The 1600 ADSL2+ family of endpoints deliver the required performance for multimedia applications at very competitive price points. The 1600 ADSL2+ endpoints, in compact form factor, have been successfully used for residential, business, in-building deployments such as hotel/motel, temporary housing, and dormitory-campus installations for high-speed internet access (HSIA) and video-on-demand services.

The Zhone 1600 ADSL2+ endpoints are easily user-installed. The embedded web-based user interface is designed to simplify ADSL deployment. All products provide an Ethernet connection that is auto-sensing, eliminating the worry about connection cable type (straight-through vs crossover).

Default settings make for a quick and easy installation that doesn't require any configuration.

The modem, when operating in router mode, support DHCP Server/Relay/Client, NAT, as well as RIP, dynamic routing, port forwarding, and static routing. For security, firewall functions including PAP/CHAP authentication and IP filtering are supported.
