

TIFFEN® Glimmerglass® & Bronze Glimmerglass® Filters

The First Filter Series With a “Psychological Edge”.

The introduction of the Glimmerglass filter, a new series of Diffusion filters, seems to support the theory that when you “look good”, you “feel good.” People always want to look their best. And they want to look even better in pictures. Here’s another way Tiffen makes that happen.

The Glimmerglass is the first series of filters with a “psychological edge.” A new type of filter, the Glimmerglass softens fine details in a unique manner, while adding a mild glow to highlights. As contrast is also reduced, the look is one of enhanced beauty.

A first in this field is the fact that the filter is both effective to look at as well as to look through. The glass itself has a distinct silver ‘sparkle,’ which has been found to be doubly useful. When production starts and people see the filter glittering on the front of the lens, they become more confident in the knowledge that the filter is working for them and they may also turn in a better performance.

Bronze Glimmerglass filters are a variation of the Glimmerglass filter, with the addition of a bronze color. These filters add warmth to skin tones and scenics and have some effect on contrast. Bronze is a new Tiffen color and lends itself to numerous opportunities for creative effects.

The effect of the lighter grades is subtle, with the higher grades becoming gradually more noticeable, all capable of providing a beautiful image.

Glimmerglass filters are available in grades 1-5 in many standard professional motion picture and television sizes, as well as screw-in sizes in 52mm to 82mm.
