You can also access MouseWare Help by right-clicking the Mouse icon in the task tray at the bottom right corner of your screen, and then selecting MouseWare Help.

## Using the Standby Function

When you are done using your computer, you can put it in standby mode rather than turn it off completely. Putting the computer in standby mode allows you to return quickly to normal computer use.

### *To put the computer in standby mode*

- 1 Save your work and close any applications that are running. (You can leave Microsoft Windows running.)
- 2 Press the  (Standby) button on the top of the keyboard (or press the power switch momentarily on the front panel of the computer).

The computer goes into standby mode.

Alternatively, you can click the Start button on the Windows taskbar, click Shutdown, select Standby, and then click OK.

### *To let the computer go into standby mode automatically*

Set the computer to automatically go into standby mode after there has been no activity on it for a specified time. You can set this length of time on the Windows Control Panel. To set the timer on the Windows Control Panel, click the Start button on the Windows taskbar. Select Settings, and then click Control Panel. When the panel displays, double-click the Power icon, and then select the Disk Drives tab. On the Disk Drives tab, select the When Powered by AC Power check box. A check mark appears in the check box and you can then type in the timer setting or click the arrows to select a new time.

### *To resume from standby mode*

Press any key on the keyboard, move the mouse, or press the power switch on the front panel again.

## Standby Mode Indicators

You can tell which mode the computer is in by the color of the power indicator light.

<i>Color</i>	<i>Mode</i>
Amber	Computer is in standby mode.
Green	Computer is out of standby mode, ready to use.
No color	Computer is turned off.

The computer's fan runs at low speed when the computer is in standby mode. This is normal.

## Shutting Down Your Computer

When you are ready to turn off your computer for an extended period of time, use the following procedure to shut down the computer.

**!** To avoid the potential loss of data, do not use the power switch to shut down the computer.

### *To shut down your computer*

If you plan to shut down your computer for a short period of time, you may want to use standby mode instead. See "Using the Standby Function" on page 11.

- 1 Click the Start button on the Windows taskbar to open the Start menu.
- 2 Click Shut Down to display the Shut Down Windows dialog box.
- 3 Select the Shut down option.
- 4 Click OK to complete the shutdown process.

Respond to any prompts about saving documents.

## Troubleshooting

This section describes how to solve common problems you may encounter when using your computer. Many problems have simple solutions, so try these suggestions before you call Sony Customer Support. For more advanced troubleshooting information, see the *VAIO Digital Studio Computer Reference Manual*. You can download this electronic document from Sony's website at <http://www.sony.com/pcsupport>.

### *My computer does not start*

- ❑ Check that the computer is plugged into a power source and that it is turned on. Check that the power light is lit on the front panel of the computer.
- ❑ Confirm that a diskette is not in the diskette drive (unless you are using a bootable diskette).
- ❑ Confirm that the power cord and all cables are connected firmly, as described on the color poster.
- ❑ If you plugged the computer into a power strip or UPS, make sure the power strip or UPS is turned on and working.
- ❑ Check that the display is plugged into a power source and turned on. Check that the brightness and contrast controls are adjusted correctly. See the manual that came with your display for details.
- ❑ Check that the computer is not in standby mode (see "Using the Standby Function" on page 11).

### *My computer "locks up"*

- ❑ Close the application that is currently locked up by pressing ALT+F4.
- ❑ Try restarting the computer. On the Windows taskbar, click the Start button, click Shut Down, click Restart, and then click OK.
- ❑ If you cannot restart as described in the preceding step, you can restart the computer by pressing CTRL+ALT+DELETE or press the power switch for more than six seconds.

**!** Pressing CTRL+ALT+DELETE may result in losing changes made to files that are currently open.

*My software program "locks up" or crashes*

- ❑ Close the application that is currently locked up by pressing ALT+F4.
- ❑ Contact the software publisher or designated provider for technical support. See "For Answers to Your Software Questions" on page 29 for a complete list of phone numbers.

*My CD-ROM/DVD-ROM/CD-RW drive tray does not open*

- ❑ Make sure the computer is turned on.
- ❑ Press the Eject button on the drive.
- ❑ Double-click the My Computer icon on the Windows desktop. Right-click the CD-ROM icon. Select the Eject option from the pop-up menu.
- ❑ If the Eject button does not work, you can open the tray by inserting a straightened heavy-weight paper clip into the emergency eject hole.

*I cannot play a CD-ROM*

- ❑ Make sure you place the disc in the tray with the label side facing up.
- ❑ Make sure the software is installed according to the program's instructions.

*I cannot play a DVD-ROM*

- ❑ If a region code warning appears when you are using the DVD player, it could be that the DVD-ROM you are trying to play is incompatible with the DVD-ROM drive in your VAIO Digital Studio Computer. The region code is listed on the disc's packaging. Region code indicators such as "1" or "ALL" are labeled on some DVDs to indicate what type of player can play the disc. Unless a "1" or "ALL" appears on the DVD or on the packaging, you cannot play the disc on this computer.
- ❑ If you hear audio but cannot see video, your computer's video resolution may be set too high. For best results, change the Windows Control Panel/Display/Settings to 800 x 600 using 16-bit color.

- ❑ If you see video but cannot hear audio, check all of the following: Make sure the mute setting is off in your DVD player. Check the master volume setting in the audio Mixer. Check the volume settings in your computer speakers. Check the connections between your speakers and the computer. Check the Windows Control Panel/System/Device Manager to see that the drivers are installed properly.
- ❑ A dirty or damaged disc may cause the computer to “hang” while it tries to read the disc. If necessary, reboot the computer, remove the disc, and then check that it is not dirty or damaged.

*When I double-click an application icon, a message such as “You must insert the application CD into your CD-ROM drive” appears and the software does not start*

- ❑ Some titles require specific files that are located on the application’s CD-ROM. Insert the disc and try starting the program again.
- ❑ Check to make sure you inserted the CD-ROM with the label side facing up.

*My speakers have no sound*

- ❑ Check that the speakers are plugged into the HEADPHONES connector.
- ❑ If the speakers have a mute button, make sure it is off.
- ❑ If the speakers are powered by batteries, check that the batteries are inserted properly and that they are charged.
- ❑ If the speakers use an external power source, make sure that the power cord is plugged into a grounded wall outlet or power strip.
- ❑ If the speakers have their own volume control, check the volume level.
- ❑ If the program you are using has its own volume control, check that the volume is turned up.
- ❑ Check the volume controls in the application, in the audio Mixer, and in Windows.
- ❑ If you connected headphones to the computer, you will not hear sound from the speakers.

### *My modem connection is slow*

The computer's modem uses K56flex™ technology/V.90. Many factors influence modem connection speed, including telephone line noise or compatibility with telephone equipment (such as fax machines or other modems). If you think your modem is not connecting properly to other PC-based modems, fax machines, or your Internet Service Provider, check the following:

- ❑ Have your phone company check that your phone line is free from any line noise.
- ❑ If your problem is fax-related, check that there are no problems with the fax machine you are calling and that it is compatible with fax modems.
- ❑ If you are having a problem connecting with your Internet Service Provider, check that the ISP is not experiencing technical problems.
- ❑ If you have a second phone line available, try connecting the modem to this line.

### *My modem does not work*

- ❑ Check that the phone line is plugged into the LINE jack.
- ❑ Check that the phone line is working. You can check the line by plugging in an ordinary phone and listening for a dial tone.
- ❑ Check that the phone number the program is dialing is correct.
- ❑ Check that the software you are using is compatible with the Sony computer modem. (All preinstalled programs are compatible.) Call the software publisher or Sony Customer Support.

### *My microphone does not work*

Check that the microphone is plugged into the MIC connector.

### *My microphone is too sensitive to background noise*

If you find there is too much background noise when you record sound, you should adjust the microphone gain by following these steps:

- 1 Right-click the speaker icon (Volume) in the lower right Windows task tray.
- 2 Click Open Volume Controls. The Volume Control screen appears.
- 3 In the Options menu, select Properties. The Properties screen appears.
- 4 Change the setting for “Adjust volume for” from Playback to Recording, then click OK.
- 5 Click the Advanced button under Microphone Balance. The Advanced Controls for Microphone screen appears.
- 6 Deselect the check box for 1 Mic Gain (+20dB), then click the Close button.
- 7 Close the Recording Control window.

### *My mouse does not work*

- Check that the mouse is plugged into the **MOUSE** connector.
- There may be dust or dirt inside the mouse mechanism. To clean the mouse, follow these steps:
  - Turn off your computer. See “Shutting Down Your Computer” on page 12 for details.
  - Remove the mouse ball cover on the back side of the mouse.
  - Turn the mouse upright, and drop the mouse ball into your hand.
  - Using a piece of tape, remove any dust or dirt on the mouse ball and inside the mouse ball socket.

- Check that the taskbar is not hidden or shrunken.
- Use the mouse to point to the left, right, top, and bottom edges of the screen.

See the *VAIO Digital Studio Computer Read Me First* for additional information on using your Sony computer.

## Using the System Recovery CD(s)

You can reinstall software titles that shipped with your computer if they are corrupted or accidentally erased. You may not need to recover the entire contents of your hard drive. If you experience a problem with your computer, reinstalling an individual device driver or software title may correct the problem.

Use the Application Recovery CD(s) to reinstall individual applications or device drivers. See “Using the Application Recovery CD(s)” on page 23.

The System Recovery CD(s) contains a backup copy of all the software originally installed on your hard disk drive. **It can be used only to recover the hard disk of the Sony computer you purchased.**

The System Recovery utility gives you three options:

- ❑ **Full Restore without Format** restores all the software titles that originally came with your computer without formatting the hard disk.
- ❑ **Full Restore with Format** formats the hard disk drive and then restores all the original software. If your hard drive is partitioned into C and D drives, the computer offers you the option to reformat the drive into a single partition.
- ❑ **Operating System Only** formats the hard disk drive and restores the Windows operating system and the device drivers that shipped with your computer. This option is recommended for advanced users only.

! If you choose the Full Restore with Format or Operating System Only option, your hard disk will be formatted, which removes all the information on the hard disk drive. You will lose any software you have installed and any other files you have created since you started to use your computer. This means you will have to reinstall any applications that were not included with the computer when you purchased it. If you choose the Full Restore without Format option, you may need to reinstall applications that were not included with the computer when you purchased it. If you have any questions on using the System Recovery CD(s), contact Sony Customer Support.

### To use the System Recovery CD(s)

 You need to complete the Windows registration process when you use the System Recovery CD(s). Make sure you have the product ID number located on the cover of your Microsoft Windows manual. You will need this number to complete the recovery process.

**1 Insert the Sony System Recovery CD in the CD-ROM/DVD-ROM drive.**

 The System Recovery utility boots from the CD-ROM/DVD-ROM drive. It must be in the drive when you turn on the computer.

**2 Shut down your computer as described in “Shutting Down Your Computer” on page 12.**

**3 Wait 30 seconds and turn on your computer.**

**4 Click OK to signify you have read and accept the Microsoft End-User License Agreement.**

**5 When the System Recovery menu appears, follow the on-screen instructions to complete the recovery process.**

 Your system may include one or two System Recovery CDs. If you have two System Recovery CDs, insert the first CD to run the System Recovery program. You are prompted to insert the second CD once the information from the first CD has been installed.

The recovery process takes 30 to 60 minutes to complete.

## Using the Application Recovery CD(s)

The Application Recovery CD(s) allows you to reinstall individual applications and device drivers if they are corrupted or accidentally erased. Reinstalling an individual device driver or software title may correct a problem you are experiencing with your computer, and you may not need to recover the entire contents of your hard drive. If you do need to reinstall all the software titles that shipped with your computer, use the System Recovery CD(s). See “Using the System Recovery CD(s)” on page 21.

You must be in Windows to run the Application Recovery CD(s). The application will not run from DOS. If you have any questions on using the Application Recovery CD(s), contact Sony Customer Support.

### *To use the Application Recovery CD(s)*

- 1 Turn on your computer. If your computer is already on, close all applications.
- 2 When the Windows desktop appears, insert the Sony Application Recovery CD in the CD-ROM/DVD-ROM drive. The Application Recovery utility loads automatically.
- 3 When the Application Recovery menu appears, follow the on-screen instructions to complete the recovery process.

Your system may include one or two Application Recovery CDs. If you have two Application Recovery CDs, insert the first CD to run the Application Recovery program. You may be prompted to insert the second CD, depending on the application you wish to restore.
