

# ***FM Stereo FM-AM Receiver***

---

## Operating Instructions

### Owner's Record

The model and serial numbers are located on the rear of the unit. Record the serial number in the space provided below. Refer to them whenever you call upon your Sony dealer regarding this product.

Model No. STR-DE475/K402

Serial No. \_\_\_\_\_

***STR-DE475  
STR-K402***

## WARNING

**To prevent fire or shock hazard, do not expose the unit to rain or moisture.**

For customers in the United States

This symbol is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

This symbol is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

### INFORMATION

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules.

These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

### CAUTION

You are cautioned that any changes or modification not expressly approved in this manual could void your authority to operate this equipment.

### Note to CATV system installer:

This reminder is provided to call CATV system installer's attention to Article 820-40 of the NEC that provides guidelines for proper grounding and, in particular, specifies that the cable ground shall be connected to the grounding system of the building, as close to the point of cable entry as practical.

### Owner's Record

The model and serial numbers are located on the rear of the unit. Record the serial number in the space provided below. Refer to them whenever you call upon your Sony dealer regarding this product.

Model No. STR-DE475/K402

Serial No. \_\_\_\_\_

### For customers in Canada

### CAUTION

TO PREVENT ELECTRIC SHOCK, DO NOT USE THIS POLARIZED AC PLUG WITH AN EXTENSION CORD, RECEPTACLE OR OTHER OUTLET UNLESS THE BLADES CAN BE FULLY INSERTED TO PREVENT BLADE EXPOSURE.

### For customers in the United States and Canada

ENERGY STAR® is a U.S. registered mark. As an ENERGY STAR® partner, Sony Corporation has determined that this product meets the ENERGY STAR® guidelines for energy efficiency

### For customers in other countries

**To avoid electrical shock, do not open the cabinet. Refer servicing to qualified personnel only.**

**Do not install the appliance in a confined space, such as a bookcase or built-in cabinet.**

## Precautions

### On safety

- Should any solid object or liquid fall into the cabinet, unplug the receiver and have it checked by qualified personnel before operating it any further.
- To prevent fire, do not cover the ventilation of the receiver with newspapers, table cloths, curtains, etc. And don't place lighted candles on the receiver.
- To prevent fire or shock hazards, do not place vases on the receiver.

### On power sources

- Before operating the receiver, check that the operating voltage is identical with your local power supply. The operating voltage is indicated on the nameplate at the rear of the receiver.
- The unit is not disconnected from the AC power source (mains) as long as it is connected to the wall outlet, even if the unit itself has been turned off.
- If you are not going to use the receiver for a long time, be sure to disconnect the receiver from the wall outlet. To disconnect the AC power cord, grasp the plug itself; never pull the cord.
- One blade of the plug is wider than the other for the purpose of safety and will fit into the wall outlet only one way. If you are unable to insert the plug fully into the outlet, contact your dealer. (for customers in the United States and Canada only)
- AC power cord must be changed only at the qualified service shop.

### On placement

- Place the receiver in a location with adequate ventilation to prevent heat buildup and prolong the life of the receiver.
- Do not place the receiver near heat sources, or in a place subject to direct sunlight, excessive dust or mechanical shock.
- Do not place anything on top of the cabinet that might block the ventilation holes and cause malfunctions.
- Although the receiver heats up during operation, this is not a malfunction. If you continuously use this receiver at a large volume, the cabinet temperature of the top, side and bottom rises accordingly. To avoid burning yourself, do not touch the cabinet.

### On operation

Before connecting other components, be sure to turn off and unplug the receiver.

### On cleaning

Clean the cabinet, panel and controls with a soft cloth slightly moistened with a mild detergent solution. Do not use any type of abrasive pad, scouring powder or solvent such as alcohol or benzene.

If you have any question or problem concerning your receiver, please consult your nearest Sony dealer.

---

## About This Manual

The instructions in this manual are for models STR-DE475 and STR-K402. Check your model number by looking at the lower right corner of the front panel.

### About area codes

The area code of the player you purchased is shown on the lower portion of the rear panel (see the illustration below).

Any differences in operation, according to the area code, are clearly indicated in the text, for example, "Models of area code AA only".

### Conventions

- The instructions in this manual describe the controls on the receiver. You can also use the controls on the supplied remote if they have the same or similar names as those on the receiver.
- The following icon is used in this manual:  
🔍 Indicates hints and tips for making the task easier.

This receiver incorporates Dolby\* Digital and Pro Logic Surround and the DTS\*\* Digital Surround System.

# Hooking Up the Components

This chapter describes how to connect various audio and video components to the receiver. Be sure to read the sections for the components you have before you actually connect them to the receiver.

## Unpacking

Check that you received the following items with the receiver:

- FM wire antenna (1)
- AM loop antenna (1)
- R6 (size-AA) batteries (2)
- Remote Commander (remote) (1)

### Inserting batteries into the remote

Insert R6 (size-AA) batteries with the + and – properly oriented in the battery compartment. When using the remote, point it at the remote sensor  on the receiver.

#### When to replace batteries

Under normal conditions, the batteries should last for about 6 months. When the remote no longer operates the receiver, replace all batteries with new ones.

#### Notes

- Do not leave the remote in an extremely hot or humid place.
- Do not use a new battery with an old one.
- Do not expose the remote sensor to direct sunlight or lighting apparatuses. Doing so may cause a malfunction.
- If you don't use the remote for an extended period of time, remove the batteries to avoid possible damage from battery leakage and corrosion.

### Before you get started

- Turn off the power to all components before making any connections.
- Do not connect the AC power cords until all of the connections are completed.
- Be sure to make connections firmly to avoid hum and noise.
- When connecting an audio/video cord, be sure to match the color-coded pins to the appropriate jacks on the components: yellow (video) to yellow; white (left, audio) to white; and red (right, audio) to red.

# Antenna Hookups

## Terminals for connecting the antennas

Connect the	To the
AM loop antenna	AM terminals
FM wire antenna	FM 75Ω COAXIAL terminal

## Notes on antenna hookups

- To prevent noise pickup, keep the AM loop antenna away from the receiver and other components.
- Be sure to fully extend the FM wire antenna.
- After connecting the FM wire antenna, keep it as horizontal as possible.

**If you have poor FM reception**

Use a 75-ohm coaxial cable (not supplied) to connect the receiver to an outdoor FM antenna as shown below.

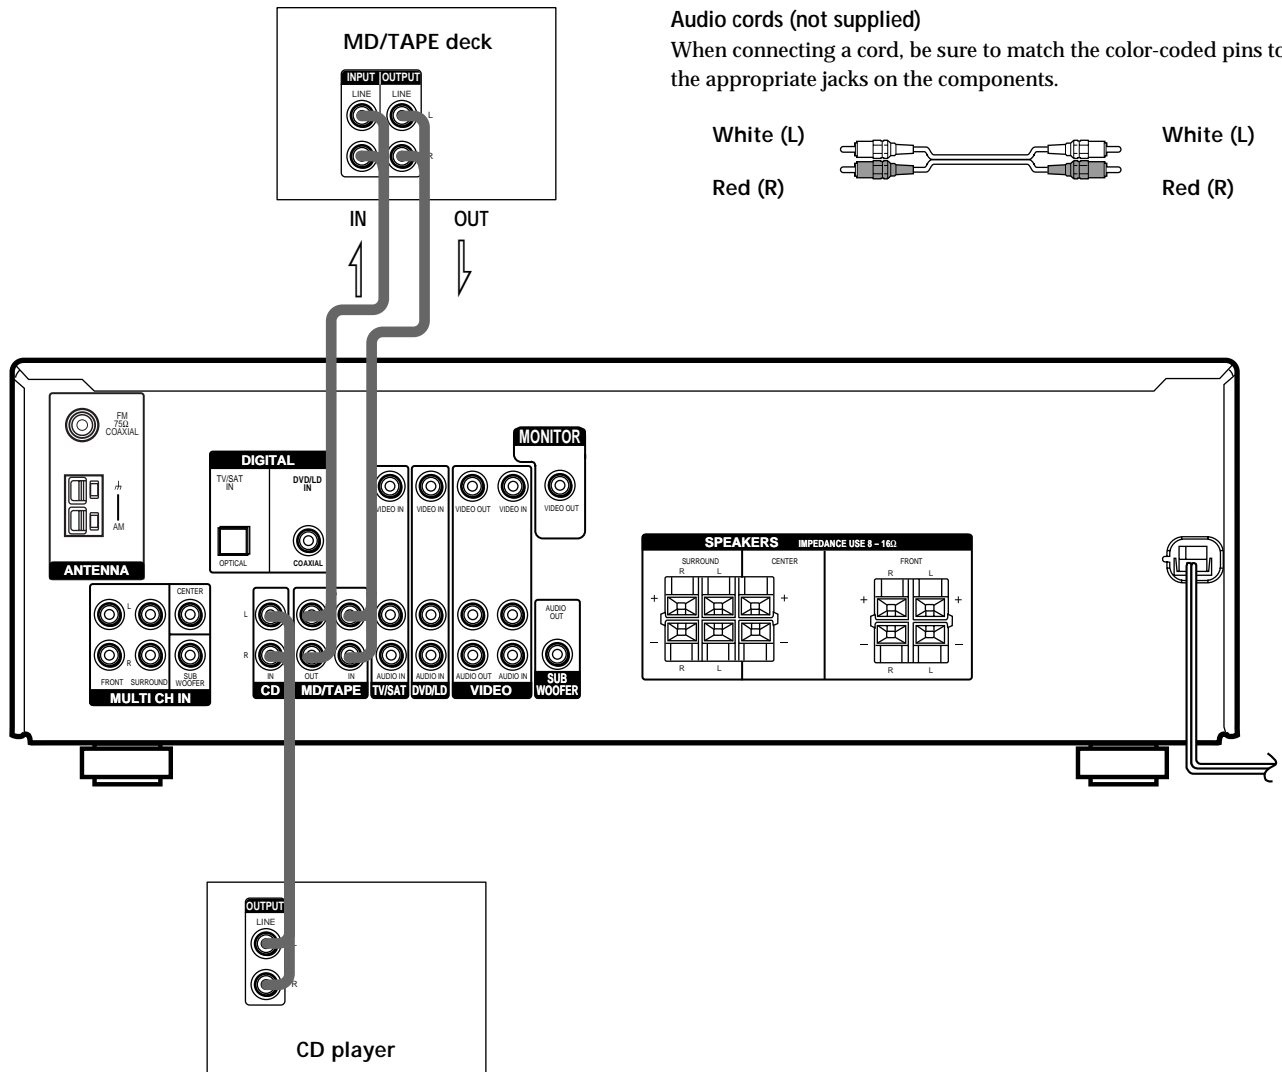

### Outdoor FM antenna

### Important

If you connect the receiver to an outdoor antenna, ground it against lightning. To prevent a gas explosion, do not connect the ground wire to a gas pipe.

# Audio Component Hookups

## Required cords

Audio cords (not supplied)

When connecting a cord, be sure to match the color-coded pins to the appropriate jacks on the components.

White (L)

Red (R)

White (L)

Red (R)

## Jacks for connecting audio components

Connect a	To the
CD player	CD jacks
MD deck or Tape deck	MD/TAPE jacks

# Video Component Hookups

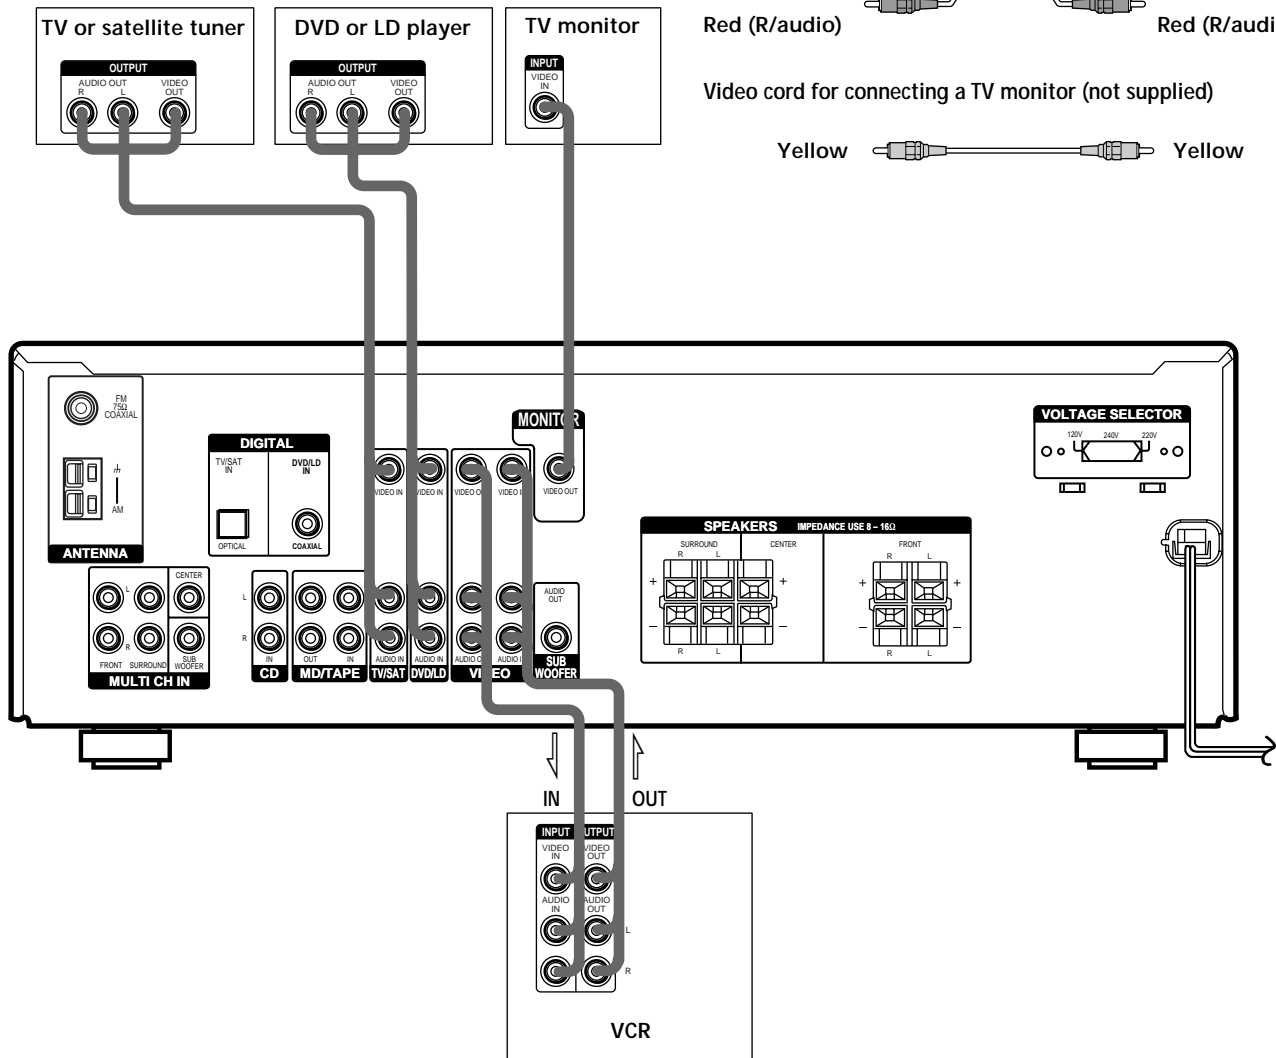

## Required cords

Audio/video cords (not supplied)

When connecting a cord, be sure to match the color-coded pins to the appropriate jacks on the components.

Video cord for connecting a TV monitor (not supplied)

## Jacks for connecting video components

Connect a	To the
TV or satellite tuner	TV/SAT jacks
VCR	VIDEO jacks
DVD or LD player	DVD/LD jacks
TV monitor	MONITOR VIDEO OUT jack

## Note on video component hookups

You can connect your TV's audio output jacks to the TV/SAT AUDIO IN jacks on the receiver and apply sound effects to the audio from the TV. In this case, do not connect the TV's video output jack to the TV/SAT VIDEO IN jack on the receiver. If you are connecting a separate TV tuner (or satellite tuner), connect both the audio and video output jacks to the receiver as shown above.

# Digital Component Hookups

Connect the digital output jacks of your DVD player and satellite tuner (etc.) to the receiver's digital input jacks to bring the multi channel surround sound of a movie theater into your home. To enjoy full effect of multi channel surround sound, five speakers (two front speakers, two surround speakers, and a center speaker) and a sub woofer are required. You can also connect an LD player with an RF OUT jack via an RF demodulator, such as the Sony MOD-RF1 (not supplied).

## Required cords

Optical digital cords (not supplied)

Black Black

Coaxial digital cord (not supplied)

Yellow Yellow

Audio/video cords (not supplied)

When connecting a cord, be sure to match the color-coded pins to the appropriate jacks on the components.

Yellow (video) Yellow (video)  
 White (L/audio) White (L/audio)  
 Red (R/audio) Red (R/audio)

### Notes

- The optical and coaxial digital input jacks on the receiver are compatible with sampling frequencies of 32 kHz, 44.1 kHz, and 48kHz.
- The coaxial digital input jack is also compatible with sampling frequency of 96 kHz.

## Example of LD player connected via an RF demodulator

Please note that you cannot connect an LD player's AC-3 RF OUT jack directly to the receiver's digital input jacks. You must first convert the RF signal to coaxial digital signal. Connect the LD player to the RF demodulator, then connect the RF demodulator's coaxial digital output to the receiver's COAXIAL DVD/LD IN jack. Refer to the instruction manual supplied with your RF Demodulator for details on AC-3 RF hookups.

### Note

When making connections as shown above, be sure to set INPUT MODE (11 on page 23) manually. The receiver may not operate correctly if INPUT MODE is set to "AUTO."

# MULTI CH IN Hookups

Although this receiver incorporates a multi channel decoder, it is also equipped with MULTI CH IN jacks. These connections allow you to enjoy multichannel software encoded in formats other than Dolby Digital and DTS. If your DVD player is equipped with MULTI CH OUTPUT jacks, you can connect them directly to the receiver to enjoy the sound of the DVD player's multi channel decoder. Alternatively, the MULTI CH IN jacks can be used to connect an external multi channel decoder. To fully enjoy multi channel surround sound, you will need five speakers (two front speakers, two surround speakers, and a center speaker) and a sub woofer. Refer to the instruction manual supplied with your DVD player, multi channel decoder, etc., for details on the Multi Channel input hookups.

## Required cords

Audio cords (not supplied)

Two for the MULTI CH IN FRONT and SURROUND jacks

Monaural audio cords (not supplied)

Two for the MULTI CH IN CENTER and SUB WOOFER jacks

Video cord (not supplied)

One for the DVD/LD VIDEO IN jacks (etc.)

### Note

When using the connections described below, adjust the level of your surround speakers and sub woofer from the DVD player or multichannel decoder.

## Example of a DVD player hookup using the MULTI CH IN jacks

### Note

See page 12 for details on speaker system hookup.

# Other Hookups

\* Models of area code E2, E3 only.

## Setting the VOLTAGE SELECTOR (models of area code E2, E3 only)

Check that the voltage selector on the rear panel of the player is set to the local power line voltage. If not, set the selector to the correct position using a screwdriver before connecting the AC power cord to a wall outlet.

## Connecting the AC power cord

Before connecting the AC power cord of this receiver to a wall outlet:

- Connect the speaker system to the receiver (see page 12).

Connect the AC power cord(s) of your audio/video components to a wall outlet.

### Note

If the AC power cord is disconnected for about one week, the receiver's entire memory will be cleared and the demonstration will start.

# Hooking Up and Setting Up the Speaker System

This chapter describes how to hook up your speaker system to the receiver, how to position each speaker, and how to set up your speakers to enjoy multi channel surround sound.

## Brief descriptions of buttons and control used to set up the speaker system

**SET UP button:** Press to enter the setup mode when specifying speaker types and distances.

**MENU </> buttons:** Use to select parameters after pressing the SET UP button.

**MENU +/- buttons:** Use to adjust the setting of each parameter.

# Speaker System Hookup

## Required cords

Speaker cords (not supplied)

One for each front, surround, and center speaker

Monaural audio cord (not supplied)

One for an active woofer

## Terminals for connecting the speakers

Connect the	To the
Front speakers (8 ohm)	SPEAKERS FRONT terminals
Surround speakers (8 ohm)	SPEAKERS SURROUND terminals
Center speaker (8 ohm)	SPEAKERS CENTER terminals
Active sub woofer	SUBWOOFER AUDIO OUT jack

## Notes on speaker system hookup

- Twist the stripped ends of the speaker cords about 2/3 inch (10 mm). Be sure to match the speaker cord to the appropriate terminal on the components: + to + and - to -. If the cords are reversed, the sound will be distorted and will lack bass.
- If you use speakers with low maximum input rating, adjust the volume carefully to avoid excessive output on the speakers.

### To avoid short-circuiting the speakers

Short-circuiting of the speakers may damage the receiver. To prevent this, make sure to take the following precautions when connecting the speakers.

**Make sure the stripped ends of each speaker cord does not touch another speaker terminal or the stripped end of another speaker cord.**

**Examples of poor conditions of the speaker cord**

Stripped speaker cord is touching another speaker terminal.

Stripped cords are touching each other due to excessive removal of insulation.

**After connecting all the components, speakers, and AC power cord, output a test tone to check that all the speakers are connected correctly. For details on outputting a test tone, see page 18.**

If no sound is heard from a speaker while outputting a test tone or a test tone is output from a speaker other than the one whose name is currently displayed on the receiver, the speaker may be short-circuited. If this happens, check the speaker connection again.

### To avoid damaging your speakers

Make sure that you turn down the volume before you turn off the receiver. When you turn on the receiver, the volume remains at the level you turn off the receiver.

# Performing Initial Setup Operations

Once you have hooked up the speakers and turned on the power, clear the receiver's memory. Then specify the speaker parameters (size, position, etc.) and perform any other initial setup operations necessary for your system.

## Clearing the receiver's memory

Before you use your receiver for the first time or when you want to clear the receiver's memory, do the following. This procedure is not necessary if the demonstration activates when you turn the power on.

**1** Turn off the receiver.

**2** Hold down I/⏻ for four seconds.

The currently selected function, then the demonstration message appears in the display and the items including the following are reset or cleared:

- All preset stations are reset or cleared.
- All sound field parameters are reset to their factory settings.
- All index names (of preset stations and program sources) are cleared.
- All adjustments made with the SET UP button are reset to their factory settings.
- The sound field memorized for each program source and preset stations are cleared.

## Performing initial setup operations

Before you use your receiver for the first time, use the SET UP button to adjust settings to correspond to your system. You can set the following items. For details on how to adjust each setting, see the page in parentheses.

- Speaker size and placement (page 15).
- Speaker distance (page 17).
- Select the MULTI CH IN video signal (page 41).
- Whether the display turns off or not when you press DIMMER (page 41).

### Demonstration Mode

The demonstration will activate the first time you turn on the power. When the demonstration starts, the following message appears in the display:

"NOW DEMONSTRATION MODE IF YOU FINISH DEMONSTRATION PLEASE PRESS POWER KEY WHILE THIS MESSAGE APPEARS IN THE DISPLAY THANK YOU"

#### To cancel the demonstration

Press I/⏻ to turn the receiver off while the above message is being displayed. The next time you turn the receiver on, the demonstration will not appear.

#### To view the demonstration

Hold down SET UP and press I/⏻ to turn on the power.

#### Notes

- Running the demonstration will clear the receiver's memory. For details on what will be cleared, see "Clearing the receiver's memory" on this page.
- There will be no sound when the demonstration mode is activated.
- You cannot cancel demonstration if you did not press I/⏻ while the above message is being displayed. To cancel demonstration after the above message appears, press I/⏻ twice to activate the demonstration again. Then, press I/⏻ while the above message is being displayed.

# Multi Channel Surround Setup

For the best possible surround sound all speakers should be the same distance from the listening position (A). (However, this unit lets you to place the center speaker up to 5 feet (1.5 meters) closer (B) and the surround speakers up to 15 feet (4.5 meters) closer (C) to the listening position.

The front speakers can be placed from 3 to 40 feet (1.0 to 12.0 meters) from the listening position (A).)

You can place the surround speakers either behind you or to the side, depending on the shape of your room (etc.).

When placing surround speakers to your side

When placing the surround speakers behind you

**Note**

Do not place the center speaker farther away from the listening position than the front speakers.

## Specifying the speaker parameters

- 1 Press I/⏻ to turn on the receiver.
- 2 Press SET UP.
- 3 Press MENU </> to select the parameter you want to adjust.
- 4 Press MENU +/- to select the setting you want. The setting is stored automatically.
- 5 Repeat steps 3 and 4 until you have set all of the parameters that follow.

**Normal speaker and Micro Satellite speaker**

Choose NORM. SP. if you're using normal speakers and MICRO SP. if you're using Micro Satellite speakers. If you choose NORM. SP., you can adjust the speaker size and the sub woofer selection as mentioned below. However, if you choose MICRO SP., the speaker size and the sub woofer selection has been configured as follows:

Speakers	Settings
Front	SMALL
Center	SMALL
Surround	SMALL
Sub Woofer	YES

You cannot change the configuration if you choose MICRO SP.

For STR-K402, the speaker size and sub woofer selection has been preset to MICRO SP. according to the supplied speaker system. If you change the speaker system, choose NORM. SP. to adjust the speaker size and sub woofer selection.

The setting for Micro Satellite speaker (MICRO SP.) has been programmed to optimize the sound balance. If you use Sony's Micro Satellite speakers, select MICRO SP. When you use Micro Satellite speaker and the speaker size is set to LARGE, you may not obtain the correct soundstage. The speaker may also be damaged at high volume position.

For STR-DE475, the speaker size and sub woofer selection has been preset to NORM. SP.

The following speaker size setup is applicable for NORM. SP.

## Multi Channel Surround Setup

### ■ Front speaker size ( )

Initial setting : LARGE

- If you connect large speakers that will effectively reproduce bass frequencies, select “LARGE”. Normally, select “LARGE”.
- If the sound is distorted, or you feel a lack of surround effects when using multi channel surround sound, select “SMALL” to activate the bass redirection circuitry and output the front channel bass frequencies from the sub woofer.
- When the front speaker is set to “SMALL”, the center and surround speakers are also automatically set to “SMALL” (unless previously set to “NO”).

### ■ Center speaker size ( )

Initial setting : LARGE

- If you connect a large speaker that will effectively reproduce bass frequencies, select “LARGE”. Normally, select “LARGE”. However, if the front speakers are set to “SMALL”, you cannot set the center speaker to “LARGE”.
- If the sound is distorted, or you feel a lack of surround effects when using multi channel surround sound, select “SMALL” to activate the bass redirection circuitry and output the center channel bass frequencies from the front speakers (if set to “LARGE”) or sub woofer. \*<sup>1</sup>
- If you do not connect the center speaker, select “NO”. The sound of the center channel will be output from the front speakers. \*<sup>2</sup>

### ■ Surround speaker size ( )

Initial setting : LARGE

- If you connect large speakers that will effectively reproduce bass frequencies, select “LARGE”. Normally, select “LARGE”. However, if the front speakers are set to “SMALL”, you cannot set the surround speakers to “LARGE”.
- If the sound is distorted, or you feel a lack of surround effects when using multi channel surround sound, select “SMALL” to activate the bass redirection circuitry and output the surround channel bass frequencies from the sub woofer or other “LARGE” speakers.
- If you do not connect surround speakers, select “NO”. \*<sup>3</sup>

 \*1~\*3 correspond to the following Dolby Pro Logic modes

\*<sup>1</sup> NORMAL

\*<sup>2</sup> PHANTOM

\*<sup>3</sup> 3 STEREO

### About speaker sizes (LARGE and SMALL)

Internally, the LARGE and SMALL settings for each speaker determine whether or not the internal sound processor will cut the bass signal from that channel. When the bass is cut from a channel the bass redirection circuitry sends the corresponding bass frequencies to the sub woofer or other “LARGE” speaker. However, since bass sounds have a certain amount of directionality it best not to cut them, if possible. Therefore, even when using small speakers, you can set them to “LARGE” if you want to output the bass frequencies from that speaker. On the other hand, if you are using a large speaker, but prefer not to have bass frequencies output from that speaker, set it to “SMALL”.

If the overall sound level is lower than you prefer, set all speakers to “LARGE”. If there is not enough bass, you can use BASS +/- to boost the bass levels. To adjust the bass, see page 32.

### ■ Surround speaker position ( )\*

Initial setting : PL. BEHD.

This parameter lets you specify the location of your surround speakers for proper implementation of the Digital Cinema Sound surround modes in the “VIRTUAL” sound fields. Refer to the illustration below.

- Select “PL. SIDE” if the location of your surround speakers corresponds to section **A**.
- Select “PL. BEHD.” if the location of your surround speakers corresponds to section **B**.

This setting only effects the surround modes in the “VIRTUAL” sound fields.

\* These parameters are not available when “Surround speaker size” is set to “NO”.

### ■ Surround speaker height ( )\*

Initial setting : HGT. LOW

This parameter lets you specify the height of your surround speakers for proper implementation of the Digital Cinema Sound surround modes in the “VIRTUAL” sound fields. Refer to the illustration below.

- Select “HGT. LOW” if the location of your surround speakers corresponds to section **A**.
- Select “HGT. HIGH” if the location of your surround speakers corresponds to section **B**.

This setting only affects the surround modes in the “VIRTUAL” sound fields.

\* These parameters are not available when “Surround speaker size” is set to “NO”.

### About the surround speaker position (PL. SIDE, and PL. BEHD.)

This setting is designed specifically for implementation of the Digital Cinema Sound modes in the “VIRTUAL” sound fields. With the Digital Cinema Sound modes, speaker position is not as critical as other modes. All of the modes in the “VIRTUAL” sound fields were designed under the premise that the surround speaker would be located behind the listening position, but presentation remains fairly consistent even with the surround speakers positioned at a rather wide angle. However, if the speakers are pointing toward the listener from the immediate left and right of the listening position, the “VIRTUAL” sound fields will not be effective unless the surround speaker position parameter is set to “PL. SIDE”.

Nevertheless, each listening environment has many variables, such as wall reflections, and you may obtain better results using “PL. BEHD.” if your speakers are located high above the listening position, even if they are to the immediate left and right. Therefore, although it may result in a setting contrary to the “Surround speaker position” explanation, we recommend that you play back multi channel surround encoded software and listen to the effect each setting has on your listening environment. Choose the setting that provides a good sense of spaciousness and that best succeeds in forming a cohesive space between the surround sound from the surround speakers and the sound from the front speakers. If you are not sure which sounds best, select “PL. BEHD.” and then use the speaker distance parameter and speaker level adjustments to obtain proper balance.

### ■ Sub woofer selection

Initial setting : S.W. YES

- If you connect a sub woofer, select “S.W. YES”.
  - If you do not connect a sub woofer, select “S.W. NO”.
- This activates the bass redirection circuitry and outputs the LFE signals from other speakers.
- In order to take full advantage of the Dolby Digital (AC-3) bass redirection circuitry, we recommend setting the sub woofer’s cut off frequency as high as possible.

### ■ Front speaker distance ( )

Initial setting : DIST. 5.0 m (5.0 meter) 16 feet

Set the distance from your listening position to the front (left or right) speaker (**A** on page 15).

- Front speaker distance can be set in 1 foot (0.1 meter) steps from 3 to 40 feet (1.0 to 12.0 meters).
- If both speakers are not placed an equal distance from your listening position, set the distance to the closest speaker.

### ■ Center speaker distance ( )

Initial setting : DIST. 5.0 m (5.0 meter) 16 feet

Set the distance from your listening position to the center speaker.

- Center speaker distance can be set in 1 foot (0.1 meter) steps from a distance equal to the front speaker distance (**A** on page 15) to a distance 5 feet (1.5 meters) closer to your listening position (**E** on page 15).
- Do not place the center speaker farther away from your listening position than the front speakers.

### ■ Surround speaker distance ( )

Initial setting : DIST. 3.5 m (3.5 meter) 11 feet

Set the distance from your listening position to the surround (left or right) speaker.

- Surround speaker distance can be set in 1 foot (0.1 meter) steps from a distance equal to the front speaker distance (**A** on page 15) to a distance 15 feet (4.5 meters) closer to your listening position (**C** on page 15).
- Do not place the surround speakers farther away from your listening position than the front speakers.
- If both speakers are not placed an equal distance from your listening position, set the distance to the closest speaker.

### About speaker distances

This receiver allows you to input the speaker position in terms of distance. However, it is not possible to set the center speaker farther away than the front speakers. Also, the center speaker can not be set more than 5 feet (1.5 meters) closer than the front speakers.

Likewise, the surround speakers cannot be set farther away from the listening position than the front speakers. And they can be no more than 15 feet (4.5 meters) closer.

This is because incorrect speaker placement is not conducive to enjoy the surround sound.

Please note that, setting the speaker distance closer than the actual location of the speakers will cause a delay in the output of the sound from that speaker. In other words, the speaker will sound like it is farther away.

For example, setting the center speaker distance 3~6 feet (1~2 m) closer than the actual speaker position will create a fairly realistic sensation of being "inside" the screen. If you cannot obtain a satisfactory surround effect because the surround speakers are too close, setting the surround speaker distance closer (shorter) than the actual distance will create a larger soundstage. (1 foot corresponds to a 1 ms difference.)

Adjusting these parameters while listening to the sound often results in much better surround sound. Give it a try!

### Adjusting the speaker volume

Use the remote while seated in your listening position to adjust the volume of each speaker.

#### Note

This receiver incorporates a new test tone with a frequency centered at 800 Hz for easier speaker volume adjustment.

- 1 Press **I/⏻** to turn on the receiver.
- 2 Press **TEST TONE** on the supplied remote.  
You will hear the test tone from each speaker in sequence.
- 3 **Adjust the volume level so that the volume of the test tone from each speaker sounds the same when you are in your main listening position.**
  - To adjust the balance of the front right and front left speakers, use the front balance parameter in the LEVEL menu (see page 31).
  - To adjust the balance of the surround right and surround left speakers, use the surround balance parameter in the LEVEL menu (see page 31).
  - To adjust the volume level of the center speaker, press **MENU </>** to select the center parameter. Use **MENU +/-** on the remote to adjust the level.
  - To adjust the volume level of the surround speaker, press **MENU </>** to select the surround parameter. Use **MENU +/-** on the remote to adjust the level.
- 4 Press **TEST TONE** on the remote again to turn off the test tone.

#### Note

The test tone cannot be output when the receiver is set to MULTI CH IN.

 You can adjust the volume level of all speakers at the same time

Rotate **MASTER VOLUME** on the receiver or press **MASTER VOL +/-** on the remote.

### Notes

- The front balance, surround balance, center level, and surround level are shown in the display during adjustment.
- Although these adjustments can also be made via the front panel using the LEVEL menu (when the test tone is output, the receiver switches to the LEVEL menu automatically), we recommend you follow the procedure previously described in this section and adjust the speaker levels from your listening position using the remote control.

### 💡 When setting the volume levels for each speaker

Let's assume that you have matched the sound levels of all the speakers using the test tone. Although this lays the foundation for high quality surround sound, it may be necessary to make further adjustments while listening to playback of actual software. This is because most software contains center and surround channels recorded at slightly lower levels than the two front channels.

When you actually play back software recorded in multi channel surround, you will notice that increasing the center and surround speaker levels produces a better blend between the front and center speakers and greater cohesion between the front and surround speakers. Increasing the level of the center speaker about 1 dB, and the surround speakers about 1~2 dB is likely to produce better results.

In other words, in order to create a more cohesive soundstage with balanced dialog, we recommend that you make some adjustments while playing your software. Changes of only 1 dB can make a huge difference in the character of the soundstage.

## Before You Use Your Receiver

### Checking the connections

After connecting all of your components to the receiver, do the following to verify that the connections were made correctly.

- 1 Press I/Power to turn on the receiver.
- 2 Press a function button to select a component (program source) that you connected (e.g., CD player or tape deck).
- 3 Turn on the component and start playing it.
- 4 Rotate MASTER VOLUME to turn up the volume.

If you do not obtain normal sound output after performing this procedure, look for the reason in the following checklist and take the appropriate measures to correct the problem.

### There is no sound no matter which component is selected.

- ➔ Check that both the receiver and all components are turned on.
- ➔ Check that the volume level on the display is not set to VOL MIN by turning the MASTER VOLUME.
- ➔ Check that all speaker cords are connected correctly.
- ➔ Press MUTING if MUTING appears on the display.
- ➔ Check that the headphones are not connected to the PHONES jack. No sound will come from the speakers if the headphones are connected.
- ➔ Check that the receiver is not in "Demonstration Mode" (see page 14).

---

## Before You Use Your Receiver

### **There's no sound from a specific component.**

- ➔ Check that the component is connected correctly to the audio input jacks for that component.
- ➔ Check that the cord(s) used for the connection is (are) fully inserted into the jacks on both the receiver and the component.

### **No sound is heard from one of the front speakers.**

- ➔ Connect a pair of headphones to the PHONES jack to verify that sound is output from the headphones (see "20 PHONES jack" on page 23).  
If only one channel is output from the headphones, the component may not be connected to the receiver correctly. Check that all the cords are fully inserted into the jacks on both the receiver and the component.  
If both channels are output from the headphones, the front speaker may not be connected to the receiver correctly. Check the connection of the front speaker which is not outputting any sound.

If you encounter a problem that is not included above, see "Troubleshooting" on page 42.

# Location of Parts and Basic Operations

This chapter provides information about the locations and functions of the buttons and controls on the front panel. It also explains basic operations.

## Front Panel Parts Descriptions

**1** I/⏻ switch

Press to turn the receiver on and off.

**2** DISPLAY button

Press repeatedly to change the information on the display window as follows:

Index name of the component or the preset station\*

FUNCTION button indication or frequency\*\*

Sound field applied to the program source

\* *Index name appears only when you have assigned one to the component or preset station (see page 39). Index name does not appear when only blank spaces have been entered, or it is the same as the function button.*

\*\* *Frequency appears only when the tuner is selected.*

**3** DIMMER button

Press repeatedly to adjust the brightness of the display. When you want to turn off the display, set in the "DIM.RANGE" parameter in the SET UP menu (page 47).

**4** The following buttons operate the built-in tuner. For details, see "Receiving Broadcasts" starting from page 34.

**PRESET TUNING +/- buttons**

Scan all preset stations.

**TUNING +/- buttons**

Scan all the available radio stations.

**MEMORY button**

Press to memorize a preset station.

**SHIFT button**

Selects a memory page for preset stations.

## Front Panel Parts Description

### FM MODE button

If "STEREO" flashes in the display and the FM stereo reception is poor, press this button. You will not have the stereo effect but the sound is improved.

### FM button

Selects the FM band.

### AM button

Selects the AM band.

### 5 SET UP button/indicator

Press to activate the setup mode, then use the MENU </> buttons (19) to select any of the following indications. You can then make various settings using the MENU +/- buttons (18).

When you select	You can
Speaker type	Specify the type of speakers. (page 15)
Speaker setup	Specify the front, center, surround speaker sizes, the surround speaker position, and whether or not you are using a sub woofer. (page 15)
Speaker Distance	Specify the front, center, and surround speaker distances. (page 17)
Dimmer range	Specify the display to turn off when you press the DIMMER button several times. (page 47)
MULTI CH IN video input	Specify the video input to be used with the audio signals from the MULTI CH IN jacks. (page 47)

### 6 MULTI CHANNEL DECODING indicator

This indicator lights up when the unit is decoding signals recorded in a Multi Channel format.

### 7 LEVEL button / indicator

Press to activate the speaker level parameters (page 31). The indicator on the button lights up and you can adjust the various speaker level parameters (front balance, surround balance, etc.).

### 8 SURR button / indicator

Press to activate the surround parameters (page 30). The indicator on the button lights up and you can adjust the various surround parameters (effect level, wall type, etc.).

### 9 MULTI CH IN button

Press to enjoy the audio source connected to the MULTI CH IN jacks with the video from the selected component. Press again to cancel MULTI CH IN.

- When the MULTI CH IN is selected, the tone, sound field and surround parameters do not function.

### 10 Tone buttons

#### TREBLE +/- button

Press this button to adjust the tone (treble) (page 32).

#### BASS +/- button

Press this button to adjust the tone (bass) (page 32).

**11 INPUT MODE button**

Press to select the input mode for your digital components (DVD/LD and TV/SAT).

Each press switches the input mode of the currently selected component.

Select	To
AUTO	Give priority to digital signals when there are both digital and analog connections. If there are no digital signals, analog is selected
DIGITAL (OPTICAL)	Specify the digital audio signals input to the DIGITAL OPTICAL input jacks (TV/SAT only)
DIGITAL (COAXIAL)	Specify the digital audio signals input to the DIGITAL COAXIAL input jacks (DVD/LD only)
ANALOG	Specify the analog audio signals input to the AUDIO IN (L and R) jack

**Note**

If 96 kHz digital signal is input, the tone, sound field and surround parameters do not function.

**12 Function buttons**

Press one of the buttons to select the component you want to use.

To select	Press
VCR	VIDEO
DVD or LD player	DVD/LD
TV or satellite tuner	TV/SAT
MD or Tape deck	MD/TAPE
CD player	CD
Built in tuner	TUNER

After selecting the component, turn on the component you selected and play the program source.

- After selecting VCR, DVD player, or LD player, turn on the TV and set the TV's video input to match the component you selected.

**13 MASTER VOLUME control**

After turning on the component you selected, rotate to adjust the volume.

**14 MUTING button**

Press to mute the sound. MUTING appears on the display when the sound is muted.

**15 SOUND FIELD**

Use the SOUND FIELD buttons to enjoy surround sound. For details, see "Enjoying Surround Sound" starting from page 24.

**A.F.D button / indicator**

Press to set the receiver to automatically detect the type of audio signal being input and perform proper decoding (if necessary).

**MODE button / indicator**

Press to activate the sound field selection mode (page 25).

**2CH button / indicator**

Press to output sound from only the front (left and right) speakers.

**16 NAME button / indicator**

Press to activate the name function and enter names for preset stations and program sources (page 39).

**17 ENTER button**

Press to enter individual characters for the preset stations and program source names.

**18 MENU +/- buttons**

Turn to adjust the selected speaker level and surround parameters (etc.).

**19 MENU </> buttons**

Press to select various speaker level and surround parameters (etc.).

**20 PHONES jack**

Connects headphones.

- When you connect the headphones, no sound will come from the speakers.

# Enjoying Surround Sound

This chapter describes how to set up the receiver to enjoy surround sound. You can enjoy multi channel surround when playing back software encoded with Dolby Digital or DTS.

You can take advantage of surround sound simply by selecting one of the receiver's pre-programmed sound modes. They bring the exciting and powerful sound of movie theaters and concert halls into your home. You can also customize the sound modes to obtain the sound you desire by changing the various surround parameters. The receiver contains a variety of different sound modes. The cinema sound modes are designed for use when playing back movie software (DVD, LD, etc.) encoded with multi channel surround sound or Dolby Pro Logic. In addition to decoding the surround sound, some of these modes also provide sound effects commonly found in movie theaters.

The virtual sound modes contain compelling applications of the Sony Digital Cinema Sound digital signal processing technology. They shift the sound away from the actual speaker locations to simulate the presence of several "virtual" speakers.

The music (etc.) sound modes are designed for use with standard audio sources and TV broadcasts. They add reverberation to the source signal to make you feel as if you were in a concert hall or stadium (etc.). Use these sound modes with two-channel sources like CD and stereo broadcasts of sports programs or musical concerts. For more information about the sound modes, see pages 26 – 27.

## **A.F.D.**

The "Auto Format Decoding" sound mode presents the sound exactly as it was encoded, without adding any reverberation (etc.).

To fully enjoy surround sound, you must register the number and location of your speakers. See "Multi-Channel Surround setup" starting on page 15 to set the speaker parameters before enjoying surround sound.

## Selecting a Sound Field

You can enjoy surround sound simply by selecting one of the pre-programmed sound fields according to the program you want to listen to.

- 1 Press **MODE**.  
The current sound field is indicated in the display.
- 2 Press **MENU </>** or **MENU +/-** buttons to select the sound field you want.  
See the table starting on page 26 for information on each sound field.

### To turn the sound field off

Press **A.F.D.** or **2CH** (page 23).

 The receiver memorizes the last sound field selected for each program source (Sound Field Link)

Whenever you select a program source, the sound field that was last applied is automatically applied again. For example, if you listen to CD with HALL as the sound field, change to a different program source, then return to CD, HALL will be applied again. With the tuner, sound fields are memorized separately for AM, FM, and all preset stations.

 You can identify Dolby Surround-encoded software by looking at the packaging

Dolby Digital discs are labeled with the  logo, and Dolby Surround encoded programs are labeled with the  logo.

### Brief descriptions of buttons used to enjoy surround sound

**LEVEL button:** Press to customize the level parameters.

**SURR button:** Press to customize the surround parameters in the current sound field.

**BASS +/- buttons:** Press to adjust the tone (bass).

**TREBLE +/- buttons:** Press to adjust the tone (treble).

**MENU </> buttons:** Use to select parameters after pressing the LEVEL, SURR or SET UP buttons.

**MENU +/- buttons:** Use to adjust parameters and select sound fields (etc.).

**SOUND FIELD buttons:**

**A.F.D. button:** Press to set the receiver to automatically detect the type of audio signal being input and perform proper decoding (if necessary).

**MODE button:** Press to activate the sound field selection mode.

**2CH button:** Press to output sound from only the front (left and right) speakers.

## Selecting a Sound Field

### Sound field information

Sound field	Effect	Notes
NORM. Surr. (NORMAL SURROUND)	Software with multi channel surround audio signals is played according to the way it was recorded. Software with two channel audio signals, is decoded with Dolby Pro Logic to create surround effects.	
STUDIO A (CINEMA STUDIO A)	Reproduces the sound characteristics of Sony Pictures Entertainment's classic editing studio.	This is a standard mode, great for watching most type of movie.
STUDIO B (CINEMA STUDIO B)	Reproduces the sound characteristics of Sony Pictures Entertainment's mixing studio which is one of the most up-to-date facilities in Hollywood.	This mode is ideal for watching science-fiction or action movies with lots of sound effects.
STUDIO C (CINEMA STUDIO C)	Reproduces the sound characteristics of Sony Pictures Entertainment's BGM recording studio.	This mode is ideal for watching musicals or classic films where music is featured in the soundtrack.
V.M.DIMENS.* (VIRTUAL MULTI DIMENSION)	Uses 3D sound imaging to create an array of virtual surround speakers positioned higher than the listener from a single pair of actual surround speakers. This mode creates four sets of virtual speakers surrounding the listener at approximately a 30° angle of elevation.	 <p>SIDE**</p>  <p>BEHIND**</p> <p>** See page 16</p>
V. SEMI M.D.* (VIRTUAL SEMI-MULTI DIMENSION)	Uses 3D sound imaging to create virtual surround speakers from the sound of the front speakers without using actual surround speakers. This mode creates five sets of virtual speakers surrounding the listener at a 30° angle of elevation.	

\* "VIRTUAL" sound field: Sound field with virtual speakers.

## Sound field information

Sound field	Effect	Notes
HALL	Reproduces the acoustics of a rectangular concert hall.	Ideal for soft acoustic sounds.
JAZZ (JAZZ CLUB)	Reproduces the acoustics of a jazz club.	
L. HOUSE (LIVE HOUSE)	Reproduces the acoustics of a 300-seat live house.	Great for rock or pop music.
GAME	Obtains maximum audio impact from video game software.	Be sure to set the game machine to stereo mode when using game software with stereo sound capabilities.

### Notes

- The effects provided by the virtual speakers may cause increased noise in the play back signal.
- When listening to sound fields that employ the virtual speakers, you will not be able to hear any sound coming directly from the surround speakers.

### Use the buttons on the front panel to operate the following modes

A.F.D. AUTO FORMAT DECODING (Press the A.F.D. button)	Automatically detects the type of audio signal being input (Dolby Digital, Dolby Pro Logic, or standard two channel stereo) and performs the proper decoding if necessary. This mode presents the sound as it was recorded/encoded, without adding any effects.	You can use this mode as a reference.
2CH ST. 2 CHANNEL (Press the 2CH button)	Outputs the sound from the front left and right speakers only. Standard two channel (stereo) sources completely bypass the sound field processing. Multi channel surround formats are downmixed to two channels.	This allows you to play any source using only the front left and right speakers.

### Note

- No sound is output from the sub woofer when the 2 CHANNEL mode is selected. To listen to two channel (stereo) sources using the front left and right speakers and a sub woofer, use the AUTO FORMAT DECODING mode.
- When you select "Micro Satellite Speaker", internal sound processor will automatically redirect bass sound to subwoofer. If you want to listen to two channel (stereo) sources under this setting, we recommend that you choose AUTO FORMAT DECODING mode so that you can take advantage of your subwoofer to get back correct bass signal.

**Source sound displays**

The letters (L, C, R, etc.) indicate the source sound. The box around the letters varies to show how the receiver downmixes the source sound (based on the speakers settings). When using music sound modes such as HALL or JAZZ CLUB, the receiver adds reverberation based on the source sound.

The following table shows how the indicators light up when using AUTO FORMAT DECODING mode.

Although the table below shows almost all of the configurations available from multi channel surround signals, the ones marked “☆” are the most common.

Recording Format (Front/Surround)	Input Channel Display	Source sound and Output Channel Display			
		All speakers present	Surround speakers absent	Center speaker absent	Surround/center speakers absent
1/0	DOLBY DIGITAL [1/0]	<input checked="" type="checkbox"/> DIGITAL <input checked="" type="checkbox"/>	<input checked="" type="checkbox"/> DIGITAL <input checked="" type="checkbox"/>	<input checked="" type="checkbox"/> DIGITAL <input type="checkbox"/> c <input type="checkbox"/>	<input checked="" type="checkbox"/> DIGITAL <input type="checkbox"/> c <input type="checkbox"/>

\* Signals with Dolby surround encoded flag OFF  
 \*\* Signals with Dolby surround encoded flag ON  
 \*\*\* The sampling rate is displayed.

**Notes**

- The receiver performs Pro Logic decoding and the display conforms to 2/0\*\* when using the following movie sound modes with 2/0\* or STEREO PCM format signals. (STUDIO A, B, C, V.M.DIMENS. and V. SEMI M.D.)
- When using music sound modes such as HALL or JAZZ CLUB with standard audio formats e.g., PCM, the receiver creates surround signals from the front L and R signals. In this case, sound is output from the surround speakers, but output channel indicators for the surround speakers do not light.

# Customizing Sound Fields

By adjusting the surround parameters and the tone characteristics of the front speakers, you can customize the sound fields to suit your particular listening situation.

Once you customize a sound field, the changes are stored in memory indefinitely (unless the receiver is unplugged for about two weeks). You can change a customized sound field any time by making new adjustments to the parameters.

See the table on page 33 for the parameters available in each sound field.

## To get the most from multi channel surround sound

Position your speakers and do the procedures described in "Multi Channel Surround Setup" starting on page 15 before you customize a sound field.

## Adjusting the surround parameters

The SURR menu contains parameters that let you customize various aspects of the current sound field. The settings available in this menu are stored individually for each sound field.

- 1 Start playing a program source encoded with multi channel surround sound.**
- 2 Press SURR.**  
The button lights up and the first parameter is displayed.
- 3 Press MENU </> to select the parameter you want to adjust.**
- 4 Press MENU +/- to select the setting you want.**  
The setting is stored automatically.

### Effect level (EFFECT)

Initial setting : (depends on sound field mode)

This parameter lets you adjust the "presence" of the current surround effect.

### Wall type

Initial setting : WALL MID

When sound is reflected off soft material, such as a curtain, the high frequency elements are reduced. A hard wall is highly reflective and does not significantly affect the frequency response of the reflected sound. This parameter lets you control the level of the high frequencies to alter the sonic character of your listening environment by simulating a softer (S) or harder (H) wall.

- The wall type can be adjusted from WALL S. 1 ~ WALL S. 8 (soft) to WALL H. 1 ~ WALL H. 8 (hard) in 17 steps.
- The midpoint WALL MID designates a neutral wall (made of wood).

### Reverberation

Initial setting : REVB. MID

Before sound reaches our ears, it is reflected (reverberated) many times between the left and right walls, ceiling, and floor. In a large room, sound takes more time to bounce from one surface to another than in a smaller room. This parameter lets you control the spacing of the early reflections to simulate a sonically larger (L) or smaller (S) room.

- The reverberation can be adjusted from REVB. S. 1 ~ REVB. S. 8 (short) to REVB. L. 1 ~ REVB. L. 8 (long) in 17 steps.
- The midpoint REVB. MID designates a standard room with no adjustment.

## Adjusting the level parameters

The LEVEL menu contains parameters that let you adjust the balance and speaker volumes of each speaker. The settings available in this menu are applied to all sound fields.

- 1 Start playing a program source encoded with multi channel surround sound.
- 2 Press LEVEL.  
The button lights up and the first parameter is displayed.
- 3 Press MENU </> to select the parameter you want to adjust.
- 4 Press MENU +/- to select the setting you want.  
The setting is stored automatically.

### \*Front balance (L R)

Initial setting : BALANCE

Lets you adjust the balance between the front left and right speakers.

- The balance can be adjusted  $\pm 8$  steps.
- These settings can also be adjusted using the supplied remote. See "Adjusting the speaker volume" (page 18).

### \*Surround balance (SL SR)

Initial setting : BALANCE

Lets you adjust the balance between the surround left and right speakers.

- The balance can be adjusted  $\pm 8$  steps.
- These settings can also be adjusted using the supplied remote. See "Adjusting the speaker volume" (page 18).

### \*Surround level

Initial setting : SURR 0 dB

Lets you adjust level of the surround (left and right) speakers.

- The level can be adjusted in 1 dB steps from  $-10$  dB to  $+6$  dB.
- These settings can also be adjusted directly using the supplied remote. See "Adjusting the speaker volume" (page 18).

### \*Center level

Initial setting : CTR 0 dB

Lets you adjust the level of the center speaker.

- The level can be adjusted in 1 dB steps from  $-10$  dB to  $+6$  dB.

### \*Sub woofer level

Initial setting : S. W. 0 dB

Lets you adjust the level of the sub woofer.

- The level can be adjusted in 1 dB steps from  $-10$  dB to  $+6$  dB.

\* The parameters can be adjusted separately for MULTI CH IN.

### Low Frequency Effect

Initial setting : L.F.E. 0 dB

This parameter lets you attenuate the level of the LFE (Low Frequency Effect) channel output from the sub woofer without affecting the level of the bass frequencies sent to the sub woofer from the front, center or surround channels via the bass redirection circuitry.

- The level can be adjusted in 1 dB steps from  $-20.0$  dB to 0 dB (line level). 0 dB outputs the full LFE signal at the mix level determined by the recording engineer.
- Selecting OFF mutes the sound of the LFE channel from the sub woofer. However, the low frequency sounds of the front, center, or surround speakers are output from the sub woofer according to the settings made for each speaker in the speaker setup (page 15).

### Dynamic range compressor (DYNAMIC RANGE)

Initial setting : COMP. OFF

Lets you compress the dynamic range of the sound track. This may be useful when you want to watch movies at low volumes late at night.

- COMP. OFF reproduces the sound track with no compression.
- COMP. STD reproduces the sound track with the dynamic range intended by the recording engineer.
- COMP. 0.1 ~ 0.9 allow you to compress the dynamic range in small steps to achieve the sound you want.
- COMP. MAX provides a dramatic compression of the dynamic range.

#### Note

Dynamic range compression does not work with DTS sources.

#### About the Dynamic Range Compressor

This parameter allows you to compress the dynamic range of the soundtrack based on the dynamic range information included in the Dolby Digital signal. "COMP. STD" is standard compression, but because many sources have only light compression, you may not notice much difference when using COMP. 0.1~0.9.

Therefore, we recommend using the "COMP. MAX" setting. This greatly compresses the dynamic range and allows you to view movies late at night at low volumes. Unlike analog limiters, the levels are predetermined and it provides a very natural

compression.

### Adjusting the bass/treble

The BASS +/- or TREBLE +/- button lets you adjust the tone (bass or treble) of the front speakers for optimum sound. You can adjust the tone for each separate sound field.

- 1 Start playing a program source encoded with multi channel surround sound.
- 2 Press BASS +/- to adjust the bass tone and TREBLE +/- to adjust the treble tone.  
The setting is stored automatically.  
You can select a tone level of -6 dB to +6 dB in 2 dB steps.

### Resetting customized sound fields to the factory settings

- 1 If the power is on, press I/⏻ to turn off the power.
- 2 Hold down MODE and press I/⏻.  
"S.F. CLR." appears in the display and all sound fields are reset at once.

## Adjustable parameters for each sound field

# Receiving Broadcasts

This chapter describes how to receive FM or AM broadcasts and how to preset selected stations.

You can tune in stations on this receiver in the following ways:

## **Direct Tuning**

You can enter a frequency of the station you want directly by using the numeric buttons on the remote (see page 36).

## **Automatic Tuning**

If you don't know the frequency of the station you want, you can let the receiver scan all available stations in your area (see page 36).

## **Preset Tuning**

After you have tuned in stations using Direct Tuning or Automatic Tuning, you can preset them to the receiver (see page 37). Then you can tune in any of the stations directly by entering its 2-character code (see page 37). Up to 30 FM or AM stations can be preset. The receiver will also scan all the stations that you have preset (see page 37).

Before you begin, make sure you have:

- Connected an FM and AM antenna to the receiver (see page 5).

**Brief descriptions of buttons used to receive broadcasts**

**PRESET TUNING +/-:** Press to scan all preset radio stations.

**TUNING +/-:** Press to scan all available radio stations.

**FM MODE:** If "STEREO" flashes in the display and the FM stereo reception is poor, press this button to improve the sound. You will not be able to enjoy stereo effect but the sound will be less distorted.

**Note**  
If "STEREO" does not appear at all even when the FM broadcast is received normally, press this button to turn on the "STEREO" indication.

**FM:** Press to select the FM band.

**AM:** Press to select the AM band.

**MEMORY:** Uses for memorizing preset stations.

**SHIFT:** Press to select a memory page (A, B, or C) for presetting radio stations or tuning to preset stations.

**TUNER:** Press to select the tuner.

**On the remote:**  
**D. TUNING:** Press this button to enter a frequency directly using the numeric buttons.

**Numeric buttons:** Press to enter a numeric value when inputting the frequency directly, presetting radio stations, or tuning to preset stations.

## Direct Tuning

For details on the buttons used in this section, see “Brief descriptions of buttons used to receive broadcasts” on page 35.

- 1 Press TUNER.  
The last received station is tuned in.
- 2 Press FM or AM to select the FM or AM band.
- 3 Press D.TUNING on the remote.
- 4 Press the numeric buttons on the remote to enter the frequency.

Example 1: FM 102.50 MHz

① → ② → ⑤ → ①

Example 2: AM 1350 kHz

(You don't have to enter the last “0” when the tuning interval is set to 10 kHz)

① → ③ → ⑤ → ①

### If you cannot tune in a station and the entered numbers flash

Make sure you've entered the right frequency. If not, repeat Steps 3 and 4.

If the entered numbers still flash, the frequency is not used in your area.

- 5 If you've tuned in an AM station, adjust the direction of the AM loop antenna for optimum reception.
- 6 Repeat Steps 2 to 5 to receive other stations.

 If you try to enter a frequency not covered by the tuning interval

The entered value is automatically rounded up or down.

This tuning scale for direct tuning differs depending on the area code as shown in the following table. For details on area codes, see page 3.

Area code	FM tuning scale	AM tuning scale
U, CA	50 kHz	10 kHz (can be changed to 9 kHz)*
E2, E3, TW	50 kHz	9 kHz (can be changed to 10 kHz)*
AU	50 kHz	9 kHz

\* To change the AM tuning scale, see page 45.

## Automatic Tuning

For details on the buttons used in this section, see “Brief descriptions of buttons used to receive broadcasts” on page 35.

- 1 Press TUNER.  
The last received station is tuned in.
- 2 Press FM or AM to select the FM or AM band.
- 3 Press TUNING + or TUNING –.  
Press the + button to scan from low to high; press the – button to scan from high to low.

### When the receiver reaches either end of the band

Scanning is repeated in the same direction.

The receiver stops scanning whenever a station is received.

- 4 To continue scanning, press TUNING + or TUNING – again.

# Preset Tuning

For details on the buttons used in this section, see “Brief descriptions of buttons used to receive broadcasts” on page 35.

Before tuning to preset stations, be sure to preset them by performing steps on “Presetting radio stations” below.

## Presetting radio stations

- 1 Press **TUNER**.  
The last received station is tuned in.
- 2 Tune in the station that you want to preset using **Direct Tuning** or **Automatic Tuning** (page 36).
- 3 Press **MEMORY**.  
“MEMORY” appears in the display for a few seconds. Do Steps 4 to 6 before “MEMORY” goes out.
- 4 Press **SHIFT** to select a memory page (A, B or C).  
Each time you press **SHIFT**, the letter “A”, “B” or “C” appears in the display.
- 5 Select a preset number by pressing **PRESET TUNING +** or **PRESET TUNING -**.  
If “MEMORY” goes out before you press the preset number, start again from Step 3.
- 6 Press **MEMORY** again to store the station.  
If “MEMORY” goes out before you can store the station, start again from Step 3.
- 7 Repeat Steps 2 to 6 to preset another station.

### To change a preset number to another station

Do Steps 1 to 6 to preset the new station to the number.

#### Note

If the AC power cord is disconnected for about one week, all the preset stations will be cleared from the receiver’s memory, and you will have to preset the stations again.

## Tuning to preset stations

You can tune the preset stations either of the following two ways.

### Scanning the preset stations

- 1 Press **TUNER**.  
The last received station is tuned in.
- 2 Press **PRESET TUNING +** or **PRESET TUNING -** repeatedly to select the preset station you want. Each time you press the button, the receiver tunes in one preset station at a time, in the corresponding order and direction as follows:

### Using the preset codes

- 1 Press **TUNER**.  
The last received station is tuned in.
- 2 Press **SHIFT** to select a memory page (A, B or C), then press the preset number of the station you want using the numeric buttons on the supplied remote.

# Other Operations

## Brief descriptions of buttons that appear in this chapter

**NAME button:** Press to name preset stations or program sources.

**MENU +/- buttons:** Use to select characters when naming preset stations or program sources.

**MENU </> buttons:** Use to move the cursor when naming preset stations or program sources.

**TUNER button:** Press to select the tuner.

**SET UP button:** Press to enter the set up mode.

**ENTER button:** Press to enter the completed name of the preset station or program source.

# Naming Preset Stations and Program Sources

You can enter a name (index name) of up to 8 characters for preset stations and program sources. These names (for example, "VHS") appear in the receiver's display when a station or program source is selected.

Note that no more than one name can be entered for each preset station or program source.

This function is useful for distinguishing components of the same kind. For example, two VCRs can be specified as "VHS" and "8MM", respectively. It is also handy for identifying components connected to jacks meant for another type of component, for example, a second CD player connected to the MD/TAPE jacks.

## 1 To name a preset station

Press TUNER.

The last station you received is tuned in.

## To name a program source

Select the program source (component) to be named, then go to Step 3.

## 2 Tune in the preset station you want to create an index name for.

If you are not familiar with how to tune in preset stations, see "Tuning to preset stations" on page 37.

## 3 Press NAME.

## 4 Create an index name by using the MENU +/- and MENU </>:

Press MENU +/- to select a character, then press > to move the cursor to the next position.

## To insert a space

Press MENU +/- until a blank space appears in the display (you can find the space character between "I" and "A").

## If you've made a mistake

Press MENU < or > repeatedly until the character to be changed flashes, then press MENU + or - to select the right character.

## 5 Press ENTER.

## To assign index names to other stations

Repeat Steps 2 to 5.

# Recording

Your receiver makes it easy to record to and from the components connected to it. You don't have to connect the playback and recording components directly to each other: once you select a program source on the receiver, you can record and edit as you normally would using the controls on each component.

Before you begin, make sure you've connected all components properly.

## Recording on an audio tape or MiniDisc

You can record on a cassette tape or MiniDisc using the receiver. Refer to the instruction manual of your cassette deck or MD deck if you need help.

- 1 Select the component to be recorded.
- 2 Prepare the component for playing.  
For example, insert a CD into the CD player.
- 3 Insert a blank tape or MD into the recording deck and adjust the recording level, if necessary.
- 4 Start recording on the recording deck, then start playback on the playback component.

## Recording

### Recording on a video tape

You can record from a TV, or an LD player using the receiver. You can also add audio from a variety of audio sources when editing a video tape. See your LD player's instruction manual if you need help.

- 1 Select the program source to be recorded.
- 2 Prepare the component for playing.  
For example, insert the laser disc you want to record into the LD player.
- 3 Insert a blank video tape into the VCR for recording.
- 4 Start recording on the recording VCR, then start playing the laser disc you want to record.

 You can record the sound from any audio source onto a video tape while recording from a laser disc

Locate the point where you want to start recording from another audio source, select the program source, then start playback. The audio from that source will be recorded onto the audio track of the video tape instead of the audio from the original medium.

To resume audio recording from the original medium, select the video source again.

#### Notes

- You cannot record a digital audio signal using a component connected to the analog MD/TAPE OUT or VIDEO OUT jacks.
- Sound adjustments do not affect the signal output from the MD/TAPE OUT or VIDEO OUT jacks.
- When MULTI CH IN is selected, audio signals are not output from MD/TAPE OUT or VIDEO OUT jacks.

## Using the Sleep Timer

You can set the receiver to turn off automatically at a specified time.

Press **SLEEP** on the remote while the power is on. Each time you press **SLEEP**, the time changes as shown below.

→ 2-00-00 → 1-30-00 → 1-00-00 → 0-30-00 → OFF

The display dims after you have specified the time.

 You can freely specify the time  
First, press **SLEEP** on the remote, then specify the time you want using **MENU +/-** on the receiver. The sleep time changes in 1 minute intervals. You can specify up to 5 hours.

 You can check the time remaining before the receiver turns off  
Press **SLEEP** on the remote. The remaining time appears in the display.

---

## Adjustment Using the SET UP Button

The SET UP button allows you to make the following adjustments.

### Selecting the MULTI CH IN video input

This parameter lets you specify the video input to be used with the audio signals from the MULTI CH IN jack. The MULTI CH IN video input is set to DVD/LD by default.

- 1 Press SET UP.
- 2 Press MENU </> to select "MULTI CH IN VISUAL".
- 3 Press MENU +/- to select the video input you want.

### Set the display to turn off

This parameter lets you specify whether or not the display turns off when you press the DIMMER button several times. When "WIDE" is selected, you can set the display to turn off, but when "NARROW" is selected, you cannot set the display to turn off. The default setting is set to "NARROW".

- 1 Press SET UP.
- 2 Press MENU </> to select "DIM.RANGE".
- 3 Press MENU +/- to select "NARROW" or "WIDE".

# Additional Information

## Troubleshooting

If you experience any of the following difficulties while using the receiver, use this troubleshooting guide to help you remedy the problem. Also, see “Checking the connections” on page 19 to verify that the connections are correct. Should any problem persist, consult your nearest Sony dealer.

### **There’s no sound or only a very low-level sound is heard.**

- ➔ Check that the speakers and components are connected securely.
- ➔ Make sure that you’ve selected the correct component on the receiver.
- ➔ Press MUTING if MUTING appears on the display.
- ➔ The protective device on the receiver has been activated because of a short circuit. Turn off the receiver, eliminate the short-circuit problem and turn on the power again.

### **The left and right sounds are unbalanced or reversed.**

- ➔ Check that the speakers and components are connected correctly and securely.
- ➔ Adjust front balance parameter in the LEVEL menu.

### **Severe hum or noise is heard.**

- ➔ Check that the speakers and components are connected securely.
- ➔ Check that the connecting cords are away from a transformer or motor, and at least 10 feet (3 meters) away from a TV set or fluorescent light.
- ➔ Move your TV away from the audio components.
- ➔ The plugs and jacks are dirty. Wipe them with a cloth slightly moistened with alcohol.

### **No sound is heard from the center speaker.**

- ➔ Make sure the sound field function is on (press SOUND FIELD MODE).
- ➔ Select the appropriate center mode (see pages 25–27).
- ➔ Adjust the speaker volume (see page 18).
- ➔ Make sure the center speaker size parameter is set to either SMALL or LARGE (see page 16).

**No sound or only a very low-level sound is heard from the surround speakers.**

- ➔ Make sure the sound field function is on (press SOUND FIELD MODE).
- ➔ Select the appropriate center mode (see pages 25–27).
- ➔ Adjust the speaker volume (see page 18).
- ➔ Make sure the surround speaker size parameter is set to either SMALL or LARGE (see page 16).

**No sound is heard from the sub woofer.**

- ➔ Make sure the sub woofer is set to YES (see page 17).
- ➔ Check that 2CH mode has not been selected (see page 27).

**Recording cannot be done.**

- ➔ Check that the components are connected correctly.
- ➔ Select the source component with a FUNCTION button.
- ➔ When recording from a digital component, make sure the input mode is set to ANALOG (see page 23) before recording with a component connected to the analog MD/TAPE terminals.

**Radio stations cannot be tuned in.**

- ➔ Check that the antennas are connected securely. Adjust the antennas and connect an external antenna if necessary.
- ➔ The signal strength of the stations is too weak (when tuning in with automatic tuning). Use direct tuning.
- ➔ Make sure you set the tuning interval correctly (when tuning in AM stations with direct tuning) (see pages 36 and 45).
- ➔ No stations have been preset or the preset stations have been cleared (when tuning by scanning preset stations). Preset the stations (see page 37).
- ➔ Press DISPLAY so that the frequency appears in the display.

**The surround effect cannot be obtained.**

- ➔ Make sure the sound field function is on (press SOUND FIELD MODE).

**“PCM--kHz” appears on the display.**

- ➔ The sampling frequency is more than 48 kHz. Change the input player setting to 48 kHz.

**Nothing appears on the display.**

- ➔ When the display turns off immediately after the receiver is turned on, press DIMMER to change the display mode.

**No picture or an unclear picture appears on the TV screen or monitor.**

- ➔ Select the appropriate function on the receiver.
- ➔ Set your TV to the appropriate input mode.
- ➔ Move your TV away from the audio components.

**The remote does not function.**

- ➔ Point the remote at the remote sensor  on the receiver.
- ➔ Remove any obstacles in the path between the remote and the receiver.
- ➔ Replace both batteries in the remote with new ones, if they are weak.
- ➔ Make sure you select the correct function on the remote.
- ➔ If the remote is set to operate the TV only, use the remote to select a source or component other than TV before operating the receiver or other component.

# Glossary

## Surround sound

Sound that consists of three elements: direct sound, early reflected sound (early reflections) and reverberative sound (reverberation). The acoustics of the surrounding space affect the way these three sound elements are heard. Surround sound combines these sound elements in such a way that you actually can sense the size of the venue, as well as its type.

- Types of sound

- Transition of sound from surround speakers

## Dolby Pro Logic Surround

As one method of decoding Dolby Surround, Dolby Pro Logic Surround produces four channels from two-channel sound. Compared with the former Dolby Surround system, Dolby Pro Logic Surround reproduces left-to-right panning more naturally and localizes sounds more precisely. To take full advantage of Dolby Pro Logic Surround, you should have one pair of surround speakers and a center speaker. The surround speakers output monaural sound.

## Dolby Digital

This sound format for movie theaters is more advanced than Dolby Pro Logic Surround. In this format, the surround speakers output stereo sound with an expanded frequency range and a sub woofer channel for deep bass is independently provided. This format is also called "5.1" because the sub woofer channel is counted as 0.1 channel (since it functions only when a deep bass effect is needed). All six channels in this format are recorded separately to realize superior channel separation. Furthermore, since all the signals are processed digitally, less signal degradation occurs.

## Digital Cinema Sound

This is the generic name of the surround sound produced by digital signal processing technology developed by Sony. Unlike previous surround sound fields mainly directed at the reproduction of music, Digital Cinema Sound is designed specifically for the enjoyment of movies.

## Settings Using SURR, LEVEL, and SET UP buttons

You can make various settings using the LEVEL, SURR, SET UP, MENU </> and MENU +/- buttons. The table below shows each of the settings that these buttons can make.

Press and light	Press MENU < or > to select	Press MENU + or - to select	See page
SURR button	EFFECT LEVEL	depends on sound mode (in 16 steps)	30
	WALL TYPE	between -8 to +8 (in 1 increment steps)	
	REVERBERATION TIME	-8 to +8 (in 1 increment steps)	
LEVEL button	FRONT BALANCE	between -8 to +8 (in 1 increment steps)	31
	SURR BALANCE	between -8 to +8 (in 1 increment steps)	
	SURR LEVEL	between -10 dB to +6 dB (in 1 dB steps)	
	CENTER LEVEL	between -10 dB to +6 dB (in 1 dB steps)	
	SUB WOOFER LEVEL	between -10 dB to +6 dB (in 1 dB steps)	
	LFE MIX LEVEL	OFF, or -20 dB to 0 dB (in 1 dB steps)	
	DYNAMIC RANGE COMP	OFF, 0.1 to 0.9 (in 0.1 dB steps), STD, or MAX	
*SET UP	[L] [R] (FRONT)	LARGE or SMALL	15
	[C] (CENTER)	LARGE, SMALL, or NO	
	[SL] [SR] (SURR)	LARGE, SMALL, or NO	
	[SL] [SR] (SURR) PL. XXX	PL. SIDE or PL. BEHD.

\* When you press the SET UP button, you can select NORM. SP. (for normal speakers) or MICRO SP. (for Micro Satellite speakers). (page 15)

# Remote Button Description

You can use the remote to operate the components in your system. The tables below show the settings of each button.

Remote Button	Operations	Function
SLEEP	Receiver	Activates the sleep function and the duration which the receiver turns off automatically.
AV I/⏻	TV/VCR/ CD player/ DVD player/ MD deck/ VCD player/ LD player/ DAT deck	Turns the audio and video components on or off.
I/⏻	Receiver	Turns the receiver on or off.
VIDEO/ VIDEO 1	Receiver	To watch VCR (VTR mode 3)
VIDEO 2	Receiver	To watch VCR (VTR mode 1)
VIDEO 3	Receiver	To watch VCR (VTR mode 2)
DVD/LD	Receiver	To watch DVD or laser disc.
TV/SAT	Receiver	To watch TV programs or satellite receiver.
MD/TAPE	Receiver	To listen Minidisc or audio tape.
CD/SACD	Receiver	To listen to compact disc.
TUNER	Receiver	To listen to radio programs.
PHONO	Receiver	To listen to turn table.
AUX	Receiver	To listen to an audio equipment.
FN SHIFT*	Remote	Use simultaneously to select other function.
0-9	Receiver	Use with "SHIFT" button to select tuner preset station numeric input during DIRECT TUNING or MEMORY mode.
	CD player/ MD deck/ VCD player/ LD player/ DAT deck	Selects track numbers. 0 selects track 10.
	TV/VCR/SAT	Selects channel numbers.
>10	CD player/ MD deck/ Tape deck/ LD player/ VCD player	Selects tracks numbers over 10.

Remote Button	Operations	Function
ENTER	TV/VCR/SAT/ Tape deck/ LD player/ VCD player/ MD deck/ DAT deck	After selecting a channel, disc or track using the numeric buttons, press to enter the value.
SHIFT	Receiver	Press repeatedly to select a memory page for presetting radio stations or tuning to preset stations.
-/--	TV	Selects the channel entry mode, either one or two digit.
D.TUNING	Receiver	Tuner station direct key-in mode.
⏮/⏭	CD player/ MD deck/ DVD player/ LD player/ VCD player/ Tape deck/VCR/ DAT deck	Skips tracks.
⏪/⏩	CD player/ DVD player/ VCD player	Searches tracks (forward or backward).
	MD deck/ Tape deck/VCR/ LD player/ DAT deck	Fastforwards or rewinds.
◀	Tape deck	Starts play on the reverse side.
▶	CD player/ MD deck/Tape deck/VCR/ DVD player/ VCD player/ LD player/ DAT deck	Starts play.
⏸	CD player/ MD deck/Tape deck/VCR/ DVD player/ VCD player/ LD player/ DAT deck	Pauses play or record. (Also starts recording with components in record standby.)

\* VIDEO 1, VIDEO 2, VIDEO 3, PHONO and MD/TAPE function is a 2-key operation. To select the above function, press FN SHIFT (function shift) and the function key you want simultaneously.

For example, press FN SHIFT and CD/SACD to select MD/TAPE function.

## Note

When you press the function buttons (VIDEO, DVD/LD, TV/SAT), the input mode of the TV might not switch to the corresponding input mode that you want. In this case, press the TV/VIDEO button to switch the input mode of the TV.

Remote Button	Operations	Function
■	CD player/ MD deck/Tape deck/VCR/ DVD player/ VCD player/ LD player/ DAT deck	Stops play.
POSITION**	TV	Changes the position of the small picture.
SWAP**	TV	Swaps the small and the large picture.
DISC	CD player	Select discs (Mega storage CD player only).
SUB CH +/-**	TV	Selects preset channels for the small picture.
D. SKIP/ CH/PRESET +/-	Receiver	Scans and selects preset stations.
	TV/VCR/SAT	Selects preset channels.
	CD player	Skips discs (CD player with multi-disc changer only).
DISPLAY	TV/VCR/ LD player/ DVD player/ VCD player	Selects information displayed on the TV screen.
P IN P**	TV	Activates the picture-in-picture function.
JUMP	TV	Toggles between the previous and the current channels.
WIDE	TV	Selects the wide picture mode.
ANT TV/VTR	VCR	Selects output signal from the aerial terminal: TV signal or VCR program.
TV/VIDEO	TV/VCR	Selects input signal: TV input or video input.
A. F. D.	Receiver	Auto Format Decoding.
2CH/OFF	Receiver	Turns off sound field or selects 2CH mode.
MODE +/-	Receiver	Selects sound field mode.
MULTI CH/ 2 CH DIRECT	Receiver	Selects MULTI CH IN source.
MUTING	Receiver	Mutes the sound from the receiver.
TEST TONE	Receiver	Press to output test tone.
MAIN MENU	Receiver	Press this button repeatedly to select one of the two cursor modes: LEVEL and SURROUND.

Remote Button	Operations	Function
MASTER VOL +/-	Receiver	Adjusts the master volume of the receiver.
MENU </>	Receiver	Selects a menu item.
MENU +/-	Receiver	Makes adjustment or change the setting.
MENU	DVD	Displays DVD menu.
⇄/⇅/⇆/⇇	DVD	Selects a menu item.
ENTER	DVD	Enters the selection.
RETURN	DVD	Returns to the previous menu or exits the menu.
TITLE	DVD	Displays DVD title.

\*\* Only for Sony TVs with the picture-in-picture function.

#### Notes

- Some functions explained in this section may not work depending on the model of the receiver.
- The above explanation is intended to serve as an example only. Therefore, depending on the component the above operation may not be possible or may operate differently than described.
- The VIDEO 1, VIDEO 2, VIDEO 3, PHONO and AUX functions are not available for set operation.

### Changing the factory setting of a function button

If the factory settings of the FUNCTION buttons don't match your system components, you can change them. For example, if you have an MD player and a tape deck and you don't have a CD player, you can assign the CD/SACD button to your tape deck. Note that the settings of the TUNER and FN SHIFT functions (VIDEO 1, VIDEO 2, VIDEO 3, PHONO and MD/TAPE) cannot be changed.

## Remote Button Description

\* Sony VCRs are operated with a VTR 1, 2 or 3 setting. These correspond to Beta, 8mm and VHS respectively.

Now you can use the CD/SACD button to control the tape deck.

To reset a button to its factory setting  
Repeat the above procedure.

To reset all the function buttons to their factory setting  
Press I/⏻, AV I/⏻ and MASTER VOL - at the same time.

- 1 Hold down the Function button whose function you want to change (for example, CD/SACD).
- 2 Press the corresponding button of the component you want to assign to the Function button (for example, 4 - Tape deck).

The following buttons are assigned to select the functions:

To operate	Press
CD player	1
DAT deck	2
MD deck	3
Tape deck A	4
Tape deck B	5
LD player	6
VCR (remote control mode VTR 1*)	7
VCR (remote control mode VTR 2*)	8
VCR (remote control mode VTR 3*)	9
TV	0
DSS (Digital Satellite Receiver)	>10
DVD	ENTER
VCD player	<<<
