TEC ELECTRONIC CASH REGISTER

## MA-191-100 SERIES

**TEC** TOKYO ELECTRIC CO.,LTD.

**WARNING**

This equipment generates, uses, and can radiate radio frequency energy and if not installed and used in accordance with the instructions manual, may cause interference to radio communications. It has been tested and found to comply with the limits for a Class A computing device pursuant to Subpart J of Part 15 of FCC Rules, which are designed to provide reasonable protection against such interference when operated in a commercial environment. Operation of this equipment in a residential area is likely to cause interference in which cause the user at his own expense will required to take whatever measures may be required to correct the interference.

## TO OUR CUSTOMERS

Thank you for choosing a TEC electronic cash register MA-191-100 series. This instruction manual provides a description of the functions and handling of this register and should be read carefully to obtain maximum performance. Since every consideration has been given to safety, there is no danger of damaging the machine by incorrect operation.

Please refer to this manual whenever you have any doubts concerning the machine. This machine has been manufactured under strict quality control and should give you full satisfaction. However, if the machine is damaged during transit, or there are any unclear points in this manual, please contact your TEC representative listed in this booklet.

- The specifications described in this manual may be modified by TEC, if necessary.
- Be sure to keep this manual for future reference.

## PRECAUTIONS

1. The keys on the keyboard work with a light touch. Avoid pressing the keys too hard.
2. Avoid handling the machine with wet hands.
3. Do not apply thinner or other volatile oils to the cabinet or other plastic parts. If the dirt is very bad, wipe off with a piece of cloth soaked in neutral detergent and squeezed tightly.

## APPEARANCE AND NOMENCLATURE

- **Power Switch** ... The power switch is provided at the righthand side of the cabinet. The AC power is turned on when the switch is pushed to ON, and turned off when the switch is pushed to OFF.

### Clerk Locks

These locks are used to identify which clerk is operating the register.

### CLERK KEYS (CL 1, CL 2, CL 3, CL 4)

Each clerk should keep his/her clerk key. The register will not operate unless one of these keys is inserted and set to the corresponding position on the Clerk Locks. Each of the keys may be inserted and pulled out in the neutral position marked with the "." (point).

- NOTES: 1. The push-style Clerk Keys may be installed in place of the Clerk Locks. In that case, four Clerk Keys will be installed as the standard feature, and nine Clerk Keys as an optional feature.
2. The Clerk Locks or push-style Clerk Keys may be used as Major Group Keys if so programmed in the system option.

### GT Lock

This lock is provided to read or reset the accumulated sales totals not on the daily but on weekly or monthly basis.

#### GTX Position:

This position allows to read the accumulated totals. The GTX Key and GTZ Key can access this position.

#### GTZ Position:

This position allows to read and reset the accumulated totals. The GTZ Key can access this position.

NOTE: When the GT Lock is turned to either the GTX or GTZ position, the Mode Lock position and any Clerk Key ON/OFF condition will be disregarded.

REG Lights up when sale items have been entered into a department.

(-) Lights up when the RTN MDSE, DOLL DISC, %-, ITEM CORR, or VOID key has been operated. It also lights up when the ST or one of the total keys has been depressed and the displayed amount is negative. It lights up also when an amount is entered in the "-" mode.

SI Lights up when a department or PLU with the SI (selective itemized) status programmed is entered. It also lights up when the SI/TL key is depressed.

TXBL Lights up when a taxable department or PLU is entered. It also lights up with the 'ST' Lamp when the TXBL TL key is depressed.

ST Lights up when the sub-total amount is displayed after the ST key has been depressed.

TL Lights up on a finalizing operation with the total amount displayed when finalized without any amount tendered.

CG When an amount tendering operation has been performed, this lamp lights up with the change due displayed.

SHORT Lights up when the amount tendered is less than the sale total  
TRF with the shortage amount displayed. It also lights up when all the balance is transferred to suspend a sale with a previous balance entry.

## KEYBOARD LAYOUT

On the following page are two typical keyboard layouts for the MA-191-100 series. Since this series is designed to be capable of programming most of the keys to be placed in the desired place on the keyboard, these are merely examples. Please ask your TEC representative if any other alternative or additional keys must be installed, referring to the description of the "FUNCTION OF EACH KEY" and "OTHER OPTIONAL KEYS" in this manual.

**RTN MDSE** Returned Merchandise Key

This is the Returned Merchandise Key which is used for refunding money to a customer who has returned goods to the store.

To operate, depress the **RTN MDSE** key either before or after ringing up the amount to be refunded, and then depress the appropriate department key (the department key may be replaced by a PLU code and the **PLU** key combination). The amount is automatically printed and deducted from the bill.

The **RTN MDSE** key can be used outside as well as inside a sale.

**@/FOR** Quantity Extension and Split Pricing Key

This key is used to multiply a department or PLU item entry by a quantity. This key is also used to split a whole package price of a department or PLU.

The basic order of multiplication is:

|**QUANTITY**| → |**@/FOR**| → |**PRICE**|

As for details of multiplication and split pricing for various cases, refer to the "REGISTERING PROCEDURE FOR SALES".

The quantity can be of maximum 3 integral digits and 3 digits below the decimal point. The price can be of maximum 6 digits. The product must not exceed 7 digits.

Usually, the fraction below the least effective digit will be rounded off. However, it may be programmed to be discarded or rounded up by the system option.

**PLU** Price-Look-Up Key

This key is used to enter a PLU that is linked to a department. Each PLU can be programmed to be a preset PLU (to allow the preset price entry only) or an open PLU (to allow a price entry through the numeric keys each time).

TO ENTER THROUGH PRESET PLU:

|**PLU Code**| → |**PLU**| .... The preset price will automatically be read and entered.

To repeat the same PLU price, depress the **PLU** key only, after the above operation.

TO ENTER THROUGH OPEN PLU:

|**PLU Code**| → |**PLU**| → |**PRICE**| → |**AMT**|

.... The price indexed on the numeric keys will be entered.

To repeat the same PLU price, depress the **AMT** key only, after the above operation.

# CONTROL LOCKS AND MODE SELECTOR KEYS

## Mode Lock

### (POSITION)

### (FUNCTION)

- LOCK** ..... The register operations are locked when the Mode Lock is set to this position. Displays the current time.
- REG** ..... Normal cash register operations are carried out in this mode. However, the operations using the keys that have been programmed to require the "MGR" position cannot be done in this mode.
- X** ..... The sale totals can be read and the programmed data can be verified in this position.
- MGR** ..... This position allows to register all normal cash register operations to be carried out in the REG mode and the operations using the keys that have been programmed to require the "MGR" position.
- ☐** ..... This is the "Negative Mode", which automatically processes all the entries in the reverse way, i.e., positive items into negative, and the negative items into positive.
- Z** ..... All the resettable totals and their respective counters will be read and reset in this position.
- SET** ..... In this position, the register will allow programming operations.

**REG Key**

The REG Key is used by the cashier who operates the register. This key can access the positions of LOCK and REG.

**MGR Key**

The MGR Key is used by the store manager or a person authorized by the manager. This key can access the positions of LOCK, REG, X, and MGR.

**MA Key**

The MA Key is used by the store manager who will daily supervise the collection of money and the printout of transactions recorded by the register. This key can access the positions of LOCK, REG, X, MGR, ☐, and Z.

**SET Key**

The SET Key is used by the programmer. This key can access the positions of LOCK and SET.

## FUNCTION OF EACH KEY

### RECEIPT

OFF  ON Receipt ON/OFF Switch

This switch has two positions available -- 'OFF' position and 'ON' position. When in the 'OFF' position, no receipt is issued from the register and sales are printed on the audit roll only. When the switch is turned to the 'ON' position, sales are printed on both the receipt roll and audit roll, then a receipt is issued which is torn off and given to the customer.

### **NS** No-sale Key

This key is used, when the Mode Lock is in the REG position, to open the cash drawer while the machine is outside a sale. To operate, depress this key once. A non-add number may usually be entered prior to a no-sale operation. However, it can be programmed to prohibit it when a no-sale is operated.

### **VALIDATE** Validation Key

This key is used to over print a validation slip.

To operate, after registering an item or finalizing a sale, insert a slip into the validation slot and depress the **VALIDATE** key. The item, the amount, and the date and/or consecutive number will be printed on one line on the slip.

The system option provides program selections as to the printing position, single- or multi-validation, validation compulsion on some transaction keys, etc.

If the SLIP Lamp flashes, it means that validation compulsion is programmed for the last item entered. In this case, insert a slip into the validation slot and depress the **VALIDATE** key; no other operation is allowed until the compulsory validation has been done.

### **RF** Receipt Feed Key

This key is used to advance the receipt roll. It is operated by depressing the key and holding it in that position until the paper has advanced to the required position.

### **JF** Journal Feed Key

This key is used to advance the audit roll in the same fashion as the RF key. These two keys are useful if the cashier, due perhaps to an interruption whilst ringing up a sale, is unsure which items have already been entered. By using the feed key the cashier can see which figures have actually been printed.

### **PR OPEN** Preset Open Key

This key is used to modify the status of preset department keys. When the **PR OPEN** key is depressed prior to depressing a preset department key (either before or after the numeric entry), the preset

## DISPLAY

The front display is located at the top of the register just above the keyboard. The display has two types of display -- numeric display and message descriptors.

Front Display

Rear or Remote Display

### Numeric Display

- AMOUNT (8 digits) Displays the numeric data, such as amount, quantity, etc.
- DPT (2 digits) Displays the code which represents each Department Key. It stays lit when repeating the same department entry.
- RPT (1 digit) Displays the repeat department entry count.
- PLU (3 digits, commonly used with the DPT and RPT digits)  
Displays the PLU code when any PLU is entered. It goes out when repeating the same PLU entry.

### Message Descriptors

- SLIP Lights up when a slip has been properly inserted to allow validation. It flashes to require a slip insertion when validation compulsion is programmed on a transaction key.
- ALM Lights up with the alarm buzzer to indicate that the last operation or numeric entry has resulted in an error. To clear the erroneous condition, depress the **C** key.

To operate, enter the discount amount on the numeric keyboard, and then depress the **DOLL DISC** key.

### **ST** Sub-total Key

This key is used to obtain the sub-total amount during a sale. When this key is depressed after all the items have been rung up, the sub-total of the sale is printed and displayed.

If the **ST** key is depressed more than once consecutively, the first depression only will print and display the sub-total; further depressions will only display but not print the sub-total amount.

The system option provides the selection not to print but only display the sub-total on the depression of the **ST** key.

In charge posting, a depression of the **ST** key displays the amount without tax and without previous balance.

### **AT/TL** Amount Tendered / Cash Total Key

This key is used to record all cash paid on transactions, and will be able to finalize a sale operation. Usually the key is programmed to function as both amount tendered and cash total key. However, the key may be programmed to operate with enforced tendering or as a cash total key.

#### AMOUNT TENDERED FUNCTION

After the **TXBL TL** key has been depressed, enter the amount tendered by the customer in payment of the sale, and then depress the **AT/TL** key. The change is automatically computed, displayed, and printed.

If the amount tendered is smaller than the sale total, it prints the amount tendered on the receipt with the balance still due displayed, but the drawer is not yet opened. In this case, ask the customer for additional payment in cash and repeat the same amount tendering operation, or depress another media key if the balance due is processed as a sale in that media.

#### TOTAL KEY FUNCTION

To obtain the total and finalize a cash sale, depress the **AT/TL** key only. The sale is finalized with the total printed and displayed, and the drawer opens.

- NOTES:**
1. If the **AT/TL** key has been programmed to function as the "AMOUNT TENDERED" key only and the sale total is "0" or negative, no amount tendering can be entered. In this case, the **AT/TL** key will function as the "TOTAL KEY", so just depress the **AT/TL** to obtain the total and finalize the sale.
  2. If the "TXBL TL Compulsory" option has been selected in the system option, the **TXBL TL** key depressions for obtaining the sale total is required before finalizing any sale.

TYPICAL KEYBOARD LAYOUTS

6	14	22		
7	15	23	AT/TL	
8	16	24		

When the Mode Lock is in the X position, the [#] key is used to read the Cash-in-drawer total.

### [0] ~ [9], [00] Numeric Keys

These keys are used to enter numeric values such as amount, quantity, date, or code number.

Depressing the [00] key once is the same as depressing the [0] key twice consecutively.

### [.] Decimal Point Key

This key is used, as part of numeric keys, to designate the position of the decimal point when entering a percent rate or a quantity. For example, to enter 0.5%, index 0→[.]→5, or [.]→5.

When entering a price or amount such as \$0.25, just index 2→5. In this case, depression of the [.] key is not necessary and will cause an error.

### [1] ~ [8] (MA-191-108) [1] ~ [24] (MA-191-124) Department Keys

These are department keys through which sales items are registered. These keys may be programmed as either 'PRESET' keys or 'OPEN' keys.

#### OPEN DEPARTMENT KEY

A department key which has no preset price programmed is an 'OPEN' key and must have a price entered into it manually each time. The price is rung up on the numeric keyboard and the appropriate department key is depressed. The price is then displayed and printed on the receipt and audit rolls.

When the same department key is depressed more than once after a price entry, the price entry is repeated as many times as the department key is depressed.

To enter a price extended by multiplication, enter the quantity first, depress the [ @/FOR ] key, enter the price, and then depress the appropriate department key. A multiplication entry may not be repeated by depressing the department key again.

#### PRESET DEPARTMENT KEY

A preset key is a key which has already a price programmed in it. It is therefore unnecessary to enter the price of an item; simply depress the key to register the sale of one item.

To repeat the same preset item, depress the department key as many times as desired.

To multiply a preset department price by a quantity, enter the quantity first, depress the [ @/FOR ] key (the [ @/FOR ] key may be omitted if the preceding quantity is a one-digit value), and then depress the preset department key.

If a non-preset price must be entered on the keyboard into a preset

department key is reversed to non-preset and allows amount entry through the numeric keyboard.

If a preset department is entered with a price through the numeric keyboard using the **PR OPEN** key, no repeat operation is then possible for that department key.

The **PR OPEN** key cannot be used with the **PLU** key.

#### **LC OPEN** Listing Capacity Open Key

This key is used to release the listing capacity on each Department or finalizing key. To operate, depress the **LC OPEN** key before depressing the department or finalizing key (either before or after the numeric entry).

By depressing the **LC OPEN** key, the HALC (High Amount Listing Capacity) will be released to allow a numeric entry with two further digits, and the LALC (Low Amount Listing Capacity) will be 1-digit less than the programmed value, as to the department keys. As for the finalizing keys, the HALC will be extended to allow one further digit.

In order to allow a numeric entry outside the values defined above, the Mode Lock must be turned to the 'MGR' position using the MA or MGR Key.

Repeat operation will be possible on any department key even when the **LC OPEN** key is depressed before the department key.

#### **R/A** Received on Account Key

A received on account transaction is used to identify money which is in the drawer but not business. The amount entered is thus included in the "Cash-in-drawer" total but not in the sales totals.

To operate, enter an amount of payment and then depress the **R/A** key. Repeat this operation if multiple payments are entered at a time. The payments entered are usually finalized by the **AT/TL** (if paid in cash), **CHK TND** (if paid in check), or **MSC TEND** (if paid in misc. media). The **Chg** key may function to finalize payments received on account if so programmed in the system option. The above operation can only be done when the register is outside a sale.

The **ITEM CORR** key is effective to delete a payment just recorded with the depression of the **R/A** key, if before finalized by a media key.

#### **PO** Paid Out Key

A paid out transaction is used when an amount of money is removed from the cash drawer without relating to a sale. When the **PO** key is used, the amount entered is subtracted from the "Cash-in-drawer" total but does not affect the sales totals.

To operate, enter an amount taken from the cash drawer and depress the **PO** key whilst the register is in an out-of-sale condition. This operation may be carried out as many times as required if multiple paid-out items are registered at a time. The paid-out amounts recorded are finalized by the **AT/TL** key only.

As for other functions and programmabilities, see the **AT/TL** key description; except that the **Chg** key is usually programmed as a "Total" key only but not as a "Tender" key.

**MSC TND**      **Miscellaneous Tendered Key**

This key is provided to tender and finalize a sale in miscellaneous media, which cannot be processed by any other media key. It has the same functions and programmabilities as the **CHK TND** key.

**VND CPN**      **Vendor Coupon Key**

This is a motorized credit key to subtract vendor coupon amount from the sale.

To operate, enter the coupon amount and depress the **VND CPN** key. This operation can only be done inside a sale. The coupon amount to be entered must not exceed the sale total or the total of the taxable items of the sale. The **VND CPN** can be programmed with a listing capacity (a 4-digit amount), tax status, validation compulsion, and manager intervention.

The **TX/M** key may work with the **VND CPN** key, but the **LC OPEN** key will not function with the **VND CPN**. In order to release the listing capacity of the vendor coupon amount, the Mode Lock must be turned to the MGR position.

Quantity extension is not possible using the **VND CPN** key.

**STR CPN**      **Store Coupon Key**

This is a non-motorized credit key to subtract a store coupon amount redeemed through a department. Store coupon operations will net the department through which they are redeemed.

To operate, depress the **STR CPN** key either before or after the coupon amount entry, then depress the department key.

The **STR CPN** key does not have its own listing capacity programmed, and thus it follows each department listing capacity. The tax status of the store coupon amount is also ruled by the department through which it is redeemed.

The store coupon amount must be entered inside a sale or must not exceed the sale total unless the "Credit Balance" option is selected.

The amount entered with the **STR CPN** will subtract the Department Total memory, but does not affect the Department Item Counter memory.

Quantity extension will be permitted with this key, but split pricing will not be permitted. No PLU, Void, or Returned Merchandise entries are possible with the **STR CPN** key.

The **STR CPN** key can be programmed with validation compulsion and manager intervention.

3. If the "TOTAL VALIDATION COMPULSORY" option has been selected in the system option, each sale can only be finalized after operating the total validation.

The **AT/TL** key is also used to finalize received on account payment entries or paid out amounts.

The **AT/TL** key can be programmed with the HALC (High Amount Listing Capacity) of the amount tendered. If the HALC has been set, the amount tendered must not exceed the programmed value; otherwise, it will result in an error. If the **LC OPEN** key is used prior to the **AT/TL** key depression, the HALC will be extended by one additional digit. If an amount still greater must be tendered, the MA or MGR Key is required to turn the Mode Lock to the MGR position.

#### **CHK TND** or **CHECK TEND** Check Tendered Key

This key is used to cash a check when the register is outside a sale, or to finalize the transaction as a check payment.

#### CHECK CASHING

When the register is outside a sale, enter the check amount and depress the **CHK TND** key. A receipt is issued and the drawer is opened to enable the exchange.

Check cashing may be prohibited if so programmed in the system option.

#### FINALIZING AS CHECK PAYMENT

On finalizing a sale, enter the amount of the check given by the customer and depress the **CHK TND** key. If the amount received is greater than the sale total, the receipt is issued with the change due printed and displayed. Then the change is given to the customer in cash. (The "Check Over-tendering Prohibited" option can be selected in the system option, if necessary. In this case, an amount equal to or less than the sale total may be tendered.) If the amount received is smaller than the sale total, the shortage is displayed, and the customer may pay the additional amount in cash to finalize the sale by depressing the **AT/TL** key.

The **CHK TND** key is also used to finalize received on account payment entries if paid in check.

As for the HALC of the check tendered, the description will be the same as the HALC of the amount tendered for the **AT/TL** key.

Also refer to the **AT/TL** key description as to other functions and related programmabilities, except the **CHK TND** key is usually programmed to function as the "Tendered" key only.

#### **Chg** Charge Total Key

This key is used as an alternative method of payment for charge sales. To operate, depress the **Chg** key, instead the **AT/TL**, to obtain the total and finalize the sale.

**TX/M** (or **TX1/M**, **TX2/M** for Dual-tax Area) Tax Modifier Key

This key is used to reverse the taxable/non-taxable status on departments and other tax-programmable keys for one entry only. For dual-tax areas, two keys should be provided -- **TX1/M** and **TX2/M** -- in place of the **TX/M** key. The two tax modifier keys will function independently each with its own tax table pre-programmed for taxable items.

The tax modifier key(s) will be effective to reverse the tax status programmed on Department keys, **DOLL DISC**, **%+**, **%-**, **VND CPN**, **BTL RTN**, and PLUs.

To operate, depress the **TX/M** key prior to depressing any of these motorized keys above listed, i.e., either before or after the amount entry.

**TXBL TL** Taxable Total Key

This key is used to display the contents of the main itemizer plus any taxes due. The amount will display only but not be printed.

In order to allow add-on operation following the use of this key, the taxes are not added into any totals until actual finalization is initiated.

Mandatory depression of this key prior to finalizing is a programmable option.

If the "TOTAL VALIDATION AFTER **TXBL TL**" is selected in the system option, depressing the **VALIDATE** key after a **TXBL TL** key operation prints the sale total on the validation slip, and therefore, only a finalizing operation is allowed.

In charge posting, depressing the **TXBL TL** displays the amount including tax without the previous balance.

**EX** Tax Exempt Key

This key is to declare the exemption of the taxes from the sale, display and print the total without tax. Only a finalizing operation is possible after a **EX** key depression.

The **ITEM CORR** key cannot function to delete a **EX** key entry.

If two tax modifier keys (**TX1/M** and **TX2/M**) are installed, tax-exemption may operate in any of the following three ways:

**TX1/M** → **EX** ..... to exempt TAX 1 only

**TX2/M** → **EX** ..... to exempt TAX 2 only

**EX** ..... to exempt both TAX 1 and TAX 2

If only one tax modifier key (**TX/M**) is installed, operate the **EX** key alone for the tax exemption.

department, depress the **PR OPEN** key either before or after the price entry on the numeric keyboard.

Each department key can be programmed with a unit price, either positive or negative use, a HALC (High Amount Listing Capacity) and a LALC (Low Amount Listing Capacity), and tax and S.I. status.

When a department is programmed as a negative department, a price entry may not be repeated by depressing the department key again. Neither may a price entry be repeated when the **RTN MDSE** or **PR OPEN** key has been depressed prior to any department key depression.

#### **C** Clear Key

This key is used to correct a numeric entry error prior to depressing any other key or to correct any error condition and cancel the alarm buzzer.

If the **C** key is depressed after a sub-total is obtained, the sub-total is displayed.

#### **%+** Percent Charge Key

This key is used to add a percentage rate to a sale. If the pre-programmed percentage rate is to be added, depress the **%+** key without a prior numeric entry. If a rate different from the pre-programmed % rate is to be added, enter the desired rate on the numeric keyboard and then depress the **%+** key. (The manual rate will take priority.)

To operate, depress the **%+** key either immediately after a department entry if only that item requires the percentage addition, or after the **ST** key has been depressed if required on the total bill. The percentage rate and the amount are printed and will be added to the sales total.

The percentage rate may be within the range from 0.001 to 99.999%. The fraction resulted from the percentage calculation is usually programmed to be rounded off. However, it can be programmed to be rounded up or discarded.

Usually, if the **%+** key is depressed after a second **ST** key depression within a sale, it adds the rate to the sale total of the items entered between the first and the second **ST** key depressions. However, it can be programmed to add the rate to the entire sale by the system option.

#### **%-** Percent Discount Key

This key operates in the same fashion as the **%+** key except that operation will subtract from instead of adding to a sale.

#### **DOLL DISC** Dollar Discount Key

This key is used to subtract an amount from the sale total such as a discount during a sale. This key cannot normally be used outside a sale. An amount exceeding the sales total cannot normally be entered. However, when the "Credit Balance" option has been selected, this key can be used inside or outside the sale and over-subtraction of the sale total is allowed.

If the [%+] key is used immediately after a previous balance entered with the [PB+] key, the percent rate is added to the previous balance. But the [%-] key cannot be used in this case. Neither the [%+] nor [%-] key may be used immediately after a previous balance entered with the [PB-] key.

#### **[TRF] Transfer Key**

When a charge posting operation is ended with the [Chg] key, this key is used to transfer the entire balance with no payment.

To operate, depress the [TRF] after the [Chg] key. All the balance is transferred, the transferred amount is printed with the "TF" symbol to indicate the new balance, and a receipt is issued. (See the "REGISTERING PROCEDURE FOR SALES" as to details.)

### OTHER OPTIONAL KEYS

The following keys are not shown in the KEYBOARD LAYOUT on page 6. However, any of them may be installed if the customer requires. But please note that some of the present keys may have to be dispensed with or additional memories may have to be installed to gain additional functions. Please contact your TEC representative if any of the following keys is necessary.

#### **[TAX] Manual Tax Key**

This key is used to enter an irregular tax amount that cannot be calculated on the basis of the programmed tax table, and to add it to the sale total.

To operate, enter the desired amount of tax, and then depress the [TAX] key. The tax amount entered is then printed. This tax amount is processed into the TAX 2 memory. Therefore, the tax amount automatically calculated and printed at finalizing the sale (TAX 1) does not include a manual-entered tax, while the entire sale total printed on the receipt last line includes the manual-entered tax also.

This key is also used, if depressed without an amount entry within a sale, to display the total of only non-taxable items so far entered. Usually, this non-taxable total is only displayed but not printed. However, it may be programmed to print also in the system option.

#### **[RECEIPT ISSUE] Receipt Issue Key**

This key is used to issue the receipt of a sale when the sale has already been finalized with the [RECEIPT ON/OFF] switch positioned to OFF.

To operate, depress the [RECEIPT ISSUE] key without numeric entry. The receipt for the last sale is then issued. This key will not function if another sale has already been under way.

**Additional Department Keys** (up to 50 departments)

**Additional PLUs** (up to 300 PLUs)

## **BTL RTN** Bottle Return Key

This is a credit key to enter a bottle return amount. This key can be programmed as either a motorized or non-motorized key, but must be used inside a sale in either way.

### WHEN PROGRAMMED AS MOTORIZED KEY

To operate, enter the bottle return amount and then depress the **BTL RTN** key.

The amount entered through the **BTL RTN** key must not exceed the taxable item total if the **BTL RTN** key has been programmed taxable, unless the "Credit Balance" option is selected.

The **BTL RTN** can be programmed with its own tax status, which can be modified by the **TX/M** key when necessary.

### WHEN PROGRAMMED AS NON-MOTORIZED KEY

To operate, depress the **BTL RTN** key before the bottle return amount entry, and then depress the appropriate department key.

The tax status of the **BTL RTN** key follows that of the department through which the amount is entered.

The amount entered with **BTL RTN** key will subtract the department total but will not affect the department counter.

No PLU entry is possible using the **BTL RTN** key.

The **ITEM CORR** key is effective to delete the last amount entered through or declared by the **BTL RTN** key.

Quantity extension using the **BTL RTN** key is possible, but split pricing is not.

The **BTL RTN** key can be programmed with its own listing capacity. To release this listing capacity, the Mode Lock must be turned to the MGR position.

The amount entered using the **BTL RTN** key must not exceed the sale total unless the "Credit Balance" option is selected.

## **AMT** Amount Key

This key is used to enter an amount into an open PLU.

To operate, enter the desired open PLU code, depress the **PLU** key, enter the price, and then depress the **AMT** key. If the **AMT** key is depressed more than once consecutively, the same price entry into the same open PLU is repeated.

Quantity extension and split pricing are permitted using the **AMT** key.

The **TX/M**, **RTN MDSE**, or other declaration keys may function if depressed any time prior to the **AMT** key depression.

## REGISTERING PROCEDURE FOR SALES

Here are patterns for actual registering operations. In the following examples, "[ ]" indicates an input through numeric keys, "□" indicates a depression of the transaction key, and "---" indicates other registering and/or totalling operations.

**NO-SALE** (Mode Lock: REG)

[NS]

**DEPARTMENT ENTRY** (Mode Lock: REG or □)

|PRICE| → [OPEN DEPT] → ---

[PRESET DEPT] → ---

[PR OPEN] → |PRICE| → [PRESET DEPT] → ---

**NOTE:** When a price to override the listing capacity is entered, the [LC OPEN] key may be depressed either before or after the price entry but before the department key depression. In this case, a price two-digit larger or 1-digit smaller may be entered for one entry only. To allow a price even larger or smaller than this, the MA or MGR key is required and set to the MGR position of the Mode Lock.

**PLU ENTRY** (Mode Lock: REG or □)

|PLU CODE| → [PLU] → --- ..... to enter a preset PLU price

|PLU CODE| → [PLU] → |PRICE| → [AMT] → --- ..... to enter an amount into an open PLU

**REPEAT ENTRY** (Mode Lock: REG or □)

[PRESET DEPT] → [PRESET DEPT] → [PRESET DEPT] → ---

(Repeat depressing the same key as many times as the desired count.)

|PRICE| → [OPEN DEPT] → [OPEN DEPT] → [OPEN DEPT] → ---

[PRESET PLU CODE] → [PLU] → [PLU] → [PLU] → ---

Repeat

[OPEN PLU CODE] → [PLU] → |PRICE| → [AMT] → [AMT] → [AMT] → ---

Repeat

### **[SI/M] Selective Itemization Modifier Key**

This key is used to reverse the SI (selective itemization) status programmed on each Department or PLU.

To operate, depress the **[SI/M]** key prior to entering a department or PLU item. The item is then reversed from SI to non-SI, or from non-SI to SI.

### **[SI/TL] Selective Itemizer Total Key**

This key is used to display and print the selective itemizer.

To operate, depress the **[SI/TL]** key without a numeric entry during a sale. At this time the content of the selective itemizer is cleared.

The **[ITEM CORR]** key does not function to delete the **[SI/TL]** key entry.

If the "SI/TL Compulsion" option is selected, no finalizing operation will be allowed until the content of the selective itemizer is cleared to "0" (zero).

If the "SI/TL Non-print" option is selected, the content of the selective itemizer is displayed and printed only on the journal but not on the receipt.

If the "SI/TL Affect Main Itemizer TL" option is selected and a percent rate is programmed on the **[SI/TL]** key, the depression of the **[SI/TL]** key also calculates the amount automatically based on the preset rate as a special charge or discount, which is added to or subtracted from the sale total automatically.

### **[PB+], [PB-] Previous Balance Keys**

These keys are used to enter a previous balance in a charge posting operation. If a previous balance is entered, then the operation becomes a charge posting operation, and the **[Chg]** (as the Charge Transfer Key) must be used at the end of the operation. (See the "REGISTERING PROCEDURE FOR SALES" as to the operation in detail to follow the **[Chg]** key in charge posting.)

A previous balance may be entered any time during a sale. The **[PB+]** key is used to post a debit balance and the **[PB-]** key is used to post a credit balance. To initiate a charge posting operation where no previous balance exists, then enter "0" (zero) as a past balance followed by either **[PB+]** or **[PB-]** key.

If the **[ST]** or **[TXBL TL]** key is depressed in a charge posting operation, the displayed or printed amount does not include the previous balance.

Usually, if the **[Chg]** key is depressed to end a charge posting, the displayed and printed amount includes the previous balance. However, it may be programmed not to include the previous balance in the printed amount only.

**RETURNED MERCHANDISE** (Mode Lock: REG or ; or MGR if so programmed)

RTN MDSE →  PRESET DEPT → ---

RTN MDSE →  PRICE | →  OPEN DEPT → ---

RTN MDSE →  PR OPEN →  PRICE | →  PRESET DEPT → ---

RTN MDSE →  PRESET PLU CODE | →  PLU → ---

RTN MDSE →  OPEN PLU CODE | →  PLU →  PRICE | →  AMT → ---

**DOLLAR DISCOUNT** (Mode Lock: REG or ; or MGR if so programmed)

DISCOUNT AMOUNT | →  DOLL DISC → ---

- NOTES:**
1. The  TX/M (  TX1/M and/or  TX2/M ) key may be either before or after the DISCOUNT AMOUNT entry if the tax status of the  DOLL DISC key is reversed.
  2. Unless the "Credit Balance" option has been selected, no discount amount exceeding the sale total will be allowed. If dollar discounting is made on a taxable item, no amount exceeding the taxable item amount will be allowed.
  3. Unless the "Credit Balance" option has been selected, no dollar discount operation outside a sale will be allowed.

**PERCENT DISCOUNT** (Mode Lock: REG or ; or MGR if so programmed)

(1) To discount from the sub-total:

ST →  %- → --- ... to discount by the preset % rate

ST →  RATE | →  %- → --- ... to discount by a manual rate

(2) To discount from an individual department item:

DEPT →  %- → --- ... to discount by the preset % rate

DEPT →  RATE | →  %- → --- ... to discount by a manual rate

- NOTES:**
1. The rate may be entered within the range up to 99.999%. If the rate contains the decimal point, use the  . key.
  2. The above  DEPT keys may be replaced by a PLU entry.
  3. The tax modifier may be used prior to the  %- key if necessary.

**PERCENT CHARGE (SPECIAL FEE ENTRY)** (Mode Lock: REG or )

This operates the same as in the "PERCENT DISCOUNT" operations above, except that the  %+ is used instead of the  %- key.

**IC/VD**    Item Correct / Void Key

This is a dual-function key, i.e., both **ITEM CORR** and **VOID** functions can operate using this key.

**OPEN**    LC/PR Open Key

This is a dual-function key, i.e., both **LC OPEN** and **PR OPEN** functions can operate using this key.

**#/NS**    Non-add Number Print / No-sale Key

This is a dual-function key, i.e., both **#** and **NS** functions can operate using this key.

If this key is depressed with a prior numeric entry, it functions as the **#** key. If depressed without a numeric entry, it functions as the **NS** key.

ITEM CORRECTION (LAST LINE VOIDING) (Mode Lock: REG or )

PRESET DEPT → ITEM CORR → ---

PRICE → OPEN DEPT → ITEM CORR → ---

RTN MDSE → PR DEPT → ITEM CORR → ---

RTN MDSE → PRICE → OPEN DEPT → ITEM CORR → ---

PRESET PLU CODE → PLU → ITEM CORR → ---

OPEN PLU CODE → PLU → PRICE → AMT → ITEM CORR → ---

- NOTES:
1. The  ITEM CORR key depression will delete the last line item already printed within a sale.
  2. The  ITEM CORR key functions to delete the last line item, even if the  DEPT keys in the above example are replaced by the  %+,  %- ,  R/A ,  PO ,  DOLL DISC ,  TAX ,  BTL RTN (as motorized key),  VND CPN ,  PB+ , or  PB- key.

NON-ADD NUMBER PRINT (Mode Lock: REG or )

NUMBER → # → ---

(Check No., Customer No., Credit Card No., etc.)

- NOTES:
1. If the "Non-add Number Print Allowed Only Once in a Sale" has been selected in the system option, a second non-add number entry will result in an error.
  2. The  . key cannot be used to enter a non-add number. Neither can any other key be used along with the  # key to print a non-add number.

SUB-TOTAL (Mode Lock: REG or )

DEPT ...  DEPT →  ST → --- ... The sale total without tax so far is displayed and printed, but the sale is not finalized.

- NOTES:
1. If the  C key is depressed after once obtaining a sub-total, the sub-total amount will be displayed.
  2. If the  ST key is depressed more than once consecutively, the first depression only will print and display the sub-total; further depression will only display but not print the sub-total.

TAXABLE TOTAL (Mode Lock: REG or )

DEPT ...  DEPT →  TXBL TL ... The sale total with tax so far is displayed but not printed. The sale is not finalized.

- NOTES:
1. If the  C key is depressed after the  TXBL TL has once been depressed, the sale total with tax is then displayed.
  2. If the  TXBL TL key is depressed during a charge posting operation, the sale total without tax and without PB is displayed.

- NOTES: 1. Repeat entry is not possible when the **PR OPEN**, **VOID**, or **RTN MDSE** key has been depressed prior to the **DEPT**, **PLU**, or **AMT** key.
2. The **LC OPEN** key is effective on repeat operation.

**QUANTITY EXTENSION** (Mode Lock: REG or **-**)

**QUANTITY** → **@/FOR** → **PRESET DEPT** → ---  
 (May be omitted if the quantity is one-digit.)

**PR OPEN** → **QUANTITY** → **@/FOR** → **PRICE** → **PRESET DEPT** → ---

**QUANTITY** → **@/FOR** → **PRICE** → **OPEN DEPT** → ---

**QUANTITY** → **@/FOR** → **PRESET PLU CODE** → **PLU** → ---

**OPEN PLU CODE** → **PLU** → **QUANTITY** → **@/FOR** → **PRICE** → **AMT** → ---

**NOTE:** The **QUANTITY** may be max. 3-digit integral and 3-digit below the decimal point. (Use the **.** point key for a quantity including the decimal point.) The **PRICE** may be max. 6-digit. The product must not exceed 8 digits for a department and 7 digits for a **PLU** entry.

**SPLIT PRICING** (Mode Lock: REG or **-**)

**PURCHASED Q'TY** → **@/FOR** → **WHOLE PACKAGE Q'TY** → **@/FOR** → **PRESET DEPT**  
 → ---

**PURCHASED Q'TY** → **@/FOR** → **WHOLE PACKAGE Q'TY** → **@/FOR**  
 → **WHOLE PACKAGE PRICE** → **OPEN DEPT** → ---

**PURCHASED Q'TY** → **@/FOR** → **WHOLE PACKAGE Q'TY** → **@/FOR**  
 → **PRESET PLU CODE** → **PLU** → ---

**OPEN PLU CODE** → **PLU** → **PURCHASED Q'TY** → **@/FOR** → **WHOLE PACKAGE Q'TY**  
 → **@/FOR** → **WHOLE PACKAGE PRICE**  
 → **AMT** → ---

- NOTES:** 1. The **.** (point) key is used for **PURCHASED Q'TY** entry if the decimal point is contained. The **WHOLE PACKAGE Q'TY** must be integral.
2. Usually, the fraction of the result is rounded up in split pricing operation. However, it is programmable to round up the fraction of the each item price, i.e. **WHOLE PACKAGE PRICE ÷ WHOLE PACKAGE Q'TY**, in the system option.

CASH TOTAL (Mode Lock: REG or )

DEPT ...  DEPT →  AT/TL ... The drawer opens, the sale total is displayed and printed, and a receipt is issued.

CASH TENDERING (Mode Lock: REG or )

DEPT ...  DEPT → (  TXBL TL ) → | CASH TENDERED | →  AT/TL

CHECK TENDERING (Mode Lock: REG or )

DEPT ...  DEPT → (  TXBL TL ) → | AMOUNT OF CHECK TENDERED | →  CHK TND

CHARGE TOTAL (Mode Lock: REG or )

DEPT ...  DEPT → (  TXBL TL ) →  Chg

MISC. TENDERING (Mode Lock: REG or )

DEPT ...  DEPT → (  TXBL TL ) → | AMOUNT OF MISC.TENDERED | →  MSC TND

**NOTE:** The above operations of CHECK, CHARGE, and MISC Keys are based on the standard programming. If any of those keys are programmed to be used the other way (i.e., Total key instead of Tender key or vice versa,) do the operation as shown in "CASH TOTAL" and "CASH TENDERING".

MULTI-TENDERING, SPLIT-TENDERING (Mode Lock: REG or )

MULTI-TENDERING (Short tendering repeated multiple times by the same media)

DPET ...  DEPT → (  TXBL TL ) → | AMOUNT TENDERED | →  CHK TND

→ | AMOUNT TENDERED | →  CHK TND

→ | AMOUNT TENDERED | →  CHK TND

→ | AMOUNT TENDERED | →  CHK TND

The  CHK TND key may be replaced by any other media key if it is programmed to allow tendering.

STORE COUPON (Mode Lock: REG or ; or MGR if so programmed)

STR CPN →  PRESET DEPT → ---

STR CPN →  COUPON AMOUNT →  OPEN DEPT → ---

STR CPN →  COUPON Q'TY →  @/FOR →  COUPON AMOUNT →  OPEN DEPT → ---

- NOTES: 1. The tax modifier(s),  LC OPEN, and  PR OPEN keys may be operated with the  STR CPN key if necessary.
2. The  ITEM CORR key is effective to delete the store coupon item entered through a department.

VENDOR COUPON (Mode Lock: REG or ; or MGR if so programmed)

Department or PLU entries →  COUPON AMOUNT →  VND CPN → ---

↑  
( TX/M if the  VND CPN tax status is to be reversed.)

NOTE: Quantity extension is not possible with the  VND CPN key.

BOTTLE RETURN (motorized  BTL RTN key) (Mode Lock: REG or ; or MGR if so programmed)

DEPT or PLU entries →  BOTTLE RETURN AMOUNT →  BTL RTN → ---

- NOTES: 1. The BOTTLE RETURN AMOUNT must not exceed the sub-total, or if  BTL RTN key is programmed to be taxable, must not exceed the taxable item total, unless the "Credit Balance" option is selected.
2. The tax modifier(s) may be operated if necessary.

BOTTLE RETURN (non-motorized  BTL RTN key) (Mode Lock: REG or ; or MGR if so programmed)

BTL RTN →  PRESET DEPT → ---

BTL RTN →  BOTTLE RETURN AMOUNT →  OPEN DEPT → ---

- NOTES: 1. Other declaration keys except  RTN MDSE and  VOID may function along with the  BTL RTN key.
2. The tax modifier(s) or  SI/M key may be used to modify each department status through which the bottle return amount is entered. The  BTL RTN key itself does not have tax or SI status.
3. Quantity extension is possible, but split pricing is not.

**PREVIOUS BALANCE, CHARGE POSTING (Mode Lock: REG or [-])**

**1. TO INITIATE CHARGE POSTING WHERE NO PREVIOUS BALANCE EXISTS:**

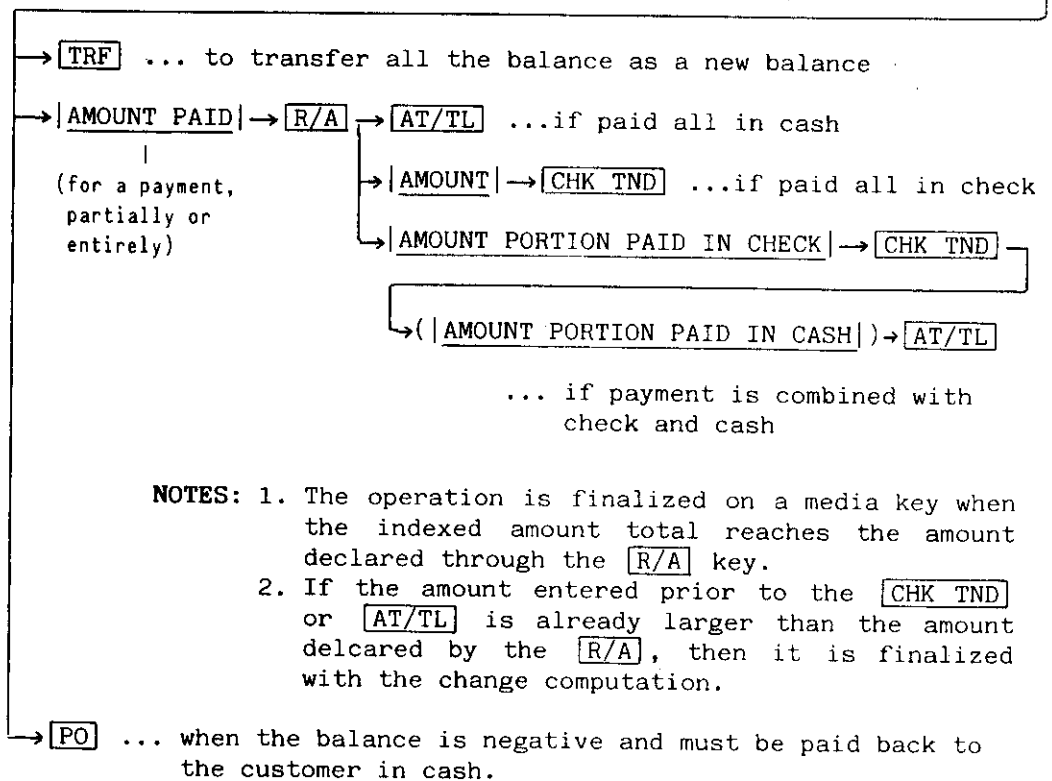

0 → [PB+] (or [PB-]) → --- Follow the second line of the operation below.

**2. CHARGE POSTING WITH A PREVIOUS BALANCE FIRST ENTERED (PRE-SELECT)**

[PREVIOUS BALANCE] → [PB+] (or [PB-] if the balance is negative)

→ (Additional registrations if any) → ([TXBL TL]) → [Chg]

Displays only the sale total with taxes of the additional registrations.	Displays the entire sale total including PB and taxes.
--	--

**NOTES:** 1. The operation is finalized on a media key when the indexed amount total reaches the amount declared through the [R/A] key.  
 2. If the amount entered prior to the [CHK TND] or [AT/TL] is already larger than the amount declared by the [R/A], then it is finalized with the change computation.

**3. PERCENT CHARGE ADDED TO A PREVIOUS BALANCE**

[PREVIOUS BALANCE] → [PB+] → ( [MANUAL RATE] ) → [%+] → ---

**4. CHARGE POSTING WITH A PREVIOUS BALANCE ENTRY DURING SALE (POST-SELECT)**

A previous balance may be entered not only before other sales items but also after or between them if the [Chg] key has not been depressed. Multiple previous balance entries are possible within a sale.

MANUAL TAX ENTRY (Mode Lock: REG or )

TAX AMOUNT | →  TAX

NON-TAXABLE ITEM TOTAL READ (Mode Lock: REG or )

DEPT ...  DEPT →  TAX → --- ... The total of the non-taxable item(s) so far entered within the sale is displayed. It is usually not printed, but programmable to print if required.

SELECTIVE ITEMIZER READ (Mode Lock: REG or )

DEPT ...  DEPT →  SI/TL → --- ... The selective item total is displayed and printed on the receipt and journal.

- NOTES:
1. It may be programmed not to print the selective item total on the receipt.
  2. The content of the selective itemizer is cleared on the depression of the  SI/TL key.
  3. If a percent rate is programmed on the  SI/TL, the amount calculated on the rate is automatically printed and added to or subtracted from the sale.
  4. If the "SI/TL Compulsion" option is selected, only a finalizing operation is allowed after the  SI/TL key depression.

TAX EXEMPTION (Mode Lock: REG or )

DEPT ...  DEPT →  EX → Finalization ... to exempt all the taxes

DEPT ...  DEPT →  TX1/M →  EX → Finalization ... to exempt TAX 1 only

DEPT ...  DEPT →  TX2/M →  EX → Finalization ... to exempt TAX 2 only

DESIGNATED VOID (Mode Lock: REG or ; or MGR if so programmed)

VOID →  PRESET DEPT → ---

|  PRICE TO BE VOIDED | →  VOID →  OPEN DEPT → ---

VOID → |  DEPT PRICE TO BE VOIDED | →  OPEN DEPT

→ |  % CHARGE RATE TO BE VOIDED ALONG WITH THE DEPT PRICE | -  %+

→ ---

VOID → |  PRESET PLU CODE | →  PLU →

VOID → |  OPEN PLU CODE | →  PLU → |  PRICE TO BE VOIDED | →  AMT →

(A  %+ or  %- key operation may follow, just as in the above, if necessary.)

- NOTES:
1. Designated voiding cannot be made on a department that has been preset as a negative department.
  2. Unless the "Credit Balance" option has been selected, voiding to result the sale total into negative will go into an error.

**VALIDATION PRINT** (Mode Lock: REG or )

After entering an item through a transaction key or a media key → Insert a validation slip into the validation slot. Make sure that the "SLP" Lamp is lit. →  VALI  
 DATE

- NOTES:**
1. No other operations can follow until the validation slip once printed is withdrawn.
  2. Validation printing cannot be done after a non-add number or no-sale registration.
  3. The following are the selections that can be programmed in the system option related to validation:
    - (1) PRINT FORMAT
      - a) AMOUNT only
      - b) DATE (MONTH, DAY, YEAR) and AMOUNT
      - c) MONTH, DAY, AMOUNT, and CONSECUTIVE NO.
    - (2) MULTI-VALIDATION or SINGLE-VALIDATION
    - (3) VALIDATION COMPULSORY on various transaction keys

**LOAN** (Mode Lock: REG)

May be repeated if more cash to be loaned.

- NOTES:**
1. Neither the  ITEM CORR nor  VOID key may void any items in a loan operation.
  2. Quantity extension is not possible for loan entries.
  3. The loan media must always be cash and the finalizing key must be the  AT/TL only.

**PICK UP** (Mode Lock: MGR)

May be repeated by alternating the amount and/or media.

- NOTES:**
1. Pick up operations may effect through  AT/TL,  CHK TND,  MSC TND, and  VND CPN.
  2. An amount must be entered before each media key.
  3. Neither the  ITEM CORR nor  VOID key can void any items in a pick up operation.
  4. The register with four Clerk Keys allows this pick up operation and each clerk may pick up individually to affect his/her own clerk IN-DRAWER memory. Meanwhile, each memory turning into negative will not be an error.
  5. On the depression of the  PO key, the drawer opens. Pick up operations may be carried out with the drawer kept open.

TABLE OF X AND Z REPORTS -- Continued --

(REPORT NAME)	(KEY OPERATION)	(CONTENTS & REMARKS)
GTX (Accumulated Totals Read)	GT Lock: GTX <u>AT/TL</u>	All the accumulated totals are printed.
GTZ (Accumulated Totals Reset)	GT Lock: GTZ <u>AT/TL</u>	All the accumulated totals are printed and resettable totals will be cleared when the report has been issued.

NOTE: When the GT Lock  
is turned to GTX  
or GTZ, the Mode  
Lock position is  
disregarded wherever  
it may be.

---

NOTE: No Clerk Key is necessary to issue any of the reports except the  
INDIVIDUAL CLERK READ/RESET reports.

**SETTING OR CHANGING THE STORE/REGISTER NUMBER** (Condition: after a Z reset and a GTZ reset)

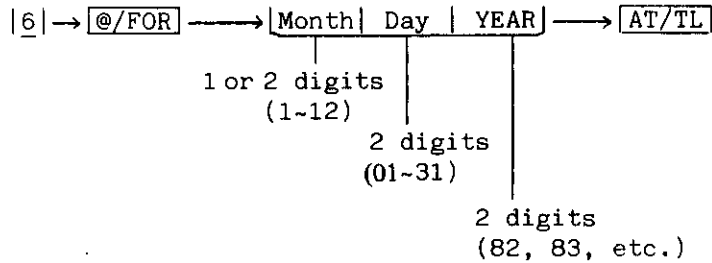

Mode Lock: SET

Key Operation: |NUMBER| → [#]  
(0 ~ 999999)

NOTE: The . key is not allowed in the number entry.

**SETTING THE DATE** (Condition: anytime outside a sale)

Mode Lock: SET Key Operation:

NOTE: The date entry order may be DAY-MONTH-YEAR, if so programmed in the system option.

**SETTING THE TIME** (Condition: anytime outside a sale)

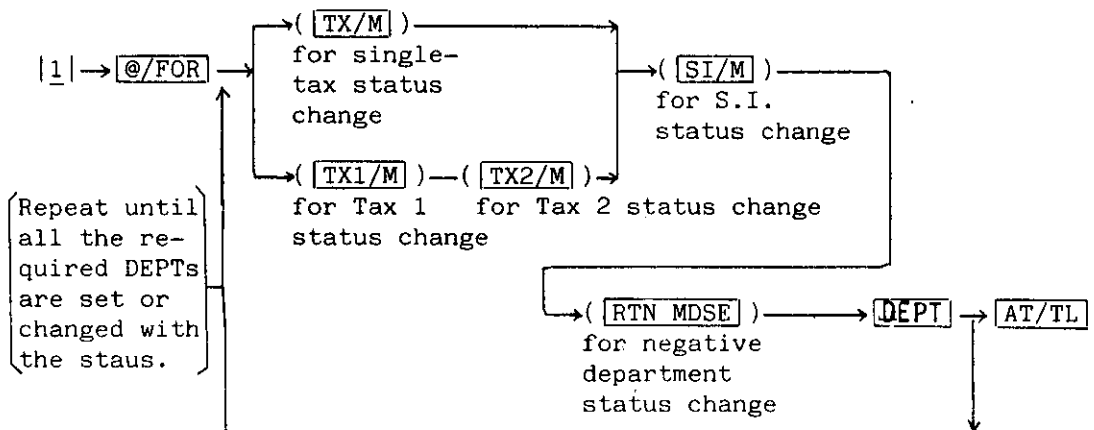

Mode Lock: SET Key Operation:

NOTE: Enter the hour in the 24-hour system.

**SETTING INDIVIDUAL DEPARTMENT STATUS** (Condition: after a Z reset; also requires a GTZ reset and PLU reset if the negative status is to be changed also.)

Mode Lock: SET Key Operation:

- NOTES:** 1. Among **TX1/M** (**TX/M**), **TX2/M**, and **SI/M**, depress the key(s) for the required status change(s) for each department. The **RTN MDSE** is depressed to set or reset the negative DEPT status.
2. Depressing any of the three keys above, the related status reverses. For example, depressing the **TX/M** reverses a non-taxable DEPT to a taxable, or taxable to non-taxable. Each department status is read by the number indicated on the display when each department key is depressed in the above operation. The numbers and their respective statuses are:

- 0: Non-taxable, no S.I. status
- 1: Tax 1 only
- 2: Tax 2 only
- 3: Tax 1 and Tax 2
- 4: S.I. only
- 5: Tax 1 and S.I.
- 6: Tax 2 and S.I.
- 7: Tax 1 and Tax 2 and S.I.

Watching the number, adjust the status by depressing those keys. See the examples below:

STATUS NUMBER BEFORE CHANGE	KEY-IN FOR CHANGE PRIOR TO <b>DEPT</b> KEY	NEW NUMBER AND STATUS OBTAINED
0	→ <b>TX1/M</b>	→ 1(Tax1 only)
0	→ <b>TX1/M</b> <b>TX2/M</b>	→ 3(Tax1 and Tax2)
0	→ <b>TX1/M</b> <b>SI/M</b>	→ 5(Tax1 and S.I.)
	⋮	
	etc.	
1	→ <b>TX1/M</b>	→ 0(Non-txbl, no SI)
1	→ <b>TX2/M</b>	→ 3(Tax1 and Tax2)
1	→ <b>TX1/M</b> <b>TX2/M</b>	→ 2(Tax2 only)
	⋮	
	etc.	
7	→ <b>TX1/M</b>	→ 6(Tax2 and S.I.)
7	→ <b>SI/M</b>	→ 3(Tax1 and Tax2)
	⋮	
	etc.	

3. In order to simplify the status setting operation, each department status may be reset to "0" by entering "0" and depressing the department key. (This can only be done after a GTZ reset and a PLU Z reset.) Then the required status is set simply by depressing the keys **TX1/M** (**TX/M**), **TX2/M**, and/or **SI/M**, only once.

**SETTING OR CHANGING DEPARTMENT PRESET PRICE (Condition: anytime outside a sale.)**

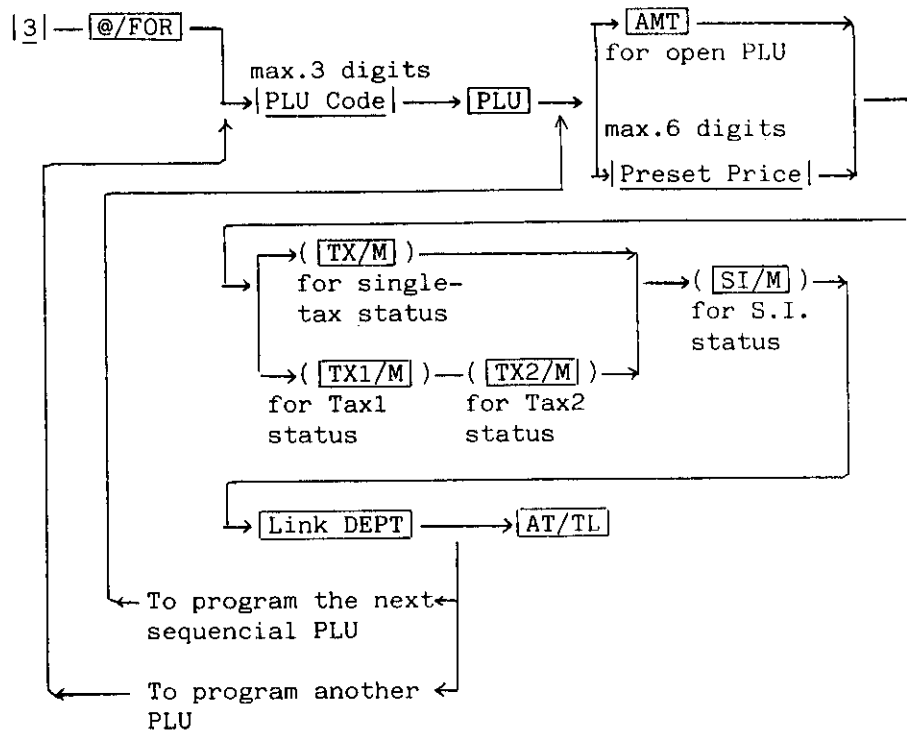

Mode Lock: SET      Key Operation:

- NOTES: 1. To preset the price of "0", enter "0" in place of |Preset Price| in the above operation.  
 2. If no price is entered at the |Preset Price|, the department is set as an open department.

**PROGRAMMING PLU TABLE (Condition: after a Z reset to renew the PLU table, or anytime outside a sale to program additional PLUs)**

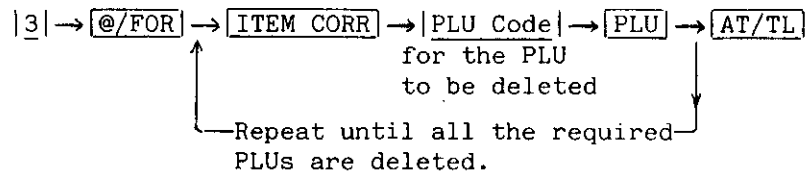

Mode Lock: SET      Key Operation:

- NOTES: 1. As for the functions and operations of the (TX1/M), (TX/M), (TX2/M), and (SI/M), see the description in the SETTING OR CHANGING DEPARTMENT STATUS.  
 2. When the link department has been programmed to be negative, any PLU to be linked to it is automatically set as a negative PLU. Reversing this negative status is not possible unless the link department itself is re-programmed to be positive.  
 3. A maximum of 150 PLUs can be programmed.

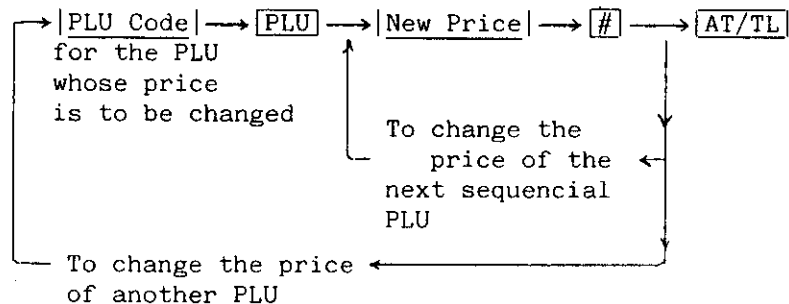

**DELETING INDIVIDUAL PLU (Condition: after a PLU Z reset)**

Mode Lock: SET      Key Operation:

**CHANGING PLU PRESET PRICE (Condition: anytime outside a sale)**

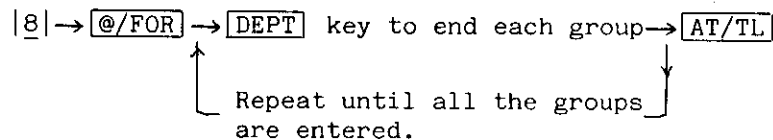

Mode Lock: SET      Key Operation:

- NOTES:**
1. To preset the price of "0", enter "0" in place of the New Price in the above operation.
  2. Attempt to preset a price into a PLU that has been programmed as an open PLU will result in an error.
  3. In this operation, changes of PLU status, its link department, etc. are not possible.

**SETTING DEPARTMENT GROUPS (Condition: after a Z reset and a GTZ reset)**

Mode Lock: SET      Key Operation:

- NOTES:**
1. A maximum number of groups as many as the department keys installed on the keyboard may be set.
  2. To reset all the groups once set, operate in the SET mode:

|8| -> @/FOR -> |0| -> AT/TL

2. For TAX 2 Table programming, follow the same procedure in the 1), 2), or 3) above, using the **TX2/M** instead of the **TX1/M**.
3. If both TAX 1 and TAX 2 tables are programmed, the TAX 1 must be set first. The TAX 1 table entry will automatically reset both the TAX 1 and TAX 2 tables that have been programmed.
4. No second depression of the **ST** key is allowed within one tax table programming.

**SETTING NON-TAXABLE LIMIT AMOUNT (for a certain area only)**  
(Condition: after a Z reset)

This may be programmed only when one tax modifier key (**TX/M**) is installed. The tax levied when exceeding this limit amount will be calculated by the TAX 1 table.

Mode Lock: SET      Key Operation:

|9| → |@/FOR| → |Non-taxable Limit Amount| → |AT/TL|

- NOTES:**
1. If this program has been set, the tax is calculated and added to the sale total which exceeds the limit amount even when the sale is entirely composed of non-taxable items.
  2. To reset the limit amount once set, enter "0" in place of the |Non-taxable Limit Amount| in the above operation.
  3. This tax calculation program will be disregarded when the sale total turns out to be negative.

ex.) In case the limit amount "\$3.25" is set:

Case 1: Normal Department Entry: (Mode Lock: REG)

|326| → |non-taxable DEPT| → |AT/TL|

..... The entered amount \$3.26 is greater than the limit amount \$3.25. It will therefore be taxed.

Case 2: Returned Merchandise Entry: (Mode Lock: REG)

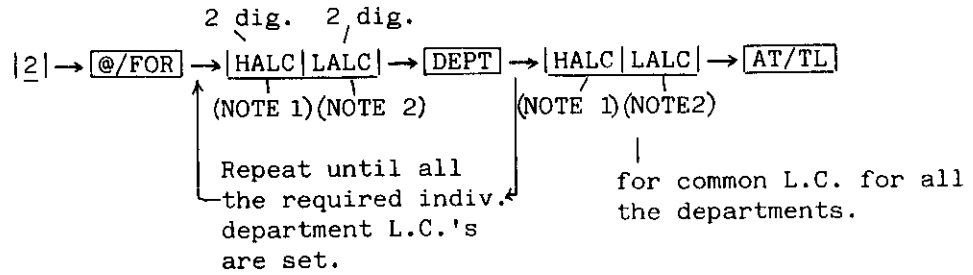

|RTN MDSE| → |326| → |non-taxable DEPT| → |AT/TL|

..... The non-taxable total is negative. The tax already levied will therefore not be returned.

**SETTING THE LISTING CAPACITY OF DEPARTMENT**

(Condition: after a Z reset)

Mode Lock: SET      Key Operation:

NOTE 1: HALC.....High Amount Listing Capacity

ex.)

NOTE 2: LALC.....Low Amount Listing Capacity

ex.)

The amount range allowed to be entered:

equal to or smaller than the HALC,  
and larger than the LALC

- NOTES:** 1. If the individual listing capacity of a department has been set, it prevails over the common listing capacity of all the departments.  
2. To reset an individual department listing capacity, enter "0" before the **DEPT** key in the above operation. Then the common listing capacity of all the departments, if pre-programmed, will prevail.

**SETTING TENDER LISTING CAPACITIES** (Condition: after a Z reset)

Mode Lock: SET      Key Operation:

**NOTE:** To reset the tender listing capacity of a media key once programmed, enter "0" and depress the media key in the SET mode.

**SETTING BOTTLE RETURN AMOUNT LIMIT** (Condition: after a Z reset)

Mode Lock: SET      Key Operation:

|Bottle Return Limit Amount| → **[BTL RTN]**

max 4 digits (up to 9999¢)

- NOTES:** 1. If quantity extension is operated with the **[BTL RTN]** key, the multiplier is subject to the amount limit not the product.  
2. To reset the limit amount once set, operate in the SET mode:

|0| → **[BTL RTN]**

**SETTING VENDOR COUPON AMOUNT LIMIT** (Condition: after a Z reset)

Mode Lock: SET      Key Operation:

|Vendor Coupon Limit Amount| → **[VND CPN]**

max.4 digits  
(up to 9999¢)

**NOTE:** To reset the limit amount once set, operate in the SET mode:

|0| → **[VND CPN]**

**SETTING DOLLAR DISCOUNT LIMIT** (Condition: after a Z reset)

Mode Lock: SET      Key Operation:

|Dollar Discount Limit Amount| → **[DOLL DISC]**

max. 4 digits  
(up to 9999¢)

**NOTE:** To reset the limit amount once set, operate in the SET mode:

|0| → **[DOLL DISC]**

**PROGRAMMING THE PRESET RATES OF **[%+]** AND **[%-]** KEYS** (Condition: anytime outside a sale)

Mode Lock: SET      Key Operation

- 1) To set a rate of a integral value:

|RATE| → **[%+]**

|RATE| → **[%-]**

max. 2 digits

- 2) To set a rate containing the decimal point:

|Integral Portion| **[.]** |Decimal Portion| → **[%+]**

max. 2 digits      max. 3 digits → **[%-]**  
(up to 99.999%)

3) To reset the rate once set:

|0| → [%+]

|0| → [%-]

### SETTING THE % RATE ON [SI/TL] KEY (Condition: after a Z reset)

This operation is effective only when the "SI/TL AFFECT M.I. TL" option is selected.

Mode Lock: SET      Key Operation:

[% RATE] → [SI/TL]

max. 99.99%

(Use the [.] key if  
the rate contains  
a decimal point.)

- NOTES: 1. The fraction resulted from the % calculation is processed in the same way as selected for the [%+] and [%-] keys.  
2. To reset the rate once set, operate in the SET mode:

|0| → [SI/TL]

### SETTING HOURLY RANGES (Condition: after a Z reset)

Mode Lock: SET      Key Operation:

- NOTES: 1. A maximum of 24 hourly ranges may be set.  
2. To change the table of hourly ranges once set, partially or entirely, do the entire setting operation over again.  
3. To reset the hourly range table once set:  
Mode Lock: SET, |4| → [ @/FOR ] → |0| → [ # ] → [ AT/TL ]  
4. Do not set an hourly range across 24:00, such as "from 23:00 to 1:00".

## INSTALLING AND REMOVING THE RECEIPT PAPER ROLL

Fig. 1

Fig. 2

Fig. 3

Fig. 4

### ■ Installing the Receipt Paper

- 1) Open the paper cover and install a new paper roll of the recommended type.
- 2) Install it with the receipt paper coming from the bottom of the roll (see Fig. 1).
- 3) Fold the paper end at a right-angle and thread it through the receipt paper inlet (see Fig. 2).
- 4) Depress the R.F. key until the paper end appears at the receipt paper outlet. If the paper ends do not come out of the receipt paper outlet after the R.F. key is depressed, for a while, the paper is not properly threaded through the paper feed mechanism. Push the paper end through the receipt paper inlet while keeping the R.F. key depressed (see Fig. 3).

### ■ Removing the Receipt Paper

When receipts with a red line are issued, the register is running out of the receipt paper. Replace the receipt paper roll according to the procedure described below.

- 1) Open the paper cover.
- 2) Remove the paper core from the paper holder, pull out the release lever and pull the paper core upwards to remove the old paper tail (see Fig. 4).

## INSTALLING AND REMOVING THE JOURNAL PAPER ROLL

Fig. 5

Fig. 6

Fig. 7

### ■ Installing the Journal Paper Roll

- 1) Fold the paper end at a right angle and thread it through the journal paper inlet.
- 2) Depress the J.F. key until a paper length of about 40 cm is out of the journal paper guide and wind it around the journal receiving shaft two or three turns in the direction of the arrow (see Fig. 5).
- 3) Reinstall the journal receiving shaft in the register (see Fig. 6).

### ■ Removing the Journal Paper

When the register is cleared or has run out of the journal paper, remove the journal paper according to the procedure described below.

- 1) Open the paper cover.
- 2) Depress the J.F. key until unprinted journal paper appears.
- 3) Lift up the printed journal paper with the journal receiving shaft and tear the unprinted portion. Do not use scissors to cut the journal paper, so that the torn ends can be matched later, if necessary (see Fig. 7).
- 4) The printed journal roll wound onto the receiving shaft, can be removed, by sliding it off.

## WHEN A POWER FAILURE OCCURS

When power is restored, the register will display the last item entered before the power failure if the item was entered through a motorized key (such as **DEPT**, media keys, etc.). In this case, continue the registering operation. However, if the register displays "FAIL" when the power is restored, it indicates that the last item entry was not completed (i.e., only numeric keys or a declaration key such as **RTN MDSE** were operated but not any motorized key). In this case, first depress the **C** key to clear the "FAIL" condition, and then do the registering operation again from the numeric or declaration key entry. In the event of a power failure, be sure to check the receipt before it is handed to the customer.

## OPENING AND REMOVING THE DRAWER

Fig. 8

Fig. 9

### ■ Opening the Drawer (Fig. 8)

The drawer opens automatically when a registration is made. In the event of a power failure or other troubles the drawer can be opened in the following manner.

- 1) Insert the drawer release key into the drawer release lock and turned the key clockwise 45 deg. The drawer will now open.
- 2) The drawer release key can be taken out by returning it to the original position.

### ■ Removing the Drawer (Fig. 9)

- 1) To remove the drawer, lift it up by the stoppers attached on both sides and pull it out.
- 2) When installing the drawer, the rollers on the rails of the register and push it all the way in.
  - The coin case can be removed from the drawer, by lifting it up at the front.

## REPLACING THE INK ROLLER

When the receipt and journal paper print is too light, replace the ink roller in the following manner.

Fig. 10

Fig. 11

Fig. 12

- 1) Place the control lock in the LOCK position and remove the stamp cover (see Fig. 10).
- 2) Remove the ink roller holder (see Fig. 11).
- 3) Remove the ink roll (see Fig. 12). When removing it, wear a vinyl glove or cover the ink roll with a strip of vinyl sheet to avoid contact with the hands.

## REPLENISHING INK

When the store message is printed too lightly, replenish the ink in the following manner.

Fig. 13

Fig. 14

- 1) Place the control lock in the LOCK position and remove the stamp cover (see Fig. 10).
- 2) Remove the ink roll holder (see Fig. 11).
- 3) Pull out the store message stamp in the direction of the arrow (see Fig. 13).
- 4) Apply ink to the replenishment pad at the back of the store message stamp. The amount of refilling should be adjusted according to the density of the printed message, but the limit of 2 cc should not be exceeded. (The ink bottle supplied contains 5 cc of ink). (see Fig. 14).
- 5) Reassembly is the reverse procedure.

## SPECIFICATIONS

Size.....	460mm(width) x 441mm(depth) x 413mm(height)
Weight.....	Approx. 23kg
AC power required.....	AC 117V $\pm$ 10% 60Hz (Varies depending on each area.)
Power consumed.....	60W
Size of receipt and journal tape.....	45mm(width) x 100mm(diam.)
Ambient temperature.....	0 <sup>o</sup> - 40 <sup>o</sup> C, 10 - 90% (Relative Humidity)

## BEFORE CALLING FOR SERVICE

It is your dealer's primary concern to give full satisfaction and better service to our customers. So if any problems arise in connection with the operation of this cash register, contact your TEC representative listed on this page. However, before calling for service, please check the following points once again.

- In case the register is inoperative with a blank display and the printer will not turn.
  - Is the register power switch turned on?
  - Is the power cord of the register connected to the wall socket properly?
  - Is AC power applied to the outlet? (Plug in a lamp or light fixture to check.)
  - Has the fuse blown, or has the circuit breaker been turned off?
- In case the receipt does not come out of the receipt outlet.
  - Can the red lines on the receipt or journal paper be seen?  
In this case, replace the receipt or journal tape with a new roll immediately.
  - The receipt paper is jammed at the receipt cutter. In this case remove the printer cover and check the installation of the receipt paper.
