CAR-USE COMPONENT SUBWOOFER
HP D'EXTREME-GRAVE AUTOMOBILE
SUBWOOFER PARA AUTOMÓVIL

Be sure to read this instruction manual before installing this speaker.

Prière de lire obligatoirement ce manuel d'installation avant de monter les haut-parleurs.

Antes de instalar el altavoz es importante que lea estas instrucciones.
Leia este manual de instruções antes de instalar o alto-falante.
⚠ WARNING**Dear Customer:**

Selecting fine audio equipment such as the unit you've just purchased is only the start of your musical enjoyment. Now it's time to consider how you can maximize the fun and excitement your equipment offers. PIONEER and the Electronic Industries Association's Consumer Electronics Group want you to get the most out of your equipment by playing it at a safe level. One that lets the sound come through loud and clear without annoying blaring or distortion—and, most importantly, without affecting your sensitive hearing.

Sound can be deceiving. Over time your hearing "comfort level" adapts to higher volumes of sound. So what sounds "normal" can actually be loud and harmful to your hearing. Guard against this by setting your equipment at a safe level BEFORE your hearing adapts.

To establish a safe level:

- Start your volume control at a low setting.
- Slowly increase the sound until you can hear it comfortably and clearly, and without distortion.

Once you have established a comfortable sound level:

- Set the dial and leave it there.

Taking a minute to do this now will help to prevent hearing damage or loss in the future. After all, we want you listening for a lifetime.

**⚠ CAUTION**

This product was designed for use in sound pressure level competitions. When using it competitively, never remain in the vehicle as exposure to high sound pressure levels can cause hearing damage. Operate the system from outside the vehicle using a remote control, with the doors and windows tightly shut.

To prevent damage to your speakers please observe the following caution. At high volume, if the music sounds distorted or additional sounds are perceived lower the volume. This may be caused by excessive input to the speakers. The sound you are hearing could be the speaker cone becoming out of control or it may be the voice coil actually coming into contact with the magnetic assembly. Under these circumstances, it is prudent to lower the volume to just below the point where these phenomena occur. If your amplifier has a gain control it would be advisable to lower this control slightly to prevent this from reoccurring. In some cases, if there is an equalizer in the system, the bass control on this unit could also be set to a lower level to prevent this from occurring. If the volume is still too high after those steps the speaker can reproduce any desired, it is recommended that additional speakers be added to the system. By doing so it is possible to gain significant increases in sound pressure levels. In some cases you may double the perceived system output without any deterioration in sound quality. When installing the speakers, or after installation make sure not to subject the diaphragms to direct shock (for example, dropping sharp-edged objects onto them) as the speakers may be damaged. If this speaker is used as it is mounted on a cabinet whose volume is larger than the recommended size or used alone in a free air, it will not only be deteriorated in durability but also be out of order.

PIONEER recommends that this speaker be used in conjunction with amplifiers whose continuous (RMS) output is lower than the nominal input power of this speaker.

- Never connect only one voice coil of this Dual Voice Coil (DVC) speaker. Both voice coils must be connected to the amplifier for correct operation.
- The subwoofer enclosure must be securely & directly attached to the vehicle.
- The speakers may become very hot when the system is operated at high power continuously for a long time. Never directly touch the speakers with your hands until the speakers have cooled.
- Always install this product using the included hardware.

⚠ ATTENTION

Ce produit a été spécialement conçu pour être utilisé lors d'une compétition de niveau de pression acoustique N.P.A.(SPL/Sound Pressure Level). Lors d'une compétition, afin d'éviter les accidents provoqués par le volume phonique élevé veillez sans faute sortir du véhicule et commencer à faire fonctionner l'appareil seulement après avoir fermé les portes et les vitres du véhicule.

Afin d'éviter d'endommager les haut-parleurs, observer les précautions suivantes. Si la musique semble déformée ou si des parasites sont perçus à volume élevé, baisser le volume. Ces problèmes peuvent être causés par l'entrée excessive aux haut-parleurs. Les parasites peuvent être dus à l'affaiblissement du cône du haut-parleur ou à la bobine mobile venant en contact avec l'ensemble magnétique. Dans ces circonstances, il est prudent de baisser le volume à un niveau juste au-dessous du point où ces phénomènes se produisent. Si l'amplificateur est munie d'une commande de gain, il est recommandé de baisser cette commande légèrement afin d'éliminer les phénomènes de reproduction. Dans certains cas, s'il y a un égaliseur dans le système, on peut aussi ajuster la commande de basse pour éviter ce phénomène. Si le volume est trop élevé, il est possible qu'il y ait de la pression acoustique (spl) supérieure à celle que le haut-parleur peut reproduire sans distorsion, il est recommandé d'ajouter des haut-parleurs supplémentaires au système. On peut ainsi obtenir des augmentations considérables de niveaux de pression acoustique. Dans certains cas, on peut arriver à doubler la puissance perdue du système sans détérioration de la qualité sonore. Installant les haut-parleurs ou après les avoir installés, veiller à ne pas endommager leurs diaphragmes (en laissant tomber dessus des objets coupants, par exemple) car ils pourraient être endommagés. Si le haut-parleur est utilisé tel quel, monté sur un coffre dont le volume est plus grand que la taille recommandée ou s'il est utilisé à l'air libre, sa durabilité sera amoindrie et il risque aussi de tomber au sol.

Afin d'éviter d'abîmer le haut-parleur avec une amplification élevée, PIONEER recommande d'utiliser des amplificateurs dont le niveau de puissance continue (RMS) est inférieur à la puissance nominale du haut-parleur.

- Ne jamais connecter une seule bobine mobile de ce haut-parleur de Double Bobine Mobile (DVC). Les deux bobines doivent être connectées sur l'amplificateur afin d'assurer un fonctionnement correct.

- Pour écouter et apprécier la musique en toute sécurité, utiliser l'appareil après l'avoir installé et fixé solidement le caisson au châssis du véhicule.

- Lorsque l'on utilise le haut-parleur continuellement pendant une période de temps prolongée à haute puissance, la température du haut-parleur s'élève et celui-ci chauffe. Pour cette raison, veillez faire attention à ne pas toucher le haut-parleur avec les mains.

- Veillez sans faute procéder à l'installation en utilisant les pièces destinées à l'installation fournies comme accessoires avec l'appareil.

● FEATURES

1. DOUBLE CONE STRUCTURE WITH REINFORCEMENT NODES (PATENT PENDING) : To create a cone structure sufficient to stand up to extreme SPL conditions, a new Double Cone design was created. A massive contact area between the two cones virtually eliminates the dual cone failure mode. The subwoofer's unique reinforcement nodes securely connect the two cones and further develop the stability and resiliency needed for high SPL performance.

2. WIDE ROLL, 3-LAYER FIBER WOVEN RADIAL SURROUND (PATENT PENDING) : The surround is required to precisely control the huge power handling and extended linear excursion. This patent-pending design eliminates surround puckerling at large excursion, resulting in louder, more controlled bass response with improved durability. The honeycomb pattern reinforcing cloth evenly distributes strength throughout the surround material, eliminating any weak points of surround, improving high power capability.

3. HIGH POWER HANDLING CERAMIC COAT VOICE COIL WIRE : Ceramic coat wire provides superior heat capability to increase input handling capacity. Ceramic coating insulates the voice coil wire, preventing short circuits due to overheating and dramatically improving reliability.

4. TITANIUM VOICE COIL BOBBIN : Extremely strong yet lightweight, titanium is used to create possibly the most powerful voice coil bobbin ever created.

5. DOUBLE STACKED MAGNETS & THICK TOP PLATE, HIGH POWER MOTOR ASSEMBLY : The massive double-stack motor structure provides more powerful force to move the cone assembly faster.

6. ALUMINUM HEATSINK COOLING SYSTEM (PATENT PENDING) : The high current capability provided by the ceramic-coated voice coil wires means higher temperatures. Draws heat away from the inside of the subwoofer, reducing temperatures significantly. This keeps the woofer cool and hitting hard.

7. BOTTOM HOLD DESIGN ALUMINUM DIE-CAST ONE PIECE RIGID CHASSIS : Any flex or vibration in the basket structure would reduce the output energy of the woofer. A massive cast basket with rigid spokes holds the top & bottom side of motor structure securely, effectively minimizing any undesired output loss.

8. TOP PLATE DESIGN ALUMINUM DIE-CAST CONSTRUCTION : The top plate is designed to hold the motor assembly in place while providing a rigid base for the entire subwoofer.

9. ALUMINUM HEATSINK COOLING SYSTEM (PATENT PENDING) : The high current capability provided by the ceramic-coated voice coil wires means higher temperatures. Draws heat away from the inside of the subwoofer, reducing temperatures significantly. This keeps the woofer cool and hitting hard.

10. BOTTOM HOLD DESIGN ALUMINUM DIE-CAST ONE PIECE RIGID CHASSIS : Any flex or vibration in the basket structure would reduce the output energy of the woofer. A massive cast basket with rigid spokes holds the top & bottom side of motor structure securely, effectively minimizing any undesired output loss.

11. TOP PLATE DESIGN ALUMINUM DIE-CAST CONSTRUCTION : The top plate is designed to hold the motor assembly in place while providing a rigid base for the entire subwoofer.

12. ALUMINUM HEATSINK COOLING SYSTEM (PATENT PENDING) : The high current capability provided by the ceramic-coated voice coil wires means higher temperatures. Draws heat away from the inside of the subwoofer, reducing temperatures significantly. This keeps the woofer cool and hitting hard.

13. BOTTOM HOLD DESIGN ALUMINUM DIE-CAST ONE PIECE RIGID CHASSIS : Any flex or vibration in the basket structure would reduce the output energy of the woofer. A massive cast basket with rigid spokes holds the top & bottom side of motor structure securely, effectively minimizing any undesired output loss.

14. TOP PLATE DESIGN ALUMINUM DIE-CAST CONSTRUCTION : The top plate is designed to hold the motor assembly in place while providing a rigid base for the entire subwoofer.

15. ALUMINUM HEATSINK COOLING SYSTEM (PATENT PENDING) : The high current capability provided by the ceramic-coated voice coil wires means higher temperatures. Draws heat away from the inside of the subwoofer, reducing temperatures significantly. This keeps the woofer cool and hitting hard.

16. BOTTOM HOLD DESIGN ALUMINUM DIE-CAST ONE PIECE RIGID CHASSIS : Any flex or vibration in the basket structure would reduce the output energy of the woofer. A massive cast basket with rigid spokes holds the top & bottom side of motor structure securely, effectively minimizing any undesired output loss.

17. TOP PLATE DESIGN ALUMINUM DIE-CAST CONSTRUCTION : The top plate is designed to hold the motor assembly in place while providing a rigid base for the entire subwoofer.

18. ALUMINUM HEATSINK COOLING SYSTEM (PATENT PENDING) : The high current capability provided by the ceramic-coated voice coil wires means higher temperatures. Draws heat away from the inside of the subwoofer, reducing temperatures significantly. This keeps the woofer cool and hitting hard.

19. BOTTOM HOLD DESIGN ALUMINUM DIE-CAST ONE PIECE RIGID CHASSIS : Any flex or vibration in the basket structure would reduce the output energy of the woofer. A massive cast basket with rigid spokes holds the top & bottom side of motor structure securely, effectively minimizing any undesired output loss.

20. TOP PLATE DESIGN ALUMINUM DIE-CAST CONSTRUCTION : The top plate is designed to hold the motor assembly in place while providing a rigid base for the entire subwoofer.

21. ALUMINUM HEATSINK COOLING SYSTEM (PATENT PENDING) : The high current capability provided by the ceramic-coated voice coil wires means higher temperatures. Draws heat away from the inside of the subwoofer, reducing temperatures significantly. This keeps the woofer cool and hitting hard.

22. BOTTOM HOLD DESIGN ALUMINUM DIE-CAST ONE PIECE RIGID CHASSIS : Any flex or vibration in the basket structure would reduce the output energy of the woofer. A massive cast basket with rigid spokes holds the top & bottom side of motor structure securely, effectively minimizing any undesired output loss.

23. TOP PLATE DESIGN ALUMINUM DIE-CAST CONSTRUCTION : The top plate is designed to hold the motor assembly in place while providing a rigid base for the entire subwoofer.

24. ALUMINUM HEATSINK COOLING SYSTEM (PATENT PENDING) : The high current capability provided by the ceramic-coated voice coil wires means higher temperatures. Draws heat away from the inside of the subwoofer, reducing temperatures significantly. This keeps the woofer cool and hitting hard.

25. BOTTOM HOLD DESIGN ALUMINUM DIE-CAST ONE PIECE RIGID CHASSIS : Any flex or vibration in the basket structure would reduce the output energy of the woofer. A massive cast basket with rigid spokes holds the top & bottom side of motor structure securely, effectively minimizing any undesired output loss.

26. TOP PLATE DESIGN ALUMINUM DIE-CAST CONSTRUCTION : The top plate is designed to hold the motor assembly in place while providing a rigid base for the entire subwoofer.

27. ALUMINUM HEATSINK COOLING SYSTEM (PATENT PENDING) : The high current capability provided by the ceramic-coated voice coil wires means higher temperatures. Draws heat away from the inside of the subwoofer, reducing temperatures significantly. This keeps the woofer cool and hitting hard.

28. BOTTOM HOLD DESIGN ALUMINUM DIE-CAST ONE PIECE RIGID CHASSIS : Any flex or vibration in the basket structure would reduce the output energy of the woofer. A massive cast basket with rigid spokes holds the top & bottom side of motor structure securely, effectively minimizing any undesired output loss.

29. TOP PLATE DESIGN ALUMINUM DIE-CAST CONSTRUCTION : The top plate is designed to hold the motor assembly in place while providing a rigid base for the entire subwoofer.

30. ALUMINUM HEATSINK COOLING SYSTEM (PATENT PENDING) : The high current capability provided by the ceramic-coated voice coil wires means higher temperatures. Draws heat away from the inside of the subwoofer, reducing temperatures significantly. This keeps the woofer cool and hitting hard.

31. BOTTOM HOLD DESIGN ALUMINUM DIE-CAST ONE PIECE RIGID CHASSIS : Any flex or vibration in the basket structure would reduce the output energy of the woofer. A massive cast basket with rigid spokes holds the top & bottom side of motor structure securely, effectively minimizing any undesired output loss.

32. TOP PLATE DESIGN ALUMINUM DIE-CAST CONSTRUCTION : The top plate is designed to hold the motor assembly in place while providing a rigid base for the entire subwoofer.

33. ALUMINUM HEATSINK COOLING SYSTEM (PATENT PENDING) : The high current capability provided by the ceramic-coated voice coil wires means higher temperatures. Draws heat away from the inside of the subwoofer, reducing temperatures significantly. This keeps the woofer cool and hitting hard.

34. BOTTOM HOLD DESIGN ALUMINUM DIE-CAST ONE PIECE RIGID CHASSIS : Any flex or vibration in the basket structure would reduce the output energy of the woofer. A massive cast basket with rigid spokes holds the top & bottom side of motor structure securely, effectively minimizing any undesired output loss.

35. TOP PLATE DESIGN ALUMINUM DIE-CAST CONSTRUCTION : The top plate is designed to hold the motor assembly in place while providing a rigid base for the entire subwoofer.

36. ALUMINUM HEATSINK COOLING SYSTEM (PATENT PENDING) : The high current capability provided by the ceramic-coated voice coil wires means higher temperatures. Draws heat away from the inside of the subwoofer, reducing temperatures significantly. This keeps the woofer cool and hitting hard.

37. BOTTOM HOLD DESIGN ALUMINUM DIE-CAST ONE PIECE RIGID CHASSIS : Any flex or vibration in the basket structure would reduce the output energy of the woofer. A massive cast basket with rigid spokes holds the top & bottom side of motor structure securely, effectively minimizing any undesired output loss.

38. TOP PLATE DESIGN ALUMINUM DIE-CAST CONSTRUCTION : The top plate is designed to hold the motor assembly in place while providing a rigid base for the entire subwoofer.

39. ALUMINUM HEATSINK COOLING SYSTEM (PATENT PENDING) : The high current capability provided by the ceramic-coated voice coil wires means higher temperatures. Draws heat away from the inside of the subwoofer, reducing temperatures significantly. This keeps the woofer cool and hitting hard.

40. BOTTOM HOLD DESIGN ALUMINUM DIE-CAST ONE PIECE RIGID CHASSIS : Any flex or vibration in the basket structure would reduce the output energy of the woofer. A massive cast basket with rigid spokes holds the top & bottom side of motor structure securely, effectively minimizing any undesired output loss.

41. TOP PLATE DESIGN ALUMINUM DIE-CAST CONSTRUCTION : The top plate is designed to hold the motor assembly in place while providing a rigid base for the entire subwoofer.

42. ALUMINUM HEATSINK COOLING SYSTEM (PATENT PENDING) : The high current capability provided by the ceramic-coated voice coil wires means higher temperatures. Draws heat away from the inside of the subwoofer, reducing temperatures significantly. This keeps the woofer cool and hitting hard.

43. BOTTOM HOLD DESIGN ALUMINUM DIE-CAST ONE PIECE RIGID CHASSIS : Any flex or vibration in the basket structure would reduce the output energy of the woofer. A massive cast basket with rigid spokes holds the top & bottom side of motor structure securely, effectively minimizing any undesired output loss.

44. TOP PLATE DESIGN ALUMINUM DIE-CAST CONSTRUCTION : The top plate is designed to hold the motor assembly in place while providing a rigid base for the entire subwoofer.

45. ALUMINUM HEATSINK COOLING SYSTEM (PATENT PENDING) : The high current capability provided by the ceramic-coated voice coil wires means higher temperatures. Draws heat away from the inside of the subwoofer, reducing temperatures significantly. This keeps the woofer cool and hitting hard.

46. BOTTOM HOLD DESIGN ALUMINUM DIE-CAST ONE PIECE RIGID CHASSIS : Any flex or vibration in the basket structure would reduce the output energy of the woofer. A massive cast basket with rigid spokes holds the top & bottom side of motor structure securely, effectively minimizing any undesired output loss.

47. TOP PLATE DESIGN ALUMINUM DIE-CAST CONSTRUCTION : The top plate is designed to hold the motor assembly in place while providing a rigid base for the entire subwoofer.

48. ALUMINUM HEATSINK COOLING SYSTEM (PATENT PENDING) : The high current capability provided by the ceramic-coated voice coil wires means higher temperatures. Draws heat away from the inside of the subwoofer, reducing temperatures significantly. This keeps the woofer cool and hitting hard.

49. BOTTOM HOLD DESIGN ALUMINUM DIE-CAST ONE PIECE RIGID CHASSIS : Any flex or vibration in the basket structure would reduce the output energy of the woofer. A massive cast basket with rigid spokes holds the top & bottom side of motor structure securely, effectively minimizing any undesired output loss.

50. TOP PLATE DESIGN ALUMINUM DIE-CAST CONSTRUCTION : The top plate is designed to hold the motor assembly in place while providing a rigid base for the entire subwoofer.

51. ALUMINUM HEATSINK COOLING SYSTEM (PATENT PENDING) : The high current capability provided by the ceramic-coated voice coil wires means higher temperatures. Draws heat away from the inside of the subwoofer, reducing temperatures significantly. This keeps the woofer cool and hitting hard.

52. BOTTOM HOLD DESIGN ALUMINUM DIE-CAST ONE PIECE RIGID CHASSIS : Any flex or vibration in the basket structure would reduce the output energy of the woofer. A massive cast basket with rigid spokes holds the top & bottom side of motor structure securely, effectively minimizing any undesired output loss.
