Dishwasher integratable ADG 6556 IXM

Model Version		Page
	ADG 6556 IXM	
	8542 556 10740	
	Technical data	2 - 4
	Spare part list	5 - 6
	Exploded view	7 - 8
	Circuit diagram	9
	Program diagram	10
	Text/Legend	11 - 17
	Family	VBL - MID 5

This documentation is only intended for qualified technicians who are aware of the respective safety regulations.

Date: 14.02.2002

Document-No.: 4812 718 17313

Subject to modification

Technical data

Dimension

Height	82.0 - 87.0	cm
Width	59.7	cm
Depth	55.5	cm
Weight	50	kg

Wooden door for Integrable types

Thickness min.	16	mm
Thickness max.	20	mm
Width min.	592	mm
Width max.	595	mm
Height min.	515	mm
Height max.	600	mm
Weight max.	5.5	kg
Max. stick out over lower edge of appliance door	92	mm
Height of plinth min.	93	mm

Electronic boards

Service boards	see spare part list
Serial boards	see on the boards itself
DUB	4619 724 06661
Programing of version and programmed control board, see „Service“ and „Data set“ on rating plate of inner door:	
CB programmed	442241
Data set	442231
Basic control board, not programmed see on the board itself	4619 724 17411

Succession of programs

Programs	see program diagram
Succession	A1a-A3a-A5b-A6a-A7a

Datas Energy Label

Reference program	A5b
Energy Performance	B
Cleaning Performance	A
Drying Performance	B

Options

Zone washing
Delay function

Program information

Start indicator
Pre wash
Main wash
Drying
End

All programs will be locked after start. Changing the program or finishing the program will be possible only after pressing the start button for longer then 1.5 sec. (Break by customer)

A switching off the appliance or unplug the appliance for a while, this will frozen the program step and later on, the program continuos on the same position.

Exception: Switching off the appliance or unplug the appliance during the drying phase, this will lead directly to the end of the program.

Water Volume at alternating spray system

Volume at alternating spray system (same level when selected zone washing as in the normal programs)

Water	Volume	Level
Regeneration	0.3 l	15 mm
Back rinse 3x	1.0 l	60 mm
Prewash	3.9 l	120 mm
Main wash	3.2 l	118 mm
Intermediate rinse 1	3.2 l	118 mm
Intermediate rinse 2	3.2 l	118 mm
Clear rinse	3.2 l	118 mm
Safety/ overflow	8.5 l	141 mm

Measuring the level

Remove the coarse sieve, put in a measuring meter into the sump, measure the hight of the water level.

Detergent max.

Pre-wash	10	cm ³
Main-wash	40	cm ³
Rinse aid	135	cm ³
6 Dosage steps	1 - 6	ml

Water softener

Saltcontainer	2	kg
Resin container	900	cm ³
Regeneration dosage	300	cm ³

Technical data

Water pressure

Inlet pressure	0.3 - 10	bar
Spray pump pressure	0.3	bar

Rotations

Spray pump motor	2800	RPM
Drain pump motor	3000	RPM
Spray arm lower	30 - 40	RPM
Spray arm upper	30 - 40	RPM

Spray arms, turning rhythm at alternating spray system

Turning starts every time with the upper spray arm

Pre wash Lower arm ~3min, Upper arm ~1min

Main wash Lower arm ~3min, Upper arm ~5min

Intermediate rinse

Lower arm ~2min, Upper arm ~2min

Final rinse Lower arm ~2min, Upper arm ~2min

Service Test program

Lower arm ~30sec, Upper arm ~30sec

Remark: When switching of the main switch or interrupt the mains during the Test Program runs, then the alternating of the spray arms change in the test program to the rhythm of main wash 5/3 min.

Important: To leaf the Test program is possible by made a break by customer (pushing the start button for 1.5 sec.)

After finishing the test program (End LED shines and/or Start LED goes of) must the appliance be switched off.

If this will not be done, then the next normal wash will be made with the frequency of the Service Test Program ~30/30sec.

Flow rates/ Inlet volume

Flow meter (at 0.3 bar = quantity 1.1 l/min)	208	lmp/l
Spray pump	45 - 65	l/min
Drain pump	16	l/min
Pump height max.	1.1	m
Inlet valve	4	l/min
Spray arm lower	~ 33	l/min
Sprayarm upper	~ 27	l/min
Shower top	~ 8	l/min

Electrical base data

Voltage	220/ 230	V
Frequency	50	Hz
Total power	2.0 - 2.2	kW
Fuse	10	A

Spray pump motor alternating spray system

Voltage	220/ 240	V
Power consumption	125	W
HI	79	Ω
HA	60	Ω
Capacitor	4	μ F

Drain pump motor

Voltage	220/ 240	V
Power consumption	30	W
Resistance	146	Ω

Heating

1 Element system

Voltage	220/ 230	V
Power consumption	1.87/ 2.04	kW
Resistance	24.5	Ω
Heating speed	~ 2.0	°C/min
Temperature on surface	~ 115	°C
Safety thermostat self reset		
(Temperature of water)	~ 85	°C
Fuse	206	°C

Potentiometer

Points of measurement:	1(black) to 2 (middle)
Position 0	0.0 kΩ
Position 1	0.5 kΩ
Position 2	1.0 kΩ
Position 3	1.4 kΩ
Position 4	1.8 kΩ
Position 5	2.3 kΩ
Position 6	2.6 kΩ

Water valves

Single electric inlet valve

Voltage	220/ 240	V
Frequency	50/ 60	Hz
Resistance	3.76	kΩ

Technical data

Regenerating valve

Voltage	220/ 240	V
Frequency	50/ 60	Hz
Resistance	3.13	kΩ

Motor Diverter Valve

Voltage	220 - 240	V
Frequency	50/ 60	Hz
Resistance	6.5	kΩ
Signal (2x within ~13 sec.)	5.0	V

Coil of dispenser

Voltage	220/ 240	V
Frequency	50/ 60	Hz
Resistance	1.3	kΩ

Reed contacts

flow meter
 salt control
 rinse aid control

NTC

20 °C	58.1	kΩ
25 °C	47.1	kΩ
30 °C	38.2	kΩ
40 °C	25.4	kΩ
50 °C	17.2	kΩ
60 °C	11.8	kΩ
70 °C	8.3	kΩ
80 °C	6	kΩ
85 °C	4	kΩ

Regeneration

Volume	300	cm ³
Position 0 after wash cycles	12	
water hardness	0 - 5	°dh
	0 - 0.9	mmol/l
	0 - 9	°Fh
Position 1 after wash cycles	10	
water hardness	6 - 10	°dh
	1 - 1.8	mmol/l
	10 - 18	°Fh
Position 2 after wash cycles	7	
water hardness	11 - 15	°dh
	1.9 - 2.7	mmol/l
	19 - 27	°Fh
Position 3 after wash cycles	5	
water hardness	16 - 21	°dh
	2.8 - 3.7	mmol/l
	28.37	°Fh
Position 4 after wash cycles	3	
water hardness	22 - 28	°dh
	3.8 - 5.0	mmol/l
	38 - 50	°Fh
Position 5 after wash cycles	2	
water hardness	29 - 35	°dh
	5.1 - 6.3	mmol/l
	51 - 63	°Fh
Position 6 after wash cycles	1	
water hardness	36 - 60	°dh
	6.4 - 10.7	mmol/l
	64 - 107	°Fh
Salt consumption for regeneration	77	g
Number of cycles with 2 kg salt	26	

Accessory

If you need spare parts apart from the spare part list have a look in the Service Bulletin 4812 718 40084.

Function diagram
Point alternating wash

- d: drain out depends on soil level
- f: water fill if (d) water was drained out
- h: heating up to 40°C fill 70°C depends on soil level
- r: rinsing time 0 min. till 12 min. depends on soil level
- i: 2nd intermediate rinse depends on soil level
- XU = Upper spray arm working
- XL = Lower spray arm working
- X = time in min.
- Example:
1U / 3L = 1 Min. Upper / 3 Min. Lower spray arm working

Text/Legend

Test procedure for SERVICE-TEST-PROGRAM Point dishwashers appliances with and without 7 Segment Display

Switch on the appliance. If there is no failure indicated, then:

1. Start the passive test program.
If there is a defective component indicated, open the plinth and take out the control board (CB).
2. Check the component.
Unplug the indicated component from the control board (CB) and check it by using an Ohmmeter
If the resistance is not correct, check the cables to the component and check the component itself.
3. Visibly check the control board (CB).
4. At the end of the repair start the appliance and delete the failure. After this, start the passive and active test program again to see that the failure is solved.

More details: see following pages.

Attention:

Danger for short circuit. Short circuits on components can damage the control board (CB).

If electronic boards are wet, do not switch the appliance on.

To check the appliance, plug in the appliance.

Failures, which occurred during the program will be stored and indicated by flashing the start LED.

The failure will be indicated and can be related to the failure table.

To erase the failures, you must push the start button longer than 1,5 seconds.

The failures

- F1 NTC break
- F2 water leakage
- F9 continuous water inlet

are checked and indicated immediately after start of the program.

Therefore these failures have to be solved before starting the active test program.

When these failures are not solved, the active test program does not run.

The electrical components get their voltage via triac from the control board (CB). To test the voltage the voltmeter must be connected in parallel to the component (the component must be connected). If the component is disconnected, then the output voltage from the control board (CB) is reduced.

After starting a program this program is locked. That means neither by unplugging/switching off the appliance nor by setting to another program, the first set program cannot be changed. Changing of the program is only possible by pushing the start button again for longer than 1,5 sec..

Attention: New service control boards start at first with the service test program. This test program is without back rinsing. **Dangerous for overfilling the appliance, in case the appliance is not empty.** By running the test program or another program a second time, the back rinsing will be carried out as usual.

Text/Legend

Handling of failures

- F0 Sensor failure (only when a dirt sensor is installed)
Will not be indicate to the customer. The programs will finish even if there is a failure. The Failure is indicated only in the active test program after 10 – 30 second's. The active test program will finish as well, even if there is a failure.
If the failure in a sensor program appears, the machine will always choose the highest consumption (best cleaning result).
- None or wrong output from the sensor
 - Unlogical or unreal measurement results
- Reason:
- Defective electronic of the sensor
 - Optoelectronic parts in the sensor defect
 - The sensor is very dirty
 - Connection between sensor and control board (CB) interrupted
- Attention: The failure code will not store.
- F1. NTC break
Temperature out of the normal value (-3°C till +85°C)
- Temperature inside higher than +85°C
 - NTC defective
 - Dishwasher is frozen, less than -3°C
- If the temperature is less than -3°C, fill the appliance with a cup of warm water to warm it up before you start it..
- F2. Water Leakage
- Water is in the drip tray
- Floater (LS6) switches off the WV1 and the electronic switches on the DPM until WI reports that it is empty.
- F3. Heating System Defective
Indicated after app. 25 minutes (1. check after 5 min., after that follow 2 more checks, before the failure is indicate)
- Heats too slowly (less than 1,5 °C in 10 min.)
 - Heating (HEW) defective
 - Relays (RE2) on control board (CB) is defective
 - NTC - resistance fluctuation
- F4. Draining Failure
Drain pump starts and after 4 min. the WI detects that it is "not empty"
- Drain pump (DPM) defective
 - Siphon closed
 - Control board (CB) defective
 - OWI/WI defective.

Text/Legend

- F6. Water Tap Closed
Water valve (WV1) is switched on but flow meter (FM) sends no impulses (less than 10 imp. in 10 sec.) and the water indicator (WI) is off (empty)
- Water tap closed
 - Water inlet hose blocked
 - Water inlet valve (WV1) defective
 - Flow meter (FM) defective (leads to FM failure)
- F7. Flow Meter Failure
Water inlet valve (WV1) is switched on and the water indicator (WI) is on (full).
- Flow meter (FM) sends too few impulses (less than 10 imp. in 10 sec.)
 - Water tap closed during water inlet
 - Water inlet hose blocked
 - Water inlet valve (WV1) defective
 - Flow meter (FM) defective
- F8. Water Level Failure.
Failures are supervised over the whole program.
Mechanical water indicator WI: Spray pump works, the WI switches more than 20 times in 2 minutes back.
Optical water indicator OWI: Always after the OWI-Signal is missing, the electrical components are turned off for 5 sec. If after the 5 sec. the OWI-Signal is still not present then, it notes a Failure F8. If, however, after the 5 sec. the OWI-Signal is present, then the water-level is filled to 6 Ltr. and the electrical components are again turned on. After the OWI signal is missing for a second time note an F8 Failure.
- WI defect? Should switch on after approx. 1 Ltr
 - Sieve blocked
 - Water strongly foams
 - Pot has turned off and is filled with spray water
 - No stable spray pump (SPM) working
- F9. Continuous Water Inlet
Water inlet valve (WV1) is switched off, water indicator (WI) on, flow meter (FM) sends impulses (more than 10 imp. in 10 sec.)
- Water inlet valve (WV1) mechanically not closed
 - Triac (CB) permanently switched on. (short circuit)
- Reaction: interval 30 sec. drain pump on / 20 sec. drain pump off in interval

The following failures will only be indicated, when the relevant component is installed.

Text/Legend

FA. OWI (Optical Water Indicator) – Failure

If the electronics signals of the Flow meter for the 3,4 Ltr. of water has been received on permanent wash system and 2,5 Ltr on alternating wash system and the OWI signal "Water in the sump" is missing then take note.

- Lens will be cleaned: Water inlet off for 10 Sec and SPM on for 10 Sec.

- If after that there is still no signal "Water in sump", then the appliance goes into failure mode FA.

FB. MDV (Motor Diverter) – Failure

Failure condition:

Start water inlet. After 15 sec. switches the WI. After that, when not within 120 sec. comes a signal from the MDV to the control board, lower or upper spray arm is functioning, then the FB will indicate.

Check:

- Do the upper and lower spray arms alternate turns in approx. 30-40 sec.? If only one turns then there is a failure.

- Is the diverter disc in the sump blocked? Yes, unblock it.

- Does 230V come from the control board (ZW,DVH) to the MDV? No, change control board.

How to check:

Start test program and wait until backrinse is over. After the start of the regular water-inlet must come 230V within 30 sec. for approx. 20 sec. to the MDV.

- Is the winding of the MDV or cable to the MDV interrupted? (ZW,DVH) resistance of the MDV should be approx. 6,3 K Ω

- Is the signal cable between the MDV and control board (SAB,DVL) carrying 5v?

FC. ASA (Automatic Salt Adaptation)/ Water hardness sensor Failure (only indicates in the active test program)

Failure condition:

Electronic on the water softener detects high electrical resistance in the resin.

Check:

Cables on the sensors of the water softener interrupted or weak contact? Cables from the control board (ASA) to WHS electronic on the water softener interrupted or weak contact?

For salt, rinse aid, zone wash valve, sieve valve failure see active test program.

Failure Display POINT

Appliances with 1 and 2-digit 7 Segment Display and without 7 Segment Display

Alarm / Failure	Failure code, Indication in test program when a failure occurs	
	Shown with 7 segment display or without 7 segment display	Shown on 2/3 digit 7 segment display
F1 NTC-Failure	START  1 x flash 1s Pause 1 x flash.....	
F2 Water Leakage	START  2 x flashes 1s Pause 2 x flashes.....	
F3 Failure in Heating System	START  3 x flashes 1s Pause 3 x flashes.....	
F4 Draining Failure	START  4 x flashes 1s Pause 4 x flashes.....	
F6 Water Tap closed	START  6 x flashes 1s Pause 6 x flashes.....	
F7 Flow Meter Failure	START  7 x flashes 1s Pause 7 x flashes.....	
F8 Water Level Failure	START  8 x flashes 1s Pause 8 x flashes.....	
F9 Continuous Waterinlet	START  9 x flashes 1s Pause 9 x flashes.....	
F0 Sensor-Failure (Only displayed in act. test program)	START  10 x flashes 1s Pause 10 x flashes.....	
FA OWI-Fehler	START  11 x flashes 1s Pause 11 x flashes.....	
FB MDV-Fehler	START  12 x flashes 1s Pause 12 x flashes.....	
FC ASA-Fehler (Only displayed in act. test program)	START  13 x flashes 1s Pause 13 x flashes.....	

 LED flashing

- "Rotor blocked (F5)" isn't displayed on the POINT appliance

Text/Legend

With the passive test program, you can check all LED's and buttons. If there is no failure the passive test program runs normally.

Attention:

If you can't start the active test program (Start button doesn't flash), normally there is one of the following failures detected: F1, F2 or F9

When these failures are not solved before, the passive and active test program will not run. After solving the failure you must "sign" (erase) the failure.

A present failure will be indicate directly after you switch on the appliance. Then fix the mistake, erase failure and start test program again (see following start procedure).

Start procedure

Start the passive test program if there is no failure indicated

If there is no failure the passive test program runs normally.

1. Turn OFF appliance
2. Push start button and hold it.
3. Select program position 1.(turn to the right or with WP VBL turn to the left)
4. Finish pushing the start button when the start LED flashes.
5. Test all LEDs by operating the buttons and the program knob. After the check, turn the program knob on to program place 1
6. Start the active test program by pushing the start button again
7. Failure indication.
8. Repair the failure
9. Solve the failure by pushing the start button for longer than 1,5 sec.
10. Start the active test program again, to see, if the failure is really solved

Active test program starts (see next page)

PS1	1.LED	prewash		
PS2	2.LED	mainwash		
		intermediate rinse		
		final rinse		
PS3	3.LED	drying (regeneration)		
PS4	4.LED	end	goes off if any button is pushed	goes off if after 30 min prog. Is finished

Text/Legend

Active test program

Remarks

The active test program runs to the failure position and stops or, if there is no failure, it runs to the end.

To leave the test program push the start button for longer than 1,5 second's.

Not enough salt or rinse aid will not stop the running of the appliance.

Remark When switching off the main switch or interrupting the mains, during the test program runs, then the alternating of the spray arms changes in the test program from 30/30 sec. to the rhythm of the main wash 5/3 min.

Important Leaving the test program is possible by making a break by the customer (Pushing the start button for more than 1,5 sec.).

After finishing the test program (End LED shines and/or Start LED goes off) then the appliance must be switched off.

If this is not done, then the next main wash will be made with the frequency of the Service Test Program ~30/30 sec. instead of 3/5 min.

When the failure position is reached the failure indication is indicated on the page "Failure Codes"

Attention:

If you can't start the active test program (Start button doesn't flash), normally there is one of the following failures detected: F1, F2 or F9

When these failures are not repaired before, the active test program will not run. After solving the failure you must "sign" (erase) the failure.
