## IMPORTANT PRECAUTIONS

**ANNING:** To reduce the risk of serious injury, read the following important precautions before using the weight system.

- Read all instructions in this manual before using the weight system. Use the weight system only as described in this manual.
- 2. It is the responsibility of the owner to ensure that all users of the weight system are adequately informed of all precautions.
- 3. The weight system is intended for home use only. Do not use the weight system in any commercial, rental, or institutional setting.
- 4. Use the weight system only on a level surface. Cover the floor beneath the weight system to protect the floor.
- Keep the weight system indoors, away from moisture and dust. Do not put the weight system in a garage or covered patio, or near water.
- 6. Make sure all parts are properly tightened each time the weight system is used. Replace any worn parts immediately.
- 7. Keep children under 12 and pets away from the weight system at all times.
- 8. The weight system is designed to support a maximum user weight of 300 pounds.

- 9. Always wear athletic shoes for foot protection while exercising.
- 10. Keep hands and feet away from moving parts.
- 11. Make sure that the cables remain on the pulleys at all times. If the cables bind as you are exercising, stop immediately and make sure that the cables are on the pulleys. Replace all cables at least every two years.
- 12. Always secure the weight stack with the lock pin and lock after exercising to prevent unauthorized use of the weight system (see LOCKING THE WEIGHT STACK on page 24).
- 13. Always stand on the foot plate when performing an exercise that could cause the weight system to tip.
- 14. Never release the arms, leg lever, lat bar, leg press, ab strap, or handle while weights are raised. The weights will fall with great force.
- 15. Always disconnect the lat bar from the weight system when performing an exercise that does not use the lat bar.
- 16. If you feel pain or dizziness at any time while exercising, stop immediately and cool down.

WARNING: Before beginning this or any exercise program, consult your physician. This is especially important for persons over the age of 35 or persons with pre-existing health problems. ## **ASSEMBLY**

#### MAKE ASSEMBLY EASIER

Everything in this manual is designed to ensure that the weight system can be assembled successfully by anyone. Before beginning assembly, make sure to read the information on this page. This brief introduction will save you much more time than it takes to read it.

#### **ASSEMBLY REQUIRES TWO PERSONS**

For your convenience and safety, assemble the weight system with the help of another person.

#### **SET ASIDE ENOUGH TIME**

Due to the many features of the weight system, the assembly process will require several hours. By setting aside plenty of time and by deciding to make the task enjoyable, assembly will go smoothly. You may want to assemble the weight system over a couple of evenings.

#### **SELECT A LOCATION**

Because of its weight and size, the weight system should be assembled in the location where it will be used. Make sure that there is enough room to walk around the weight system as you assemble it.

#### HOW TO UNPACK THE BOX

To make assembly as easy as possible, we have divided the assembly process into four stages. The parts needed for each stage are found in individual bags. Important: Wait until you begin each stage to open the parts bag for that stage. Place all parts of the weight system in a cleared area and remove the packing materials. Do not dispose of the packing materials until assembly is completed.

# MAKE SURE YOU HAVE THE FOLLOWING TOOLS:

• Two adjustable wrenches

· One standard screwdriver

· One phillips screwdriver

One rubber mallet

 You will also need grease or petroleum jelly, a small amount of soapy water, and clear tape or masking tape.

Note: Assembly will be more convenient if you have a socket set, a set of open-end or closed-end wrenches, or a set of ratchet wrenches.

#### **HOW TO IDENTIFY PARTS**

To help you identify the small parts used in assembly, we have included a **PART IDENTIFICATION CHART** in the center of this manual. Place the chart on the floor and use it to easily identify parts during each assembly step. **Note: Some small parts may have been pre-attached.** If a part is not in the parts bag, check to see if it has been pre-attached.

#### **HOW TO ORIENT PARTS**

As you assemble the weight system, make sure all parts are oriented exactly as shown in the drawings.

#### **TIGHTENING PARTS**

Tighten all parts as you assemble them, unless instructed to do otherwise.

#### **QUESTIONS?**

If you have questions after reading these assembly instructions, see the front cover of this manual.

#### THE FOUR STAGES OF THE ASSEMBLY PROCESS

**Frame Assembly**—You will begin by assembling the base and the uprights that form the skeleton of the weight system.

**Arm Assembly**—During this stage you will assemble the arms and the leg lever.

63. Make sure that all parts have been properly tightened. The use of the remaining parts will be explained in ADJUSTMENTS, beginning on the following page.

Before using the weight system, pull each cable a few times to make sure that the cables move smoothly over the pulleys. If one of the cables does not move smoothly, find and correct the problem. IMPORTANT: If the cables are not properly installed, they may be damaged when heavy weight is used. See the CABLE DIAGRAMS on pages 26 and 27 of this manual for proper cable routing. If there is any slack in the cables, you will need to remove the slack by tightening the cables. See MAINTENANCE on page 28.

### **ADJUSTMENTS**

This section explains how to adjust the weight system. See the EXERCISE GUIDELINES on page 29 for important information about how to get the most benefit from your exercise program. Also, see the accompanying exercise guide to see the correct form for each exercise.

Make sure all parts are properly tightened each time the weight system is used. Replace any worn parts immediately. The weight system can be cleaned with a damp cloth and a mild, non-abrasive detergent. Do not use solvents.

#### CHANGING THE WEIGHT SETTING

To change the setting of the weight stack, insert the Weight Pin (57) under the desired Weight (55). Insert the Weight Pin so that the bent end touches the weight stack. Turn the bent end down. Note: Be careful not to scratch yourself when reaching through the hole in the Shroud (10). Do not use the Top Weight (56, not shown) by itself.

Note: Due to the cables and pulleys, the amount of resistance at each exercise station may vary from the weight setting. Use the WEIGHT RESISTANCE CHART on page 25 to find the approximate amount of resistance at each weight station.

# ATTACHING THE ACCESSORIES TO A PULLEY STATION

Attach the Handle (93) to the Ab Cable (107) at the low pulley station with a Cable Clip (95). For some exercises, the Chain (94) should be attached between the Handle and the Cable with two Cable Clips. Adjust the length of the Chain between the Handle and the Cable so that the Handle is in the correct starting position for the exercise to be performed.

The Lat Bar (not shown), the Ab Strap (79), or the Handle (93) can be attached at any pulley station in the same manner. Always engage the Lock Plate (21) when using the low pulley station (see USING THE LOCK PLATE below).

#### **USING THE LOCK PLATE**

When using the low pulley station, engage the Leg Pin (24) into the Leg Lever (4) and the Lock Plate (21).

To use the Leg Lever (4), engage the Leg Pin (24) into the Right Seat Frame (3) and the Lock Plate (21).

#### **ADJUSTING THE BACKREST**

To adjust the position of the Press Backrest (113), disengaging the Knob (43) from the Left Upright (26) and move the Backrest to the desired position. Reengage the Knob into the Left Upright and the Backrest Frame (53). **Make sure the Knob is fully tightened.** 

#### LOCKING THE WEIGHT STACK

Lock the weight stack by inserting the Lock Pin (65) through a Weight Guide (44) and securing the Lock (48) onto the Lock Pin.

# **WEIGHT RESISTANCE CHART**

The chart below shows the approximate weight resistance at each exercise station. "Top" refers to the 6 lb. top weight. The other numbers refer to the 12.5 lb. weight plates. Weight resistance shown for the butterfly arm station is for each arm. Note: The actual resistance at each station may vary due to differences in individual weight plates as well as friction between the cables, pulleys, and weight guides.

# **CABLE DIAGRAMS**

The cable diagrams below show the proper routing of the Butterfly Cable (106), the Ab Cable (107), the Short Cable (108), the Press Cable (109), and the Weight Cable (110). Use the diagram to make sure that the cables and the cable traps have been assembled correctly. If the cables have not been correctly routed, the weight system will not function properly and damage may occur. The numbers show the correct route for each cable. **Make sure that the cable traps do not touch or bind the cables.** 

## **MAINTENANCE**

Make sure all parts are properly tightened each time the weight system is used. Replace any worn parts immediately. The weight system can be cleaned with a damp cloth and a mild, non-abrasive detergent. Do not use solvents.

#### TIGHTENING THE CABLES

Woven cable, the type of cable used on the weight system, can stretch slightly when it is first used. If there is slack in the cables before resistance is felt, the cables should be tightened. To tighten the cables, first insert the weight pin into the middle of the weight stack. Slack can be removed from these cables several ways:

- See drawing 1. Tighten the M8 Nylon Locknut (91) that connects the end of a cable to a "U"bracket (50).
- See drawing 1. Remove the M10 Nylon Locknut (90) and the M10 x 50mm Bolt (64) from the Cable Trap (68), the 90mm Pulley (63), the two Half Finger Guards (66), and a "U"-bracket (50). Reattach the Pulley, Cable Trap, and Finger Guards to the other hole in the "U"-bracket. Make sure that the Cable Trap and Finger Guards are oriented as shown and that the cable and Pulley move smoothly.
- See drawing 2. Remove the M10 Nylon Locknut (90) and the M10 x 50mm Bolt (64) from the Cable Trap (68), the 90mm Pulley (63), the two Half Finger Guards (66), and the two Pulley Plates (51). Reattach the Pulley, Cable Trap, and Finger Guards to a hole closer to the center of the Pulley Plates. Make sure that the Cable Trap is oriented to hold the cable in the groove of the Pulley, that the Finger Guards are oriented as shown, and that the Cable and Pulley move smoothly.
- See drawing 3. Loosen the M12 Nut (49) on the Weight Cable (110). Tighten the Cable into the Weight Tube (not shown) until the slack is removed from the Cable. Retighten the M12 Nut against the M12 Washer (33).

Do not overtighten the cables. If the cables are overtightened, the top weight will be lifted off the weight stack. If a cable tends to slip off the pulleys often, it may have become twisted. Remove the cable and reinstall it. If the cables need to be replaced, see the part ordering information on the back cover of this manual.

# **EXERCISE GUIDELINES**

#### THE FOUR BASIC TYPES OF WORKOUTS

#### **Muscle Building**

To increase the size and strength of your muscles, push them close to their maximum capacity. Your muscles will continually adapt and grow as you progressively increase the intensity of your exercise. You can adjust the intensity level of an individual exercise in two ways:

- · by changing the amount of weight used
- by changing the number of repetitions or sets performed. (A "repetition" is one complete cycle of an exercise, such as one sit-up. A "set" is a series of repetitions.)

The proper amount of weight for each exercise depends upon the individual user. You must gauge your limits and select the amount of weight that is right for you. Begin with 3 sets of 8 repetitions for each exercise you perform. Rest for three minutes after each set. When you can complete 3 sets of 12 repetitions without difficulty, increase the amount of weight.

#### **Toning**

You can tone your muscles by pushing them to a moderate percentage of their capacity. Select a moderate amount of weight and increase the number of repetitions in each set. Complete as many sets of 15 to 20 repetitions as possible without discomfort. Rest for one minute after each set. Work your muscles by completing more sets rather than by using high amounts of weight.

#### **Weight Loss**

To lose weight, use a low amount of weight and increase the number of repetitions in each set. Exercise for 20 to 30 minutes, resting for a maximum of 30 seconds between sets.

#### **Cross Training**

Cross training is an efficient way to get a complete and well-balanced fitness program. An example of a balanced program is:

- Plan strength training workouts on Monday, Wednesday, and Friday.
- Plan 20 to 30 minutes of aerobic exercise, such as running on a treadmill or riding on an exercise cycle, on Tuesday and Thursday.
- Rest from both strength training and aerobic exercise for at least one full day each week to give your body time to regenerate.

The combination of strength training and aerobic exercise will reshape and strengthen your body, plus develop your heart and lungs.

#### PERSONALIZING YOUR EXERCISE PROGRAM

Determining the exact length of time for each workout, as well as the number of repetitions or sets completed, is an individual matter. It is important to avoid overdoing it during the first few months of your exercise program. You should progress at your own pace and be sensitive to your body's signals. If you experience pain or dizziness at any time while exercising, stop immediately and begin cooling down. Find out what is wrong before continuing. Remember that adequate rest and a proper diet are important factors in any exercise program.

#### **WARMING UP**

Begin each workout with 5 to 10 minutes of stretching and light exercise to warm up. Warming up prepares your body for more strenuous exercise by increasing circulation, raising your body temperature and delivering more oxygen to your muscles.

#### **WORKING OUT**

Each workout should include 6 to 10 different exercises. Select exercises for every major muscle group, emphasizing areas that you want to develop most. To give balance and variety to your workouts, vary the exercises from session to session.

Schedule your workouts for the time of day when your energy level is the highest. Each workout should be followed by at least one day of rest. Once you find the schedule that is right for you, stick with it.

#### **EXERCISE FORM**

Maintaining proper form is an essential part of an effective exercise program. This requires moving through the full range of motion for each exercise, and moving only the appropriate parts of the body. Exercising in an uncontrolled manner will leave you feeling exhausted. On the exercise guide accompanying this manual you will find photographs showing the correct form for several exercises, and a list of the muscles affected. See the muscle chart on the next page to find the names of the muscles.

The repetitions in each set should be performed smoothly and without pausing. The exertion stage of each repetition should last about half as long as the return stage. Proper breathing is important. Exhale during the exertion stage of each repetition and inhale during the return stroke. Never hold your breath.

Rest for a short period of time after each set. The ideal resting periods are:

- Rest for three minutes after each set for a muscle building workout.
- Rest for one minute after each set for a toning workout
- Rest for 30 seconds after each set for a weight loss workout.

Plan to spend the first couple of weeks familiarizing yourself with the equipment and learning the proper form for each exercise.

#### **COOLING DOWN**

End each workout with 5 to 10 minutes of stretching. Include stretches for both your arms and legs. Move

slowly as you stretch and do not bounce. Ease into each stretch gradually and go only as far as you can without strain. Stretching at the end of each workout is an effective way to increase flexibility.

#### STAYING MOTIVATED

For motivation, keep a record of each workout. The chart on page 31 of this manual can be photocopied and used to schedule and record your workouts. List the date, the exercises performed, the weight used, and the numbers of sets and repetitions completed. Record your weight and key body measurements at the end of every month. Remember, the key to achieving the greatest results is to make exercise a regular and enjoyable part of your everyday life.
