FCC STATEMENT

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/ TV technician for help.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

- 1) This device may not cause harmful interference.
- 2) This device must accept any interference received, including interference that may cause undesired operation.

CE Mark Warning

This is a class B product. In a domestic environment, this product may cause radio interference, in which case the user may be required to take adequate measures.

Package contents

The following contents should be found in your box:

- > One TD-8811/TD-8811B External ADSL2+ ROUTER
- > One AC power Adapter for TD-8811/8811B External ADSL2+ ROUTER
- > One Resource CD for TD-8811/TD-8811B External ADSL2+ ROUTER, including:
 - This User Guide
 - Quick installation Guide Program
 - Other Helpful Information
 - USB driver
- Quick installation Guide
- One RJ45 cable
- Two RJ11 cable
- > One ADSL splitter (only available for TD-8811)
- > One USB cable

P Note:

If any of the above items are damaged or missing, please contact the retailer from whom you purchased the TD-8811/TD-8811B External ADSL2+ ROUTER for assistance.

Chapter 1. Product Overview

The TP-LINK TD-8811/TD-8811B External ADSL2+ ROUTER is the latest product designed and manufactured by TP-LINK TECHNOLOGIES CO., LTD. With TP-LINK's excellent circuit design and high quality production, we guarantee its high performance, great stability and easy to use.

The TD-8811/TD-8811B is a complete plug-and-play solution. With standard Ethernet interface, it can be directly connected to any 10M/100M Ethernet devices, support Auto-MDI/MDIX.

The TD-8811/TD-8811B not only uses html (web mode through Ethernet port) to configure the router but also uses external utility software, too. You can download it from our website (<u>http://www.tp-link.com</u>).

1.1 Product main specification

- > High speed and asymmetrical data transmit mode, provides safe and exclusive bandwidth
- Supports All ADSL2+ industrial standards
- Compatible with all mainstream DSLAM (CO)
- Firmware upgradeable
- Provides integrated access of internet and route function which face to SOHO users
- Advanced DMT modulation and demodulation
- Real-time Configuration and device monitoring
- Quick response semi-conductive surge protection circuit, provides reliable ESD and surge-protect function

1.2 Supporting protocol

- G.992.1 (G.dmt) Annex A/B
- G.992.2 (G.lite) Annex A/B
- ANSI T1.413
- G.992.3 (ADSL2) Annex A/B compliant
- G.992.5 (ADSL2+) Annex A/B compliant
- ADSL dual latency (fast path and interleaved path)
- I.432 ATM physical layer compliant
- -Supports RFC2364 (PPPoA)
- -Supports RFC2516 (PPPoE)
- -Supports RFC1483 (EoA) (Bridged *and route)
- -Supports RFC1577 (IPoA)

P Note:

- 1) TD-8811 supports Annex A, TD-8811B supports Annex B
- 2) "*" Needs the third-party software.

1.3 Transmit data-rate

- Max download data-rate: 24Mbps
- Max upload data-rate: 1Mbps
- Max line length: 6Km

1.4 ATM property

- > AAL0, AAL5, OAM, RM, and raw cell types supported
- Direct hardware support for 4 Receive VCs, with additional RX VCs and TX VCs supported in software
- > Full 24-bit Virtual Path Identifier (VPI) and Virtual Circuit Identifier (VCI)

1.5 System support

- Support PVC
- ➢ Support NAT、DHCP and so on
- Support IEEE 802.3、IEEE 802.3u
- > Support 10Base-T/100BASE-TX full-duplex or half duplex Ethernet
- Support Auto-MDIX
- Support USB 1.1 device interface

1.6 Working environment

- ➢ Operating temperature: 0 ℃~40 ℃
- ➤ Storage temperature: -40 °C ~70 °C
- Humidity: 10%~90% (non-condensing)

1.7 Electric parameter

- Adaptor power Output: 9VAC/0.8A, 50Hz or 60 Hz
- Power consumption: 4W Maximum

Chapter 2. Hardware Installation Guide

The TD-8811/TD-8811B maintains three separate interfaces, one Ethernet, one USB interface and one ADSL interface. The Router should not be located where it will be exposed to moisture or excessive heat. Place the Router in a location where it can be safely connected to the various devices as well as to a power source.

2.1 System requirement

Confirm your computer has been installed with networking interface card (NIC) before connecting ADSL2+ ROUTER to your computer, with the operating system supporting the TCP/IP protocol.

2.2 LED explanation

The front panel of ADSL2+ ROUTER includes one power indicator (RED) and five function indicators (GREEN), as explained in chart 1-1:

Indicator	Description	Status	Function Details
Bower	Power	On	Power OK
FOWEI	ruwei	Off	Power fail
		On	There is data transmitting or receiving on WAN
Act	Data		port
		Off	No data is transmitting or receiving on WAN port
		On	There is a mistake when ADSL is transmitting
Alarm	Mistake		data or receiving data
		Off	ADSL works normally
		Slow flash	Self-detecting when power up
ADSL	ADOL	Quick flash	Connecting to the telecom network
	518105	On	Connection to telecom network is OK
		On	LAN port works normally
LAN	Ethernet	Off	Connection on LAN port is abnormal
		Flash	Data is transmitting or receiving on LAN port
		On	Connection to telecom network is OK
USB	USB status	Off	Connection on USB port is abnormal
		Flash	Data is transmitting or receiving

Chart 1-1

2.3 Rear-panel

- > **ON/OFF**: Turn on/off the ADSL2+ Router's power.
- POWER (9VAC/0.8A input): please do not use any unknown power adapter, otherwise your ADSL2+ Router may be damaged.
- RESET (reset default): Press the reset button, then turn on the Router's power (keep the button pressed) for at least three seconds, it will restore the settings to the default factory configuration.
- > LAN: Connect with your computer's NIC.
- > USB: Connect with your computer's USB interface
- > LINE (WAN): Connect to the MODEM Port of Splitter or connect the telephone line.

2.4 Hardware installation procedures

The procedure to install the Router can be described in the following steps:

First Step: Connect the MODEM port of Splitter with the LINE port of the TD-8811/TD-8811B ADSL2+ ROUTER by telephone line.

Second Step: Connect category 5 cable with RJ45 jacks to ADSL2+ Router's LAN port and your computer's NIC. Or connect USB cable to ADSL2+ Router's USB port and your computer's USB interface.

Third Step: Plug one end of the AC Power Adapter into the Power jack on the Ethernet ADSL2+ Router and the other end to a standard electrical outlet.

Last Step: Check the line connection to see if everything is ready. Power up finally.

Figure 2-1

Chapter 3. System Configuration

3.1 Computer Configuration

- 1. Connect the cable according to Chapter 2, turn on the power.
- Change the IP address of your PC (Figure 3-1) : Open TCP/IP Properties of the LAN card in your PC, enter the IP address as 192.168.1.* (* is any value between 2 to 254, Network mask is 255.255.255.0, Gateway is 192.168.1.1, DNS address is the value provided by ISP).

Internet Protocol (TCP/IP) Propertie	25 ?	×
General		_
You can get IP settings assigned auton this capability. Otherwise, you need to a the appropriate IP settings.	natically if your network supports ask your network administrator for	
O <u>O</u> btain an IP address automatical	ly	
─● Use the following IP address: ──		
<u>I</u> P address:	192.168.1.168	
S <u>u</u> bnet mask:	255 . 255 . 255 . 0	
Default gateway:	192.168.1.1	
C Obtain DNS server address autor	natically

	Ad <u>v</u> anced	
	OK Cancel	

Figure 3-1

P Note:

- 1) Users of Windows 98 can open TCP/IP Properties according to the following: Right-click (Mouse) Network Neighbor -> Choose Properties -> Double-click TCP/IP PCI Fast Ethernet Adapter.
- 2) The users of Windows 2000/NT/XP can do the following: Right-press Network Neighbor ->Choose Properties->Right-press Local Connection ->Choose Properties->Double- click Internet Protocol (TCP/IP).
- 3) The words may be different with this guide in fact.

You can check whether your configuration is successful through PING command. Enter "Ping 192.168.1.1".

If the screen looks like the following, the connection between your computer and TD-8811/8811B is OK now.

Pinging 192.168.1.1 with 32 bytes of data: Reply from 192.168.1.1: bytes=32 time=1ms TTL=254 Ping statistics for 192.168.1.1: Packets: Sent = 4, Received = 4, Lost = 0 (0% loss), Approximate round trip times in milli-seconds: Minimum = 0ms, Maximum = 1ms, Average = 0ms

Figure 3-2

If the screen looks like the following, the connection fails. Repeat the previous steps again.

```
C: \Documents and Settings \Administrator>ping 192.168.1.1

Pinging 192.168.1.1 with 32 bytes of data:

Request timed out.

Request timed out.

Request timed out.

Ping statistics for 192.168.1.1:

Packets: Sent = 4, Received = 0, Lost = 4 (100% loss),
```

```
Figure 3-3
```

3.2 Login

Startup Internet Explorer, and enter 192.168.1.1, then enter default user name(admin), password(admin), When ADSL2+ connection is OK, you will see the Figure 3-4.

	TD-8811/8811B	External ADSL2+ ROUTER

P Note:

All of the above setting is under windows XP OS.

3.4 Software Dial

If TD-8811/TD-8811B CPE work in bridged (RFC 1483 Bridged) mode when it connects Internet. You must install dial software on your PC. There are some software working on Windows in market, example for EnterNet3000, RASPPPoE and WinPeET.

How do I set up the connection in the windows XP?

- \triangleright The users of Windows XP can click the "start->All Programs->Accessories-> **Communications->New connection wizard**", then click **Next** to enter the setting page.
- > Please select the "connect to the internet", and then click the Next button to enter the next page and select the "set up my connection manually", click Next to enter the next page.
- > Please select the "connect using a broadband connection that requires user name and password", click Next to type the name of your ISP in the current page, and then click Next.
- > Type an **ISP account name** and **password**, if you have forgotten an existing account name or password, please connect with your ISP, click Next.
- > To create the connection and close this wizard, click finish to add a shortcut to this connection to your desktop.

When you assess the internet by ADSL, double-click this shortcut of dial connection in your desktop, type the account name and password, then click **connect** to connect the Internet.

3.5 USB Configuration

If you use the USB interface, First, you must install the USB's drive to the computer. You can obtain the drives from the provided CD or download from our website. (<u>http://www.tp-link.com</u>)

USB Drive installation procedures

If the hardware is installed before the computer is Power On. Please turn on the computer and enter the operating system, Then the operating system will identify the device. If the hardware is installed after the computer is Power On, the desktop will display the information about finding the new hardware.

Then you will see the Figure 3-25 require install software for USB Device, select 'Install from a list or specific location (Advanced)'and Clicking the **next** button to enter the next step, then Figure 3-26 will display.

Figure 3-25

Found New Hardware Wizard			
Please choose your search and installation options.			
 Search for the best driver in these locations. 			
Use the check boxes below to limit or expand the default search, which includes local paths and removable media. The best driver found will be installed.			
Search removable media (floppy, CD-ROM)			
Include this location in the search:			
E:\Documents and Settings\zff\Desktop\tp-adsl-usb 📀 Browse			
O Don't search. I will choose the driver to install.			
Choose this option to select the device driver from a list. Windows does not guarantee that the driver you choose will be the best match for your hardware.			
< Back Next > Cancel			

Figure 3-26

Select the 'search removable media(floppy, CD-ROM····)' and click the **next** button, then Figure 3-27 is available. The driver will be searched and installed.

P Note:

You must insert the CD first.

Found New Hardware Wizard					
Please w a	it while the wizard searches				
⊞ ⊒i	TP-Link ADSL USB Remote NDIS Device				
	<pre></pre>				

Figure 3-27

After that, you will see the Figure 3-28. The installation completes, click **Finish** to close the installation.

Please refer to <u>chapter 3.1</u> to finish the IP configuration for USB connect. Then you could use the USB device.

Found New Hardware Wizard					
	Completing the Found New Hardware Wizard The wizard has finished installing the software for: TP-Link ADSL USB Remote NDIS Device				
	< Back Finish Cancel				

Figure 3-28

P Note:

- 1) All of the above settings are under windows XP.
- 2) If you want to pull out the USB device you must disconnect the network of USB first.

Chapter 4: Advantage management setup

In order to satisfy our customer's needs, we offer an excellent Web management interface. Feel free to utilize the Advantage application and online software upgrades. The functions of the Web management interface are as follows:

- Upgrade software
- Modify the default IP address of the port of LAN(192.168.1.1)
- Modify the login password
- Configure DHCP
- > Check the information of IP and the operation status
- Configure the NAT function
- Configure the DNS parameters
- Configure RIP(Routing Information Protocol)
- Configure IP route
- Configure Security rule
- Configure DSL parameter

P Note:

If you want to acquire further details, please access our website (<u>www.tp-link.com</u>) and consult the User Guide of TD-8811/TD-8811B.

Appendix A: FQA

- 1. What related parameters are required to acquire ISP when you want to access the internet by ADSL2+ ROUTER?
 - 1) Dial user: Connection protocol, User name, Password, Value of VPI/VCI, Encapsulation mode of AAL5 and so on.
 - Static IP user: Connection protocol, WAN IP Address, Subnet Mask, Gateway, Value of VPI/VCI, Encapsulation mode of AAL5 and so on.

2. About Connection protocol, VCI/VPI, Encapsulation mode of AAL5

- This product supports the PPP protocol over ATM (PPPoA), PPP over Ethernet (PPPoE), MAC Encapsulation Routing (MER), IP over ATM (IPoA) and Bridging. You may be used with any one of the five protocols above. Because the ISP in different areas supports different protocol, you must choose the protocol which is supported by your ISP.
- 2) The VPI is the English abbreviation of the Virtual Path Identifier, the VCI is the English abbreviation of the Virtual Channel Identifier, the value of VCI/VPI must be compatible with the value that provided by ISP.
- 3) Encapsulation mode of AAL5 include: LLC/SNAP and VC_MAX(often using LLC/SNAP).

3. The LAN's and the NIC's LED both are bright, but why the configuration interface is inaccessible?

- 1) Use the order of **ping 192.168.1.1** to check the Accuracy of connection.
- 2) Check the Accuracy of working NIC.
- 3) Whatever the setup of the IP address on your computer (if you close the DHCP function, you can't obtain the IP address automatically, must specify the IP address of your computer manually).
- 4) Run the winipcfg order in the windows 95/98(run the ipconfig order in the windows 2000) to check whether setup the IP address, subnet mask, default gateway by DHCP.
- 5) Resume the ADSL2+ Router's default configuration if necessary.

4. Have completed all configurations, but can't dial through computer

- 1) Check the indicator of ADSL2+, it should be working normally.
- Check the accuracy of parameter of value of VPI/VCI, Encapsulation mode of AAL5 and so on, whether you need to install the software of dial the number, such as Winpoet, Enternet.
- 3) This product has the PPP dial procedure inside, so you will not need to use the dial software if your protocol is PPPoA or PPPoE, ADSL2+ Router will connect automatically.
- 4) You can check whether your ADSL2+ ROUTER succeeds in connection with **PING** command.

Appendix B: Default Configuration

USER NAME	admin
PASSWORD	admin
IP ADDRESS	192.168.1.1
VPI/VCI	0/32,1/33,0/35,0/100,0/200,8/35,8/81

Appendix C: Contact Information

For more help with the installation or operation of the TP-LINK TD-8811/TD-8811B External ADSL2+ ROUTER, please contact us.
