# 1. CAUTIONS ON USE AND INSTALLATION

- **Handling the unit.**

Do not drop, jolt, or vibrate, as this may result in damage to the unit. This may cause problems. Treat the camera cables carefully to prevent cable problems, such as breaks in the cable and loose connections.

- **Install the camera in a location free from noise.**

If the camera or the cables are located near power utility lines or a TV, etc. undesirable noise may appear on the screen. In such a case, try to change the location of the camera or the cable wiring.

- **Operating ambient temperature and humidity.**

Do not use the camera in places where temperature and humidity exceed the specifications. Picture quality will deteriorate and internal parts may be damaged.

Be particularly careful when using in places exposed to direct sunlight. When shooting in hot places, depending on the conditions of the object and the camera (for example when the gain is increased), noise in the form of vertical strips or white dots may occur.  
This is not a malfunction.

- **When not using the camera for extended periods of time.**

Switch the control unit off and disconnect the power supply.

- **Avoid using or storing the camera in the following places:**

- Places filled with highly flammable gas.
- Places near gasoline, benzene, or paint thinner.
- Places subject to strong vibration.
- Places containing chemicals (such as pesticides), rubber or vinyl products for extended periods of time.

- **Do not shoot intense light.**

When intense light enters, vertical stripes or transverse bands may appear on the screen. This is not a malfunction. Ghosts may occur when there is an intense light near the object. In this case, change the shooting angle.

- **Moire**

A moire pattern is an interference pattern generated when two repetitive line patterns overlap. This is not a malfunction. Eliminating the repetitive line patterns, or aligning the two patterns, will eliminate the moire.

- **Handling of the protection cap.**

Keep the protection cap away from children as they may pose a choking hazard. The protection cap protects the image sensing plane when the lens is removed from the camera head, do not discard.

- **When cleaning the camera.**

Unplug the power source before cleaning. Clean with a soft dry cloth only. Do not use any chemicals or chemically treated cloths. Chemicals may damage coatings, printing or the paint work. When cleaning the lens, use lens cleaning paper.

- **Installation without a tripod.**

Before installing the camera, make sure that the location can withstand the total weight of the camera.

If this is not the case, reinforce the area to prevent the unit from dropping, which may result in damage to the unit or personal injury.

- **This camera is for indoor use only.**

## 4. CONNECTION

### 4. 1 Standard Connection

### 4. 2 Cautions on Connection

- When connecting the camera cables, be sure to turn off the CMOS color camera and any other equipment connected to it.
- For DC supply connecting to DC IN 12V terminal, when not using AC adapter: AC-Y415A (not supplied), use UL listed and/or CSA approved ungrounded type AC adapter with the specifications described below. Please purchase connectors separately.

Power supply voltage : 12V DC  $\pm$  10%  
Current rating : More than 830mA  
Ripple voltage : Less than 50mV (p-p)  
Connector : HR10A-7P-4S by HIROSE electronics Co. Ltd  
Pins 1, 2 : 12V  
Pins 3, 4 : GND

- We suggest using a C mount mega pixel lens. When using other lenses, the best performance of this camera may not be obtained.  
(For example, low resolution may occur, focus may be lost through the range of a zoom lens, and flare, ghosting may occur.)  
Furthermore, in order to avoid damaging the mounting portion of the camera head, use a lens which has projection dimension from the mounting base of less than 0.433" (11mm.)
- Please use a good quality, low resistance cable for the HD-SDI terminal.

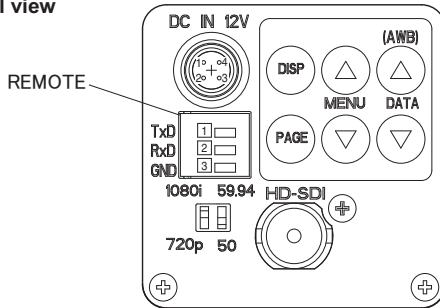

### 4. 3 Connection on Rear Panel

There are DC IN 12V, REMOTE terminals and HD-SDI terminal (BNC connector) for basic connection on the rear panel.

Please use them as needed.

\* For connecting to the REMOTE terminal, use a shielded cable. Connect the cable correctly or damage may occur to the camera.

## 5. OPERATION

- ① Refer to the item "4. CONNECTION", and connect the equipment correctly.
- ② Turn on the connected equipment and the camera.
- ③ Aim the lens at the object, adjust the lens iris adjustment, focus adjustment, etc.
- ④ Refer to the item "5.1 White Balance", make the adjustment.
- ⑤ Refer to the items "5.2 Gain", "7. MODE SETTING BY THE ON SCREEN DISPLAY", select the necessary items.

### 5. 1 White Balance

For white balance adjustment of this unit, ATW (Automatic Tracking White balance), AWB (Automatic White Balance) and MANUAL (Manual white balance) adjustments are provided. Refer to the item "7.3 (3) WHT BAL (White Balance)", select the desired mode.

	<b>ATW (Automatic Tracking White Balance)</b>	<b>AWB (Automatic White Balance)</b>	<b>MANUAL (Manual White Balance)</b>
<b>Outline</b>	The camera measures the object color temperature and adjusts the white balance automatically.	Adjust white balance by displaying the white object inside the area set by AWB menu and pressing the [DATA UP] button.	Adjust the white balance manually using the WHT BAL menu while shooting the white object.
<b>Features</b>	Tracks variations of color temperature and adjusts white balance automatically.	Measurement accuracy is higher than ATW. This mode is effective when shooting under less variations of color temperature.	Artificial white balance setting. The manual adjustment is most effective under shooting conditions with no color temperature variation.
<b>Notes</b>	If illumination is low, white balance may not be corrected.		Adjustment is performed by confirming with a monitor.

(1) AWB(Automatic White Balance)

- ① Set the MODE to AWB on the WHT BAL menu.  
Perform the C.TEMP (color temperature conversion) setting, if necessary.  
(Refer to the item "7.3 (3) WHT BAL (White Balance)".)  
  - 3200K: Appropriate for indoor shooting.
  - 5600K: Appropriate for outdoor shooting.
- ② If the color bar pattern is displayed on the screen or if the index menu/menu is displayed, press the [DISP] button to disable the color bar pattern or the character display on the menu.
- ③ Shoot a known white object entirely in the area set by the AWB menu (refer to the item "7.3 (3) (3.1) (d) Confirming the contents of the zone area selected by AWB" ) and press [DATA UP] button for approx. 1 second.
- ④ The character AWB blinks on the screen when the AWB starts.
- ⑤ The character AWB stops blinking when the AWB finishes, and the result is displayed for approx. 1 second.

Display	Meaning
<b>AWB OK</b>	Automatic white balance adjustment finished correctly.
<b>AWB NG LEVEL LOW</b>	Automatic white balance adjustment cannot be performed because the video level is too low. Adjust the video level by increasing the illumination or opening the lens iris.
<b>AWB NG LEVEL HIGH</b>	Automatic white balance adjustment cannot be performed because the video level is too high. Adjust the video level by decreasing the illumination or closing the lens iris.
<b>AWB NG C. TEMP LOW</b>	Automatic white balance adjustment cannot be performed because the color temperature is too low. If the C.TEMP is set to 5600K, set to 3200K. If the message appears with the C.TEMP set to 3200K, change the illumination or use a color temperature conversion filter.
<b>AWB NG C. TEMP HIGH</b>	Automatic white balance adjustment cannot be performed because the color temperature is too high. If the C.TEMP is set to 3200K, set to 5600K. If the message appears with the C.TEMP set to 5600K, change the illumination or use the color temperature conversion filter.
<b>AWB NG</b>	Automatic white balance adjustment cannot be performed for other reasons. Such as no white area is included in an object, etc.

(2) MANUAL(Manual white balance)

- ① Set the MODE to MANUAL on the WHT BAL menu.  
(Refer to the item "7.3 (3) WHT BAL (White Balance)".)
- ② Shoot a known white object, set the white balance by adjusting the levels of R GAIN and B GAIN on the menu, confirming with a monitor or a vector scope.  
(Refer to the item "7.3 (3) (3.3) Changing gain in MANUAL mode".)

## 5. 2 Gain

When the image is dark even if the lens iris is open, change the gain (video gain) to get the desired video level. For gain adjustment of the unit, MANUAL (Manual), OFF (0 dB) modes are provided. Select the mode on the GAIN menu. (Refer to the item "7.3 (2) GAIN (Video gain)".)

### (1) MANUAL(Manual gain)

Gain adjustment is performed on the GAIN menu. The adjustment range is from 0 to 18dB in 1dB steps. (Refer to the item "7.3 (2) (2.1) Changing gain in MANUAL mode".)

### (2) OFF

Gain is fixed at 0 dB.

### **Note:**

**White, red, green, or blue dots may occur when the gain is increased. This is not a malfunction, just certain characteristics of the CMOS sensor becoming more visible.**

## 7. MODE SETTING BY THE ON SCREEN DISPLAY

Various settings can be controlled on the unit by using the on screen menu displayed on the monitor. The contents once set are memorized in the scene files (A, B, C, D, E) selected, so if the power turns off, it is unnecessary to set the values again when using the unit next time. When the setting is performed, select the menu of the item to be set.

### 7. 1 Using the Menus

When the unit is powered on, the normal screen showing only the video signal appears. Change the output to each screen (video signal output, color bar screen, index menu, and menus) by using the [DISP], [PAGE], [MENU UP], [MENU DOWN], [DATA UP], and [DATA DOWN] buttons.

\* A menu is selected when pushing the [PAGE] button after moving the "→" on the screen by the [MENU UP], [MENU DOWN] button while the Index menu is displayed.

### 7. 2 Scene File

Five scene files (A, B, C, D, E) are available as user memories for this unit. These are chosen depending on shooting conditions. By pressing [DATA UP], [DATA DOWN] buttons while [DISP] button is pressed and the index menu is displayed, the camera operation is changed immediately from the currently selected scene file to the next.

**Note:**

**Scene file does not contain the data of set "OPTION."**

**(Refer to the item "7.3 Menus" (6) "OPTION" for the "OPTION" setting.)**

## 7. 3 Menus

- Select the menu to change the setting by referring to the item "7.1 Using the Menus".
- When the [MENU UP], [MENU DOWN] buttons are pressed, the "→" on the screen moves up and down. Move the "→" to the item whose setting you wish to change.

### (1) SHUTTER (Electronic shutter)

The electronic shutter has three modes; AUTO, MANUAL, SS(Synchro Scan).

Press the "Page" button to enter the Shutter Page. Use the "Data Up/Down" buttons to select the Shutter Mode.

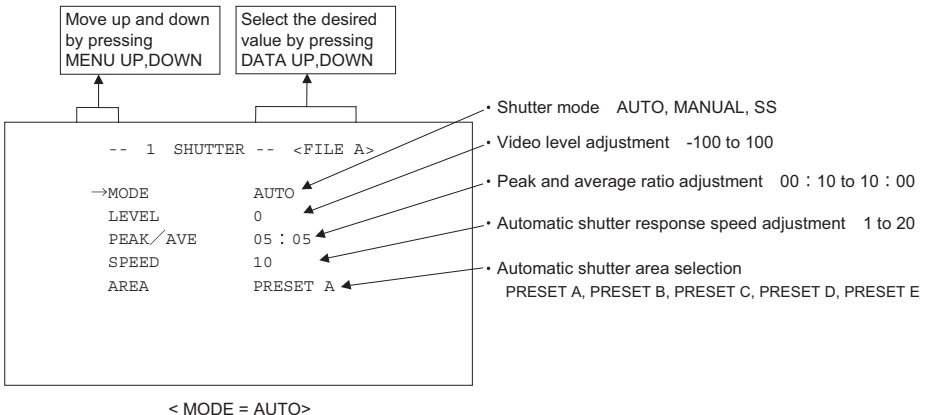

- AUTO** : The exposure time is controlled automatically to obtain the video level set.
- MANUAL** : It is possible to select the exposure time from eight speed settings; OFF (1/60s : 59.94 Hz setting, 1/50s : 50 Hz setting), 1/100s, 1/125s, 1/250s, 1/500s, 1/1000s, 1/2000s, 1/4000s.
- SS** : Shutter speed can be set by the horizontal scanning time (1H) unit.

#### Note:

- When setting a rapid shutter speed, sensitivity degrades according to the speed. When a discharging light such as fluorescent lamp, etc. is used for the illumination, the flicker may be large.
- When an object is moving rapidly, the monitor may display the image distorted and/or blurred. This is not a malfunction, just certain character of the rolling shutter system.
- When the shutter speed setting is high, the hue may change depending on shooting conditions or objects.
