TECHNOLOGY & BENEFITS VIDEO

Multi-Drive Recorder - This DVD recorder is designed to provide the greatest flexibility in recording and playback by supporting DVD-RAM, DVD-R, and DVD-RW recordable disc formats. The right format for every application:

- DVD-RAM is the most flexible of the recordable disc formats when it comes to recording, editing and playback. Even more, re-record content approximately 100,000 times!
- DVD-R is a write-once format perfect for sharing treasured video moments with virtually anyone who has a DVD-Video player.
- DVD-RW* can rewrite content up to 1000 times and playback in a wide variety of computer drives and DVD-Video players

High-Definition Multimedia Interface (HDMI™) - HDMI™ (High-Definition Multimedia Interface) is the first industry-supported, uncompressed, all-digital audio/video connection. HDMI™ provides the best interface between a DVD player and compatible products, such as a digital television (DTV). When matched with a compatible TV, this single interconnecting cable combines: Multi-channel audio, uncompressed digital video, intercommunication between devices and simple control Protocols. This single cable connection ensures that all signals remain in their pure digital form and secure by use of High Definition Copy Protection (HDCP) regardless of signal output resolution.

Video Upconversion - 720p/1080i - HDMI™ can support uncompressed digital video up to HDTV level resolution. Thus, the player makes use of this conduit by up-converting the standard DVD picture resolution to nearly HDTV-quality with output resolutions of 720p or 1080i. This makes a DVD player with an HDMI™ connection the perfect match for today's digital televisions. As this conversion is performed in the player, the signal remains free from excessive digital-to-analog conversion artifacts. Also supports VCR playback.

AUDIO

WMA & MP3 Playback - Recordable Compact Discs (CD-R & CD-RW) with music stored in either the Windows Media™ Audio or MP3 file formats can be enjoyed.

CONVENIENCE

Bi-Direction Dubbing - A convenient way to transfer content from a VHS tape to DVD or DVD content to VHS. Dubbing from VHS to DVD provides the capability of transferring the entire tape from the unit's front panel or remote control.

Chase Play - Chase Play allows the user to begin watching a recording that is already in progress from the beginning while it continues to record to the end.

Front Panel A/V & S-Video Inputs - There are composite audio & video inputs, as well as S-Video input on the front panel of the unit for easy camcorder dubbing.

Front Panel DV Input allows direct connection via IEEE1394 connector for easy transfer of data for equipped devices, such as a camcorders.
