OWNER'S MANUAL

# IMPORTANT SAFETY INSTRUCTIONS

## • Explanation of Graphical Symbols

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert you to the presence of uninsulated “dangerous voltage” within the product’s enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert you to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

- 1** Read Instructions – All the safety and operating instructions should be read before the product is operated.
- 2** Retain Instructions – The safety and operating instructions should be retained for future reference.
- 3** Heed Warnings – All warnings on the product and in the operating instructions should be adhered to.
- 4** Follow Instructions – All operating and use instructions should be followed.
- 5** Cleaning – Unplug this product from the wall outlet before cleaning. Do not use liquid cleaners or aerosol cleaners. Use a damp cloth for cleaning.
- 6** Attachments – Do not use attachments not recommended by the product manufacturer as they may cause hazards.
- 7** Water and Moisture – Do not use this product near water – for example, near a bath tub, wash bowl, kitchen sink, or laundry tub; in a wet basement; or near a swimming pool; and the like.
- 8** Accessories – Do not place this product on an unstable cart, stand, tripod, bracket, or table. The product may fall, causing serious injury to a child or adult, and serious damage to the product. Use only with a cart, stand, tripod, bracket, or table recommended by the manufacturer, or sold with the product. Any mounting of the product should follow the manufacturer’s instructions, and should use a mounting accessory recommended by the manufacturer.
- 9** A product and cart combination should be moved with care. Quick stops, excessive force, and uneven surfaces may cause the product and cart combination to overturn.

- 10** Ventilation – Slots and openings in the cabinet are provided for ventilation and to ensure reliable operation of the product and to protect it from overheating, and these openings must not be blocked or covered. The openings should never be blocked by placing the product on a bed, sofa, rug, or other similar surface. This product should not be placed in a built-in installation such as a bookcase or rack unless proper ventilation is provided or the manufacturer’s instructions have been adhered to.
- 11** Power Sources – This product should be operated only from the type of power source indicated on the marking label. If you are not sure of the type of power supply to your home, consult your product dealer or local power company. For products intended to operate from battery power, or other sources, refer to the operating instructions.
- 12** Grounding or Polarization – This product may be equipped with a polarized alternating current line plug (a plug having one blade wider than the other). This plug will fit into the power outlet only one way. This is a safety feature. If you are unable to insert the plug fully into the outlet, try reversing the plug. If the plug should still fail to fit, contact your electrician to replace your obsolete outlet. Do not defeat the safety purpose of the polarized plug.
- 13** Power-Cord Protection – Power-supply cords should be routed so that they are not likely to be walked on or pinched by items placed upon or against them, paying particular attention to cords at plugs, convenience receptacles, and the point where they exit from the product.
- 14** Lightning – For added protection for this product during a lightning storm, or when it is left unattended and unused for long periods of time, unplug it from the wall outlet and disconnect the antenna or cable system. This will prevent damage to the product due to lightning and power-line surges.
- 15** Power Lines – An outside antenna system should not be located in the vicinity of overhead power lines or other electric light or power circuits, or where it can fall into such power lines or circuits. When installing an outside antenna system, extreme care should be taken to keep from touching such power lines or circuits as contact with them might be fatal.
- 16** Overloading – Do not overload wall outlets, extension cords, or integral convenience receptacles as this can result in a risk of fire or electric shock.
- 17** Object and Liquid Entry – Never push objects of any kind into this product through openings as they may touch dangerous voltage points or short-out parts that could result in a fire or electric shock. Never spill liquid of any kind on the product.
- 18** Servicing – Do not attempt to service this product yourself as opening or removing covers may expose you to dangerous voltage or other hazards. Refer all servicing to qualified service personnel.
- 19** Damage Requiring Service – Unplug this product from the wall outlet and refer servicing to qualified service personnel under the following conditions:
  - a)** When the power-supply cord or plug is damaged,
  - b)** If liquid has been spilled, or objects have fallen into the product,
  - c)** If the product has been exposed to rain or water,

- d) If the product does not operate normally by following the operating instructions. Adjust only those controls that are covered by the operating instructions as an improper adjustment of other controls may result in damage and will often require extensive work by a qualified technician to restore the product to its normal operation,
  - e) If the product has been dropped or damaged in any way, and
  - f) When the product exhibits a distinct change in performance - this indicates a need for service.
- 20 Replacement Parts** – When replacement parts are required, be sure the service technician has used replacement parts specified by the manufacturer or have the same characteristics as the original part. Unauthorized substitutions may result in fire, electric shock, or other hazards.
- 21 Safety Check** – Upon completion of any service or repairs to this product, ask the service technician to perform safety checks to determine that the product is in proper operating condition.
- 22 Wall or Ceiling Mounting** – The unit should be mounted to a wall or ceiling only as recommended by the manufacturer.
- 23 Heat** – The product should be situated away from heat sources such as radiators, heat registers, stoves, or other products (including amplifiers) that produce heat.

- 24 Outdoor Antenna Grounding** – If an outside antenna or cable system is connected to the product, be sure the antenna or cable system is grounded so as to provide some protection against voltage surges and built-up static charges. Article 810 of the National Electrical Code, ANSI/NFPA 70, provides information with regard to proper grounding of the mast and supporting structure, grounding of the lead-in wire to an antenna discharge unit, size of grounding conductors, location of antenna discharge unit, connection to grounding electrodes, and requirements for the grounding electrode.

EXAMPLE OF ANTENNA GROUNDING

**Note to CATV system installer:**

This reminder is provided to call the CATV system installer's attention to Article 820-40 of the NEC that provides guidelines for proper grounding and, in particular, specifies that the cable ground shall be connected to the grounding system of the building, as close to the point of cable entry as practical.

**FCC INFORMATION (for US customers)**

**1 IMPORTANT NOTICE: DO NOT MODIFY THIS UNIT!**

This product, when installed as indicated in the instructions contained in this manual, meets FCC requirements. Modifications not expressly approved by Yamaha may void your authority, granted by the FCC, to use the product.

- 2 IMPORTANT:** When connecting this product to accessories and/or another product use only high quality shielded cables. Cable/s supplied with this product **MUST** be used. Follow all installation instructions. Failure to follow instructions could void your FCC authorization to use this product in the USA.

- 3 NOTE:** This product has been tested and found to comply with the requirements listed in FCC Regulations, Part 15 for Class "B" digital devices. Compliance with these requirements provides a reasonable level of assurance that your use of this product in a residential environment will not result in harmful interference with other electronic devices.

This equipment generates/uses radio frequencies and, if not installed and used according to the instructions found in the users manual, may cause interference harmful to the operation of other electronic devices.

Compliance with FCC regulations does not guarantee that interference will not occur in all installations. If this product is found to be the source of interference, which can be determined by turning the unit "OFF" and "ON", please try to eliminate the problem by using one of the following measures:

Relocate either this product or the device that is being affected by the interference.

Utilize power outlets that are on different branch (circuit breaker or fuse) circuits or install AC line filter/s.

In the case of radio or TV interference, relocate/reorient the antenna. If the antenna lead-in is 300 ohm ribbon lead, change the lead-in to coaxial type cable.

If these corrective measures do not produce satisfactory results, please contact the local retailer authorized to distribute this type of product. If you can not locate the appropriate retailer, please contact Yamaha Electronics Corp., U.S.A. 6660 Orangethorpe Ave, Buena Park, CA 90620.

The above statements apply **ONLY** to those products distributed by Yamaha Corporation of America or its subsidiaries.

# CAUTION: READ THIS BEFORE OPERATING YOUR UNIT.

- 1 To assure the finest performance, please read this manual carefully. Keep it in a safe place for future reference.
- 2 Install this sound system in a well ventilated, cool, dry, clean place — away from direct sunlight, heat sources, vibration, dust, moisture, and/or cold. Allow ventilation space of at least 30 cm on the top, 20 cm on the left and right, and 20 cm on the back of this unit.
- 3 Locate this unit away from other electrical appliances, motors, or transformers to avoid humming sounds.
- 4 Do not expose this unit to sudden temperature changes from cold to hot, and do not locate this unit in a environment with high humidity (i.e. a room with a humidifier) to prevent condensation inside this unit, which may cause an electrical shock, fire, damage to this unit, and/or personal injury.
- 5 Avoid installing this unit where foreign object may fall onto this unit and/or this unit may be exposed to liquid dripping or splashing. On the top of this unit, do not place:
  - Other components, as they may cause damage and/or discoloration on the surface of this unit.
  - Burning objects (i.e. candles), as they may cause fire, damage to this unit, and/or personal injury.
  - Containers with liquid in them, as they may fall and liquid may cause electrical shock to the user and/or damage to this unit.
- 6 Do not cover this unit with a newspaper, tablecloth, curtain, etc. in order not to obstruct heat radiation. If the temperature inside this unit rises, it may cause fire, damage to this unit, and/or personal injury.
- 7 Do not plug in this unit to a wall outlet until all connections are complete.
- 8 Do not operate this unit upside-down. It may overheat, possibly causing damage.
- 9 Do not use force on switches, knobs and/or cords.
- 10 When disconnecting the power cord from the wall outlet, grasp the plug; do not pull the cord.
- 11 Do not clean this unit with chemical solvents; this might damage the finish. Use a clean, dry cloth.
- 12 Only voltage specified on this unit must be used. Using this unit with a higher voltage than specified is dangerous and may cause fire, damage to this unit, and/or personal injury. YAMAHA will not be held responsible for any damage resulting from use of this unit with a voltage other than specified.
- 13 To prevent damage by lightning, disconnect the power cord from the wall outlet during an electrical storm.
- 14 Do not attempt to modify or fix this unit. Contact qualified YAMAHA service personnel when any service is needed. The cabinet should never be opened for any reasons.
- 15 When not planning to use this unit for long periods of time (i.e. vacation), disconnect the AC power plug from the wall outlet.
- 16 Be sure to read the “TROUBLESHOOTING” section on common operating errors before concluding that this unit is faulty.
- 17 Before moving this unit, press STANDBY/ON to set this unit in the standby mode, and disconnect the AC power plug from the wall outlet.

## WARNING

TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK, DO NOT EXPOSE THIS UNIT TO RAIN OR MOISTURE.

This unit is not disconnected from the AC power source as long as it is connected to the wall outlet, even if this unit itself is turned off. This state is called the standby mode. In this state, this unit is designed to consume a very small quantity of power.

## FOR CANADIAN CUSTOMERS

To prevent electric shock, match wide blade of plug to wide slot and fully insert.  
This Class B digital apparatus complies with Canadian ICES-003.

## IMPORTANT

Please record the serial number of this unit in the space below.  
MODEL:  
Serial No.:  
The serial number is located on the rear of the unit.  
Retain this Owner's Manual in a safe place for future reference.

## We Want You Listening For A Lifetime

YAMAHA and the Electronic Industries Association's Consumer Electronics Group want you to get the most out of your equipment by playing it at a safe level. One that lets the sound come through loud and clear without annoying blaring or distortion - and, most importantly, without affecting your sensitive hearing.

Since hearing damage from loud sounds is often undetectable until it is too late, YAMAHA and the Electronic Industries Association's Consumer Electronics Group recommend you to avoid prolonged exposure from excessive volume levels.

# FEATURES

## Built-in 7-channel power amplifier

- ◆ Minimum RMS output power (0.06% THD, 20 Hz – 20 kHz, 8Ω)  
Front: 95 W + 95 W  
Center: 95 W  
Surround: 95 W + 95 W  
Surround back: 95 W + 95 W

## Sound field features

- ◆ Proprietary YAMAHA technology for the creation of sound fields
- ◆ Dolby Digital/Dolby Digital EX decoder
- ◆ DTS/DTS-ES Matrix 6.1, Discrete 6.1, DTS Neo:6, DTS 96/24 decoder
- ◆ Dolby Pro Logic/Dolby Pro Logic II/Dolby Pro Logic IIx decoder
- ◆ Virtual CINEMA DSP
- ◆ SILENT CINEMA™

## Sophisticated AM/FM tuner

- ◆ 40-station random access preset tuning
- ◆ Automatic preset tuning
- ◆ Preset station shifting capability (preset editing)

## Other features

- ◆ YPAO: YAMAHA Parametric Room Acoustic Optimizer for automatic speaker setup
- ◆ 192-kHz/24-bit D/A converter
- ◆ A SET MENU which provides you with items for optimizing this unit for your audio/video system
- ◆ 8 additional input jacks for discrete multi-channel input
- ◆ On-screen display function helpful in controlling this unit
- ◆ S-Video signal input/output capability
- ◆ Component video input/output capability
- ◆ Video signal conversion (Composite video ↔ S-Video) capability for monitor out
- ◆ Optical and coaxial digital audio signal jacks
- ◆ Sleep timer
- ◆ Cinema and music night listening modes
- ◆ Remote control with preset manufacturer codes

• ✱ indicates a tip for your operation.

- Some operations can be performed by using either the buttons on the main unit or on the remote control. In cases when the button names differ between the main unit and the remote control, the button name on the remote control is given in parentheses.
- This manual is printed prior to production. Design and specifications are subject to change in part as a result of improvements, etc. In case of differences between the manual and product, the product has priority.

Manufactured under license from Dolby Laboratories. "Dolby", "Pro Logic", "Surround EX", and the double-D symbol are trademarks of Dolby Laboratories.

"DTS", "DTS-ES", "Neo:6" and "DTS 96/24" are trademarks of Digital Theater Systems, Inc.

"SILENT CINEMA" is a trademark of YAMAHA CORPORATION.

# GETTING STARTED

## Supplied accessories

Please check that you received all of the following parts.

Remote control

Batteries (4)  
(AAA, R03, UM-4)

AM loop antenna

Optimizer microphone

Indoor FM antenna  
(U.S.A., Canada and  
China models)

Indoor FM antenna  
(Australia and Korea  
models)

## Installing batteries in the remote control

**1** Press the  part and slide the battery compartment cover off.

**2** Insert four supplied batteries (AAA, R03, UM-4) according to the polarity markings (+ and -) on the inside of the battery compartment.

**3** Slide the cover back until it snaps into place.

## Notes on batteries

- Change all of the batteries if you notice the following conditions; the operation range of the remote control decreases, the indicator does not flash or its light becomes dim.
- Do not use old batteries together with new ones.
- Do not use different types of batteries (such as alkaline and manganese batteries) together. Read the packaging carefully as these different types of batteries may have the same shape and color.
- If the batteries have leaked, dispose of them immediately. Avoid touching the leaked material or letting it come into contact with clothing, etc. Clean the battery compartment thoroughly before installing new batteries.

If the remote control is without batteries for more than 2 minutes, or if exhausted batteries remain in the remote control, the contents of the memory may be cleared. When the memory is cleared, insert new batteries, set up the manufacturer code and program any acquired functions that may have been cleared.

# CONTROLS AND FUNCTIONS

## Front panel

### 1 STANDBY/ON

Turns on this unit or sets it to the standby mode. When you turn on this unit, you will hear a click and there will be a 4 to 5-second delay before this unit can reproduce sound.

#### Note

In standby mode, this unit consumes a small amount of power in order to receive infrared-signals from the remote control.

### 2 OPTIMIZER MIC jack

Use to connect and input audio signals from the supplied microphone for use with the AUTO SETUP function (see page 25).

### 3 Remote control sensor

Receives signals from the remote control.

### 4 Front panel display

Shows information about the operational status of this unit.

### 5 FM/AM

Switches the reception band between FM and AM.

### 6 A/B/C/D/E (NEXT)

Selects one of the 5 preset station groups (A to E) when the unit is in tuner mode. Selects the speaker channel to be adjusted when the unit is not in tuner mode.

### 7 PRESET/TUNING </> (LEVEL +/-)

Selects preset station number 1 to 8 when the colon (:) is displayed next to the band indication in the front panel display when the unit is in tuner mode. Selects the tuning frequency when the colon (:) is not displayed. Adjusts the level of the speaker channel selected using A/B/C/D/E (NEXT) when the unit is not in tuner mode.

### 8 MEMORY (MAN'L/AUTO FM)

Stores a station in the memory. Hold down this button for more than 3 seconds to start automatic preset tuning.

### 9 TUNING MODE (AUTO/MAN'L MONO)

Switches the tuning mode between automatic (AUTO indicator on) and manual (AUTO indicator off).

### 10 VOLUME

Controls the output level of all audio channels. This does not affect the REC OUT level.

**11**  **PHONES (SILENT CINEMA) jack**

Outputs audio signals for private listening with headphones. When you connect headphones, no signals are output to the OUTPUT jacks or to the speakers. All Dolby Digital and DTS audio signals are mixed down to the left and right headphone channels.

**12** **SPEAKERS A/B**

Turns on or off the set of front speakers connected to the A and/or B terminals on the rear panel each time the corresponding button is pressed.

**13** **PRESET/TUNING (EDIT)**

Switches the function of PRESET/TUNING  /  (LEVEL -/+ ) between selecting preset station numbers and tuning.

**14** **STRAIGHT (EFFECT)**

Switches the sound fields off or on. When STRAIGHT is selected, input signals (2-channel or multi-channel) are output directly from their respective speakers without effect processing.

**15** **PROGRAM**

Use to select sound field programs or adjust the bass/treble balance (in conjunction with TONE CONTROL).

**16** **TONE CONTROL**

Use to adjust the bass/treble balance for the front left and right, center, presence and subwoofer channels (see page 31).

**17** **INPUT MODE**

Sets the priority (AUTO, DTS, ANALOG) for the type of signals received when one component is connected to two or more of this unit's input jacks (see page 36).

**18** **INPUT selector**

Selects the input source you want to listen to or watch.

**19** **MULTI CH INPUT**

Selects the source connected to the MULTI CH INPUT jacks. When selected, the MULTI CH INPUT source takes priority over the source selected with INPUT (or the input selector buttons on the remote control).

**20** **VIDEO AUX jacks**

Input audio and video signals from a portable external source such as a game console. To reproduce source signals from these jacks, select V-AUX as the input source.

## Remote control

This section describes the function of each control on the remote control used to control this unit. To operate other components, see "REMOTE CONTROL FEATURES" on page 60.

### 1 Infrared window

Outputs infrared control signals. Aim this window at the component you want to operate.

### 2 CODE SET

Use to set up manufacturer codes (see page 61).

### 3 Input selector buttons

Select the input source and change the control area.

### 4 Sound field program / numeric buttons (1 - 8)

Use to select sound field programs.

Use numbers 1 through 8 to select preset stations when the unit is in tuner mode.

### 5 NIGHT

Turns on or off the night listening modes (see page 35).

### 6 LEVEL

Selects the speaker channel to be adjusted and sets the level.

### 7 Cursor buttons ^ / v / < / > / SELECT

Use to select and adjust sound field program parameters or SET MENU items.

Press ^ / v to select preset station numbers when the unit is in tuner mode.

### 8 TEST (RETURN)

Outputs the test tone to adjust the speaker levels.

Returns to the previous menu level when adjusting the SET MENU parameters.

### 9 TRANSMIT indicator

Flashes while the remote control is sending signals.

### 10 STANDBY

Sets this unit in the standby mode.

### 11 SYSTEM POWER

Turns on the power of this unit.

### 12 SLEEP

Sets the sleep timer.

### 13 MULTI CH IN

Selects MULTI CH INPUT when using an external decoder (etc.).

### 14 AMP

Selects the AMP mode. You must select the AMP mode to control the main unit.

### 15 VOLUME +/-

Increases or decreases the volume level.

### 16 MUTE

Mutes the sound. Press again to restore the audio output to the previous volume level.

### 17 EX/ES

Switches between 5.1 or 6.1/7.1-channel playback of multi-channel software.

**18 STRAIGHT (EFFECT)**

Switches the sound fields off or on. When STRAIGHT is selected, input signals (2-channel or multi-channel) are output directly from their respective speakers without effect processing.

**19 SET MENU (A/B/C/D/E)**

Activates the SET MENU function.

Selects preset station groups when the unit is in tuner mode.

**20 ON SCREEN**

Selects the display mode of the on-screen display (OSD) this unit sends to your video monitor.

**Using the remote control**

The remote control transmits a directional infrared beam. Be sure to aim the remote control directly at the remote control sensor on the main unit during operation.

**Handling the remote control**

- Do not spill water or other liquids on the remote control.
- Do not drop the remote control.
- Do not leave or store the remote control in the following types of conditions:
  - high humidity such as near a bath
  - high temperature such as near a heater or stove
  - extremely low temperatures
  - dusty places

## Front panel display

**1 Decoder indicators**

When any of this unit's decoders function, the respective indicator lights up.

**2 SILENT CINEMA indicator**

Lights up when headphones are connected and a sound field program is selected (see page 31).

**3 NIGHT indicator**

Lights up when you select night listening mode.

**4 Input source indicators**

A cursor lights to show the current input source.

**5 Sound field indicators**

Light to indicate the active DSP sound fields.

**6 CINEMA DSP indicator**

Lights up when you select a CINEMA DSP sound field program.

**7 AUTO indicator**

Lights up when this unit is in automatic tuning mode.

**8 TUNED indicator**

Lights up when this unit is tuned into a station.

**9 STEREO indicator**

Lights up when this unit is receiving a strong signal for an FM stereo broadcast while the AUTO indicator is lit.

**10 MEMORY indicator**

Blinks to show that a station can be stored.

**11 MUTE indicator**

Blinks while the MUTE function is on.

**12 VOLUME level indication**

Indicates the volume level.

**13 PCM indicator**

Lights up when this unit is reproducing PCM (pulse code modulation) digital audio signals.

**14 VIRTUAL indicator**

Lights up when Virtual CINEMA DSP is active (see page 36).

**15 Headphones indicator**

Lights up when headphones are connected.

**16 SP A B indicators**

Light up according to the set of front speakers selected. Both indicators light up when both sets of speakers are selected.

**17 SLEEP indicator**

Lights up while the sleep timer is on.

**18 HiFi DSP indicator**

Lights up when you select a HiFi DSP sound field program.

**19 Multi-information display**

Shows the current sound field program name and other information when adjusting or changing settings.

**20 OPTIMIZER indicator**

Lights up during the auto setup procedure and when the auto setup speaker settings are used without any modifications.

**21 96/24 indicator**

Lights up when a DTS 96/24 signal is input to this unit.

**22 LFE indicator**

Lights up when the input signal contains the LFE signal.

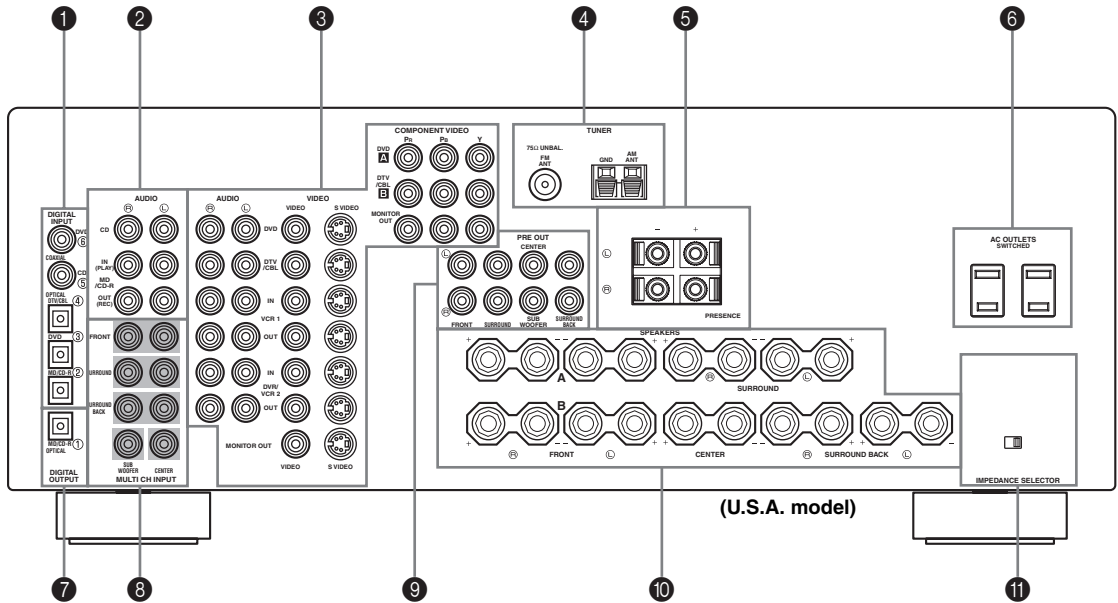

**23 Input channel indicators**

Indicate the channel components of the current digital input signal.

**24 Presence and surround back speaker indicators**

Indicate the connection of presence and/or surround back speakers when using the SPEAKER LEVEL setting (see page 55).

## Rear panel

**1 DIGITAL INPUT jacks**

See pages 16, 18 and 19 for details.

**2 Audio component jacks**

See page 19 for connection information.

**3 Video component jacks**

See pages 16 and 18 for connection information.

**4 Antenna terminals**

See page 21 for connection information.

**5 PRESENCE speaker terminals**

See page 13 for connection information.

**6 AC OUTLET(S)**

Use to supply power to your other A/V components (see page 22).

**7 DIGITAL OUTPUT jack**

See page 19 for details.

**8 MULTI CH INPUT jacks**

See page 17 for connection information.

**9 PRE OUT jacks**

See page 20 for connection information.

**10 Speaker terminals**

See page 13 for connection information.

**11 IMPEDANCE SELECTOR switch**

See page 23.

# SPEAKER SETUP

## Speaker placement

The speaker layout below shows the standard ITU-R speaker setting. You can use it to enjoy CINEMA DSP and multi-channel audio sources.

### Front speakers (FR and FL)

The front speakers are used for the main source sound plus effect sounds. Place these speakers an equal distance from the ideal listening position. The distance of each speaker from each side of the video monitor should be the same.

### Center speaker (C)

The center speaker is for the center channel sounds (dialog, vocals, etc.). If for some reason it is not practical to use a center speaker, you can do without it. Best results, however, are obtained with the full system. Align the front face of the center speaker with the front face of your video monitor. Place the speaker centrally between the front speakers and as close to the monitor as possible, such as directly over or under it.

### Surround speakers (SR and SL)

The surround speakers are used for effect and surround sounds. Place these speakers behind your listening position, facing slightly inwards, about 1.8 m (6 ft) above the floor.

### Surround back speakers (SBR and SBL)

The surround back speakers supplement the surround speakers and provide for more realistic front-to-back transitions. Place these speakers directly behind the listening position and at the same height as the surround speakers. They should be positioned at least 30 cm (12 in) apart. Ideally, they should be positioned at the same width as the front speakers.

### Subwoofer

The use of a subwoofer, such as the YAMAHA Active Servo Processing Subwoofer System, is effective not only for reinforcing bass frequencies from any or all channels, but also for high fidelity reproduction of the LFE (low-frequency effect) channel included in Dolby Digital and DTS software. The position of the subwoofer is not so critical, because low bass sounds are not highly directional. But it is better to place the subwoofer near the front speakers. Turn it slightly toward the center of the room to reduce wall reflections.

### Presence speakers (PR and PL)

Presence speakers supplement the sound from the front speakers with extra ambient effects produced by CINEMA DSP (see page 44). These effects include sounds that filmmakers intend to locate a little farther back behind the screen in order to create more theater-like ambience. Place these speakers at the front of the room about 0.5 - 1 m (1 - 3 ft) outside the front speakers, facing slightly inwards, and about 1.8 m (6 ft) above the floor.

## Speaker connections

Be sure to connect the left channel (L), right channel (R), “+” (red) and “-” (black) properly. If the connections are faulty, no sound will be heard from the speakers, and if the polarity of the speaker connections is incorrect, the sound will be unnatural and lack bass.

### CAUTION

- If you will use 6 ohm speakers, be sure to set this unit's speaker impedance setting to 6 ohms before using (see page 23).
- Before connecting the speakers, make sure that the power of this unit is off.
- Do not let the bare speaker wires touch each other or do not let them touch any metal part of this unit. This could damage this unit and/or speakers.
- Use magnetically shielded speakers. If this type of speakers still creates the interference with the monitor, place the speakers away from the monitor.

A speaker cord is actually a pair of insulated cables running side by side. One cable is colored or shaped differently, perhaps with a stripe, groove or ridges. Connect the striped (grooved, etc.) cable to the “+” (red) terminals on this unit and your speaker. Connect the plain cable to the “-” (black) terminals.

- 1 Remove approximately 10 mm (3/8") of insulation from the end of each speaker cable.
- 2 Twist the exposed wires of the cable together to prevent short circuits.
- 3 Unscrew the knob.
- 4 Insert one bare wire into the hole in the side of each terminal.

- 5 Tighten the knob to secure the wire.

Red: positive (+)  
Black: negative (-)

### Connecting to PRESENCE speaker terminals

- 1 Open the tab.
- 2 Insert one bare wire into the hole of each terminal.
- 3 Return the tab to secure the wire.

### Banana plug connections

First, tighten the knob and then insert the banana plug connector into the end of the corresponding terminal.

You can also use banana plugs with the PRESENCE speaker terminals. Open the tab, then insert one banana plug connector into the hole of each terminal. Do not attempt to close the tabs after connecting the banana plugs.

You can connect both surround back and presence speakers to this unit, but they do not output sound simultaneously.

- The surround back speakers output the surround back channel included in Dolby Digital EX and DTS-ES software and only operate when the Dolby Digital EX or DTS-ES decoder is turned on.
- The presence speakers output ambient effects created by the DSP sound fields. They do not output sound when other sound fields are selected.

### ■ FRONT terminals

Connect one or two speaker systems to these terminals. If you use only one speaker system, connect it to either the FRONT A or B terminals.

#### Note

The Canada model cannot output to two separate speaker systems simultaneously.

### ■ CENTER terminals

Connect a center speaker to these terminals.

### ■ SURROUND terminals

Connect surround speakers to these terminals.

### ■ SUBWOOFER jack

Connect a subwoofer with built-in amplifier, such as the YAMAHA Active Servo Processing Subwoofer System, to this jack.

### ■ SURROUND BACK terminals

Connect surround back speakers to these terminals. If you only connect one surround back speaker, connect it to the left (L) terminals.

### ■ PRESENCE terminals

Connect presence speakers to these terminals.

# CONNECTIONS

## Before connecting components

### CAUTION

Do not connect this unit or other components to the mains power until all connections between components are complete.

### ■ Cable indications

#### For analog signals

left analog cables

right analog cables

#### For digital signals

optical cables

coaxial cables

#### For video signals

video cables

S-Video cables

### ■ Analog jacks

You can input analog signals from audio components by connecting audio pin cable to the analog jacks on this unit. Connect red plugs to the right jacks and white plugs to the left jacks.

### ■ Digital jacks

This unit has digital jacks for direct transmission of digital signals through either coaxial or fiber optic cables. You can use the digital jacks to input PCM, Dolby Digital and DTS bitstreams. When you connect components to both the COAXIAL and OPTICAL jacks, priority is given to the input signals from the COAXIAL jack. All digital input jacks are compatible with 96-kHz sampling digital signals.

### Note

This unit handles digital and analog signals independently. Thus audio signals input to the analog jacks are only output to the analog OUT (REC) jacks. Likewise audio signals input to the digital (OPTICAL or COAXIAL) jacks are only output to the DIGITAL OUTPUT jack.

### Dust protection cap

Pull out the cap from the optical jack before you connect the fiber optic cable. Do not discard the cap. When you are not using the optical jack, be sure to put the cap back in place. This cap protects the jack from dust.

### ■ Video jacks

This unit has three types of video jacks. Connection depends on the availability of input jacks on your monitor. The signals input through the S VIDEO jacks on this unit are automatically converted for output through the VIDEO jacks. When V CONV. is set to ON (see page 58), signals input through the VIDEO jacks can be output through the S VIDEO jacks.

### VIDEO jack

For conventional composite video signals.

### S VIDEO jack

For S-Video signals, separated into luminance (Y) and color (C) video signals to achieve high-quality color reproduction.

### COMPONENT VIDEO jacks

For component signals, separated into luminance (Y) and color difference (Pb, Pr) to provide the best quality in picture reproduction.

### Signal flow inside this unit

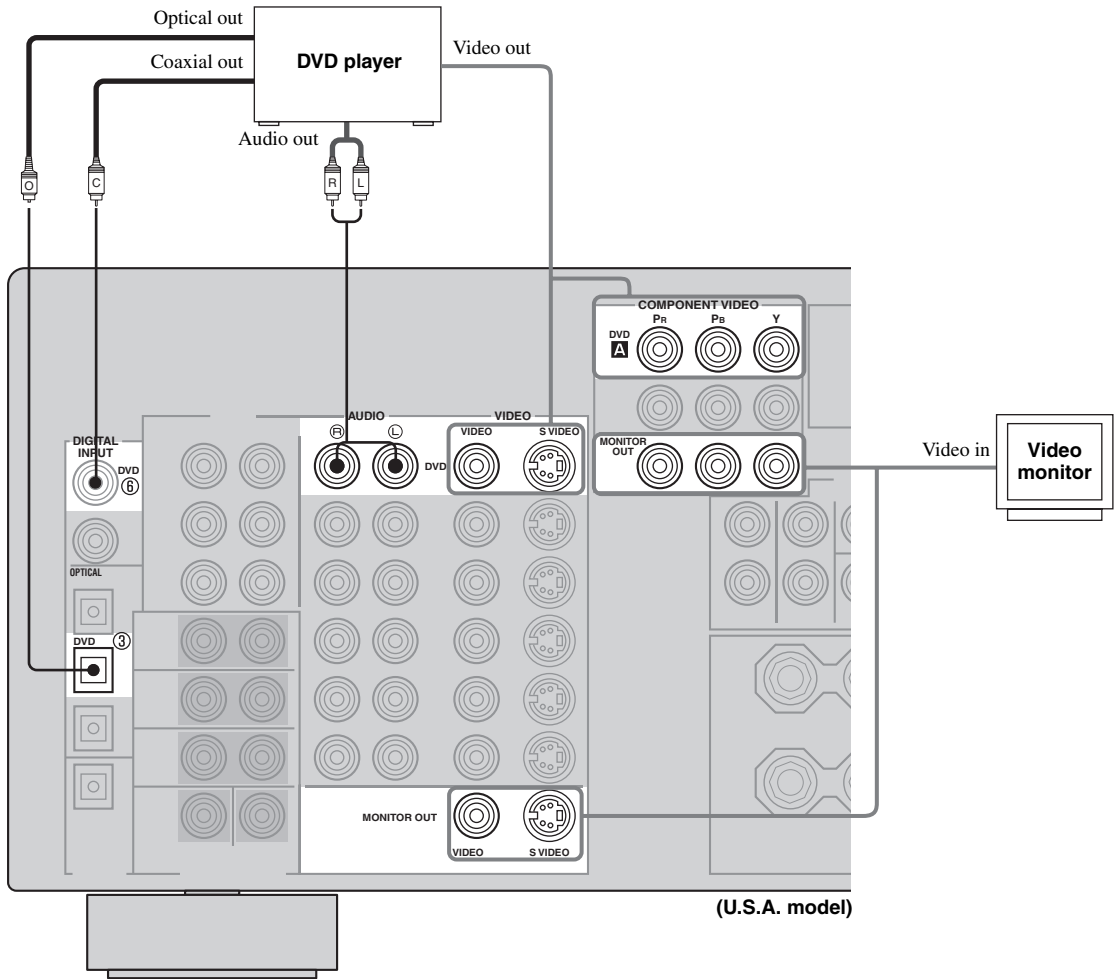

### Note

When signals are input through both the S VIDEO and VIDEO jacks, signals input through the S VIDEO jack have priority.

## Connecting video components

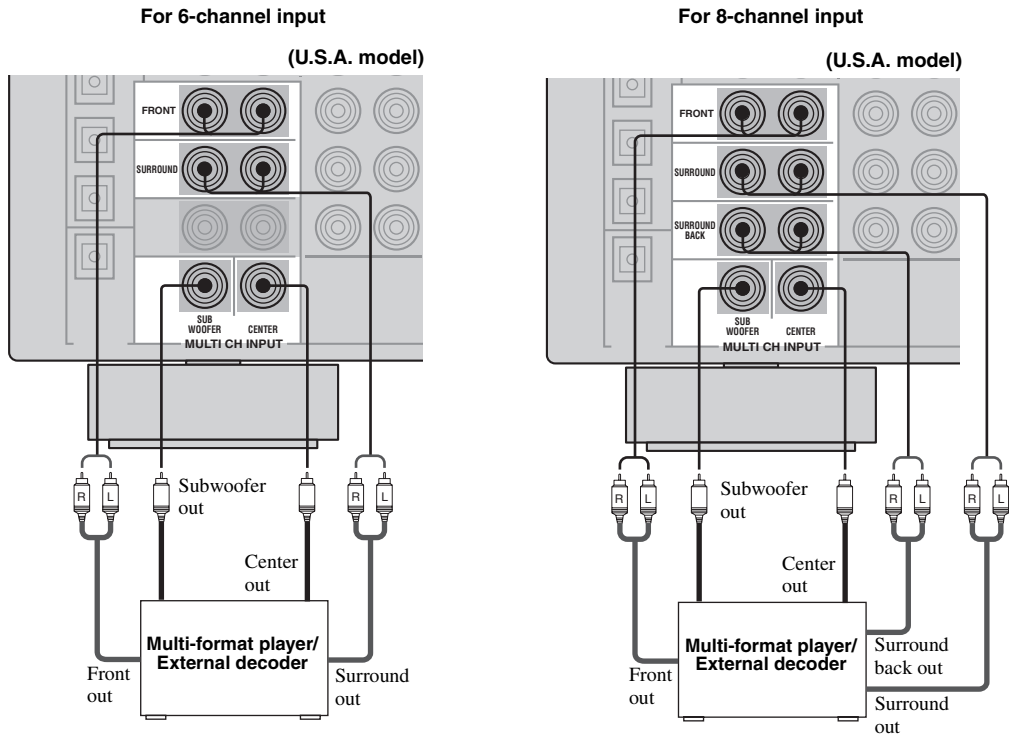

### ■ Connections for DVD playback

### ■ Connecting to the MULTI CH INPUT jacks

This unit is equipped with 8 additional input jacks (left and right FRONT, CENTER, left and right SURROUND, left and right SURROUND BACK and SUB WOOFER) for discrete multi-channel input from a multi-format player, external decoder, sound processor or pre-amplifier.

Connect the output jacks on your multi-format player or external decoder to the MULTI CH INPUT jacks. Be sure to match the left and right outputs to the left and right input jacks for the front and surround channels.

#### Notes

- When you select MULTI CH INPUT as the input source, this unit automatically turns off the digital sound field processor, and you cannot select sound field programs.
- This unit does not redirect signals input to the MULTI CH INPUT jacks to accommodate for missing speakers. We recommend that you connect at least a 5.1-channel speaker system before using this feature.
- When headphones are used, only front left and right channels are output.

■ Connections for other video components

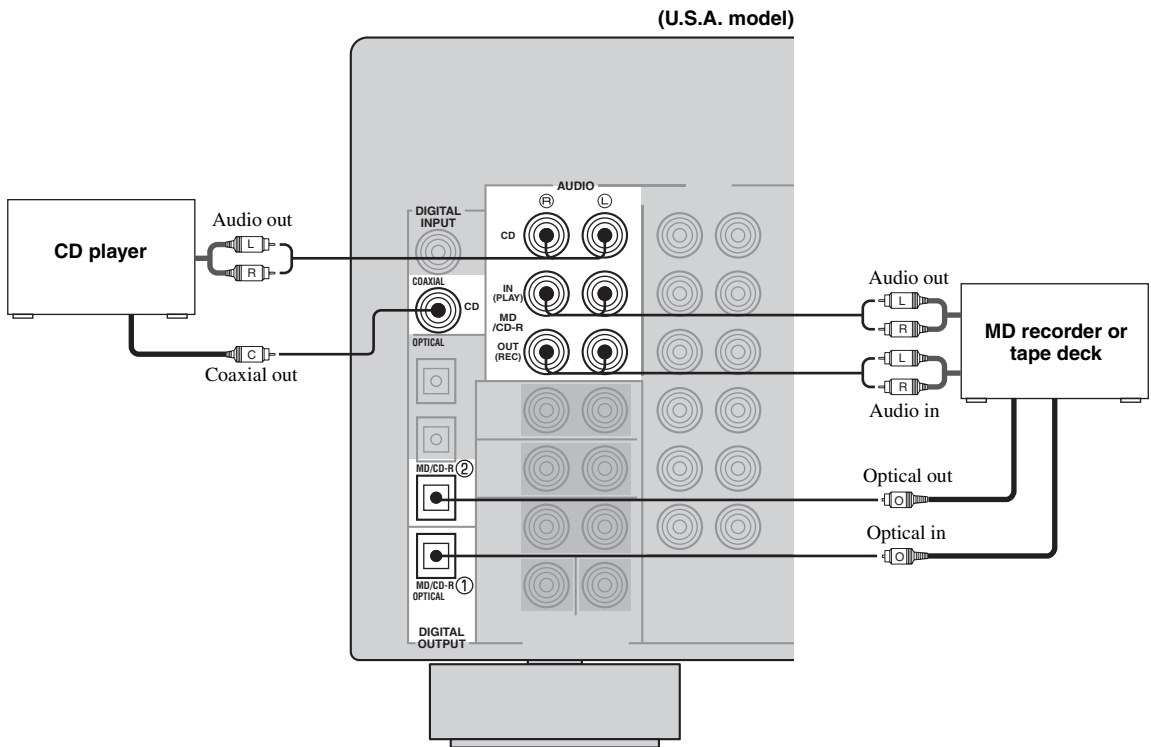

■ VIDEO AUX jacks (on the front panel)

Use these jacks to connect any video source, such as a game console or video camera, to this unit.

## Connecting audio components

### ■ Connections for audio components

**■ Connecting to an external amplifier**

If you want to increase the power output to the speakers, or want to use another amplifier, connect an external amplifier to the PRE OUT jacks as follows.

**Notes**

- When audio pin plugs are connected to the PRE OUT jacks for output to an external amplifier, do not make connections to the corresponding SPEAKERS terminals. Set the volume of the amplifier connected to this unit to the maximum.
- The signals output through the FRONT PRE OUT and CENTER PRE OUT jacks are affected by the TONE CONTROL settings.
- If SPEAKERS A is turned off and SP B is set to ZONE B (see page 59), signals will only be output from the FRONT PRE OUT jacks.

**❶ FRONT PRE OUT jacks**

Front channel line output jacks.

**❷ SURROUND PRE OUT jacks**

Surround channel line output jacks.

**❸ CENTER PRE OUT jack**

Center channel line output jack.

**❹ SURROUND BACK PRE OUT jacks**

Surround back or presence channel line output jacks.

**❺ SUB WOOFER PRE OUT jack**

Connect a subwoofer with built-in amplifier, such as the YAMAHA Active Servo Processing Subwoofer System, to this jack.

**Notes**

- Each PRE OUT jack outputs the same channel signals as the corresponding speaker terminals.
- Adjust the volume level of the subwoofer with the control on the subwoofer. It is also possible to adjust the volume level using the remote control (see “Manually adjusting speaker levels” on page 49).
- Some signals may not be output from the SUB WOOFER PRE OUT jack depending on the SPEAKER SET (see page 53) and LFE/BASS OUT (see page 54) settings.

## Connecting the antennas

Both AM and FM indoor antennas are included with this unit. In general, these antennas should provide sufficient signal strength. Connect each antenna correctly to the designated terminals.

### Connecting the AM loop antenna

**1** Set up the AM loop antenna, then connect it to the terminals on this unit.

**2** Press and hold the tab to insert the AM loop antenna lead wires into the AM ANT and GND terminals.

**3** Orient the AM loop antenna for the best reception.

### Notes

- The AM loop antenna should be placed away from this unit.
- The AM loop antenna should always be connected, even if an outdoor AM antenna is connected to this unit.
- A properly installed outdoor antenna provides clearer reception than an indoor one. If you experience poor reception quality, an outdoor antenna may improve the quality. Consult the nearest authorized YAMAHA dealer or service center about outdoor antennas.

### 75-ohm/300-ohm antenna adapter (U.K. model only)

**1** Open the cover of the included 75-ohm/300-ohm antenna adapter.

**2** Cut the external sleeve of the 75-ohm coaxial cable and prepare it for connection.

**3** Cut the lead wire and remove it.

**4** Insert the cable wire into the slot, and clamp it with pliers.

**5** Snap the cover into place.

## Connecting the power supply cord

### ■ Connecting the AC power cord

Plug the power cord into an AC wall outlet.

### ■ AC OUTLET(S) (SWITCHED)

Australia model ..... 1 OUTLET  
 Korea model .....None  
 Other models .....2 OUTLETS

Use these outlets to connect the power cords from your other components to this unit. Power to the AC OUTLET(S) is controlled by this unit's STANDBY/ON (or SYSTEM POWER and STANDBY). The outlet(s) supply power to any connected component whenever this unit is turned on. The maximum power (total power consumption of components) that can be connected to the AC OUTLET(S) is:

Korea model ..... N/A  
 China model ..... 50 W  
 Other models .....100 W

### ■ Memory back-up

The memory back-up circuit prevents the stored data from being lost even if this unit is in the standby mode.

However if the power cord is disconnected from the AC wall outlet, or the power supply is cut for more than one week, the stored data will be lost.

**■ IMPEDANCE SELECTOR switch**

**CAUTION**

Do not change the setting of the IMPEDANCE SELECTOR switch when the unit power is switched on, as doing so may damage the unit.

If this unit fails to turn on when STANDBY/ON is pressed on either the front panel or remote control, the IMPEDANCE SELECTOR switch may not be fully slid to either position. If this is the case, slide the switch all the way to either position when this unit is in standby mode.

Select the switch position (left or right) according to the impedance of the speakers in your system.

PREPARATION

Switch position	Speaker	Impedance level
Left	Front	If you use one set (A or B), the impedance of each speaker must be 4 Ω or higher. If you use two sets (A and B), the impedance of each speaker must be 8 Ω or higher.
	Center, Surround, Surround back, Presence	The impedance of each speaker must be 6 Ω or higher.
Right	Front	If you use one set (A or B), the impedance of each speaker must be 8 Ω or higher. If you use two sets (A and B), the impedance of each speaker must be 16 Ω or higher.*
	Center, Surround, Surround back, Presence	The impedance of each speaker must be 8 Ω or higher.

\* The Canada model cannot use two separate speaker systems (A and B) simultaneously when the switch is set to the right position.

English

## Turning on the power

When all connections are complete, turn on the power of this unit.

- 1** Press **STANDBY/ON** (**SYSTEM POWER** on the remote control) to turn on the power of this unit.

or

- 2** Turn on the video monitor connected to this unit.

# AUTO SETUP

## Introduction

This receiver employs YAMAHA Parametric Room Acoustic Optimizer (YPAO) technology which lets you avoid troublesome listening-based speaker setup and achieves highly accurate sound adjustments. The supplied optimizer microphone collects and analyzes the sound your speakers produce in your actual listening environment.

### Notes

- Please be advised that it is normal for loud test tones to be output during the auto setup procedure.
- If auto setup stops and error messages appear on the screen, follow the troubleshooting on page 29.

YPAO performs the following checks and makes appropriate adjustments to give you the best possible sound from your system.

### WIRING/LEVEL:

Checks which speakers are connected and the polarity of each speaker. Also checks and adjusts the sound level (volume) of each speaker so that the sound level of each speaker is the same when heard from the listening position.

### DISTANCE/PHASE:

Checks the distance of each speaker from the listening position and adjusts the delay of each channel so that the sound from each speaker reaches the listening position at the same time. Also checks the phase of each speaker.

### SIZE:

Checks the speakers frequency response and sets the crossover/high cut frequency for the subwoofer to improve the sound relationship between the speakers and the subwoofer.

## Optimizer microphone setup

- 1 Connect the supplied optimizer microphone to the OPTIMIZER MIC jack on the front panel.**

### Notes

- After you have completed the auto setup procedure, be sure to disconnect the optimizer microphone.
- The optimizer microphone is sensitive to heat.
  - Keep it away from direct sunlight.
  - Do not place it on top of this unit.

- 2 Place the optimizer microphone on a flat level surface with the omni-directional microphone head upward, at your normal listening position.**

If possible, use a tripod (etc.) to affix the optimizer mic at the same height as your ears would be when you are seated in your listening position.

## Starting the setup

For best results, make sure the room is as quiet as possible during the auto setup procedure (YPAO). If there is too much ambient noise, the results may not be satisfactory.

If your subwoofer has adjustable volume and crossover/high cut frequency controls, set the volume between 9 and 11 o'clock (as viewed on a conventional clockface) and set the crossover/high cut frequency to the maximum.

Subwoofer

**1 Switch on this unit and your video monitor.**  
Make sure the OSD is displayed.

**2 Press AMP.**

**3 Press SET MENU.**

**4 Press ^/∨ to select AUTO SETUP.**

**5 Press SELECT to enter AUTO SETUP.**

**6 Press ^/∨ to select SETUP, then press </> to select the desired setting.**

- AUTO** To perform the auto setup procedure (YPAO).
- RELOAD** To reload the last auto setup (YPAO) settings to override any manual changes.
- UNDO** To undo the last auto setup (YPAO) and restore the previous settings.
- DEFAULT** To restore the factory preset (default) setup parameters.

You can choose RELOAD or UNDO only if you have already performed auto setup.

**7 Press ∨ to select START, then press SELECT to start the setup procedure.**

- If you selected AUTO in step 6, loud test tones will be output from each speaker in turn; WAIT appears during the auto setup procedure.
- If you selected DEFAULT, RELOAD or UNDO in step 6, no test tones are output.

The RESULT:WIRING screen appears after all items have been measured and set.

- If an ERROR screen appears, see “If an error screen appears” on page 27.
- If a WARNING screen appears, see “If a warning screen appears” on page 28.

**8 Use the cursor buttons to display the results.**

- Press ^ / v to display information about individual results.
- Press < / > to switch between each result list.

**9 When finished, press SELECT.**

The RESULT:EXIT screen appears.

**10 Press ^ / v to select SET or CANCEL.**

- SET** To apply the auto setup (YPAO) settings.
- CANCEL** To cancel the auto setup (YPAO) without making any changes.

**11 Press SELECT to set or cancel the auto setup settings.**

 If you are not satisfied with the result or want to manually adjust each setup parameter, use the manual setup parameters (see page 51).

**Notes**

- If E-10 appears during testing, restart the procedure from step 3.
- To cancel the auto setup procedure before completion, press SET MENU.

**■ If an error screen appears**

**1 Press SELECT to display detailed information about the error.**

**2 Press < / > to switch between error messages.**

For details about each message, see page 29.

**3 When finished, press SELECT to return to the main error screen.**

**4 Press ^ / v to select RETRY or EXIT, then press SELECT.**

- RETRY** To retry the auto setup procedure.
- EXIT** To exit auto setup.

■ **If a warning screen appears**

**1 Press </> to display detailed information about each warning.**

For details about each message, see page 29.

Warnings let you know about potential problems detected during auto setup. Warnings will not cancel the auto setup.

**2 When you are finished, press SELECT.**

The RESULT:EXIT screen appears.

**3 Press ^/∨ to select RESULT LIST, then press SELECT.**

The RESULT:WIRING screen appears.

**Continue from step 8 on page 27 to display each result.**

**Notes**

- If you change speakers, speaker positions, or the layout of your listening environment, perform auto setup again to re-calibrate your system.
- If SWFR PHASE:REV appears in RESULT:WIRING, the SET MENU “SUBWOOFER PHASE” parameter is automatically set to REVERSE (see page 55).
- In the DISTANCE results, the distance displayed may be longer than the actual distance depending on the characteristics of your subwoofer.

## ■ Troubleshooting for auto setup procedure

### Before auto setup

Error message	Cause	Remedy
Connect MIC!	Optimizer microphone is not connected.	<ul style="list-style-type: none"> <li>Connect the supplied optimizer microphone to the OPTIMIZER MIC jack on the front panel.</li> </ul>
Unplug HP!	Headphones are connected.	<ul style="list-style-type: none"> <li>Unplug the headphones.</li> </ul>

### Errors during auto setup

Press SELECT to display detailed information about individual errors. Press </> to switch between error messages.

Error message	Cause	Remedy
E-1:NO FRONT SP	Front L/R channel signal(s) is (are) not detected.	<ul style="list-style-type: none"> <li>Select the front speakers with SPEAKER A or B.</li> <li>Check the front left and right speaker connections.</li> </ul>
E-2:NO SURR.SP	A surround channel signal is not detected.	<ul style="list-style-type: none"> <li>Check the surround speaker connections.</li> </ul>
E-3:NO PRES.SP	A presence channel signal is not detected.	<ul style="list-style-type: none"> <li>Check the presence speaker connections.</li> </ul>
E-4:SBR->SBL	Only right surround back channel signal is detected.	<ul style="list-style-type: none"> <li>Connect the surround back speaker to the LEFT SURROUND BACK SPEAKERS terminal if you only have one surround back speaker.</li> </ul>
E-5:NOISY	Background noise is too loud.	<ul style="list-style-type: none"> <li>Try the auto setup procedure in a quiet environment.</li> <li>Turn off noisy electric equipment like air conditioners (etc.) or move them away from the optimizer microphone.</li> </ul>
E-6:CHECK SURR.	Surround back speaker(s) is (are) connected, though surround L/R speakers are not.	<ul style="list-style-type: none"> <li>Connect surround speakers when you use (a) surround back speaker(s).</li> </ul>
E-7:NO MIC	The optimizer microphone was unplugged during the auto setup procedure.	<ul style="list-style-type: none"> <li>Do not touch the optimizer microphone during the auto setup procedure.</li> </ul>
E-8:NO SIGNAL	The optimizer microphone does not detect test tones.	<ul style="list-style-type: none"> <li>Check the microphone setting.</li> <li>Check the speaker connections and placement.</li> </ul>
E-9:USER CANCEL	The auto setup procedure was cancelled due to user activity.	<ul style="list-style-type: none"> <li>Perform the auto setup procedure again. Do not adjust VOLUME (etc.) during the auto setup procedure.</li> </ul>
E-10:OTHER ERROR	A DSP communication error or hangup occurred.	<ul style="list-style-type: none"> <li>Perform the auto setup procedure again.</li> </ul>

### Warnings after auto setup

Press </> to display detailed information about individual warnings.

Warning message	Cause	Remedy
W-1:OUT OF PHASE	Speaker polarity is not correct. This message may appear depending on the speakers even when the speakers are connected correctly.	<ul style="list-style-type: none"> <li>Check the speaker connections for proper polarity (+ or -).</li> </ul>
W-2:OVER 24m (80ft)	The distance between the speaker and the listening position is over 24 m (80 ft).	<ul style="list-style-type: none"> <li>Bring the speaker closer to the listening position.</li> </ul>
W-3:LEVEL ERROR	The difference of volume level among speakers is excessive. (No level correction is made.)	<ul style="list-style-type: none"> <li>Readjust the speaker installation so that all speakers are set in locations with similar conditions.</li> <li>Check the speaker connections.</li> <li>Use speakers of similar quality and efficiency.</li> <li>Adjust the output volume of the subwoofer.</li> </ul>

- If the ERROR or WARNING screens appears, check the cause of the problem, then perform the auto setup procedure again.
- If warning W-1 appears, corrections are made, but they may not be optimal.
- If warning W-2 or W-3 appears, no corrections are made.
- If error E-10 occurs repeatedly, please contact a qualified YAMAHA service center.

# PLAYBACK

## Basic operations

(U.S.A. model)

- 1 Press **STANDBY/ON** (**SYSTEM POWER** on the remote control) to turn on the power.

- 2 Turn on the video monitor connected to this unit.

- 3 Press **SPEAKERS A** or **B** on the front panel. Each press turns the respective speakers on or off.

- 4 Select the input source.

Use **INPUT** (or press one of the input selector buttons on the remote control) to select the input you desire.

The current input source name and input mode appear in the front panel display and video monitor for a few seconds.

Selected input source      Input mode

- 5 Start playback or select a broadcast station on the source component.

Refer to the operating instructions for the component.

- 6 Adjust the volume to the desired output level.

## 7 Select a sound field program if desired.

Use PROGRAM (or press AMP to select the AMP mode, then press one of the sound field program buttons repeatedly) to select a sound field program. See page 44 for details about sound field programs.

### To listen with headphones (SILENT CINEMA)

“SILENT CINEMA” allows you to enjoy multi-channel music or movie sound, including Dolby Digital and DTS surround, through ordinary headphones. “SILENT CINEMA” activates automatically whenever you connect headphones to the PHONES jack while listening to CINEMA DSP or HiFi DSP sound field programs. When activated, the “SILENT CINEMA” indicator lights up in the front panel display.

#### Notes

- This unit will not be set to “SILENT CINEMA” when MULTI CH INPUT is selected as the input source.
- “SILENT CINEMA” is not effective when the Direct Stereo or 2ch Stereo program is selected, or in STRAIGHT mode.

### To adjust the tone

You can adjust the tonal quality of your front left and right, center, presence and subwoofer speakers or headphones (when connected).

Press TONE CONTROL on the front panel repeatedly to select TREBLE or BASS, then rotate PROGRAM to the right or left to increase or decrease.

- Select TREBLE to adjust the high frequency response.
  - Select BASS to adjust the low frequency response.
- To cancel the tone control, press TONE CONTROL repeatedly to select BYPASS.

Speaker and headphone adjustments are stored independently.

#### Note

TONE CONTROL is not effective with the Direct Stereo program (page 35) or MULTI CH INPUT.

### To mute the sound

Press MUTE on the remote control.

The MUTE indicator blinks in the front panel display.

To resume the audio output, press MUTE again (or press VOLUME -/+). The MUTE indicator disappears from the display.

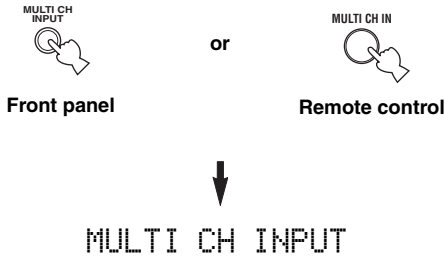

You can adjust the muting level (see page 56).

**■ Selecting MULTI CH INPUT**

Press MULTI CH INPUT so that “MULTI CH INPUT” appears in the front panel display and video monitor.

**Note**

When “MULTI CH INPUT” is shown in the front panel display, no other source can be played. To select another input source with INPUT (or one of the input selector buttons), press MULTI CH INPUT to turn off “MULTI CH INPUT” in the front panel display.

**■ Playing video sources in the background**

You can combine a video image from a video source with sound from an audio source. For example, you can enjoy listening to classical music while viewing beautiful scenery from the video source on the video monitor.

**Use the input selector buttons on the remote control to select a video source, then select an audio source.**

**Note**

If you want to enjoy audio from the MULTI CH INPUT jacks together with a video source, first select the video source, then press MULTI CH INPUT.

**Selecting sound field programs**

**■ Front panel operation**

**Rotate PROGRAM to select the desired program.**

The name of the selected program appears in the front panel display and video monitor.

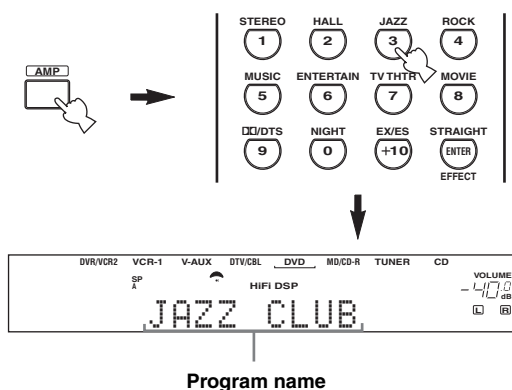

## Remote control operation

Press **AMP** to select the AMP mode, then press one of the sound field program buttons repeatedly to select the desired program.

The name of the selected program appears in the front panel display.

Choose a sound field program based on your listening preference, and not on the name of the program.

### Notes

- When you select an input source, this unit automatically selects the last sound field program used with that source.
- Sound field programs cannot be selected when MULTI CH INPUT is selected.
- Sampling frequencies higher than 48 kHz (except for DTS 96/24 signals) will be sampled down to 48 kHz, then sound field programs will be applied.

## Enjoying multi-channel software

If you connected a surround back speaker, use this feature to enjoy 6.1/7.1-channel playback for multi-channel sources using the Dolby Pro Logic IIX, Dolby Digital Surround EX or DTS-ES decoders.

Press **AMP** to select the AMP mode, then press **EX/ES** on the remote control to switch between 5.1 and 6.1/7.1-channel playback.

To select a decoder, press **</>** repeatedly when **PLIIXMusic (etc.)** is displayed.

### AUTO (AUTO)

When a signal (flag) that can be recognized by the unit is input, the unit selects the optimum decoder for playing back the signal in 6.1/7.1 channels.

If the unit cannot recognize the flag or no flag is present in the input signal, it cannot automatically be played in 6.1/7.1 channels.

### Decoders (select with </>)

You can select from the following decoders depending on the format of the software you are playing.

#### PLIIXMovie

For playing back Dolby Digital or DTS signals in 6.1/7.1 channels using the Pro Logic IIX movie decoder.

#### PLIIXMusic

For playing back Dolby Digital or DTS signals in 6.1/7.1 channels using the Pro Logic IIX music decoder.

#### EX/ES

For playing back Dolby Digital signals in 6.1/7.1 channels using the Dolby Digital Surround EX decoder. DTS signals are played back in 6.1/7.1 channels using the DTS-ES decoder.

#### EX

For playing back Dolby Digital or DTS signals in 6.1/7.1 channels using the Dolby Digital Surround EX decoder.

### OFF (OFF)

Decoders are not used to create 6.1/7.1 channels.

When "SURR B L/R SP" is set to SMLx1 or LRGx1 (see page 54), the surround back channel will be output from the left SURROUND BACK speaker terminals.

**Notes**

- Some 6.1-channel compatible discs do not have a signal (flag) which this unit can automatically detect. When playing these kinds of discs with 6.1-channel, select a decoder (PLIIx Movie, PLIIx Music, EX/ES or EX) manually.
- 6.1-channel playback is not possible even if EX/ES is pressed in the following cases:
  - When “SURR L/R SP” (see page 53) or “SURR B L/R SP” (see page 54) is set to NONE.
  - When the source connected to the MULTI CH INPUT jack is being played.
  - When the source being played does not contain surround left and right channel signals.
  - When a Dolby Digital KARAOKE source is being played.
  - When “2ch Stereo” or Direct Stereo is selected.
- When the power of this unit is turned off, the input mode will be reset to AUTO.
- When the DTS-ES decoder is applied to DTS 96/24 signals, you cannot use the DTS 96/24 decoding feature.
- The Pro Logic IIx decoder is not available when “SURR B L/R SP” is set to NONE (see page 54).
- PLIIxMovie cannot be selected when “SURR B L/R SP” is set to SMLx1 or LRGx1 (see page 54).

**■ Enjoying 2-channel software**

Signals input from 2-channel sources can also be played back on multiple channels.

**Press /DTS on the remote control to select the decoder.**

You can select from the following decoders depending on the type of software you are playing and your personal preference.

PRO LOGIC SUR. STANDARD

Standard processing for Dolby Surround sources.

PRO LOGIC SUR. ENHANCED

CINEMA DSP enhanced processing for Dolby Surround sources.

PRO LOGIC IIx Movie\*

Dolby Pro Logic II/IIx processing for movie software.

PRO LOGIC IIx Music\*

Dolby Pro Logic II/IIx processing for music software.

PRO LOGIC IIx Game\*

Dolby Pro Logic II/IIx processing for game software.

DTS Neo:6 Cinema

DTS processing for movie software.

DTS Neo:6 Music

DTS processing for music software.

\* Use the PLII/PLIIx parameter to select the Pro Logic II or Pro Logic IIx decoders (see page 69).

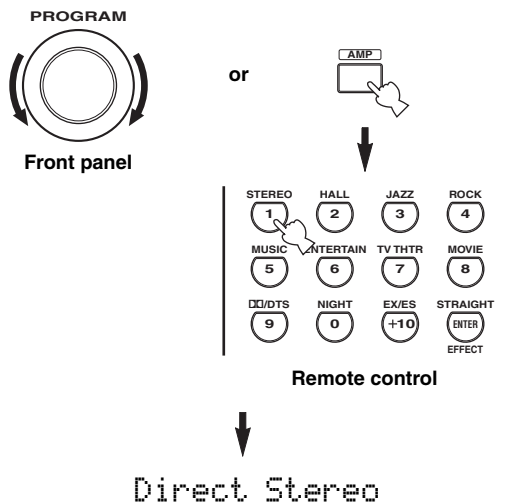

**Note**

The Pro Logic IIx decoder is not available when “SURR B L/R SP” is set to NONE (see page 54).

## ■ Listening to high fidelity stereo sound (Direct Stereo)

Direct Stereo allows you to bypass this unit's decoders and DSP processors to enjoy pure high fidelity sound from 2-channel PCM and analog sources.

Rotate **PROGRAM** (or press **AMP** to select the **AMP** mode, then press **STEREO** repeatedly) to select "Direct Stereo".

### Notes

- To avoid unexpected noise, do not play DTS-encoded CDs in this mode.
- When multi-channel signals (Dolby Digital and DTS) are input, this unit automatically switches to the corresponding analog input. (When DTS is selected as an input mode, no sound will be heard.)
- No sound will be output from the subwoofer.
- CONTROL (page 31) and SET MENU (page 51) settings are not effective.
- The front panel display automatically dims.

## ■ Night listening modes

The night listening modes are designed to improve listenability at lower volumes or at night. Choose either NIGHT:CINEMA or NIGHT:MUSIC depending on the type of material you are playing.

Press **NIGHT** on the remote control repeatedly to select cinema or music.

When night listening is selected, the NIGHT indicator in the front panel display lights up.

- Select NIGHT:CINEMA when watching films to reduce the dynamic range of film soundtracks and make dialog easier to hear at lower volumes.
- Select NIGHT:MUSIC when listening to music sources to preserve ease-of-listening for all sounds.
- Select OFF if you do not want to use this function.

Press **</>** to adjust the effect level while NIGHT:CINEMA or NIGHT:MUSIC is displayed.

This adjusts the level of compression.

Effect.Lvl: MID

- Select MIN for minimum compression.
- Select MID for standard compression.
- Select MAX for maximum compression.

NIGHT:CINEMA and NIGHT:MUSIC adjustments are stored independently.

### Notes

- You cannot use the night listening modes with the Direct Stereo program or MULTI CH INPUT (even though the NIGHT indicator lights up when Direct Stereo is selected).
- The night listening modes may vary in effectiveness depending on the input source and surround sound settings you use.

**Downmixing to 2 channels**

You can enjoy 2-channel stereo playback even from multi-channel sources.

**Rotate PROGRAM (or press STEREO on the remote control) to select 2ch Stereo.**

↓  
2ch Stereo

You can use a subwoofer with this program when SWFR or BOTH is selected in "BASS OUT".

**Listening to unprocessed input signals**

In STRAIGHT mode, two channel stereo sources are output from only the front left and right speakers. Multi-channel sources are decoded straight into the appropriate channels without any additional effect processing.

**Press STRAIGHT (EFFECT) to select STRAIGHT.**

↓  
STRAIGHT

Press STRAIGHT (EFFECT) again so that "STRAIGHT" disappears from the display when you want to turn the sound effect back on.

**Virtual CINEMA DSP**

Virtual CINEMA DSP allows you to enjoy the CINEMA DSP programs without surround speakers. It creates virtual speakers to reproduce the natural sound field. If you do not connect surround speakers, Virtual CINEMA DSP activates automatically whenever you select a CINEMA DSP sound field program.

**Note**

Virtual CINEMA DSP will not activate, even when "SURR L/R SP" is set to NONE (see page 53) in the following cases:

- When MULTI CH INPUT is selected as the input source.
- When headphones are connected to the PHONES jack.

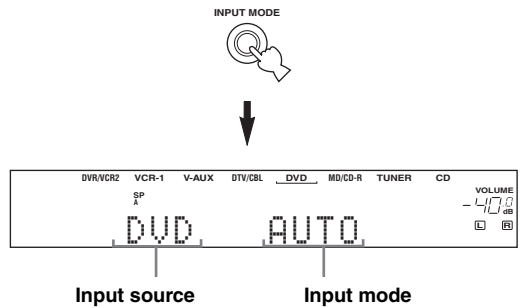

**Selecting input modes**

This unit comes with a variety of input jacks. Do the following to select the type of input signals you want to use.

**1 Rotate INPUT to select the input source.**

**2 Press INPUT MODE to select an input mode. In most cases, use AUTO.**

- AUTO** Automatically selects input signals in the following order:  
1) Digital signals\*  
2) Analog signals
- DTS** Selects only digital signals encoded in DTS. If no DTS signals are input, no sound is output.
- ANALOG** Selects only analog signals. If no analog signals are input, no sound is output.

\* If this unit detects a Dolby Digital or DTS signal, the decoder automatically switches to the appropriate sound field program.

You can adjust the default input mode this unit selects when the power is turned on (see page 58).

**Notes**

- When you play DTS-encoded CD/LDs with the input mode set to AUTO:
  - This unit automatically switches to the DTS decoding mode. The unit remains in DTS mode (and the **dts** indicator may flash) for up to 30 seconds after playback of the DTS source is complete. To manually release the DTS mode, press INPUT MODE to reselect AUTO.
  - The DTS decoding mode may be released if search or skip operations are performed for more than 30 seconds. To prevent this, press INPUT MODE to select DTS.
- If the digital output data of the player has been processed in any way, you may not be able to perform DTS decoding even if you make a digital connection between this unit and the player.

**Displaying information about the input source**

You can display the type, format and sampling frequency of the current input signal.

**1 Select the input source.****2 Press AMP to select the AMP mode, then press STRAIGHT (EFFECT) so that "STRAIGHT" appears in the display.****3 Press ^/∨ to display the following information about the input signal.**

- (Format) Signal format display. When the unit cannot detect a digital signal it automatically switches to analog input.
- in Number of source channels in the input signal. For example, a multi-channel soundtrack with 3 front channels, 2 surround channels and LFE, is displayed as "3/2/LFE".
- fs Sampling frequency. When the unit is unable to detect the sampling frequency "Unknown" appears.
- rate Bit rate. When the unit is unable to detect the bit rate "Unknown" appears.
- flg Flag data encoded with DTS or Dolby Digital signals that cue this unit to automatically switch decoders.

# TUNING

## Automatic and manual tuning

There are 2 tuning methods; automatic and manual. Automatic tuning is effective when station signals are strong and there is no interference.

### Automatic tuning

- 1 Rotate INPUT to select TUNER as the input source.

- 2 Press FM/AM to select the reception band. "FM" or "AM" appears in the front panel display.

- 3 Press TUNING MODE (AUTO/MAN'L MONO) so that the AUTO indicator lights up in the front panel display.

If a colon (:) appears in the front panel display, tuning is not possible. Press PRESET/TUNING (EDIT) to turn the colon (:) off.

- 4 Press PRESET/TUNING </> once to begin automatic tuning.

Press > to tune into a higher frequency, or press < to tune into a lower frequency.

When tuned into a station, the TUNED indicator lights up and the frequency of the received station is shown in the front panel display.

## Manual tuning

If the signal from the station you want to select is weak, tune into it manually. Manually tuning into an FM station will automatically switch the tuner to monaural reception to increase the signal quality.

**1 Select TUNER and the reception band following steps 1 and 2 as described in "Automatic tuning".**

**2 Press TUNING MODE (AUTO/MAN'L MONO) so that the AUTO indicator disappears from the front panel display.**

If a colon (:) appears in the front panel display, tuning is not possible. Press PRESET/TUNING (EDIT) to turn the colon (:) off.

**3 Press PRESET/TUNING </> to tune into the desired station manually.**

Hold down the button to continue searching.

## Presetting stations

### Automatically presetting FM stations

You can use the automatic preset tuning feature to store FM stations. This function enables this unit to automatically tune into FM stations with strong signals, and to store up to 40 (8 stations in 5 groups, A1 through E8) of those stations in order. You can then recall any preset station easily by selecting the preset station number.

**1 Press FM/AM to select the FM band.**

**2 Press TUNING MODE (AUTO/MAN'L MONO) so that the AUTO indicator lights up in the front panel display.**

If a colon (:) appears in the front panel display, tuning is not possible. Press PRESET/TUNING (EDIT) to turn the colon (:) off.

**3 Press and hold MEMORY (MAN'L/AUTO FM) for more than 3 seconds.**

The preset number, the MEMORY and AUTO indicators flash. After about 5 seconds, automatic presetting starts from the frequency currently displayed and proceeds toward the higher frequencies.

When automatic preset tuning is completed, the front panel display shows the frequency of the last preset station.

**Notes**

- Any stored station data existing under a preset number is cleared when you store a new station under that preset number.
- If the number of the received stations does not reach 40 (E8), automatic preset tuning has automatically stopped after searching all stations.
- Only FM stations with sufficient signal strength are stored automatically by automatic preset tuning. If the station you want to store is weak in signal strength, tune into it manually, and store it by following the procedure in “Manually presetting stations”.

**Automatic preset tuning options**

You can select the preset number from which this unit will store FM stations and/or begin tuning toward lower frequencies.

After pressing MEMORY in step 3:

- 1 Press A/B/C/D/E, then PRESET/TUNING </> to select the preset number under which the first station will be stored. Automatic preset tuning will stop when stations have all been stored up to E8.
- 2 Press PRESET/TUNING (EDIT) to turn off the colon (: ) and then press PRESET/TUNING </> to begin tuning toward the lower frequencies.

**Memory back-up**

The memory back-up circuit prevents the stored data from being lost even if this unit is set in the standby mode, the power cord is disconnected from the AC outlet, or the power supply is temporarily cut due to power failure. However, if the power is cut for more than one week, the preset stations may be cleared. If so, store the stations again by using the presetting station methods.

**Manually presetting stations**

You can also store up to 40 stations (8 stations in 5 groups, A1 through E8) manually.

**1 Tune into a station.**

See page 38 for tuning instructions.

When tuned into a station, the front panel display shows the frequency of the station received.

**2 Press MEMORY (MAN'L/AUTO FM).**

The MEMORY indicator flashes for about 5 seconds.

**3 Press A/B/C/D/E repeatedly to select a preset station group (A to E) while the MEMORY indicator is flashing.**

The group letter appears. Check that the colon (: ) appears in the front panel display.

**4 Press PRESET/TUNING </> to select a preset station number (1 through 8) while the MEMORY indicator is flashing.**

Press > to select a higher preset station number.  
Press < to select a lower preset station number.

**5 Press MEMORY (MAN'L/AUTO FM) on the front panel while the MEMORY indicator is flashing.**

The station band and frequency appear in the front panel display with the preset group and number you have selected.

Shows the displayed station has been stored as C3.

**6 Repeat steps 1 to 5 to store other stations.**

**Notes**

- Any stored station data existing under a preset number is cleared when you store a new station under that preset number.
- The reception mode (stereo or monaural) is stored along with the station frequency.

**Selecting preset stations**

You can tune any desired station simply by selecting the preset station number under which it was stored.

(U.S.A. model)

**When performing this operation with the remote control, first press TUNER to set the remote to tuner mode.**

**1 Press A/B/C/D/E to select the preset station group.**

The preset group letter appears in the front panel display and changes each time you press the button.

Front panel

or

Remote control

**2 Press PRESET/TUNING </> (PRESET/CH ^ / v on the remote control) to select a preset station number (1 through 8).**

The preset group and number appear on the front panel display along with the station band, frequency and the TUNED indicator lights up.

## Exchanging preset stations

You can exchange the assignment of two preset stations with each other. The example below describes the procedure for exchanging preset station “E1” with “A5”.

(U.S.A. model)

- 1 Select preset station “E1” using A/B/C/D/E and PRESET/TUNING </> / >.**  
See “Selecting preset stations”.

- 2 Press and hold PRESET/TUNING (EDIT) for more than 3 seconds.**  
“E1” and the MEMORY indicator flash in the front panel display.

- 3 Select preset station “A5” using A/B/C/D/E and PRESET/TUNING </> / >.**  
“A5” and the MEMORY indicator flash in the front panel display.

- 4 Press PRESET/TUNING (EDIT) again.**  
The stations stored at the two preset assignments are exchanged.

# RECORDING

Recording adjustments and other operations are performed from the recording components. Refer to the operating instructions for those components.

(U.S.A. model)

**1 Turn on the power of this unit and all connected components.**

**2 Select the source component you want to record from.**

**3 Start playback (or select a broadcast station) on the source component.**

**4 Start recording on the recording component.**

Do a test recording before you start an actual recording.

## Notes

- When this unit is set in the standby mode, you cannot record between other components connected to this unit.
- The setting of TONE CONTROL, VOLUME, "SPEAKER LEVEL" (page 55) and programs does not affect recorded material.
- A source connected to the MULTI CH INPUT jacks of this unit cannot be recorded.
- S-Video and composite video signals pass independently through this unit's video circuits. Therefore, when recording or dubbing video signals, if your video source component is connected to provide only an S-Video (or only a composite video) signal, you can record only an S-Video (or only a composite video) signal to your VCR.
- Digital signals input to the DIGITAL INPUT jacks are not output to the analog AUDIO OUT (L/R) jacks for recording. Likewise, analog signals input to the AUDIO IN (L/R) jacks are not output to the DIGITAL OUTPUT jack. Therefore, if your source component is connected to provide only digital (or analog) signals, you can only record digital (or analog) signals.
- A given input source is not output on the same REC OUT channel. (For example, the signal input from VCR 1 IN is not output on VCR 1 OUT.)
- Check the copyright laws in your country to record from records, CDs, radio, etc. Recording of copyrighted material may infringe copyright laws.

If you playback a video source that uses scrambled or encoded signals to prevent it from being dubbed, the picture itself may be disturbed due to those signals.

## Special considerations when recording DTS software

The DTS signal is a digital bitstream. Attempting to digitally record the DTS bitstream will result in noise being recorded. Therefore, if you want to use this unit to record sources that have DTS signals recorded on them, the following considerations and adjustments need to be made.

For DVDs and CDs encoded with DTS, when your player is compatible with the DTS format, follow its operating instructions to make a setting so that the analog signal will be output from the player.

# SOUND FIELD PROGRAM DESCRIPTIONS

This unit is equipped with a variety of precise digital decoders that allow you to enjoy multichannel playback from almost any sound source (stereo or multichannel). This unit is also equipped with a YAMAHA digital sound field processing (DSP) chip containing several sound field programs which you can use to enhance your playback experience. Most of these sound field programs are precise digital recreations of actual acoustic environments found in famous concert halls, music venues, and movie theaters.

The YAMAHA CINEMA DSP modes are compatible with all Dolby Digital, DTS, and Dolby Surround sources. Set the input mode to AUTO (see page 36) to enable this unit to automatically switch to the appropriate digital decoder according to the input signal.

## Notes

- This unit's DSP sound field programs are recreations of real-world acoustic environments made from precise measurements taken in the actual hall, etc. Thus you may notice variations in the strength of the reflections coming from the front, back, left and right.
- Feel free to choose a sound field program based on your listening preference, and not purely on the name of the program itself.

## For movie/video sources

You can select from the following sound fields when playing movie or video sources. The sound fields marked "MULTI" can be used with multi-channel sources, like DVD, digital TV, etc. Those marked "2-CH" can be used with 2-channel (stereo) sources like TV programs, video tapes, etc.

Program	Features	Sources
STEREO: 2ch Stereo	Downmixes multi-channel sources to 2 channel (left and right) or plays back 2-channel sources as is.	
MUSIC VIDEO	This program lends an enthusiastic atmosphere to the sound, giving you the feeling you are at an actual jazz or rock concert.	
ENTERTAINMENT: Game	This program adds a deep and spatial feeling to video game sounds.	
TV THEATER: Mono Movie	This program is provided for reproducing monaural video sources (such as old movies). The program produces the optimum reverberation to create sound depth using only the presence sound field.	
TV THEATER: Variety/Sports	Though the presence sound field is relatively narrow, the surround sound field employs the sound environment of a large concert hall. This effect enhances the experience of watching various TV programs such as news, variety shows, music programs or sports programs.	
MOVIE THEATER: Spectacle	CINEMA DSP processing. This program creates the extremely wide sound field of a 70-mm movie theater. It precisely reproduces the source sound in detail, making both the video and the sound field incredibly real. This is ideal for any kind of video source encoded with Dolby Surround, Dolby Digital or DTS (especially large-scale movie productions).	MULTI 2-CH
MOVIE THEATER: Sci-Fi	CINEMA DSP processing. This program clearly reproduces dialog and sound effects in the latest sound form for science fiction films, thus creating a broad and expansive cinematic space amid silence. You can enjoy science fiction films in a virtual-space sound field that includes Dolby Surround, Dolby Digital and DTS-encoded software employing the most advanced techniques.	
MOVIE THEATER: Adventure	CINEMA DSP processing. This program is ideal for precisely reproducing the sound design of the newest 70-mm and multichannel soundtrack films. The sound field is made to be similar to that of the newest movie theaters, so the reverberations of the sound field itself are restrained as much as possible.	
MOVIE THEATER: General	CINEMA DSP processing. This program is for reproducing sounds from 70-mm and multichannel soundtrack films, and is characterized by soft and extensive sound field.	

Program	Features	Sources
DOLBY DIGITAL: SUR. STANDARD	Standard 5.1-channel processing for Dolby Digital sources.	MULTI
DOLBY DIGITAL: SUR. ENHANCED	CINEMA DSP enhanced processing for Dolby Digital sources.	
DD D+PLIIx Movie: SUR. STANDARD	Standard 6.1/7.1-channel processing (Dolby Pro Logic IIx Movie) for Dolby Digital sources.	
DD D+PLIIx Movie: SUR. ENHANCED	CINEMA DSP enhanced 6.1/7.1-channel processing (Dolby Pro Logic IIx Movie) for Dolby Digital sources.	
DOLBY D EX: SUR. STANDARD	Standard 6.1-channel processing for Dolby Digital sources.	
DOLBY D EX: SUR. ENHANCED	CINEMA DSP enhanced 6.1-channel processing (Dolby Digital EX) for Dolby Digital sources.	
DTS: SUR. STANDARD	Standard 5.1-channel processing for DTS sources.	
DTS 96/24: SUR. STANDARD	Standard 5.1-channel processing for 96-kHz/24-bit DTS sources.	
DTS: SUR. ENHANCED	CINEMA DSP enhanced processing for DTS and 96-kHz/24-bit DTS sources.	
DTS+PLIIx Movie: SUR. STANDARD	Standard 6.1/7.1-channel processing (Dolby Pro Logic IIx Movie) for DTS sources.	
DTS+PLIIx Movie: SUR. ENHANCED	CINEMA DSP enhanced 6.1/7.1-channel processing (Dolby Pro Logic IIx Movie) for DTS sources.	
DTS+DOLBY EX: SUR. STANDARD	Standard 6.1-channel processing (Dolby Digital EX) for DTS sources.	
DTS+DOLBY EX: SUR. ENHANCED	CINEMA DSP enhanced 6.1-channel processing (Dolby Digital EX) for DTS sources.	
DTS ES Mtrx6.1: SUR. STANDARD	Standard 6.1-channel processing (DTS-ES Matrix) for DTS sources.	
DTS ES Mtrx6.1: SUR. ENHANCED	CINEMA DSP enhanced processing (DTS-ES Matrix) for DTS sources.	
DTS ES Disc6.1: SUR. STANDARD	Standard 6.1-channel processing (DTS-ES Discrete) for DTS sources.	
DTS ES Disc6.1: SUR. ENHANCED	CINEMA DSP enhanced processing (DTS-ES Discrete) for DTS sources.	

<b>Program</b>	<b>Features</b>	<b>Sources</b>
PRO LOGIC: SUR. STANDARD	Standard processing for Dolby Surround sources.	2-CH
PRO LOGIC: SUR. ENHANCED	CINEMA DSP enhanced processing for Dolby Surround sources.	
PRO LOGIC IIx: PLIIx Movie	Dolby Pro Logic IIx processing for movie software.*	
PRO LOGIC II: PLII Movie	Dolby Pro Logic II processing for movie software.*	
PRO LOGIC IIx: PLIIx Game	Dolby Pro Logic IIx processing for game software.*	
PRO LOGIC II: PLII Game	Dolby Pro Logic II processing for game software.*	
DTS: Neo:6 Cinema	DTS processing for movie software.	

\* You can select either Pro Logic IIx or Pro Logic II processing using the PLII/PLIIx parameter on page 69.

## For music sources

You can select from the following sound fields when playing music sources, like CD, FM/AM broadcasting, tapes, etc.

Program	Features	Sources
CONCERT HALL	HiFi DSP processing. A classic shoe-box type concert hall with approximately 1700 seats. Pillars and ornate carvings create extremely complex reflections which produce a very full, rich sound.	MULTI 2-CH
JAZZ CLUB	HiFi DSP processing. This is the sound field at stage front in "The Bottom Line", a famous New York jazz club. The floor can seat 300 people to the left and right in a sound field offering a real and vibrant sound.	
ROCK CONCERT	HiFi DSP processing. The ideal program for lively, dynamic rock music. The data for this program was recorded at LA's "hottest" rock club. The listener's virtual seat is at the center-left of the hall.	
ENTERTAINMENT: Disco	HiFi DSP processing. This program recreates the acoustic environment of a lively disco in the heart of a big city. The sound is dense and highly concentrated. It is also characterized by high-energy, "immediate" sound.	
<b>DD</b> D+PLIIx Music: SUR. STANDARD	Standard Dolby Digital and Dolby Pro Logic IIx processing for music sources.	MULTI
<b>DD</b> D+PLIIx Music: SUR. ENHANCED	CINEMA DSP enhanced Dolby Digital and Dolby Pro Logic IIx processing for music sources.	
DTS+PLIIx Music: SUR. STANDARD	Standard DTS and Dolby Pro Logic IIx processing for music sources.	
DTS+PLIIx Music: SUR. ENHANCED	CINEMA DSP enhanced DTS and Dolby Pro Logic IIx processing for music sources.	
STEREO: 2ch Stereo	2-channel (left and right) playback.	2-CH
STEREO: Direct Stereo	Use to output stereo sources to only the front left and right speakers without any processing.	
STEREO: 7ch Stereo	Use to increase the output stereo sources (in stereo) from all speakers. This provides a larger sound field and is ideal for background music at parties, etc.	
PRO LOGIC IIx: PLIIx Music	Dolby Pro Logic IIx processing for music software.*	
PRO LOGIC II: PLII Music	Dolby Pro Logic II processing for music software.*	
DTS: Neo:6 Music	DTS processing for music software.	

\* You can select either Pro Logic IIx or Pro Logic II processing using the PLII/PLIIx parameter on page 69.

# ADVANCED OPERATIONS

## Selecting the OSD mode

You can display this unit's operating information on a video monitor. If you display the SET MENU and sound field program parameter settings on a monitor, it is much easier to see the available options and parameters than it is by reading this information on the front panel display.

**1 Turn on the video monitor connected to this unit.**

**2 Press ON SCREEN repeatedly to change the OSD mode.**

The OSD mode changes in the following order: full display, short display, and display off.

### Full display

Always shows the sound field program parameter settings as well as the contents of the front panel display.

### Short display

Briefly shows the contents of the front panel display at the bottom of the screen each time you operate this unit.

### Display off

Only operations performed using ON SCREEN are displayed. The OSD is displayed when using SET MENU or the test tone feature, settings are displayed, even if the OSD mode is set to "Display off".

Full display

Short display

### Notes

- The OSD signal is not output to the REC OUT jack, and will not be recorded.
- You can set the OSD to turn on (gray background) or off when a video source is not being reproduced (or the source component is turned off) by using "DISPLAY SET" (see page 58).

## Using the sleep timer

Use this feature to automatically set this unit in the standby mode after a certain amount of time. The sleep timer is useful when you are going to sleep while this unit is playing or recording a source. The sleep timer also automatically turns off any external components connected to the AC OUTLET(S).

### Setting the sleep timer

**1 Select a source and start playback on the source component.**

**2 Press SLEEP repeatedly to set the amount of time.**

Each time you press SLEEP, the front panel display changes as shown below. The SLEEP indicator flashes while switching the amount of time for the sleep timer.

The SLEEP indicator lights up in the front panel display, and the display returns to the selected sound field program.

### SLEEP indicator

### ■ Canceling the sleep timer

Press SLEEP repeatedly until "SLEEP OFF" appears in the front panel display.

After a few seconds, "SLEEP OFF" disappears, and the SLEEP indicator goes off.

The sleep timer setting can also be canceled by pressing STANDBY on the remote control (or STANDBY/ON on the front panel) to set this unit to the standby mode.

## Manually adjusting speaker levels

You can adjust the output level of each speaker while listening to a music source. This is also possible when playing sources through the MULTI CH INPUT jacks. Please note that this operation will override the level adjustments made in "AUTO SETUP" (page 25), "SPEAKER LEVEL" (page 55) and "Using the test tone" (page 50).

**1 Press AMP.**

**2 Press LEVEL repeatedly to select the speaker you want to adjust.**

FRONT L	Front left speaker level
CENTER	Center speaker level
FRONT R	Front right speaker level
SUR. R	Surround right speaker level
SUR. B. R	Surround back right speaker level
SUR. B. L	Surround back left speaker level
SUR. L	Surround left speaker level
SWFR	Subwoofer level
PRES	Presence speaker level

Once you press LEVEL, you can also select the speaker by pressing  $\wedge$  /  $\vee$ .

**3 Press  $\langle$  /  $\rangle$  to adjust the speaker output level.**  
The control range is from +10 dB to -10 dB.

**4 Press SELECT when you have completed your adjustment.**

This operation can also be performed using the controls on the front panel. Press NEXT repeatedly to select the speaker you want to adjust, then press LEVEL  $\rightarrow$  /  $\leftarrow$  to adjust the output level.

## Using the test tone

You can use the test tone feature to manually balance your speaker levels. Please note that this operation will override the level adjustments made in “AUTO SETUP” (page 25), “SPEAKER LEVEL” (page 55) and “Manually adjusting speaker levels” (page 49). Use the test tone to set speaker levels so that the volume from each speaker is identical when heard from your listening position.

### Note

You cannot activate the test tone if headphones are connected to the PHONES jack. Remove the headphones from the PHONES jack.

**1 Press AMP.**

**2 Press TEST.**

The unit outputs a test tone.

**3 Press  $\wedge$  /  $\vee$  repeatedly to select the speaker you want to adjust.**

TEST LEFT	Front left speaker
TEST CENTER	Center speaker
TEST RIGHT	Front right speaker
TEST SUR. R	Right surround speaker
TEST SUR. B. R	Right surround back speaker
TEST SUR. B. L	Left surround back speaker
TEST SUR. L	Left surround speaker
TEST SUBWOOFER	Subwoofer

**4 Press  $\langle$  /  $\rangle$  to adjust the speaker volumes.**

**5 Press TEST when you have completed your adjustment.**

The test tone stops.

If PRESENCE SP in “SPEAKER SET” is set to YES, you can adjust the presence speaker volumes (proceed to step 6).

## ■ Outputting the test tone from the PRESENCE speakers

**6 Press  $\wedge$  /  $\vee$  repeatedly to select the speaker from which you want to output the test tone.**

TEST FRONT	Front speakers
TEST PRESENCE	Presence speakers
TEST PRES L	Left presence speakers
TEST PRES R	Right presence speakers

**7 Press  $\langle$  /  $\rangle$  to adjust the presence speaker volumes.**

**8 Press TEST when you have completed your adjustment.**

The test tone stops.

# SET MENU

You can use the following parameters in SET MENU to adjust a variety of system settings and customize the way this unit operates. Change the initial settings (indicated in bold under each parameter) to reflect the needs of your listening environment.

## ■ AUTO SETUP

Use to specify which speaker parameters auto setup will adjust, and to activate the auto setup procedure (see page 25).

## ■ MANUAL SETUP

Use to manually adjust speaker and system parameters.

### 1 SOUND MENU

Use to manually adjust any speaker setting, alter the quality and tone of the sound output by the system or compensate for video signal processing delays when using LCD monitors or projectors.

Most of the parameters described in SOUND MENU are set automatically when you run auto setup (see page 25). You can use SOUND MENU to make further adjustments, but we recommend running auto setup first.

Item	Features	Page
A)SPEAKER SET	Selects the size of each speaker, the speakers for low-frequency signal output, and the cross over frequency.	53
B)SPEAKER LEVEL	Adjusts the output level of each speaker.	55
C)SP DISTANCE	Adjusts the delay time of each speaker.	55
D)CENTER GEO	Adjusts the tonal quality of the center speaker.	56
E)LFE LEVEL	Adjusts the output level of the LFE channel for Dolby Digital or DTS signals.	56
F)DYNAMIC RANGE	Adjusts the dynamic range for Dolby Digital or DTS signals.	56
G)AUDIO SET	Customizes the muting level, audio delay and height of the front and center channel sounds.	56
H)PR/SB SELECT	Selects priority to either surround back or presence speakers when both sets of speakers are connected to this unit.	57

### 2 INPUT MENU

Use to reassign digital input/outputs and select the input mode.

Item	Features	Page
A)I/O ASSIGNMENT	Assigns jacks according to the component to be used.	57
B)INPUT MODE	Selects the initial input mode of the source.	58

### 3 OPTION MENU

Use to adjust the optional system parameters.

Item	Features	Page
A)DISPLAY SET	Adjusts the brightness of the display and converts video signals.	58
B)MEMORY GUARD	Locks sound field program parameters and other SET MENU settings.	59
C)PARAM. INI	Initializes the parameters of a group of sound field programs.	59
D)ZONE SET	Specifies the location of the speakers connected to the SPEAKERS B terminals.	59

## Using SET MENU

Use the remote control to access and adjust each parameter.

You can change SET MENU parameters while the unit is reproducing sound.

### Note

You cannot change some SET MENU parameters while the unit is in either cinema or music night listening mode.

#### 1 Press AMP.

#### 2 Press SET MENU.

#### 3 Press ^ / v to select MANUAL SETUP.

#### 4 Press SELECT to enter MANUAL SETUP.

1 SOUND MENU appears on the front panel display.

#### 5 Press ^ / v to select the desired menu.

#### 6 Press SELECT to enter the selected menu.

#### 7 Press ^ / v to select the item you want to adjust, then press < / > to change the setting of the item.

Repeat this operation to select and adjust each setting. To return to the previous menu level, press RETURN.

#### 8 To exit, press SET MENU when finished.

### Memory back-up

The memory back-up circuit prevents the stored data from being lost even if this unit is in the standby mode. However, if the power cord is disconnected from the AC outlet, or the power supply is cut for more than one week, the stored data will be lost. If so, adjust the items again.

## 1 SOUND MENU

Use to manually adjust any speaker setting or compensate for video signal processing delays when using LCD monitors or projectors. Most of the SOUND MENU parameters are set automatically when you run auto setup (see page 25).

### ■ Speaker set A>SPEAKER SET

Use to manually adjust any speaker setting.

If you are not satisfied with the bass sounds from your speakers, you can change these settings according to your preference.

#### Center speaker CENTER SP

Choices: NONE, **SML**, LRG

- Select NONE if you do not have a center speaker. The unit directs all of the center channel signal to the front left and right speakers.
- Select SML if you have a small center speaker. The unit directs the low-frequency signals of the center channel to the speakers selected with “LFE/BASS OUT”.
- Select LRG if you have a large center speaker. The unit directs the entire range of the center channel signal to the center speaker.

#### Front speakers FRONT SP

Choices: SMALL, **LARGE**

- Select SMALL if you have small front speakers. The unit directs the low-frequency signals of the front channel to the speakers selected with “LFE/BASS OUT”.
- Select LARGE if you have large front speakers. The unit directs the entire range of the front left and right channel signals to the front left and right speakers.

#### Surround left/right speakers SURR L/R SP

Choices: NONE, **SML**, LRG

- Select NONE if you do not have surround speakers. This will set the unit to the Virtual CINEMA DSP mode (see page 36) and automatically set the surround back speaker setting (SURR B L/R SP) to NONE.
- Select SML if you have small surround left and right speakers. The low-frequency signals of the surround channel are directed to the speakers selected with “LFE/BASS OUT”.
- Select LRG if you have large surround left and right speakers. The entire range of the surround channel signal is directed to the surround left and right speakers.

**Surround back speakers** SURR B L/R SP

Choices: NONE, SMLx1, **SMLx2**, LRGx1, LRGx2

- Select NONE if you do not have a surround back speaker. The unit directs all of the surround back channel signal to the surround left and right speakers.
- Select SMLx1 if you have a small surround back speaker. The low-frequency signals of the surround back channel are directed to the speakers selected with “LFE/BASS OUT”, and the rest of the frequency signals are directed to the left surround back speaker.
- Select SMLx2 if you have 2 small surround back speakers. The low-frequency signals of the surround back channels are directed to the speakers selected with “LFE/BASS OUT”.
- Select LRGx1 if you have a large surround back speaker. The unit directs the entire range of the surround back channel signal to the left surround back speaker.
- Select LRGx2 if you have 2 large surround back speakers. The unit directs the entire range of the surround back channel signal to the surround back speakers.

**Note**

If you select SMLx1 or LRGx1, connect the speaker to the left SURROUND BACK speaker terminals.

**Presence speakers** PRESENCE SP

Choices: **NONE**, YES

- Select NONE if you do not have presence speakers.
- Select YES if you have presence speakers.

**Bass out** LFE/BASS OUT

Low-frequency (bass) signals can be directed to the subwoofer and/or the front left and right speakers according to the characteristics of your system. This setting also determines the routing of the LFE (low-frequency effect) signals found in Dolby Digital or DTS sources.

Choices: SWFR, FRNT, **BOTH**

- Select SWFR if you connect a subwoofer. LFE and low-frequency signals from other channels are directed to the subwoofer according to the speaker settings.
- Select FRNT if you do not use a subwoofer. LFE and low frequency signals from other channels are directed to the front speakers according to the speaker settings (even if you have previously set front speakers to SML).
- Select BOTH if you connect a subwoofer and you want to output low-frequency signals from front channels to both the front speakers and subwoofer. LFE and low-frequency signals from other channels are also directed to the subwoofer according to the speaker settings. Use this function to reinforce low-frequency signals using the subwoofer when playing back sources such as CDs.

**Cross over** CROSS OVER

Use this feature to select a cross-over (cut-off) frequency for all low-frequency signals. All frequencies below the selected frequency will be sent to the subwoofer.

Choices: 40Hz, 60Hz, **80Hz**, 90Hz, 100Hz, 110Hz, 120Hz, 160Hz, 200Hz

**Subwoofer phase** SUBWOOFER PHASE

If bass sounds are lacking or unclear, use this feature to switch the phase of your subwoofer.

Choices: **NORMAL** (normal), **REVERSE** (reverse)

- Select **NORMAL** if you do not want to reverse the phase of your subwoofer.
- Select **REVERSE** to reverse the phase of your subwoofer.

**Speaker level** B>SPEAKER LEVEL

Use these settings to manually balance the speaker levels between the front left or surround left speakers and each speaker selected in **SPEAKER SET** (page 53).

Choices: -10.0 dB to +10.0 dB

- **FR** adjusts the balance of the front left and front right speakers.
- **C** adjusts the balance of the front left and center speakers.
- **SL** adjusts the balance of the front left and surround left speakers.
- **SBL\*** adjusts the balance of the surround left and surround back left speakers.
- **SBR\*** adjusts the balance of the surround left and surround back right speakers.
- **SR** adjusts the balance of the surround left and surround right speakers.
- **SWFR** adjusts the balance of the front left speaker and subwoofer.
- **PRES** adjusts the balance of the front and presence speakers.

\* SB will be displayed if you selected only one surround back speaker in **SURR B L/R SP** (page 54).

To calibrate, use the test tone feature (see page 50).

**Speaker distance** C>SP DISTANCE

Use this feature to manually input the distance of each speaker and adjust the delay applied to respective channel. Ideally, each speaker should be the same distance from the main listening position. However, this is not possible in most home situations. Thus, a certain amount of delay must be applied to the sound from each speaker so that all sound will arrive at the listening position at the same time.

**Unit** UNIT

Choices: meters (m), feet (ft)

Initial setting:

U.S.A. and Canada models: feet (ft)

Other models: meters (m)

- Select meters to input speaker distances in meters.
- Select feet to input speaker distances in feet.

**Speaker distances**

Choices: 0.3 to 24.00 m (1 to 80 ft)

- **FRONT L** adjusts the distance of the front left speaker. Initial setting: 3.0 m (10.0 ft)
- **FRONT R** adjusts the distance of the front right speaker. Initial setting: 3.0 m (10.0 ft)
- **CENTER** adjusts the distance of the center speaker. Initial setting: 3.0 m (10.0 ft)
- **SURR L** adjusts the distance of the surround left speaker. Initial setting: 3.0 m (10.0 ft)
- **SURR R** adjusts the distance of the surround right speaker. Initial setting: 3.0 m (10.0 ft)
- **SB L\*** adjusts the distance of the surround back left speaker. Initial setting: 2.10 m (7.0 ft)
- **SB R\*** adjusts the distance of the surround back right speaker. Initial setting: 2.10 m (7.0 ft)
- **SWFR** adjusts the distance of the subwoofer. Initial setting: 3.0 m (10.0 ft)
- **PRES L** adjusts the distance of the presence left speaker. Initial setting: 3.0 m (10.0 ft)
- **PRES R** adjusts the distance of the presence right speaker. Initial setting: 3.0 m (10.0 ft)

\* SURR B will be displayed if you selected only one surround back speaker in **SURR B L/R SP** (page 54).

## ■ Center graphic equalizer D)CENTER GEO

Use this feature to adjust the built-in 5-band graphic equalizer for the center channel so that the tonal quality of the center speaker matches that of the front speakers.

You can make adjustments listening to the currently selected source component or a test tone.

You can adjust 5 frequency bands: 100Hz, 300Hz, 1kHz, 3kHz, 10kHz

Choices: -6 to +6 dB

- Select ON to output test tones from the front left and center speakers, and adjust the tonal quality of the center speaker.
- Select OFF to stop the test tone and output the currently selected source component.
- Press ^ / v to select a frequency band.
- Press < / > to adjust the selected frequency band.

## ■ Low-frequency effect level E)LFE LEVEL

Use to adjust the output level of the LFE (low-frequency effect) channel according to the capacity of your subwoofer or headphones. The LFE channel carries low-frequency special effects which are only added to certain scenes. This setting is effective only when this unit decodes Dolby Digital or DTS signals.

Choices: -20 to 0 dB

### Speaker SPEAKER

Select to adjust the speaker LFE level.

### Headphone HEADPHONE

Select to adjust the headphone LFE level.

#### Note

Depending on the settings of "LFE LEVEL", some signals may not be output from the SUB WOOFER OUTPUT jack.

## ■ Dynamic range F)D.RANGE

Use to select the amount of dynamic range compression to be applied to your speakers or headphones. This setting is effective only when the unit is decoding Dolby Digital and DTS signals.

Choices: MIN (minimum), STD (standard), **MAX** (maximum)

### Speaker SP

Select to adjust the speaker compression.

### Headphone HP

Select to adjust the headphone compression.

- Select MIN if you regularly listen at low volume levels.
- Select STD for general use.
- Select MAX to preserve the greatest amount of dynamic range.

## ■ Audio set G)AUDIO SET

Use to customize this units overall audio settings.

### Audio mute AUDIO MUTE

Use to adjust how much the mute function reduces the output volume.

Choices: **MUTE**, -20 dB

- Select MUTE to completely halt all output of sound.
- Select -20 dB to reduce the current volume by 20 dB.

### Audio delay AUDIO DELAY

Use to delay the sound output and synchronize it with the video image. This may be necessary when using certain LCD monitors or projectors.

Choices: **0** to 160 mS

**Dialog lift** DIALG.LIFT

Use to turn on and off the DIALG.LIFT parameter (see page 69). This parameter adjusts the height of the front and center channel sounds (dialog, vocals, etc.) by assigning some of the front and center channel elements to the presence speakers.

Choices: **OFF**, **ON**

- Select OFF to turn off DIALG.LIFT effect.
- Select ON to turn on DIALG.LIFT effect.

**Note**

“DIALG.LIFT” appears only when “PRESENCE SP” is set to YES (see page 54).

### ■ Presence/surround back channel select H)PR/SB SELECT

You can select to prioritize either the surround back or presence speakers when playing sources that contain surround back channel signals using CINEMA DSP sound field programs.

Choices: **PRch**, **SBch**

- Select PRch to use presence speakers even when surround back channel signals are input. The signals for the surround back channel will be output from surround speakers.
- Select SBch to use surround back speakers when a surround back channel signal is detected in a CINEMA DSP program. Presence channel signals will be output from front speakers.

## 2 INPUT MENU

Use to reassign digital input/outputs and select the input mode.

### ■ Input/output assignment A)I/O ASSIGNMENT

You can assign jacks according to the component to be used if this unit's initial settings do not correspond to your needs. Change the following parameters to reassign the respective jacks and effectively connect more components. Once the inputs have been reassigned, you can select the corresponding component by using INPUT on the front panel or the input selector buttons on the remote control.

#### For COMPONENT VIDEO jacks A and B

Choices: DVD, V-AUX, DTV/CBL, VCR 1, DVR/VCR2

#### For OPTICAL OUTPUT jack 1

Choices: MD/CD-R, CD, V-AUX, DTV/CBL, VCR 1, DVD, DVR/VCR2

#### For OPTICAL INPUT jacks 2, 3 and 4

Choices: CD, DTV/CBL, VCR 1, DVD, DVR/VCR2, MD/CD-R

**For COAXIAL INPUT jacks 5 and 6**

Choices: CD, V-AUX, DTV/CBL, VCR 1, MD/CD-R, DVD, DVR/VCR2

**Notes**

- You cannot select a specific item more than once for the same type of jack.
- When you connect a component to both the COAXIAL and OPTICAL jacks, priority is given to the input signals from the COAXIAL jack.

**Input mode B>INPUT MODE**

Use this feature to designate the input mode for sources connected to the DIGITAL INPUT jacks when you turn on this unit (see page 36 for details about the input mode).  
 Choices: **AUTO**, **LAST**

- Select **AUTO** to allow this unit to automatically detect the type of input signal and select the appropriate input mode.
- Select **LAST** to set this unit to automatically select the last input mode used for that source.

**Note**

Even if **LAST** is selected, the last setting for the EX/ES button will not be recalled.

**3 OPTION MENU**

Use to adjust the optional system parameters.

**Display set A>DISPLAY SET**

**Dimmer DIMMER**

Use to adjust the brightness of the front panel display.  
 Choices: **-4** to **0**

**Video conversion U CONU.**

Use this feature to turn on/off conversion of composite (VIDEO) signals to S-Video signals. This allows you to output converted video signals from the S VIDEO jacks when no S-Video signals are input.

Choices: **ON**, **OFF**

- Select **OFF** not to convert any signals.
- Select **ON** to convert composite signals to S-Video signals.

**Note**

Converted video signals are only output to the MONITOR OUT jacks. When recording you must make the same type of video connections (i.e., S-Video) between each component.

**OSD shift OSD SHIFT**

Use to adjust the vertical position of the OSD.

Choices: **+5** (downward) to **-5** (upward)

- Press **+** to lower the position of the OSD.
- Press **-** to raise the position of the OSD.

**Gray back GRAY BACK**

Selecting **AUTO** for the on-screen display setting displays a gray background when there's no video signal input. Nothing is displayed if **OFF** is selected.

Choices: **AUTO**, **OFF**

**Note**

If "GRAY BACK" is set to **OFF**, no information will be displayed on the screen when video signals are not being input.

## ■ Memory guard B)MEMORY GUARD

Use this feature to prevent accidental changes to DSP program parameter values and other system settings.

Choices: **OFF**, ON

```

B)MEMORY GUARD
  ▶OFF  ON

[<]/[>]:Select
[SELECT]:Return
  
```

Select ON to protect:

- DSP program parameters
- All SET MENU items
- All speaker levels
- The on-screen display (OSD) mode

### Note

When “MEMORY GUARD” is set to ON, you cannot use the test tone or select any other SET MENU items.

## ■ Parameter initialization C)PARAM. INI

Use this feature to initialize the parameters for each sound field program within a sound field program group. When you initialize a sound field program group, all of the parameter values within that group revert to their initial settings.

Press the corresponding numeric button for the sound field program that you want to initialize.

An asterisk (\*) next to a program number means that the parameter values have been changed from their initial settings.

```

C)PARAM. INI
  1  2  3  4
  5  6  7  *8
  9
  
```

### Notes

- You cannot automatically revert to the previous parameter settings once you initialize a sound field program group.
- You cannot separately initialize individual sound field programs.
- You cannot initialize any program groups when “MEMORY GUARD” is set to ON.

## ■ Zone set D)ZONE SET

Use to specify the location of speakers connected to the SPEAKERS B terminals.

```

D)ZONE SET
SP B.....FRONT

[<]/[>]:Select
[SELECT]:Return
  
```

## Speaker B set SP B

Use this feature to select the location of the front speakers connected to the SPEAKERS B terminals.

Choices: **FRONT**, ZONE B

- Select **FRONT** to turn on/off SPEAKERS A and B when the speakers connected to the SPEAKERS B terminals are set in the main room.
- Select **ZONE B** if the speakers connected to the SPEAKERS B terminals are set in another room. If SPEAKERS A is turned OFF and SPEAKERS B is turned ON, all the speakers including the subwoofer in the main room are muted and the unit outputs sound from SPEAKERS B only.

### Notes

- If you connect headphones to the PHONES jack on the unit when “SP B” is set to ZONE B, the sound is output from both headphones and SPEAKERS B.
- If a DSP program is selected when “SP B” is set to ZONE B, the unit automatically enters the Virtual CINEMA DSP mode.

# REMOTE CONTROL FEATURES

In addition to controlling this unit, the remote control can also operate other A/V components made by YAMAHA and other manufacturers. To control other components, you must set up remote control with the appropriate manufacturer codes.

## Control area

### ■ Controlling this unit

The shaded areas below can be used to control this unit when the AMP mode is selected. Press AMP to activate the AMP mode.

### ■ Controlling other components

The shaded areas below can be used to control other components. Each button has a different function depending on the selected component. Select the component you want to control by pressing an input selector button.

The ☆☆ button and input selector buttons switch the function of the component control area below.

\* Use the ☆☆ button to control other components regardless of whether they are connected to this unit.

### Component control area

You can control up to 9 different components by setting appropriate manufacturer codes (see page 61).

## Setting manufacturer codes

You can control other components by setting the appropriate manufacturer codes. Codes can be set up for each input area. For a complete list of available manufacturer codes, refer to “LIST OF MANUFACTURER CODES” at the end of this manual.

The following table shows the factory preset component (Library: component category) and the manufacturer code for each area.

Input area	Component category (Library)	Manufacturer	Code
CD	CD	YAMAHA	0005
MD/CD-R	MD	YAMAHA	0024
TUNER	TUNER	YAMAHA	0003
DVD	DVD	YAMAHA	0098
DTV/CBL	-	-	-
V-AUX	-	-	-
VCR 1	-	-	-
DVR/VCR2	-	-	-
☆☆	-	-	-

### Note

You may not be able to operate your YAMAHA component even if a YAMAHA manufacturer code is initially set as listed above. In this case, try to set other YAMAHA manufacturer code(s).

- 1 Press an input selector button or ☆☆ to select the component you want to set up.

- 2 Press CODE SET using a ballpoint pen or similar object.

The TRANSMIT indicator on the remote control flashes twice.

- 3 Press the numeric buttons to enter the four digit manufacturer's code for the component to be used.

Refer to “LIST OF MANUFACTURER CODES” at the end of this manual.

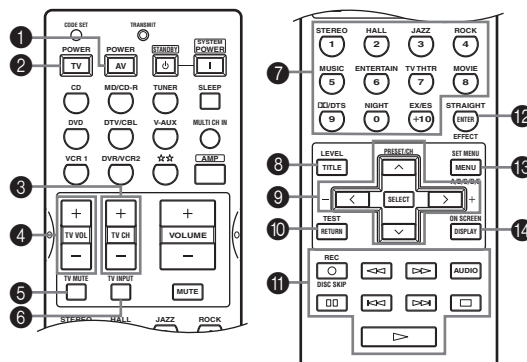

The TRANSMIT indicator on the remote control flashes twice.

### Notes

- If the manufacturer of your component has more than one code, try each of them until you find the correct one.
- If you wait for more than 30 seconds during step 3, the setup process is canceled. If this happens, start over from step 2.

## Controlling other components

Once you set the appropriate manufacturer codes, you can use this remote to control your other components. Note that some buttons may not correctly operate the selected component. Use the input selector buttons to select the component you want to operate. The remote control automatically switches to the appropriate control mode for that component.

	DVD player/ DVD recorder	VCR	Digital TV/ Cable TV	CD player	MD/CD recorder	Tuner

\*1 This button functions only when the original remote control of the component has a POWER button.

\*2 These buttons can operate your TV without switching the input if the manufacturer code is set in DTV/CBL or ☆☆. When the manufacturer code for your TV is set up in both the DTV/CBL and ☆☆ areas, priority is given to the signal in the DTV/CBL area.

\*3 These buttons can operate your VCR without switching the input to VCR 1 if the manufacturer code is set in VCR 1.

## Clearing setup manufacturer codes

### ■ Clearing a setup manufacturer code for component control

- 1 Press an input selector button or ☆☆ to select the component control for which you want to clear the manufacturer code.

- 2 Press CODE SET using a ballpoint pen or similar object.

The TRANSMIT indicator on the remote control flashes twice.

- 3 If you do not press any button within 30 seconds after step 2, the clearing process is canceled. If this happens, start over from step 1.

- 4 Enter the code number “0000”.

The TRANSMIT indicator on the remote control flashes twice, and the manufacturer code for the selected component is cleared.

You can clear all setup manufacturer codes at once by entering the code number “9990”.

# EDITING SOUND FIELD PARAMETERS

## What is a sound field

What really creates the rich, full tones of a live instrument are the multiple reflections from the walls of the room. In addition to making the sound “live”, these reflections enable us to tell where the player is situated, and the size and shape of the room in which we are sitting.

### ■ Elements of a sound field

In any environment, in addition to the direct sound coming straight to our ears from the player’s instrument, there are two distinct types of sound reflections that combine to make up the sound field:

#### Early reflections

Reflected sounds reach our ears extremely rapidly (50 ms – 100 ms after the direct sound), after reflecting from one surface only — for example, from the ceiling or a wall. Early reflections actually add clarity to the direct sound.

#### Reverberations

These are caused by reflections from more than one surface — walls, ceiling, the back of the room — so numerous that they merge together to form a continuous sonic “afterglow”. They are non-directional, and lessen the clarity of the direct sound.

Direct sound, early reflections and subsequent reverberation taken together help us to determine the subjective size and shape of the room, and it is this information that the digital sound field processor reproduces in order to create sound fields.

If you could create the appropriate early reflections and subsequent reverberations in your listening room, you would be able to create your own listening environment. The acoustics in your room could be changed to those of a concert hall, a dance floor, or virtually any size room at all. This ability to create sound fields at will is exactly what YAMAHA has done with the digital sound field processor.

## Changing parameter settings

You can enjoy good quality sound with the factory preset parameters. Although you do not have to change the initial settings, you can change some of the parameters to better suit the input source or your listening room.

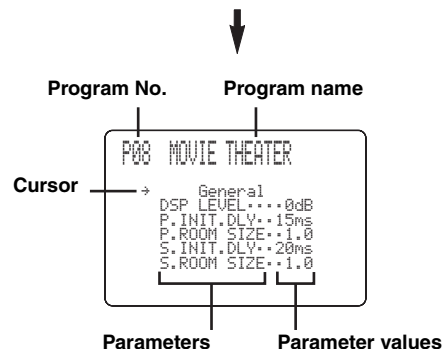

### 1 Press AMP.

### 2 Turn on the video monitor and press ON SCREEN repeatedly to select the full display mode.

### 3 Select the sound field program you want to adjust.

- 4 Press  $\wedge$  /  $\vee$  to select the parameters.**

- 5 Press  $\langle$  /  $\rangle$  to change the parameter value.**

When you set a parameter to a value other than the factory-set value, an asterisk mark (\*) appears by the parameter name on the front panel display.

- 6 Repeat steps 3 through 5 as necessary to change other program parameters.**

#### Note

You cannot change parameter values when “MEMORY GUARD” is set to ON. If you want to change the parameter values, set “MEMORY GUARD” to OFF (see page 59).

#### Memory back-up

The memory back-up circuit prevents the stored data from being lost even if this unit is set in the standby mode, the power cord is disconnected from the AC outlet, or the power supply is temporarily cut due to power failure. However, if the power is cut for more than one week, the parameter values will return to the factory settings. If this happens, edit the parameter value again.

#### ■ Resetting parameters to the factory presets

##### To reset a certain parameter

Select the parameter you want to reset, then press  $\langle$  /  $\rangle$  repeatedly until the asterisk mark (\*) next to the parameter name disappears.

##### To reset all parameters

Use PARAM. INI (see page 59).

# SOUND FIELD PARAMETER DESCRIPTIONS

You can adjust the values of certain digital sound field parameters so the sound fields are recreated accurately in your listening room. Not all of the following parameters are found in every program.

## ■ DSP LEVEL

**Function:** This parameter adjusts the level of all the DSP effect sounds within a narrow range.  
**Description:** Depending on the acoustics of your listening room, you may want to increase or decrease the DSP effect level relative to the level of the direct sound.  
**Control range:** -6 dB – +3 dB

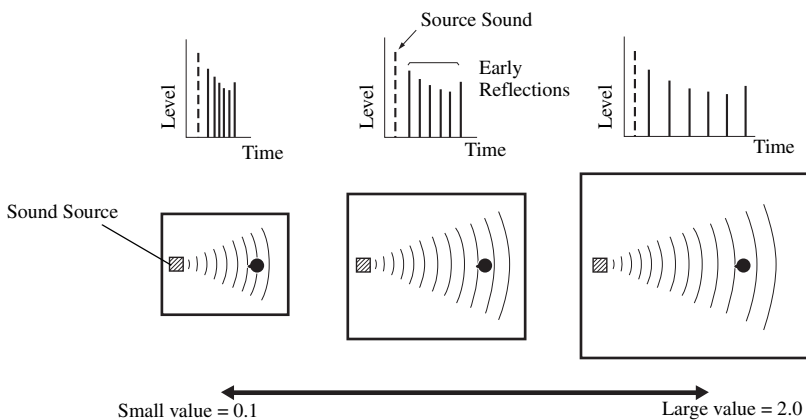

## ■ INIT. DLY (Initial delay)

**Function:** This parameter changes the apparent distance from the source sound by adjusting the delay between the direct sound and the first reflection heard by the listener.  
**Description:** The smaller the value, the closer the sound source seems to the listener. The larger the value, the farther it seems. For a small room, set to a small value. For a large room, set to a large value.  
**Control range:** 1 – 99 msec

## ■ ROOM SIZE/P. ROOM SIZE (Room size)

**Function:** This parameter adjusts the apparent size of the surround sound field. The larger the value, the larger the surround sound field becomes.  
**Description:** As the sound is repeatedly reflected around a room, the larger the hall is, the longer the time between the original reflected sound and the subsequent reflections. By controlling the time between the reflected sounds, you can change the apparent size of the virtual venue. Changing this parameter from one to two, doubles the apparent length of the room.  
**Control range:** 0.1 – 2.0

## ■ LIVENESS

**Function:** This parameter adjusts the reflectivity of the virtual walls in the hall by changing the rate at which the early reflections decay.

**Description:** The early reflections of a sound source decay much faster in a room with acoustically absorbent wall surfaces than in one which has highly reflective surfaces. A room with acoustically absorbent surfaces is referred to as “dead”, while a room with highly reflective surfaces is referred to as “live”. The LIVENESS parameter lets you adjust the early reflection decay rate, and thus the “liveness” of the room.

**Control range:** 0 – 10

## ■ S. INIT. DLY (Surround initial delay)

**Function:** This parameter adjusts the delay between the direct sound and the first reflection on the surround side of the sound field. You can only adjust this parameter when at least two front channels and two surround channels are used.

**Control Range:** 1 – 49 msec

## ■ S. ROOM SIZE (Surround room size)

**Function:** This parameter adjusts the apparent size of the surround sound field.

**Control Range:** 0.1 – 2.0

## ■ S. LIVENESS (Surround liveness)

**Function:** This parameter adjusts the apparent reflectivity of the virtual walls in the surround sound field.

**Control Range:** 0 – 10

## ■ SB INIT. DLY (Surround back initial delay)

**Function:** This parameter adjusts the delay between the direct sound and the first reflection in the surround back sound field.

**Control Range:** 1 – 49 msec

## ■ SB ROOM SIZE (Surround back room size)

**Function:** This parameter adjusts the apparent size of the surround back sound field.

**Control Range:** 0.1 – 2.0

## ■ SB LIVENESS (Surround back liveness)

**Function:** This parameter adjusts the apparent reflectivity of the virtual wall in the surround back sound field.

**Control Range:** 0 – 10

**REV.TIME (Reverberation time)**

**Function:** This parameter adjusts the amount of time it takes for the dense, subsequent reverberation sound to decay by 60 dB (at 1 kHz). This changes the apparent size of the acoustic environment over an extremely wide range.

**Description:** Set a longer reverberation time for “dead” sources and listening room environments, and a shorter time for “live” sources and listening room environments.

**Control Range:** 1.0 – 5.0 sec

**REV.DELAY (Reverberation delay)**

**Function:** This parameter adjusts the time difference between the beginning of the direct sound and the beginning of the reverberation sound.

**Description:** The larger the value, the later the reverberation sound begins. A later reverberation sound makes you feel like you are in a larger acoustic environment.

**Control Range:** 0 – 250 msec

**REV. LEVEL (Reverberation level)**

**Function:** This parameter adjusts the volume of the reverberation sound.

**Description:** The larger the value, the stronger the reverberation becomes.

**Control Range:** 0 – 100%

### ■ DIALG.LIFT (Dialog lift)

Function: This parameter adjusts the height of the front and center channel sounds by assigning some of the front and center channel elements to the presence speakers.

Description: The larger the parameter, the higher the position of the front and center channel sound.

Choices: 0/1/2/3/4/5, initial setting is 3.

### For 7ch Stereo

Function: These parameter adjusts the volume level for each channel in 7-channel stereo mode.

Control Range: 0 – 100%

### ■ CT LEVEL (Center level)

### ■ SL LEVEL (Surround left level)

### ■ SR LEVEL (Surround right level)

### ■ SB LEVEL (Surround back level)

### ■ PR LEVEL (Presence level)

### For PRO LOGIC IIx Music and PRO LOGIC II Music

### ■ PANORAMA

Function: Extends the front stereo image to include the surround speakers for wraparound effect.

Choices: OFF/ON, initial setting is OFF.

### ■ DIMENSION

Function: Gradually adjusts the sound field either towards the front or towards the rear.

Control range: -3 (towards the rear) to +3 (towards the front), initial setting is STD (standard).

### ■ CT WIDTH (Center width)

Function: Adjusts the center image from all three front speakers to varying degrees. A larger value adjusts the center image towards the front left and right speakers.

Control range: 0 (center channel sound is output only from center speaker) to 7 (center channel sound is output only from front left and right speakers), initial setting is 3.

### For PRO LOGIC IIx Movie, Music and Game

### ■ PLII/PLIIX (Pro Logic II/Pro Logic IIx)

Function: Switches the type of Pro Logic decoding to be used. PLII decoding creates 5.1-channel sound from 2-channel sources. PLIIX decoding creates 6.1/7.1-channel sound from 2-channel sources.

Choices: PLII, PLIIX

### For DTS Neo:6 Music

### ■ C. IMAGE (Center image)

Function: This parameter adjusts the center image from all three front speakers to varying degrees.

Control range: 0 – 0.5

# TROUBLESHOOTING

Refer to the chart below when this unit does not function properly. If the problem you are experiencing is not listed below or if the instruction below does not help, set this unit to the standby mode, disconnect the power cord, and contact the nearest authorized YAMAHA dealer or service center.

## ■ General

Problem	Cause	Remedy	Refer to page
<b>This unit fails to turn on when STANDBY/ON (or SYSTEM POWER) is pressed, or enters in the standby mode soon after the power has been turned on.</b>	The power cord is not connected or the plug is not completely inserted.	Connect the power cord firmly.	—
	The impedance setting is incorrect.	Set the impedance to match your speakers.	23
	The protection circuitry has been activated.	Make sure all speaker wire connections on this unit and on all speakers are secure and that the wire for each connection does not touch anything other than its respective connection.	12-14
	This unit has been exposed to a strong external electric shock (such as lightning and strong static electricity).	Set this unit in the standby mode, disconnect the power cord, plug it back in after 30 seconds, then use it normally.	—
<b>On-screen display does not appear.</b>	The setting for the on-screen display is set to "DISPLAY OFF".	Select the full display or short display mode.	48
	"GRAY BACK" in SET MENU is set to OFF, and no video signal is currently being received.	Set "GRAY BACK" to AUTO to always show the OSD.	58
<b>No sound</b>	Incorrect input or output cable connections.	Connect the cables properly. If the problem persists, the cables may be defective.	16-19
	The optimizer microphone is connected.	Disconnect the optimizer microphone.	25
	The input mode is set to DTS or ANALOG.	Select AUTO.	36
	No appropriate input source has been selected.	Select an appropriate input source with INPUT, MULTI CH INPUT or the input selector buttons.	30
	Speaker connections are not secure.	Secure the connections.	12
	The front speakers to be used have not been selected properly.	Select the front speakers with SPEAKERS A and/or B.	30
	The volume is turned down.	Turn up the volume.	—
	The sound is muted.	Press MUTE or any operation buttons of this unit to cancel a mute and adjust the volume.	31
	The input mode is set to ANALOG while playing a source encoded with a DTS signal.	Set the input mode to AUTO or DTS.	36
	The signals this unit cannot reproduce are being received from a source component e.g.: a CD-ROM.	Play a source whose signals this unit can reproduce.	—
<b>No picture</b>	The output and input for the picture are connected to different types of video jacks.	Turn on the video conversion function.	58

Problem	Cause	Remedy	Refer to page
<b>The sound suddenly goes off.</b>	The protection circuitry has been activated because of a short circuit, etc.	Check that the impedance selector setting is correct.	23
		Check that the speaker wires are not touching each other and then turn this unit back on.	—
	The sleep timer has turned the unit off.	Turn on the power, and play the source again.	—
	The sound is muted.	Press MUTE to cancel a mute.	31
<b>Only the speaker on one side can be heard.</b>	Incorrect cable connections.	Connect the cables properly. If the problem persists, the cables may be defective.	12
	Incorrect balance settings in SET MENU.	Adjust the SPEAKER LEVEL settings.	55
<b>Only the center speaker outputs substantial sound.</b>	When playing a monaural source with a CINEMA DSP program, the source signal is directed to the center channel, and the front and surround speakers output effect sounds.		
<b>No sound from the effect speakers.</b>	The sound field programs are turned off.	Press STRAIGHT (EFFECT) to turn them on.	36
	You are using a source or program combination that does not output sound from all channels.	Try another sound field program.	44
<b>No sound from the center speaker.</b>	The output level of the center speaker is set to minimum.	Raise the level of the center speaker.	55
	“CENTER SP” in SET MENU is set to NONE.	Select the appropriate setting for the center speaker.	53
	One of the Hi-Fi DSP programs (except for 7ch Stereo) has been selected.	Try another sound field program.	44
<b>No sound from the surround speakers.</b>	The output level of the surround speakers is set to minimum.	Raise the output level of the surround speakers.	55
	“SURR L/R SP” in SET MENU is set to NONE.	Select the appropriate setting for the surround left and right speakers.	53
	A monaural source is being played with STRAIGHT.	Press STRAIGHT (EFFECT) to turn on the sound fields.	—
<b>No sound from the surround back speakers.</b>	Presence speakers are selected.	Select surround back speakers in PR/SB SELECT.	57
	“SURR L/R SP” in SET MENU is set to NONE.	If the surround left and right speakers are set to NONE, the surround back speaker setting is automatically set to NONE. Select the appropriate setting for the surround speakers.	53
	“SURR B L/R SP” in SET MENU is set to NONE.	Select LRGx1 or SMLx1.	54
<b>No sound from the subwoofer.</b>	“LFE/BASS OUT” in SET MENU is set to FRNT when a Dolby Digital or DTS signal is being played.	Select SWFR or BOTH.	54
	“LFE/BASS OUT” in SET MENU is set to SWFR or FRNT when a 2-channel source is being played.	Select BOTH.	54
	The source does not contain low bass signals.		

Problem	Cause	Remedy	Refer to page
<b>Dolby Digital or DTS sources cannot be played. (Dolby Digital or DTS indicator on the front panel display does not light up.)</b>	The connected component is not set to output Dolby Digital or DTS digital signals.	Make an appropriate setting following the operations instructions for your component.	—
	The input mode is set to ANALOG.	Set the input mode to AUTO or DTS.	36
<b>A “humming” sound can be heard.</b>	Incorrect cable connections.	Firmly connect the audio plugs. If the problem persists, the cables may be defective.	—
<b>The volume level cannot be increased, or the sound is distorted.</b>	The component connected to the OUT (REC) jacks of this unit is turned off.	Turn on the power to the component.	—
<b>The sound effect cannot be recorded.</b>	It is not possible to record the sound effect with a recording component.		
<b>A source cannot be recorded by a digital recording component connected to this DIGITAL OUTPUT jack.</b>	The source component is not connected to this unit's DIGITAL INPUT jacks.	Connect the source component to the DIGITAL INPUT jacks.	16-19, 43
	Some components cannot record the Dolby Digital or DTS sources.		
<b>A source cannot be recorded by an analog component connected to the AUDIO OUT jacks.</b>	The source component is not connected to this unit's analog AUDIO IN jacks.	Connect the source component to the analog AUDIO IN jacks.	16-19, 43
<b>The sound field parameters and some other settings on this unit cannot be changed.</b>	“MEMORY GUARD” in SET MENU is set to ON.	Select OFF.	59
<b>This unit does not operate properly.</b>	The internal microcomputer has been frozen by an external electric shock (such as lightning or excessive static electricity) or by a power supply with low voltage.	Disconnect the AC power cord from the outlet and then plug it in again after about 30 seconds.	—
<b>“CHECK SP WIRES” appears in the front panel display.</b>	Speaker cables are short circuited.	Make sure all speaker cables are connected correctly.	12

Problem	Cause	Remedy	Refer to page
<b>There is noise interference from digital or high-frequency equipment, or this unit.</b>	This unit is too close to the digital or high-frequency equipment.	Move this unit further away from such equipment.	—
<b>The picture is disturbed.</b>	The video source uses scrambled or encoded signals to prevent dubbing.		
<b>This unit suddenly turns into the standby mode.</b>	The internal temperature becomes too high and the overheat protection circuitry has been activated.	Wait about 1 hour for this unit to cool down and then turn it back on.	—

## ■ Tuner

Problem		Cause	Remedy	Refer to page
FM	<b>FM stereo reception is noisy.</b>	The characteristics of FM stereo broadcasts may cause this problem when the transmitter is too far away or the antenna input is poor.	Check the antenna connections. Try using a high-quality directional FM antenna.	21
			Use the manual tuning method.	39
	<b>There is distortion, and clear reception cannot be obtained even with a good FM antenna.</b>	There is multipath interference.	Adjust the antenna position to eliminate multipath interference.	—
	<b>The desired station cannot be tuned in with the automatic tuning method.</b>	The signal is too weak.	Use a high-quality directional FM antenna. Use the manual tuning method.	21 39
	<b>Previously preset stations can no longer be tuned in.</b>	This unit has been disconnected for a long period.	Preset the stations again.	39
AM	<b>The desired station cannot be tuned in with the automatic tuning method.</b>	The signal is weak or the antenna connections are loose.	Tighten the AM loop antenna connections and orient it for best reception. Use the manual tuning method.	— 39
	<b>There are continuous crackling and hissing noises.</b>	Noises result from lightning, fluorescent lamps, motors, thermostats and other electrical equipment.	Use an outdoor antenna and a ground wire. This will help somewhat, but it is difficult to eliminate all noise.	—
	<b>There are buzzing and whining noises.</b>	A TV set is being used nearby.	Move this unit away from the TV.	—

## ■ Remote control

Problem	Cause	Remedy	Refer to page
<b>The remote control does not work nor function properly.</b>	Wrong distance or angle.	The remote control will function within a maximum range of 6 m (20 ft) and no more than 30 degrees off-axis from the front panel.	7
	Direct sunlight or lighting (from an inverter type of fluorescent lamp, etc.) is striking the remote control sensor of this unit.	Reposition this unit.	—
	The batteries are weak.	Replace all batteries.	3
	The manufacturer code was not correctly set.	Set the manufacturer code correctly using the "LIST OF MANUFACTURER CODES" at the end of this manual.	61
		Try to set another code for the same manufacturer using the "LIST OF MANUFACTURER CODES" at the end of this manual.	61
Even if the manufacturer code is correctly set, there are some models that do not respond to the remote control.			

# RESETTING THE FACTORY PRESETS

If you want to reset all of your unit's parameters for any reason, do the following. This procedure completely resets ALL parameters, including the SET MENU, level, assign and tuner presets.

**Be sure this unit is in standby mode.**

---

**1 Hold down STRAIGHT (EFFECT) on the front panel and press STANDBY/ON.**

“FACTORY PRESET” appears in the front panel display.

To cancel the initialization procedure without making any changes, press STANDBY/ON.

---

**2 Press STRAIGHT (EFFECT) to select the desired setting.**

Reset	To reset the unit to its factory presets.
Cancel	To cancel without making any changes.

---

**3 Press STANDBY/ON to confirm your selection.**

If you selected “Reset”, the unit is reset to its factory presets and switches to standby mode.

If you selected “Cancel”, the unit switches to standby mode and nothing is reset.

## Audio formats

### ■ Dolby Digital

Dolby Digital is a digital surround sound system that gives you completely independent multi-channel audio. With 3 front channels (left, center, and right), and 2 surround stereo channels, Dolby Digital provides 5 full-range audio channels. With an additional channel especially for bass effects, called LFE (low frequency effect), the system has a total of 5.1-channels (LFE is counted as 0.1 channel). By using 2-channel stereo for the surround speakers, more accurate moving sound effects and surround sound environment are possible than with Dolby Surround. The wide dynamic range (from maximum to minimum volume) reproduced by the 5 full-range channels and the precise sound orientation generated using digital sound processing provide listeners with previously unheard of excitement and realism.

With this unit, any sound environment from monaural up to a 5.1-channel configuration can be freely selected for your enjoyment.

### ■ Dolby Digital Surround EX

Dolby Digital EX creates 6 full-bandwidth output channels from 5.1-channel sources. This is done using a matrix decoder that derives 3 surround channels from the 2 in the original recording. For the best results, Dolby Digital EX should be used with movie sound tracks recorded with Dolby Digital Surround EX. With this additional channel, you can experience more dynamic and realistic moving sound especially with scenes with “flyover” and “fly-around” effects.

### ■ Dolby Pro Logic II

Dolby Pro Logic II is an improved technique used to decode vast numbers of existing Dolby Surround software. This new technology enables a discrete 5-channel playback with 2 front left and right channels, 1 center channel, and 2 surround left and right channels (instead of only 1 surround channel for conventional Pro Logic technology). Music and Game modes are also available for 2-channel sources in addition to the Movie mode.

### ■ Dolby Pro Logic IIx

Dolby Pro Logic IIx is a new technology enabling discrete multi-channel playback from 2-channel or multi-channel sources. There is a Music mode for music, a Movie mode for movies and a Game mode for games.

### ■ Dolby Surround

Dolby Surround uses a 4 channel analog recording system to reproduce realistic and dynamic sound effects: 2 front left and right channels (stereo), a center channel for dialog (monaural), and a surround channel for special sound effects (monaural). The surround channel reproduces sound within a narrow frequency range.

Dolby Surround is widely used with nearly all video tapes and laser discs, and in many TV and cable broadcasts as well. The Dolby Pro Logic decoder built into this unit employs a digital signal processing system that automatically stabilizes the volume on each channel to enhance moving sound effects and directionality.

### ■ DTS 96/24

DTS 96/24 offers an unprecedented level of audio quality for multi-channel sound on DVD-Video, and is fully backward-compatible with all DTS decoders. “96” refers to a 96 kHz sampling rate (compared to the typical 48 kHz sampling rate). “24” refers to 24-bit word length. DTS 96/24 offers sound quality transparent to the original 96/24 master, and 96/24 5.1-channel sound with full-quality full-motion video for music programs and motion picture soundtracks on DVD-video.

### ■ DTS (Digital Theater Systems) Digital Surround

DTS digital surround was developed to replace the analog soundtracks of movies with a 6-channel digital sound track, and is now rapidly gaining popularity in movie theaters around the world. Digital Theater Systems Inc. has developed a home theater system so that you can enjoy the depth of sound and natural spatial representation of DTS digital surround in your home. This system produces practically distortion-free 6-channel sound (technically, a left, right and center channels, 2 surround channels, plus an LFE 0.1 channel as a subwoofer, for a total of 5.1-channels). The unit incorporates DTS-ES decoder that enables 6.1-channel reproduction by adding the surround back channel to existing 5.1-channel format.

### ■ Neo:6

Neo:6 decodes the conventional 2-channel sources for 6 channel playback by the specific decoder. It enables playback with the full-range channels with higher separation just like digital discrete signal playback. Two modes are available; “Music mode” for playing music sources and “Cinema mode” for movies.

## Sound field programs

### ■ CINEMA DSP

Since the Dolby Surround and DTS systems were originally designed for use in movie theaters, their effect is best felt in a theater having many speakers and designed for acoustic effects. Since home conditions, such as room size, wall material, number of speakers, and so on, can differ so widely, it's inevitable that there are differences in the sound heard as well. Based on a wealth of actually measured data, YAMAHA CINEMA DSP uses YAMAHA original sound field technology to combine Dolby Pro Logic, Dolby Digital and DTS systems to provide the visual and audio experience of movie theater in the listening room of your own home.

### ■ SILENT CINEMA

YAMAHA has developed a natural, realistic sound effect DSP algorithm for headphones. Parameters for headphones have been set for each sound field so that accurate representations of all the sound field programs can be enjoyed on headphones.

### ■ Virtual CINEMA DSP

YAMAHA has developed a Virtual CINEMA DSP algorithm that allows you to enjoy DSP sound field surround effects even without any surround speakers by using virtual surround speakers. It is even possible to enjoy Virtual CINEMA DSP using a minimal two-speaker system that does not include a center speaker.

## Audio information

### ■ ITU-R

ITU-R is the radio communication sector of the ITU (International Telecommunication Union). ITU-R recommends a standard speaker placement which is used in many critical listening rooms, especially for mastering purposes.

### ■ LFE 0.1 channel

This channel is for the reproduction of low bass signals. The frequency range for this channel is 20 Hz to 120 Hz. This channel is counted as 0.1 because it only enforces a low frequency range compared to the full-range reproduced by the other 5/6 channels in Dolby Digital or DTS 5.1/6.1-channel systems.

### ■ PCM (Linear PCM)

Linear PCM is a signal format under which an analog audio signal is digitized, recorded and transmitted without using any compression. This is used as a method of recording CDs and DVD audio. The PCM system uses a technique for sampling the size of the analog signal per very small unit of time. Standing for "pulse code modulation", the analog signal is encoded as pulses and then modulated for recording.

### ■ Sampling frequency and number of quantized bits

When digitizing an analog audio signal, the number of times the signal is sampled per second is called the sampling frequency, while the degree of fineness when converting the sound level into a numeric value is called the number of quantized bits.

The range of rates that can be played back is determined based on the sampling rate, while the dynamic range representing the sound level difference is determined by the number of quantized bits. In principle, the higher the sampling frequency, the wider the range of frequencies that can be played back, and the higher the number of quantized bits, the more finely the sound level can be reproduced.

## ***Video signal information***

### ■ **Component video signal**

With the component video signal system, the video signal is separated into the Y signal for the luminance and the P<sub>B</sub> and P<sub>R</sub> signals for the chrominance. Color can be reproduced more faithfully with this system because each of these signals is independent. The component signal is also called the "color difference signal" because the luminance signal is subtracted from the color signal. A monitor with component input jacks is required in order to use the component signal for output.

### ■ **Composite video signal**

With the composite video signal system, the video signal is composed of three basic elements of a video picture; color, brightness and synchronization data. A composite video jack on a video component transmits these three elements combined.

### ■ **S-Video signal**

With the S-Video signal system, the video signal normally transmitted using a pin cable is separated and transmitted as the Y signal for the luminance and the C signal for the chrominance through the S-Video cable. Using the S VIDEO jack eliminates video signal transmission loss and allows recording and playback of even more beautiful images.

# SPECIFICATIONS

## AUDIO SECTION

- Minimum RMS Output Power for Front, Center, Surround, Surround back  
20 Hz to 20 kHz, 0.06% THD, 8 Ω ..... 95 W
- Maximum Power (EIAJ)  
[China and Korea models]  
1 kHz, 10% THD, 8 Ω ..... 135 W
- Dynamic Power (IHF)  
8/6/4/2 Ω ..... 130/165/195/240 W
- Damping Factor (IHF)  
20 Hz to 20 kHz, 8 Ω ..... 100 or more
- Frequency Response  
CD terminal to Front L/R ..... 10 Hz to 100 kHz, -3 dB
- Total Harmonic Distortion  
CD, etc. to Front L/R (20 Hz to 20 kHz, 50 W, 8 Ω) ..... 0.06%
- Signal to Noise Ratio (IHF-A Network)  
CD (250 mV) to Front L/R, Effect Off ..... 100 dB
- Residual Noise (IHF-A Network)  
Front L/R ..... 150 μV or less
- Channel Separation (1 kHz/10 kHz)  
CD (5.1 kΩ terminated) to Front L/R ..... 60 dB/45 dB
- Tone Control (Front L/R)  
BASS Boost/Cut ..... ±6 dB/50 Hz  
BASS Turnover Frequency ..... 350 Hz  
TREBLE Boost/Cut ..... ±6 dB/20 kHz  
TREBLE Turnover Frequency ..... 3.5 kHz
- Phones Output ..... 150 mV/100 Ω
- Input Sensitivity/Input Impedance  
CD, etc. .... 200 mV/47 kΩ  
MULTI CH INPUT ..... 200 mV/47 kΩ
- Output Level/Output Impedance  
REC OUT ..... 200 mV/1.2 kΩ  
PRE OUT ..... 2 V/1.2 kΩ  
SUB WOOFER ..... 4 V/1.7 kΩ

## VIDEO SECTION

- Video Signal Type ..... PAL/NTSC
- Signal to Noise Ratio ..... 50 dB
- Frequency Response (MONITOR OUT)  
Composite, S-Video ..... 5 Hz to 10 MHz, -3 dB  
Component ..... 5 Hz to 60 MHz, -3 dB

## FM SECTION

- Tuning Range  
[U.S.A. and Canada models] ..... 87.5 to 107.9 MHz  
[Other models] ..... 87.50 to 108.00 MHz
- Usable Sensitivity (IHF) ..... 1.0 μV (11.2 dBf)
- Signal to Noise Ratio (IHF)  
Mono/Stereo ..... 76 dB/70 dB
- Harmonic Distortion (1 kHz)  
Mono/Stereo ..... 0.2%/0.3%
- Stereo Separation (1 kHz) ..... 42 dB
- Frequency Response ..... 20 Hz to 15 kHz, +0.5, -2 dB

## AM SECTION

- Tuning Range  
[U.S.A. and Canada models] ..... 530 to 1710 kHz  
[Other models] ..... 531 to 1611 kHz
- Usable Sensitivity ..... 300 μV/m

## GENERAL

- Power Supply  
[U.S.A. and Canada models] ..... AC 120 V, 60 Hz  
[Australia model] ..... AC 240 V, 50 Hz  
[China model] ..... AC 220 V, 50 Hz  
[Korea model] ..... AC 220 V, 60 Hz
- Power Consumption  
[U.S.A. and Canada models] ..... 400 W/500 VA  
[Other models] ..... 440 W
- Standby Power Consumption ..... 0.1 W
- AC Outlets  
[U.S.A. and Canada models] ..... 2 (Total 100 W maximum)  
[Australia model] ..... 1 (Total 100 W maximum)  
[China model] ..... 2 (Total 50 W maximum)
- Dimension (W x H x D) ..... 435 x 171 x 420 mm  
(17-1/8" x 6-3/4" x 16-1/2")
- Weight ..... 12.5 kg (27 lbs 9 oz)
