P/N: MSAB0030501 (1.1) H

Receiving Calls

- 1. When the phone rings or vibrates press $\ \ \ \ \ \ \ \ \ \$ to answer a call.
- If you press or the side keys while the phone is ringing, the ringing or vibration is muted for that call.
- 2. Press to end the call.

Bluetooth[®]

The LG265 is compatible with devices that support the Bluetooth® headset and hands-free profile(s). You may create and store 20 pairings within the LG265 and connect to one device at a time. The approximate communication range for Bluetooth® wireless technology is up to 30 feet (10 meters).

- > Read user guide of each Bluetooth accessory that you are trying to pair with your phone because the instructions may be different.
- > The Bluetooth® word mark and logos are owned by the Bluetooth SIG, Inc. and any use of such marks by LG Electronics is under license. Other trademarks and trade names are those of their respective owners.
- > Your phone is based on the Bluetooth® specification, but it is not guaranteed to work with all devices enabled with Bluetooth® wireless technology.

Getting Started With Your Phone

Installing the Battery

1. Remove the battery cover by sliding it upward. Align the battery with the terminals near the bottom of the phone. Align the battery cover then slide it downward until it clicks into place.

Removing the Battery

- 1. Turn off the phone, then push the battery cover from down to up such as shown below.
- 2. While holding the battery cover, lift and remove the battery cover.
- 3. Lift the top of the battery out using the fingertip cutouts, then remove it.

Charging the Battery

Warning!

- Use only the charger provided with the phone. Using any charger other than the one included with the LG265 may damage your phone or battery.
- 1. Plug the end of the adapter into the phone's charger port and the other end into an electrical
- 2. The charge time varies depending upon the bat-

Entering Text With the QWERTY® Keyboard

Your phone features a slide-out QWERTY keyboard, specifically designed for easy and comfortable text entry. The QWERTY keyboard uses the same layout and works just like the keyboard on your computer. The easiest way to enter text is using your thumbs to type on the QWERTY keyboard.

Soft Keys In Standby Mode Left Soft Key Use to access Message. Right Soft Key Use to access the BACK Key

ENTER Key

To enter text with the QWERTY keyboard:

- 1. In a text entry screen, slide open the QWERTY keyboard. (The display automatically adjusts to landscape mode.)
- 2. Use your thumbs to enter text.
- To change capitalization, press
- > To enter alternate characters on a key, press (FN) and then press the key. To lock the function key (as when entering a series of numbers), press FN twice.
- To enter symbols, press (a) and select a symbol.
- For additional text entry options, including Symbols and 123, press Left Soft Key and

Bluetooth Menu 3

The LG265 is compatible with devices that support the Bluetooth® headset and hands-free profile(s). You may create and store 20 pairings within the LG265 and connect to one device at a time. The approximate communication range for Bluetooth® wireless technology is up to 30 feet (10 meters).

Pair with Hands Free/ Send a Contact/ Send Files/ Add a New.../ Trusted Devices/ More...

Contacts Menu 4

The Contacts Menu allows you to store names, phone numbers and other information in your phone's memory. When you access your Contacts, the number in parentheses represents the number of entries you have stored (up to 600).

Contacts Listing/ Backup

Missed Alerts Menu 5

Displays the list of your missed alerts. This feature allows you to check out functions you have not promptly checked. For example, the features are Missed Calls, Alarm, Text Messages.

IM Menu 6

Allows you to log on to specific web messaging services and chat online. Privacy poli-

Photos Menu 7

Your phone's built-in camera gives you the ability to take full-color digital pictures, view your pictures using the phone's display, and instantly send them to family and

Taking pictures with your phone's built-in camera is as simple as choosing a Camera subject, pointing the lens, and pressing a button. You can activate the phone's camera mode whether the phone is open or closed.

Photo Album Your phone's picture storage area is called Photo Album. There are three types of folders that can be used separately according to your needs: In Phone/ Memory Card/ Online Albums.

Picture Message Allows you to store your picture messages.

Pictures in your phone and memory card can be printed via the connection between your phone and a printer. While the transfer, you cannot receive incoming calls and you need printer setting to use this menu.

> The Settings menu allows you to configure where pictures are saved, view your account information, or switch the format between portrait or land-

scape mode

Phone Overview

Turning the Phone On 1. Install a charged battery or connect the phone to an external power source.

- 2. Press for a few seconds until the LCD screen lights up.

Turning the Phone Off

1. Press and hold • until the display turns off.

Turning the Phone On and Off

Making Calls

- 1. Make sure the phone is turned on. If not, press for about 3 seconds.
- **2.** Enter the phone number (include the area code if needed).
- **3.** Press . If the phone is locked, enter the lock code.

-) By default, the lock code/password is the last 4 digits of your phone number. You can change this code/password in Security menu.
-) If the phone is restricted, you can only dial phone numbers saved in the Emergency Numbers or your Contacts. To turn off this function: 🐷 -> Settings -> More... -> Restrict and Lock -> w -> Limit Calls -> Outgoing Calls -> Unlock -> w
- 4. Press to end the call

☐ Important Safety Precautions and Warranty Information

Read these simple guidelines. Breaking the rules may be dangerous or illegal. Further detailed information is given in this user guide.

WARNING! Violation of the instructions may cause serious injury or death.

- Never use an unapproved battery since this could damage the phone and/or battery and could cause the battery to
- Never place your phone in a microwave oven as it will cause the battery to
 - Never store your phone in temperatures less than -4°F or greater than 122°F.
 - Do not dispose of your battery by fire r with hazardous or flammable materi-

- When riding in a car, do not leave your phone or set up the hands-free kit near to the air bag. If wireless equipment is improperly installed and the air bag is deployed, you may be seriously injured.
- Do not use a hand-held phone while Do not use the phone in areas where its

☐ Safety (Continued)

Posted Facilities

Do not expose the battery charger or adapter to direct sunlight or use it in places with high humidity, such as a

RF signals may affect improperly installed or inadequately shielded elec-tronic systems in motor vehicles. Check with the manufacturer or its

representative regarding your vehicle. You should also consult the man ufacturer of any equipment that has been added to your vehicle.

your phone OFF in any facility where posted notices so requ

Blasting Areas
To avoid interfering with blasting operations, turn your phone OFF when in a "blasting area" or in areas posted: "Turn off two-way radio". Obey all signs and instructions

signs and instructions.

Potentially Explosive Atmosphere
Turn your phone OFF when in any area with a potentially explosive atmosphere and obey all signs and instructions. Sparks in such areas could cause an explosion or five resulting in bodily injury or even death. Areas with a potentially explosive atmosphere are often, but not always marked clearly. Potential areas may include: fueling areas (such as gasoline stations); below deck on boats; fuel or chemical transfer or storage facilities; vehicles using fiquefied petroleum gas (such as propane or butane); areas where the air contains chemicals or particles (such as grain, dust, or metal powders); and any other area where you would nor nally be advised to turn off your vehicle engine.

For Vehicles Equipped with an Air Bag An air bag inflates with great force. DO NOT place objects, including either installed or portable wireless equipment, in the area over the air bag or in the air bag deployment area. If in-vehicle wireless equipment improperly installed and the air bag inflates, serious injury could result.

Please dispose of your battery properly or take it to your local wireless carrier for recycling.
 Do not dispose of your battery by fire or with hazardous or flammable mytariel.

■ JaTeTy (Continued)

reducing the amount of time spent using a wireless phone will reduce RF exposure. If you must conduct extended conversations by wireless phone every day, you could place more distance between your body and the source of the RF, since the exposure level drops off damatically with distance. For example, you could use a headset and carry the wireless phone away from your body or use a wireless phone connected to a remote antenna. Again, the scientific data do not demonstrate that wireless phones are harmful. But if you are concerned about the RF exposure from these products, you can use measures like those described above to reduce your RF exposure from wireless phone use.

10. What about children using wireless phones?

The scientific evidence does not show a danger to users of wireless phones, including children and teenagers. If you want to take steps to lower exposure to radio frequency energy (RF), the measures described above would apply to children and teenagers using wireless phones. Reducing the time of wireless phone use and increasing the distance between the user and the RF source will reduce RF exposure. Some groups sponsored by other national governments have advised that children be discouraged from using wireless phones at all. For example, the government in the United Kingdom distributed leaflest containing such a recommendation in December 2000. They noted that no evidence exists that using a wireless phone causes brain tumors or other ill effects. Their recommendation to limit wireless phone use by children was strictly precautionary; it was not based on scientific evidence that any health hazard exists.

- DaTEELY (CONTINUED)

 Do not disassemble the phone.

 Do not place or answer calls while charging the phone as it may short-circuit the phone and/or cause electric shock or fire.

 If you put your phone in a pooted or bag without covering the receptacle of the phone (power plug pin), metallic articles (such as a coin, paperfujo or pen) may short-circuit the phone. Always cover the receptacle when not in use.

 Do not short-circuit the battery, Metallic articles such as a coin, papercilp or pen in your pocket or bag may short-circuit the + and terminals of the battery (metal strips on the battery) upon moving. Short-circuit of the terminal may damage the battery and cause an explosion. Warning! Important Safety Information
 Avoiding hearing damage
 Fermanent hearing loss may occur if you use your phone and/or headset at a high volume. Set the volume to a safe level. You can adapt
 over time to a higher volume of sound that may sound normal but can
 be damaging to your hearing. If you experience ringing in your easr or
 unified speech, stop listening and have your hearing, could be
 er the volume, the less time is required before your hearing could be
 affected. Hearing experts suggest that to protect your hearing.

 • Limit the amount of time you use your phone and/or headset at
 high volume.
 - - high volume.

 Avoid turning up the volume to block out noisy surroundings.

 Turn the volume down if you can't hear people speaking near you, or information about how to set a maximum volume limit on your hone, see the features guide for your phone.

Using your phone safely Use of your phone while operating a vehicle is not recommended and is illegal in some areas. Be careful and attentive while driving. Stop using

megat III some areas, be careful and attentive while driving. Stop using your phone if you find it disruptive or distracting while operating any type of vehicle or performing any other activity that requires your full attention.

belong to this working group: National Institute for Occupational Safety and Health FDA Consumer Update Environmental Protection Agency Occupational Safety and Health Administration

Do wireless phones pose a health hazard? The available scientific evidence does not show that:

 National Telecommunications and Information Administration
The National Institutes of Health participates in some interagency
working group activities, as well. The FDA shares regulatory responsi
bilities for wireless phones with the Federal Communications. lems are associated with using wireless phones. There is no proof, worning group activities, as wear. Her Destinates regulatory responsi-bilities for wireless phones with the Federal Communications Commission (FCC). All phones that are sold in the United States must comply with FCC safety guidelines that limit RF exposure. The FCC relies on the FDA and other health agencies for safety questions about wireless phones. The FCC also regulates the base stations that the wireless phone networks rely upon. While these base stations operate at higher power than do the wireless phones themselves, the however, that wireless phones are absolutely safe. Wireless phones however, that wireless phones are absolutely safe. Wireless phones mit bow levels of radiofrequency energy (RF) in the microwave range while being used. They also emit very low levels of RF when in the Main Menu Screen. Whereas high levels of RF can produce health effects (by heating tissue), exposure to low level RF that does not produce heating effects causes no known adverse health effects. Many studies of low level RF exposures have not found any biological effects. Some studies have suggested that some biological effects may occur, but such findings have not been confirmed by additional research. In some cases, other researches have had difficulty in reproducing those studies, or in determining the reasons for inconsistent months. RF exposures that people get from these base stations are typically thousands of times lower than those they can get from wireless phones. Base stations are thus not the subject of the safety ques-3. What kinds of phones are the subject of this update? 2. What is the FDA's role concerning the safety of wireless

phones?Under the law, the FDA does not review the safety of radiation-emit-

The term "wireless phone" refers here to handheld wireless phones with built-in antennas, often called "cell", "mobile", or "PCS" phones These types of wireless phones can expose the user to measurable

radiofrequency energy (RF) because of the short distance between the phone and the user's head. These RF exposures are limited by FCC safety guidelines that were developed with the advice of the FDA and other federal health and safety agencies. When the phone is located at greater distances from the user, the exposure to RF is drastically lower because a person's RF exposure decreases rapidly with increasing distance from the source. The so called 'cordless phones,' which have a base unit connected to the telephone wiring in a house, typically operate at far lower power levels, and thus produce RF exposures far below the FCC safety limits.

4. What are the results of the research done already?

The research done thus far has produced conflicting results, and many studies have suffered from flaws in their research methods. Animal experiments investigating the effects of radiofrequency ene (RF) exposures characteristic of wireless phones have yielded conflicting results that often cannot be repeated in other laboratories, few animal studies, however, have suggested that low levels of RF could accelerate the development of cancer in blaboratory animals. However, many of the studies that showed increased tumor develop However, many of the studies that showed increased tumor development used animals that had been genetically engineered or treated with cancer-causing chemicals so as to be pre-disposed to develop cancer in the absence of RF exposure. Other studies exposed the animals to RF for up to 22 hours per day. These conditions are not similar to the conditions under which people use wireless phones, so we don't know with certainty what the results of such studies mean for human health. Three large epidemiology studies have been published since December 2000. Between them, the studies investigated any possible association between the use of wireless phones and primary possible association between the use of wireless phones and primary prain cancer eliuma, menigiona, or acoustic neuroma, tumors of the pussine association between the use of wireless phones and primary brain cancer, glioma, meningioma, or acoustic neuroma, tumors of the brain or salivary gland, leukemia, or other cancers. None of the studies demonstrated the existence of any harmful health effects from wireless phone RF exposures. However, none of the studies can answer questions about long-term exposures, since the average peri

5. What research is needed to decide whether RF exposure

That research is needed to declare meetiner in exposure from wireless phones poses a health risk of the from wireless phones poses a health risk of the properties of laboratory studies and epidemiological studies of people actually using wireless phones would provide some of the data that are needed. Antenna Care

TIA(Telecommunications Industry Association) Safety Information

Cour wireless handheld portable phone is a low power radio transmitter and receiver. When it is ON, it receives and also sends out Radio Frequency (RF) signals. In August, 1996, the Federal Communications Commissions (FCC) adopted RF exposure guidelines with safety levels for handheld wireless phones. Those guidelines are consistent with the safety standards previously set by both U.S. and international standards.

NEXT Report so (1700)
ICNIRP (1996)
Health Canada, Safety Code 6, 1999.
Those standards were based on comprehensive and periodic evaluations of the relevant scientific literature. For example, over 120 scientists, engineers, and physicians from universities, government health agencies, and industry reviewed the available body of research to develop the ANSI Standard (C95.1). The design of your phone complies with the FCC significancy (CRE) and the complete significancy of th

Unauthorised antennas, modifications, or attachments could damage the phone and may violate FCC regulations.

For your phone to operate most efficiently:

Do not touch the antenna unnecessarily when the phone is in use.

Contact with the antenna affects call quality and may cause the phone

Driving
Check the laws and regulations on the use of ireless phones in the areas where you drive and always obey them. Also, if using your phone while

to operate at a higher power level than otherwise needed.

Phone Operation
NORMAL POSITION: Hold the phone as you would any other telephone with the antenna pointed up and over your shoulder.

Exposure to Radio Frequency Signal

pleted in a few years. However, very large numbers of animals would be needed to provide reliable proof of a cancer promoting effect if one exists. Epidemiological studies can provide data that is directly applicable to human populations, but 10 or more years follow-up ms be needed to provide answers about some health effects, such as cancer. This is because the interval between the time of exposure to cancer, miss because the interval benefit to deposite to a capsosite to a cancer-causing agent and the time tumors develop — if they do — may be many, many years. The interpretation of epidemiological stud-ies is hampered by difficulties in measuring actual RF exposure during day-to-day use of wireless phones. Many factors affect this measureent, such as the angle at which the phone is held, or which model

 What is the FDA doing to find out more about the possible health effects of wireless phone RF?
 The FDA is working with the U.S. National Toxicology Program and with groups of investigators around the world to ensure that high priority animal studies are conducted to address important questions. ority animal studies are conducted to address important questions about the effects of exposure to radio frequency energy (RP). The FDA has been a leading participant in the World Health Organization International Electromagnetic Fields (EMF) Project since its inception in 1996. An influential result of this work has been the development of a detailed agends of research needs that has driven the establishment of new research programs around the world. The project has also helped develop a series of public information documents on EMF issues. The FDA and the Cellular Telecommunications & Internet Association (CTIA) have a formal Cooperative Research and Development Agreement (CRADA) to do re-warch on windows and the contractive research and Development Agreement (CRADA) to do re-warch on windows and the contractive research r Development Agreement (CRADA) to do research on wireless phone safety. The FDA provides the scientific oversight, obtaining input fron experts in government, industry, and academic organizations. CTIA-funded research is conducted through contracts with independent nvestigators. The initial research will include both laboratory studies and studies of wireless phone users. The CRADA will also include a

exposure I can get by using my wireless phone All phones sold in the United States must comply with Fe Communications Commission (FCC) guidelines that limit radio fre-quency energy (RF) exposures. The FCC established these guidelines in consultation with the FDA and the other federal health and safety

agencies. The FCC limit for RF exposure from wireless telephones i agencies. The T-LL mint for Nr exposure from wireless telephones is set at a Specific Absorption Rate (SAR) of 1.6 watts per kilogram (1.6 W/kg). The FCC limit is consistent with the safety standards developed by the Institute of Electrical and Electronic Engineering (IEEE) and the National Council on Radiation Protection and Measurement. The exposure limit takes into consideration the body's ability to remove heat from the tissues that absorb energy from the wireless phone and is set well below levels known to have effects. Manufacturers of wireless phones must report the RF exposure level for each model of phone to the FCC. The FCC website (http://www.fcc.gov/oet/ rfsafety) gives directions for locating the FCC identification number on your phone so you can find your phone's RF exposure level in the online listing.

8. What has the FDA done to measure the radio frequency

energy coming from wireless phones?

The Institute of Electrical and Electronic Engineers (IEEE) is developing a technical standard for measuring the radio frequency energy (RF) exposure from wireless phones and other wireless handsets with the participation and leadership of FDA scientists and engineers. The andard, "Recommended Practice for Determining the Spatial-Peak Specific Absorption Rate (SAR) in the Human Body Due to Wirele Communications Devices: Experimental Techniques," sets forth the first consistent test methodology for measuring the rate at which RF is deposited in the heads of wireless phone users. The test method is deposited in the neads of wireless phone users. The test method uses a tissue-simulating model of the human head. Standardized SAR test methodology is expected to greatly improve the consistency of measurements made at different laboratories on the same phone. SAR is the measurement of the amount of energy absorbed in tissu either by the whole body or a small part of the body. It is measured in watts/kg (or milliwatts/g) of matter. This measu determine whether a wireless phone complies with safety guideline

9. What steps can I take to reduce my exposure to radio

frequency energy from my wireless phone?

If there is a risk from these products — and at this point we do not know that there is — it is probably very small. But if you are conerned about avoiding even potential risks, you can take a few simple steps to minimize your exposure to radio frequency energy (RF). Since time is a key factor in how much exposure a person receives,

☐ FCC Part 15 Class B Compliance

☐ Industry Canada Compliance

WARNING! Read this information before operating the phone.

☐ Bodily Contact During Operation

☐ Caution

☐ Safety (Continued)

ting consumer products such as wireless phones before they can be sold, as it does with new drugs or medical devices. However, the agency has authority to take action if wireless phones are shown to emit radiofrequency energy (RF) at a level that is hazardous to the user. In such a case, the FDA could require the manufacturiers of wireless phones to notify users of the health hazard and to repair;

less phones to notify users of the health hazard and to repair, replace, or recall the phones so that the hazard no longer exists. Although the existing scientific data do not justify FDA regulatory actions, the FDA has urged the wireless phone industry to take a number of steps, including the following:

Support needed research into possible biological effects of RF of the type emitted by wireless phones.

Design wireless phones in a way that minimizes any RF exposure to the user that is not necessary for device function; and cooperate in providing users of wireless phones with the best possible information on possible effects of wireless phone use on human health. The FDA belongs to an interagency working group of the federal agencies that have responsibility for different aspects of RF safety to ensure coordinated efforts at the federal level. The following agencies belong to this working group:

This device and its accessories comply with part 15 of FCC rules. Operation is subject to the following two conditions: (1) This device and its accessories may not cause harmful interference, and (2) this device and its accessories must accept any interference received, including interference that causes undesired operation.

This phone complies with Industry Canada RSS 133. This phone complies with the Class B limits for radio noise emissions as set out in the interference causing standard entitled "Digital Apparatus" (ICES-003) of Industry Canada.

WANNING: Read this information before operating the proone.

In August 1996, the Federal Communications Commission (FCC) of the United States, with its action in Report and Order FCC 96-326, adopted an updated safety standard for human exposure to Radio Frequency (RF) electromagnetic energy emitted by FCC regulated transmitters. Those guidelines are consistent with the safety standard previously set by U.S. Canada and international standards bodies. The design of this phone complies with the FCC guidelines and these international standards.

This device was tested for typical use with the back of the phone kept 0.6 inches (1.5 cm) from the body. To comply with FCC RF exposure requirements, a minimum separation distance of 0.6 inches (1.5 cm) must be maintained between the user's body and the back of the phone, including the antenna, whether extended or retracted. Third-party belt-clips, holsters and similar accessories containing metallic components should not be used. Avoid the use of accessories that cannot maintain 0.6 inches (1.5 cm) distance between the user's body and the back of the phone and have not been tested for compliance with FCC RF exposure limits.

A minimum separation distance of 8 inches (20 cm) must be maintained between the user / bystander and the vehicle-mounted external antenna to satisfy FCC RF exposure requirements. For more information about RF exposure, visit the FCC website at www.fcc.gov.

Use only the supplied and approved antenna. Use of unauthorized antennas or modifications could impair call quality, damage the phone, void your warranty and/or result in violation of FCC regulations.

Do not use the phone with a damaged antenna. If a damaged antenna comes in contact with the skin a minor burn may result. Contact your local dealer for a replacement antenna.

☐ Vehicle-Mounted External Antenna (Optional, if available.)

- LG offers you a limited warranty that the enclosed subscriber unit and its enclosed accessories will be free
- from defects in material and workmanship, according to the following terms and conditions:

 (1) The limited warranty for the product extends for ONE (1) year beginning on the date of purchase of the product by the original end user.

 (2) The limited warranty extends only to the original end user of the product and is not assignable or
- transferable to any subsequent purchaser/end user. (3) This warranty is good only to the original end user of the product during the warranty period as long
- (4) Upon request from LG, the consumer must provide information to reasonably prove the date of pur-
- (5) During the applicable warranty period, LG will repair or replace at LG's sole option, without charge to the original end user, any defective component part of the phone or accessory. (6) LG may, use rebuilt, reconditioned, or new parts or components when repairing any product or
- replace a product with a rebuilt, reconditioned or new product.

2. WHAT THIS WARRANTY DOES NOT COVER:

- (1) Defects or damages resulting from use of the product in other than its normal and customary manner. (2) Defects or damages from abnormal use, abnormal conditions, improper storage, exposure to moisture or dampness, unauthorized modifications, unauthorized connections, unauthorized repair, misuse, neglect, abuse, accident, alteration, improper installation, or other acts which are not the fault of LG, including damage caused by spills of food or liquids.
- (3) Breakage or damage to antennas unless caused directly by defects in material or workmanship (4) If the carrier's or manufacturer's Customer Service Centre was not notified by the end user of the
- alleged defect or malfunction of the product, during the warranty period. (5) Products which have had their serial numbers removed or made illegible
- (6) Damage resulting from use of non-LG approved accessories.
- (7) All plastic surfaces and all other externally exposed parts that are scratched or damaged due to normal customer use.
- (8) Products serviced by non-authorized persons or companies.

- (1) This limited warranty is in lieu of all other warranties, express or implied either in fact or by operations of law, statutory or otherwise, including, but not limited to any implied warranty of merchantability or fitness for a particular purpose.
- (2) Shipping damage is the sole responsibility of the shipping company.

3. EXCLUSION OF LIABILITY:

No other express warranty is applicable to this product. THE DURATION OF ANY IMPLIED WARRANTIES, INCLUDING THE IMPLIED WARRANTY OF MARKETABILITY, IS LIMITED TO THE DURATION OF THE EXPRESS WARRANTY HEREIN. LG ELECTRONICS CANADA, INC. SHALL NOT BE LIABLE FOR THE LOSS OF THE USE OF THE PRODUCT, INCONVENIENCE, LOSS OR ANY OTHER DAMAGES, DIRECT OR CONSEQUENTIAL, ARISING OUT OF THE USE OF OR INABILITY TO USE, THIS PRODUCT OR FOR ANY BREACH OF ANY EXPRESS OR IMPLIED WARRANTY, INCLUDING THE IMPLIED WARRANTY OF MERCHANTABILITY APPLICABLE TO THIS PRODUCT.

4. HOW TO GET WARRANTY SERVICE:

To obtain warranty service, please call the following telephone number from anywhere in Canada: LG Electronics Canada, Inc. Tel. 1-888-542-2623

LG Electronics Canada, Inc. Customer care center: 550 Matheson Blvd East Mississauga, ON L4Z 4G3 1-888-LGCanada

11. What about wireless phone interference with medical

equipment?

Radio frequency energy (RF) from wireless phones can interact with some electronic devices. For this reason, the FDA helped develop a detailed test method to measure electromagnetic interference (EMI) of implanted cardiac pacemakers and defibrillators from wireless telephones. This test method is now part of a standard sponsored by the Association for the Advancement of Medical instrumentation (AAMI). The final draft, a joint effort by the FDA, medical device manul

hearing aids for interference from handheld wireless phones and helped develop a voluntary standard sponsored by the Institute of Electrical and Electronic Engineers (IEEE). This standard specifies test methods and performance requirements for hearing aids and wireless phones so that no interference occurs when a person uses a "compatible" phone and a "compatible" hearing aid at the same time. This standard was approved by the IEEE in 2000. The FDA continues to monitor the use of wireless phones for possible interactions with other medical devices. Should harmful interference be found to occur, the FDA will conduct testing to assess the interference and work to resolve the problem.

(Specific Absorption Rate) This Model Phone Meets the Government's Requirements for

This Model Phone Meets the Covernment's Requirements for Exposure to Radio Waves. Your wireless phone is a radio transmitter and receiver. It is designed and manufactured not to exceed the emis-sion limits for exposure to radiofrequency (RF) energy set by the Federal Communication Commission (FCC) of the U.S. Oxernment. These FCC exposure limits are derived from the recommendations of two recognitions, the National Counsel on Radiation Protection and Measurement (NCRP) and the Institute of Electrical and Electronics Engineers (IEEE). In both cases, the recommendations were developed

y scientific and engineering experts drawn from industry, government, nd academia after extensive reviews of the scientific literature related to and academia after extensive reviews of the scientific iterature related the biological effects of RF energy. The exposure Limit for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR is a measure of the rate of absorp-Absorption Rate, or SAR. The SAR is a measure of the rate of absorp-tion of RF energy by the human body expressed in units of watts per kilogram (W/kg). The FCC requires wireless phones to comply with a safety limit of 1.6 watts per kilogram (1.6 W/kg). The FCC exposure limit incorporates a substantial margin of safety to give additional pro-tection to the public and to account for any variations in measurements Tests for SAR are conducted using standard operating positions speci-fied by the FCC with the phone transmitting at its highest certified power level in all tested frequency bands. Although SAR is determined with the bishot testified neurologists has tasked SR best of the Sarbert at the highest certified power level, the actual SAR level of the phone at the ingress course power level, in eaction shorteen on the phone while operating can be well below the maximum value. Because the phone is designed to operate at multiple power levels to use only the power required to reach the network, in general, the closer you are to a wireless base station antenna, the lower the power output. Before a phone model is available for sale to the public, it must be test ed and certified to the FCC that it does not exceed the limit established by the governmentadopted requirement for safe exposure. The tests are performed in positions and locations (e.g., at the ear and wom on the body) as required by the FCC for each model. This device was tested for typical body-worn operations with the back of the phone kept 0.79 inches (2.0 cm) between the user's body and the back of the phone. To

comply with FCC RF exposure requirements, a minimum separation dis

tance of 0.79 inches (2.0 cm) must be maintained between the user shody and the back of the phone. Third-party beltclips, holsters, and

similar accessories containing metallic components should not be used. Body-worn accessories that cannot maintain 0.79 inches (2.0 cm) separation distance between the user's body and the back of the phone, and have not been tested for typical body-worn operations may not comply with FCC RF exposure limits and should be avoided. The FCC has granted an Equipment Authorization for this model phone with all reported SAR levels esubated as in compliance with the FCC RF emission guidelines. The highest SAR value for this model phone when tested for use at the ear is 1.51 W/kg while there may be differences between SAR levels of various phones and at various positions, they all meet the government requirement for safe exposure. SAR information on this model phone is on file with the FCC and can be found under the Display Grant section of http://www.fcc.gov/oet/fc.cid after searching on FCC ID.

To find information that pertains to a particular model phone, this site uses the phone FCC ID number which is usually printed somewhere on

searching on FCC ID.

To find information that pertains to a particular model phone, this site
uses the phone FCC ID number which is usually printed somewhere on
the case of the phone. Sometimes it may be necessary to remove the
battery pack to find the number. Once you have the FCC ID number for
a particular phone, follow the instructions on the website and it should
provide values for typical or maximum SAR for a particular phone.
Additional information on Specific Absorption Rates (SAR) can be
found on the Cellular Telecommunications Industry Association (CTIA)
website at http://www.ctia.org/
