Patents and Licenses

Visit www.novatelwireless.com/patents for a complete list of all Novatel Wireless patents.

Software License

Proprietary Rights Provisions:

The software drivers provided with this product are copyrighted by Novatel Wireless and/or Novatel Wireless' suppliers. Although copyrighted, the software drivers are unpublished and embody valuable trade secrets proprietary to Novatel Wireless and/or Novatel Wireless' suppliers. The disassembly, decompilation, and/or Reverse Engineering of the software drivers for any purpose is strictly prohibited by international law. The copying of the software drivers, except for a reasonable number of back-up copies is strictly prohibited by international law. It is forbidden by international law to provide access to the software drivers to any person for any purpose other than processing the internal data for the intended use of the software drivers.

U.S. Government Restricted Rights Clause:

The software drivers are classified as "Commercial Computing device Software" and the U.S. Government is acquiring only "Restricted Rights" in the software drivers and their Documentation.

U.S. Government Export Administration Act Compliance Clause:

It is forbidden by US law to export, license or otherwise transfer the software drivers or Derivative Works to any country where such transfer is prohibited by the United States Export Administration Act, or any successor legislation, or in violation of the laws of any other country.

Trademarks and Service Marks

Novatel Wireless is a trademark of Novatel Wireless, Inc., and the other trademarks, logos, and service marks (collectively the "Trademarks") used in this user manual are the property of Novatel Wireless or their respective owners. Nothing contained in this user manual should be construed as granting by implication, estoppel, or otherwise, a license or right of use of Novatel Wireless or any other Trademark displayed in this user manual without the written permission of Novatel Wireless or its respective owners.

- Novatel Wireless, and the Novatel Wireless logo are all trademarks of Novatel Wireless, Inc.
- MiFi[®] and the MiFi logo are registered trademarks of Novatel Wireless, Inc.
- Microsoft and Windows are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.
- Apple[®], Mac[®], and Mac OS[®] are trademarks of Apple, Inc., registered in the U.S. and other countries.
- Linux[®] is the registered trademark of Linus Torvalds in the U.S. and other countries.

The names of actual companies and products mentioned in this user manual may be the trademarks of their respective owners.

Getting Started

Overview Components Power Management Caring for Your Device

Overview

Congratulations on your purchase of the Verizon Jetpack[™] Mobile Hotspot - MiFi[®] 4620L for 4G LTE[™] and Wi-Fi!

With the MiFi 4620L you can access 4G LTE networks for faster apps, uploads and downloads. Connect up to ten Wi-Fi enabled devices to the Internet at once - laptops, tablets, e-readers, gaming consoles and more* - and experience download speeds of up to 100 Mbps**.

The MiFi 4620L is backwards compatible to 3G networks, ensuring reliable connectivity when you need it most.

Features

- Connect to High-Speed Wireless Data (4G LTE, 3G CDMA and GSM)
- Wi-Fi Connectivity
- Manage Wireless Network Activity
 - **MiFi Settings** is an easy-to-use web-based interface that allows you to manage, monitor, and customize your Wi-Fi and 4G LTE connection.
- Advanced Embedded Antenna Design
- VPN Capability
- Auto Connectivity Options

Package Contents

The Verizon Wireless MiFi 4620L package includes:

- MiFi 4620L
- 1500mAh Standard Lithium Ion Battery
- Wall Charger
- Protective Pouch
- Verizon Wireless Brochures

^{*} When multiple users are connected to the MiFi 4620L, all of their data usage will be aggregated and applied to the mobile broadband customer.

^{**} Manufacturer's rated peak theoretical speed. Actual speeds may vary.

System Requirements

- Compatible with all major operating systems
- Works with the latest versions of browsers, including Android[™], Chrome[™], Firefox[®], Internet Explorer[®], Safari[™] and Mobile Safari[™]

To use Wi-Fi mode, your computer needs Wi-Fi capability and Internet browser software only.

Your device must have proper data service to function properly. (See <u>Using the Device for the First</u> <u>Time</u> on page 12.)

Components

- **0** Scroll Button Scrolls left or right through available menu options.
- Service Status Indicator (LED) Shows the device status, including connection and error states. (See <u>Service Status Indicator (LED) States</u> on page 6.)
- **Micro USB Connector** The wall charger connects here.
- **G** Selection Button Use to select a menu option.
- Status Display Provides connection and battery status, network signal strength, roaming status, and the number of users connected with Wi-Fi. (See <u>Service Display States</u> on page 7.)
- **6** Power Button Powers the device on and off.

- **I** SIM Card Slot The SIM card is installed here.
- **2** Battery Compartment The battery contacts connect here.
- **3** Master Reset Button Insert a paperclip in the small hole to reset the device to factory settings. (See <u>How do I reset the MiFi 4620L back to factory settings?</u> on page 82.)
- **Battery Removal Divot** When the battery is installed, insert a fingernail here and lift to easily remove it.
- S Network Name and Password Label The pre-configured network name (SSID) and Wi-Fi/ Admin password are printed on a label inside the back cover of your device.

Service Status Indicator (LED) States

LED Color	Status	Description
No Light	Off	The device is powered off or otherwise is not receiving power.
Yellow	Solid Blinking	The device is in power down mode. The device is powered off and also charging the battery.
Green	Slow Blinking Blinking	The device is powered on; 4G service is available but not connected or connected while dormant. The device is powered on and connected to the 4G network and transmitting data.
Violet	Slow Blinking Blinking	The device is powered on; 3G 1X or EV-DO service is available but not connected or connected while dormant. The device is powered on and connected to a 3G 1X or EV-DO network and transmitting data.
Red	Blinking	If this occurs during power up, no SIM card is inserted. All other times, this indicates an error or a SIM card failure.
White	Blinking	The device is powered on and the firmware is being upgraded. This LED only applies to over-the-air firmware updates.

Service Display States

Display Icon	Status	Description
No icons	The display is off, and the LED is also off.	The device is powered off or otherwise is not receiving power.
Network signal strength	An antenna with 0-5 bars.	More bars indicate stronger signal.
Message status	An SMS message logo.	If the logo is present, there are unread SMS messages.
Battery final status	A battery outline filled with bars; while charging, the bars cycle from 0-4 bars. When fully charged, the bars don't move.	More bars indicate more battery life.
	When the battery is very low, the battery outline blinks on and off every two seconds. Charge the battery immediately.	
Connected Device status	2 A connected device logo.	If the logo is present, the number of connected devices is displayed.
Roaming status	A device roaming logo.	If the logo is present, the device is currently roaming.

Power Management

Your device will work from its battery or when plugged into a power source.

- **Battery** Charge the battery by plugging in the wall charger. While the battery is charging the battery icon bars blink. When the battery is fully charged, the battery icon is solid.
- **Wall charger** You can use the device when the charger is plugged into a wall socket. The MiFi battery charges while it is plugged in.

Before using the MiFi 4620L, read the battery safety information in the "Safety Hazards" section of this guide. (See <u>Proper Battery Use and Disposal</u> on page 92.)

Like any electronic device, the device must be handled with care to ensure reliable operation. Novatel Wireless recommends the following guidelines:

- Protect the device from liquids, dust, and excessive temperatures.
- Do not apply adhesive labels to the device; they might cause the device to potentially overheat and they might alter the performance of the antenna.
- Store the device in a safe place when not in use.

2

Using the MiFi 4620L

Accessing the Network Using the Device for the First Time Connecting to the MiFi Device Using the Device After Setup is Complete

Accessing the Network

4G LTE

With LTE bandwidth (700 MHz) you can get the broadband-like speed you require to work efficiently outside the home or office. You can connect to the Internet, access your corporate intranet, check your email and download attachments at speeds that are up to 10 times faster than 3G*.

4G Mobile Broadband with LTE*

- Download: typical download speeds of 5-12 Mbps
- Upload: typical upload speeds of 2-5 Mbps

3G Mobile Broadband with EVDO Rev. A**

- Download: typical download speeds of 600 kbps-1.4 Mbps with bursts up to 3.1 Mbps.
- Upload: typical upload speeds of 500-800 kbps with bursts up to 1.8 Mbps.

GSM Mobile Broadband with HSPA+, WCDMA, EDGE and GPRS***

• Download and upload speeds depend on the roaming network.

<u>WiFi 802.11b/g/n</u>

- 802.11b uses the 2.4 GHz frequency with a bandwidth of 11 Mbps.
- 802.11g uses the 2.4 GHz frequency with a bandwidth of 54 Mbps.
- 802.11n uses the 2.4 GHz frequency with a bandwidth of 150 Mbps.

- * Speeds shown are those published by Verizon Wireless, Inc. and are theoretical in nature. Actual throughput speed and coverage may vary. Speed claims not applicable when roaming.
- ** Mobile Broadband Rev.A speed claim based on Verizon Wireless network tests with 5 MB FTP data files without compression. Your Mobile Broadband Rev. A enabled device will indicate coverage when you are in a Mobile Broadband Rev. A service area. When outside the Rev. A service area, your wireless device will revert to Mobile Broadband Rev. 0 (typical download speeds will be 400–700 Kbps and upload speeds will be 60–80 Kbps).
- *** Subject to Customer Agreement, Calling Plan, credit approval, and other service terms.

Using the Device for the First Time

To get started, follow these steps:

- Confirm your computer meets the minimum system requirements. (See <u>System</u> <u>Requirements</u> on page 3.)
- **2** Assemble the wall charger. (See <u>Assemble the Wall Charger</u> on page 13.)
- Install the 4G LTE SIM card. (See Install the 4G LTE SIM Card on page 13.)
- Insert and charge the battery. (See <u>Insert and Charge the Battery</u> on page 15.)
- **5** Turn on the device. (See <u>Power the MiFi 4620L On and Off</u> on page 18.)
- Connect the device to your computer using Wi-Fi. (See <u>Connecting to the Device</u> on page 19.)
- Connect to MiFi Settings. (See <u>Connect to MiFi Settings</u> on page 19.)

Assemble the Wall Charger

The wall charger comes with a removable plug. You need to connect it before using the MiFi device for the first time. To assemble the wall charger, follow these steps:

Remove the plug and the wall charger from the package.

2 Slide the plug on to the wall charger.

Install the 4G LTE SIM Card

To install your new 4G LTE SIM card, follow these steps:

- Open the cover located on the underside of the MiFi 4620L.
- **2** Remove SIM card from the outer card, being careful not to touch the gold-colored contacts.
- **6** Hold the card as shown with the gold-colored contact points facing down.
- Insert the SIM card into the slot. The 4G SIM card MUST remain in the SIM card slot when in use.

Your SIM (Subscriber Identity Module) card is a small rectangular plastic card that stores your phone number and important information about your wireless service.

CAUTION! Do not bend or scratch your SIM card. Avoid exposing your SIM card to static electricity, water, or dirt.

Remove the 4G LTE SIM Card

To remove the 4G LTE SIM card, follow these steps:

1 Open the SIM card cover located on the underside of the MiFi 4620L. Press down firmly on the small black tab to the left side of the SIM card slot.

2 Apply firm pressure to the right side of the SIM card and push to slide the card over the small black tab. A piece of transparent tape can be attached to the end of the SIM card once it has been pushed over the small black tab to complete lifting the card out of the slot.

NOTE Should your 4G SIM card be lost or damaged, contact your network operator.

Insert and Charge the Battery

IMPORTANT Before you use your device, be sure to charge the battery for at least three hours to ensure a full initial charge.

To insert and charge the battery, follow these steps:

Insert your fingernail into the indention on the back cover and lift to open the battery compartment, located on the bottom of the device. Set the cover aside.

Align the gold-colored contacts on the battery with the gold-colored contacts on the device and gently slide the battery into place.

8 Replace the cover by setting it on the device where the notches align, and then press on the cover until it clicks into place.

9 Plug the other end of the AC wall charger into the appropriate electrical outlet. Charge for at least three hours.

CAUTION! Use only batteries and chargers with your device that have been approved by Novatel Wireless. The failure to use approved batteries and chargers may increase the risk that your device will overheat, catch fire, or explode, resulting in serious bodily injury, death, or property damage.

You are now ready to connect your computer or other Wi-Fi device to the MiFi 4620L.

Remove the Battery

To remove or replace the battery, follow these steps:

1 Remove the cover to open the battery compartment, located on the bottom of the device. Set the cover aside.

Insert your fingernail into the battery removal divot and lift the battery out of the battery compartment.

Battery Tips

WARNING! Use only batteries and chargers with your device that have been approved by Novatel Wireless. Always use Novatel Wireless original batteries and chargers. The warranty does not cover damage caused by non-Novatel Wireless batteries and/or chargers.

- It normally takes at least three hours to fully charge the battery with the wall charger.
- Do not use sharp objects to access the battery well, this may damage the device and the battery.
- Do not use excessive force to remove the battery or to access the battery well.
- The battery discharges more rapidly as additional devices access your MiFi device.
- Battery life depends on the network, signal strength, temperature, features, and accessories you use.
- Your device also works with an approved car charger.
- New batteries or batteries stored for a long time may take more time to charge.
- When charging your battery, keep it near room temperature.
- When storing your battery, keep it uncharged in a cool, dark, dry place.
- Never expose batteries to temperatures below -20°C (4°F) or above 60°C (140°F).
- Never leave the device in an unattended vehicle due to uncontrollable temperatures that may be outside the desired temperature for this device.
- Some batteries perform best after several full charge/discharge cycles.
- It is normal for batteries to gradually wear down and require longer charging times. If you notice a change in your battery life, it is probably time to purchase a new battery.

IMPORTANT Whenever you remove or insert either the battery or the SIM card, ensure your MiFi device is not connected to any device or power source. Never use tools, knives, keys, pens or any type of object to force the door open or to remove the battery. Using any of these types of objects could result in puncturing the MiFi battery.

WARNING! The failure to use approved batteries and chargers may increase the risk that your device will overheat, catch fire, or explode, resulting in serious bodily injury, death, or property damage. To avoid risk of explosion, never dispose of batteries in a fire.

Power the MiFi 4620L On and Off

Power On

• Press the Power Button until the LED illuminates green or violet.

Power Off

• Press and hold the Power Button until the display shows **MiFi Powering Off** and the LED turns yellow.

Activate Your Device

Your SIM card should come pre-activated and ready to connect. Insert the SIM card, power up the MiFi device, and connect.

If your SIM card did not come pre-activated or you need to re-activate your SIM card, you can:

- go to your network operator's retail store
- contact your network operator's customer service department

IMPORTANT The MiFi 4620L requires an activated account with a wireless carrier to function.

Now you can connect your computer to your MiFi 4620L using Wi-Fi.

Connect to MiFi Settings

To connect to the MiFi 4620L, follow these steps:

Turn on your computer and turn on the MiFi 4620L.

The MiFi 4620L's LED should be slow blinking green or violet, indicating the device is in service and ready to connect. The MiFi 4620L broadcasts its own wireless network.

On your computer, use the Wi-Fi manager (Windows) or the AirPort menu bar icon (Mac OS X) to connect wirelessly to the MiFi 4620L wireless network.

The steps to connect to a Wi-Fi network vary depending on your operating system and whether you use the native application or third-party software. Generally, you click an icon in the Windows notification area where you can select View Available Wireless Networks, or click the Airport icon in the menu bar on a Mac. If you are unfamiliar with wireless networking on your computer, consult the computer help system.

- Connect to the network name found on the sticker that appears on the back of the MiFi device as well as on the Activation Guide. The network name or SSID is in the format MiFi4620L Jetpack XXXX Secure, where XXXX are four digits unique to your device.
- Enter the 8-digit Wi-Fi/Admin password. The password appears on the back of the MiFi device as well as on the Activation Guide.

If you are entering the SSID manually, please add the word "Secure" after the SSID. For example, "MiFi4620L Jetpack 1A3B Secure".

5 You can change device settings by connecting to the MiFi Settings on-device web page. (See Configuring MiFi Settings on page 22.)

IMPORTANT Charge the battery completely before you connect your computer to your MiFi device. (See Insert and Charge the Battery on page 15.)

You can use the MiFi 4620L as a wireless mobile hotspot to connect your computer and/or (up to a total of ten) other Wi-Fi enabled devices to the mobile broadband network.

You can customize the MiFi 4620L's settings using MiFi Settings. (See <u>Configuring MiFi Settings</u> on page 22.)

Normal Use

- The MiFi 4620L is powered on as soon as you press the power button and the display turns on.
- The LED on the device becomes green (4G) or violet (3G) and blinks according to the connection speed.

Setting up a Temporary Hotspot

See <u>Setting Up a Temporary Hotspot</u> on page 31 for more information about setting up a temporary hotspot.

Security for the MiFi 4620L

The MiFi 4620L comes from the factory with security enabled. A sticker on the back panel includes the name of the wireless network (SSID) and the network password. You can change the security settings in the MiFi Settings Wi-Fi screen. (See <u>Wi-Fi</u> on page 28.)

MiFi Settings

Configuring MiFi Settings Login Quickstart Wi-Fi Network Security System Advanced You can configure the Wi-Fi settings on your device using the easy-to-use MiFi Settings web-based User Interface (MiFi Settings). It allows you to manage, monitor, and customize your Wi-Fi and 4G LTE mobile broadband connection.

The following sections describe how to connect to MiFi Settings, as well as each screen and the corresponding functionality.

Connect to MiFi Settings

To connect to MiFi settings, follow these steps:

1 Turn on your computer and turn on the MiFi 4620L device.

MiFi 4620L's LED should be slow blinking green (4G) or violet (3G), indicating the device is in service and ready to connect. MiFi 4620L broadcasts its own wireless network.

On your computer, use the Wi-Fi manager (Windows) or the AirPort menu bar icon (Mac OS X) to connect wirelessly to the MiFi 4620L wireless network.

Tip!

The steps to connect to a Wi-Fi network vary depending on your operating system and whether you use the native application or third-party software. Generally, you click an icon in the Windows notification area where you can select **View Available Wireless Networks,** or click the Airport icon in the menu bar on a Mac. If you are unfamiliar with wireless networking on your computer, consult the computer help system.

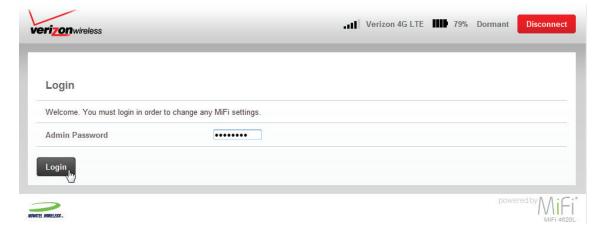

- Click **Connect** and enter the Wi-Fi/Admin password found on the sticker on the back of the device and on the Activation Guide.
- Open your browser and type <u>http://vz.hotspot</u> or <u>http://192.168.1.1</u> into the address bar. Then press the **Enter** or **Return** key. The Welcome Page opens. (See <u>Login</u> on page 23.)
- **S** Type your Wi-Fi/Admin password in the Login field in the upper right corner of the window and click **Login**. The Login page changes to the Home page. (See <u>Wi-Fi</u> on page 65.)

The Login page is the first page you see after connecting and prior to logging in. It contains the status bar, the **Connect/Disconnect** button, and the **Login** button. You can access more information after you log in.

Change Admin Passwo	ord						
This password is used to login to	his MiFidevice.						
Current Admin Password			(4 ~ 6	4 characters)			
New Admin Password			(4 ~ 6	4 characters)			
Confirm New Password							

Change Admin Password

To change the administration password used to login to the MiFi device from the QuickStart screen, follow these steps:

- Enter your current password in the Current Admin Password box.
- 2 Enter your new password in the New Admin Password box.
- 3 Re-enter your new password in the Confirm New Password box.
- **G** Click **Save & Next**.

- **Save** Click this button to save any changes made to the password settings.
- **Cancel** Click this button to cancel any changes made to the password settings.

Wi-Fi Settings

The Wi-Fi Settings screen has the following sections:

- Network Name (SSID) The name of the MiFi 4620L device's wireless network.
- **Security** The security type used to encrypt the wireless network.
- Wi-Fi Password Displays the current Wi-Fi password.
- Available Wi-Fi Connections Displays the number of available Wi-Fi connections.

To change your Wi-Fi security, password and/or connection settings, follow these steps:

• Select the desired settings from the security, Wi-Fi password and/or available Wi-Fi connections drop down menu(s).

2 Click **Save & Restart**.

QuickStart	Wi-Fi Network Security System Advanced	Logo (
	Admin Password Wi-Fi Settings

WiFi Password	1070 ·	
	8 ~ 63 ASCII characters	
	For greater security, use a mixture of digits, upper case, lower case, and other symbols.	

IMPORTANT You should use the Secure profile with the WPA/WPA2 Personal Mixed Mode security setting whenever possible.

Choosing a Profile

Your device comes with the Secure profile already set. The following profiles come with your device:

- **Secure** This is the profile you should use most of the time. You can set up this profile with the security measures you need to use your device safely.
- **Temporary Hotspot** This profile allows you set up a temporary hotspot to allow others nearby (maximum of ten) to go online at the same time.
- **Open** This profile is not secure and should be avoided.

Setting Up a Temporary Hotspot

You can use the device to set up a temporary hotspot to allow a maximum of ten connections to your MiFi 4620L at one time.

The Temporary Hotspot profile is pre-set on your device. It generates a temporary network name (SSID) and network key so you can allow others to connect to your device without having to change your secure profile's security settings. To set up a Temporary Hotspot, follow these steps:

2 Go to the Wi-Fi screen. (See <u>Wi-Fi</u> on page 28.)

On the Wi-Fi screen, select Temporary Hotspot as the selected profile.

A new (temporary) network name (SSID) and network key (Wi-Fi passkey) appears. Typically the temporary network name has the word "Temp" added.

Security		
WiFi Password		ОК
(

Click Generate to create a new network name and network key if you do not want to use the preset temporary profile.

You should write down the new network name and network key.

(See Wi-Fi on page 65.) for more information about changing profiles.

Changing to a Different Profile

To use a different profile, follow these steps:

- **1** Click the Selected Profile pop-up menu and choose a different profile.
- **2** Wait a moment for the web page to update with the Wi-Fi settings for the selected profile.

6 Click **Save** to change to the new profile settings.

IMPORTANT Changing the profile ends all Wi-Fi connections to MiFi 4620L, including the current connection to MiFi Settings. You **must** re-connect your computer to MiFi 4620L using the new profile's Wi-Fi settings.

Be sure to write down the new network key (Wi-Fi passkey) before you finish changing the profile.

Updating the Current Profile

To update the current profile, follow these steps:

- 2 Make changes to the profile settings.
- Click Save.
 - If you change the Network Name (SSID), security method, or network key you will need to re-connect with the Wi-Fi manager on your computer.
 - If you change other settings, your computer will re-connect automatically after MiFi 4620L restarts.
 - Tip!
- Some Wi-Fi clients become confused if the security is changed and the network name is not. If you change security settings and do not get asked for the new network key when you try to reconnect, delete the existing old network name from your Preferred Networks list on your wireless device. Then you can reconnect.

IMPORTANT Changing the Network Name (SSID), security method, or network key (Wi-Fi passkey) ends all Wi-Fi connections to MiFi 4620L, including the current connection to MiFi Settings. You **must** re-connect your computer to MiFi 4620L using the new profile's Wi-Fi settings.

Be sure to write down the new network key (Wi-Fi passkey) before you finish changing the profile.

Updating a Profile Not Currently in Use

To update a profile not currently in use, follow these steps:

- Change the Selected Profile pop-up menu to a different profile.
- **2** Wait a moment for the web page to update with the Wi-Fi settings for the selected profile.
- **6** Change the settings.

NOTE The Temporary Hotspot profile cannot be changed directly. You must click **Generate** to generate a new network name (SSID) and network key.

Olick Update Profile to save the changes.

OR

Click **Save** to update the profile and also make it the current profile.

Buttons

- **Save** Click this button to save any changes made to your current profile. •
- **Cancel** Click this button to cancel any changes made to your current profile.

Connected Devices

The Connected Devices section has the following:

- **Hostname** The network name for the connected device (if available).
- **Date/Time** The date/time the device was detected by the network.
- MAC Address The Media Access Controller (MAC) or physical address for MiFi 4620L.
- IP Address The IP address for MiFi 4620L.

			Global IPv6 2600:1012:b003:fc0e:a56d:3592:a4e4:db78	

Buttons

• **Refresh** — Click this button to refresh connected devices information.

The Network menu provides detailed LAN, WWAN and SIM information and configuration options. The Network menu has the following options:

- LAN (See LAN on page 36.)
- WWAN (See <u>WWAN</u> on page 39.)
- **SIM** (See <u>SIM</u> on page 44.)

LAN

The LAN screen gives you settings and information about MiFi 4620L's network. The LAN screen has the following sections:

- **IPv4** (See <u>IPv4</u> on page 37.)
- **IPv6** (See <u>IPv6</u> on page 38.)

QuickStart	Wi-Fi Network Security	System Advanced	Log
	LAN WWA	IN SIM	
IPv4			
IP Address	192.168.1.1		
Subnet Mask	255.255.255.0

Start DHCP Adress Range	192.168.1.2	(IP Address)	
Current DHCP Address Range	192.168.1.2 ~ 192.168.1.50		
IPv6			
Enable IPv6	V		
Link-local Address	fe80::215:ffff:fe0c:91cd		
Global Address	2600:1012:b000:7bce:215:fff	f:fe0c:91cd	
Save Cancel			

IPv4

The IPv4 section has the following options:

- IP Address The IP address for MiFi 4620L.
- **Subnet Mask** The subnet mask network setting for MiFi 4620L. The default value 255.255.255.0 is standard for small (class "C") networks. If you change the LAN IP Address, ensure you use the correct Subnet Mask for the IP address range containing the LAN IP address.
- Hostname The network name for the connected device (if available).
- MAC Address The Media Access Controller (MAC) or physical address for MiFi 4620L.
- Enable DHCP Server The Enable DHCP Server checkbox enables or disables the DHCP Server feature.
- Start DHCP Address Range The start range of IP addresses reserved for use by MiFi 4620L's DHCP server table.
- Current DHCP Address Range The current range of IP addresses reserved for use by MiFi 4620L's DHCP server table. If a device with a static IP address wants to connect to MiFi 4620L's network, the static IP should be outside of the DHCP address range. Most devices do not have a static IP.

The Password screen enables you to set the administration password. This is the password you use to log in to MiFi Settings. The Password screen has the following section:

• Set Administration Password (See Set Administration Password on page 46.)

verizon wireless		.atl	Verizon 4G LTE	82% Dormant Disconnect
QuickStart	Wi-Fi Network	Security System	Advanced	Logout
	Password	MAC Filtering Port F	Filtering	0
Set Administration Pass	word			
Current Password				
New Password		(4 ~ 64 characters)		
Verify New Password				
Save				
NONTTEL MIRELESS .				powered by MiFi

Set Administration Password

To set or change the administration password, follow these steps:

- Type your current password in the **Current Password** box.
- 2 Type the new password (it must have between 4 and 64 characters) in the **New Password** box.
- **3** Type it again in the **Verify New Password** box.
- **O** Click **Apply**.

Quick Start	Wi-Fi Network	Security System	Advanced	Log
	Password	MAC Filtering Port F	iltering	
Set Administration Pa	ssword			
Current Password	•••••			
New Password	•••••	(4 ~ 64 characters)		

Next time you log in to MiFi Settings, you need to use the new password.

Buttons

- Save Click this button to save any changes made to the password settings.
- **Cancel** Click this button to cancel any changes made to the password settings.

IMPORTANT Record your administration password. If you forget it, you have to reset the device before you can use MiFi Settings. (See How do I reset the MiFi 4620L back to factory settings? on page 82.)

MAC Filtering

The MAC Filtering screen enables you to allow specific devices to connect to MiFi 4620L's wireless network. For example, if you put the MAC address for your Wi-Fi-enabled mobile phone and the MAC address for your computer in the **Trusted Device List**, then only those devices can connect to your device. The MAC Filtering screen has the following sections:

- MAC Filter (See MAC Filter on page 48.)
- Trusted Device List (See Trusted Device List on page 49.)
- Connected Devices (See Connected Devices on page 50.)

QuickStart	1	Vi-Fi Network	Security	System	Advanced	Logo

			IPv4 NHCP 192	168 1 2		-

Trusted devices still need the correct network name (SSID) and network key (Wi-Fi passkey).

NOTE The MAC address on the Windows operating system is called the **Physical Address**.

IMPORTANT Do not enable MAC filtering unless you have added your own computer's MAC address to the trusted device list. Otherwise you will be unable to access the device.

MAC Filter

The **Enable MAC Filter** checkbox enables or disables the MAC Filter feature.

	_	_	
QuickStart	Wi-Fi Network Security Syste	m Advanced	Lo
	Password MAC Filtering Po	ort Filtering	
MAC Filter			

- When the feature is **enabled** (checked), you must add the MAC address for the device to the Trusted Device List. If a device not in the list tries to connect to the MiFi 4620L wireless network, the connection is blocked even if the device has the correct network name (SSID) and network key (Wi-Fi passkey).
- When the feature is **disabled** (un-checked), any device with the correct network name (SSID) and network key (Wi-Fi passkey) can connect to the MiFi 4620L wireless network.

Find the MAC Address on a Computer

The Media Access Controller (MAC) Address is also known as a hardware or physical address for a device (usually a network adapter). It consists of six pairs of numbers and letters (for example, 00-21-9B-1C-64-34).

You can view the MAC address for any device connected to the MiFi wireless network from the Wi-Fi screen. (See <u>Wi-Fi Settings</u> on page 27.)

You can cut and paste your computer's MAC address from the Wi-Fi Clients section of the Wi-Fi screen.

If the computer is not connected to the MiFi wireless network, you can find the MAC address directly. To find the MAC address, follow one of these steps:

- On a Windows PC, the MAC address is the Physical Address. You can find the Physical Address by running **ipconfig /all** from the cmd window.
 - » To run ipconfig/all, select Start > All Programs (or Programs) > Accessories > Command Prompt to open the Command Prompt window. Then type ipconfig/all and press the Return or Enter key.
- On a Mac, the MAC address is the AirPort ID.
 - » To find the AirPort ID, open the Apple Menu > System Preferences > Network. In the list, click AirPort. Click Advanced. A sheet opens. Click the AirPort tab. The AirPort ID is at the bottom of the sheet.

IMPORTANT Windows only: Make sure you get the MAC address for the wireless network adapter and not the Ethernet controller (NIC), if the computer has both.

Trusted Device List

The Trusted Device List section displays the MAC address(es) of trusted devices. Only devices in the Trusted Device List are able to connect to the MiFi 4620L wireless network.

Add Trusted Device MAC Address

To add a device to the Trusted Device List, follow these steps:

1 Type the Wi-Fi-enabled device's MAC address in the **Trusted Devices** field. You can use either ":" or "-" as the separator (for example, 00:21:9B:1C:64:34 or 00-21-9B-1C-64-34).

You can cut and paste your computer's MAC address from the Wi-Fi Clients section of the Wi-Fi screen.

2 Click **Add Device**.

- B Repeat steps 1 and 2 as needed.
- **When the list is complete, click Save.**

• Click **Delete Device**.

Connected Devices

- **Hostname** The network name for the connected device (if available).
- **Date/Time** The date/time the device was detected by the network.
- MAC Address The MAC address for the connected device.

NOTE The MAC address on the Windows operating system is called the **Physical Address**.

- IP Address The IP address for the connected device.
- **IP Type** This can be **DHCP** if the IP address came from MiFi 4620L, or **ARP** if the ARP protocol was used.

Buttons

- Save Click this button to save any changes made to MAC Filtering.
- **Cancel** Click this button to cancel any changes made to MAC Filtering.

Port Filtering

The Port Filtering screen allows you to block outgoing Internet connections. You can set a list of Allowed Applications to only allow certain programs to connect to the Internet. The Port Filtering screen has the following sections:

- **Port Filtering** (See <u>Port Filtering</u> on page 52.)
- Allowed Applications (See <u>Allowed Applications</u> on page 52.)
- **Custom Applications** (See <u>Custom Applications</u> on page 53.)

QuickStart	Wi-Fi Network Security System Advanced	Log

Port Filtering

The Enable Port Filtering checkbox enables or disables the Port Filtering feature.

- When the feature is **enabled** (checked), you must select a port filtering application in the Allowed Applications list to allow that application to connect to the Internet. For example, if you select VPN in the Allowed Applications list but do not select HTTP, you can connect to a VPN server but you cannot connect to a web page using your Internet browser.
- When the feature is **disabled** (un-checked), any application can connect to the Internet.

The Custom Port Filtering screen uses check boxes to enable port filtering for custom applications. Similar to the Allowed Applications list, you must enable custom applications so they can connect to the Internet.

Port Ranges

You can define up to six port ranges for each application. Each port range has the following options:

- **Start Port** Type the beginning of the range of port numbers used by outgoing traffic for this application. Use as many rows as necessary to define the required number of port ranges. Unused rows can be left blank.
- **End Port** Type the end of the range of port numbers. If the port is a single port instead of a range, type the same value for both the Start Port and the End Port.
- **Protocol** For each port range (each row), select the protocol (TCP, UDP, or both) used by that port range.

x00000000000000 Ports >>		Ports for Application 1	
Ports >>	<< Hide	∼ TCP/UDP ▼	
		∼ TCP/UDP ▼	
		~ TCP/UDP ▼	
		~ TCP/UDP ▼	
		~ TCP/UDP ▼	
		∼ TCP/UDP ▼	

You can define all of your applications before you click **Save** to save your changes.

Use the **Ports** and **Hide** links to open and close the Port Definition Panel so you can define the ports for each application as needed.

Buttons

- Save Click this button to save changes made to the applications and/or port ranges.
- **Cancel** Click this button to discard changes made to the applications and/or port ranges.

System

The System menu provides system information, a system log, and the options to delete notifications and reset to factory defaults. The System menu has the following options:

- System Status (See System Status on page 56.)
- **Config File** (See <u>Config File</u> on page 58.)
- **Software Update** (See <u>Software Update</u> on page 60.)

GPS Over Wi-Fi Feature

Overview

This feature allows the MiFi device to provide a GPS (NMEA) stream to your Windows or Mac computer. This is only useful if you are running an application which is capable of using a NMEA GPS stream. Examples of such applications are Microsoft Streets & Trips and DeLorme Street Atlas.

To use this feature, a driver must be installed on your computer. See Driver վեղ Installation below for details on installing this driver.

Using GPS over Wi-Fi

Once Drivers are Installed on your computer, you can use the GPS over Wi-Fi feature:

- 1. Ensure you have a Wi-Fi connection to the MiFi.
- 2. Enable the "GPS over Wi-Fi" setting on this screen. (There is no need to change the "Port Number" setting.)
- 3. On your computer, start your GPS-enabled application, and configure it to use a "NMEA Port" or "GPS Receiver". Check your application's settings and help to determine how this is done. Most applications will scan all ports, seeking a NMEA port.
- 4. Once the GPS application has found the NMEA port, it should report "Waiting for GPS" or similiar until a fix is obtained. After that, it will use or display your current GPS location.

Driver Installation

Drivers are needed to use either the "USB tethered mode" or "GPS over Wi-Fi" features.

Driver Installation

The driver can be downloaded using these links:

- GPS Driver for Windows
- GPS Driver for Mac
- Once the download is completed:
- If necessary, unzip the downloaded file.
- . Run the installer included in the download to begin the driver installation.
- Confirm the installation prompts as needed, and complete the installation.
- 6 After the device driver is installed, open your GPS client software program and follow the configuration instructions.
- **6** Start your GPS client software application.

Diagnostics

The Diagnostics screen shows information about the MiFi 4620L firmware and other system-level information. You can also view the system log. This screen is used mostly for troubleshooting and is not required for normal operation. The Diagnostics screen has the following sections:

- Modem (See Modem on page 72.)
- 4G Network (LTE) (See <u>4G Network (LTE)</u> on page 73.)
- **3G Network (EVDO/1xRTT)** (See <u>3G Network (EVDO/1xRTT)</u> on page 73.)
- 3G Network (GSM/WCDMA) (See <u>3G Network (GSM/WCDMA)</u> on page 74.)

Modem

The Modem section has the following:

- **MEID** The Mobile Equipment Identifier (MEID) is used by the mobile data network to identify this particular modem.
- **Phone Number (MDN)** The Phone Number or Mobile Directory Number (MDN) is used by the mobile data network to identify this particular data service.
- **FW Version** The modem firmware version.
- **SIM Status Status of the** SIM card. If the SIM card is missing, or this field indicates some form of SIM error, the MiFi device will not be able to connect to the mobile network.
- ICCID The ID number assigned to the SIM Card.
- **MIN (MSID)** The Mobile Identification Number (MIN) or Mobile Station ID (MSID) is the number associated with the home service provider and the wireless phone number.
- **ESN** The Electronic Serial Number, which is either blank or a pseudo-ESN which is not guaranteed to be unique for devices that use an MEID.
- Home SID System identifier for the home network.
- **ERI Version** The Enhanced Roaming Indicator version that is currently installed.
- **PRL Version** The version of the Preferred Roaming List (PRL), which tells the modem which non-home carrier towers should provide roaming coverage.

4G Network (LTE)

The 4G Network (LTE) section has the following:

- **Status** Status of the network (Disabled, Not available, or Available).
- **Network Operator** The vendor that currently provides wireless access.
- **RSSI** Indicates the signal strength for LTE.
- **SINR** A measure of signal quality; the higher the number the better the signal.

3G Network (EVDO/1xRTT)

The 3G Network (EVDO/1xRTT) section has the following:

- Status Status of the network (Disabled, Not available, or Available).
- **RSSI (1x)** Indicates the RSSI for the 1xRTT signal.
- **Technology** The type of technology used to connect to the Internet.
- **RSSI (EVDO)** Indicates the signal strength for the EVDO/eHRPD signal.
- **Network Operator** The vendor that currently provides wireless access.
- **Ec/lo** A measure of how clean the signal is, and is a type of signal-to-noise ratio.
- **SID** System identifier for the network.

3G Network (GSM/WCDMA)

The 3G Network (GSM/WCDMA) section has the following:

- Status Status of the network (Disabled, Not available, or Available).
- **Technology** The type of technology used to connect to the Internet.
- **Network Operator** The vendor that currently provides wireless access.
- **RSSI** Indicates the signal strength for the GSM/WCDMA signal.
- **Cell ID** Identifies the cell tower currently used.
- **Band Preference** A modem setting which determines the network technology used when multiple technologies are available.

Buttons

• **Field Test** — Click this button to run the Field Test. The Field Test will provide a large quantity of diagnostic information, which will be displayed in a new window.

Port Forwarding

The Port Forwarding feature allows incoming traffic (from the Internet) to be forwarded to a particular computer or device on the MiFi 4620L's wireless network. Normally, incoming traffic from the Internet is blocked.

You need to use Port Forwarding to allow Internet users to access any server you are running on your computer, such as a Web server, FTP server, or E-mail server. Also, for some online games, Port Forwarding must be used for the game to function correctly. The Port Forwarding screen has the following sections:

- Port Forwarding (See Port Forwarding on page 76.)
- Custom Applications (See Custom Applications on page 77.)
- DMZ (See <u>DMZ</u> on page 78.)

QuickStart	Wi-Fi Network Security System Advanced	Logo
	Audio Alerts Settings Diagnostics Port Forwarding	C
Port Forwarding		
Enable Port Forwarding	V Use this feature to forward incoming traffic from the internet to a particular connected device. For each enabled application, specify the IP address of the desired connected device.	
Application	IP Address of Connected Device	
DNS (Domain Name Server)		
FTP Server		
HTTP (Web) Server		
NNTP Server		
POP3 Server		
SMTP Server		
SNMP Server		
Telnet Server		
TFTP Server		
Custom Applications		
DMZ		
Port Forwarding and DMZ fea	atures can not be used simultaneously.	
Enable DMZ	Incoming traffic which would otherwise be blocked will be forwarded to the DMZ device.	
IP Address of Connected Device	192.168.1.2	
Save Cancel		

Port Forwarding

The Port Forwarding feature forwards incoming traffic from the internet to a particular connected device. To use any of the common server applications listed, follow these steps:

• Select the **Enable Port Forwarding** check box.

verizon wireless	•11 Verizon 4G LTE Charging Connected	Disconnect
QuickStart	Wi-Fi Network Security System Advanced	Logout
	Audio Alerts Settings Diagnostics Port Forwarding	0
Port Forwarding		
Enable Port Forwarding	U ghis feature to forward incoming traffic from the internet to a particular connected device. For each enabled application, specify the IP address of the desired connected device.	

- 2 On the Port Forwarding section of the Port Forwarding screen, type the computer's IP Address in the IP Address of Connected Device field beside the Application name.
- **6** Enable the corresponding **Application** on this screen by selecting its check box.
- 4 Save your changes by clicking **Save**.

Tell the person or company that needs port forwarding to connect to the MiFi 4620L's IP address (by default, this is http://192.168.1.1). Connection requests are forwarded to the IP address specified in step 3.

IMPORTANT When no longer needed, Port Forwarding should be disabled on this screen by de-selecting its check box, and saving change(s) by clicking **Save**. Leaving applications enabled unnecessarily creates a security risk.

Custom Applications

This page is not available unless the Port Forwarding feature is enabled.

Click **Custom Applications** to open the Custom Port Forwarding screen. You can define and enable custom Port Forwarding applications. You need to know details of the traffic used and generated by the applications you wish to define. The Port Forwarding screen has the following options:

- **Application Name** Type a name for the application.
- **Port Range** Click the **Ports** link to show the Port Definition Panel. Click **Hide** when you finish defining the current application. Click **Save** when you finish defining all applications.
- **Protocol** For each port range (each row), select the protocol (TCP, UDP, or both) used by incoming traffic on that port range.
- **Destination IP Address** Input the IP address of the connected device to which you want incoming traffic to be forwarded.

Port Ranges

You can define up to six port ranges for each application. Each port range has the following options:

- **Start Port** Type the beginning of the range of port numbers used by outgoing traffic for this application. Use as many rows as necessary to define the required number of port ranges. Unused rows can be left blank.
- **End Port** Type the end of the range of port numbers. If the port is a single port instead of a range, type the same value for both the Start Port and the End Port.
- **Protocol** For each port range (each row), select the protocol (TCP, UDP, or both) used by that port range.

You can define all of your applications before you click **Save** to save your changes. Use the **Ports** and **Hide** links as necessary to open and close the Port Definition Panel so you can define the ports for each application as needed.

DMZ

The DMZ feature forwards incoming traffic which would otherwise be blocked to the DMZ device. To use this feature, follow these steps:

- On the DMZ section of the Port Forwarding screen, type the computer's IP Address in the IP Address of Connected Device field.
- **3** Save your changes by clicking **Save**.

Enable DMZ	Including traffic which would otherwise be blocked will be forwarded to the DMZ device.
IP Address of Connected Device	192.168.1.2

IMPORTANT The Port Forwarding and DMZ features cannot be used simultaneously.

Buttons

- **Save** Click this button to save changes made to port forwarding.
- **Cancel** Click this button to return to the previous settings.

4

Troubleshooting

Overview Common Problems and Solutions Technical Support

Overview

When properly installed, the MiFi 4620L is a highly reliable product. Most problems are caused by one of these issues:

- System resources required by the device are being used by other devices.
- Network coverage is unavailable due to coverage area, an account problem, or a network problem.

The following tips can help solve many common problems encountered while using the device.

First Steps

- Make sure you are using the device in the correct geographic region.
- Ensure that your wireless coverage extends to your current location.
- Ensure you have an active subscription plan.
- Restarting your computer and your modem can resolve many issues.

IMPORTANT Before contacting support, be sure to restart both your computer and your **device.**

Common Problems and Solutions

The following are some common problems and solutions.

My MiFi 4620L just powered off without my pressing the power button. Why?

This may occur under any of the following circumstances.

- Pressing the Master Reset button •
- Restarting the device
- Switching profiles
- Restoring the configuration settings
- **Battery depletion**

To restore battery power, follow these steps.

- Manually press the power button to turn it back on.
- 2 If the battery is depleted, charge the device with the wall charger.

How do I reset the MiFi 4620L back to factory settings?

The master reset button is in a small hole located on the bottom of the device, underneath the battery cover. This button returns the device to factory settings, including re-setting the network name (SSID) and network key (Wi-Fi passkey) to those printed on the sticker affixed to the back of the device. To reset the device, follow these steps.

• Place one end of an unfolded paper clip into the master reset button hole.

How do I reset the Access Point and Router settings back to factory settings?

To reset the access point and router settings, follow these steps.

- Connect to MiFi Settings by connecting your computer to the MiFi wireless network and going to <u>http://admin.mifi</u> or <u>http://192.168.1.1</u> in your browser.
- Connect to the Diagnostics screen. (See <u>Diagnostics</u> on page 72.) The Diagnostics screen has a **Reset to Factory Defaults** button. This button resets all Access Point and Router settings to their factory default values. All existing settings are lost.

IMPORTANT Before contacting support, be sure to re-start both your computer and the device.

Technical Support

For additional information and technical support for Novatel Wireless devices, you can visit the Novatel Wireless Data Technical Support page at <u>www.novatelwireless.com/support</u>.

Product Specifications and Regulatory Information

Product Specifications Regulatory Statements Wireless Communications Limited Warranty and Liability Safety Hazards Proper Battery Use and Disposal

Product Specifications

General

Name:	Verizon MiFi 4620L Jetpack
Model:	MiFi 4620L
Approvals:	FCC (North America)
Weight:	90 g / 3.17 oz
Dimensions:	95 mm x 60 mm x 14 mm, 3.76 in x 2.36 in x 0.53 in
Wireless Network – Tri Mode:	LTE, CDMA, GSM
Wireless Network – Wi-Fi Mode	802.11 b/g/n
Default SSID	MiFi4620L Jetpack XXXX Secure (see the sticker on the back of your device for your ID)
Battery	
SizeTime required for full charge	1500 mAh 2.5-3 hours (when not in use)
Chip Set:	QUALCOMM [®] MDM9600
Interface Type:	Type B USB Port for Micro USB, used by the wall charger

Technology/Bands

Technology:	LTE, CDMA 1X/EV-DO Rev A, HSPA+DC/WCDMA/EDGE/GPRS
Band Designation:	LTE 700 MHz
	CDMA 1x/EV-DO RA; 800/1900 MHz
	HSPA+/WCDMA; 850/900/1900/2100 MHz
	EDGE/GPRS; 850/900/1800/1900 MHz
CDMA Transmit Band:	824.7-848.31 MHz/1851.25-1908.75 MHz
CDMA Receive Band:	869.7-893.31 MHz/1931.25-1988.75 MHz

Environmental

Operating Temperature:	-10 ° C to +45° C (14°F to 113° F)
Storage Temperature:	-20° C to 60° C (-4° F to 140° F)
Drop:	1 meter (3.28 feet) drop, no damage – fully operational
Vibration Stability:	5 Hz to 500 Hz, 0.1 octave/second

Federal Communications Commission Notice (FCC – United States)

Electronic devices, including computers and wireless modems, generate RF energy incidental to their intended function and are therefore subject to FCC rules and regulations.

This equipment has been tested to, and found to be within the acceptable limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a residential environment.

This equipment generates radio frequency energy and is designed for use in accordance with the manufacturer's user manual. However, there is no guarantee that interference will not occur in any particular installation. If this equipment causes harmful interference to radio or television reception, which can be determined by turning the equipment off and on, ou are encouraged to try to correct the interference by one or more of the following measures.

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- · Consult the dealer or an experienced radio/television technician for help.

This device complies with Part 15 of the Federal Communications Commission (FCC) Rules. Operation is subject to the following two conditions.

- This device may not cause harmful interference.
- This device must accept any interference received, including interference that may cause undesired operation.

WARNING: DO NOT ATTEMPT TO SERVICE THE WIRELESS COMMUNICATION DEVICE YOURSELF. SUCH ACTION MAY VOID THE WARRANTY. THE MIFI 4620L MODEM IS FACTORY TUNED. NO CUSTOMER CALIBRATION OR TUNING IS REQUIRED. CONTACT NOVATEL WIRELESS TECHNICAL SUPPORT FOR INFORMATION ABOUT SERVICING YOUR WIRELESS COMMUNICATION DEVICE.

FCC CAUTION: Any changes or modification not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

MODIFICATIONS: The FCC requires that you be notified that any changes or modifications made to this device that are not expressly approved by Novatel Wireless, Inc. may void your authority to operate the equipment.

NOTE: The Radio Frequency (RF) emitter installed in your modem must not be located or operated in conjunction with any other antenna or transmitter, unless specifically authorized by Novatel Wireless Technologies.

RF Exposure Content

FCC Equipment Authorization ID: PKRNVWMIFI4620

This device is authorized for use in mobile and portable applications.

This product has been evaluated for SAR and meets the FCC Guidelines for exposure to radio waves.

For better signal reception, coverage range and data throughput, do not place the router near any physical obstruction, including in a pocket or in close proximity of any object. For RF Safety, a mandatory minimum of 10 mm (1 cm) should be maintained between the device and any part of a human body when using the device. Increasing the separation between the device and the body will result in better reception and reduced exposure to radio energy.

Wireless Communications

IMPORTANT Due to the transmission and reception properties of wireless communications, data occasionally can be lost or delayed.

This can be due to the variation in radio signal strength that results from changes in the characteristics of the radio transmission path. Although data loss is rare, the environment where you operate the modem might adversely affect communications.

Variations in radio signal strength are referred to as fading. Fading is caused by several different factors including signal reflection, the ionosphere, and interference from other radio channels.

Novatel Wireless or its partners will not be held responsible for damages of any kind resulting from the delays or errors in data transmitted or received with the MiFi 4620L device, or failure of the MiFi 4620L device to transmit or receive such data.

Limited Warranty and Liability

Novatel Wireless, Inc. warrants for the 12-month period immediately following receipt of the Product by Purchaser that the Product will be free from defects in material and workmanship under normal use. THESE WARRANTIES ARE EXPRESSLY IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, WITHOUT LIMITATION, ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

The exclusive remedy for a claim under this warranty shall be limited to the repair or replacement, at Novatel Wireless' option, of defective or non-conforming materials, parts or components. The foregoing warranties do not extend to (I) non conformities, defects or errors in the Products due to accident, abuse, misuse or negligent use of the Products or use in other than a normal and customary manner, environmental conditions not conforming to Novatel Wireless' specification, of failure to follow prescribed installation, operating and maintenance procedures, (II) defects, errors or nonconformity's in the Product due to modifications, alterations, additions or changes not made in accordance with Novatel Wireless' specifications or authorized by Novatel Wireless, (III) normal wear and tear, (IV) damage caused by force of nature or act of any third person, (V) shipping damage, (VI) service or repair of Product by the purchaser without prior written consent from Novatel Wireless, (VII) products designated by Novatel Wireless as beta site test samples, experimental, developmental, reproduction, sample, incomplete or out of specification Products, or (VIII) returned products if the original identification marks have been removed or altered.

Safety Hazards

Do not operate the MiFi 4620L device in an environment that might be susceptible to radio interference resulting in danger, specifically:

Areas where prohibited by the law

Follow any special rules and regulations and obey all signs and notices. Always turn off the host device when instructed to do so, or when you suspect that it might cause interference or danger.

Where explosive atmospheres might be present

Do not operate your device in any area where a potentially explosive atmosphere might exist. Sparks in such areas could cause an explosion or fire resulting in bodily injury or even death. Be aware and comply with all signs and instructions.

Users are advised not to operate the device while at a refueling point or service station. Users are reminded to observe restrictions on the use of radio equipment in fuel depots (fuel storage and distribution areas), chemical plants or where blasting operations are in progress.

Areas with a potentially explosive atmosphere are often but not always clearly marked. Potential locations can include gas stations, below deck on boats, chemical transfer or storage facilities, vehicles using liquefied petroleum gas (such as propane or butane), areas where the air contains chemicals or particles, such as grain, dust or metal powders, and any other area where you would normally be advised to turn off your vehicle engine.

Near medical and life support equipment

Do not operate your device in any area where medical equipment, life support equipment, or near any equipment that might be susceptible to any form of radio interference. In such areas, the host communications device must be turned off. The device can transmit signals that could interfere with this equipment.

On an aircraft, either on the ground or airborne

In addition to FAA requirements, many airline regulations state that you must suspend wireless operations before boarding an airplane. Please ensure that the modem is turned off prior to boarding aircraft in order to comply with these regulations. The modem can transmit signals that could interfere with various onboard systems and controls.

While operating a vehicle

The driver or operator of any vehicle should not operate a wireless data device while in control of a vehicle. Doing so will detract from the driver or operator's control and operation of that vehicle. In some countries, operating such communications devices while in control of a vehicle is an offense.

Electrostatic discharge (ESD)

Electrical and electronic devices are sensitive to electrostatic discharge (ESD). Macintosh native connection software might attempt to reinitialize the device should a substantial electrostatic discharge reset the device. If the software is not operational after an ESD occurrence, then restart your computer.

IMPORTANT In event of a battery leak:

- Do not allow the liquid to come in contact with the skin or the eyes. If contact has been made, wash the affected area with large amounts of water and seek medical advice.
- Seek medical advice immediately if a battery has been swallowed.
- Communicate the appropriate steps to be taken if a hazard occurs. Due to the transmission and reception properties of wireless communications, data occasionally can be lost or delayed.

Please review the following guidelines for safe and responsible battery use.

- Do not disassemble or open, crush, bend or deform, puncture, or shred.
- Do not modify or remanufacture, attempt to insert a foreign object into the battery, immerse or expose to water or other liquids, or expose to fire, explosion, or other hazard.
- Only use the battery for the system for which it was specified.
- Only use the battery with a charging system that has been qualified with the system per this standard. Use of an unqualified battery or charger may present a risk of fire, explosion, leakage, or other hazard.
- Do not short circuit a battery or allow a metallic or conductive object to contact the battery terminals.
- Replace the battery only with another battery that has been qualified with the system per this standard. Use of an unqualified battery may present a risk of fire, explosion, leakage, or other hazard.
- Promptly dispose of used batteries in accordance with local regulations.
- Battery usage by children should be supervised.
- Avoid dropping the device or battery. If the device or the battery is dropped, especially on a hard surface, and the user suspects damage, take it to a service center for inspection.
- Improper battery use may result in a fire, explosion, or other hazard.

Glossary

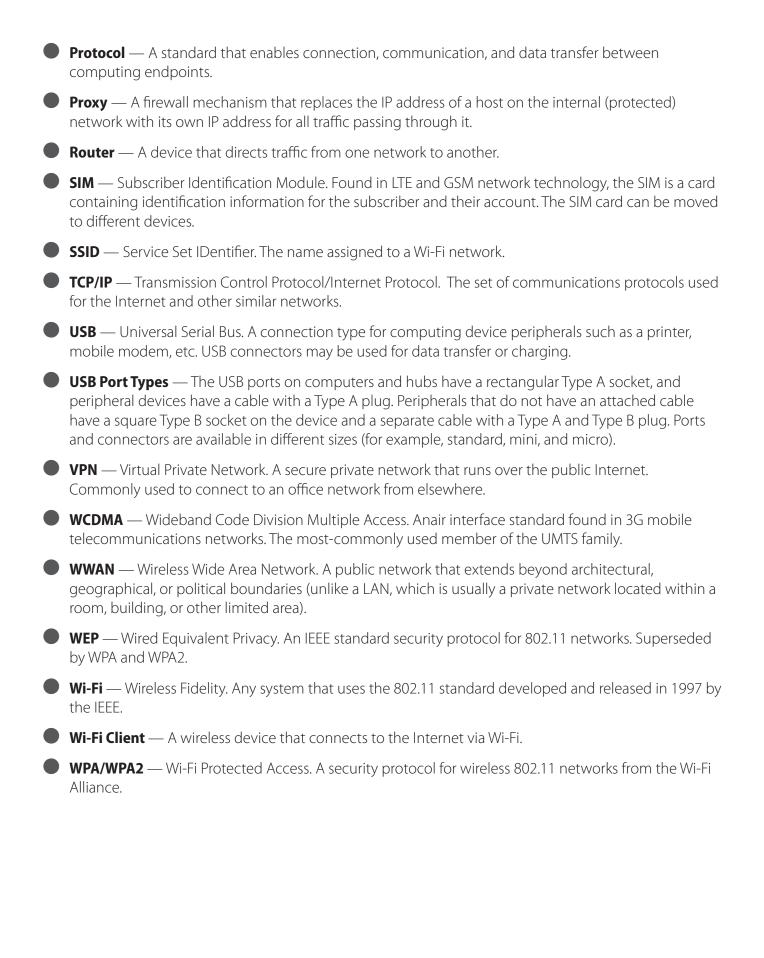

1X — Internet at 1/10 the speed of EV-DO.

3G — Third Generation. 3G refers to the third generation of mobile telephony technology. **4G LTE** — Fourth Generation. 4G LTE refers to the fourth generation of mobile telephony technology. **802.11 (b, g, n)** — A set of WLAN communication standards in the 2.4, 3.6 and 5 GHz frequency bands. **bps** — Bits per second. The rate of data flow. **Broadband** — High-capacity high-speed transmission channel with a wider bandwidth than conventional modem lines. Broadband channels can carry video, voice, and data simultaneously. **CDMA** — Code Division Multiple Access. It is the underlying channel access method used by some mobile phone standards. **DHCP** — Dynamic Host Configuration Protocol. Software found in servers and routers that automatically assigns temporary IP addresses to clients logging into an IP network. **DHCP Server** — A server or service with a server that assigns IP addresses. DNS — Domain Name System. A system for converting host names and domain names into IP. addresses on the Internet or on local networks that use the TCP/IP protocol. EDGE — Enhances Data rates for GSM Evolution. A digital mobile phone technology that allows improved data transmission rates as a backward-compatible extension of GSM. **EV-DO Rev 0** — CDMA EV-DO Rev. 0 is a leading-edge wireless technology with higher data rates and higher system capacity. It is a fully backward compatible standard and remains interoperable with deployed EV-DO networks and devices around the world. Rev 0 provides access to mobile devices with forward link speeds of up to 2.4 Mbit/s, and reverse link speeds up to 152 kbit/s. For more information, visit www.cdg.org. **EV-DO Rev A** — CDMA EV-DO Rev. A is a leading-edge wireless technology with higher data rates and higher system capacity. It is a fully backward compatible standard and remains interoperable with deployed EV-DO networks and devices around the world. Rev A provides access to mobile devices with forward link speed of up to 3.1 Mbit/s, and reverse link speeds up to 1.8 Mbit/s. The increased data rates on Rev. A's physical layer enable richer applications and services. For more information, visit www.cdg.org. Firmware — A computer program embedded in an electronic device. Firmware usually contains. operating code for the device. **GPRS** — General Packet Radio Service. A packet oriented mobile data service on the 2G and 3G cellular communication system's global system for mobile communications (GSM).

• **GSM** — A computer program embedded in an electronic device. Firmware usually contains operating code for the device.

Hotspot — A Wi-Fi (802.11) access point or the area covered by an access point. Used for connecting to the Internet.
