Dear Customer

Thank you for purchasing this system.
For optimum performance and safety, please read these instructions carefully.

Front cover of the receiver is open in all explanations in these operating instructions.

The model number and serial number of this product can be found on either the back or the bottom of the unit.
Please note them in the space provided below and keep for future reference.

	MODEL NUMBER	SERIAL NUMBER
Processor:	SH-AC500D	
Receiver:	SA-AX7

Enjoying DVD and other digital sources

This system provides you with the opportunity to enjoy the high quality surround effects found on DVDs and other digital sources. Before you playback these sources, though, you need to prepare this system.

Follow these steps to get the most out of your system.

1. **Connect the processor and receiver; page 8.**
2. **Connect the DVD player (or other digital equipment); page 9.**
3. **Connect your speakers; pages 14, 15, and 16.**
4. **Do the speaker settings on the processor; pages 28 to 31.**

The system is now ready for playback.

Follow the steps on pages 32 and 33, and sit back and enjoy the powerful sounds on your system.

CAUTION

Do not place a tape deck, CD, or DVD player on top of the receiver.
Heat radiated from the top of this unit may cause damage to the software.
NO

Table of contents

Supplied accessories

Please check and identify the supplied accessories.
☐ AC power supply cord (2 pc.)

(RJA0065-A)

☐ AM loop antenna set
● AM loop antenna (1 pc.)
● AM loop antenna holder (1 pc.)
● Screw (1 pc.)

**(RSA0010)**

☐ FM indoor antenna (1 pc.)

(RSA0006)

☐ Stereo connection cable (2 pc.)

(RJL2P004B08)

☐ Monaural connection cable (2 pc.)

(RJL1P011B15)

☐ Optical fiber cable (1 pc.)
(SJP2281)

☐ Batteries (4 pcs.)
☐ Remote control transmitter (1 pc.)
(RAK-SA954MK)

Use numbers indicated in parentheses when asking for replacement parts.
(Only for U.S.A.)
To order accessories contact 1-800-332-5368 or web site
(http://www.panasonic.com).

─ THE FOLLOWING APPLIES ONLY IN THE U.S.A. ─

CAUTION:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules.
These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

● Reorient or relocate the receiving antenna.
● Increase the separation between the equipment and receiver.
● Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
● Consult the dealer or an experienced radio/TV technician for help.

Any unauthorized changes or modifications to this equipment would void the user's authority to operate this device.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

WARNING:
TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK OR PRODUCT DAMAGE, DO NOT EXPOSE THIS APPLIANCE TO RAIN, SPLASHING, DRIPPING OR MOISTURE.

CAUTION:
TO PREVENT ELECTRIC SHOCK MATCH WIDE BLADE OF PLUG TO WIDE SLOT, FULLY INSERT.

CAUTION
RISK OF ELECTRIC SHOCK DO NOT OPEN

CAUTION: TO REDUCE THE RISK OF ELECTRIC SHOCK, DO NOT REMOVE SCREWS. NO USER-SERVICEABLE PARTS INSIDE.
REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

Before using this unit please read these operating instructions carefully. Take special care to follow the warnings indicated on the unit itself as well as the safety suggestions listed below.
Afterwards keep them handy for future reference.

Safety

1. **Power Source**—The unit should be connected to power supply only of the type described in the operating instructions or as marked on the unit.
2. **Polarization**—If the unit is equipped with a polarized AC power plug (a plug having one blade wider than the other), that plug will fit into the AC outlet only one way. This is a safety feature. If you are unable to insert the plug fully into the outlet, try reversing the plug. If the plug should still fail to fit, contact your electrician to replace your obsolete outlet. Do not defeat the safety purpose of the polarized plug.
3. **Power Cord Protection**—AC power supply cords should be routed so that they are not likely to be walked on or pinched by items placed upon or against them. Never take hold of the plug or cord if your hand is wet, and always grasp the plug body when connecting or disconnecting it.
4. **Nonuse Periods**—When the unit is not used, turn the power off. When left unused for a long period of time, the unit should be unplugged from the household AC outlet.

Installation

Environment

1. **Outdoor Antenna Grounding**—If an outside antenna is connected to the receiver, be sure the antenna system is grounded so as to provide some protection against voltage surges and built-up static charges. Section 810 of the National Electrical Code, ANSI/NFPA No. 70-1990, provides information with respect to proper grounding of the mast and supporting structure, grounding of the lead-in wire to an antenna discharge unit, size of grounding conductors, location of antenna-discharge unit, connection to grounding electrodes, and requirements for the grounding electrode. See figure below.

```
                                ANTENNA
                                LEAD IN
              GROUND            WIRE
              CLAMP

                                ANTENNA

NEC—NATIONAL ELECTRICAL CODE

2. **Water and Moisture**—Do not use this unit near water—for example, near a bathtub, washbowl, swimming pool, or the like. Damp basements should also be avoided.
3. **Heat**—The unit should be situated away from heat sources such as radiators and the like.
   It also should not be placed in temperatures less than 5°C (41°F) or greater than 35°C (95°F).

Placement

1. **Ventilation**—The unit should be situated so that its location or position does not interfere with its proper ventilation. Allow 10 cm (4") clearance from the rear of the unit.
2. **Foreign Material**—Care should be taken so that objects do not fall into and liquids are not spilled into the unit. Do not subject this unit to excessive smoke, dust, mechanical vibration, or shock.
3. **Magnetism**—The unit should be situated away from equipment or devices that generate strong magnetic fields.
4. **Stacking**—Do not place heavy objects, other than system components, on top of the unit.
5. **Surface**—Place the unit on a flat, level surface.
6. **Carts and Stands**—The unit should be used only with a cart or stand that is recommended by the manufacturer. The unit and cart combination should be moved with care. Quick stops, excessive force, and uneven surfaces may cause the unit and cart combination to overturn.
7. **Wall or Ceiling Mounting**—The unit should not be mounted to a wall or ceiling, unless specified in this operating instructions.

Maintenance

Clean the cabinet, panel and controls with a soft cloth lightly moistened with mild detergent solution.
Do not use any type of abrasive pad, scouring powder or solvent such as alcohol or benzine.

Service

1. **Damage Requiring Service**—The unit should be serviced by qualified service personnel when:
   (a) The AC power supply cord or the plug has been damaged; or
   (b) Objects have fallen or liquid has been spilled into the unit; or
   (c) The unit has been exposed to rain; or
   (d) The unit does not appear to operate normally or exhibits a marked change in performance; or
   (e) The unit has been dropped, or the enclosure damaged.
2. **Servicing**—The user should not attempt to service the unit beyond that described in the operating instructions. All other servicing should be referred to an authorized service personnel.
   For the address of an authorized servicenter:
   In the U.S.A. 1-800-211-7262 or web site
   (http://www.panasonic.com)
   In Canada 905-624-5505 or web site
   (www.panasonic.ca)

You are able to enjoy these surround systems with this system.

Surround system	Features	Software
Dolby Pro Logic	Dolby Pro Logic is a decoding system that was developed to get a better sense of presence from sources encoded with Dolby Surround. The feeling of position has been improved by the addition of a separate center speaker channel. Dolby Surround was developed to allow enjoyment of Dolby Stereo, a cinema system, in private homes. This system reproduces sound close to that of the original movie through use of an analog matrix. (➡ Page 26, 27.)	● Video tapes ● Laser discs ● DVDs ● CDs Software encoded with Dolby Surround can be identified with this mark. □□ DOLBY SURROUND
Dolby Digital (AC-3)	Dolby Digital is a discrete 6 (5.1) channel digital surround system developed for cinema use. The sound signals in Dolby Digital format are compressed to 1/12 their original size, allowing an entire movie to be recorded on a single DVD. Not all Dolby Digital sources are recorded with 6 channels. Some sources marked Dolby Digital may be recorded in Dolby Surround, a 2 channel system. (➡ Page 26.)	● DVDs Software encoded with Dolby Digital can be identified with this mark. □□ DOLBY D I G I T A L
DTS	DTS is a discrete 6 (5.1) channel digital surround system developed for cinema use. Sources encoded in DTS are only compressed to a quarter of the size of the original to preserve sound quality. DTS sources are produced with the intention that all speaker channels will be used. (➡ Page 26.)	● DVDs ● Laser discs ● CDs Software encoded with DTS can be identified with this mark. D I G I T A L dts SURROUND
SFC (Sound Field Control)	The receiver itself produces the surround effects with sources other than those listed above. Various effects, like a concert hall or jazz club, can be achieved by introducing width or reverberation to the original sound. (➡ Page 27.)	Any kind, but particularly music CDs and video tapes.

Speaker indicators and signal format indicators
Speaker indicators
Light in accordance with the speaker setting, and each of the indicators corresponding with the speaker concerned flashes when;
● the type or presence of that speaker is set,
● the test signal is output from that speaker,
● the output level or delay time of that speaker is adjusted.

Signal format indicators (LS, C, RS, L, R, S, LFE)
These indicators light up to indicate each input signal format.
LS: Surround speaker (left)
C: Center speaker
RS: Surround speaker (right)
L: Front speaker (left)
R: Front speaker (right)
"S" represents the mono surround and "LFE" (Low Frequency Effect) is a channel for the deep-bass effect in the low frequency range.

Before use

7

RQT5110

Make sure that the power supply for all components has been turned off before making any connections.

To connect equipment, refer to the appropriate operating instructions.

Note
Do not place books, etc., on the top of this unit or block the heat radiation vents in any way.

Connecting the receiver and processor

Stereo connection cable (included)
White (L)
Red (R)

Connections

Optical fiber cable connections **A**
Dust cap

- Do not bend the optical fiber cable.
- Attach the dust caps when the optical terminals are not in use.

"DIGITAL 1" terminals **B**
Disconnect the coaxial cable from the DIGITAL 1 terminal when using an optical fiber cable. Only the coaxial cable is recognized if both types are connected.

"LINE IN" terminals **C**
If "LINE" is selected with the input selector on this processor, the signals received through these terminals are output as they are without passing through any sound control circuits (i.e. no volume or other sound adjustments can be made with this processor.)

Note
- Dolby Digital RF (radio frequency) signals cannot be decoded with this processor even if a unit that has Dolby Digital RF output terminals is connected to this processor.
- **Turn off the power to this processor if unusual hissing or beat sounds are heard while listening to FM, AM, or television broadcasts.**

This receiver has an S-VIDEO terminal for a DVD player, VCR (VCR 1 only) and TV.

| Caution when using a TV with an S-VIDEO terminal |

On some television models, the video signal from components which do not use S-VIDEO input and are connected only to the VIDEO terminals will not be shown on the television screen.
If this occurs, use one of the following methods to view the video signal.

Does the television have a "VIDEO/S-VIDEO" selector switch?

YES — Set the switch to "VIDEO".

If the television has two or more video input terminals
Connect the VIDEO terminal and the S-VIDEO terminal to different video input terminals on the television, and switch the picture on the television according to the video source being played.

NO

If the television has only one video input terminal
Disconnect the S-VIDEO cable connected to the television's S-VIDEO terminal and connect only the video terminal.

Note
When using S-VIDEO terminals be aware of the following.
Video signals input into the VIDEO terminals cannot be output from S-VIDEO terminals or vice versa.

This antenna is normally sufficient for reception of FM broadcasts.

Attach to a wall (using tape) facing in the direction of best reception.

For best reception
An FM outdoor antenna is recommended.

AM loop antenna (included)　　　　　　B

This antenna is normally sufficient for reception of AM broadcasts.

Fit the AM loop antenna holder (included) onto the rear panel of this unit and then attach the AM loop antenna to the AM loop antenna holder (facing in the direction of best reception).

Pay attention to the following points when mounting the antenna.
● Do not mount it close to power cords, speaker wires or metal surfaces (doing so will result in noise).
● Do not mount it close to a tape deck. When the tape deck is being used, chirping or beeping sounds may result.

When mounting the antenna to a column, a wall or rack C

Mount the antenna so that the hinge is vertical.

AM LOOP ANT
FM outdoor antenna (not included) **A**

An outdoor antenna should be used when using this unit in mountainous areas or in spaces enclosed by reinforced concrete where the FM indoor antenna (included) does not provide satisfactory reception.
Disconnect the FM indoor antenna if an FM outdoor antenna is installed.

Note

An outdoor antenna should be installed by a qualified technician only.

AM outdoor antenna (not included) **B**

An outdoor antenna should be used when using this unit in mountainous areas or in spaces enclosed by reinforced concrete where the AM loop antenna (included) does not provide satisfactory reception.

Stretch 5–12 m (16–40 ft.) of vinyl-covered wire horizontally across a window frame or other convenient location, keeping it as high as possible from the ground.
When the unit is not in use, disconnect the outdoor antenna to prevent possible damage that may be caused by lightning. Never use an outdoor antenna during an electrical storm.

Note

Be sure to connect the AM loop antenna even when an outdoor antenna is used.

(not included)

Front speakers
Place the front speakers on the left and right of the TV at seated ear height so that there is good coherency between the picture and sound.

Center speaker
Place this speaker underneath or above the center of the TV. Aim the speaker at the seating area.

Surround speakers
Place these speakers on the side of or slightly behind the listener, and about one meter higher than ear level.

Subwoofer
The subwoofer can be placed in any position as long as it is at a reasonable distance from the TV.
Note that some experimentation can yield the smoothest low frequency performance. Placement near a corner can increase the apparent output level, but can result in unnatural bass.

Connecting speakers

Other connections are possible depending on your speaker system.
See your speaker system's operating instructions for details.

Battery installation **A**

Use of batteries

● Do not mix old and new batteries, or batteries of different types (manganese and alkaline, etc.).
● Never subject batteries to excessive heat or flame; do not attempt to disassemble them; and be sure they are not short-circuited.
● If the remote control is not to be used for a long period of time, remove the batteries and store them in a cool, dark place.
● Do not attempt to recharge alkaline or manganese batteries.
● Do not use rechargeable type batteries.

● Use alkaline batteries for longer life.

**Correct method of use** **B**

Operation notes

● Do not place obstacles between the remote control signal sensor and remote control unit.
● Do not expose the remote control signal sensor to direct sunlight or to the bright light of an invertor fluorescent light.
● Take care to keep the remote control signal sensor and end of the remote control unit free from dust.
● If the unit is installed in a rack with glass doors, the glass doors' thickness or color might make it necessary to use the remote control a shorter distance from the unit.

To prevent damage

● Never place heavy items on top of the unit.
● Do not disassemble or reconstruct the unit.
● Do not spill water or other liquids into the unit.

VOLUME

MIN — MAX

Before operation, set [VOLUME] to the "MIN" position.

1 Press [POWER].

2 Select the speaker system(s) to be used.

The buttons A, B and BI-WIRE refer to the speaker terminals at the rear of the unit.

If the button is pressed once more, the indicator will switch off and no sound will be heard from the speakers.

BI-WIRE and A, or BI-WIRE and B cannot be used at the same time.

3 Turn [INPUT SELECTOR] to select and start the desired source.

(Refer to the appropriate operating instructions for details.)

The indicator corresponding to the selected source lights and the source is shown on the display.
The selected source and "INPUT" will be shown on the display.

TAPE (MONITOR): To listen to cassette tapes
VCR 1: To watch video tapes (VCR 1)
TV/DSS/VCR 2: To watch TV, DSS or video tapes (VCR 2)
VCR 3: To watch video tapes (VCR 3)
DVD: To use the digital surround processor
**CD:** To listen to compact discs
TUNER: To listen to radio broadcasts
PHONO: To listen to phono discs

Note

To watch a video (or DVD) or the TV, set the TV to either the TV mode or VIDEO mode.

4 Adjust the volume level.

For your reference

● **If a Dolby Pro Logic or SFC mode has been selected**
After displaying the selected source, the display will then change to show the Dolby Pro Logic or SFC mode and "INPUT" will go out (➡ page 27).
If the source chosen was TUNER then the display will change again to show the frequency.

● **If you are using VCR and you select TAPE, CD, TUNER, or PHONO**
The picture will remain on the screen.

● **The volume control**
The volume control on this receiver allows more gradual adjustment compared to past models, thus making it easier to make fine volume adjustments during normal use.

When you finish listening

Be sure to reduce the volume level, and switch the power to the standby condition by pressing [POWER].

TAPE
MONITOR

| To open the front cover A |

Press [PUSH OPEN].

Push the cover closed by hand.

| For front speakers with an impedance under 6 Ω B |

Press and hold [A] or [B] until "LOW IMP" lights up on the display.

If even one of the speakers being used has an impedance under 6 Ω, press and hold down either [A] or [B] for 4 seconds or more to set the impedance on the main unit to LOW.

(Press and hold down once again for 4 seconds or more to turn it off.)

Note that when "LOW IMP" is illuminated, speakers A and B cannot both be used at the same time.

To change speakers when "LOW IMP" is on:
e.g. To use speakers B, press [A] ("A" goes out), and then press [B] to activate speakers B.

| The TAPE (MONITOR) indicator |

This indicator lights in the following two situations:
1. While TAPE is selected.
2. While TAPE MONITOR is in use.

Tape monitor C

If [TAPE MONITOR] is pressed while a source other than TAPE is selected, the "TAPE (MONITOR)" indicator lights and the tape monitor comes on.
Sources other than tape can still be selected with [INPUT SELECTOR] while the "TAPE (MONITOR)" indicator is on.

Press [TAPE MONITOR] again to turn the tape monitor off.

(➡ See "Making a recording" on page 42 for details on how to use the tape monitor during recording.)

Receiver operation (Basic)

19
To enjoy bi-amp sound A

By using the bi-wiring feature of this unit to connect your speakers, you are able to take advantage of two separate amplifiers for the high frequency and low frequency ranges. This enables more highly defined sound reproduction of the two ranges thus producing high quality bi-amp stereo sound.

Ensure "BI-AMP" illuminates when BI-WIRE is selected.

BI-AMP will turn off and the indicator will go out in the following cases:
• If any of the Dolby Pro Logic or SFC modes are turned on.
• If DVD 6CH INPUT is selected.

To adjust the high and low balance B

Turn [BI-AMP BALANCE] to adjust the LF/HF balance

This adjusts the high and low frequency output of bi-wired front speakers.
The setting depends on the speakers being used.
Adjust the balance to suit your room's acoustics and the features of the speakers.
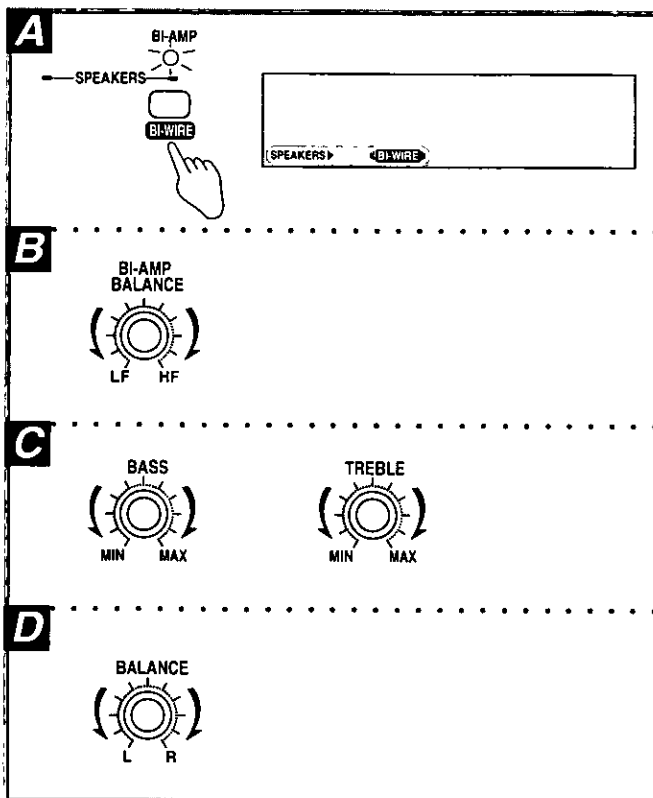

To adjust the tone quality C

Turn [BASS] to adjust the low frequency sound.
Turn [TREBLE] to adjust the high frequency sound.

To adjust the sound balance D

Turn [BALANCE] to adjust the left/right sound balance.

20

To adjust the subwoofer level A

Turn [SUBWOOFER LEVEL] to adjust its level.
If the subwoofer isn't being used, be sure to set it to MIN.

To compensate when the volume is low B

This button balances low volume sounds by boosting bass sound pressure of the front speakers and subwoofer.

This function allows you to enjoy balanced sounds even if the volume is low.

Press [SUBWOOFER ADAPTIVE CONTROL].
The message "ON" will appear on the display for 2 seconds.
"SUBWOOFER ADAPTIVE CONTROL" will light up.
To return to the previous condition, press once again.
The message "OFF" will appear on the display for 2 seconds, then the indicator turns off.

## To adjust the output range of the subwoofer C

Turn [SUBWOOFER LOW PASS FILTER] to select a suitable frequency.
The setting depends on the room's acoustics, the peculiarities of the subwoofer, and the interaction of the subwoofer and the front speakers.

Note
Adjustments can not be made when DVD 6CH INPUT has been selected.

Receiver operation (Basic)

Listening to radio broadcasts

Sequential tuning

Use the tuning buttons to tune-in radio stations.

1 **Turn [INPUT SELECTOR] to select "TUNER."**

2 **Press [-BAND, –FM MODE] to select "FM" or "AM."**

3 **Press [TUNING (∨ or ∧)] to tune to the desired frequency.**
"TUNED" lights up when tuned.
"STEREO" lights up when an FM stereo broadcast is received.

To make an automatic search for stations
If [TUNING (∨ or ∧)] is held down for an instant until the frequency begins to scroll, the broadcast stations are tuned in automatically when one is found.

Note
Tuning may stop automatically if any jamming is encountered.

· ·
**If noise is excessive in the FM stereo mode**
Press and hold [-BAND, –FM MODE] for 2 seconds.
("STEREO" will go out, and "MONO" will light up).

The broadcast will be monaural, but noise will be reduced.
If the button is pressed and held for 2 seconds once more, the stereo mode resumes.

For your reference
The tuner can pick up interference from DVD players. If this occurs turn the DVD player off.
Direct tuning

by remote control only

Specify the frequency using the numeric buttons on the remote control transmitter to directly tune to the desired station.

1 Press [RCVR] to switch to the receiver operation mode.
The button lights up.

2 Press [TUNER].
The selector on the receiver will change to "TUNER."
Each time the button is pressed, the band will change as follows,
FM ⇌ AM.

3 Press [TUNE ENT].

4 While cursor display is flashing (approx. 10 seconds)
Press the numbered buttons to enter the frequency.

If the desired FM frequency is 107.9 MHz, press
[1]→[0]→[7]→[9].
If the frequency has been input correctly, the displayed frequency will blink once.

Note
1. If no button is pressed while the cursor display is flashing, the display will return to the frequency which is currently being received.
   To re-specify the frequency, repeat the procedure from step 3.
2. If the frequency has not been input correctly, "ERROR" will be displayed.
   In this case, re-enter the frequency.

Receiver operation (Radio)

Selected band
Preset tuning

Presetting radio stations into the memory channels of this unit makes selecting stations simple.

A total of 30 FM and AM stations can be preset.

Please remember this
If a new broadcast station is preset into a channel, the setting for the broadcast station which was previously entered in that channel will be automatically erased.

Automatic memory presetting

Automatic memory presetting allows this unit to automatically search for broadcast stations and then preset them into memory. With this method, the channels that can be preset into the memory are set as follows for different bands (FM or AM).

When FM stations are preset,
For FM stations 1–30
When FM and AM stations are preset,
For FM stations 1–20
For AM stations 21–30

1 Set to the frequency from which you want to start automatic memory presetting.
(➡ Page 22–23.)

2 Press [MEMORY] until the frequency begins to change.
(Automatic memory presetting will start.)
During automatic memory presetting, the memory indicator will flash while the frequency scrolls.

To stop, press [MEMORY] again.

• •

When a broadcast station is preset A

The memory indicator and the preset channel number will be displayed for approximately 1 second.
When presetting is completed
The last broadcast station to be preset will be displayed.

Note

Frequencies may not be preset correctly in cases where the broadcast waves are too strong or too weak. In such cases, carry out presetting manually. (➡ Page 25.)

2 MEMORY

3 TUNING

4 MEMORY

PRESET

1 PRESET

2 TUNING

Manual memory presetting **A**

Stations can be preset into the desired channels by the user.

1 Set to the desired frequency.
(➡ Page 22–23.)

If interference or static is keeping you from enjoying an FM broadcast, press and hold [-BAND, –FM MODE] and change to monaural.
You can preset the station in monaural just as in stereo.

2 Press [MEMORY].
To cancel the memory function, press [MEMORY] again.

3 Press [TUNING (∨ or ∧)] to select the desired channel.
Holding the buttons down lets you scroll through channels faster.

4 Press [MEMORY].
The channel will blink on the display.
. . . .

To continue presetting
Repeat steps 1 through 4.

To listen to preset channels **B**

1 Press [PRESET].

2 Press [TUNING (∨ or ∧)].
Holding down the buttons lets you scroll through channels faster.

The channel number flashes for approximately 5 seconds.
Select the desired channel number during that time.
After 5 seconds, the display will change from the channel number to the frequency.

Note
If you press [PRESET] while the channel number is displayed, the display will change to the frequency.

To confirm the channel number of the broadcast station being received
Press [PRESET].
(The channel number flashes for approximately 5 seconds.)

Note
The channel number is not displayed if you change the frequency or FM mode setting.

For your reference
Even if the power cord is disconnected from the household AC outlet, the memory will retain its contents for approximately one month.

If frequency presettings are accidentally erased
Program the presettings once again.
The power cord should remain connected for one hour or more for the memory back-up to be effective.

Receiver operation (Radio)

RQT5110

Reproduction modes

On the processor

Use these modes to enjoy DVDs and other digital sources that have been connected to the processor through the digital optical terminals. The receiver should be in the DVD 6CH INPUT mode.

SURROUND mode A

Select this mode when playing back sources (DVD, CD, laser disc, etc.) recorded in either Dolby Digital or Dolby Surround Format. The unit processes most types automatically.

Normal audio CDs can also be played back. The unit processes the 2 channel signal into surround signals and sound is heard from all the speakers.

As well as normal audio CDs, software with any of the following marks can be played back in this mode.

DTS mode B

Select this mode when playing back sources (DVD, CD, laser disc, etc.) recorded in DTS format.

Software with the following mark can be played back in this mode.

STEREO mode C

Select this mode to listen to surround sources, other than DTS, in stereo. The down-mix function of this unit concentrates the discrete signals into the front L/R channels. Use this mode when using headphones or recording onto a video cassette recorder.

Select this mode to listen to normal stereo software.

A SURROUND

B DTS

C STEREO
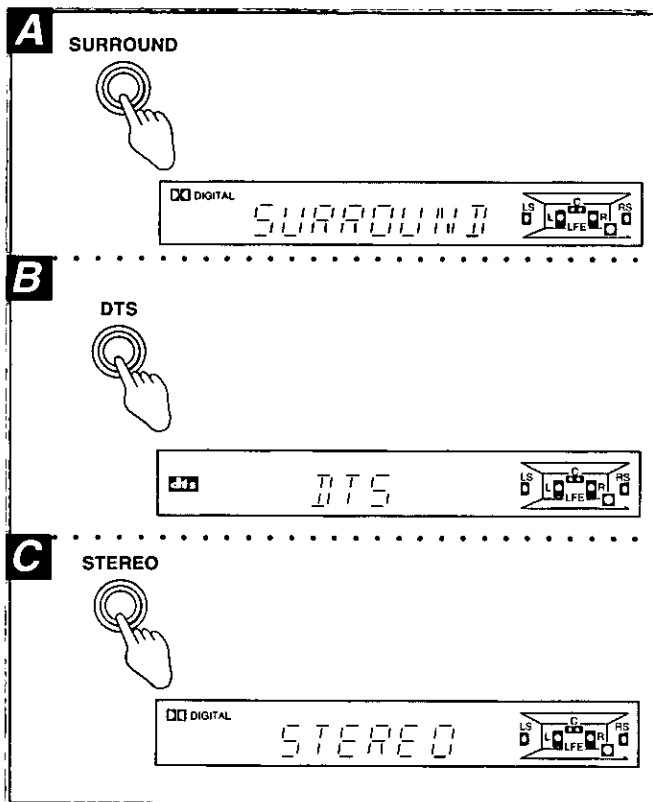

Use these modes to enjoy any source (video tapes, CDs, etc.) other than DVD 6CH INPUT.

Dolby Pro Logic SURROUND mode A

By reproducing the feeling of depth and movement of sound, video software or compact discs recorded with Dolby Surround provide the listener with a feeling of presence like that of a movie theater.

Dolby Pro Logic 3 STEREO mode B

You can enjoy audio/video sources with clear sound, more presence and a good feeling of orientation. 3 STEREO can be used with stereo sources not encoded with Dolby Surround.

SFC mode C

The SFC (Sound Field Control) function gives presence and spread thereby enhancing and enriching the music or movie.
Read the following explanations to better understand how to make your selection.

Note

- SFC is designed to add surround-like effects to stereo sources. Select the Dolby Pro Logic SURROUND mode when playing back Dolby Surround sources.
- The center speaker is not used in the HALL and SIMULATED mode

HALL
This mode imparts a reflection and spread which will make you feel as if you are in a large concert hall.

CLUB
Like a jazz club, this mode provides an exciting and intimate atmosphere. It simulates the sound field of a relatively small room having a low ceiling and hard reflective surfaces, for a "live" sound with enhanced presence to bring the performers up close.

LIVE
Primarily for vocal pieces, this mode adds gloss to the vocals and you'll feel as though you were hearing a live stage performance.

THEATER
You can clearly perceive the directions and source of the movie.
Real ambience of sound can also be recreated naturally using this mode.

SIMULATED (SIM SURR)
Choose this mode if little or no sound will be heard from the surround speakers.
You can feel as if you were in a more expanded space adding to the actual sound from the source.
This mode also adds effect to monaural sources by outputting sound from surround speakers.

Sound mode (Reproduction modes)
Speaker settings for the processor

Set the type and presence of the speakers before playing the sound by reproducing the input source.

Before proceeding
Check the frequency range of each speaker to be used. Consider speakers capable of playing back low frequency sounds (below around 100 Hz) as LARGE. Consider speakers not capable of playing back low frequency sounds as SMALL.

1 Press [POWER].

2 Press [CHANNEL/SET], and select the speaker channel to be set.
Each time the button is pressed, the channel display is switched in the listed order.
FRONT: Front speakers
CENTER: Center speaker
SURROUND: Surround speakers
SUB-WFR: Subwoofer
COMPLETE: Select this when you have completed the settings.

The selected channel is shown on the display for approx. 2 seconds. The current setting for that channel is then shown as a flashing display. The indicator corresponding to the selected speaker also continues to flash.

**3** Press [SELECTOR], and set the type (LARGE, SMALL) and presence (YES, NO or NONE) of the speaker.
Each time the button is pressed, the display is switched in the listed order.
LARGE: select if the speaker can produce low frequency sounds,
SMALL: select if the speaker cannot produce low frequency sounds,
NONE: select if you are not using a center speaker or surround speakers,
YES: select if you are using a subwoofer,
NO: select if you are not using a subwoofer.

The sound for speaker channels that are set to "NONE" or "NO" are output from the front speakers.

4 Repeat steps 2 and 3 to complete the settings for all the channels.

5 Press [CHANNEL/SET] to select "COMPLETE."
The settings are now entered into the unit's memory. The display goes out after about 2 seconds and the previous display reappears.
The speaker indicators light up unless "NONE" or "NO" has been selected for the corresponding channel.

If no buttons are pressed for approx. 10 seconds during the setting process, all previous settings are cancelled, the setting mode is released, and the original display is restored.
Begin the setting process again if this occurs.

For your reference
The setting remains as it is until changed by the above procedure, even after the power has been turned off.
Adjusting speaker output level

Adjust speaker level so the output from all the speakers is the same apparent level when sitting where you would normally enjoy a source.

Preparation for the receiver
- Turn ON the speakers with [A] or [BI-WIRE].
- Adjust front speaker balance with [BALANCE].

1 Turn [INPUT SELECTOR] to select "DVD" on the receiver.

2 Press [DVD 6CH INPUT] to select "DVD-6CH."
Changes as follows, each time the button is pressed.
DVD 6CH ⇌ DVD (2CH)

If you press this button while another source (CD, PHONO, etc.) is selected, the receiver switches the source to DVD and engages the DVD 6CH INPUT mode.

3 Set the volume level to 0 dB on the processor.

4 by remote control only
Press [PROC] to switch to the processor operation mode.
The button lights up.

5 by remote control
Press [SURROUND] to select the surround mode.
"SURROUND" appears on the display.

6 by remote control only
Press [TEST] to output the test signal.
"TEST" appears on the display, and the speaker indicator corresponding to the speaker outputting sound flashes.
The test signal is automatically output from each speaker for 2 seconds in the following sequence:

L → C → R → RS → LS → SW

L: Front speaker (left)
C: Center speaker
R: Front speaker (right)
RS: Surround speaker (right)
LS: Surround speaker (left)
SW: Subwoofer
(Speakers for which NONE or NO has been set are skipped.)

(Continued on next page)

Sound mode (Surround on the processor)

29

RQT5110

········TEST
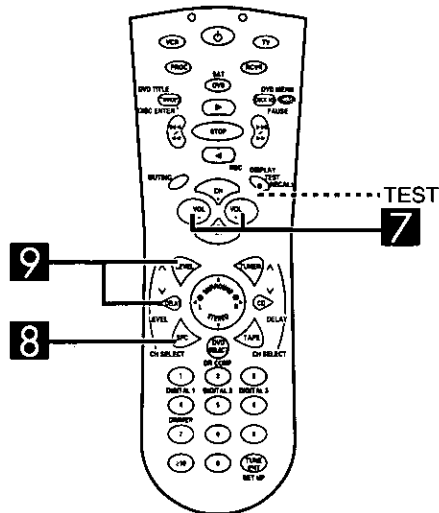

7 [by remote control]

Press [VOL –] or [VOL +] to set the receiver's volume level normally used for enjoying the source.

8 [by remote control only]

Press [LEVEL CH SELECT] to select the speaker channel to adjust.

The output level appears on the display, and the speaker indicator for the selected speaker flashes.

Each time the button is subsequently pressed, the speaker whose level is to be set is selected in the listed sequence. (Speakers for which NONE or NO has been set are skipped.)

9 [by remote control only]

Press [LEVEL ∨] or [LEVEL ∧] to adjust the output level.

Channels C, RS, LS, and SW can be adjusted between –12 dB and +12 dB. Set them so that the output from each channel appears to be the same as that from the front speakers.

10 Repeat steps 8 and 9 to adjust the output of each channel to approximately the same apparent level.
To stop the test signal
Press [TEST].
Adjusting the delay time

by remote control only

By adjusting the delay time, the difference in the distance from the viewing and listening position to the front speakers and the distance to the center speaker and surround speakers can be offset and made equal. This achieves better sound localization and makes a more life-like reproduction of the sound field possible.

Note

Please note that the following occurs if delay time is adjusted while playing back a source or analog input is selected:
- Adjustment is not possible if the source is DTS format.
- While the □□PRO LOGIC indicator is alight, the center channel cannot be adjusted and 15 ms are added to the delay times listed for the surround channel.

1 **Press [PROC] to switch to the processor operation mode.**
The button lights up.

2 **Press [SURROUND] to select "SURROUND."**
"SURROUND" appears on the display.

3 **Press [DELAY CH SELECT] to select the channel to be adjusted.**
The current delay time is displayed.
The speaker indicator for selected speaker flashes.
Press again to change the speaker channel;
C (Center speaker) ⇌ S (Surround speakers)

Speakers set as "NONE" are skipped.

4 **Press [DELAY ∨] or [DELAY ∧] to set the delay time.**
The delay time changes with each press.
The increments depend on the channel being adjusted.

Speaker	Available delay time setting (ms)
Center	0, 1, 2, 3, 4, 5
Surround	0, 5, 10, 15

The display is restored if a button isn't pressed for 4 or more seconds.

To calculate the delay time A

D_1: Distance from front speakers
D_2: Distance from surround speakers
D_3: Distance from center speaker

Setting the center channel delay time:

If D_1 is equal to or less than D_3	Set to 0 ms
If D_3 is less than D_1	Increase 1 ms for every 30 cm of difference between D_1 and D_3

Setting the surround channel delay time:

If D_1 is equal to or less than D_2	Set to 0 ms
If D_2 is less than D_1	Start at 0 ms and increase by 5 ms for every 1.5 m of difference between D_1 and D_2

Sound mode (Surround on the processor)

31

RQT5110
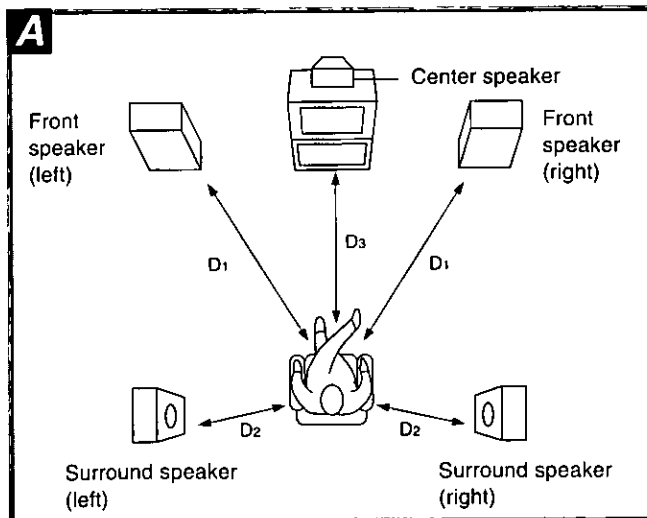

Dolby Digital, DTS and other 6 channel discrete sources are recorded with each speaker channel discrete from the other.
Depth, movement, position and other characteristics are maintained, so using this mode will make you feel as if you were at a movie theater.

Ensure you have your speakers set up in either of the following ways.
- The front speakers are connected to the A terminals (➡ page 14) and "SPEAKERS A" is selected.
- The front speakers are bi-wired (➡ page 15) and "SPEAKERS BI-WIRE" is selected.

---

1 Turn [INPUT SELECTOR] to select "DVD"on the receiver.

2 Press [DVD 6CH INPUT] to select "DVD 6CH" on the receiver.

Note
- This mode cannot be turned on while SPEAKERS B is on. This mode is automatically cancelled if SPEAKERS B is selected and the modes in the memory for all sources will also be switched to STEREO. The modes must be selected again for all sources when SPEAKERS B is turned off again.
- BI-AMP and DVD 6CH INPUT cannot be used at the same time.
  If you are using BI-AMP and you select DVD 6CH INPUT, BI-AMP will turn OFF and the "BI-AMP" indicator will go out.

3 Press one of the processor's input select buttons to select the input source.
The indicator above the pressed button now lights.

DIGITAL 1: Selects the source connected to the DIGITAL 1 terminal. The unit automatically recognizes whether the source is connected through the optical fiber cable or the coaxial cable.

Note
If both types are connected at the same time, only the coaxial cable is recognized. Disconnect the coaxial cable if the external unit is connected with the optical fiber cable.

DIGITAL 2: Selects the source connected to this terminal.
DIGITAL 3: Selects the source connected to this terminal.
LINE: Selects the source connected to the LINE terminal.

When DIGITAL 1, 2 or 3 has been selected:
The reproduction modes in step 4 can be selected.
**When LINE has been selected:**
The analog sound signals input through LINE IN terminals are directly output to the connected component. "THROUGH" appears on the display.

Note
Only the POWER button and select buttons function when LINE has been selected.

The figures in bold italics are the factory settings.

For your reference
Settings for volume level and delay time can be done for each SFC mode.
VGCA mode
This receiver features a state-of-the-art variable gain control amplifier (VGCA). This feature cuts down greatly on noise encountered during normal use.

1 Turn [INPUT SELECTOR] to select the source.

2 Press [VGCA].
The "VGCA" indicator lights when "VGCA" is selected.
"VGCA ON" is displayed, then "TONE DEFEAT / DISPLAY OFF" scrolls across the display. The display then turns off.
If TUNER was chosen as the source, the current frequency is shown.

3 Start the desired source.
Follow your equipment's operating instructions.

To confirm the current display
Press [STEREO].
The display comes on for about 3 seconds.

For your reference
You can set the VGCA mode for each source.
Each source will retain the selected mode.

Note
● Tone quality (bass and treble) cannot be adjusted in this mode.
● Dolby Pro Logic and the SFC modes cannot be selected while VGCA is on. These modes are also cancelled when VGCA is turned on and STEREO mode is engaged.

| To have the display on constantly |

The display is turned off while VGCA is on to cut down on unnecessary noise. Do the following if you would prefer to have the display on.

① **Turn [INPUT SELECTOR] to select a source other than TUNER.**
② **Press [VGCA] to turn VGCA on.**
③ **Press and hold [VGCA] for about 4 seconds until the display comes on.**

This setting remains active even if the unit is turned off.
Repeat the procedure to turn the display off again.

Sound mode (Surround on the receiver, VGCA)

39

RQT5110
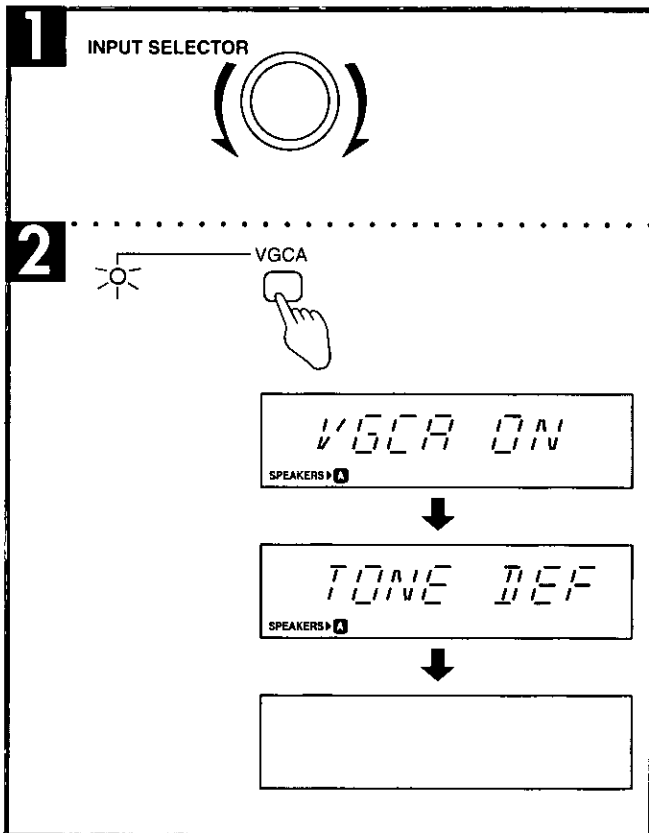

▓▓▓ To mute the sound level ▓▓▓ **A**

by remote control only

Press [MUTING].

The message "MUTING ON NOW" runs repeatedly from right to left across the display as long as the muting function is on.

Press once again to return to the previous volume level.

Note

Muting is cancelled when the receiver is turned off.

▓▓▓ To listen through headphones ▓▓▓ **B**

① **Reduce the volume level.**
② **Connect the headphones.**
   Plug type: 6.3 mm (1/4 in.) stereo
③ **Adjust the volume level.**

Turn the speakers off when using headphones. Turning the speakers off automatically engages STEREO mode and ensures no sound is heard from the subwoofer. If either SURROUND or 3 STEREO is used, the sound heard through the headphones will seem unusual.

Note

Avoid listening for prolonged periods of time to prevent hearing damage.

▓▓▓ When using the VCR 2 terminals (front panel) ▓▓▓ **C**

This button can be used only when TV/DSS/VCR 2 is selected as the input source.
The TV/DSS, VCR 2 input select button works for both TV/DSS input and input from the source connected to the front panel "VCR 2" terminals.
(➡ Page 10.)

Select " ▄ TV/DSS" or " ▄ VCR 2".
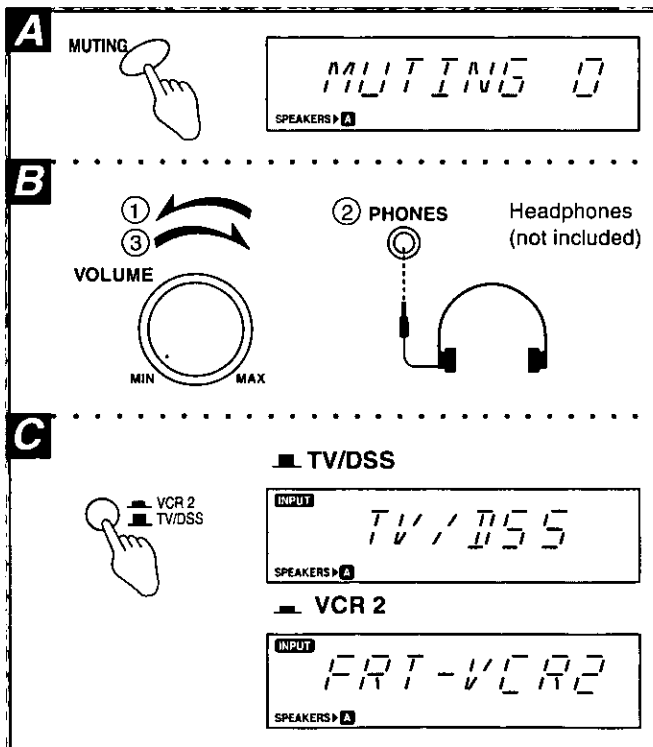

To turn off the blue light on the receiver and dim the processor's display [A]

by remote control only

This can improve video viewing in dark or dimly lit rooms.

① **Press [PROC].**
The button lights up.

② (Point the remote control toward the receiver and processor)
Press [DIMMER].
When the button is pressed, the blue light on the receiver is turned off and the display on the processor is dimmed.

Repeat to turn on again.

Note

- When the unit's power is turned off, the original condition is restored.
- If one of the conditions is not changed, turn the system off to return it to the original setting and repeat the steps again carefully.

Setting the midnight mode (dynamic range compression) [B]

by remote control only

"Dynamic range compression" (DR COMP) is a function for compressing the dynamic range (reproduction level range) of audio signals. It is used for viewing movie software late at night or at other times when high volume levels are not desirable.

This function only works with DR COMP compatible Dolby Digital format software.

① **Press [PROC].**
The button lights up.

② **Press [DR COMP].**
The "DR COMP" indicator lights.

When the procedure is repeated, the function is released, and the indicator goes off.

For your reference
When DR COMP is on, scenes that already have a low sound level will be heard as they are. When scenes that are loud occur, the function acts to reduce the peak level.
The sound field will remain intact even if DR COMP is functioning.

TAPE MONITOR
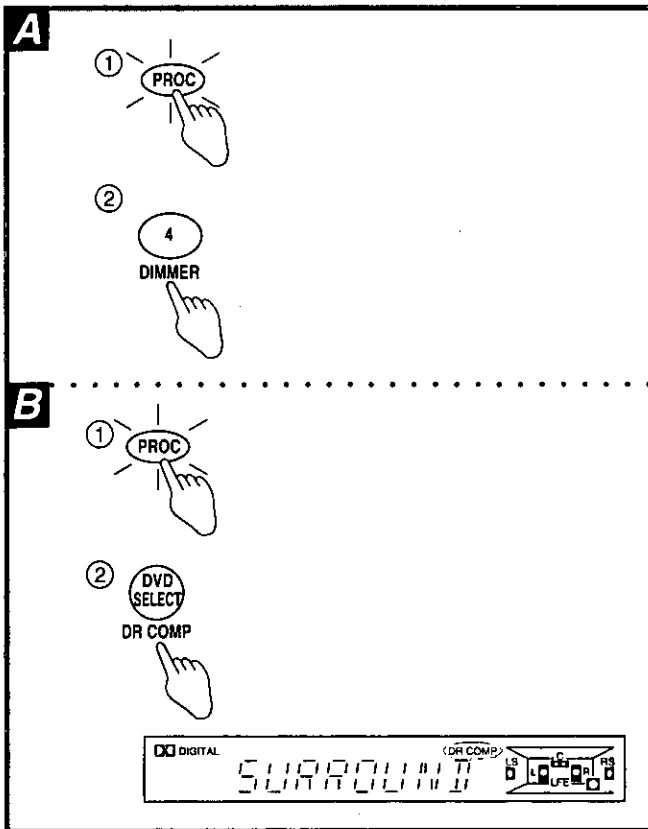

Making a recording
Note

When you select DVD 6CH INPUT mode, only sound from the front left and right channels is recorded.

To record all 6 channels

Set the playback mode on the processor to STEREO mode. (➡ Page 26.)

Recording to a tape deck or VCR

You can record to a tape deck connected to TAPE REC (OUT) or to a VCR connected to VCR 1 OUT.

See the recording unit's operating instructions for details on how to prepare it for recording.

When recording with a tape deck, you can record any source except TAPE.

When recording with a VCR, you can record any source except TAPE or VCR 1.

Note

Recording from the tape deck to the VCR is not possible.

1 Turn [INPUT SELECTOR] to select the source to be recorded.

2 If you selected TV/DSS/VCR 2 in step 1, set [▬ TV/DSS, ▬ VCR 2] to the required position.

3 Begin recording.
Follow your recording unit's operating instructions.

4 Start the source to be recorded.
Follow your equipment's operating instructions.

To monitor sound being recorded onto a tape deck **4**

It is possible to check the sound being recorded if your tape deck is a 3 head system.

Press [TAPE MONITOR] on this unit and set the monitor button on the tape deck to "TAPE."

Press [TAPE MONITOR] once again to turn it off.

For your reference

Use the VCR 2 terminals on the front of the unit when dubbing from a video camera.

To operate the receiver

Point the remote control toward the receiver

Change the remote control code in either of the following circumstances:
- If the Panasonic TV or VCR does not operate as a result of a difference in the remote control code.
- If you wish to operate some other make of TV, VCR, DVD player, satellite receiver or cable box.
  (➡ Refer to pages 48 to 52 for the buttons which can be used.)
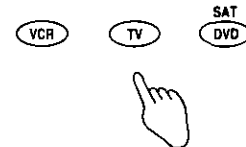

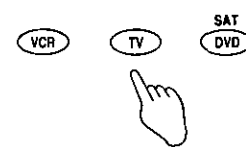

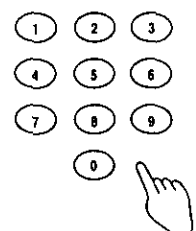

Note

- Even after changing the code there may be cases where certain operations cannot be done or operation is not possible at all.
- Changes to the codes may be cancelled when the remote control's batteries are replaced. Repeat the operation to reenter the code.
- This remote control can only accept the code for either a DVD player or a satellite receiver or a cable box. It will be able to control only the component you have entered the code for.

Green   Red

How to change the remote control code

1 Find the code numbers for your device in the code tables.
(➡ pages 55 to 59).

2 Press the button for the component you want to operate.

3 Press [SET UP].
Both the green and red indicator light up.

4 Press the button for the component you want to operate again.

5 Carefully enter the 4 digit code.
The buttons at the top of the remote control flash to indicate the number has been accepted.
Repeat from step 2 if the number wasn't accepted.

6 Press [⏻] to test operation.
If the correct code was entered, the component will turn on or off.
Try the code. If the component doesn't respond, repeat from step 2 and try the next code.

Remote control operations

53

RQT5110
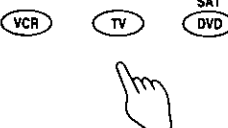

Changing the remote control code (continued)

Green   Red
Using the code scan to change the remote control code

1 **Press [SET UP].**
Both the green and red indicator light up.

2 **Press the button for the component you want to operate.**
Only the red indicator lights up.

3 **Press [0] twice.**

4 **Press [⏻] repeatedly until the component responds.**
Be sure to leave enough time between presses for the component to respond.

5 **Press [SET UP] immediately after the component responds.**
The code is locked into the remote control.

6 **Press [⏻] again to check that the code has been accepted.**

For your reference

Checking the code numbers you have entered.
Use this feature to make a note of the codes you have entered for each component.

① **Press [SET UP].**
Both the green and red indicators light up.

② **Press the button for the component you want to confirm.**
Only the red indicator lights up.

③ **Press [≥10].**
The green indicator flashes to show the code number. It pauses between each digit. 10 flashes represents "0".
The red indicator goes out to show the number is finished.

-HELP
-RESET

-HELP
-RESET

B

①

②

90°
If you make a mistake in operation or if sound output stops due to some operation which was performed, the HELP function displays information which can be useful for indicating the method by which this condition can be remedied.

If "ERROR" or scrolling characters (for instance, "SPEAKER OFF NOW") appear on the display during operation, carry out the following operation.

Press [-HELP, -RESET].

The method for remedying this situation will be displayed.

For your reference

If the above button is pressed for 2 seconds or more until "RESET" appears on the display, the operation settings for the unit will be initialized to the settings made at the time of shipment.

However, any broadcasting stations which have been preset into memory will not be erased at this time.
If the front cover comes off B

① **Insert the cover as shown in the illustration.**
② **Ensure the cover is parallel to the unit, then press firmly down on the levers until they click into place.**
③ **Check that the cover now moves correctly.**
   If it does not, remove it and repeat the above procedure.

RECEIVER

■ AMPLIFIER SECTION

Rated minimum sine wave RMS power output
20 Hz–20 kHz both channels driven
0.05 % total harmonic distortion

100 W per channel (6 Ω)

1 kHz continuous power output both channels driven
0.05 % total harmonic distortion   105 W per channel (6 Ω)

Total harmonic distortion
rated power at 20 Hz–20 kHz	0.05 % (6 Ω)
half power at 1 kHz	0.03 % (6 Ω)

Power output at the DVD 6CH operation
20 Hz–20 kHz (each channels driven)
0.09 % total harmonic distortion
Front	2 x 100 W (6 Ω)
Center	100 W (6 Ω)
Surround	2 x 100 W (6 Ω)
Subwoofer 20–200 Hz	100 W (6 Ω)

Low frequency damping factor	30 (6 Ω)

Load impedance
Front	
A or B	4–8 Ω
A and B	8 Ω
BI-WIRE	6–8 Ω
Center	6–8 Ω
Surround	6–8 Ω
Subwoofer	6–8 Ω
Dynamic headroom	2 dB (8 Ω)

Frequency response
PHONO	RIAA standard curve ±0.8 dB
CD, TAPE, DVD, VCR 1, TV/DSS/VCR 2, VCR 3	
	10 Hz–100 kHz, ±3 dB

Input sensitivity
PHONO	0.4 mV (3 mV, IHF'66)
CD, TAPE, DVD, VCR 1, TV/DSS/VCR 2, VCR 3	
	27 mV (200 mV, IHF'66)

S/N (IHF A) (VGCA ON)
PHONO	80 dB (80 dB, IHF'66)
CD, TAPE, DVD (L/R/C/LS/RS), VCR 1, TV/DSS/VCR 2, VCR 3	
	90 dB (100 dB, IHF'66)
	110 dB (IHF A, Rated Power, S=2 V)

Input impedance
PHONO	47 kΩ
CD, TAPE, DVD, VCR 1, TV/DSS/VCR 2, VCR 3	22 kΩ

Tone controls
BASS	50 Hz, +10 to –10 dB
TREBLE	20 kHz, +10 to –10 dB
Adaptive control (volume at –30 dB)	50 Hz, +5 dB
Subwoofer cut off frequency control	50–200 Hz

■ FM TUNER SECTION
Frequency range	87.9–107.9 MHz
Sensitivity	11.2 dBf (2 μV, IHF'58)

50 dB quieting sensitivity
MONO	18.3 dBf (4.5 μV, IHF'58)
STEREO	38.3 dBf (45 μV, IHF'58)

Total harmonic distortion
MONO	0.2 %
STEREO	0.3 %

S/N
MONO	73 dB
STEREO	67 dB
Frequency response	20 Hz–15 kHz, +1 dB, –2 dB
Alternate channel selectivity	65 dB
Capture ratio	1.5 dB

Image rejection at 98 MHz	40 dB
Spurious response rejection at 98 MHz	75 dB
AM suppression	50 dB

Stereo separation
1 kHz	40 dB
10 kHz	30 dB
Antenna terminal	75 Ω (unbalanced)

■ AM TUNER SECTION
Frequency range	530–1710 kHz
Sensitivity	20 μV, 330 μV/m
Selectivity	55 dB
IF rejection at 1000 kHz	50 dB

■ VIDEO SECTION
Output voltage at 1 V input (unbalanced)	1±0.1 Vp-p
Maximum input voltage	1.5 Vp-p
Input/output impedance	75 Ω

■ GENERAL
Power supply	AC 120 V, 60 Hz
Power consumption	340 W
	(In standby condition: 2 W)
Dimensions (W x H x D)	430 x 158 x 378.4 mm
	(16-15/16" x 6-7/32" x 14-29/32")
Weight	11 kg (24.4 lb.)

■ DIN Power (1 kHz T.H.D. 1%)

2 x 100 W (6 Ω)

SURROUND PROCESSOR

■ AUDIO
Output voltage/Impedance	2 V (at 0 dB)/1 kΩ

Input impedance
LINE	22 kΩ
COAXIAL	75 Ω

Frequency responce
FRONT L/R, CENTER, SURROUND L/R (LARGE)	
20 Hz–20 kHz	±1 dB

Delay time
DOLBY DIGITAL	CENTER	0–5 ms
	SURROUND L/R	0–15 ms
DOLBY PRO LOGIC	SURROUND L/R	15–30 ms

Total harmonic distortion
FRONT L/R (1 kHz, 0 dB, PCM)	0.007 %
Dynamic range	96 dB
S/N (IHF A)	100 dB
Load impedance	More than 10 kΩ

■ GENERAL
Power supply	AC 120 V, 60 Hz
Power consumption	15 W
	(In standby condition: 4 W)
Dimensions (W x H x D)	430 x 69.4 x 301.4 mm
	(16-15/16" x 2-47/64" x 11-55/64")
Weight	2.6 kg (5.7 lb.)

Notes:
1. Specifications are subject to change without notice.
   Weight and dimensions are approximate.
2. Total harmonic distortion is measured by the digital spectrum analyzer.

RQT5110

Before requesting service for this unit, check the chart below for a possible cause of the problem you are experiencing. Some simple checks or a minor adjustment on your part may eliminate the problem and restore proper operation.

If you are in doubt about some of the check points, or if the remedies indicated in the chart do not solve the problem, refer to the directory of Authorized Service Centers (enclosed with this unit) to locate a convenient service center, or consult your dealer for instructions.

For detailed instructions, contact an authorized servicenter in the U.S.A. and Panasonic Canada Inc. Customer Care Centre in Canada.
In the U.S.A. 1-800-211-7262 or web site (http://www.panasonic.com)
In Canada 905-624-5505 or web site (www.panasonic.ca)

Problem	Probable cause(s)	Suggested remedy	Page(s)

While listening to FM broadcasts

Problem	Probable cause(s)	Suggested remedy	Page(s)
Hiss is heard during stereo broadcasts, but not during monaural ones.	Modulation for the two types is different so some noise may be heard during stereo broadcasts.	● Reduce the treble. ● Change the location and direction of the antenna. ● Use an outdoor antenna. ● Use an antenna with more elements.	20 12,13 13 –
Excessive noise in both stereo and monaural broadcasts.	Antenna location and direction poor.		
	Station is distant.		
"STEREO" and "TUNED" indicators flicker.	Antenna location and direction poor.	● Change the location and direction of the antenna. ● Use an outdoor antenna. ● Use an antenna with more elements.	12,13 13 –
	Station is distant.		
Stereo broadcasts highly distorted.	Building or mountain nearby.		

While listening to AM broadcasts

Problem	Probable cause(s)	Suggested remedy	Page(s)
Unusual "beat" sound is heard.	A television is on nearby.	● Separate the two or turn the television off.	–
	Adjacent signal is interfering.	● Reduce the treble.	20
Low-pitched "hum" is heard when a station is tuned.	Power cord is near the antenna wires.	● Separate the power cord from the wires.	–
	Electronic interference from the power cord is fed to the speakers.	● Use an outdoor antenna.	13
A continuous or intermittent hiss is heard.	Interference from other appliances.	● Separate this unit from such appliances.	–

While enjoying the surround modes

Problem	Probable cause(s)	Suggested remedy	Page(s)
Sound is not heard from the center, surround or subwoofer speakers.	The presence setting of the speaker has been incorrectly set to "NONE" or "NO."	● Set the type and presence setting of each speaker correctly.	28
	The STEREO reproduction mode is on.	● Set to SURROUND or DTS reproduction mode.	33
A DTS formatted source cannot be played back in the SURROUND mode.	This DTS source couldn't be processed by the SURROUND mode.	● Select the DTS reproduction mode.	33
Sound doesn't come from the center speaker while using Dolby Pro Logic.	PHANTOM is selected.	● Select NORMAL or WIDEBAND.	34

Problem	Probable cause(s)	Suggested remedy	Page(s)

Common Problems

Problem	Probable cause(s)	Suggested remedy	Page(s)
Unit doesn't come on.	The power cord plug is not fully inserted.	● Confirm the plug is fully inserted.	–
Sound is not heard.	The speaker indicators are off.	● Turn on the speaker indicators.	18
	The tape monitor function is on.	● Press the tape monitor button.	19
	The muting function is on.	● Press the muting button on the remote control.	40
	Incomplete or incorrect connection to speakers and external equipment.	● Check all connections.	8–11, 14–16
	The incorrect input source has been selected.	● Select the correct source.	18, 32
The midnight mode does not function. (When the DR COMP button on the remote control is pressed, the DR COMP indicator does not light.)	The SURROUND mode has not been selected.	● Select the SURROUND mode.	33
	The source being played has not been recorded in the Dolby Digital format.	● Check if the DD DIGITAL indicator is illuminated.	41
Sound suddenly stops or none is heard when the unit is switched on. "OVERLOAD" appears on the display.	The protection circuitry has functioned because: the positive and negative speaker wires have shorted; speakers with a lower impedance than this unit's rated impedance are being used; the speakers are under strain through excessive volume, excessive power, or by being used in a high temperature environment.	● Switch off the unit, determine and correct the cause, then switch the unit on. ● Use speakers with the right impedance rating.	– 15–16
"F70" appears on the processor's display.		● Turn off the power and then turn it on again, or disconnect the AC power supply cord and then connect it to your household AC outlet again. (If "F70" still remains on the display, consult an authorized service center or your dealer.)	–

Listening caution

Selecting fine audio equipment such as the unit you've just purchased is only the start of your musical enjoyment. Now it's time to consider how you can maximize the fun and excitement your equipment offers. This manufacturer and the Electronic Industries Association's Consumer Electronics Group want you to get the most out of your equipment by playing it at a safe level. One that lets the sound come through loud and clear without annoying blaring or distortion—and, most importantly, without affecting your sensitive hearing.

We recommend you to avoid prolonged exposure to excessive noise.

Sound can be deceiving. Over time your hearing "comfort level" adapts to higher volumes of sound. So what sounds "normal" can actually be loud and harmful to your hearing.
Guard against this by setting your equipment at a safe level BEFORE your hearing adapts.
To establish a safe level:
● Start your volume control at a low setting.
● Slowly increase the sound until you can hear it comfortably and clearly, and without distortion.

Once you have established a comfortable sound level:
● Set the dial and leave it there.

Taking a minute to do this now will help to prevent hearing damage or loss in the future. After all, we want you listening for a lifetime.

Maintenance

If the surfaces are dirty

To clean this unit, wipe with a soft, dry cloth.
If the surfaces are extremely dirty, use a soft cloth dipped in a soap-and-water solution or a weak detergent solution.

● Never use alcohol, paint thinner or benzine to clean this unit.
● Before using chemically treated cloth, read the instructions that came with the cloth carefully.

Product service

Do not attempt to remove the cover(s) or repair the unit yourself. Refer servicing to qualified personnel only.

Product information

For product service, product information or assistance with product operation, refer to the servicenter directory.
