2. Accumulated Elapsed Time Measurement

3. Split Time /Lap Time Measurement

How To Use The Memory Function.

The stopwatch can store up to the first 30 split / lap times and the total elapsed time. They are automatically entered into the memory. In additional, the fastest lap, and the slowest lap can also be recalled

- With each press of "C", the time stored is recalled. The time can be recalled successively by keeping the button pressed.

Reset to "00"

- To stop the recall of the stored data, press "A", "B" or "D". The measurements when the stopwatch was stopped will be shown. Then press "B" to reset the digits to "00".

The time stored in the memory can be recalled even while the stopwatch is measuring.

With each press of "C"	
When the stopwatch is stopped	Fastest Lap, Slowest Lap, and that, Average Lap, after that, Split time and lap time are recalled starting with the first ones.
When the stopwatch is running	Fastest Lap, Slowest Lap, and that, Average Lap, after that, Split time and lap time are recalled starting with the last ones.

Notes :

- If press "C" for over 2 seconds, fast recall will be activated.
- To measure the lap time and split time while the stored data are recalled, operate the buttons as follows.
Press "B" to measure new lap time and split time
Press "A" to stop or start the measurement.
- When memory is full, extra split / lap times will not store into memory but the memory counter will still show extra split/lap times. Any fastest, slowest and average laps will not store into the memory.
