### **Description**

The Steiner Lawn Sweeper is designed to give a "clean sweep" in your lawn sweeping operations. The unit is ground-driven so it can be pulled by any lawn and garden tractor. It can be used to trail behind with offset hitch while mowing, or regular hitch to clean-up after you've finished mowing. The packing action allows you to put much more material into the unit before it is necessary to unload.

There is a transport position for the sweeper and clutch levers on each wheel to disengage the wheel clutches.

#### **Operating Instructions**

- > 1. Determine hitch position for offset or straight pull position.
- > 2. Transport to clean-up site with the clutches disengaged and sweeper in transport position.
- 3. Lower the sweeper housing and adjust sweeper height on right side of sweeper housing by choosing the pin location to regulate gauge wheel height. NOTE: Operation is best when the sweeper is approximately 1/2" below the tips of the grass, but does not "scrub" the lawn.
- 4. Adjust the float springs allowing the sweeper to "float" over rough areas or high spots in the lawn.
- > 5. Engage clutches on both wheels by rotating the lever approximately 180 deg.
- 6. When sweeping leaves the best results are obtained by sweeping several times during the leaf fall rather than waiting until there is a large accumulation. A large accumulation will require several passes to make a clean sweep. MAXIMUM SPEED IS 10 M.P.H.
- > 7. Open rear door to unload.
- » 8. To transport Always disengage wheel clutches and raise sweeper housing. DO NOT TRAVEL AT HIGH SPEEDS WITH CLUTCHES ENGAGED! MAXIMUM SPEED IS 10 M.P.H. NOTE: to disengage both wheels rotate each lever approximately 180 deg. You can feel a high spot when it is disengaged.
