# **User's Guide**

# L1920P

Make sure to read the **Important Precautions** before using the product. Keep the User's Guide(CD) in an accessible place for furture reference. See the label attached on the product and quote this information to your

dealer when you require service.

This unit has been engineered and manufactured to ensure your personal safety, however improper use may result in potential eletrical shock or fire hazards. In order to allow the proper operation of all safeguards incorporated in this display, observe the following basic rules for its installation, use, and servicing.

# **On Safety**

Use only the power cord supplied with the unit. In case you use another power cord, make sure that it is certified by the applicable national standards if not being provided by the supplier. If the power cable is faulty in any way, please contact the manufacturer or the nearest authorized repair service provider for a replacement.

The power supply cord is used as the main disconnection device. Ensure that the socket-outlet is easily accessible after installation.

Operate the display only from a power source indicated in the specifications of this manual or listed on the display. If you are not sure what type of power supply you have in your home, consult with your dealer.

Overloaded AC outlets and extension cords are dangerous. So are frayed power cords and broken plugs. They may result in a shock or fire hazard. Call your service technician for replacement.

Do not Open the Display.

- There are no user serviceable components inside.
- There are Dangerous High Voltages inside, even when the power is OFF.
- Contact your dealer if the display is not operating properly.

To Avoid Personal Injury :

- Do not place the display on a sloping shelf unless properly secured.
- Use only a stand recommended by the manufacturer.

To Prevent Fire or Hazards:

- Always turn the display OFF if you leave the room for more than a short period of time. Never leave the display ON when leaving the house.
- Keep children from dropping or pushing objects into the display's cabinet openings. Some internal parts carry hazardous voltages.
- Do not add accessories that have not been designed for this display.
- During a lightning storm or when the display is to be left unattended for an extended period of time, unplug it from the wall outlet.

# **On Installation**

Do not allow anything to rest upon or roll over the power cord, and do not place the display where the power cord is subject to damage.

Do not use this display near water such as near a bathtub, washbowl, kitchen sink, laundry tub, in a wet basement, or near a swimming pool. Displays are provided with ventilation openings in the cabinet to allow the release of heat generated during operation. If these openings are blocked, built-up heat can cause failures which may result in a fire hazard. Therefore, NEVER:

- Block the bottom ventilation slots by placing the display on a bed, sofa, rug, etc.
- Place the display in a built-in enclosure unless proper ventilation is provided.
- Cover the openings with cloth or other material.
- Place the display near or over a radiator or heat source.

Do not rub or strike the Active Matrix LCD with anything hard as this may scratch, mar, or damage the Active Matrix LCD permanently.

Do not press the LCD screen with your finger for a long time as this may cause some afterimages.

Some dot defects may appear as Red, Green or Blue spots on the screen. However, this will have no impact or effect on the display performance.

If possible, use the recommended resolution to obtain the best image quality for your LCD display. If used under any mode except the recommended resolution, some scaled or processed images may appear on the screen. However, this is characteristic of the fixed-resolution LCD panel.

# **On Cleaning**

- Unplug the display before cleaning the face of the display screen.
- Use a slightly damp (not wet) cloth. Do not use an aerosol directly on the display screen because over-spraying may cause electrical shock.

# **On Repacking**

 Do not throw away the carton and packing materials. They make an ideal container in which to transport the unit. When shipping the unit to another location, repack it in its original material.

# On Disposal

- The fluorescent lamp used in this product contains a small amount of mercury.
- Do not dispose of this product with general household waste.
   Disposal of this product must be carried out in accordance to the regulations of your local authority.

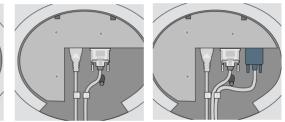

## Using the Computer

1. Separate the back cap by sliding its lower section downward as shown in the picture.

2. Connect the signal input cable and the power cord. (see next page)

**3.** After the cables are connected, set the back cap into the groove of the upper section and reassemble by pushing upward.

**4.** Insert the back cap along the bottom grooves on both sides, holding the bottom.

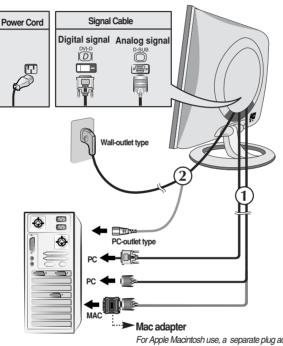

# Using the Computer

1. Connect the signal cable. When attached, tighten the thumbscrews to secure the connection.

2. Connect the power cord into a proper power outlet that is easily accessible and close to the display.

#### NOTE

- This is a simplified representation of the rear view.
- This rear view represents a general model; your display may differ from the view as shown.

For Apple Macintosh use, a separate plug adapter is needed to change the 15 pin high density (3 row) D-sub VGA connector on the supplied cable to a 15 pin 2 row connector.

 Press U button on the front switch panel to turn the power on. When monitor power is turned on, the 'Self Image Setting Function' is executed automatically. (Only Analog Mode)

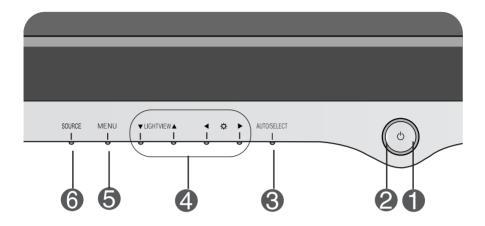

PROCESSING SELF

#### NOTE

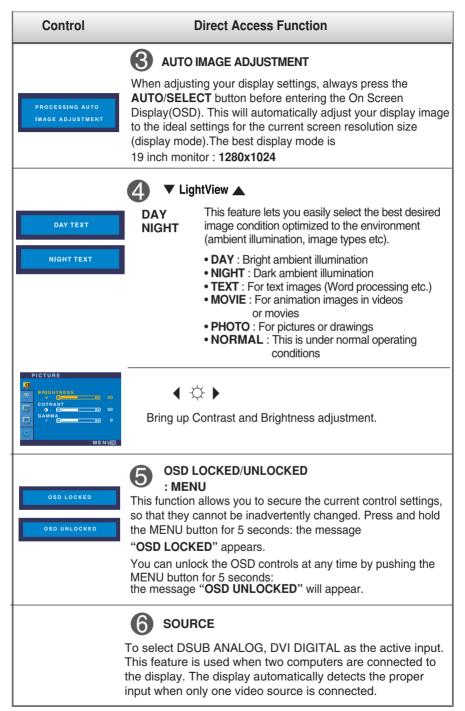

\* Self Image Setting Function'? This function provides the user with optimal display settings. When the user connects the monitor for the first time, this function automatically adjusts the display to optimal settings for individual input signals. If you want to adjust the monitor while in use, or wish to manually run this function once again, push the 'AUTO/SELECT' button on the front panel of the monitor. Otherwise, you may execute the 'Factory reset' option on the OSD adjustment menu. However, be aware that this option initializes all the menu items except 'Language'.

# **Front Panel Controls**

С	ontrol	Function
0	Power Button	Use this button to turn the display on or off.
2	Power Indicator	This Indicator lights up blue when the display operates normally(On Mode). If the display is in Sleep Mode (Energy Saving), this indicator color changes to amber.
8	AUTO/SELECT Button	Use this button to enter a selection in the On Screen Display.
4	<b>V</b> ▲ <b>→</b> Buttons	Use these buttons to choose or adjust items in the On Screen Display.
6	MENU Button	Use this button to enter or exit the On Screen Display.

### Screen Adjustment

Making adjustments to the image size, position and operating parameters of the display is quick and easy with the On Screen Display Control system. A short example is given below to familiarize you with the use of the controls. The following section is an outline of the available adjustments and selections you can make using the OSD.

#### NOTE

• Allow the display to stabilize for at least 30 minutes before making image adjustments.

To make adjustments in the On Screen Display, follow these steps:

MENU → ▼	▲ → AU	ITO/SE	ELECT -	→ ♥ Å ◀ ► │
	MENU	←	MENU	*

Press the **MENU Button**, then the main menu of the OSD appears.

2 To access a control, use the ▼ or ▲ Buttons. When the icon you want becomes highlighted, press the AUTO/ SELECT Button.

3 Use the  $\forall \land \checkmark \checkmark \Rightarrow$  Buttons to adjust the item to the desired level.

Accept the changes by pressing the MENU Button.

5 Exit the OSD by Pressing the MENU Button.

The following table indicates all the On Screen Display control, adjustment, and setting menus.

Main menu	Sub menu		Α	D	Reference	
PICTURE	BRIGHTNESS				To adjust the brightness,	
	CONTRA	ST			contrast and gamma of the screen	
	GAMMA

	FACTORY RESET					
				<b>A</b> : <i>A</i>	Adjustable Analog Input Digital Input	

#### NOTE

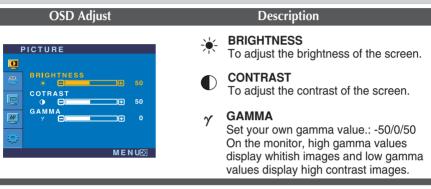

The order of icons may differ depending on the model (A8~A10).

You were introduced to the procedure of selecting and adjusting an item using the OSD system. Listed below are the icons, icon names, and icon descriptions of the all items shown on the Menu.

#### NOTE

OSD (On Screen Display) menu languages on the monitor may differ from the manual.

### To adjust the brightness and contrast of the screen

### To customize the color of the screen

OSD Adjust	Description	
COLOR PRESET PRESET 5000K 9300K PRED 50	PRESET 6500K/9300K Select the screen color. • 6500K: Slightly reddish white • 9300K: Slightly bluish white.	
GREEN 50 BLUE 50 MENUS	RED GREEN Set your own color levels. BLUE	

### To adjust the position of the screen

OSD Adjust	Description
POSITION HORIZONTAL	Horizontal Position To move image left and right.
VERTICAL           C           C	Vertical Position To move image up and down.
M E N U⊠	

### To improve the clarity and stability of the screen

OSD Adjust		Description
CLOCK	CLOCK	To minimize any vertical bars or stripes visible on the screen background.The horizontal screen size will also change.
Image: Phase         Image: Phase	PHASE	To adjust the focus of the display. This item allows you to remove any horizontal noise and clear or sharpen the image of characters.

### To customize the screen status for a user's operating environment

OSD Adjust		Description
SETUP LANGUAGE > ENGLISH OSD POSITION	LANGUAGE	To choose the language in which the control names are displayed.
HORIZONTAL 50 VERTICAL 50	OSD POSITION	To adjust position of the OSD window on the screen.
ANALOG 1280 X 1024 60HZ MENU	WHITE BALANCE	If the output of the video card is different the required specifications, the color level may deteriorate due to video signal distortion. Using this function, the
SETUP WHITE BALANCE NO POWER INDICATOR NO FACTORY RESET NO		signal level is adjusted to fit into the standard output level of the video card in order to provide the optimal image. Activate this function when white and black colors are present in the screen.
ANALOG 1280 X 1024 60HZ MENU	Power Indicator	Use this function to set the power indicator on the front side of the monitor to <b>ON</b> or <b>OFF</b> . If you set <b>OFF</b> , it will go off. If you set <b>ON</b> at any time, the power indicator will automatically be turned on.
	FACTORY RESET	Restore all factory default settings except <b>"LANGUAGE."</b> Press the ► button to reset immediately.

If this does not improve the screen image, restore the factory default settings. If necessary, perform the white balance function again. This function will be enabled only when the input signal is an analog signal.

Check the following before calling for service.

No image appears		
Is the power cord of the display connected?	Check and see if the power cord is connected properly to the power outlet.	
Is the power indicator light on?	Press the Power button.	
Is the power on and the power indicator blue or green?	<ul> <li>Adjust the brightness and the contrast.</li> </ul>	
Is the power indicator amber?	<ul> <li>If the display is in power saving mode, try moving the mouse or pressing any key on the keyboard to bring up the screen.</li> <li>Try to turn on the PC.</li> </ul>	
Do you see an "OUT OF RANGE" message on the screen?	• This message appears when the signal from the PC (video card) is out of horizontal or vertical frequency range of the display. See the 'Specifications' section of this manual and configure your display again.	
Do you see a "CHECK SIGNAL CABLE" message on the screen?	<ul> <li>This message appears when the signal cable between your PC and your display is not connected. Check the signal cable and try again.</li> </ul>	

Do you see a "OSD LOCKED" message on the screen?		
Do you see "OSD LOCKED" when you push MENU button?	• You can secure the current control settings, so that they cannot be inadvertently changed. You can unlock the OSD controls at any time by pushing the <b>MENU</b> button for 5 seconds: the message <b>"OSD UNLOCKED</b> " will appear.	

Display image is incorrect		
Display Position is incorrect.	<ul> <li>Press the AUTO/SELECT button to automatically adjust your display image to the ideal setting. If the results are unsatisfactory, adjust the image position using the H position and V position icon in the on screen display.</li> <li>Check Control Panel -&gt; Display -&gt; Settings and see if the frequency or the resolution were changed. If yes, readjust the video card to the recommend resolution.</li> </ul>	
On the screen background, vertical bars or stripes are visible.	• Press the <b>AUTO/SELECT</b> button to automatically adjust your display image to the ideal setting. If the results are unsatisfactory, decrease the vertical bars or stripes using the <b>CLOCK</b> icon in the on screen display.	
Any horizontal noise appearing in any image or characters are not clearly portrayed.	<ul> <li>Press the AUTO/SELECT button to automatically adjust your display image to the ideal setting. If the results are unsatisfactory, decrease the horizontal bars using the PHASE icon in the on screen display.</li> <li>Check Control Panel -&gt; Display -&gt; Settings and adjust the display to the recommended resolution or adjust the display image to the ideal setting. Set the color setting higher than 24 bits (true color).</li> </ul>	
The screen color is mono or abnormal.	<ul> <li>Check if the signal cable is properly connected and use a screwdriver to fasten if necessary.</li> <li>Make sure the video card is properly inserted in the slot.</li> <li>Set the color setting higher than 24 bits (true color) at Control Panel - Settings.</li> </ul>	
The screen blinks.	<ul> <li>Check if the screen is set to interlace mode and if yes, change it to the recommend resolution.</li> <li>Make sure the power voltage is high enough, It has to be higher than AC100-240V 50/60Hz.</li> </ul>	

Have you installed the display driver?		
Have you installed the display driver?	• Be sure to install the display driver from the display driver CD (or diskette) that comes with your display. Or, you can also download the driver from our web site: http://www.lge.com.	
Do you see an "Unrecognized monitor, Plug&Play (VESA DDC) monitor found" message?	<ul> <li>Make sure to check if the video card supports Plug&amp;Play function.</li> </ul>	

USB function		
USB function cannot be setup.	<ul> <li>Check if the USB cable is correctly connected.</li> <li>Check if the PC and OS are USB compliant. For verification of USB support, consult the manufacturer of each system.</li> </ul>

## How to Install the VESA Standard wall mounting

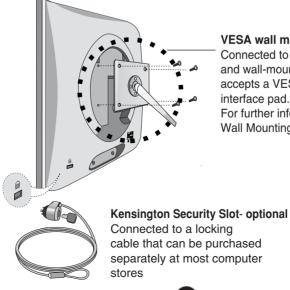

### This monitor meets VESA-compliant mounting interface pad specifications.

1. Please the monitor on a piece of cloth or other soft surface with the front side facing downward and remove the rear cap.

2. Slide off the lower section of the cover base with two hands as shown in the

- **3.** Separate the stand base using a screwdriver as shown in the picture.
- **4.** Install the VESA standrad wall mounting.

#### VESA wall mounting

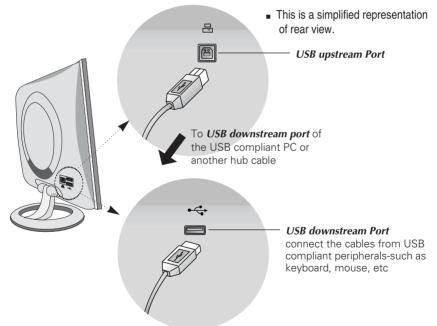

Connected to another object (stand type and wall-mounted type. This monitor accepts a VESA-compliant mounting interface pad.-optional) For further information, refer to the VESA Wall Mounting Instruction Guide.

### Making use of USB (Universal Serial Bus) - Optional

USB (Universal Serial Bus) is an innovation in connecting your different desktop peripherals conveniently to your computer. By using the USB, you will be able to connect your mouse, keyboard, and other peripherals to your display instead of having to connect them to your computer. This will give you greater flexibility in setting up your system. USB allows you to connect a chain of up to 120 devices on a single USB port; and you can "hot" plug (attach them while the computer is running) or unplug them while maintaining the Plug and the Plug auto detection and configuration. This display has an integrated BUSpowered USB hub, allowing up to 2 other USB devices to be attached it.

### **USB** connection

- 1. Connect the upstream port of the display to the downstream port of the USB compliant PC or another hub using the USB cable. (Computer must have a USB port)
- 2. Connect the USB compliant peripherals to the downstream ports of the display.

#### NOTE

- To activate the USB hub function, the display must be connected to a USB compliant PC(OS) or another hub with the USB cable(enclosed).
- When connecting the USB cable, check that the shape of the connector at the cable side matches the shape at the connecting side.
- Even if the display is in a power saving mode, USB compliant devices will function when they are connected the USB ports(both the upstream and downstream) of the display.

### **USB Specifications**

USB standard	Rev. 1.1 complied BUS-powered hub
Downstream power supply	100mA for each (MAX)
Communication speed	12 Mbps (full), 1.5 Mbps (low)
USB port	1 Upstream port 2 Downstream ports

**IMPORTANT:** These USB connectors are not designed for use with high-power USB devices such as a video camera, scanner, etc. LGE recommends connecting high-power USB devices directly to the computer
