7VCA Serial - Version 1.3 - Edition: September 2000

* These specifications are subject to amend without notice

1 Introduction

Congratulations on your purchase of the **SY-7VCA** Motherboard. This *Quick Start Guide* illustrates the steps for installing and setting up your new Motherboard.

This guide provides all users with the basic steps of Motherboard setting and operation. For further information, please refer to the *SY-7VCA Motherboard Uses' Guide* that came with your Motherboard.

Unpacking

When unpacking the Motherboard, check for the following items:

◆ The SY-7VCA VT82C694X AGP/PCI Motherboard

◆ The Quick Start Guide

◆ The Installation CD-ROM

◆ SOYO Bonus Pack CD-ROM

◆ One IDE Device ATA 66 Flat Cable

◆ One Floppy Disk Drive Flat Cable

SY-7VCA Motherboard Layout

Key Features

- Supports Intel® processors
 - FSB 66MHz: Celeron™ (400-700MHz)
 - FSB 100MHz: Pentium® III (500E-850MHz)
 - FSB 133MHz: Pentium® III (533-933MHz)
- Supports 66/100/133 MHz Front Side Bus Frequency
- Auto-detect CPU voltage
- Easy CPU settings in BIOS with the "SOYO COMBO Setup"
- PC99, ACPI
- Ultra DMA33/66 (ATA 33/66)
- Supports Wake-On-LAN (WOL)
- Power-on by modem and alarm
- Supports onboard hardware monitoring
- Supports suspend to RAM (STR)
- Supports 5 sets of voltage monitoring
- Supports multiple-boot function
- 5 x 32-bit bus master PCI slots
- 1 x 16-bit ISA slot.
- 1 x 32-bit AGP slot
- 4 x USB ports onboard
(USB1: 2 Ports, USB2: 2 Ports)
- ATX power connector
- Hardware Random Number Generator (RNG) for enabling enhanced platform security
- RTC hardware to handle Y2K Century Rollover

2 Installation

To avoid damage to your Motherboard, please follow these simple rules while handling this equipment:

- Before handling the Motherboard, ground yourself by touching on to an unpainted portion of the system's metal chassis.
- Remove the Motherboard from its anti-static packaging. Hold the motherboard by the edges and avoid touching its components.
- Check the Motherboard for damage. If any chip appears to be loose, press carefully to seat it firmly in its socket.

Follow the directions in this section which is designed to guide you through a quick and correct method to install your new **SY-7VCA** Motherboard. For detailed information, please refer to the *SY-7VCA Motherboard User's guide and Technical Reference* online manual on in the CD-ROM package that came with your Motherboard.

Gather and prepare all necessary components to complete the installation successfully:

- ◆ Socket370 processor with built-in CPU cooling fan (boxed type)
- ◆ SDRAM module(s)
- ◆ Computer case with adequate power supply unit
- ◆ Monitor
- ◆ PS/2 Keyboard
- ◆ Pointing Device (PS/2 Mouse)
- ◆ Speaker(s) (optional)
- ◆ Disk Drives: HDD, CD-ROM, Floppy drive ...
- ◆ External Peripherals: Printer, Plotter, and Modem (optional)
- ◆ Internal Peripherals: Modem and LAN cards (optional)

Note: 1. If you want to use an external speaker connected to "Line-out" port, please make sure to use an "amplified speaker" that can generate proper output sound volume.

Install the Motherboard

To perform the installation of your new **SY-7VCA** Motherboard, follow the steps below:

Step 1. CPU Installation

- Mark your CPU Frequency: **Record the working frequency of your CPU that should be clearly marked on the CPU cover.**

FSB 66MHz

<input type="checkbox"/> 400MHz (66x6.0)	<input type="checkbox"/> 466MHz (66x7.0)	<input type="checkbox"/> 533MHz (66x8.0)	<input type="checkbox"/> 600MHz (66x9.0)	<input type="checkbox"/> 667MHz (66x10.0)
<input type="checkbox"/> 433MHz (66x6.5)	<input type="checkbox"/> 500MHz (66x7.5)	<input type="checkbox"/> 566MHz (66x8.5)	<input type="checkbox"/> 633MHz (66x9.5)	<input type="checkbox"/> 700MHz (66x10.5)

FSB 100MHz

<input type="checkbox"/> 500MHz (100x5.0)	<input type="checkbox"/> 600MHz (100x6.0)	<input type="checkbox"/> 700MHz (100x7.0)	<input type="checkbox"/> 800MHz (100x8.0)
<input type="checkbox"/> 550MHz (100x5.5)	<input type="checkbox"/> 650MHz (100x6.5)	<input type="checkbox"/> 750MHz (100x7.5)	<input type="checkbox"/> 850MHz (100x8.5)

FSB 133MHz

<input type="checkbox"/> 533MHz (133x4.0)	<input type="checkbox"/> 667MHz (133x5.0)	<input type="checkbox"/> 800MHz (133x6.0)	<input type="checkbox"/> 933MHz (133x7.0)
<input type="checkbox"/> 600MHz (133x4.5)	<input type="checkbox"/> 733MHz (133x5.5)	<input type="checkbox"/> 866MHz (133x6.5)	<input type="checkbox"/>

CPU Mount Procedure: To mount the Coppermine™ processor that you have purchased separately, follow these instructions.

1. Lift the socket handle up to a vertical position.
2. Align the blunt edge of the CPU with the matching pinhole edge on the socket.
3. Seat the processor in the socket completely and without forcing.
4. Then close the socket handle to secure the CPU in place.

Remember to connect the CPU Cooling Fan to the appropriate power connector on the Motherboard. *The fan is a key component that stabilizes the system. It prevents the equipment from overheating and prolongs the life of your CPU.*

SY-7VCA Quick Start Guide

Step 2. Connections to the Motherboard

This section tells how to connect internal peripherals and the power supply to the Motherboard.

The internal peripherals consist of IDE devices (HDD, CD-ROM), Floppy Disk Drive, Chassis Fan, Front Panel Devices (STR LED, Internal Speaker, Reset Button and IDE LED Switch.), Wake-On-LAN card, VGA card, Sound Card, and other devices.

For more details on connecting internal and external peripherals to your new SY-7VCA Motherboard, please refer to *SY-7VCA Motherboard User's Guide and Technical Reference* online manual on the CD-ROM.

Connectors and Plug-ins

Wake-On-LAN Header: JP10					Standard IrDA (Infrared Device Header): SIRCON						
Pin1	Pin2	Pin3	Pin4	Pin5	Pin1	Pin2	Pin3	Pin4	Pin5		
5V-SB	GND	MP_Wakeup			VCC	None	IRRX	GND	IRTX		
USB2 : (PORT1)					USB2 : (PORT2)						
Pin1	Pin2	Pin3	Pin4	Pin5	Pin6	Pin7	Pin8	Pin9	Pin10		
Power	Data-	Data+	GND	GND	Power	Data-	Data+	GND	None		
CPU Cooling Fan: CPUFAN					Chassis Fan: CHAFAN						
Pin1	Pin2	Pin3	Pin4	Pin5	Pin1	Pin2	Pin3	Pin4	Pin5		
GND	12V	SENSOR			GND	12V	SENSOR				
CD-IN: CDIN1 / CDIN2							Pin1	Pin2	Pin3	Pin4	
Connect the CD Line-in cord from the CR-ROM device to the matching connector CDIN							CDIN1	L	G	G	R
							CDIN2	G	L	G	R
					Power LED						
					Pin1	Pin2	Pin3	Pin4	Pin5		
					5V	NC	GND				
					Speaker						
					Pin1	Pin2	Pin3	Pin4	Pin5		
					5V	NC	NC	Speaker out			
HDD LED		STR LED		PWRBT		RESET					
Pin1	Pin2	Pin1	Pin2	Pin1	Pin2	Pin1	Pin2				
LED Anode	LED Cathode	LED Anode	LED Cathode	Power On/Off	GND	Control PIN	GND				
ATX Power On/Off: PWRBT											
Connect your power switch to this header (momentary switch type).											
To turn off the system, press this switch and hold down for longer than 4 seconds.											
ATX Power Supply: ATX PW											
Attach the ATX Power cable to this connector. (This motherboard requires an ATX power supply, an AT power supply can NOT be used.)											
When using the Power-On by PS/2 Keyboard function, please make sure the ATX power supply is able to provide at least 720mA on the 5V Standby lead (5VSB) in order to meet the standard ATX specifications.											

Note: The STR LED is connected to the Voltage that feeds the DIMM sockets. Therefore the following table applies:

	Suspend to RAM	Normal Operation	Power Off
STR LED	ON	ON	OFF

Step 3. Configure Memory

Your board comes with three DIMM sockets, providing support for up to 1.5GB of main memory using unbuffered and registered DIMM modules from 8MB to 512MB. On this motherboard, DRAM speed can be set independent from the CPU front side bus speed. Depending on the DRAM clock speed setting in the BIOS setup, appropriate memory modules must be used. For 66MHz DRAM speed, use PC66 memory; for 100MHz DRAM speed, use PC100 memory; for 133MHz DRAM speed, use PC133 memory.

Memory Configuration Table

Number of Memory Modules	DIMM 1	DIMM 2	DIMM 3
RAM Type	SDRAM / VCM SDRAM		
Memory Module Size (MB)	8/16/32/64/128/256/512 MB		
Note: Always install memory modules in the order prescribed in this table.			

CMOS Clear (JP5)

In some cases the CMOS memory may contain wrong data, follow the steps below to clear CMOS memory.

1. Clear the CMOS memory by momentarily shorting pin 2-3 on jumper JP5. This jumper can be easily identified by its white colored cap.
2. Then put the jumper back to 1-2 to allow writing new of data into the CMOS memory.

CMOS Clearing	Clear CMOS Data	Retain CMOS Data
JP5 Setting	Short pin 2-3 for at least 5 seconds to clear the CMOS 	Short pin 1-2 to retain new settings 
<i>Note: You must unplug the ATX power cable from the ATX power connector when performing the CMOS Clear operation.</i>		

SY-7VCA Quick Start Guide

Debug LEDs

The Debug LEDs give an indication of the status of the system during boot-up. If the system does not boot-up properly, use the table below to find out at what point in boot-up sequence the problem arises. A x means the LED is off, a L means the LED is lit.

Code				Explanation
X	X	X	L	Initialization of the chipset. The MCH and ICH registers will be set to the most conservative values by the BIOS to make sure the system boots up properly.
D8	D3	D2	D1	
X	X	L	X	The BIOS is now decompressing the BIOS code into shadow RAM. Most of the BIOS code is stored in the BIOS Flash ROM IC in compressed form to save space. At boot-up this code is decompressed and stored to RAM for faster execution.
D8	D3	D2	D1	
X	X	L	L	The checksum for the decompressed code is calculated and checked. The checksum is calculated by adding all data bytes together and storing the result in the BIOS ROM. If the calculated checksum is different from the checksum stored in the ROM, the code stored in the FLASH ROM is corrupted.
D8	D3	D2	D1	
X	L	X	X	The chipset (MCH and ICH) registers are set to the values selected by the user.
D8	D3	D2	D1	
X	L	X	L	Now the BIOS will set the CPU Vcore voltage and the FSB bus frequency to the user selected value. If the system stops at this point, the settings selected by the user are inappropriate. Please select more conservative settings.
D8	D3	D2	D1	
X	L	L	X	The Hardware Monitor Functionality is initialized. The settings the user selected in the BIOS for the Hardware Monitor are written into the Hardware Monitor registers.
D8	D3	D2	D1	
X	L	L	L	If the VGA card does not work or is not inserted at all, the system will display this code for a short period of time.
D8	D3	D2	D1	
L	X	X	X	At this point the BIOS is initializing the CPU. The L2 cache latency values are set, and more important, the CPU micro-code is written into the CPU.
D8	D3	D2	D1	
L	X	X	L	Now the system is testing the RAM inserted on the board. The screen will show the BIOS testing the RAM by a running counter. After finishing the test, the screen will show the amount of RAM in your system.
D8	D3	D2	D1	
L	X	L	X	The super I/O registers are set to the default values. This includes the serial, parallel and IR etc settings.
D8	D3	D2	D1	
L	X	L	L	At this point the IDE busses (primary and secondary) are scanned for devices. This includes HD drives and ATAPI CD-ROM drives that are connected to the IDE bus. After scanning the detected devices are displayed on screen.
D8	D3	D2	D1	
L	L	X	X	The serial and parallel port registers are set to the values selected by the user.
D8	D3	D2	D1	
L	L	X	L	Now the BIOS will scan the peripheral busses for add-on cards. This includes the PCI and AGP busses. If any add-on cards are detected, the resources it requires are assigned by the BIOS in accordance with user settings.
D8	D3	D2	D1	
L	L	L	X	The ESCD and DMI (Desktop Management Interface) values are checked. If there are changes, the BIOS will flash the new values into the BIOS Flash ROM IC.
D8	D3	D2	D1	
L	L	L	L	At this point the BIOS passes control to the Operating System (OS). All LEDs will be on and will stay on to indicate a successful boot.
D8	D3	D2	D1	

3 Quick BIOS Setup

This Motherboard does not require any hardware jumpers to set the CPU operating frequency. Instead, CPU settings are software configurable through the BIOS [Soyo Combo Feature]. The [Soyo Combo Feature] menu combines the main parameters that you need to configure your system. They are all in one menu to enable a quick setup in BIOS.

After completion of hardware installation, turn the power switch on, then press the key while the system diagnostic is checking to enter the Award BIOS Setup program. The CMOS SETUP UTILITY will be displayed on screen. Then follow these steps to configure the CPU settings.

Step 1. Select [Standard CMOS Features]

Set [Date/Time] and [Floppy drive type], then set [Hard Disk Type] to "Auto".

Step 2. Select [Load Optimized Defaults]

Select the "Load Optimized Defaults" menu and type "Y" at the prompt to load the BIOS optimal setup.

Step 3. Select [Soyo Combo Feature]

Move the cursor to the **[CPU Frequency]** field to set the CPU frequency.

The following table shows all available [CPU Frequency] settings on your SY-7VCA Motherboard . If you set this field to [Manual], then you will be required to fill in the next two consecutive fields: (1) the CPU Host/PCI Clock, and (2) the CPU Ratio.

CPU Frequency (MHz)	<input type="checkbox"/> 633MHz (66 x 9.5)	<input type="checkbox"/> 800MHz (100 x 8.0)
<input type="checkbox"/> Manual	<input type="checkbox"/> 667MHz (66 x 10.0)	<input type="checkbox"/> 850MHz (100 x 8.5)
<input type="checkbox"/> 400MHz (66 x 6.0)	<input type="checkbox"/> 700MHz (66 x 10.5)	<input type="checkbox"/> 600MHz (133 x 4.5)
<input type="checkbox"/> 433MHz (66 x 6.5)	<input type="checkbox"/> 500MHz (100 x 5.0)	<input type="checkbox"/> 666MHz (133 x 5.0)
<input type="checkbox"/> 466MHz (66 x 7.0)	<input type="checkbox"/> 550MHz (100 x 5.5)	<input type="checkbox"/> 733MHz (133 x 5.5)
<input type="checkbox"/> 500MHz(66 x 7.5)	<input type="checkbox"/> 600MHz (100 x 6.0)	<input type="checkbox"/> 800MHz (133 x 6.0)
<input type="checkbox"/> 533MHz (66 x 8.0)	<input type="checkbox"/> 650MHz (100 x 6.5)	<input type="checkbox"/> 866MHz (133 x 6.5)
<input type="checkbox"/> 566MHz (66 x 8.5)	<input type="checkbox"/> 700MHz(100 x 7.0)	<input type="checkbox"/> 933MHz (133 x 7.0)
<input type="checkbox"/> 600MHz (66 x 9.0)	<input type="checkbox"/> 750MHz (100 x 7.5)	<input type="checkbox"/>

Select the working frequency of your Pentium® III, Celeron™ processor among these preset values.

Note: Mark the checkbox that corresponds to the working frequency of your Pentium® III, Celeron™ processor in case the CMOS configuration should be lost.

Step 4. Select [SAVE & EXIT SETUP]

Press <Enter> to save the new configuration to the CMOS memory, and continue with the boot sequence.

4 The SOYO CD

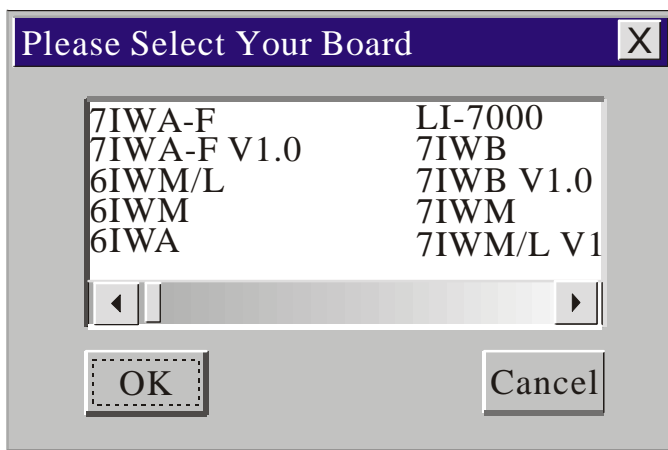

The SOYO-CD will NOT autorun if you use it on an Operating System other than Windows 9x or NT.

Your SY-7VCA Motherboard comes with a CD-ROM labeled "SOYO CD." The SOYO CD contains (1) the user's manual file for your new Motherboard, (2) the drivers software available for installation, and (3) a database in HTML format with information on SOYO Motherboards and other products.

Step 1. Insert the SOYO CD into the CD-ROM drive

The SOYO CD will auto-run, and the SOYO CD Start Up Menu will be as shown.

If you use Windows NT, the SOYO-CD will not detect your motherboard type. In that case the following dialog will pop up, please choose your motherboard and press OK. Now the SOYO-CD Start Up Menu will be shown.

(SOYO CD Start Up Program Menu)

If you use Windows 95 or 98, the SOYO CD Start Up Program automatically detects which SOYO Motherboard you own and displays the corresponding model name.

The user's manual files included on the SOYO CD are in PDF (Postscript Document) format. In order to read a PDF file, the appropriate Acrobat Reader software must be installed in your system.

Note: The Start Up program automatically detects if the Acrobat Reader utility is already present in your system, and otherwise prompts you on whether or not you want to install it. You must install the Acrobat Reader utility to be able to read the user's manual file. Follow the instructions on your screen during installation, then once the installation is completed, restart your system and re-run the SOYO CD.

Step 2. Install Drivers and Utilities

Click the **Install Drivers** button to display the list of drivers software that can be installed with your Motherboard. The Start Up program displays the drivers available for the particular model of Motherboard you own. We recommend that you only install those drivers.

SY-7VCA Quick Start Guide

(Driver Installation Menu)

A short description of all available drivers follows:

➤ **VIA 4in1 driver package**

The 4 in 1 driver package includes all drivers your motherboard needs. After selecting this driver package, one driver will be installed automatically (the IRQ remapping utility), the other three are installed if selected. By default all three drivers are selected. A description of the 4 drivers follows:

— **Bus Master PCI IDE Driver**

This driver will speed up the data-transfer rate to and from the harddisk.

— **AGP VxD Driver**

This driver must be installed in order to be able to make use of the on-board AGP Video functionality.

— **VIA Chipset Functions Registry**

This driver will make the necessary changes to the Windows registry, in order to make sure that Windows has no problems recognizing your VIA chipset.

— **IRQ remapping utility (This driver is installed automatically)**

This utility will remap the IRQ lines to make sure that everything functions properly under Windows.

➤ **VIA Ac97 Codec Driver for Win 95**

You have to install the drivers before installing any application for the Ac97 codec.

➤ **VIA hardware monitor for (Win 95/98)**

Your motherboard comes with a hardware monitoring IC. By installing this utility Temperature, Fan speed and Voltages can be monitored. It is also possible to set alarms when current system values exceed or fall below pre-set values.

Select which driver you want to install and click **OK**, or click **Cancel** to abort the driver installation and return to the main menu.

Note: Once you have selected a driver, the system will automatically exit the SOYO CD to begin the driver installation program. When the installation is complete, most drivers require to restart your system before they can become active.

Step 3. Check the Latest Releases

Click the 'Check the latest Releases' button to go the SOYO Website to automatically find the latest BIOS, manual and driver releases for your motherboard. This button will only work if your computer is connected to the internet through a network or modem connection. Make sure to get your modem connection up before clicking this button.

(Internet Explorer is a Microsoft Trademark)*

Quick Trouble shoot tips

Video (no display) related issues

I built a new computer system using a Soyo board and nothing happens when turning it on, no video and no beeps from the PC speaker. What is happening and how can it be fixed?

No screen and no beeps mean that your CPU and motherboard do not work at all. It could be that the CPU is not seated correctly or that a component on the M/B is grounded (shorted) with the case. Also make sure to check the voltage setting switch (110V/220V) on the back of the power supply. To isolate the problem do the following:

1. Press and hold down on the “Ins” (insert) key while turning on the computer until you get video. If you do not get video then,
2. Double-check jumpers setting on you motherboard and remove all add-on cards, unplug all hard-disk and floppy-disk drive cables and see if you can hear some beeps. If you still do not get any beeps, then try putting the motherboard on the table (to isolate it from the case) with the CPU and speaker only, and give it one more try.

I hear a series of beeps and I do not get anything from my monitor. What could be wrong?

The following lists some basic beep codes and their possible meanings:

- One long beep and 3 very short beeps - The video card is not detected by the motherboard. Please re-seat your video card. If you are using an AGP card, please push your AGP card down real hard. You may have to push VERY hard without the AGP card mounting screw. Make sure not to insert the card the other way around.
- Continuous beeps –One or more of the memory modules is not seated correctly in its socket.

My PCI VGA card works fine with my system, but when I put in a new AGP card, it does not give me any video. Is my AGP slot bad?

This is a common problem with AGP video cards. The reason is that your AGP card did not get seated into the AGP slot fully and firmly. Please push your AGP card down into the socket real hard, it should snap twice. You may have to unscrew

the AGP card to allow the card to go further down. Do take care not to damage the card by using too much force.

I get distorted video my AGP card right after I save my bios. Why is that?

The cause is likely that your AGP card is not running at the correct bus speed. To fix this, please clear the CMOS via JP5 and if it still does not work, please upgrade your motherboard bios to the latest version.

BIOS Issues

Where can I find the BIOS revision of my mainboard?

It will be displayed on the up-left corner on the screen during boot-up. It will show as your board type followed by the revision number, such as 5EH_2CA1 (meaning revision 2CA1 for the SY-5EH board) or 6BA+ IV_2AA2 which means SY-6BA+ IV motherboard with 2AA2 bios.

Where can I find the latest BIOS of my motherboard?

Please go to the technical support page of one of the SOYO websites (Taiwan: www.soyo.com.tw), and look up your motherboard to find the latest BIOS revision.

Hard disk, floppy drive, CD-ROM etc

When I boot up my new computer I got "floppy boot failure" and the LED on the floppy stays on

Make sure the red wire of floppy ribbon cable goes to Pin1 on the floppy drive side (don't trust the "key lock" or "notch") and use the end-connector of the cable (don't use middle one).

Modem issues

I get an "I/O Conflict" message when I turn on my system and I can not get my modem to work

What you need to do is to disable 'COM2' (or UART2 or serial port 2) in the bios under integrated peripheral setup.

I have installed my modem drivers several times and I still cannot get my modem to work. Why?

If you are sure that the modem driver has been installed correctly, then you need to install the south bridge driver from the SOYO CD, this is because Windows does not properly recognize relatively new chipsets.

Audio Issues

I do not get any sound from my sound card. What could be wrong?

Please make sure the speaker is connected to the speaker out port on your sound card.

In Device Manager, I keep getting yellow exclamation signs on my sound port even though I have installed my sound driver several times and I could not get my sound card to work. What is wrong?

It is likely that you did not have the correct driver installed. If you are sure that the correct sound driver has been installed, then please install the 'south bridge' driver for the motherboard.

The sound is working in my system, but when I play CD music from the CD-ROM, I do not get any sound. What is wrong?

This is because the 3-wire audio cable from the CD-ROM to the sound card is not connected or it is loose.

The sound from my sound card is distorted when Windows starts. What is wrong?

First, if you are using an ISA sound card, please make sure the IRQ needed for the sound card is set to 'Legacy ISA' in the bios. In other words, if your ISA sound card takes IRQ5, then set IRQ5 to 'Legacy ISA'. Next, install the 'south bridge' driver for the motherboard.

The sound and everything else works fine except that the recorder and microphone do not work. What is wrong?

This is because the recorder and microphone in the Windows are not enabled. Please go to sound properties and enable them.

Lock up (freeze)

When I boot up my system, everything works fine. It sees my CPU and memory, detects my hard drive, floppy drive and CD-ROM but locks up at "Verify DMI pool data... ", and it won't go any further. What should I do?

Please clear the CMOS via JP5 then choose 'load setup default' in the bios and save the bios and exit. Next, unplug all other add-on cards except the video card and floppy drive controller, and see if it can boot from floppy. Then put back the peripherals one by one to identify which one causes the lockup. If you are running a Cyrix CPU, make sure the 'linear burst function' is enabled in the bios.

I can not get my board to run properly.

Please make sure you have the latest bios and driver from the SOYO web site at: <http://www.soyo.com>

How to contact us:

- If you are interested in our products, please contact the SOYO sales department in the region you live.
- If you require Technical Assistance, please contact our Technical Support in the region you live.

SOYO prefers Email as communication medium, remember to *always add to the email the country that you live in.*
