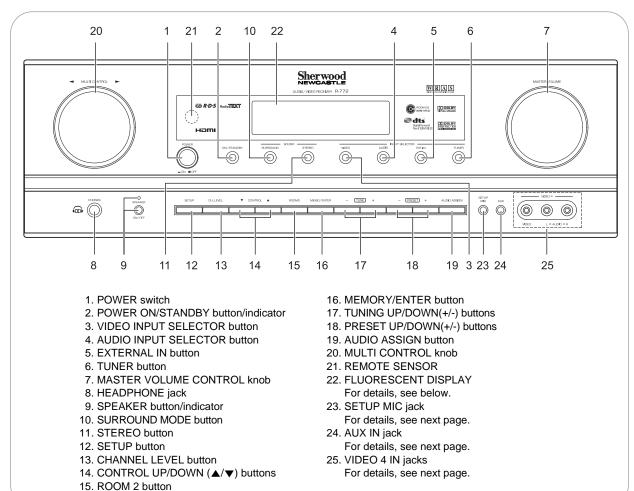

### **12.** SWITCHED AC OUTLET

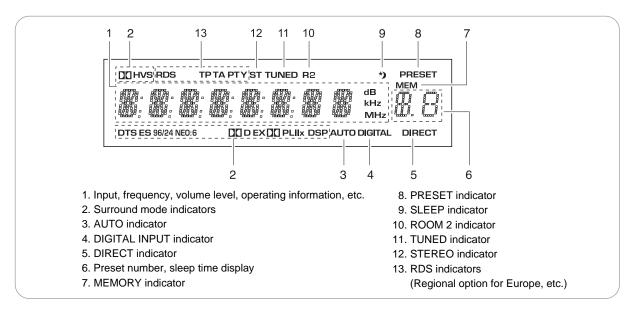

#### **13.** AC INPUT CORD

• Plug this cord into a wall AC outlet.

### Front Panel Controls

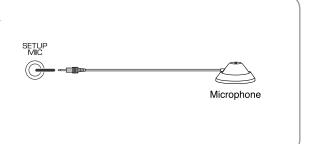

#### ■ FLUORESCENT DISPLAY

ENGLISH

#### ■ SETUP MIC JACK

- To use Auto Setup function, connect the supplied microphone to the SETUP MIC jack.(For details, refer to "When selecting the AUTO SETUP" on page 48.)
- Notes:
- Because the microphone for Auto Setup is designed for use with this receiver, do not use a microphone other than the one supplied with this receiver.
- After you have completed the auto setup procedure, disconnect the microphone.

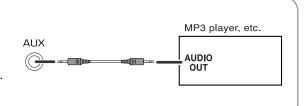

#### ■AUX IN JACK

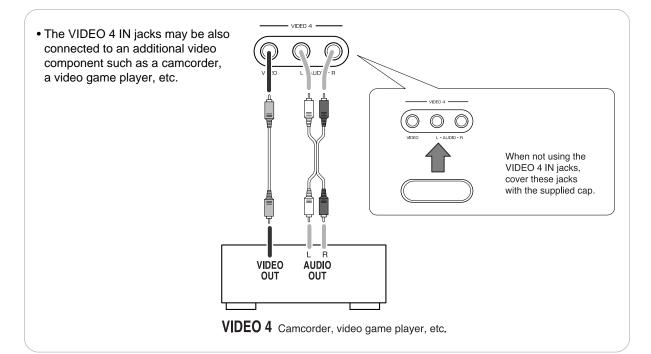

• The AUX IN jack can be connected to an additional audio component such as an MP3 player, etc.

#### ■ Note :

 When connecting this jack to an MP3 player, etc., you should use the stereo mini cord, not a mono mini cord.

#### ■ VIDEO 4 IN JACKS

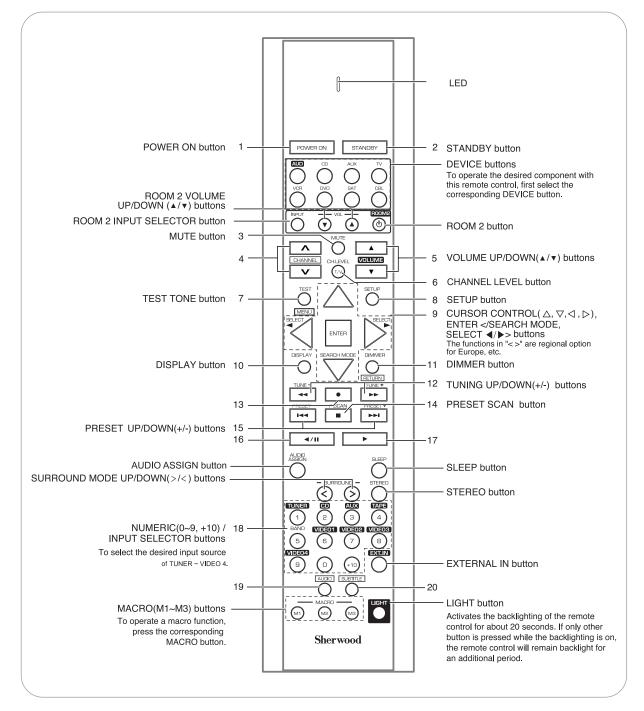

### **Universal Remote Controls**

This universal remote control can operate not only this receiver but also most popular brands of audio and video components such as CD players, tape decks, TVs, cable boxes, VCRs, DVD players, satellite receivers, etc.

- To operate 7 components other than this receiver , you should enter the setup code for each component. (For details, refer to "USING FUNCTIONS OF REMOTE CONTROL" on page 18.)
- The numbered buttons on the remote control have different functions in different device modes. For details, refer to "FUNCTION TABLE of the NUMBERED BUTTONS" on the next page.

#### ■Note:

• In such a case that some components do not have the REMOTE SENSOR which receives the remote signals, this remote control cannot operate them.

#### ■ FUNCTION TABLE of the NUMBERED BUTTONS.

#### ■Notes :

• Some functions for each component may not be available or may work differently.

• Depending on other kinds of components that are available for each DEVICE button, some functions may not be available or may work differently, too.

• For details about functions, refer to the operating instructions of each component.

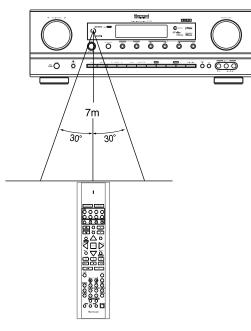

#### OPERATING COMPONENTS WITH REMOTE CONTROL

- **1.** Enter the setup code for each component other than this receiver. For details, refer to "Entering a setup code" on page 18.
- **2.** Turn on the component you want to operate.
- **3.** Press the DEVICE button on the remote control corresponding to the component you wish to operate.
- **4.** Aim the remote control at the REMOTE SENSOR of the component you wish to control and press the button corresponding to the operation you want.

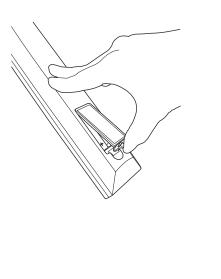

#### REMOTE CONTROL OPERATION RANGE

• Use the remote control within a range of about 7 meters (23 feet) and angles of up to 30 degrees aiming at the remote sensor.

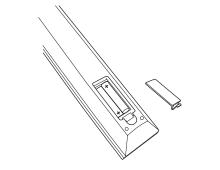

#### LOADING BATTERIES

- When the remote control does not operate, the old batteries should be replaced. In this case, load new batteries within several minutes after removing old batteries.
- If the betteries are removed or have been exhausted for a longer period of time, memorized contents will be cleared. Should this happen, you should memorize them again.
- **1.** Remove the cover.

**2.** Load two batteries ("AAA" size) matching the polarity.

- Remove the batteries when they are not used for a long time.
- Do not use the rechargeable batteries (Ni-Cd type).
- Be sure to use alkaline batteries.

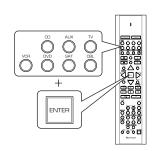

ENGLISH

#### USING FUNCTIONS OF REMOTE CONTROL

- This remote control can control up to 8 different components.
- Before operating audio and video components other than this receiver with using this remote control, the setup code for each component should be entered.
- For system remote control operation, "000" was stored previously in the memory of the device button "CD" for Sherwood CD player, "DVD" for Sherwood DVD player, "AUX" for Sherwood tape deck and "TV" for Sherwood TV respectively as its factory setup code. So, you don't need to enter its code for each Sherwood component except in such a case that its code does not work.

#### Entering a setup code

- **1.** Turn on the component you want to control.
- **2.** Find the setup codes according to the type and the brand name of your component, referring to "Setup Code Table" on page 64.
- **3.** Press and hold down both the "ENTER" button and the desired one of the DEVICE buttons for more than 1 second.

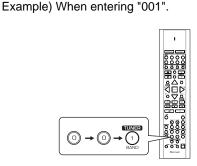

• The LED will flicker once.

■Note:

• The "AUD" button is unavailable for the audio components other than this receiver.

**4.** Enter a 3 digit code, aiming the remote control at the remote sensor on the component.

- If entering is performed successfully, the LED will flicker twice.
- To be sure that the setup code is correct, press the POWER ON(or STANDBY) button.
   If your component is tuned off, the setup code is
- correct.
- When your component is not turned off, repeat the above steps 2 to 4, trying each code for your component until you find one that works.

#### ■Notes:

- If the LED did not flicker twice, then repeat the above steps 3 to 4 and try entering the same code again.
- Manufacturers may use different setup codes for the same product category. For that reason, it is important that you check to see if the code you have entered operates as many controls as possible. If only a few functions operate, check to see if another code will work with more buttons.
- **5.** Repeat the above steps 1 to 4 for each of your components.

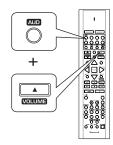

18

ENGL

#### Using a punch-through function

This remote control may be programmed to operate either the AUDIO volume punch-through or the TV volume and/or TV channel punchthrough in conjunction with any of the eight components controlled by this remote control. For example, since this receiver will likely be used as the sound system while watching TV, you may want to adjust this receiver's volume although this remote control is set to control the TV.

 When programming this remote control for the AUDIO volume punch-through, press and hold down both "AUD" button and "VOLUME ▲" button for more than 1 second.

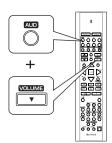

- If programming is performed successfully, the LED will flicker twice.
- When you want either TV volume or TV channel punch-through, press and hold down both "TV" button and either "VOLUME ▲" or "CHANNEL ▲" button for more than 1 second.

#### ■Note:

 If you use one of AUDIO and TV volume punch-through functions, you cannot use the other.

#### Removing a punch-through function

 When removing the AUDIO volume punch-through, press and hold down both "AUD" button and "VOLUME ▼" button for more than 1 second.

- If removing is performed successfully, the LED will flicker twice.
- When you want to remove either TV volume or TV channel punch-through, press and hold down both "TV" button and either "VOLUME ▼" or "CHANNEL ▼" button for more than 1 second.

#### Removing all punch-through functions

Press and hold down both "AUD" button and "AUDIO ASSIGN" button for more than 1 second.

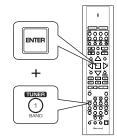

• If removing all punch-through functions is performed successfully, the LED will flicker twice.

#### Programming a macro function

- The macro function enables you to program a series of button operations(up to 10) on this remote control into a single button.
- You can store up to three separate macro command sequences into "M1", "M2" and "M3" buttons.
- Press and hold down both "ENTER" button and one of three NUMERIC buttons ("1"~"3") corresponding to "M1"~"M3" buttons for more than 1 second.

Example) When programming a series of button operations into "M1" button.

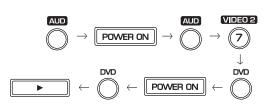

- If the macro mode is entered, the LED will flicker once.
- **2.** Press the operation buttons you want to program in order.

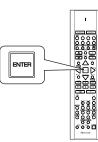

#### ■Note:

You should press the corresponding DEVICE buttons before pressing each operation button. Example) When playing a DVD on the DVD player connected to VIDEO 2 jacks of this receiver.

- ①. Press "AUD" button to control this receiver.
- ②. Press "POWER ON" button to turn this receiver on.
- ③. Press "AUD" button to control this receiver.
- ④. Press "VIDEO 2(7)" button to select the desired input source.
- ⑤. Press "DVD" button to control the DVD player.
- 6. Press "POWER ON" button to turn the DVD player on.
- ⑦. Press "DVD" button to control the DVD player.
- ⑧. Press "▶" button to start playback.

**3.** Press "ENTER" button.

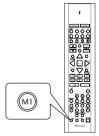

- If the programming is performed successfully, the LED will flicker twice.
- ■To remove a macro program
- When removing a macro program, perform the above steps 1 and 3, but ignore the step 2.

#### To change a macro program

 When a new macro program is stored into a MACRO button with performing the above steps 1 to 3, the previous macro program is cleared from the memory of the MACRO button.

#### **Operating a macro function**

 Aim the remote control at the REMOTE SENSORs of the components to be controlled and press the MACRO button you want. Example) When pressing "M1" button.

#### ■Notes:

 The codes programmed into a MACRO button will be transmitted at an interval of 0.5 seconds. However, some components may not be able to complete one operation in 0.5 seconds and may miss the next code.

In this case, the macro function cannot control the corresponding components correctly.

- Be sure to use the remote control within the remote control operation range of the components.
- Depending on the operation status of the components, etc., the macro function cannot control the corresponding components correctly.

### **ROOM 2 Remote Controls**

This remote control unit is an additional remote control unit for the ROOM 2 source playback only.

- · You can use the ROOM 2 functions with this remote control unit more conveniently in another room than with the universal remote control unit.
- For details on ROOM 2 operation, refer to "ROOM 2 SOURCE PLAYBACK" on page 35.

#### **REMOTE CONTROL OPERATION RANGE**

• Aim the ROOM 2 remote control(or the universal remote control) at the IR receiver installed in

"CONNECTING MULTI-ROOM SYSTEM KIT" on

main room, aim the universal remote control (or

the ROOM 2 remote control) at the remote

#### LOADING BATTERY

1. Remove the cover.

2. Load the battery(CR2025) matching the polarity.

### **Operations**

#### ■Notes:

- Before operating this receiver with the supplied remote control, refer to "Universal Remote Controls" on page 15 for details about operation.
- Before operating this receiver, first set this unit as desired for optimum performance, doing the OSD menu setting procedures. (For details, refer to "OSD Menu Settings" on page 38.)

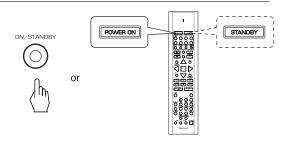

LISTENING TO A PROGRAM SOURCE

#### **Before operation**

- Enter the standby mode.
- The POWER ON/STANDBY button lights up amber. This means that the receiver is not disconnected from the AC mains and a small amount of current is retained to support the operation readiness.

- To switch the power off, push the POWER switch again.
   Then the power is cut off and the POWER ON/STANDBY button goes off.
- 1. In the standby mode, turn the power on.

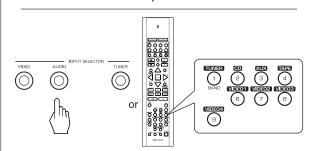

- Each time the POWER ON/STANDBY button on the front panel is pressed, the receiver is turned on to enter the operating mode (the POWER ON/ STANDBY button lights up blue) or off to enter the standby mode(the POWER ON/STANDBY button lights up amber).
- On the remote control, press the POWER ON button to enter the operating mode or press the STANDBY button to enter the standby mode.
- In the standby mode, if the INPUT SELECTOR button is pressed, the receiver is turned on automatically and the desired input is selected.
- **2.** Switch the speakers on.
  - Then the SPEAKER indicator lights up and the sound can be heard from the speakers connected to the speaker terminals.

 When using the headphones for private listening, press the SPEAKER button again to switch the speakers off.

- Each time the "AUDIO" button on the front panel is pressed, the input source changes as follows:
   → CD → AUX → TAPE →
- Each time the "VIDEO" button on the front panel is pressed, the input source changes as follows:
   → VIDEO 1→VIDEO 2→VIDEO 3 →VIDEO 4 →
- Each time the "TUNER" button is pressed, the band changes as follows:
   → FM STereo → FM MONO → AM →
- ■When selecting the EXTERNAL IN as desired,

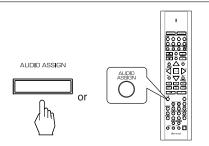

- Depending on the power amplifier setting for the surround back channels and the surround back speaker setting, "EXT. IN" is displayed and 8(/7/6) separate analog signals from the component connected to this input pass through the tone and volume circuits only and can be heard from your speakers.
- Select the desired input source to cancel the external in function.
- These analog signals can be heard only, not recorded.

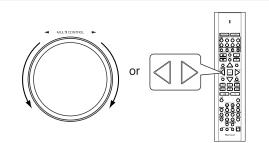

ENGL

## When CD, AUX, VIDEO 1~ 4 is selected as an input source

- If the AUDIO MODE is set to the mode other than "DIGITAL" for the corresponding input source on the INPUT SETUP menu, you cannot hear the sound from the selected digital input. (For details, refer to "SETTING THE INPUT SETUP" on page 44.)
- Press the AUDIO ASSIGN button.

- "AUD ~" is displayed for several seconds.
- "AUD ~" disappears, press the AUDIO ASSIGN button again.
- **5.** Select the desired of the digital inputs connected while displaying "AUD ~".

 Each time the MULTI CONTROL knob is rotated or the CURSOR LEFT(◀)/RIGHT(►) buttons are pressed, the corresponding input is selected as follows :

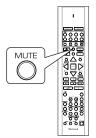

- Notes:
- When the selected digital input is not connected or assigned, "o1", "c1", etc. (, meaning no digital signal input from it) or "d" (, meaning no audio assignment) flickers and no sound will be heard.
- The selected digital input is automatically assigned to the corresponding input source on the INPUT SETUP menu. (For details, refer to "SETTING THE INPUT SETUP" on page 44.)
- The sound from the component connected to the selected digital input can be heard regardless of the selected input source.

- **6.** Operate the selected component for playback.
  - When playing back the program sources with surround sound, refer to "ENJOYING SURROUND SOUND" on page 26.
- **7.** Adjust the (overall) volume.

#### Muting the sound

- "MUTE" flickers.
- To resume the previous sound level, press it again.

#### Listening with headphones

- Ensure that the SPEAKER button is set to off.
- Depending on the signal format which is being input, you can listen in Dolby Headphone mode, stereo mode, etc. (For details, refer to "Listening in Dolby Headphone mode" on page 27).
- When the EXTERNAL IN is selected as an input source, only front left and front right channel signals can be reproduced through the headphones.

■ Note:

• Be careful not to set the volume too high when using headphones.

#### SURROUND SOUND

 This receiver incorporates a sophisticated Digital Signal Processor that allows you to create optimum sound quality and sound atmosphere in your personal Home Theater.

#### Surround modes

#### DTS Digital Surround

DTS Digital Surround(also called simply DTS) is a multi-channel digital signal format which can handle higher data rates. Discs "include the recording of up to bearing the "

5.1 channels of digital signals, which can be generally thought to provide better sound quality due to the lower audio compression required.

It also provides wide dynamic range and separation, resulting in magnificent sound.

■ DTS - ES Extended Surround™ ( This is a new multi channel digital signal format which greatly improves the 360- degree surround impression and space expression thanks to further expanded surround signals, offering high compatibility with the conventional DTS format. In addition to the 5.1 channels, DTS-ES Extended Surround also offers the surround back (sometimes also referred to as "surround center") channel for surround playback with a total of 6.1 channels. DTS-ES Extended Surround includes two signal formats with different surround signal recording methods as follows:

#### • DTS-ES<sup>™</sup> Discrete 6.1

Because the signals for 6.1 channels (including the surround back channel) are fully independent, it is possible to achieve a sense that the acoustic image are moving about freely among the background sounds surrounding the listener from 360 degrees. Though maximum performance is achieved when sound tracks recorded with this system are played using a DTS -ES decoder, when played with a conventional DTS decoder, the surround back channel signals are automatically downmixed to the surround left and surround right channels so that none of the signal components are lost.

#### • DTS - ES™ Matrix 6.1

With this format, the additional surround back channel signals undergo matrix encoding and are input to the surround left and surround right channels beforehand. During playback, they are decoded to the surround left, surround right and surround back channels.

Because the bit stream format is 100% compatible with conventional DTS signals, the effect of the DTS-ES Matrix 6.1 format can be achieved even with DTS 5.1- channel signal sources. Of course, it is possible to play DTS-ES Matrix 6.1 channel signal sources with a DTS 5.1 - channel decoder. When DTS-ES Discrete 6.1 or Matrix 6.1 sources are decoded with a DTS - ES decoder, the format is automatically detected upon decoding and the optimum surround mode is selected. However, some DTS - ES Matrix 6.1 sources may be detected as DTS sources. In this case, the DTS - ES Matrix mode should be selected manually to play these sources.

#### ■ DTS Neo: 6<sup>TM</sup> surround

This mode applies conventional 2-channel signals such as digital PCM or analog stereo signals to the high precision digital matrix decoder used for DTS-ES Matrix 6.1 to achieve 6.1channel surround playback. DTS Neo : 6 surround includes two modes for selecting the optimum decoding for the signal source.

#### DTS Neo : 6 Cinema

This mode is optimum for playing movies. Decoding is performed with emphasis on separation performance to achieve the same atmosphere with 2-channel sources as with 6.1-channel sources.

#### • DTS Neo : 6 Music

This mode is suited mainly for playing music. The front left and front right signals bypass the decoder and are played directly so there is no loss of sound quality, and the effect of the surround signals from the center, surround left, surround right and surround back channels adds a natural sense of expansion to the sound field.

#### DTS 96/24

Conventional surround formats used sampling frequencies of 48 or 44.1 kHz, so 20 kHz was about the maximum playback signal frequency. With DTS 96/24, the sampling frequency is increased to 96 or 88.2 kHz to achieve a wide frequency range of over 40 kHz. In addition, this format has a resolution of 24 bits, resulting in the same frequency band and dynamic range as 96kHz / 24 bit PCM signals.

As with conventional DTS surround, DTS 96/24 is compatible with a maximum of 5.1 channels. DTS 96/24 is fully compatible with the conventional DTS surround format, so DTS 96/24 sources can be played using a conventional DTS 5.1 channel decoder.

"DTS" and "DTS-ES I Neo:6" are registered trademarks of DTS, Inc. "96/24" is a trademarks of DTS, Inc.

#### Dolby Digital

Dolby Digital is the multi- channel digital signal format developed by Dolby Laboratories. Discs bearing the DOLBY" includes the recording of up to 5.1 channels of

digital signals, which can reproduce much better sound quality, spatial expansion and dynamic range characteristics than the previous Dolby Surround effect.

#### Dolby Digital EX

This mode creates the back (sometimes also referred to as "surround center") signals from the surround left and right signals in Dolby Digital 5.1 channel source using a matrix decoder and provides 6.1 channel surround playback. For the best results, this mode should be selected during playback of sources(bearing the "Dolby") recorded in Dolby Digital

EX. With this additional channel, you can experience more dynamic and realistic moving sound especially. When Dolby Digital EX sources are decoded with a Dolby Digital EX decoder, the format is automatically detected upon decoding and the Dolby Digital EX mode is selected. However, some Dolby Digital EX sources may be detected as Dolby Digital sources. In this case, the Dolby Digital EX mode should be selected manually to play these sources.

#### Dolby Pro Logic IIx surround

Dolby Pro Logic IIx decodes all stereo (2 channel ) and 5.1 channel sources and extends to 7.1 channel surround playback. It delivers the most natural, full range and immersing 7.1 channel listening experience. Dolby Pro Logic IIx surround includes three modes as follows :

#### Dolby Pro Logic IIx Movie

When enjoying movies, this mode allows you to further enhance the cinematic quality by adding processing that emphasizes the sounds of the action special effects.

#### Dolby Pro Logic IIx Music

When listening to music, this mode allows you to further enhance the sound quality by adding processing that emphasizes the musical effects.

#### Dolby Pro Logic IIx Game

When playing games, this mode allows you to further enhance the dynamic surround effects by adding processing that emphasizes the surrounded and exciting sound.

#### Dolby Pro Logic II surround

This mode applies conventional 2-channel signals such as digital PCM or analog stereo signals as well as Dolby Surround signals, etc. to surround processing to offer improvements over conventional Dolby Pro Logic circuits. Dolby Pro Logic II surround includes Dolby Pro Logic II Movie, Dolby Pro Logic II Music and Dolby Pro Logic II Game like Dolby Pro Logic IIx surround.

#### Dolby Virtual Speaker

This mode creates a virtual surround sound field using as few as two front speakers, allowing you to experience listening from 5.1 channel speakers.

This mode is effective not only for 5.1 channel sources but also for stereo(2 channel) sources.

Dolby VIrtual Speaker includes two listening mode as follows:

#### • Dolby Virtual Speaker Reference

The width of the front sound image is defined by the actual distance between front speakers.

#### • Dolby Virtual Speaker Wide

The width of the front sound image seems to extend beyond the front speakers.

#### Dolby Headphone

The Dolby Headphone function simulates 5.1 channel surround sound , which allows you to enjoy 5.1 channel surround sound through 2 channel headphones, just like listening from 5.1 channel speakers.

This mode is effective not only for 5.1 channel sources but also for stereo (2 channel) sources.

Manufactured under license from Dolby Laboratories "Dolby", "Pro Logic" and the double-D symbol are trademarks of Dolby Laboratories.

• The following modes apply conventional 2-channel signals such as digital PCM or analog stereo signals to high performance Digital Signal Processor to recreate sound fields artificially. Select one of the 7 provided surround modes according to the program source you want to play.

#### Theater

This mode provides the effect of being in a movie theater when watching a play.

#### Hall

This mode provides the ambience of a concert hall for classical music sources such as orchestral, chamber music or an instrumental solo.

#### Stadium

This mode provides the expansive sound field to achieve the true stadium effect when watching baseball or soccer games.

#### Room

This mode provides the sound field of a house with a low ceiling and hard walls for jazz music.

#### Panorama

This mode provides a dynamic and broad sound space to highten the overall impact of the sound track.

#### Classic

This mode provides the acoustic effects of a large concert hall for classical music.

#### Multi CH Stereo

This mode is designed for playing background music. The front, surround and surround back channels create a stereo image that encompasses the entire area.

. When using the EXTERNAL INs to play back the sound from the additional multi-channel decoder for surround sound, you can enjoy the corresponding surround sound, too. (For details, refer to the operating instructions of the component to be connected.)

For your reference, the sound from each channel can be reproduced according to the surround modes as follows:

Modes Channels	FRONT L/R	CENTER	SURROUND L/R	SURROUND BACK L/R	SUBWOOFER
DTS, DTS 96/24	0	0	0	_	0
DTS ES DISCRETE/MATRIX	0	0	0	0	0
DTS NEO: 6 CINEMA/MUSIC	0	0	0	0	(*)
DOLBY DIGITAL	0	0	0	—	0
DOLBY DIGITAL EX	0	0	0	0	0
DOLBY PRO LOGIC IIx MOVIE/MUSIC/GAME	0	0	0	0	0
DOLBY PRO LOGIC II MOVIE/MUSIC/GAME	0	0	0	—	0
DOLBY VIRTUAL SPEAKER	0	0	0	—	(*)
MULTI PCM	0	0	0	O/-	0
Other Surrounds	0	0	0	0	(*)
STEREO	0	-	—	_	(*)
EXTERNAL IN	0	0	0	0	0

(\*): Depending on the subwoofer setting, the sound from the subwoofer channel may be reproduced.

• Depending on the speaker settings and the number of the encoded channels, etc., the sound from the corresponding channels cannot be reproduced. (For details, refer to "SETTING THE SPEAKER / ROOM EQ SETUP" on page 48.)

#### **ENJOYING SURROUND SOUND**

#### ■ Notes:

- Before surround playback, first perform the speaker setup procedure, etc. on the OSD menu for optimum performance. (For details, refer to "SETTING THE SPEAKER/ROOM EQ SETUP" on page 48.)
- When playing digital signals from the Dolby Digital program source or selecting the surround mode such as Dolby Pro Logic II /Dolby Pro Logic IIx Music, Dolby Headphone, Dolby Virtual Speaker modes, you can adjust their parameters for optimum surround effect. (For details, refer to "SETTING THE SOUND PARAMETER" on page 57.)
- When the EXTERNAL IN is selected as an input source, the surround modes cannot be selected.

Depending on how to select a surround mode, select the auto surround mode or the manual surround mode.

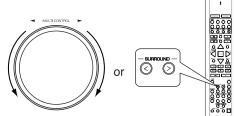

· Each time this button is pressed, the mode changes as follows :

Auto surround mode : The optimum surround mode will be "AUTO" lights up.) automatically selected depending on the signal format being input.

Manual surround mode : You can select the desired of different ("AUTO" goes off.) surround modes selectable for the signal being input with using the MULTI CONTROL knob or the SURROUND MODE UP/DOWN (  $> \, <$  ) buttons.

#### Notes :

- Even when the auto surround mode is selected and the same type of digital signal format is being input, the optimum surround mode may vary depending on whether the speaker type is set to "NO" or not.
- When the auto surround mode is selected, the surround modes other than the optimum surround mode cannot be selected.
- When selecting the manual surround mode with pressing the SURROUND MODE button on the front panel. Select the desired surround mode.

· Each time the MULTI CONTROL knob is rotated or the SURROUND MODE UP / DOWN ( >/< ) buttons are pressed, the surround mode changes depending on the input signal format as follows :

Signal format being input	Selectable surround mode
Dolby Digital EX 6.1 channel sources,	<pre><dolby +="" d="" digital="" dolby="" ex,="" music="" pliix="">, (DOLBY D + PLIIX MOVIE),</dolby></pre>
Dolby Digital 5.1 channel sources	DOLBY DIGITAL, DOLBY VS REF, DOLBY VS WIDE
Dolby Digital 2 channel sources	COLBY PLIIX MOVIE, DOLBY PLIIX MUSIC, DOLBY PLIIX GAME>, [DOLBY PLII MOVIE,
	DOLBY PLII MUSIC, DOLBY PLII GAME], DOLBY VS REF, DOLBY VS WIDE
DTS ES Discrete/Matrix 6.1 channel	<pre><corresponding +="" dts="" es="" mode,="" music="" pliix="">, (DTS + PLIIx MOVIE), DTS,</corresponding></pre>
sources	DOLBY VS REF, DOLBY VS WIDE
DTS sources,	corresponding DTS mode, DOLBY VS REF, DOLBY VS WIDE, <dts +="" dts="" neo:6,="" pliix<="" td=""></dts>
DTS 96/24 sources	MUSIC>, (DTS + PLIIX MOVIE)
PCM (multi-channel) sources*	MULTI PCM, <dolby dolby="" movie,="" music="" pliix="">, DOLBY VS REF, DOLBY VS WIDE</dolby>
96 kHz PCM (2 channel) sources PCM (2 channel) sources,	<dolby dolby="" game="" movie,="" music,="" pliix="">, [DOLBY PLII MOVIE, DOLBY PLII MUSIC, DOLBY PLII GAME], DOLBY VS REF, DOLBY VS WIDE,</dolby>
Analog stereo sources	NEO:6 CINEMA, NEO:6 MUSIC, THEATER, HALL, STADIUM, ROOM, PANORAMA, CLASSIC, MULTI CH STEREO

• Depending on surround back speaker setting, some surround modes can be selected or not as follows:

< >: Possible only when surround back speaker is not set to "NO".

[]: Possible only when surround back speaker is set to "NO".

(): Possible only when surround back speaker is set to "2CH"

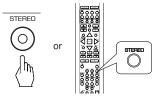

Depending on the signal format being input, the Dolby Pro Logic IIx modes and the Dolby Virtual Speaker modes may not be selected.

ENGL

#### Continued

#### ■ To cancel the surround mode for stereo operation

- Depending on the signal format which is being input, either the stereo mode or the 2CH downmix mode is selected.
  To cancel either the stereo mode or the 2CH downmix mode select
- To cancel either the stereo mode or the 2CH downmix mode, select the surround mode with using the MULTI CONTROL knob on the front panel or the SURROUND MODE UP/DOWN ( >/< ) buttons on the remote control.

#### ■2CH downmix mode

- This mode allows the multi-channel signals encoded in DTS or Dolby Digital format, etc. to be mixed down into 2 front channels and to be reproduced through only two front speakers or through headphones.
- When the SPEAKER button is set to off to listen with headphones, if the STEREO button is pressed while playing the multi-channel digital signals from DTS or Dolby Digital sources, etc., it will enter the 2CH downmix mode automatically.
- To cancel the 2CH downmix mode, select the Dolby Headphone mode with using the MULTI CONTROL knob on the front panel or the SURROUND MODE UP/DOWN ( >/< ) buttons on the remote control.

#### Listening in Dolby Headphone mode

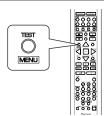

- The Dolby Headphone function simulates 5.1 channel surround sound, which allows you to enjoy 5.1 channel surround sound through 2 channel headphones, just like listening from 5.1 channel speakers.
   Note :
- Only when the SPEAKER button is set to off, the Dolby Headphone mode can be selected.
- Switch the speakers off to listen with headphones.

- Then "DOLBY HEADPHONE" (or "DOLBY H ~ ") is displayed and the Dolby Headphone mode is selected.
- To cancel the Dolby Headphone mode, press the SPEAKER button again.

#### Adjusting each channel level with test tone

- The volume level of each channel can be adjusted easily with the test tone function.
- Note : When the SPEAKER button is set to off, the test tone function does not work.
- **1.** Enter the test tone mode.

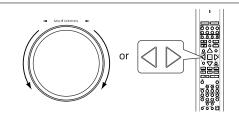

• The test tone will be heard from the speaker of each channel for 2 seconds as follows:

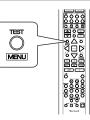

- SUB ← SL( ← SB) or ( ← SBL ← SBR) ←
   Subwoofer Surround Left Surround Back Surr.Back Left Surr.Back Right
   When the speaker setting is "NO", the test tone of the
- corresponding channel is not available.() : Possible depending on whether the surround
- back channel is set to "2 CH" or "1 CH".

**2.** At each channel, adjust the level as desired until the sound level of each speaker is heard to be equally loud.

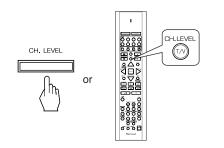

- You can select the desired channel with pressing the CONTROL UP/DOWN (▲/▼) buttons or the CURSOR UP/DOWN (▲/▼) buttons.
- **3.** Cancel the test tone function.

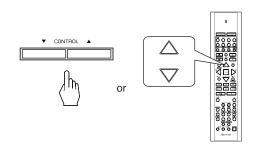

#### Adjusting the current channel level

- After adjusting each channel level with test tone, adjust the channel levels either according to the program sources or to suit your tastes.
- You can adjust the current channel levels as desired. These adjusted levels are just memorized into user's memory ("CAL"), not into preset memory("REF 1", "REF 2").
- 1. Press the CHANNEL LEVEL button.

- Then the memory mode ("CAL" or "REF 1") is displayed for several seconds.
- When the memory mode or channel level disappears, press this button again.

#### 2. Select the desired channel.

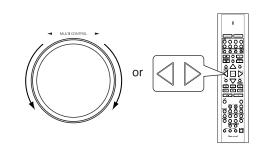

• Each time these buttons are pressed, the corresponding channel is selected as follows:

 $\rightarrow \mathsf{REF} \ \mathsf{1}(\mathsf{or} \ \mathsf{CAL}) \ \Longleftrightarrow \ \mathsf{FL} \ \bigstar \mathsf{C} \ \bigstar \mathsf{FR} \ \bigstar \mathsf{SR} \ \bigstar$ 

 $\begin{array}{c} \downarrow & \langle \mathsf{LFE} \rangle & \longleftrightarrow & \mathsf{SUB} \longleftrightarrow \mathsf{SL}(\longleftrightarrow \mathsf{SB}) \text{ or } (\longleftrightarrow \mathsf{SBL} \longleftrightarrow \mathsf{SBR}) \longleftrightarrow \\ \mathsf{DTS} \mathsf{LFE} \text{ or Dolby Digital LFE} \end{array}$ 

- ( ): Possible depending on whether the surround back channel is set to "2 CH" or "1 CH".
- < >: Possible only when the digital signals from Dolby Digital or DTS program sources that include LFE signal are input.
- Depending on the speaker settings("NO", etc.) and surround mode, etc., some channels cannot be selected.
- When the SPEAKER button is set to off, only the Front Left, Front Right (and LFE) channels can be selected.

**3.** Adjust the level of the selected channel as desired.

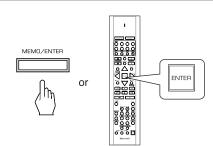

- The LFE level can be adjusted within the range of -10~0 dB and other channel levels within the range of -15~+15 dB.
- In general, we recommend the LFE level to be adjusted to 0 dB.(However, the recommended LFE level for some early DTS software is -10 dB.) If the recommended levels seem too high, lower the setting as necessary.
- **4.** Repeat the above steps 2 and 3 to adjust each channel level.

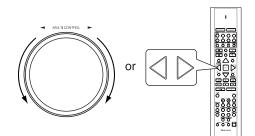

28

#### Memorizing the adjusted channel levels

- You can memorize the adjusted channel levels into preset memory("REF 1", "REF 2") and recall the memorized whenever you want.
- After performing the steps 1 ~ 4 in "Adjusting the current channel level" procedure on page 28, press the (MEMORY/) ENTER button.

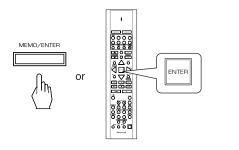

- The "1" of "REF 1" indication flickers for several seconds.
- **2.** Select the desired one of REF 1 and REF 2.

• If the preset memory disappears, perform the above step 1 again.

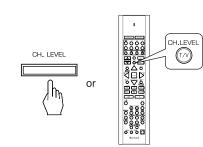

#### **3.** Confirm your selection.

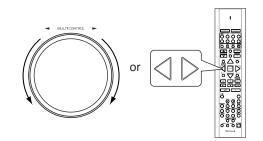

• The adjusted channel levels have now been memorized into the selected memory.

### **1.** Press the CHANNEL LEVEL button.

**Recalling the memorized channel levels** 

- "REF 1" (or "CAL") is displayed for several seconds.
- If the channel level mode display disappears, press this button again.
- **2.** Select the desired one of REF 1 and REF 2.

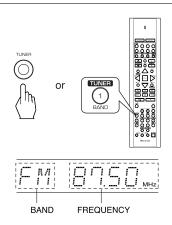

• Then the channel levels memorized into the selected preset memory are recalled.

#### LISTENING TO RADIO BROADCASTS

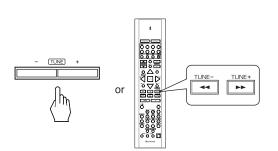

Auto tuning

ENGLISH

**1.** Select the desired band.

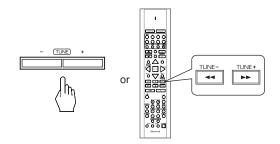

- Each time this button is pressed, the band changes as follows :
   → FM STereo → FM MONO → AM →
  - ("ST" lights up) ("ST" goes off)
- When FM stereo broadcasts are poor because of weak broadcast signals, select the FM mono mode to reduce the noise, then FM broadcasts are reproduced in monaural sound.
- Press the TUNING UP(+)/DOWN(-) buttons for more than 0.5 second.

- The tuner will now search until a station of sufficient strength has been found. The display shows the tuned frequency and "TUNED".
- If the station found is not the desired one, simply repeat this operation.
- Weak stations are skipped during auto tuning.

#### Manual tuning

- Manual tuning is useful when you already know the frequency of the desired station.
- After selecting the desired band, press the TUNING UP(+) / DOWN(-) buttons repeatedly until the right frequency has been reached.

#### Auto presetting

- Auto presetting function automatically searches for FM stations only and store them in the memory.
- While listening to radio broadcasts, press and hold down the MEMORY/ENTER button for more than 2 seconds.

MEMO/ENTER

- Then "AUTO MEM" flickers and this receiver starts auto presetting.
- Up to 30 FM stations can be stored.
- ■Notes:
- FM stations of weak strength cannot be memorized.
- To memorize AM stations or weak stations, preform "Manual presetting" procedure with using "Manual tuning" operation.

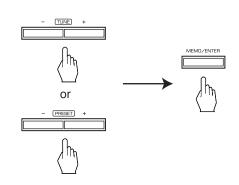

30

#### Manual presetting

- You can store up to 30 preferred stations in the memory.
- **1.** Tune in the desired station with auto or manual tuning.
- **2.** Press the MEMORY/ENTER button.

- "MEM" is flickering for several seconds.
- **3.** Select the desired preset number (1~30) and press the MEMORY/ENTER button.

- The station has now been stored in the memory.
- A stored frequency is erased from the memory by storing another frequency in its place.
- If "MEM" goes off, start again from the above step 2.
- **4.** Repeat the above steps 1 to 3 to memorize other stations.

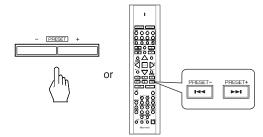

#### ■ MEMORY BACKUP FUNCTION

The following items, set before the receiver is turned off, are memorized.

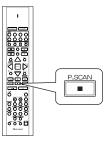

- INPUT SELECTOR settings
- Surround mode settings
- Preset stations,etc.

#### Tuning to preset stations

• After selecting the tuner as an input source, select the desired preset number.

#### Scanning preset stations in sequence

- The receiver will start scanning the stations in the preset sequence and each station is received for 5 seconds.
- At the desired station, press this button again to stop scanning.

31

### RDS Tuner(Regional Option for some countries in Europe, etc.)

#### LISTENING TO RDS BROADCASTS (FM ONLY)

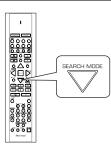

RDS(Radio Data System) is a method for sending information signals together with the transmitter signals. Your tuner is capable of translating these signals and putting the information on the display. These codes contain the following informations. Program Service name(PS), A list of Program Types(PTY), Traffic Announcement(TA), Clock Time(CT), Radio Text(RT).

#### ■Note:

• In the other countries, RDS tuner function cannot be available.

#### **RDS** search

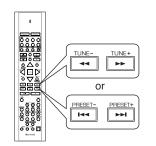

- Use this function to automatically search and receive the stations offering RDS services.
- **1.** In the FM mode, select the RDS search mode.

 Each time this button is pressed, the search mode changes as follows :

 → RDS SRCH → TP SRCH → PTY SRCH → OFF

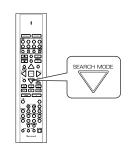

#### 2. While displaying "RDS SRCH"

- The tuner automatically searches stations offering RDS services and the station name is displayed.
- If no other RDS station is found, "NO RDS" is displayed.
- When "RDS SRCH" is not displayed, repeat again from the above step 1.

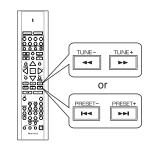

#### TP search

- Use this function to automatically search and receive the stations broadcasting the traffic program.
- **1.** In the FM mode, select the TP search mode

• "TP SRCH" is displayed.

#### 2. While displaying "TP SRCH".

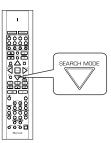

- The tuner automatically searches stations broadcasting the traffic program.
- "NO TRAFF" is displayed if the signal is too weak or there are no stations broadcasting the traffic program.
- When "TP SRCH" is not displayed, repeat again from the above step 1.

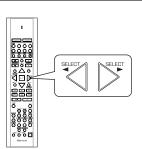

#### PTY search

- Use this function to automatically search and receive the stations broadcasting the desired program type.
- **1.** In the FM mode, select the PTY search mode.

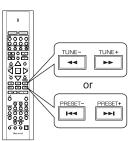

- "PTY SRCH" is displayed.
- **2.** While displaying "PTY SRCH", select the desired program type.

- Each time these buttons are pressed, one of 32 different types of programs is selected. (NEWS, AFFAIRS, INFO, SPORT, EDUCATE, DRAMA, CULTURE, SCIENCE, VARIED, POP M, ROCK M, EASY M, LIGHT M, CLASSICS, OTHER M, WEATHER, FINANCE, CHILDREN, SOCIAL, RELIGION, PHONE IN, TRAVEL, LEISURE, JAZZ, COUNTRY, NATION M, OLDIES, FOLK M, DOCUMENT, TEST, ALARM, NONE)
- When "PTY SRCH" is not displayed, repeat again from the above step 1.

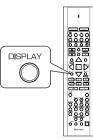

**3.** While displaying the desired program type.

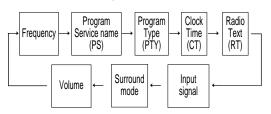

- The tuner automatically searches a station offering PTY services.
- If no station is found, "NO PROG" is displayed.

#### DISPLAY

• In the FM mode,

 Each time the DISPLAY button is pressed, the display mode changes as follows:

 If the signals are too weak or no RDS service is available, "NO NAME", "NO PTY", "NO TIME" or "NO TEXT" will be displayed.

33

#### **OTHER FUNCTIONS**

#### Operating the sleep timer

- The sleep timer allows the system to continue to operate for a specified period of time before automatically shutting off.
- To set the receiver to automatically turn off after the specified period of time.

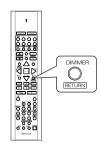

• Each time this button is pressed, the sleep time changes as follows:

 $\rightarrow 10 \rightarrow 20 \rightarrow 30 \rightarrow \dots \rightarrow 90 \rightarrow OFF$ Unit : minutes

• While operating the sleep timer, " \*) " lights up.

## Adjusting the brightness of the fluorescent display

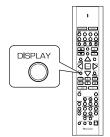

• Each time this button is pressed, the brightness of the fluorescent display changes as follows:

 $\rightarrow$  ON  $\rightarrow$  dimmer  $\rightarrow$  OFF  $\neg$ 

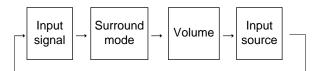

• In the display OFF mode, pressing any button will cancel the display OFF mode.

#### Displaying the audio information

- You can check the audio information on the input source.
- During playback,

 Each time this button is pressed, the display mode changes as follows :

- When the EXTERNAL IN is selected as an input source, the surround mode is not displayed.
- When RDS tuner function is available in your country, for details on the FM mode information, see "DISPLAY" on page 33.

#### **ROOM 2 SOURCE PLAYBACK**

- This function allows enjoying one source in the main room and playing another in a different room at the same time. . When you connect the multi-room system kit to the IR IN jack of this receiver, you can control this receiver with not only the universal remote control unit but also the ROOM 2 remote control unit in a different room, too. (For details, refer to "CONNECTING MULTI-ROOM SYSTEM KIT" on page 12 and "ROOM 2 Remote Controls" on page 21.) ■Notes:
- The analog signals from the EXTERNAL INs and the digital signals cannot be output to the different room, meaning no playback in a different room.

Universal

INPUT

or

- · You cannot play the ROOM 2 source in any surround mode.
- When using the buttons on the remote control unit.

#### 1. Press the ROOM 2 button.

- ROOM 2 ~ is displayed for ROOM 2 Universal several seconds. ROOM 2 ROOM2 Each time this button is or
- pressed, the ROOM 2 mode changes as follows : OFF : To turn off the ROOM 2
  - function. ("R2" goes off .)
- 1 ON : To turn it on. ("R2" lights up.)
- ■Note:
- . When the ROOM 2 mode is set to OFF, you cannot adjust the ROOM 2 volume.

2. Select the desired input as a ROOM 2 source.

 Each time the INPUT button ROOM 2 on the universal remote control unit is pressed, the ROOM 2 input can be selected among MAIN source, TUNER, CD, AUX, TAPE, VIDEO 1 ~ VIDEO 4.

#### **3.** Adjust the ROOM 2 volume.

- You can adjust the volume (ROOM 2) Universal on the power amplifier assigned to "BACK ← -ROOM 2" or "ROOM 2" when the ROOM 2 speaker terminals are connected to the speakers in a different room. (For details, refer to "When selecting the AMP
- ASSIGN" on page 40.) • The MUTE button on the ROOM 2 remote control unit can
- be available only when the ROOM 2 function is operating.
- 4. Start play on the component related to the ROOM 2 source

- When using the buttons on the front panel.
- 1. Press the ROOM 2 button to enter the ROOM 2 mode.
- ROOM 2 ~ is displayed for several seconds. • When the ROOM 2 setting mode disappears, press the ROOM 2 button again.
- **2.** Select the desired mode while displaying the ROOM 2 setting mode.
- CONTROL · Each time these buttons are pressed, the mode changes as follows : ROOM 2 ~ : To turn on or (ROOM 2 mode) off the ROOM 2 function. : To select the desired ROOM 2 source. IN ~ (ROOM 2 input) VOL ~ : To adjust the volume on the power (ROOM 2 volume) amplifier assigned to "BACK ← ROOM 2" or "ROOM 2". ■ Note : When the ROOM 2 mode is set to OFF. the ROOM 2 input and the ROOM 2 volume cannot be selected
- 3. Set the selected mode as desired.
- When selecting the ROOM 2 mode. OFF : To turn off the ROOM 2 function. ("R2" goes off.) ON : To turn it on. ("R2" lights up.) When selecting the ROOM 2 input. You can select the desired among MAIN source, TUNER, CD, AUX, TAPE, VIDEO 1 ~ VIDEO 4 as a ROOM 2 source. When selecting the ROOM 2 volume. · You can adjust the volume on the power amplifier assigned to "BACK ← → ROOM 2" or "ROOM 2" when the ROOM 2 speaker terminals are connected to the speakers in a different room. (For details, refer to "When selecting the AMP ASSIGN" on page 40.)
- 4. Start play on the component related to the ROOM 2 source.

#### ■Notes:

- . When the EXTERNAL IN is selected as a main input, if the MAIN source is selected as a ROOM 2 input, no audio signal can be heard in the different room (ROOM 2).
- Even when this receiver enters the standby mode, in such a case that "R2" lights up still and the POWER ON/STANDBY button lights up blue as it does in the operating mode, meaning only the ROOM 2 circuitry operates, the ROOM 2 source can be played independently.
- When you do not use the ROOM 2 function, turn off the ROOM 2 function to save electricity.

ROOM 2

m

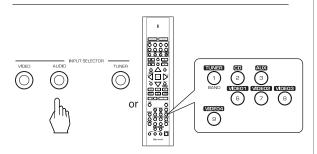

#### RECORDING

ENGLISH

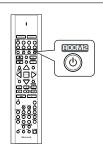

- The analog signals from the EXTERNAL INs as well as the digital signals from the coaxial or optical digital input can be heard but cannot be recorded.
- When recording the analog signals from CD, AUX, VIDEO 1 ~ 4, be sure to select the "ANALOG" for the AUDIO MODE. (For details, refer to "When selecting the AUDIO MODE" on page 45.)
- The volume and tone (bass, treble) settings have no effect on the recording signals.

#### **Recording with TAPE**

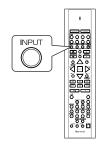

- To record the analog signals onto the recording equipment, be sure to connect the ROOM2 OUT jacks to the recording equipment. (For details, refer to "CONNECTING AUDIO COMPONENTS" on page 7.)
- 1. Select the desired input as a recording source except for TAPE.

#### 2. Turn on the ROOM 2.

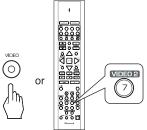

3. Select the MAIN as a ROOM 2 input.

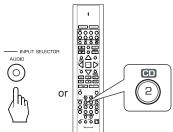

- 4. Start recording on the TAPE.
- 5. Start play on the desired input.

#### Dubbing the audio and video signals separately onto VIDEO 1

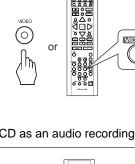

- Example: When dubbing the VIDEO 2 video signal and the CD audio signal separately onto VIDEO 1.
- **1**. Select VIDEO 2 as a video recording source.

**2.** Select CD as an audio recording source.

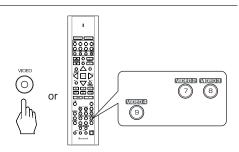

- **3.** Start recording on the VIDEO 1.
- 4. Start play on the VIDEO 2 and the CD respectively.
  - The audio signal from the CD and the video signal from the VIDEO 2 will be dubbed and you can enjoy them on the TV set and from the speakers.
  - ■Note : Be sure to observe the order of the above steps 1 and 2.

# Dubbing from video components onto VIDEO 1

1. Select the desired of VIDEO 2 ~ 4 as a recording source except VIDEO 1.

- 2. Start recording on the VIDEO 1.
- 3. Start play on the desired input.
- The audio and video signals from the desired input will be dubbed onto the VIDEO 1 and you can enjoy them on the TV set and from the speakers.

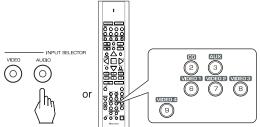

# DIGITAL AUDIO RECORDING WITH MD RECORDER

 Only when the OPTICAL DIGITAL OUT of this receiver is connected to the OPTICAL DIGITAL IN of the MD recorder or CD recorder, you can enjoy high-quality sound of digital recording without converting the original signals. Refer to "CONNECTING VIDEO COMPONENTS", "CONNECTING AUDIO COMPONENTS" and "CONNECTING DIGITAL INS AND OUT" on pages 5~8 and the operating instructions of the MD recorder or CD recorder.

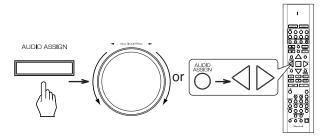

#### ■Notes:

- Depending on the digital audio signal format input into the HDMI IN connector, some digital signals cannot be output from the OPTICAL DIGITAL OUT jack.
- Digital recording is available for the digital audio program sources such as CDs, MDs, some DVDs, etc.
- In most DVDs and SACDs as well as some CDs, etc., digital recording may not be available depending on the signal format.
- There are some restrictions on recording digital signals. When making digital recordings, refer to the operating instructions of your digital recording equipment to know what restrictions are imposed.

**1.** Select the desired of CD, AUX, VIDEO 1~4 as a recording source.

- In case of recording the digital audio signal input into a HDMI IN connector
- Select the desired recording source to which the HDMI IN is connected and assigned and then perform the steps 3 and 4 (, but ignore the step 2).
- ■Note:
- If the AUDIO MODE is set to the mode other than "HDMI" for the corresponding recording source on the INPUT SETUP menu, the digital audio signals will not be output and there will be no recording. (For details, refer to "When selecting the AUDIO MODE" on page 45.)
- **2.** For digital recording, select the digital input as recording signal input.

#### ■Note:

- If the AUDIO MODE is set to the mode other than "DIGITAL" for the corresponding recording source on the INPUT SETUP menu, the digital audio signals from the selected digital input will not be output and there will be no recording. (For details, refer to "When CD, AUX, VIDEO 1~ 4 is selected as an input source" on page 23 and "When selecting the AUDIO MODE" on page 45.)
- **3.** Start recording on the component connected to the OPTICAL DIGITAL OUT.
- **4.** Start play on the desired input.

# **OSD Menu Settings**

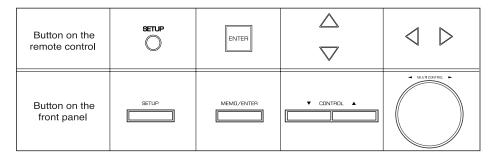

• The OSD (On-Screen Display) menu is a setting menu that is displayed on the monitor TV and allows you to perform the setup procedures easily. In most situations, you will only need to set this once during the installation and layout of your home theater, and it rarely needs to be changed later.

The OSD menu consists of 6 main menus ; system setup, input setup, speaker / room EQ setup, CH level setup, sound parameter and multi room setup. These menus are then divided up into various sub-menus.

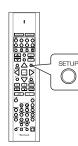

#### Notes:

- The OSD menu and the momentary OSD cannot be displayed via the COMPONENT MONITOR OUT and the HDMI MONITOR OUT jacks.
- Depending on the VIDEO MODE setting and the video connections between this receiver and the video component, the OSD menu and the momentary OSD cannot be displayed via (COMPOSITE) MONITOR OUT jack, (For details, refer to "Relationship between the video input signal and the video output signal" on page 6.)
- Navigating through the OSD menu
- The explanations here assume you are using the buttons on the remote control when performing the OSD menu operation. However, you can use the buttons on the front panel as well.

The buttons on the front panel correspond to those on the remote control as shown below.

# 1. Turn the menu screen on.

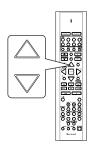

MAIN M	ENU
>SYSTEM INPUT SPEAKEB	SETUP SETUP
/ROOM EQ CH LEVEL SOUND MULTI ROOM	SETUP SETUP PARAMETER SETUP
EXIT	

• The main menu will be shown.

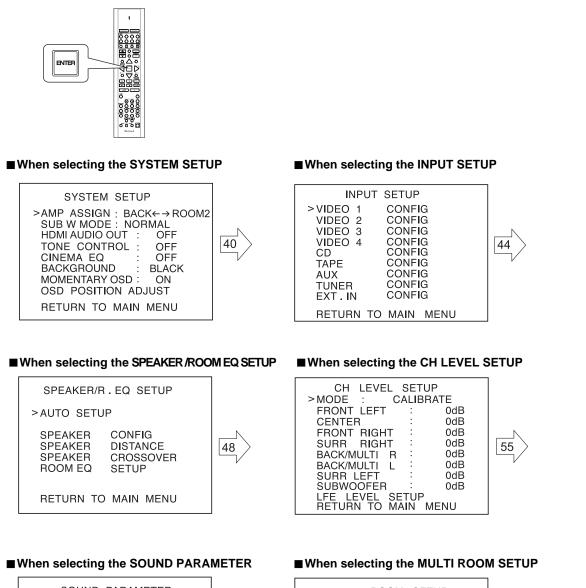

• To turn the menu screen off, press this button again.

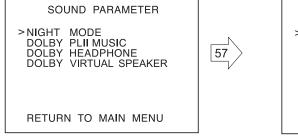

**2.** Select the desired menu using the CURSOR UP( $\blacktriangle$ )/DOWN( $\blacktriangledown$ ) buttons.

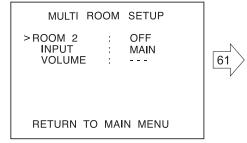

# **3.** Confirm your selection.

ENGLISH

• For the setting details, see page in  $\Rightarrow$ .

- Adjust the setting(s) in each setting category to your preference.
- When the SETUP button is pressed on a sub-menu, the menu screen will be turned off.

# SETTING THE SYSTEM SETUP

SYSTEM SETUP
<ul> <li>&gt;AMP ASSIGN : BACK← → ROOM2</li> <li>SUB W MODE : NORMAL</li> <li>HDMI AUDIO OUT : OFF</li> <li>TONE CONTROL : OFF</li> <li>CINEMA EQ : OFF</li> </ul>
BACKGROUND : BLACK MOMENTARY OSD : ON
OSD POSITION ADJUST
RETURN TO MAIN MENU

	AMP ASSIGN : To assign the surround back channels' power amplifier correctly depending on how to use the
	speakers.
-	• SUBWOOFER MODE : To select the desired subwoofer mode.
	• HDMI AUDIO OUT : To output the digital audio signals from the
	HDMI MONITOR OUT connector.
	<ul> <li>TONE CONTROL : To adjust the tone (bass and treble) as</li> </ul>
	desired.
	<ul> <li>CINEMA EQ : To select the desired cinema EQ mode.</li> </ul>
	• BACKGROUND : To select the desired background color of the
	momentary OSD and the OSD menu.
	MOMENTARY OSD : To turn on or off the OSD that shows the
	status corresponding to each operation

momentarily. • OSD POSITION ADJUST : To adjust the position of the

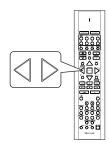

momentary OSD and the OSD menu.

# When selecting the items other than OSD POSITION ADJUST

 Press the CURSOR UP(▲)/DOWN(▼) buttons to select the desired item.

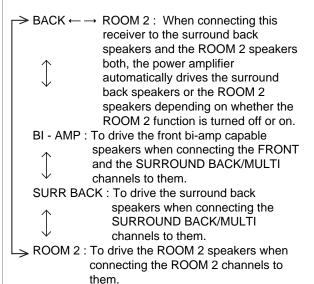

2. Press the CURSOR LEFT(◀)/RIGHT(►) buttons to set the selected item as desired.

# When selecting the AMP ASSIGN

• The surround back channels' power amplifier can drive the surround back speakers, the ROOM 2 speakers or the front bi-amp capable speakers. Depending on how to use the speakers, you should assign the power amplifier correctly. (For details, refer to "CONNECTING SPEAKERS" on page 9 and "CONNECTING ROOM 2 OUTS" on page 11.)

### Continued

#### When selecting the SUBWOOFER MODE

- "SW PLUS + " mode is valid only when "FRONT" and "CENTER" are set to "FULL RANGE" and "SUBWOOFER" is set to "YES" on the SPEAKER/ROOM EQ SETUP menu. (For details, refer to "SETTING THE SPEAKER/ ROOM EQ SETUP" on page 48.)
- NORMAL : When the low frequency signals of channels set to "FULL RANGE" are reproduced from those channels only. In this mode, the low frequency signals that are reproduced from the subwoofer
  - channel is only the low frequency signals of LFE (from the multi-channel sources that contains LFE (Low Frequency Effects) channel, also called the ".1" channel) and the channels set to the setting value other than "FULL RANGE".
- SW PLUS + : When the low frequency signals of channels set to "FULL RANGE" are reproduced simultaneously from those channels and the subwoofer channel. In this mode, the low frequency range expands more uniformly through the room, but depending on the size and shape of the room, interference may result in a decrease of the actual volume of the low frequency range.

#### When selecting the HDMI AUDIO OUT

- The HDMI connection can carry uncompressed digital video signals and digital audio signals. Depending on whether these digital audio signals are output from the HDMI MONITOR OUT of this receiver or not, you should set the HDMI AUDIO OUT correctly.
- ON : To output the digital audio signals, meaning these signals are heard from the speakers of your TV.

#### ■ Notes:

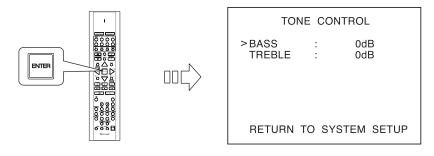

- When the HDMI AUDIO OUT is set to ON, no sound will be heard from the speakers connected to this receiver (except ROOM 2 speakers) even though any input source is selected.
- If your TV cannot support some digital audio formats, no sound may be heard from its speakers even when the HDMI AUDIO OUT is set to ON.

When selecting the TONE CONTROL

OFF : To listen to a program source without the tone effect. ("DIRECT" indicator lights up.)

ON : To adjust the tone for your taste. ("DIRECT" indicator goes off.)

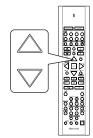

When the TONE CONTROL is set to ON to adjust the tone (bass and treble)
 Press the ENTER button to enter the tone adjustment mode.

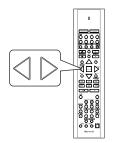

# Continued

②. Press the CURSOR UP(▲)/DOWN(▼) buttons to select the desired tone mode.

③. Press the CURSOR LEFT( $\triangleleft$ )/RIGHT( $\triangleright$ ) buttons to adjust the selected tone as desired.

- The tone level can be adjusted within the range of  $-10 \sim +10 \text{ dB}$ .
- In general, we recommend the bass and treble to be adjusted to 0 dB (flat level).
- Extreme settings at high volume may damage your speakers.
- To complete tone adjustment, repeat the above steps (2) and (3).

# When selecting the CINEMA EQ

- OFF : To turn off the cinema EQ function.
- ON : To compensate for edgy or shrill movie sound tracks.

# When selecting the BACKGROUND

BLACK : To display the black as the color background of the momentary OSD and the OSD menu.

- BLUE : To display the blue.
- Note : Only when no video signals are input into this unit, the selected background color will be displayed.

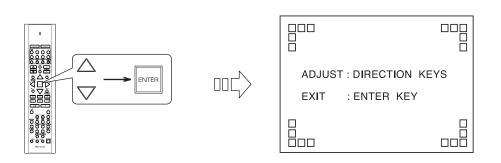

# When selecting the MOMENTARY OSD

- ON : To turn on the OSD function that shows the status corresponding to each operation on this unit momentarily.
- OFF : To turn it off.
- Note : The momentary OSD cannot be displayed via the COMPONENT MONITOR OUT and the HDMI MONITOR OUT jacks.

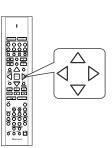

# When selecting the OSD POSITION ADJUST

- You can adjust the position of the momentary OSD and the OSD menu that are displayed on the monitor TV.
- Press the CURSOR UP(▲)/DOWN(▼) buttons to select the OSD POSITION ADJUST, then press the ENTER button.

2. Press the CURSOR UP( $\blacktriangle$ )/DOWN( $\checkmark$ )/LEFT( $\checkmark$ )/RIGHT( $\triangleright$ ) buttons to adjust the position of the momentary OSD and the OSD menu as desired.

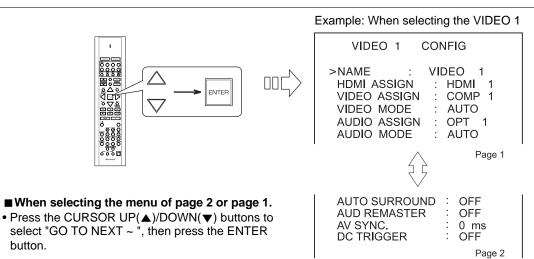

SETTING THE INPUT SETUP									
	INPL > VIDEO 1 VIDEO 2 VIDEO 3 VIDEO 4 CD TAPE AUX TUNER EXT . IN	CONFIG	• T c t						
	RETURN <sup>-</sup>	TO MAIN MENU							

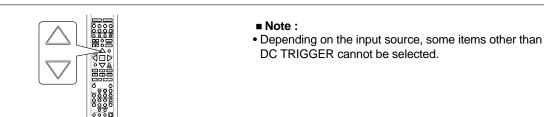

This menu allows you to make the various settings depending on how to use the input sources connected to this receiver.

## When selecting the items other than NAME

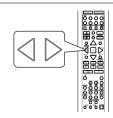

**1.** Press the CURSOR UP( $\blacktriangle$ )/DOWN( $\triangledown$ ) buttons to select the desired input source, then press the ENTER button.

Press the CURSOR UP(▲)/DOWN(▼) buttons to select the desired item.

3. Press the CURSOR LEFT(◄)/RIGHT(►) buttons to set the selected item as desired.

button.

#### Continued

#### When selecting the HDMI ASSIGN

- You should assign the connected HDMI INs to the desired of VIDEO 1 ~ VIDEO 4.
- (For details, refer to "CONNECTING VIDEO COMPONENTS" on pages 5 ~ 6.)
- You can select HDMI 1 or HDMI 2.
- Note :

 In such a case that a HDMI IN is assigned to two input sources or more, when these input sources are selected, the uncompressed digital video signals (and digital audio signals when the HDMI AUDIO OUT is set to ON) input into the same HDMI IN can be output from the HDMI MONITOR OUT of this receiver.

### When selecting the VIDEO ASSIGN

- You should assign the connected COMPONENT VIDEO INs to the desired of VIDEO 1 ~ 4.
- (For details, refer to "CONNECTING VIDEO COMPONENTS" on pages 5 ~ 6.)
- You can select the desired of COMP 1 ~ 2.
- Note :
- In such a case that a COMPONENT VIDEO IN is assigned to two input sources or more, when these input sources are selected, the component video signals can be viewed from the same COMPONENT VIDEO IN.

#### When selecting the VIDEO MODE

- You can select the video input signal to be output from the MONITOR OUTs.
- AUTO : When there are multiple video input signals, the video input signals are detected and the video input signal to be output  $\uparrow$  from the MONITOR OUTs is selected automatically in the following order :
  - component video, S-video, composite video.
- COMPOSITE : The signal that is input into the (COMPOSITE) VIDEO jack is always played. The composite video input signal is up-converted and output from the S-VIDEO MONITOR OUT jack.
- S-VIDEO : The signal that is input into the S-VIDEO jack is always played. The S-video input signal is down-converted and the output from the (COMPOSITE) VIDEO MONITOR OUT jack.
- COMPONENT : The signals that are input into the COMPONENT jacks are always played.

Because video conversion is not performed, no video signals are output from the MONITOR OUT jacks when there are no video signals that are input into the COMPONENT jacks.

- For details, refer to "Relationship between the video input signal and the video output signal" on page 6.
- Note :
- When selecting the VIDEO 4, S-VIDEO cannot be selected.

#### When selecting the AUDIO ASSIGN

- You should assign the connected DIGITAL INs to the desired of CD, AUX and VIDEO 1 ~ VIDEO 4.
- (For details, refer to "CONNECTING DIGITAL INS AND OUT" on page 8.)
- You can select the desired of OPT 1, OPT 2, COAX1 and COAX 2.
- Note :
- In such a case that a DIGITAL IN is assigned to two input sources or more, when these input sources are selected, the digital audio signals can be heard from the same DIGITAL IN.

#### When selecting the AUDIO MODE

- · You can select the desired audio input signal to be played.
- Notes :
- Be sure to set the AUDIO MODE to the audio input which is connected and assigned to the selected input source.
- When the HDMI AUDIO OUT is set to ON, no sound will be heard from the speakers connected to this receiver (except ROOM 2 speakers).
- When the AUDIO MODE is set to HDMI, you should set the HDMI ASSIGN correctly. If not, "H1", "H2" (, meaning no digital audio signal input from it) or "Hd" (, meaning no HDMI assignment) flickers on the unit's display and no sound will be heard.
- When the AUDIO MODE is set to DIGITAL, you should set the AUDIO ASSIGN correctly. If not, "o1", "c1", etc.(, meaning no digital signal input from it) or "d" (, meaning no audio assignment) flickers on the unit's display and no sound will be heard.

HDMI audio > DIGITAL audio > ANALOG audio

HDMI : The signal that is input into the HDMI IN is always played.

DIGITAL : The signal that is input into the OPTICAL or the COAXIAL DIGITAL IN is always played.

ANALOG : The signal that is input into the analog AUDIO INs is always played.

## Continued

#### When selecting the AUTO SURROUND

 Depending on how to select a surround mode, you can select the auto surround mode or the manual surround mode.

ON The optimum surround mode will be automatically selected depending on the signal format being input. (Auto surround mode)

OFF

\$

: You can select the desired of different surround modes selectable for the signal being (Manual surround mode) input with using the MULTI CONTROL knob or the SURROUND MODE UP/DOWN ( >/< ) buttons. (For details, refer to "When selecting the manual surround mode with pressing the SURROUND MODE button on the front panel" on page 26.)

#### Notes :

- Even when the auto surround mode is selected and the same type of digital signal format is being input, the optimum surround mode may vary depending on whether the speaker type is set to "NO" or not.
- When the auto surround mode is selected, the surround modes other than the optimum surround mode cannot be selected.

# When selecting the AUDIO REMASTER

- The remastering processes the input signal digitally and converts its digital sampling frequency to twice the current frequency (88.2/96 kHz) for a more detailed sound reproduction.
- ON : To process the input signal digitally and to convert its sampling frequency to 88.2/96 kHz for a more detailed sound reproduction. 1
- OFF : To turn off the remastering function.

#### Note :

 The remastering function have no effect on the input digital signal from the 88.2/96 kHz source or higher as well as the digital signal that is output from the OPTICAL DIGITAL OUT of this receiver.

#### When selecting the AV SYNC

- There may be a slight time delay between the video and audio signals in case that some video playback equipments may process the video signals later than the audio signals due to signal processing procedure, etc.. Should this happen, you can adjust the time delay of audio signals to synchronize the sound with the picture.
- The time delay can be adjusted within the range of 0 ~ 200 msec.

#### When selecting the DC TRIGGER

 To turn on the component connected to the DC TRIGGER OUT jack when this input source is selected, you should set the DC TRIGGER to ON for this input source. OFF : To turn off the DC trigger function.

1

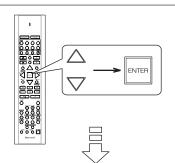

ON: To turn it on.

• For details, refer to "CONNECTING DC TRIGGER OUT" on page 8.

# When selecting the NAME

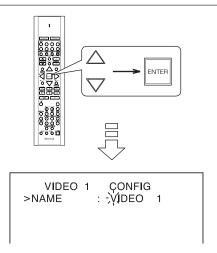

- You can give names to the input sources other than tuner.
- Up to 7 characters can be entered for each name.
- Press the CURSOR UP(▲)/DOWN(▼) buttons to select the desired input source, then press the ENTER button.

Example: When selecting the VIDEO 1

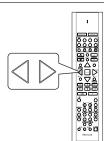

VIDEO 1	CONFIG
>NAME :	VIDEO 1
HDMI ASSIGN	: HDMI 1
VIDEO ASSIGN	: COMP 1
VIDEO MODE	: AUTO
AUDIO ASSIGN	: OPT 1
AUDIO MODE	: AUTO

 Press the CURSOR UP(▲)/DOWN(▼) buttons to select the NAME, then press the ENTER button.

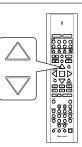

• The first digit flickers.

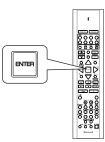

**3.** Press the CURSOR LEFT(◄)/ RIGHT(►) buttons to select the desired digit.

- Then the selected digit will flicker.
- Press the CURSOR UP(▲)/DOWN(▼) buttons to enter the desired character on the flickering digit.

- You can enter the desired among blank, A ~ Z, a ~ z, 0 ~ 9, (, ), \*, +, , , -, ., /.
- **5.** Repeat the above steps 3 and 4 to enter the desired characters on the rest of the digits.
- **6.** Confirm your entry.

- The name is stored in the memory.
- To resume its factory input source name.
  Make a blank on each digit and press the ENTER button.

>

# SETTING THE SPEAKER / ROOM EQ SETUP

- After you have installed this receiver and connected all the components, you should adjust the speaker settings for the optimum sound acoustics according to your environment and speaker layout.
- Even when you change speakers, speaker positions, or the layout of your listening environment, you should adjust the speaker settings, too.
- When performing the AUTO SETUP procedure, you need not perform the SPEAKER CONFIGURATION, SPEAKER DISTANCE, SPEAKER CROSSOVER and CH LEVEL SETUP procedures.

SPEAKER/R.EQ SETUP	<ul> <li>AUTO SETUP : To set the speaker setup and channel level setup automatically.</li> </ul>
>AUTO SETUP	SPEAKER CONFIGURATION : To adjust the speakers depending on whether they are connected or not.
SPEAKER CONFIG SPEAKER DISTANCE SPEAKER CROSSOVER ROOM EQ SETUP	<ul> <li>SPEAKER DISTANCE: To select the distance between the listening position and each speaker to set the delay time automatically for optimum surround playback.</li> <li>SPEAKER CROSSOVER : To select the desired crossover frequency.</li> </ul>
RETURN TO MAIN MENU	• ROOM EQ SETUP : To adjust the room EQ as desired.

# When selecting the AUTO SETUP

 Auto Setup lets you avoid troublesome listening-based speaker setup and achieve good surround sound. Auto Setup has the feature that provides the optimum listening environment at the listening position in your room, where there are often multiple listeners viewing programs together.

You should connect the supplied microphone to the SETUP MIC jack so that this receiver can analyze the information from a series of test tones emitted from speakers at the listening position and can adjust the configuration, distance, sound level, crossover frequency and frequency response of each speaker automatically.

- If you want to personalize your speaker setup and channel level setup by making the settings manually, perform the "When selecting the SPEAKER CONFIGURATION" on page 50, "When selecting the SPEAKER DISTANCE" on page 51, "When selecting the SPEAKER CROSSOVER" on page 52, "Adjusting each channel level with test tone" on page 27 and "Adjusting the current channel level" on page 28.
- After the auto setup has been completed, set the room EQ as desired. (For details, refer to "When selecting the ROOM EQ SETUP" on page 53.)

#### ■ Preparations

- ①. Check that the speakers are securely connected to this receiver.
  - If your subwoofer has adjustable volume and crossover frequency, set the volume halfway and set the crossover frequency to the maximum or the low pass filter off.
- ②. Connect the supplied microphone to the SETUP MIC jack on the front panel.(For details, refer to "SETUP MIC JACK" on page 14.)

#### Notes :

- Because the microphone for Auto Setup is designed for use with this receiver, to use the auto setup function, do not use a microphone other than the one supplied with this receiver.
- After you have completed the auto setup procedure, disconnect the microphone.

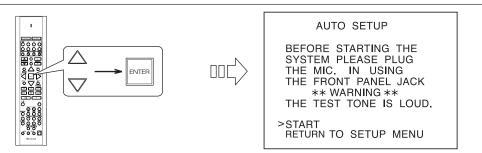

**1.** Place the microphone on a flat level surface at the listening position.

- If possible, use a tripod, etc. to attach the microphone at the same height as your ears would be when you are seated in your listening position.
- Ensure there are no obstacles between the speakers and the microphone.

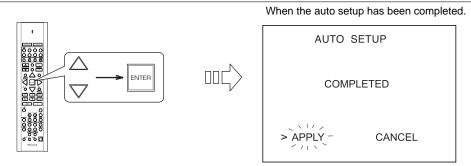

# Continued

**2.** Press the CURSOR UP( $\blacktriangle$ )/DOWN( $\triangledown$ ) buttons to select the AUTO SETUP, then press the ENTER button.

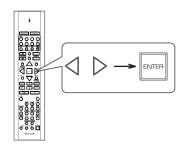

3. Press the CURSOR UP(▲)/DOWN(▼) buttons to select the START, then press the ENTER button.

- Loud test tones are output successively and then if a series of auto setup procedure has been completed, "COMPLETED" will be displayed.
- To stop the auto setup procedure while performing it, press the ENTER button.
- In such a case that the auto setup procedure is stopped before "COMPLETED" is displayed, the results of each adjustment may not be memorized.
- If there may be a problem with speaker or microphone connection, error message will be displayed. In this case, turn off the
  power, check the connection and then retry the auto setup procedure.

#### Notes :

- Before starting auto setup, be sure not to set the HDMI AUDIO OUT to ON.
- Because the test tones are loud, ensure there no infants or small children in the room.
- For best results, ensure the room is as quiet as possible during the auto setup procedure.
- If there is too much ambient noise, the results may not be satisfactory.
- **4.** To memorize the results, press the CURSOR LEFT( ◄)/ RIGHT(►) buttons to select the APPLY, then press the ENTER button.

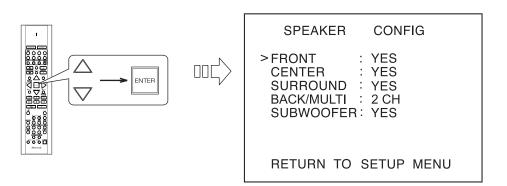

- Then the results are memorized and the SPEAKER/ ROOM EQ SETUP menu is displayed.
- Each time the CURSOR LEFT(◄)/ RIGHT(►) buttons are pressed, the APPLY or the CANCEL is selected.
- When the CANCEL is selected, the results are not memorized.
- Check the results on each setup menu(SPEAKER CONFIGURATION menu on page 50, SPEAKER DISTANCE menu on page 51, SPEAKER CROSSOVER menu on page 52 and CH LEVEL SETUP menu for "CALIBRATE" mode on page 55).
- If the results are not satisfactory, you can retry the auto setup procedure or personalize your speaker setup and channel level setup by making the settings manually. (For details, refer to "When selecting the SPEAKER CONFIGURATION" on page 50, "When selecting the SPEAKER DISTANCE" on page 51, "When selecting the SPEAKER CROSSOVER" on page 52, "Adjusting each channel level with test tone" on page 27 and "Adjusting the current channel level" on page 28.)

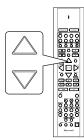

ENGLIS

# When selecting the SPEAKER CONFIGURATION

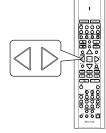

1. Press the CURSOR UP(▲)/DOWN(▼) buttons to select the SPEAKER CONFIGURATION, then press the ENTER button.

**2.** Press the CURSOR UP( $\blacktriangle$ )/DOWN( $\blacktriangledown$ ) buttons to select the desired speaker.

**3.** Press the CURSOR LEFT(◀)/ RIGHT(►) buttons to set the selected speaker as desired.

YES/NO: Select the desired depending on whether the speakers are connected or not.
2CH/1CH: Select the desired depending on the number of speakers connected to SURROUND BACK/ MULTI channels.

■Notes :

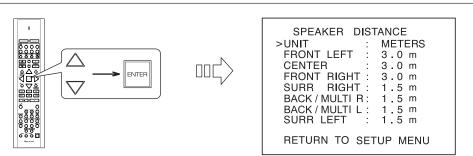

- When speakers are not set to "NO", you should set their distances from listening position and crossover frequencies according to their frequency characteristics. (For details, refer to "When selecting the SPEAKER DISTANCE" on page 51 and "When selecting the SPEAKER CROSSOVER" on page 52.)
- When the "SURROUND" is set to "NO", "BACK/MULTI" cannot be set to "2CH" or "1CH".
- When the surround back channels' power amplifier is assigned to "BI-AMP" or "ROOM 2", the "BACK/MULTI" cannot be selected. (For details, refer to "When selecting the AMP ASSIGN" on page 40.)

**4.** Repeat the above steps 2 and 3 until the speakers are all set as desired.

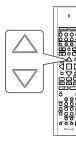

# When selecting the SPEAKER DISTANCE

Press the CURSOR UP(▲)/DOWN(▼) buttons to select the SPEAKER DISTANCE, then press the ENTER button.

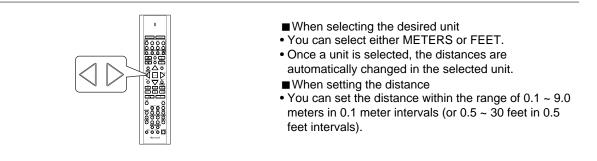

# **2.** Press the CURSOR UP( $\blacktriangle$ )/DOWN( $\blacktriangledown$ ) buttons to select the desired item.

# Note : You cannot select the subwoofer and the speakers set to "NO".

**3.** Press the CURSOR LEFT(◀)/RIGHT(►) buttons to set the selected item as desired.

**4.** Repeat the above steps 2 and 3 until the distances are all set as desired.

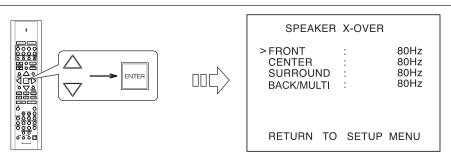

#### ■ About the speaker distance

When enjoying multi-channel surround playback with Dolby Digital and DTS sources, etc., it is ideal that the center, surround and surround back speakers should be the same distance from the main listening position as the front speakers. By entering the distance between the listening position and each speaker, the delay times of center, surround and surround back speakers are automatically adjusted to create an ideal listening environment virtually as if the center, surround and surround back speakers were at their ideal locations respectively.

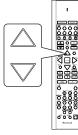

# When selecting the SPEAKER CROSSOVER

- Set the crossover frequency according to the frequency characteristics of the speakers connected. (For details on the frequency characteristics, refer to the operating instructions of the speakers.)
- If the frequency range of your speaker is 100 Hz ~ 20 kHz, the crossover frequency should be set to 100 Hz (or slightly higher).
- The low frequencies below the crossover frequency are to output from subwoofer or the speakers which are set to "FULL RANGE" (when not using a subwoofer).
- 1. Press the CURSOR UP(▲)/DOWN(▼) buttons to select the SPEAKER CROSSOVER, then press the ENTER button.

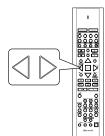

**2.** Press the CURSOR UP( $\blacktriangle$ )/DOWN( $\triangledown$ ) buttons to select the desired speaker.

# ■Note :

- You cannot select the subwoofer and the speakers set to "NO".
- **3.** Press the CURSOR LEFT( $\triangleleft$ )/RIGHT( $\triangleright$ ) buttons to set the crossover frequency as desired.

- You can adjust the crossover frequency within the range of 40 ~ 250 Hz.
- Select "FULL RANGE" when the selected speaker can fully reproduce the low frequencies below 40 Hz.

**4.** Repeat the above steps 2 and 3 until the crossover frequencies are all set as desired.

# When selecting the ROOM EQ SETUP

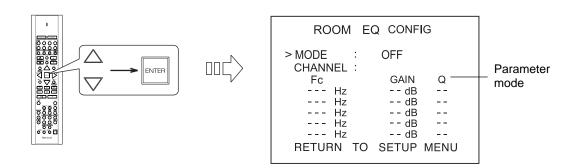

- The room EQ is a kind of room equalizer for your speakers. According to the acoustic characteristics of your room measured by the auto setup, the room EQ automatically adjusts the frequency response of your speakers.
- If you use different brands or sizes of speakers for some channels or have a room with unique acoustic characteristics, such as walls, furniture, and the dimensions or the shape of the room, we recommend using the room EQ.

Note :

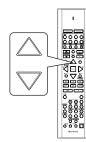

• To use the room EQ, first you should finish measuring the acoustic characteristics of your room performing the auto setup.

(For details, refer to "When selecting the AUTO SETUP" on page 48.)

 Press the CURSOR UP(▲)/DOWN(▼) buttons to select the ROOM EQ SETUP, then press the ENTER button.

**2.** Press the CURSOR UP( $\blacktriangle$ )/DOWN( $\triangledown$ ) buttons to select the MODE.

**3.** Press the CURSOR LEFT( $\triangleleft$ )/RIGHT( $\triangleright$ ) buttons to select the desired room EQ mode.

OFF : When turning off the room EQ.

- FLAT : To adjust the frequency response of all speakers to the flattest response. This mode is suitable for multi channel music surround sources.
- FRONT : To adjust the frequency response of the surround and the surround back speakers to match the characteristics of the front speakers.
- USER : To adjust the tonal quality of the different speakers (except the subwoofer) manually.
- Note :
- Only when the auto setup has been performed, the FLAT and the FRONT modes can be selected.

#### Continued

#### When selecting the USER mode

- You can adjust the parametric EQ settings to optimize the frequency characteristics of this unit's parametric equalizer to match the acoustic characteristics of your room.
- The parametric equalizer uses a combination of the following three parameters to provide highly precise adjustment of the frequency characteristics.

#### \* Frequency

• This unit has 5 equalizer bands for each channel. You can adjust the specified frequency bands each within the following frequency ranges :

20 Hz ~ 120 Hz, 130Hz ~ 500 Hz, 550 Hz ~ 1.9 kHz, 2 kHz ~ 7.5 kHz, 8 kHz ~ 20 kHz

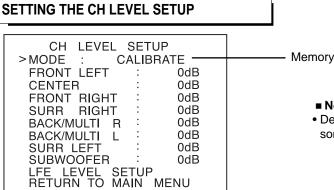

\* Gain

- This parameter is adjustable within the range of -24 ~ +24 dB in 1 dB intervals.
- % Q factor
- The width of the specified frequency band is referred to as the Q factor. This parameter is adjustable within the range of 0 ~ 24 in 1 intervals.

#### Notes :

- When selecting the mode other than "USER" mode, you cannot select the EQ parameters for each channel.
- You cannot select the channel of the subwoofer and the speakers set to "NO".
- Press the CURSOR UP(▲)/DOWN(▼) buttons to select the CHANNEL, then press the CURSOR LEFT(◀)/RIGHT(►) buttons to select the desired channel.
- ②. Press the CURSOR UP(▲)/DOWN(▼) buttons to select the parameter mode, then press the CURSOR LEFT(◀)/RIGHT(►) buttons to select the Fc (Frequency) mode.
- ③. Press the CURSOR UP(▲)/DOWN(▼) buttons to select the desired frequency band, then press the CURSOR LEFT(◀)/RIGHT(►) buttons to select the desired frequency.
- ④. Repeat the above step ③ until the desired frequency is selected for each frequency band.
- (5). Repeat the above steps  $(2) \sim (4)$  to adjust the gain of each specified frequency band.
- 6. Repeat the above steps (2) ~ ④ to adjust the Q factor of each specified frequency band.
- ⑦. Repeat the above steps ① ~ ⑥ until the EQ parameters of other channels are all adjusted as desired.

# Memory mode

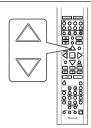

#### Note :

• Depending on the speaker settings("NO", etc.), some channels cannot be selected.

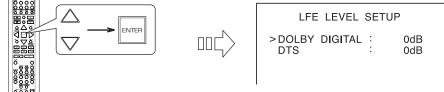

ENGLI

## Adjusting the current channel level

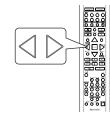

- You can adjust the current channel levels as desired. These adjusted levels are just memorized into user's memory("CALIBRATE"), not into preset memory("REFERENCE 1", "REFERENCE 2").
- After adjusting each channel level with test tone, adjust the channel levels either according to the program sources or to suit your tastes. (For details, refer to "Adjusting each channel level with test tone" on page 27.)
- Press the CURSOR UP(▲)/DOWN(▼) buttons to select the desired channel.

- When adjusting the LFE LEVEL
- ①. Press the CURSOR UP(▲)/DOWN(▼)buttons to select the LFE LEVEL SETUP, then press the ENTER button.

- ②. Press the CURSOR UP( $\blacktriangle$ )/DOWN( $\bigtriangledown$ ) buttons to select the desired program source.
- 2. Press the CURSOR LEFT(◄)/RIGHT(►) buttons to adjust the level of the selected channel or program source's LFE as desired.

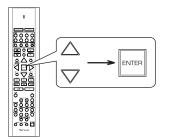

- The LFE level can be adjusted within the range of -10 ~ 0 dB and other channel levels within the range of -15 ~ +15 dB
- In general, we recommend the LFE level to be adjusted to 0 dB.(However, the recommended LFE level for some early DTS software is -10 dB.) If the recommended levels seem too high, lower setting as necessary.
- **3.** Repeat the above steps 1 and 2 to adjust each channel level.

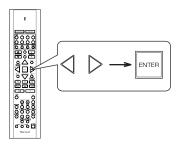

# Memorizing the adjusted channel levels

- You can memorize the adjusted channel levels into preset memory("REFERENCE 1", "REFERENCE 2") and recall the memorized whenever you want.
- After performing the steps 1 ~ 3 in "Adjusting the current channel level" procedure on page 55, press the CURSOR UP(▲)/DOWN(▼) buttons to select a channel (, not the MODE (memory mode) and the LFE LEVEL SETUP), then press the ENTER button.

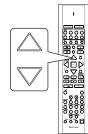

- The "REFERENCE 1" indication flickers.
- 2. Press the CURSOR LEFT(◄)/RIGHT(►) buttons to select the desired preset memory, then press the ENTER button.

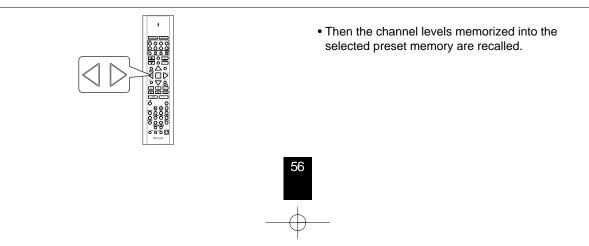

- Each time the CURSOR LEFT(◀) or RIGHT(►) button is pressed, "REFERENCE 1" or "REFERENCE 2" is selected.
- The adjusted channel levels have now been memorized into the selected memory.

**Recalling the memorized channel levels** 

**1**. Press the CURSOR UP( $\blacktriangle$ )/DOWN( $\triangledown$ ) buttons to select the MODE(memory mode).

- "CALIBRATE" may be displayed instead of "REFERENCE 1" or "REFERENCE 2".
- 2. Press the CURSOR LEFT(◄)/RIGHT(►) buttons to select the desired one of REFERENCE 1 and REFERENCE 2.

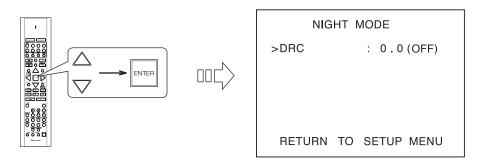

# SETTING THE SOUND PARAMETER

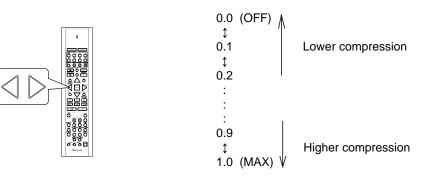

SOUND PARAMETER	NIGHT MODE : To adjust the dynamic range compression that makes faint sound easier to hear at low volume
>NIGHT MODE DOLBY PLII MUSIC DOLBY HEADPHONE	levels.  • DOLBY PLII MUSIC : To adjust the various surround parameters for optimum surround effect.
DOLBY VIRTUAL SPEAKER	<ul> <li>DOLBY HEADPHONE : To select the desired listening mode for Dolby Headphone mode.</li> <li>DOLBY VIRTUAL SPEAKER : To select the speaker layout to be</li> </ul>
RETURN TO MAIN MENU	used actually for each Dolby Virtual Speaker mode.

#### When selecting the NIGHT MODE

- This function compresses the dynamic range of previously specified parts of the Dolby Digital sound track (with extremely high volume) to minimize the difference in volume between the specified and non-specified parts.
- This makes it easy to hear all of the sound track when watching movies at night at low levels. ■Notes:
- The night mode setting is valid only when the digital signals from the Dolby Digital program source are being input.
- In some Dolby Digital softwares, the night mode setting may not be valid.
- **1.** Press the CURSOR UP( $\blacktriangle$ )/DOWN( $\bigtriangledown$ ) buttons to select the NIGHT MODE, then press the ENTER button.

# 2. Press the CURSOR LEFT(◄)/ RIGHT(►) buttons to adjust the dynamic range compression as desired.

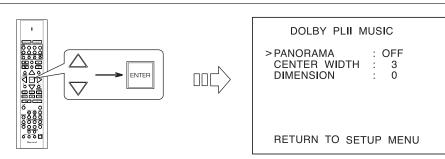

# When selecting the DOLBY PLII MUSIC

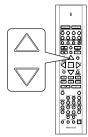

• You can adjust the various surround parameters for optimum surround effect.

■Note:

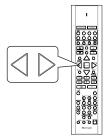

- The parameter settings are valid only when listening in either Dolby Pro Logic II Music mode or the Dolby Pro Logic IIx Music mode.
- 1. Press the CURSOR UP(▲)/DOWN(▼) buttons to select the DOLBY PLII MUSIC, then press the ENTER button.

**2.** Press the CURSOR UP( $\blacktriangle$ )/DOWN( $\triangledown$ ) buttons to select the desired parameter.

3. Press the CURSOR LEFT(◄)/ RIGHT(►) buttons to adjust the selected parameter as desired.

#### ■When selecting the PANORAMA mode

This mode extends the front stereo image to include the surround speakers for an exciting "wraparound" effect with side wall imaging. Select "OFF" or "ON"(default value:OFF).

## ■ When selecting the CENTER WIDTH control

This adjusts the center image so it may be heard only from the center speaker, only from the left/right speakers as a phantom image, or from all three front speakers to varying degrees. The control can be set in 8 steps from 0 to 7 (default value : 3).

# When selecting the DIMENSION control

This gradually adjusts the soundfield either towards the front or towards the rear. The control can be set in 7 steps from -3 to +3(default value : 0).

**4.** Repeat the above steps 2 and 3 to adjust other parameters.

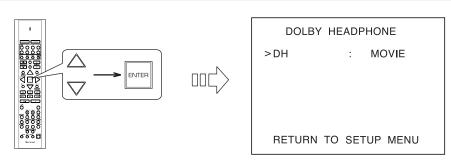

# When selecting the DOLBY HEADPHONE

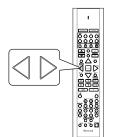

• You can select the desired listening mode for Dolby Headphone mode.

■Note:

- The listening mode setting is valid only when playing analog stereo, PCM 2 channel or Dolby Digital 2 channel source.
- Press the CURSOR UP(▲)/DOWN(▼) buttons to select the DOLBY HEADPHONE, then press the ENTER button.

**2.** Press the CURSOR LEFT( $\triangleleft$ )/ RIGHT( $\triangleright$ ) buttons to select the desired listening mode.

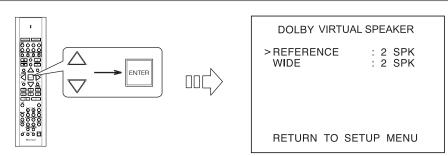

- MOVIE : This provides the surround effect suitable for movie sources.
  - MUSIC 1 : This provides the surround effect suitable for music sources.
- MUSIC 2 : This provides less surround effect compared to MUSIC 1 mode.

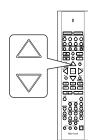

# When selecting the DOLBY VIRTUAL SPEAKER

• You can select the speaker layout to be used actually for each Dolby Virtual Speaker mode.

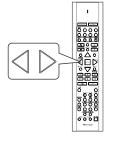

- ■Note:
- The speaker layout settings are valid only when listening in a Dolby Virtual Speaker mode.
- 1. Press the CURSOR UP(▲)/DOWN(▼) buttons to select the DOLBY VIRTUAL SPEAKER, then press the ENTER button.

**2.** Press the CURSOR UP( $\blacktriangle$ )/DOWN( $\blacktriangledown$ ) buttons to select the desired Dolby Virtual Speaker mode.

**3.** Press the CURSOR LEFT( $\triangleleft$ )/RIGHT( $\triangleright$ ) buttons to select the desired speaker layout.

- When selecting the Dolby Virtual Speaker Reference mode
  - 2 SPK : When using 2 front speakers only.
  - 3 SPK : When using 2 front and center speakers.
- When selecting the Dolby Virtual Speaker Wide mode
- > 2 SPK : When using 2 front speakers only.
  - 3 SPK : When using 2 front and center speakers.
  - 4 SPK : When using 2 front and 2 surround speakers.
- $\rightarrow$  5 SPK : When using 2 front, center and 2 surround speakers.

# ■Note:

- When the speakers are set to "NO", the corresponding speaker layouts cannot be selected.
- **4.** Repeat the above steps 2 and 3 to select the desired speaker layout for another Dolby Virtual Speaker mode.

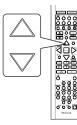

# SETTING THE MULTI ROOM SETUP

 The ROOM 2 function allows enjoying one source in the main room while playing another in a different room at the same time.

MULTI ROOM SETUP	<ul> <li>ROOM 2 : To turn on or off the ROOM 2 function.</li> <li>INPUT : To select the desired ROOM 2 source.</li> </ul>
>ROOM 2 : OFF INPUT : MAIN VOLUME :	<ul> <li>VOLUME : To adjust the volume on the power amplifier assigned to "BACK ← → ROOM 2" or "ROOM 2".</li> </ul>
RETURN TO MAIN MENU	<ul> <li>Notes:</li> <li>The analog signals from the EXTERNAL INs and the digital signals cannot be output to the different room, meaning no playback in a different room.</li> <li>You cannot play the ROOM 2 source in any surround</li> </ul>
	mode.

**1.** Press the CURSOR UP( $\blacktriangle$ )/DOWN( $\triangledown$ ) buttons to select the desired item.

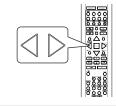

#### ■Note:

 The VOLUME cannot be adjusted when the AMP ASSIGN is assigned to "BI-AMP" or "SURR BACK".
 (For details, refer to "When selecting the AMP ASSIGN" on

page 40.)

**2.** Press the CURSOR LEFT( $\triangleleft$ )/RIGHT( $\triangleright$ ) buttons to set the selected item as desired.

# When selecting the ROOM 2

OFF : To turn off the ROOM 2 function.

1

ON : To turn it on.

#### ■Notes:

- When the ROOM 2 is set to OFF, the INPUT and the VOLUME cannot be selected.
- When you do not use the ROOM 2 function, set the ROOM 2 to OFF to save electricity.

#### When selecting the INPUT

 You can select the desired among MAIN source, TUNER, CD, AUX, TAPE, VIDEO 1 ~ VIDEO 4 as a ROOM 2 source.

#### ■Note:

 When the EXTERNAL IN is selected as a main input, if the MAIN source is selected as a ROOM 2 input, no audio signal can be heard in the different room (ROOM 2).

# When selecting the VOLUME

 You can adjust the volume on the power amplifier assigned to "BACK ← → ROOM 2" or "ROOM 2" when the ROOM 2 speaker terminals are connected to the speakers in a different room.

■Note:

You can adjust the VOLUME only when the surround back channels' power amplifier is assigned to "BACK

 → ROOM 2" or "ROOM 2". (For details, refer to "When selecting the AMP ASSIGN" on page 40.)

ENGLISH

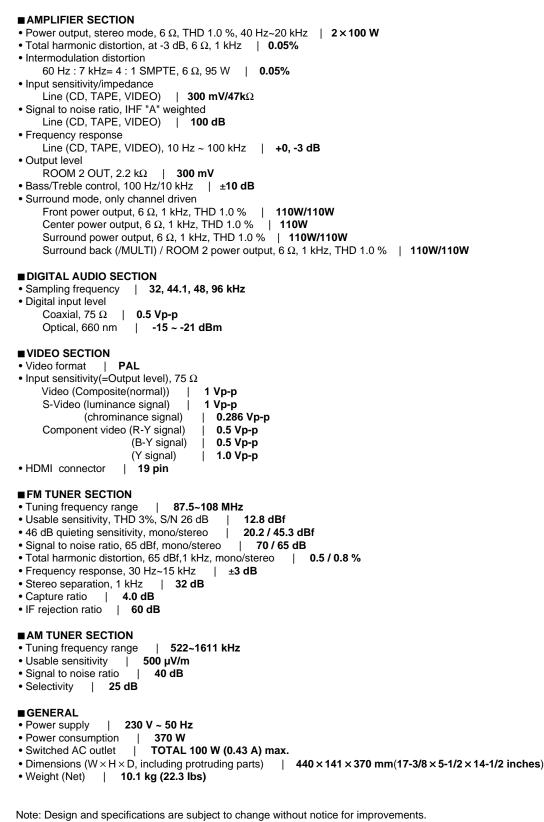

# Troubleshooting Guide

If a fault occurs, run through the table below before taking your receiver for repair. If the fault persists, attempt to solve it by switching the receiver off and on again. If this fails to resolve the situation, consult your dealer. Under no circumstances should you attempt to repair the receiver yourself. This could void the warranty.

PROBLEM	POSSIBLE CAUSE	REMEDY
No power	<ul> <li>The AC input cord is disconnected.</li> <li>Poor connection at AC wall outlet or the outlet is dead or off.</li> </ul>	<ul> <li>Connect cord securely.</li> <li>Check the outlet using a lamp or another appliance.</li> </ul>
No sound	<ul> <li>The speaker wires are disconnected.</li> <li>The master volume is adjusted too low.</li> <li>The MUTE button is pressed to ON.</li> <li>Incorrect selection of input source.</li> <li>Incorrect connections between the components.</li> <li>The HDMI AUDIO OUT is set to ON.</li> <li>The settings related to audio are set incorrectly.</li> </ul>	Check the speaker connections.     Adjust the master volume.     Press the MUTE button to cancel the muting effect.     Select the desired input source correctly.     Make connections correctly.     Set it to OFF. (For details, refer to "When     selecting the HDMI AUDIO OUT" on page 41.)     Set the settings correctly. (For details, refer to     "SETTING THE INPUT SETUP" on page 44.)
No sound from the surround speakers	<ul> <li>Surround mode is switched off(stereo mode).</li> <li>Master volume and surround level are too low.</li> <li>Monaural source is used.</li> <li>Surround speaker setting is "NO".</li> </ul>	<ul> <li>Select a surround mode.</li> <li>Adjust master volume and surround level.</li> <li>Select a stereo or surround source.</li> <li>Select the desired surround speaker setting.</li> </ul>
No sound from the center	Dolby Virtual Speaker, stereo mode, etc is	Select the desired surround mode.
speaker	selected. <ul> <li>Center speaker setting is "NO".</li> <li>Master volume and center level are too low.</li> </ul>	<ul> <li>Select the desired center speaker setting.</li> <li>Adjust master volume and center level.</li> </ul>
No sound from the surround back speakers	<ul> <li>The input signal format or the current surround mode cannot support the 7.1(or 6.1) surround.</li> <li>The surround back channels' power amplifier is assigned to "BI-AMP" or "ROOM 2".</li> <li>Master volume and surround back level are too low.</li> <li>Surround back speaker setting is "NO".</li> </ul>	<ul> <li>Under the proper situations, perform the 7.1(or 6.1) surround playback.(For details, refer to "ENJOYING SURROUND SOUND" on page 26.)</li> <li>Assign the power amplifier to the surround back channels.(For details, refer to "When selecting the AMP ASSIGN" on page 40.)</li> <li>Adjust master volume and surround back level.</li> <li>Select the desired surround back speaker setting.</li> </ul>
No picture	<ul> <li>Video connections between this unit and the monitor TV are not made correctly.</li> <li>Incorrect selection of input source on the monitor TV.</li> <li>The settings related to video are set incorrectly.</li> </ul>	<ul> <li>Make proper video connections.</li> <li>Select the input source correctly.</li> <li>Set the settings correctly. (For details, refer to "SETTING THE INPUT SETUP" on page 44.)</li> </ul>
No picture with an HDMI connection	<ul> <li>HDMI connection between this unit and the monitor TV are not made correctly.</li> <li>The monitor TV or other equipments do not support HDCP.</li> </ul>	Make proper HDMI connection.     This unit will not output video signal unless the connected equipments supports HDCP.
Stations cannot be received	<ul> <li>No antenna is connected.</li> <li>The desired station frequency is not tuned in.</li> <li>Antenna is in wrong position.</li> </ul>	<ul> <li>Connect an antenna.</li> <li>Tune in the desired station frequency.</li> <li>Move antenna and retry tuning.</li> </ul>
Preset stations cannot be received	An incorrect station frequency has been memorized.     The memorized stations are cleared.	Memorize the correct station frequency.     Memorize the stations again.
Poor FM reception	<ul> <li>No antenna is connected.</li> <li>The antenna is not positioned for the best reception.</li> <li>Weak signals.</li> </ul>	<ul> <li>Connect an antenna.</li> <li>Change the position of the antenna.</li> <li>Install an outdoor FM antenna.</li> </ul>
Continuous or intermittent hissing noise during AM reception, especially at night.	Noise is caused by motors, fluorescent lamps or lightning, etc.	Keep the receiver away from noise sources.     Install an outdoor AM antenna.
Remote control unit does not operate.	Batteries are not loaded or exhausted.     The remote sensor is obstructed.	Replace the batteries.     Remove the obstacle.
OSD function is not available.	<ul> <li>Video connections between this unit and the monitor TV are not made correctly.</li> </ul>	Make proper video connections.
