Introduction

The ICS-SP30 is a professional tri-band tuner providing 8VSB, QAM and NTSC tuner function for internal connection to a line of Sony Professional LCD and Plasma displays. The ICS-SP30 includes support for Pro:Idiom™ decoding on lodging systems supporting this encryption technology.

This document outlines the installation, set up and operation of the ICS-SP30. For questions or to check for updated information on this product, please check www.sony.com/support for more information.

User Guide on CD-ROM

Notes:

Compatible Displays

The ICS-SP30 card is compatible with the following

Sony Displays:

KLH-W26

KLH-W32

FWD-

40LX1

FWD-

32LX2

FWD-

40LX2

FWD-

50PX2

The ICS-SP30 is designed to function with Sony Professional LCD and Plasma displays which may differ in input types and connection configuration. For questions on connections and specifications on specific Sony displays, consult www.sony.com/support.

Installing Card

Step 1 – Remove power cord from the display to ensure power is off. Remove any populated cards in slot 1 and/or slot 2 (if any). There may be a cover over slot 2. Remove the middle rail guide by removing screw between two card slots

Step 2 – If inserting the ICS-SP30 into a KLH display, skip to step 3. For other displays, attach card extender to left side of the ICS-SP30 and tighten. The finished card should look like image at right

Step 3 – Carefully insert the ICS-SP30 card into the card slot. Do not allow components to come into contact with edges of the card slot. Note: S-Video input should be on the top edge of the card as it is inserted.
DO NOT FORCE CARD
When card is completely inserted, it should fit into the two internal connectors, and then the thumb screws can be tightened.

Step 4 – Attach the HDMI cable to HDMI Out on the ICS-SP30 (Note: there is a required external HDMI cable from the ICS-SP30 to the digital input of the display – This is based upon strict requirements for HD tuners in hospitality)

Step 5 – Attach COAX cable to RF input

Step 6 – Attach RJ12 data cable from PPV Provider box to the PPV CNTL input

Step 7 – Plug power into the Sony Display and using the PPV Provider remote, press Power button

The unit is now configured for hospitality mode with the PPV Provider.

Stand Alone vs. Lodging Mode

The ICS-SP30 is designed to operate in a Pay-Per-View environment, connected to a lodging system that uses protocols and commands to control the display and tuner. The ICS-SP30 may also be able to operate in a Stand Alone mode to provide basic TV tuning for the Sony Display.

When the ICS-SP30 is connected to a compatible lodging system, the ICS-SP30 will automatically recognize the lodging system and respond to the PPV commander. In Lodging Mode, the control buttons and IR commands from the Sony remote will not control the display and tuner.

Supported Remote Controls

The ICS-SP30 is designed to function with the remote control that shipped with the Sony display. Because of differences in the display remotes, in which not all remotes have the same available buttons, some remotes may have limited functionality with the display remote. In such case, a standard Sony TV remote or universal remote (such as Sony RM-EZ2) using Sony IR commands can control the ICS-SP30 in Stand-Alone Mode.

Navigating Menus

The menus in the operation of the ICS-SP30 have been designed to use the Left, Right, Up, Down buttons for most functions. To return to a previous menu, pressing the Left button

Stand-Alone Set Up Menu

The ICS-SP30 set up process includes a sequence of numbers pressed on the Sony remote to access the set up menus. With the display and ICS-SP30 powered on press the following in sequence.

(note: when pressing buttons, press the buttons to be sure the system receives the code.

Setup Menu code: Up Right Left Mute

If a button is pressed in error, press the Down arrow to clear the code entries. In the lodging environment a different remote or function may be enabled to provide additional security.

Setup Menu

Channel Options

The ICS-SP30 supports analog and digital channels from cable or over-the-air sources.

Note:

Air – To receive over-the-air channels, an antenna and additional equipment may be required

Cable – Digital cable channels may not be accessible if conditional access or subscriptions are required

Tuning Mode

Using arrow keys, select either Air or Cable

Edit Channel List

A submenu with functions to add, delete and manage channels

Clear Channel List

Used to delete the channel list programming

Auto Channel Install

Used to scan and install channels

Copyright 2007 – Enseo, Inc.

Digital Channel Search

Used to search for digital channels available. Note, these channels will not be automatically entered into the channel lineup. Digital channels require entry management on the Edit Channel List menu.

Edit Channel List

This submenu allows for manual add, delete and management functions of channels.

Channel

Using remote, enter the numbers of the channel to manage

Include in List

Yes to include / No to exclude

Type

Selection options include:

- Digital – Digital Channels
- Analog – Analog Channel
- A/V Input – Channel mapped AV inputs

Note:

Depending on the selection type, the menu options will change for the Channel List menu

Analog Type Selection

The options for an analog channel include a customized Label for the channel, Addition of a thumbnail logo for the channel and selection of audio/video options for the channel.

Digital Type Selection

Browse Digital Channels

Access to see available digital channels. The Digital Channel Search from the Main Menu is required before this function will provide results

Digital Channel

This section provides for the entry of the Channel Primary digits and Sub (Program) digits for the known digital channel

Label

Editable text for the channel

Logo

Selectable menu of logos for adding a visual thumbnail for many popular TV channels

Usage

Selection of Audio and Video (default), Audio only for music channels/inputs or video only for video only usage.

Allow Online Remapping

This setting is used for Lodging Mode to allow a remapped Digital Channel or AV Input to exist in a controlled hospitality system. Select **YES** to have the channel map settings available when connected to a lodging system.

Switch-On Options

This menu provides options for setting up default settings for when the display first turns on. These settings are particularly useful in a lodging environment to be sure the display starts on the barker channel and at a pre-defined volume setting.

Channel

Enter the channel that you would like the display to tune to when it turns on. Use Restore to cancel the change

Volume

Set the numeric value from 0 to 99 that you would like to be used as the default volume level for the display.

Picture Format

Select between different formats for the screen and content presented. Options include:

Native

This setting will show the aspect ratio of the source material. 4:3 NSTC images will be shown with side bars

Widescreen

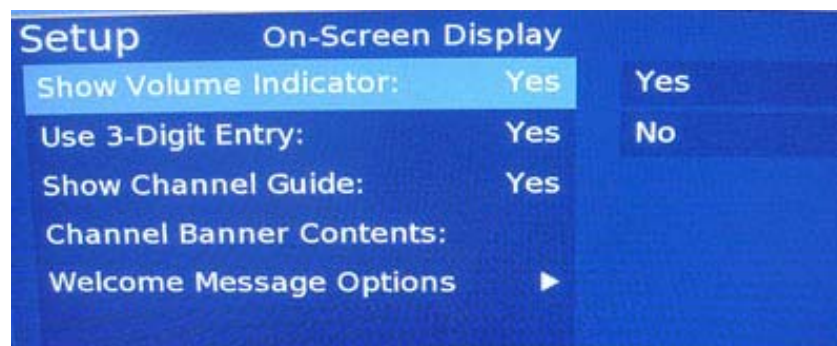

This setting will fill the screen with the image by stretching the image (if necessary) to create a 16:9 image.

Power

This setting is for specialized applications and not generally used.

On-Screen Display Options

The On-Screen Display Options settings provide for customization and set up of OSD options.

Copyright 2007 – Enseo, Inc.

Show Volume Indicator

This menu item is a Yes/No selection for whether a visual representation on the volume adjustment should be shown on the screen when the user uses the volume up or down on the remote.

Use 3-Digit Entry

This menu item is a Yes/No selection for support of 3-digit numbers for channels over 99 and digital channels that may use a sub-digit

Show Channel Guide

This menu item is a Yes/No selection for whether a channel guide is active for the user to see the available channels on the display.

Channel Banner Contents

This menu item allows the selection of the content available on the display banner. Selections include:

Show number: The channel number

Show Label: The text label for a channel

Show Logo: The select graphic if any

When selecting or deselecting an option on this sub-menu.

Welcome Message Options

This menu item provides for a way to have a welcome message shown on the display.

Show Message (Yes/No)

Line 1: First line of text

Line 2: Second line of text

Control Options

This setup section provides system level settings for the tuner card.

ESP (Energy Savings Protection)

This menu item allow for a setting of a default time off to protect against a TV being left on when a guest leaves a room without turning off the TV. The mode can be set On or Off, and the hours of inactivity until it turns itself off can be 1 to 9 hours.

Source Menu Item

This menu item is a Yes/No selection and allows control over whether a user, through the user menu, has access to input selection.

Picture Format Menu Item

This menu item is a Yes/No selection and allows control over whether a user, through the user menu, has access to change the Image Format (widescreen or native).

Note: This option will be No on all Plasma monitors to prevent image retention

Minimum Volume

Set the available minimum volume from 0 to 99

Maximum Volume

Sets the available maximum volume from 0 to 99

Setup Key Sequence

Provides a method for changing the key button sequence used to access set up features. If these are changed, make sure to write down the keys. **Failing to record these would require re-cloning an entire system to restore the set up key sequence.**

A key press sequence of up to eight buttons can be defined. These keys are more than numeric keys and adds to the security for a system.

Setup	Setup Key Sequence	
Key Press 1:	Channel +	Channel +
Key Press 2:	Right Arrow	Channel -
Key Press 3:	Left Arrow	
Key Press 4:	Mute	
Key Press 5:	Unused	
Key Press 6:	Unused	
Key Press 7:	Unused	
Key Press 8:	Unused	

Captioning Setup

This submenu is used to control the default values for the Closed Captioning function on the tuner.

Setup	Captioning	
Restore User Settings:	No	Yes
Captioning:	Off	No
Digital Captioning Mode:	CS 1	
Analog Captioning Mode:	CC 1	

Copyright 2007 – Enseo, Inc.

Restore User Setting

This setting allows for the selection of allowing user settings for CC to be stored between power cycles, or to always use a default setting on power on. Select YES to override the previous user CC setting on power on, or select NO to allow the previous user setting to be used on the next power on.

Captioning

This setting allows an ON or OFF setting for CC as a default power on status.

Digital Captioning Mode

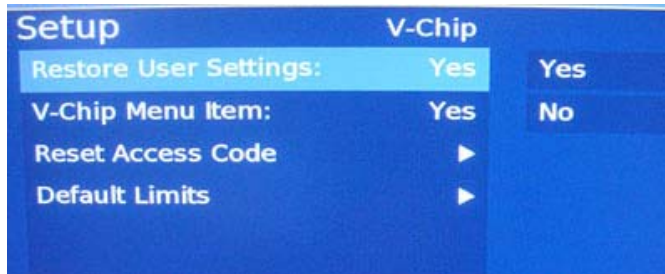

This setting allows the selection of the CC mode to be used for the Digital Channels

Analog Captioning Mode

This setting allows the selection of the CC mode to be used for the Analog Channels

V-Chip Setup

This submenu sets up default options for the V-Chip settings.

Restore User Setting

This setting allows for the selection of allowing user settings for V-Chip to be stored between power cycles, or to always use a default setting on power on. Select YES to override the previous user V-Chip setting on power on, or select NO to allow the previous user setting to be used on the next power on.

V-Chip Menu Item

This setting controls whether the user has access to the V-Chip selection and settings. Selecting YES will allow the V-Chip menu item to appear on the user menu. Selecting NO will cause the V-Chip settings to no be user accessible and they will not appear on the user menu.

Reset Access Code

This is an open setting to allow for the reset of the code. In set up mode, this code can be overwritten without knowing the previous code. This is useful incase the previous user forgot the code. The code will be reset to the default code of 0000

Default Limits

This section allow for various default values to be set for the tuner.

Enable V-Chip

This setting is a YES/NO selection. By setting YES, the default V-Chip settings will be active when the ICS-SP30 starts up. Selecting NO disables the V-Chip settings.

Select TV Ratings

This matrix allows for allowing or restricting various settings, including the TV industry Parental Guide ratings, and new specific ratings:

TV-Y = All Children TV-Y7 = Directed to Older Children
TV-G = General Audience TV-PG = Parental Guidance Suggested
TV-14 = Parents Strongly Cautioned TV-MA = Mutual Audience Only

FV = Fantasy Violence (cartoons)
V = Violence
S = Sexual Situations
L = Language
D = Suggestive Dialog

Use the arrow keys to highlight a box in the matrix and then use the 0 button on the remote is used to toggle between selections. When finished, move to the OK box and press 0 to save settings and exit.

Select Movie Ratings

This menu allows for the authorization or exclusion of content based on the Movie Rating system.

G = Children and Family
PG = Parental Guidance Suggested
PG-13 = Parental Guidance – Special Guidance to children under 13
R = Restricted. No one under 17 without an adult
NC-17 = No children under 17
X = Adult content / Adults only
Not Rated = Some films are not rated and other content is beyond NC-17 and withdrawn before rating..

Use the arrow keys to highlight a box in the matrix and then use the 0 button on the remote is used to toggle between selections. When finished, move to the OK box and press 0 to save settings and exit.

Change Access Code

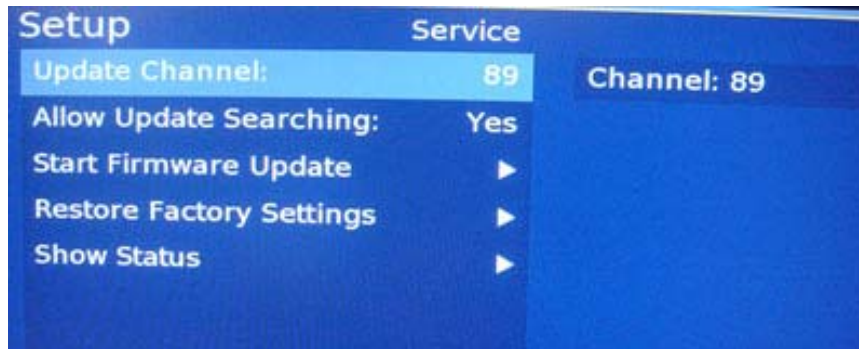

The V-Chip Access Code can be set through the set up process using this function.

Service Menu

The HD tuner is an advanced media device with the ability of communicating through an RF network to maintain updated firmware and control. The features outlined below are advanced functions designed for an integrated RF system.

This menu area is used to set up parameters for servicing the tuner or performing service functions.

Update Channel

This feature is used for setting a channel to perform firmware updates. Using the numeric keys on the remote, enter the channel that has been identified by your system administrator for firmware updates.

Allow Update Searching

This YES / NO selection either allows or prohibits the display from searching for an update channel for firmware updates. Having this selected as YES will allow updates when the Update Channel needs to be changed for some reason.

Start Firmware Update

To manually initial a firmware update, press the Right arrow button on the remote from this menu line. **NOTE: By selecting this item, the tuner will immediately begin the firmware update process and reboot when complete.**

Note:

During a firmware update, the Display MUST NOT be unplugged or turned off.

Doing so while firmware is being downloaded and upgraded on the device could damage the unit and make it unusable.

If the firmware update was initiated by mistake, it will time out after 3 to 5 minutes.

Restore Factory Settings

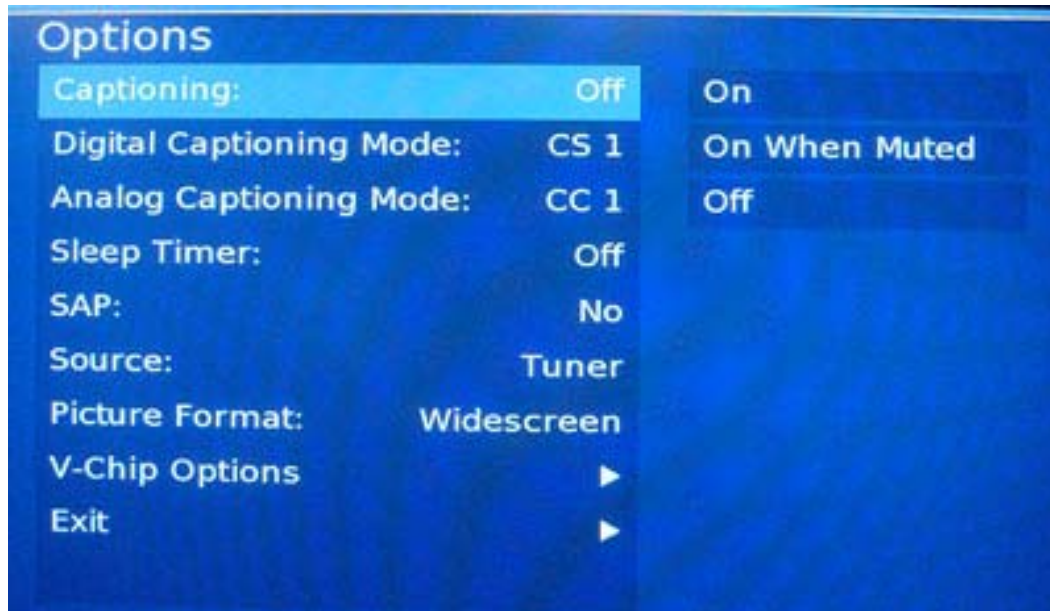

This function allows the tuner to be reset to the factory settings. Changes, channel lineup programming and other setup customizations will be lost and the tuner will return to factory settings.

Show Status

This menu item will activate a status window showing important information about the display, tuner, firmware versions and other diagnostic data.

USER MENU

User menus are accessed using either the lodging remote provided in the hotel room, or the remote supplied with the display. These menus are available to users to enjoy the features of the tuner and display. Only a few control functions are available through the user menus.

Captioning

This feature allows the selection of OFF / ON and On When Muted, Using the arrow buttons highlight the desired setting and then press the Left Arrow button to save and exit the field.

Digital Captioning Mode

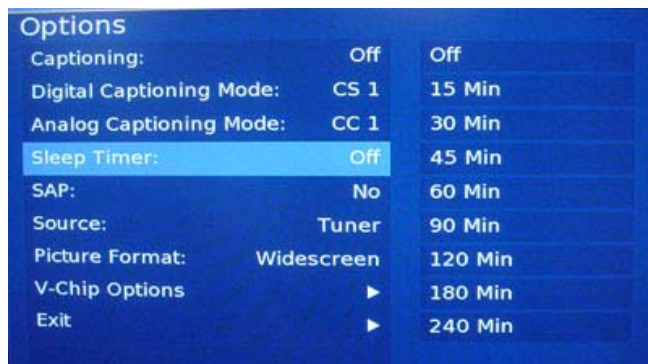

This allows the user to select the format of the CC signal for digital channels

Analog Captioning Mode

This allows the user to select the format of the CC signal for analog channels

Sleep Timer

The sleep timer function allows the user to set the TV to turn off automatically after a selected number of minutes.

Secondary Audio Programming (SAP)

This menu item allows the user the option of turning on SAP audio if available.

Source

If made user-accessible from the Setup Menu, the user will have the ability to select available inputs on the display for use of attached media devices. If this feature is not enabled on the Setup menu, this item will not be visible on the User Menu.

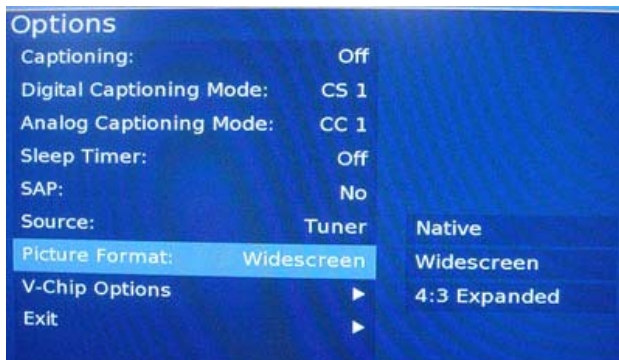

Note: The available inputs will be based on the model of display and video expansion boards installed (if any).

Picture Format

If made user-accessible from the Setup Menu, the user will have the ability to adjust the aspect ratio of content presented on the display. If this feature is not enabled on the Setup menu, this item will not be visible on the User Menu.

Note: On Plasma monitors, user access to Picture Format will be limited to prevent the potential for image retention.

V-Chip Options

If made user-accessible from the Setup Menu, the user will have the ability to set and control V-Chip settings to restrict content from being shown on the tuner. If this feature is not enabled on the Setup menu, this item will not be visible on the User Menu.

For information on how this feature operates, please

OPERATION

The HD tuner is an advanced HDTV and NTSC TV tuner with features that support lodging systems and stand-alone operation.

Lodging Mode

The tuner will automatically function in a lodging mode when attached to a compatible PPV system. The tuner will communicate with lodging system, identify the system and the necessary communication protocols and immediately send commands to the display necessary to function with the attached PPV system.

Stand Alone

To control the tuner in stand-alone mode, the tuner must not be connected to PPV system. If the display is connected to a PPV system, first disconnect the RJ12 communication cable between the tuner and the PPV control box. (RJ12 is connected to CONTROL - PPV).

In Stand Alone mode, the tuner will respond to the Sony remote and other compatible PPV system remotes. To access the User Menu in stand alone mode, press the MENU button on the remote.

Note on LX2 remote The supplied remote controller for the Sony FWD-32LX2F and FWD-40LX2F does not have a Channel Up or Channel Down buttons. To change channels on the tuner, you must use the UP Arrow or Down Arrow on this remote, or use any Sony TV remote (such as the Sony RM-EZ2) or universal remote supporting the Sony TV IR commands.

Controlling the Sony Display

The tuner and displays are designed to use the same remote control shipped with the display, while minimize conflicting commands that could cause the display and tuner to both react.

When the tuner is connected to the display the Sony display will not show the Sony Menu. All commands to control the display will be controlled by the tuner.

If you need to access the Sony display menu, press in sequence, the following remote buttons:

DISPLAY RIGHT LEFT MUTE

The Sony display will now respond to the Sony remote for menu functions. To exit this mode, perform the above key sequence again.

TROUBLESHOOTING

The Display and/or Tuner Do Not Respond to Remote

Possible Remedies

- Check that the display has power attached
- Check that the Communication Cable is correctly attached to the PPV control box.

My Display Does Not Respond to The Remote or Button on the Display

Possible Remedies

- It is possible that the Communication Cable became disconnected during operation and the display must be reset
- Review the Section "Controlling the Sony Display" on Page 18 for further details.

FAQ

Q: Which hospitality systems is the ICS-SP30 Compatible With?

A: The ICS-SP30 is designed to be compatible with most major PPV Hospitality Systems, including:

- LodgeNet (Tested and Certified Compatible)
- OnCommand (Tested and Certified Compatible)
- SeaChange (Tested and Compatible)
- More...

Most lodging system operate on a similar standard of protocol commands for operation. If a PPV provider is not listed above, it may be possible for the ICS-SP30 to work with this provider.

Q: Does the tuner support LG Pro:Idiom™ decryption technology?

A: Yes - The tuner includes the Pro:Idiom decryption technology for support of HD PPV systems from LodgeNet and OnCommand using Pro:Idiom

Q: What is the warranty on the ICS-SP30 A: The ICS-SP30 has a limited warranty from Sony against material defects for a period of 12 months from purchase date. For more information on the warranty, refer to www.sony.com/support.
