CONVENIENCE

- USB Input
- Simultaneous DVD Playback and VHS Record
- Front A/V Inputs
- Universal Glow Remote with TV Controls
- Commercial Skip

ADVANTAGE TOSHIBA

Combines the picture and sound advantages of a progressive scan DVD player with the convenient recording and playback options of a video cassette recorder.

High-Definition Multimedia Interface (HDMI™) brings Home Theater to the next level by streaming multi-channel digital audio and digital video information together on one cable to digital televisions and monitors with a compatible input.

Video Up-conversion displays a pure digital signal at either 720p or 1080i, so as to match the resolution of the HDTV monitor to eliminate signal degrading AD-D/A conversions.

HD JPEG will provide the ability to view high Megapixel images in their enhanced resolution when using HDMI™ and an HDTV display device.

Simultaneous DVD playback and VHS record for watching a DVD while recording a TV program.

Storing, sharing and transporting data is simplified by a USB Interface, which provides simple multimedia playback of mass storage classification devices such as USB Memory Sticks, memory card readers and digital cameras.

TECHNOLOGY & BENEFITS

VIDEO

High-Definition Multimedia Interface (HDMI™) - HDMI™ (High-Definition Multimedia Interface) is the first industry-supported, uncompressed, all-digital audio/video connection. HDMI™ provides the best interface between a DVD player and compatible products, such as a digital television (DTV). When matched with a compatible TV, this single interconnecting cable combines: Multi-channel audio, uncompressed digital video, intercommunication between devices and simple control Protocols. This single cable connection ensures that all signals remain in their pure digital form and secure by use of High Definition Copy Protection (HDCP) regardless of signal output resolution.

Video Upconversion - 720p/1080i - HDMI™ can support uncompressed digital video up to HDTV level resolution. Thus, the player makes use of this conduit by up-converting the standard DVD picture resolution to nearly HDTV-quality with output resolutions of 720p or 1080i. This makes a DVD player with an HDMI™ connection the perfect match for today's digital televisions. And because this conversion is performed in the player, the signal remains free from excessive digital-to-analog conversion artifacts.

Digital Cinema Progressive (3:2 Pulldown) - Delivers the smoothest, most film-like images to any progressive scan television, such as an HD-compatible one, and ensures maximum resolution.

HD JPEG – Thanks to a specialize chipset (MPEG Decoder and Scaler) and the HDMI™ interface with an HDTV display, Megapixel JPEG images are displayed in their enhanced resolution, versus the image compression that takes place with component interfaces.

AUDIO

WMA & MP3 Playback - Recordable Compact Discs (CD-R & CD-RW) with music stored in either the Windows Media™ Audio or MP3 file formats are compatible with the DVD player.

CONVENIENCE

Commercial Skip - After a program has been recorded, pressing the SKIP button once during playback will automatically advance the tape 30-seconds forward bypassing recorded commercials. Pressing the skip button on the remote again will advance the recorded tape for another 30-seconds for a total of 60-seconds.(30 sec x 6 Maximum).

USB - Toshiba Combo models featuring a USB Interface will support "mass storage classification devices" for simple multimedia playback. These formats include JPEG, WMA, MP3, and DivX (unencrypted). These devices include: most USB memory sticks and memory card readers, certain digital cameras, and certain other USB devices with storage capability.

**CD-R/CD-RW discs recorded by CD-DA method can be played back. Some CD-R/CD-RW discs may be incompatible due to laser pick-up and disc design. DVD-R discs recorded by DVD Video method can be played. Some DVD-R discs may be incompatible due to laser pick-up and disc design. JPEG discs may be incompatible due to different recording format or condition of disc.*
