Conventions

The following conventions are used in this manual:

Screen messages	Denotes actual messages that appear on screen.
NOTE	Gives bits and pieces of additional information related to the current topic.
WARNING	Alerts you to any damage that might result from doing or not doing specific actions.
CAUTION	Gives precautionary measures to avoid possible hardware or software problems.
IMPORTANT	Reminds you to do specific actions relevant to the accomplishment of procedures.

Preface

Before using this information and the product it supports, please read the following general information.

1. This Service Guide provides you with all technical information relating to the BASIC CONFIGURATION decided for Acer's "global" product offering. To better fit local market requirements and enhance product competitiveness, your regional office MAY have decided to extend the functionality of a machine (e.g. add-on card, modem, or extra memory capability). These LOCALIZED FEATURES will NOT be covered in this generic service guide. In such cases, please contact your regional offices or the responsible personnel/channel to provide you with further technical details.

2. Please note WHEN ORDERING FRU PARTS, that you should check the most up-to-date information available on your regional web or channel. If, for whatever reason, a part number change is made, it will not be noted in the printed Service Guide. For ACER-AUTHORIZED SERVICE PROVIDERS, your Acer office may have a DIFFERENT part number code to those given in the FRU list of this printed Service Guide. You MUST use the list provided by your regional Acer office to order FRU parts for repair and service of customer machines.

System Specifications

Overview

CPU	AMD Athlon 64 / Athlon 64x2 / Sempron (939)
Chipset	C51G + MCP51
Memory	Dual Channel DDR1 266/333/400, four DDR1 DIMM (Max. four GB) supported
System BIOS Feature	LCP-4MB (wake on LAN boot) Award BIOS code ACPI supported; S3 will be defaulted. Hardware monitor supported
Super I/O	ITE8712F with hardware monitor
IDE Interface	PCI bus master enhanced IDE (MCP51)
RTC	NCP51
Serial ATA	Independent DMA operation on four ports Data transfer rates up to 300MB/sec. SATA II Support Raid function
FDD Interface	1.44/2.88MB FDD
Audio	Audio on board (ALC850, 7.1 channels)
LAN	Marvell 88E1111
USB	USB 2.0 host controller supporting up to eight ports
Expansion Slots	Three PCI slot (PCI 2.3), one PCI Express x16 graphics slot
I/O Ports	One serial port, one parallel (EPP/ECP supported), eight USB ports (four rear panel / four front panel), VGA port, RJ45, one PS/2 keyboard port and one PS/2 mouse port, audio jack six mic-in, line-in, and line-out
Power Connectors	24-pin ATX power connector and ATX 12V connector
Power management	Dark green, ACPI 2.0 compliant, SMBIOS 2.3

Main Board Specifications

	Description
Size	❏ Max. 244 mm x 244 mm, Micro ATX
Processor	❏ Processor type: AMD Athlon 64 / Athlon 64x2 / Sempron ❏ Socket type: AMD Socket 939 ❏ Socket quantity: one
System Chipset	❏ North bridge: Nvidia C51G ❏ South bridge: MCP51
Memory	❏ Memory type: 　❏ DDR 　❏ CAS latency, CL = 4 ❏ Socket type: DDR memory slots ❏ Socket quantity: four ❏ Capacity: 256MB to 4GB ❏ Single channel
PCI Express / PCI Slots	❏ PCI Express Slot type: x1 / x16 　❏ Quantity: none / one ❏ PCI Slot type: PCI 2.3 5V slots 　❏ Quantity: two
FDD Interface	❏ Slot quantity: one ❏ One 1.44MB 3.5" device
IDE Interface	❏ Slot type: 40 pin PATA IDE slot 　❏ Quantity: two 　❏ Transfer rate support: PIO Mode (0/1/2/3/4), ATA Mode (33/66/100/133) ❏ Device type support: HDD / CD-ROW / CD-RW / DVD-ROM / Combo / DVD burner ❏ Connector type: SATA IDE connector 　❏ Quantity: four 　❏ Storage type support: HDD
Audio	❏ Controller: MCP51 ❏ Codec: Realtek ALC850 (7.1 channel audio support) ❏ UAJ support (HD audio feature suppport on rear only) ❏ Reserved disable function on BIOS side. Default is enabled.
LAN	❏ Controller: MCP51 ❏ LAN chip: Marvell 88E1111 ❏ 10/100/1000 BASE-T IEEE 802.3 compliant
USB (AcerPower M6)	❏ Controller: MCP51 ❏ Connector quantity: eight 　❏ Rear connectors: four 　❏ On-board header: two (2*5 pin) 　　❏ Two for front daughter board (2*5 pin Intel FPIO) ❏ Data transfer rate support: USB 2.0/1.1

	Description

USB (Aspire E360/T160)	❏ Controller: MCP51
	❏ Connectors Quantity: eight
	  ❏ Rear connectors: four
	  ❏ On-board header: three (2*5 pin)
	    ❏ One for front daughter board (2*5 pin Intel EPIO)
	    ❏ One for Multi Card Reader (2*5 pin)
	    ❏ One for cable (leverage rear USB ports)
	❏ Data transfer rate support: USB 2.0/1.1

I/O Ports	❏ Dual stack PS/2 keyboard / mouse ❏ Parallel port ❏ Serial port ❏ VGA port ❏ Dual stack USB ports with 1394 ❏ Dual stack USB ports with RJ45 connector ❏ Vertical audio connector with line-in, line-out and microphone

All On-Board Connector / Device List	❏ Rear I/O connectors
	  ❏ One PS/2 keyboard port, one PS/2 mouse port
	  ❏ One parallel port, one serial port
	  ❏ One VGA (CRT) port
	  ❏ One GigaLAN port
	  ❏ Four USB ports (AcerPower M6) / Two USB ports (Aspire T160/E360)
	  ❏ Six ports jack supporting HD audio output
	❏ On-board connectors / devices
	  ❏ One CPU socket
	  ❏ Four memory sockets
	  ❏ One PCI Express x16 slot
	  ❏ One PCI Express x1 slot
	  ❏ Two PCI slots
	  ❏ One FDD slot
	  ❏ Two PATA IDE slot
	  ❏ Four PATA IDE connectors
	  ❏ Two 2*5 pin Intel FPIO specification USB pin connectors
	  ❏ One 2*5 pin USB pin connector
	  ❏ One 2*5 Intel FPIO specification front audio connector
	  ❏ One serial port pin connector
	  ❏ One CD-In four-pin connector (CD-ROM / TV tuner card audio input)
	  ❏ One four-pin CPU fan connector
	  ❏ Two three-pin system fan connectors
	  ❏ One 20-pin + four-pin ATX interface PS3/PS2 SPS connector
	  ❏ One 2*7 Power / LED FPIO (following Intel FPIO spec.)
	  ❏ One buzzer

Wake-up Event Specifications

Device	S1 (Idle)	S3 (Suspend to RAM)	S4 (Suspend to Disk)	S5 (Shut down)

10	LAN port
11	USB ports
12	Audio jacks

System Peripherals

The Aspire T160/E360 and AcerPower M6 computer consist of the system itself, and system peripherals, like a mouse, keyboard and a set of speakers (optional). This section provides a brief description of the basic system peripherals.

Mouse (PS/2 or USB, manufacturing option)

The included mouse is a standard two-button wheel mouse. Connect the mouse to the PS/2 mouse port or USB port on the back panel of the system.

Keyboard (PS/2 or USB, manufacturing option)

Connect the keyboard to the PS/2 keyboard port or USB port on the back panel of the system.

Speakers

For system bundled with speakers, before powering on the system, connect the speaker cable to the audio out (external speaker) port on the back panel of the system. Please refer to the included operating instructions for more information.

NOTE: speakers are optional and the appearance might be different depending on the actual product.

Acer eRecovery

Acer eRecovery is a tool to quickly backup and restore the system. Users can create and save a

backup of the current system configuration to hard drive, CD, or DVD.

Acer eRecovery consists of the following functions:

1. Create backup
2. Restore from backup
3. Create factory default image CD
4. Re-install bundled software without CD
5. Change Acer eRecovery password

Create Backup

Users can create and save backup images to hard drive, CD, or DVD.

1. Boot to Windows XP
2. Press **<Alt>+<F10>** to open the Acer eRecovery utility.
3. Enter the password to proceed. The default password is six zeros.
4. In the Acer eRecovery window, select **Recovery settings** and click **Next**
5. In the Recovery settings window, select **Backup snapshot image** and click **Next**.
6. Select the backup method.
   ❑ Use **Backup to HDD** to store the backup disc image on drive D:.
   ❑ **Backup to optical device** to store the backup disc image on CD or DVD (only available on systems that include an optical disc burner).
7. After choosing the backup method, click **Next**.

Follow the instruction on screen to complete the process.

Restore from backup

Users can restore backup previously created (as stated in the **Create backup** section) from hard drive,

CD, or DVD.

1. Boot to Windows XP.
2. Press **<Alt>+<F10>** to open the Acer eRecovery utility.
3. Enter the password to proceed. The default password is six zeros.
4. In the Acer eRecovery window, select **Recovery actions** and click **Next**.
5. Select the desired restore action and follow the onscreen instructions to complete the restore process.

Create factory default image CD

When the System CD and Recovery CD are not available, you can create them by using this feature.

1. Boot to Windows XP.
2. Press **<Alt>+<F10>** to open the Acer eRecovery utility.

3. Enter the password to proceed. The default password is six zeros.

4. In the Acer eRecovery window, select **Recovery settings** and click **Next**.

5. In the Recovery settings window, select **Burn image to disc** and click **Next**.

6. In the Burn image to disc window, select **01. Factory default image** and click **Next**.

7. Follow the instructions on screen to complete the process.

Re-install bundled software without CD

Acer eRecovery stores pre-loaded software internally for easy driver and application re-installation.

1. Boot to Windows XP.

2. Press **<Alt>+<F10>** to open the Acer eRecovery utility.

3. Enter the password to proceed. The default password is six zeros.

4. In the Acer eRecovery window, select Recovery actions and click **Next**.

5. In the Recovery settings window, select **Reinstall applications/drivers** and click **Next**.

6. Select the desired driver/application and follow the instructions on screen to re-install.

At first launch, Acer eRecovery prepares all the needed software and may take few seconds to bring up the

software content window.

Change Password

Acer eRecovery and Acer disc-to-disc recovery are protected by a password that can be changed by

the user. Follow the steps below to change the password in Acer eRecovery.

1. Boot to Windows XP.

2. Press **<Alt>+<F10>** to open the Acer eRecovery utility.

3. Enter the password to proceed. The default password is six zeros.

4. In the Acer eRecovery window, select **Recovery settings** and click **Next**.

5. In the Recovery settings window, select **Password**: **Change Acer eRecovery password** and click **Next**.

6. Follow the instructions on screen to complete the process.

Acer disc-to-disc recovery

Restore without a Recovery CD

This recovery process helps you restore the C: drive with the original software content that is installed when you purchase your PC. Follow the steps below to rebuild your C: drive. (Your C: drive will be reformatted and all data will be erased.) It is important to back up all data files before you use this option.

1. Restart the system.
2. While the Acer logo is showing, press <Alt>+<F10> at the same time to enter the recovery process.
3. The message "The system has password protection. Please enter 000000:" is displayed.
4. Enter six zeros and continue.
5. The Acer Recovery main page appears.
6. Use the arrow keys to scroll through the items (operating system versions) and press <Enter> to select.

Multilingual operating system installation

Follow the instructions to choose the operating system and language you prefer when you first power-on the system.

1. Turn on the system.
2. Acer's multilingual operating system selection menu will pop-up automatically.
3. Use the arrow keys to scroll to the language version you want. Press <Enter> to confirm your selection.
4. The operating system and language you choose now will be the only option for future recovery operations.
5. The system will install the operating system and language you choose.

Hardware Specifications and Configurations

Major Chips

Item	Specification
System Core Logic	Nvidia C51G MCP51
Super I/O Controller	ITE 8712F
LAN Controller	Marvell 88E1111
Memory Controller	Nvidia C51G
IDE Controller	MCP51
Audio Controller	ALC850
VGA Controller	Nvidia C51G
Keyboard Controller	ITE 8712F

Processor

Item	Specification
Type	AMD Athlon 64 / Athlon 64x2 / Sempron
Slot	Socket 939
Speed	Depends on CPU, which is local configured
Bus Frequency	HyperTransport^{TM} technology up to 1.0 GHz
Voltage	Processor voltage can be detected by any system without setting any jumper

BIOS

Item	Specification
BIOS code programmer	Phoenix Award
BIOS version	R01-B1
BIOS ROM size	4MB
BIOS ROM package	32-pin PLCC package
Support protocol	PCIX 1.0,PCI 2.2,APM 1.2,VESA/DPMS (VBE/PM V1.1), SMBIOS 2.3, E-IDE 1.1, ACPI 1.0b,ESCD1.03, PnP 1.0a, Bootable CD-ROM 1.0, USB 1.1~ USB 2.0, UHCI 1.0, ANSI ATA 3.0 ATAPI
Boot from CD-ROM feature	Yes
Support to LS-120 drive	Yes
Support to BIOS boot block feature	Yes
BIOS Password Control	Yes

BIOS Hotkey

Hotkey	Function	Description
DEL	Enter BIOS Setup Utility	Press while the system is booting to enter BIOS Setup Utility.

System Memory

Item	Specification
Memory Slot Number	four slots
Memory Size per Slot	256 MB ~ 1GB
Supported Maximum Memory Size	4GB
Supported Memory Speed	400 MHz
Supported memory voltage	1.8 V
Support memory module package	240-pin DIMM
Support to parity check feature	Yes
Support to Error Correction Code (ECC) feature	Yes
Memory module combinations	You can install memory modules in any combination as long as they match the above specifications.

VRM (Voltage Regulator Module)

Function	VRM Specification	Typical Voltage	Power Source	Maximum Output
CPU VRM	VRM10.1	0.8375~1.6v	12 Voltage	101A
CPU VRM	VRM 9.0	1.1-1.85 Voltage	12 Voltage	70A

Cache Memory

Item	Specification
First-Level Cache Configurations	
Cache function control	Enable/Disable by BIOS Setup
Second-Level Cache Configurations The information below is only applicable to system installed with a Pentium 4 processor	
Tag RAM Location	On Processor
L2 Cache RAM Location	On Processor
L2 Cache RAM type	PBSRAM (Pipelined-burst Synchronous RAM)
L2 Cache RAM size	Depends on CPU, which is local configured
L2 Cache RAM speed	Full of the processor core clock frequency (Advanced Transfer Cache)
L2 Cache function control	Enable/Disable by BIOS Setup
L2 Cache scheme	Fixed in write-back

LAN Interface

Item	Specification
LAN Controller	Marvell 88E1111 GigaLAN Controller
LAN Controller Resident Bus	PCI Bus
LAN Port	One RJ45 on board
Function Control	Enable/Disable by BIOS Setup

IDE Interface

Item	Specification
IDE Controller	MCP51
IDE Controller Resident Bus	ATA133
Number of 40-pin PATA slot	Two Device Type Support: HDD, CD-ROM, CD-RW, DVD-ROM, Combo, DVD burner Transfer Rate Support: PIO 0/1/2/3/4 ATA Mode: 33/66/100/133
Number of STAT IDE slot	Four Device Type Support: HDD
LS-120	Supported
Bootable CD-ROM	Supported
Function Control	Enable/Disable by BIOS setup

Diskette Drive Interface

Item	Specification
Diskette Drive Controller	ITE 8712F
Diskette Drive Controller Resident Bus	LPC Bus V1.0 / 33MHz
Supported Diskette Drive Formats	1.44MB, 2.88MB format and slim type diskette drive
Function Control	Enable/Disable by BIOS Setup

Serial Port

Item	Specification
Serial port controller	ITE 8712F
Serial port controller resident bus	LPC Bus V1.0 / 33MHz
Number of serial port	One
Serial port location	Rear Panel
16550 UART support	Yes
Connector type	9-pin D-type female connector

USB Port

Item	Specification
Universal HCI	USB 2.0/1.1
Controller	MCP51
Number of the connectors	eight
Location	Rear: four for AcerPower M6; two for Aspire T160/E360 Front: four for AcerPower M6; two for Aspire T160/E360
USB Class	with support for legacy input devices

Special Design Specifications

Thermal	❑ Dynamic fan speed control by hardware monitor
	❑ CPU over temperature (over 120°C) power off protection
Power On / Wake-Up Event	❑ Power Button: S1/S3/S4/S5
	❑ PS/2 Keyboard: S1/S3/S4
	❑ USB Keyboard: S1/S3/S4
	❑ RTC: S1/S5
	❑ LAN: S1/S3/S5
	❑ Modem (Ring): S1/S3/S5

Environment Requirements

Temperature	
Operating	+5°C ~ +35°C
Non-operating	-20°C ~ +60°C (packed), -10°C ~ +60°C (un-packed)
Humidity	
Operating	15% to 80% RH, non-condensing
Non-operating	10% to 90% RH, non-condensing at 40°C
Vibration	
Operating (unpacked)	5 ~ 500Hz, 2.20g RMS random, 10 minutes per axis in all three axes
Non-operating (packed)	5 ~ 500Hz, 1.09g RMS random, one hour per axis in all three axes
Shock Operating	Half sine, 2g 11m seconds

Drop Test

Definition	The protection ability of packing & cushion must be capable of withstanding, with no physical or functional damage, mechanical impact from height-specific drops.

Test Standard				
Package Cross Weight		Drop Height		Times of Drop
KGs	lbs	CM	Inch	
0~9.1	0~20	76	30	10
9.1~18.2	20~40	61	24	10
18.2~27.3	40~60	46	18	10
27.3~45.4	60~100	31	12	10
10 drops: one corner, three edges, six surfaces

Power Management Function (ACPI support function)

Device Standby Mode

❏ Independent power management timer for hard disk drive devices
(0-15 minutes, time step=1 minute).

❏ Hard disk drive goes into Standby mode (for ATA standard interface).

❏ Disable V-sync to control the VESA DPMS monitor.

❏ Resume method: device activated (Keyboard for DOS, keyboard & mouse for Windows).

❏ Resume recovery time: 3-5 sec.

Global Standby Mode

❏ Global power management timer (2-120 minutes, time step=10 minute).

❏ Hard disk drive goes into Standby mode (for ATA standard interface).

❏ Disable H-sync and V-sync signals to control the VESA DPMS monitor.

❏ Resume method: Return to original state by pushing external switch button, modem ring in,
keyboard and mouse for APM mode.

❏ Resume recovery time: 7-10 sec.

Suspend Mode

❏ Independent power management timer (2-120 minutes, time step=10 minutes) or pushing external
switch button.

❏ CPU goes into SMM.

❏ CPU asserts STPCLK# and goes into the Stop Grant State.

❏ LED on the panel turns amber colour.

❏ Hard disk drive goes into SLEEP mode (for ATA standard interface).

❏ Disable H-sync and V-sync signals to control the VESA DPMS monitor.

❏ Ultra I/O and VGA chip go into power saving mode.

❏ Resume method: Return to original state by pushing external switch button, modem ring in,
keyboard and mouse for APM mode.

❏ Return to original state by pushing external switch button, modem ring in and USB keyboard for
ACPI mode.

ACPI

❏ ACPI specification 1.0b.

❏ S0, S1, S3 and S5 sleep state support.

❏ On board device power management support.

❏ On board device configuration support.

System Utilities

BIOS (Basic Input and Output System) includes a CMOS SETUP utility which allows users to configure required setting or to activate certain system features.The CMOS SETUP saves the configuration in the CMOS SRAM on the main board. When the power is off, the battery on the main board supplies the necessary power to the CMOS SRAM.

When the power is on, pressing the <Delete> button during the BIOS POST (Power-On Self Test) will take you to the CMOS SETUP screen. When setting up BIOS for the first time, it is recommended that you save the current BIOS to a disk in the event that BIOS needs to be reset to its original settings.

Q-Flash allows the users to quickly and easily update or backup BIOS without entering the operating system. BIOS is a Windows-based utility that doesn't require users to boot to DOS before upgrading BIOS but directly download and update BIOS from the Internet.

Item	Description
wxyz	Move to selection
e	Select Item
^	Main Menu: Quit and not save changes into CMOS Status Page Setup Menu and Option Page Setup Menu, Exit current page and return to Main Menu.
{	Increase the numeric value or make changes
}	Decrease the numeric value or make changes
l	General help, displays a screen that describes all key functions
t	Loads an default setting for stable performance
u	Save all the CMOS changes, only for Main Menu

Entering Setup

Power on the computer and the system will start POST(Power On Self Test) process. When the message of "Press DEL to enter SETUP" appears on the screen, press the key of [Delete] to enter the setup menu. Once enter Award BIOS CMOS Setup Utility, the Main Menu (as figure below) will appear on the screen. Use arrow keys to select among the items and press <Enter> to accept or enter the sub-menu.

The following table describes the parameters found in this menu:

Parameter	Description	Options
Date	Lets you set the date following the weekday-month-date-year format.	Week: from Sun. to Sat., determined by BIOS and is display only Month: from Jan. through Dec. Day: from 1 to 31 (or the maximum allowed in the month) Year: from 1999 to 2099
System Time	Lets you set the time following the hour-minute-second format.	The items format is <hour> <minute> <second>. The time is calculated base on the 24-hour military-time clock. For example, 1 p.m. is 13:00:00

Parameter	Description	Options
IDE Primary/Secondary Master, Slave	Allows you to configure the hard disk drive connected to the master port of IDE channel. To enter the IDE Master or Slave setup, press [Enter]. The IDE CD-ROM is always automatically detected.	IDE HDD Auto-Detection Press [Enter] to select this option for automatic device detection. IDE Primary/Secondary Master, Slave IDE Device Setup. You can use one of three methods: Auto: Allows BIOS to automatically detect IDE devices during POST (default) None: Select this if no IDE devices are used and the system will skip the automatic detection step and allow for faster system start up Manual: User can manually input the correct settings Access Mode: Use this to set the access mode for the hard drive. the four options are: CHS/LBA/Large/Auto (default: Auto) ❑ Cylinder: Number of cylinders ❑ Head: Number of heads ❑ Precomp: Write precomp ❑ Landing Zone: Landing Zone ❑ Sector: Number of sectors
Drive A	The category identifies the types of floppy disk drive A that has been installed in the computer.	None: No floppy drive installed 360K, 5.25": 5.25 inch PC type standard drive; 360Kbyte capacity 1.2M, 5.25": 5.25 inch AT-type high-density drive; 1.2M byte capacity (3.5 inch when 3 Mode is Enabled) 720K, 3.5": 3.5 inch double-sided drive; 720Kbyte capacity 1.44M, 3.5": 3.5 inch double-sided drive; 1.44Mbyte capacity 2.88M, 3.5": 3.5 inch double-sided drive; 2.88Mbyte capacity
Video Setting	Select the type of primary video subsystem in your computer.	The option EGA/VGA means Enhanced Graphic Adapter/Video Graphic Array.
Halt On	This item enables user to select the situation in which you want the BIOS to stop the POST process and notify you.	All Errors, No Errors All, But Keyboard All, But Diskette All, But Disk/Key
Base Memory Setting	The POST will determine the amount of base memory installed in the system. The value of the base memory for this model is 640K for systems with 640K or more memory installed on the motherboard.	
Extended Memory Setting	The BIOS determines how much extended memory is present during the POST. This is the amount of memory located above 1MB in the memory address map of CPU.	

Advanced BIOS Features

The following screen shows the Advanced BIOS Features:

```

                     Advanced BIOS Features
 ▶ Hard Disk Boot Priority        [Press Enter]            Item Help
   Virus Warning                  [Disabled]
   Quick Power on Self Test       [Enabled]          Menu Level ▶
   First Boot Device              [Floppy]
   Second Boot Device             [Hard Disk]        Allows you to choose
   Third Boot Device              [CDROM]            the VIRUS warning
   Boot From Other Device         [Enabled]          feature for IDE Hard
   Swap Floppy Drive              [Disabled]         Disk boot sector
   Boot Up Floppy Seek            [Disabled]         protection.If this
   Boot Up Numlock Status         [On]               function is enabled
   Gate A20 Option                [Fast]             and someone attempt to
   Typematic Rate Setting         [Enabled]          write data into this area,
 X Typematic Rate (Chars/Secs)    6                  BIOS will show a
 X Typematic Delay (Msec)         250                warning message on
   Security Option                [Setup]            screen and alarm beep
   APIC Mode                      [Enabled]
   MPS Version Control for OS     [1.4]
   OS Select For DRAM > 64MB      [Non-OS2]
   HDD S.M.A.R.T. Capability      [Disabled]
 ↑↓←→ :Move  Enter:Select  +/-/PU/PD:Value  F10:Save  ESC:Exit  F1:General Help
              F5:Previous Values  F7:Optimized Defaults
```

Parameter	Description	Options
Hard Disk Boot Priority	This features displays the Hard Disk Boot Device priority from high to low and allows users to set the Hard Disk Boot Device Priority. Press [Enter] to enter the setting screen. Use wory to select a device, then press <+> to move it up, or <-> to move it down the list. Press <ESC> to exit.	[Press Enter]
Virus Warning	This feature allows you to enable the VIRUS warning function for IDE Hard Disk boot sector protection. If this function is enabled and there is someone attempt to write data into this area, BIOS will show a warning message on screen and the alarm will beep.	Enabled Disabled
Quick Power On Self Test	This feature allows the system to skip certain tests while booting. When this function is enabled, it will decrease the time needed to boot the system, which means to quick power on self test function	Enabled Disabled
First / Second / Third Boot Device	The item allows you to set the sequence of boot device where BIOS attempts to load the disk operating system.	Floppy, LS120, Hard Disk, CD-ROM, ZIP, USB-FDD, USB-ZIP, USB-CDROM, USB-HDD, LAN, Disabled

Parameter	Description	Options
Boot From Other Devices	This item allows user to enable or disable to boot from other device	Enabled Disabled
Swap Floppy Drive	This field is effective only in systems with two floppy drives. Selecting Enabled assigns physical drive B to logical drive A, and physical drive A to logical drive B.	Enabled Disabled
Boot Up Floppy Seek	During POST BIOS will determine if the floppy disk drive installed is 40 or 80 tracks. 360K type is 40 tracks while 760K, 1.2M and 1.44M are all 80 tracks.	Enabled BIOS searches for floppy disk drive to determine if is 40 or 80 tracks. Note that BIOS can not tell from 720K, 1.2M or 1.44M drive type as they are all 80 tracks. Disabled BIOS will not search for the type of floppy disk drive by track number. Note that there will not be any warning message if the drive installed is 360K.
Boot Up NumLock Status	This item allows user to enable or disable to set keyboard is number keys or arrow keys	Enabled Disabled
Gate A20 Option	This item allows user to select if chipset or keyboard controller should control GateA20. The gate A20 is a device used to address memory above 1 Mbyte. Initially, the gate A20 was handled via a pin on the keyboard. Today, while keyboards still provide this support, it is more common, and much faster, for the system chipset to provide support for gate A20.	Normal (keyboard) Fast (chipset)
Typematic Rate Setting	This determines if the typematic rate is to be used. When the typematic rate is enabled, this selection allows you select the rate at which the keys are accelerated. When the typematic rate is enabled, this selection allows you to select the delay between when the key was first depressed and when the acceleration begins.	Enabled Disabled
Security Option	This category allows you to limit access to the system and Setup, or just to Setup.	System Setup
APCI Mode	This option is used to set up enable or disable the APCI function	Enabled Disabled
MPS Version Control for OS	The BIOS supports versions 1.1 and 1.4 of the Intel multiprocessor specification. Select the version supported by the operating system running on this computer.	
OS Select For DRAM >64MB	Select OS2 only if you are running OS/2 operating system with greater than 64 MB of RAM on your system.	
HDD S.M.A.R.T. Capability	S.M.A.R.T which allows your hard disk to report any read/write errors and issue a warning when LDCM installed	Enabled Disabled

Advanced Chipset Features

This page sets up more advanced information about your system. Handle this page with caution. Any changes can affect the operation of your computer.

```
              Phoenix - Award BIOS CMOS Setup Utility
                     Advanced Chipset Features

   Spread Spectrum               [Enabled]
   HT Spread Spectrum            [Disabled]
   SSE/SSE2 Instructions         [Enabled]
   System BIOS Cacheable         [Enabled]

  ↑↓←→ :Move  Enter:Select  +/-/PU/PD:Value  F10:Save  ESC:Exit  F1:General Help
            F5:Previous Values  F7:Optimized Defaults
```

Parameter	Description	Options
Dual Monitor Support	This category allows you to enable or disable dual monitor support function.	Enabled Disabled
Frame Buffer Size	This field displays how much frame buffer size of the system. Frame buffer is an area of memory used to hold a frame of data. Typically used for screen output, the buffer is the size of the maximum image that can be displayed on the screen. The memory, which is either a separate memory bank on the display adapter or a reserved part of regular memory, holds a bit mapped image while it is being painted on screen. Sophisticated graphics systems are built with several memory planes, each holding one or more bits of the pixel.	
CPU Frequency	This field allows you to determine CPU frequency of the system.	

Parameter	Description	Options
Err94 Enh	Also called Errata 94 Enhancement. Errata 94 refers to the 94th bug identified in AMD Athlon and Opteron processors. This bug affects the sequential prefetch feature in those processors.	Enabled Disabled
Spread Spectrum	When the system clock generator pulses, the extreme values of the pulse generate excess EMI. Enabling pulse spectrum spread modulation changes the extreme values from spikes to flat curves, thus reducing EMI. This benefit may in some cases be outweighed by problems with timing-critical devices, such as a clock-sensitive SCSI device.	Enabled Disabled
HT Spread Spectrum	Enables or disables HT Spread Spectrum. HT is Hyper Transport between CPU and North Bridge.	Enabled Disabled
SSE/SSE2 Instructions	This feature controls the availability of the processor's SSE and SSE2 instruction sets. When enabled, the processor's SSE and SSE2 instruction sets are enabled. Software applications can make use of those instructions to better process large amounts of data quickly. When disabled, the processor's SSE and SSE2 instruction sets are disabled. Software applications will not be able to use those instructions to process multiple data elements simultaneously. However, the processor's MMX instruction set will still be available for use. It is highly recommended that you leave this BIOS feature at the default setting of Enabled. This allows SSE- and SSE2-optimized software to make use of those instruction sets to process large amounts of data simultaneously.	Enabled Disabled
System BIOS Cacheable	Selecting Enabled allows caching of the system BIOS ROM at F0000h-FFFFFh, resulting in better system performance. However, if any program writes to this memory area, a system error may result.	Enabled Disabled
DRAM Configuration	Press [Enter] to enter the setting screen to set some parameters of memory controller.	[Press Enter]
LDI & PCI Bus Control	Press [Enter] to enter the setting screen to set some parameters of LDI & PCI bus control.	[Press Enter]
UMA Frame Buffer Size	This item allows user to select the size of VGA share memory.	32, 64, 128, 256 MB

All on‑board peripherals can be set up through this menu.

| Parameter	Description	Options
On-Chip IDE First/Second Channel	The chipset contains a PCI IDE interface with support for two IDE channels. Select Enabled to activate the first and/or second IDE interface. Select Disabled to deactivate an interface, if you install a primary and/or secondary add-in IDE interface.	Enabled Disabled
IDE Primary/ Secondary Master/ Slave PIO	The four IDE PIO (Programmed Input/Output) fields let you set a PIO mode (0-4) for each of the four IDE devices that the onboard IDE interface supports. Modes 0 through 4 provide successively increased performance. In Auto mode, the system automatically determines the best mode for each device.	

Parameter	Description	Options
IDE Primary/ Secondary Master/ Slave UDMA	UDMA (Ultra DMA) is a DMA data transfer protocol that utilizes ATA commands and the ATA bus to allow DMA commands to transfer data at a maximum burst rate of 33 MB/s. When you select Auto in the four IDE UDMA fields (for each of up to four IDE devices that the internal PCI IDE interface supports), the system automatically determines the optimal data transfer rate for each IDE device.	
IDE DMA Transfer Access	This category allows you to enable or disable DMA transfer access of IDE device (or IDE HDD).	Enabled Disabled
Serial-ATA 1/2	Enable / Disable SATA 1 /2. Serial ATA 1 control port 1 and 3, Serial ATA 2 control port 2 and 4.	
IDE Prefetch Mode	The onboard IDE drive interfaces supports IDE prefetching, for faster drive accesses. If you install a primary and/or secondary add-in IDE interface, set this field to Disabled if the interface does not support prefetching.	
IDE HDD Block Mode	Block mode is also called block transfer, multiple commands, or multiple sector read/write. If your IDE hard drive supports block mode (most new drives do), select Enabled for automatic detection of the optimal number of block read/ writes per sector the drive can support.	Enabled Disabled
SATA PORT Speed Settings	This category allows you to determine the speed of SATA port.	Auto BIOS will determine the speed of SATA port.

Parameter	Description	Options
OnChip USB	This field allows you to determine onchip USB type or disable onchip USB.	
USB Memory Type	Use this item to change the type of USB Memory to shadow or Base memory.	Shadow Base Memory
USB Keyboard Support	This field enables or disables USB keyboard support function.	Enabled Disabled
USB Mouse Support	This field enables or disables USB mouse support function.	Enabled Disabled
AC 97 Audio	Change the on board Audio to auto or disabled.	Auto Disabled
MAC Lan	Enables or disables onboard LAN controller.If you wish to use the motherboard's onboard LAN controller, you should certainly enable this BIOS feature. You can disable this feature if you do not want to use the motherboard's onboard LAN controller. This may free up an IRQ for other devices to use. This is useful if your motherboard does not support APIC and have many devices that cannot share IRQs.	Enabled Disabled
MAC Lan Boot ROM	Enables or disables on board lan boot ROM.	Enabled Disabled

Parameter	Description	Options
Onboard FDC Controller	Select Enabled if your system has a floppy disk controller (FDC) installed on the system board and you wish to use it. If you install an add-in FDC or the system has no floppy drive, select Disabled in this field.	Enabled Disabled
Onboard Serial Port 1	Select a logical COM port name and matching address for the serial port. Select an address and corresponding interrupt for the serial port.	
UR2 Duplex Mode	In an infrared port mode, this field appears. Full-duplex mode permits simultaneous two-direction transmission. Half-duplex mode permits transmission in one direction only at a time. Select the value required by the IR device connected to the IR port.	
Onboard Parallel Port	Select a logical LPT port address and corresponding interrupt for the physical parallel port.	

Parameter	Description	Options
Parallel Port Mode	Select an operating mode for the onboard parallel (printer) port. Select Normal, Compatible, or SPP unless you are certain your hardware and software both support one of the other available modes. For information about parallel port modes, see http://www.fapo.com/1284int.htm	

Power Management Setup

The Power Management menu lets you configure your system to most effectively save energy while operating in a manner consistent with your own style of computer use.

Parameter	Description	Options
ACPI Function	This item allows you to enable or disable the ACPI function	Enabled Disabled
ACPI Suspend Type	This item specifies the power saving modes for ACPI function. S1(POS): The S1 sleep mode is a low power state. In this state, no system context (CPU or chipset) is lost and hardware maintains all system context. S3 (STR): The S3 sleep mode is s power-down state in which power is supplied only to essential components such as main memory and wake-capable devices and all system context is saved to main memory. The information stored in memory will be used to restore the PC to the previous state when an wake-up event occurs.	S1 (POS): Set ACPI suspend type to S1/POS (Power On Suspend). S3 (STR): Set ACPI suspend type to S3/STR
Power Management	This option allows you to select the type (or degree) of power saving for Doze, Standby, and Suspend modes.	Max Saving: Maximum power savings. Only Available for SL CPUs. User Define: Set each mode individually. Min. Saving: Minimum power savings.
Video Off Method	Determines the manner in which the monitor is blanked.	

Parameter	Description	Options
HDD Power Down	This setting controls how long a hard disk drive must be left idle before it spins down.	**Disabled** Standby Suspend
HDD Down In Suspend	Enables or disables the functionality of HDD down in suspend.	Enabled Disabled
Soft-off by PWR/BTTN	When Enabled, turning the system off with the on/off button places the system in a very low-power-usage state, with only enough circuitry receiving power to detect power button activity or Resume by Ring activity.	Instant-off: Press down button then power off instantly Delay 4 Sec.: Press power button 4 sec. to power off. Enter suspend if button is pressed less than 4 sec.
WOL (PME#) From Soft-Off	This category enables or disables wake-on-Lan from soft-off	Enabled Disabled
USB Resume from S1/S3	Enable or Disable USB device (USB K/B or Mouse) wake up system from S1/S3.	Enabled Disabled
Resume by Alarm	You can set "Resume by Alarm" item to enabled and key in Data/Time to power on system	Disabled: Disable this function Enabled: Enable alarm function to Power On system If RTC Alarm Lead To Power On is Enabled. Date (of Month) Alarm: Everyday, 1~31 Time (hh:mm:ss) Alarm: (0.~23):(0~59):(0~59)
POWER ON Function	Select the method to power on the system.	Button Only Keyboard 98 Hot Key Mouse Left Mouse Right
PWRON After PWR-Fail	This field allows you to determine the power status to on/off or former-sts after the system.	FORMER-Sts On Off

Parameter	Description	Options
Init Display First	Initialize the AGP video display before initializing any other display device on the system. Thus the AGP display becomes the primary display.	
Reset Configuration Data	Normally, you leave this field Disabled. Select Enabled to reset Extended System Configuration Data (ESCD) when you exit Setup if you have installed a new add-on and the system reconfiguration has caused such a serious conflict that the operating system cannot boot.	Enabled Disabled
Resources Controlled By	This item allows user to assign PnP resource (I/O address, IRQ&DMA channels) for Plug and Play compatible devices automatically or manually.	Auto Manual

Parameter	Description	Options
IRQ Resources	When resource are controlled by manually, assign each system interrupt a type, depending on the type of device using the interrupt. Option: PCI Device: Assign this IRQ for PCI device. Reserved: Reserve this IRQ for other device	[Press Enter]
PCI/VGA Palette Snoop	This option is only very rarely needed. It should be left at "Disabled" unless a video device specifically requires the setting enabled upon installation.	Disabled Enabled
Maximum Payload Size	This field displays maximum payload size of the system.	[128-4096]
PCI1/2 IRQ Assignment	This item allows user to assign PCI IRQ for device	Auto, 3, 4, 5, 6, 7, 10, 11,12,14,15

PC Health Status

This section indicates the hardware information of the system including the CPU temperature, Ambient Temperature, CPU FAN, and System FAN speed.

The following table describes the parameters found in this menu.

Parameter	Description	
Shutdown Temperature	This category disables or enables system shutdown temperature.	
Vcore	Detect system's voltage status automatically	
CPU Temperature	Detect CPU Temperature automatically	
CPU / SYSTEM FAN Speed (RPM)	Detect CPU/SYSTEM Fan Speed status automatically	
CPU Smart FAN Control	This item display the system Smart Fan Function status. It is always enabled by system.	Enabled

Load Default Settings

Selecting the field loads the factory defaults for BIOS and Chipset Features which the system automatically. detects. THis option opens a dialog box that lets you install optimized defaults for all appropriate items in the Setup Utility. Press <OK> and then <Enter> to install the defaults. Press <Cancel> and then <Enter> to not install the defaults.

If you only want to install setup `defaults` for a specific option, select and display that option, and then press<F9>.

Set Supervisor/User Password

When this function is selected, the following message appears at the center of the screen to assist you in creating a password.

ENTER PASSWORD

Type the password, up to eight characters, and press <Enter>. The password typed now will clear any previously entered password from CMOS memory. You will be asked to confirm the password. Type the password again and press ⟨Enter⟩. You may also press <Esc> to abort the selection.

To disable password, just press <Enter> when you are prompted to enter password. A message will confirm the password being disabled. Once the password is disabled, the system will boot and you can enter BIOS Setup freely.

PASSWORD DISABLED

If you have selected "System" in "Security Option" of "BIOS Features Setup" menu, you will be `prompted` for the password every time the system reboots or any time you try to enter BIOS Setup.

If you have selected "Setup" at "Security Option" from "BIOS Features Setup" menu, you will be prompted for the password only when you enter BIOS Setup.

Supervisor Password has higher priority than User Password. You can use Supervisor Password when booting the system or entering BIOS Setup to modify all settings. Also you system or entering BIOS Setup but can not modify any setting if Supervisor Password is enabled.

Machine Disassembly and Replacement

This chapter displays the disassembly procedure of Aspire T160/E360 and AcerPower M6.

To disassemble the computer, you need the following tools:

❏   Wrist grounding strap and conductive mat for preventing electrostatic discharge

❏   Wire cutter

❏   Phillips screwdriver (may require different size)

NOTE: The screws for the different components vary in size. During the disassembly process, group the screws with the corresponding components to avoid mismatches when putting back the components.

General Information

Before You Begin

Before proceeding with the disassembly procedure, make sure that you do the following:

1. Turn off the power to the system and all peripherals.
2. Unplug the AC adapter and all power and signal cables from the system.

Aspire T160 and AcerPower M6 Disassembly Procedure

This section tells you how to disassemble the system when you need to perform system service.

NOTE: Before you proceed, make sure you have turned off the system and all peripherals connected to it.

Open the Computer

1. Place the system unit on a flat and steady surface.

2. Release the lock handle and slide the left cover out.
Disconnect the Cables

1. Disconnect the AUDIO cable.

2. Disconnect the USB and Front LED ASSY cables.
3. Disconnect the System fan connector and 12V power connector from the main board connector.
4. Disconnect the P1 power cable and ODD data cable from the main board connector.
5. Disconnect the FDD data cable from the main board connector.
FDD data cable

6. Disconnect the ODD data cable and power cable from the rear of ODD.

ODD data cable   ODD power cable

7. Disconnect the FDD data cable and power cable from the rear of FDD.
FDD power cable   FDD data cable
8. Disconnect the HDD data cable and power cable from the rear of HDD and main board.
Detach the HDD, FDD, ODD and Card Reader (if equipped)

1. Rail the holder shown below, then take the HDD out from the chassis.
2. Release the three latches on the front bezel, then remove the front bezel.

3. Rail the holder shown below, then take the ODD out from the chassis.
4. Rail the holder shown below, then take the FDD out from the chassis.

5. Rail the holder shown below, then take the Card Reader out from the chassis.
Detach the USB Module

Release the screw shown bellow, then take off the USB module altogether with the USB & Audio cable.
Detach the CPU Cooler

1. Disconnect the CPU cooler power cable.

2. Release the CPU Cooler latch, then remove it.

Before revolve the latch

After revolve the latch

Pull the latch afterward
Remove the Memory

Push and release those two latches to remove the memory.
Remove the System Fan

Release those four screws on back panel to remove the fan.
Remove the Main board

Release those eight screws marked to remove the main board.
Remove the Power Supply

Release those four screws marked to remove the Power Supply.

Remove the CPU

Release the CPU latch on the Socket and remove the CPU.
Aspire E360 Disassembly Procedure

Open the Computer

1. Place the system unit on a flat and steady surface.
2. Release the lock handle and slide the left cover out.
Remove the PCI

1. Lift the PCI lock up and remove it.

2. Pull out the VGA card.
3. Pull out the CD_IN cable from TV tuner card.
**4.** Pull out the TV tuner card.

5. Pull out the Modem card.

Detach the CPU Cooler
1. Disconnect the CPU Cooler power cable.
2. Release the CPU Cooler latch then remove it.

Loosen the clasp

Before revolve the latch

After revolve the latch

Pull the latch afterward then loosen the clasp.

Remove the Memory

Press those latches on the left and right sides to pop up the four memories.

Disconnect the Cables

**1.** Disconnect the Audio cable and CD_IN cable.

CD-IN Cable

AUDIO Cable

2. Disconnect the USB, Card Reader and Front LED ASSY cables.

3. Disconnect the 12V power cable, System Fan cable and 1394 cable from the main board connectors.

4. Disconnect the P1 power cable and ODD data cable from the main board.

**5.** Disconnect the FDD data cable from the main board connector.

6. Pull out the FDD data cable and power cable from the FDD and disconnect the IR cable between the front bezel and Card Reader module.

7. Pull out the slave ODD power cable and data cable.

8. Disconnect the bezel LED cable and the ODD power cable.
9. Pull out the master ODD data cable and power cable.

10. Disconnect the HDD data cables and power cables from the rear of the HDD.
11. Disconnect the HDD data cables from the main board.

Disassemble the HDD, ODD, FDD and Card Reader

1. Release the HDD rails to disassemble the two HDDs.
2. Release the three latches marked to separate the front bezel from the housing case, then lead the cables out.

3. Release the ODD rails and disassemble the two ODDs.
4. Release the FDD rail and disassemble the FDD.
5. Release the rail and remove the Card Reader.
Disassemble the USB Module

Release the screw marked as arrow indicates, then detach the USB module altogether with the USB & Audio cables.
Remove the System Fan

Release the four screws marked as photo, then detach the fan.
Remove the Main Board

Release the eight screws marked as photo, then take out the main board.
Remove the Power Supply

Release the four screws marked as photo, then detach the power supply.

Separate the CPU from the Main Board

Release the CPU latch on the socket, then remove the CPU.
Troubleshooting

This chapter provides troubleshooting information for the Aspire T160/E360 and AcerPower M6

❑ Power-On Self-Test (POST)

❑ Index of Error Message

❑ Index of Error Symptoms

❑ Undetermined Problems

Power-On Self-Test (POST)

Each time you turn on the system, the Power-on Self Test (POST) is initiated. Several items are tested during POST, but is for the most part transparent to the user.

The Power-On Self Test (POST) is a BIOS procedure that boots the system, initializes and diagnoses the system components, and controls the operation of the power-on password option. If POST discovers errors in system operations at power-on, it displays error messages on screen, generates a check point code at port 80h or even halts the system if the error is fatal.

The main components on the main board that must be diagnosed and/or initialized by POST to ensure system functionality are as follows:

❏ Microprocessor with built-in numeric co-processor and cache memory subsystem

❏ Direct Memory Access (DMA) controller

❏ Interrupt system

❏ Three programmable timers

❏ ROM subsystem

❏ RAM subsystem

❏ CMOS RAM subsystem and real time clock/calendar with battery backup

❏ Onboard parallel interface controller

❏ Embedded hard disk interface and one diskette drive interface

❏ Keyboard and auxiliary device controllers

❏ 1.44M floppy controller

❏ I/O ports

    ❏ One parallel port

    ❏ One PS/2-compatible mouse port

    ❏ One PS/2-compatible keyboard port

NOTE: When Post executes a task, it uses a series of preset numbers called check points to be latched at port 80h, indicating the stages it is currently running. This latch can be read and shown on a debug board. The following table describes the BIOS common tasks carried out by POST. Each task is denoted by an unique check point number. For other unique check point numbers that are not listed in the table, refer to the corresponding product service guide. Post Checkpoints List: The list may vary accordingly depending on your BIOS.

Checkpoint	Description
CFh	Test CMOS R/W functionality

C0h	Early chipset initialization:
	    ❏ Disable shadow RAM
	    ❏ Disable L2 cache (socket 7 or below)
	    ❏ Program basic chipset registers

C1h	Detect memory
	    ❏ Auto-detection of DRAM size, type and ECC.
	    ❏ Auto-detection of L2 cache (socket 7 or below)

C3h	Expand compressed BIOS code to DRAM
C5h	Call chipset hook to copy BIOS back to E000 & F000 shadow RAM.
01h	Expand the Xgroup codes locating in physical address 1000:0

Checkpoint	Description
02h	Reserved
03h	Initial Superio_Early _Init switch
04h	Reserved
05h	1. Blank out screen 2. Clear CMOS error flag
06h	Reserved
07h	1. Clear 8042 interface 2. Initialize 8042 self-test
08h	1. Test special keyboard controller for Win bond 977 series Super I/O chips. 2. Enable keyboard interface.
09h	Reserved
0Ah	1. Disable PS/2 mouse interface (optional) 2. Auto detect ports for keyboard & mouse followed by a port & interface swap (optional). 3. Reset keyboard for Win bond 977 series Super I/Q chips.
0Bh	Reserved
0Ch	Reserved
0Dh	Reserved
0Eh	Test F000h segment shadow to see whether it is R/W-able or not. If test fails, keep beeping the speaker.
0Fh	Reserved
10h	Auto detect flash type to load appropriate flash R/W codes into the run time area in F000 for ESCD & DMI support.
11h	Reserved
12h	Use walking 1's algorithm to check out interface in CMOS circuitry. Also set real-time clock power status, and then check for override.
13h	Reserved
14h	Program chipset default values into chipset. Chipset default values are MODBINable by OEM customers.
15h	Reserved
16h	Initial Early_Init_Onboard_Generator switch.
17h	Reserved
18h	Detect CPU information including brand, SMI type (Cyrix or Intel) and CPU level (586 or 686)
19h	Reserved
1Ah	Reserved
1Bh	Initial interrupts vector table. If no special specified, all H/W interrupts are directed to SPURIOUS_INT_HDLR & S/W interrupts to SPURIOUS_soft_HDLR.
1Ch	Reserved
1Dh	Initial Early_PM_INIT switch.
1Eh	Reserved
1Fh	Load keyboard matrix (notebook platform)
20h	Reserved
21h	HPM initialization (notebook platform)
22h	Reserved

Checkpoint	Description

23h	1. Check validity of RTC value:
	    e.g. a value of 5Ah is an invalid value for RTC minute.
	2. Load CMOS settings into BIOS stack. If CMOS checksum fails, use default
	   value instead.
	3. Prepare BIOS resource map for PCI & PnP use. If ESCD is valid, take into
	   consideration of the ESCD's legacy information.
	4. Onboard clock generator initialization. Disable respective clock resource to
	   empty PCI & DIMM slots.
	5. Early PCI initialization
	        -Enumerate PCI bus number
	        -Assign memory & I/O resource
	        -Search for a valid VGA device and VGA BIOS, and put it into C000:0

24h	Reserved
25h	Reserved
26h	Reserved
27h	Initialize INT 09 buffer
28h	Reserved
29h	1. Program CPU internal MTRR (P6 & PII) for 0-640K memory address. 2. Initialize the APIC for Pentium class CPU. 3. Program early chipset according to CMOS setup. Example: onboard IDE controller. 4. Measure CPU speed. 5. Invoke video BIOS.
2Ah	Reserved
2Bh	Reserved
2Ch	Reserved
2Dh	1. Initialize multi-language 2. Put information on screen display, including Award title, CPU type, CPU speed.
2Eh	Reserved
2Fh	Reserved
30h	Reserved
31h	Reserved
32h	Reserved
33h	Reset keyboard except Win bond 977 series Super I/O chips.
34h	Reserved
35h	Reserved
36h	Reserved
37h	Reserved
38h	Reserved
39h	Reserved
3Ah	Reserved
3Bh	Reserved
3Ch	Test 8254.
3Dh	Reserved
3Eh	Test 8259 interrupt mask bits for channel 1

Checkpoint	Description
3Fh	Reserved
40h	Test 8259 interrupt mask bits for channel 2
41h	Reserved
42h	Reserved
43h	Test 8259 functionality
44h	Reserved
45h	Reserved
46h	Reserved
47h	Initialize EISA slot
48h	Reserved
49h	1. Calculate total memory by testing the last double word of each 64K. 2. Program writes allocation for AMD K5 CPU.
4Ah	Reserved
4Bh	Reserved
4Ch	Reserved
4Dh	Reserved
4Eh	1. Program MTRR of M1 CPU. 2. Initialize L2 cache for P6 class CPU & program CPU with proper cacheable range. 3. Initialize the APIC for P6 class CPU. 4. On MP platform, adjust the cacheable range to smaller one in case the cacheable ranges between each CPU are not identical.
4Fh	Reserved
50h	Initialize USB
51h	Reserved
52h	Test all memory (clear all extended memory to 0)
53h	Reserved
54h	Reserved
55h	Display number of processors (multi-processor platform)
56h	Reserved
57h	1. Display PnP logo 2. Early ISA PnP initialization -Assign CSN to every ISA PnP device.
58h	Reserved
59h	Initialize the combined Trend Anti-Virus code.
5Ah	Reserved
5Bh	(Optional Feature) Show message for entering AWDFLASH.EXE from FDD (optional)
5Ch	Reserved
5Dh	1. Initialize Init_Onboard_Super_I/O switch. 2. Initialize Init_Onboard_AUDIO switch.
5Eh	Reserved
5Fh	Reserved
60h	Okay to enter Setup utility; i.e. not until this POST stage can users enter the CMOS setup utility.

Checkpoint	Description
61h	Reserved
62h	Reserved
63h	Reserved
64h	Reserved
65h	Initialize PS/2 Mouse
66h	Reserved
67h	Prepare memory size information for function call: INT 15h ax=E820h
68h	Reserved
69h	Turn on L2 cache
6Ah	Reserved
6Bh	Program chipset registers according to items described in Setup & Auto-configuration table.
6Ch	Reserved
6Dh	1. Assign resources to all ISA PnP devices. 2. Auto assign ports to onboard COM ports if the corresponding item in Setup is set to AUTO
6Eh	Reserved
6Fh	1. Initialize floppy controller 2. Set up floppy related fields in 40: hardware.
70h	Reserved
71h	Reserved
72h	Reserved

73h	(Optional Feature)
	Enter AWDFLASH.EXE if:
	    -AWDFLASH is found in floppy drive
	    -ALT+F2 is pressed

74h	Reserved
75h	Detect & install all IDE devices: HDD, LS120, ZIP,CDROM.....
76h	Reserved
77h	Detect serial port & parallel port
78h	Reserved
79h	Reserved
7Ah	Detect & install co-processor
7Bh	Reserved
7Ch	Reserved
7Dh	Reserved
7Eh	Reserved

7Fh	1. Switch back to text mode if full screen logo is supported.
	   -If errors occur, report errors & wait for keys
	   -If no errors occur or F1 key is pressed to continue:
	   Clear EPA or customization logo.

80h	Reserved
81h	Reserved

Checkpoint	Description
82h	1. Call chipset power management hook. 2. Recover the text fond used by EPA logo (not for full screen logo) 3. If password is set, ask for password.
83h	Save all data in stack back to CMOS.
84h	Initialize ISA PnP boot devices.
85h	1. USB final Initialization 2. NET PC: Build SYSID structure 3. Switch screen back to text mode. 4. Set up ACPI table at top of memory. 5. Invoke ISA adapter ROMs. 6. Assign IRQs to PCI devices 7. Initialize APM 8. Clear noise of IRQs
86h	Reserved
87h	Reserved
88h	Reserved
89h	Reserved
90h	Reserved
91h	Reserved
92h	Reserved
93h	Read HDD boot sector information for Trend Anti-Virus code
94h	1. Enable L2 cache 2. Program boot up speed 3. Chipset final initialization 4. Power management final initialization 5. Clear screen & display summary table 6. Program K6 write allocation 7 Program P6 class write combining.
95h	1. Program daylight saving 2. Update keyboard LED & typematic rate
96h	1. Build MP table 2. Build & update ESCD 3. Set CMOS century to 20h or 19h 4. Load CMOS time into DOS timer tick 5. Build MSIRQ routing table
FFh	Boot attempt (INT 19h)

POST Error Messages List

If you cannot run the diagnostics program tests but did receive a POST error message, use "POST Error Messages List" to diagnose system problems. If you did not receive any error message, look for a description of your error symptoms in Error Symptoms List.

NOTE: When you have deemed it necessary to replace an FRU, and have done so, you must run a total system check to ensure that no other activity has been affected by the change. This system check can be done through the diagnostics program.

NOTE: Check all power supply voltages, switch, and jumper settings before you replace the main board. Also check the power supply voltages if you have a "system no-power" condition.

If you are unable to correct the problem by using the "BIOS Messages List" table and "Error Symptoms List" table, go to "Undetermined Problems".

To diagnose a problem, first find the BIOS error messages in the left column. If directed to a check procedure, replace the FRU indicated in the check procedure. If no check procedure is indicated, the first Action/FRU listed in right column is the most likely cause.

BIOS Messages	Action/FRU
BIOS ROM checksum error - System halted	The checksum of the BIOS code in the BIOS chip is incorrect, indicating the BIOS code may have become corrupt. Contact your system dealer to replace the BIOS.
CMOS Battery Failed	The CMOS battery is no longer functional. Contact your system dealer for a replacement the BIOS.
CMOS Checksum Error- defaults loaded	Checksum of CMOS is incorrect, so the system loads the default equipment configuration. A checksum error may indicate that CMOS has become corrupt. A weak battery may have caused this error. Check the battery and replace if necessary.
CPU at nnnn	Displays the running speed of CPU.
Display switch is set incorrectly	The display switch on the motherboard can be set to either monochrome or color. This message indicates the switch is set to a different setting than indicated in Setup. Determine which setting is correct, and then either turn off the system and change the jumper, or enter Setup and change the Video selection.
Press ESC to skip memory test	The user may press Esc to skip the full memory test.
Floppy disk(s) fail	Cannot find or initialize the floppy drive controller or the drive. Make sure the controller is installed correctly, if no floppy drives are installed, be sure the Diskette Drive selection in Setup is set to NONE or AUTO.
HARD DISK initializing - Please wait a moment	Some hard drives require extra time to initialize.
HARD DISK INSTALL FAILURE	Cannot find or initialize the hard drive controller or the drive. Make sure the controller is installed correctly. If no hard drives are installed, be sure the Hard Drive Selection in Setup is set to NONE.
Hard disk(s) diagnosis fail	The system may run specific disk diagnostic routines. This message appears if one or more hard disks return an error when the diagnostics run.

BIOS Messages	Action/FRU
Keyboard Error Or No Keyboard Present	Cannot initialize the keyboard. Make sure the keyboard is attached correctly and no keys are pressed during POST. To purposely configure the system without a keyboard, set the error halt condition in Setup to HALT ON ALL, BUT KEYBOARD. The BIOS then ignores the missing keyboard during POST.
Keyboard is locked out - Unlock the key	This message usually indicates that one or more keys have been pressed during the keyboard tests. Be sure no objects are resting on the keyboard.
Memory Test:	This message displays during a full memory test, counting down the memory areas being tested.
Memory test fail	If POST detects an error during memory testing, additional information appears giving specifics about the type and location of the memory error.
Override enabled - Defaults loaded	If the system cannot boot using the current CMOS configuration, the BIOS can override the current configuration with a set of BIOS defaults designed for the most stable, minimal-performance system operations.
Press TAB to show POST screen	System OEMs may replace the Phoenix Technologies Award BIOS POST display with their own proprietary display. Including this message in the OEM display permits the operator to switch between the OEM display and the default POST display.
Primary master hard disk fail	POST detects an error in the primary master IDE hard drive.
Primary slave hard disk fail	POST detects an error in the secondary master IDE hard drive.
Secondary master hard disk fail	POST detects an error in the primary slave IDE hard drive.
Secondary slave hard disk fail	POST detects an error in the secondary slave IDE hard drive.

Error Symptoms List

NOTE: To diagnose a problem, first find the error symptom in the left column. If directed to a check procedure, replace the FRU indicated in the check procedure. If no check procedure is indicated, the first Action/ FRU listed in right column is the most likely cause.

Error Symptom	Action/FRU
Processor / Processor Fan	
NOTE: Normally, the processor fan should be operative, and the processor clock setting should be exactly set to match its speed requirement before diagnosing any processor problems.	
Processor fan does not run but power supply fan runs.	1. Ensure the system is not in power saving mode. See "Power Management" in chapter 2. 2. With the system power on, measure the voltage of processor fan connector. Its reading should be +12Vdc. Its reading should be +12Vdc. If the reading shows normal, but the fan still does not work, then replace a good fan. 3. Main board.
Processor test failed.	1. Processor. 2. Main board.
Main board and Memory	
NOTE: Ensure the memory modules are installed properly and the contact leads are clean before diagnosing any system problems.	
Memory test failed.	1. See "Memory" 2. Main board
Incorrect memory size shown or repeated during POST.	1. Insert the memory modules in the DIMM sockets properly, then reboot the system. 2. Memory module. 3. Main board.
System works but fails to enter power saving mode when the Power Management Mode is set to Enabled.	1. Enter BIOS Setup and load default settings. In Windows Systems, check settings in Power Management Property of Control Panel. 2. Reload software from Recovery CD.
Blinking cursor only; system does not work.	1. Diskette/IDE drive connection/cables 2. Diskette/IDE disk drives 3. See "Undetermined Problems". 4. Main board
Diskette Drive	
NOTE: Ensure the diskette drive is auto-setting in BIOS Setup and its read/write head is clean before diagnosing any diskette drive problems.(If only one drive is installed, please make sure the drive is connected to master connector or the drive is set to master.)	
Media and drive are mismatched.	1. Ensure the diskette drive is configured correctly in the Disk Drives of BIOS Setup. 2. Ensure the diskette drive is correctly formatted. 3. Diskette drive connection/cable 4. Diskette drive 5. Main board
Diskette drive does not work.	1. Ensure the diskette drive is not set to None in the Disk Drives of BIOS Setup. 2. Diskette drive power 3. Diskette drive connection/cable 4. Diskette drive 5. Main board

Error Symptom	Action/FRU
Diskette drive read/write error.	1. Diskette. 2. Diskette drive cable. 3. Diskette drive. 4. Main board.
Diskette drive LED comes on for more than 2 minutes when reading data.	1. Diskette 2. Diskette drive connection/cable 3. Diskette drive 4. Main board
Diskette drive LED fails to light, and the drive is unable to access for more than 2 minutes.	1. Diskette 2. Diskette drive power 3. Diskette drive connection/cable 4. Diskette drive 5. Main board
Diskette drive test failed.	1. Diskette 2. Diskette drive 3. Diskette drive cable 4. Main board
Hard Disk Drive	
NOTE: Ensure hard disk drive is configured correctly in BIOS Setup, cable/jumper are set correctly before diagnosing any hard disk drive problems. (If only one drive is installed, please make sure the drive is connected to master connector or the drive is set to master.)	
Hard disk drive test failed.	1. Enter BIOS Setup and Load default settings. 2. Hard disk drive cable. 3. Hard disk drive. 4. Main board.
Hard disk drive cannot format completely.	1. Enter BIOS Setup and Load default settings. 2. Hard disk drive cable. 3. Hard disk drive. 4. Main board.
Hard disk drive has write error.	1. Enter BIOS Setup and Load default settings. 2. Hard disk drive.
Hard disk drive LED fails to light, but system operates normally.	1. With the system power on, measure the voltage of hard disk LED connector. 2. Hard drive LED cable.
CD/DVD-ROM Drive	
NOTE: Ensure CD/DVD-ROM drive is configured correctly in BIOS Setup, cable/jumper are set correctly and its laser beam is clean before diagnosing any CD/DVD-ROM drive problems.	
CD/DVD-ROM drive LED doesn't come on but works normally.	1. CD/DVD-ROM drive
CD/DVD-ROM drive LED flashes for more than 30 seconds before LED shutting off. Software asks to reinstall disc. Software displays a reading CD/DVD error.	1. CD/DVD-ROM may have dirt or foreign material on it. Check with a known good disc. 2. CD/DVD-ROM is not inserted properly. 3. CD/DVD-ROM is damaged.
CD/DVD-ROM drive cannot load or eject when the system is turned on and its eject button is pressed and held.	1. Disconnect all cables from CD/DVD-ROM drive except power cable, then press eject button to try to unload the disk. 2. CD/DVD-ROM drive power. 3. CD/DVD-ROM drive

Error Symptom	Action/FRU
CD/DVD-ROM drive does not read and there are no messages are displayed.	1. CD may have dirt or foreign material on it. Check with a known good disc. 2. Ensure the CD/DVD-ROM driver is installed properly. 3. CD/DVD-ROM drive.
CD/DVD-ROM drive can play audio CD but no sound output.	1. Ensure the headphone jack of the CD/DVD-ROM has an output. 2. Turn up the sound volume. 3. Speaker power/connection/cable. 4. CD/DVD-ROM drive.
Real-Time Clock	
Real-time clock is inaccurate.	1. Ensure the information in the Standard CMOS Feature of BIOS Setup is set correctly. 2. RTC battery. 3. Main board
Audio	
Audio software program invokes but no sound comes from speakers.	1. Speaker power/connection/cable.
Modem	
Modem ring cannot wake up system from suspend mode.	1. For the External Modem, make sure Power on By Ring in BIOS Setup or Power Management is set to Enabled. For the PCI modem, make sure Wake up by PCI card is set to Enabled. 2. If PCI modem card is used, reinsert the modem card to PCI slot firmly or replace the modem card. 3. In Win 98, ensure the telephone application is configured correctly for your modem and set to receive messages and/or fax.
Data/fax modem software program invokes but cannot receive/send data/fax	1. Ensure the modem card is installed properly.
Fax/voice modem software program invokes but has no sound output. (Data files are received normally; voice from modem cannot be produced, but system sound feature works normally.)	1. Ensure the modem voice-in cable from modem adapter card to main board
Video and Monitor	
Video memory test failed. Video adapter failed.	1. Remove all non-factory-installed cards. 2. Load default settings (if screen is readable). 3. Main board
Display problem: - Incorrect colors No high intensity Missing, broken, or incorrect characters Blank monitor (dark) Blank monitor (bright) Distorted image Unreadable monitor Other monitor problems	1. Monitor signal connection/cable. 2. Monitor 3. Video adapter card 4. Main board
Display changing colors.	1. Monitor signal connection/cable 2. Monitor 3. Main board

Error Symptom	Action/FRU
Display problem not listed above (including blank or illegible monitor).	1. "Monitor" 2. Load default settings (if screen is readable). 3. Main board

Error Symptom	Action/FRU
Parallel/Serial Port	
Execute "Load BIOS Default Settings" in BIOS Setup to confirm ports presence before diagnosing any parallel/serial ports problems.	
Serial or parallel port loop-back test failed.	1. Make sure that the LPT# or COM# you test is the same as the setting in BIOS Setup. 2. Loop-back. 3. Main board.
Printing failed.	1. Ensure the printer driver is properly installed. Refer to the printer service manual. 2. Printer. 3. Printer cable. 4. Main board.
Printer problems.	1. Refer to the service manual for the printer.
Keyboard	
Some or all keys on keyboard do not work.	1. Keyboard
Power Supply	
Pressing power switch does not turn off system. (Only unplugging the power cord from electrical outlet can turn off the system.)	1. Ensure the Soft-off by PWR-BTTN. in BIOS Setup of Power Management is not set to Instant-off. 2. Power switch cable assembly
Pressing power switch does not turn on the system.	1. Ensure the power override switch (situated at the back of the machine, just above the connector for the power cable) is not set to OFF. 2. Power switch cable assembly.
Executing software shutdown from Windows98 Start menu does not turn off the system. (Only pressing power switch can turn off the system).	1. Load default settings. 2. Reload software from Recovery CD.
No system power, or power supply fan is not running.	1. Power Supply 2. Main board
Other Problems	
Any other problems.	1. Undetermined Problems

Undetermined Problems

If an error message is present, go to "POST Error Messages List". If you did not receive any messages, if the symptom is listed in "or "Error Symptoms List". If you still cannot solve the problem, continue with this check:

1. Check the power supply voltage. If the voltage are correct continue with the following steps:

2. Power off the system unit.

3. Perform the following checks, one by one, until you have isolated the problem FRU.

4. Load default settings in setup.

5. Check all main board jumper positions and switch settings.

6. Check all adapter card jumper positions.

7. Check all device jumper positions.

8. Check all cables and connectors for proper installation.

9. If the jumpers, switches and voltage settings are correct, remove or disconnect the following, one at a time:

10. Non-Acer devices

   ❏   External devices

   ❏   Any adapter card (modem card, LAN card or video card, if installed)

   ❏   CD/DVD-ROM drive

   ❏   Diskette drive

   ❏   Hard disk drive

   ❏   DIMM

   ❏   Processor

   ❏   Main board

11. Power on the system unit.

12. Repeat steps 2 through 5 until you find the failing device or adapter.

Jumper and Connector Information

Connectors Introduction
Item	Description	Item	Description
1	ATX_12V	12	F_1394
2	ATX (Power Connector)	13	SPDIF_OUT
3	CPU_FAN	14	CLR_CMOS
4	SYS_FAN	15	INTR
5	FDD	16	BAT
6	IDE1 / IDE2	18	SPEAKER
7	SATA1 / SATA2 / SATA3 / SATA4		
8	F_PANEL		
9	F_AUDIO		
10	CD_IN		
11, 17	F_USB1 / F_USB2/F_USB3		

ATX_12V / ATX (Power Connector)

With the use of the power connector, the power supply can supply enough stable power to all the components on the main board. Before connecting the power connector, please make sure that all components and devices are properly installed. Align the power connector with its proper location on the main board and connect tightly.

The ATX_12V power connector mainly supplies power to the CPU. If the ATX_12V power connector is not connected, the system will not start.

CAUTION: Please use a power supply that is able to handle the system voltage requirements. It is recommended that a power supply that can withstand high power consumption be used (300W or greater). If a power supply can not provide the required power, it very possibly leads to an unstable system or a system that is unable to start. If you use a 24-pin ATX power supply, please remove the small cover on the power connector on the main board before plugging in the power cord. Otherwise, please do not remove it.
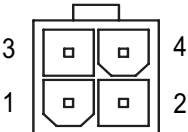

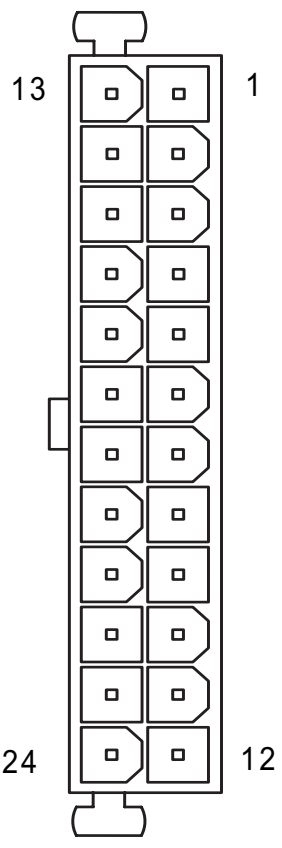

Illustration	Jumper / Header Name	Pin No. and Definition
	ATX_12V Header	1: GND

CPU FAN / SYSTEM FAN (Cooler Fan Power Connector)

The cooler fan power connector supplies a +12V power voltage via a 3-pin/4-pin (only for CPU FAN) power connector and possesses a fool-proof connection design.Most coolers are designed with color-coded power connector wires. A red power connector wire indicates a positive connection and requires a +12V power voltage. The black connector wire is the ground wire (GND). Please remember to connect the power to the cooler to prevent system overheating and failure.

CAUTION: Please remember to connect the power to the CPU fan to prevent CPU overheating and failure.

FDD (Floppy Connector)

The FDD connector is used to connect the FDD cable while the other end of the cable connects to the FDD drive. The types of FDD drives supported are 1.44MB and 2.88MB. Please connect the red power connector wire to the pin1 position.

IDE1 / IDE2 (IDE Connector)

An IDE device connects to the computer via an IDE connector. One IDE connector can connect to one IDE cable, and the single IDE cable can then connect to two IDE devices (hard drive or optical drive). If you wish to connect two IDE devices, please set the jumper on one IDE device as Master and the other as Slave.

F_AUDIO (Front Audio Panel Connector)

If you want to use Front Audio connector, you must remove 5-6 and 9-10 Jumpers. In order to utilize the front audio header, your chassis must have front audio connector. Make sure the pin assignment on the cable is the same as the pin assignment on the main board header. To find out if the chassis you are buying support front audio connector, please contact your dealer.

F_ USB1 / F_USB2 / F_USB3 (Front USB Connector)

Be careful with the polarity of the front USB connector. Check the pin assignment carefully while you connect the front USB cable, incorrect connection between the cable and connector will make the device unable to work or even damage it. For optional front USB cable, please contact your local dealer.

SPDIF_OUT (SPDIF Out)

The SPDIF output is capable of providing digital audio to external speakers or compressed AC3 data to an external Dolby Digital Decoder. This feature works only when your stereo system has digital input function. Be careful with the polarity of the SPDIF_OUT connector. Check the pin assignment while connecting the SPDIF_OUT cable. Incorrect connection will result of hardware damage.

		2: GND

BAT(Battery)
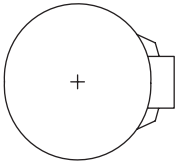

Illustration	Definition
+	❑ Danger of explosion if battery is incorrectly installed or replaced. ❑ Replace only with the same or equivalent type recommended by the manufacturer. ❑ Dispose of used batteries according to the manufacturer's instructions.

How to erase CMOS

1. Turn OFF the computer and unplug the power cord.
2. Remove the battery, wait for 30 seconds.
3. Re-install the battery.
4. Plug the power cord and turn ON the computer.

FRU (Field Replaceable Unit) List

General Description

This chapter gives you the FRU (Field Replaceable Unit) listing in global configurations of Aspire T160/E360 and AcerPower M6. Refer to this chapter whenever ordering for parts to repair or for RMA (Return Merchandise Authorization).

IMPORTANT: Please note WHEN ORDERING FRU PARTS, that you should check the most up-to-date information available on your regional web or channel. For whatever reasons a part number change is made, it will not be noted in the printed Service Guide. For ACER-AUTHORIZED SERVICE PROVIDERS, your Acer office may have a DIFFERENT part number code to those given in the FRU list of this printed Service Guide. You MUST use the local FRU list provided by your regional Acer office to order FRU parts for repair and service of customer machines.

IMPORTANT: Please note that Acer Corporation sells only the parts listed in the following table. Please be reminded that though some parts are disassembled in Chapter 3 for demonstration purpose, Acer Incorporated does not provide these parts.

NOTE: To scrap or to return the defective parts, you should follow the local government ordinance or regulations on how best to dispose it, or follow the rules set by your regional Acer office on how to return it.You can access to the web site for the latest Parts version http://aicsl.acer.com.tw/spl/

Parts

NOTE: Please note WHEN ORDERING FRU PARTS, you should check the most up-to-date information available on your regional web or channel (http://aicsl.acer.com.tw/spl). If you do not have a specific account, you can still have access to the system with guest; guest. For whatever reasons a part number change is made, it will not be noted in the written Service Guide. For Acer authorized service providers, your Acer office may have a DIFFERENT part number codes to those given in the FRU list of this written Service Guide. You MUST use the local FRU list provided by your regional Acer office to order FRU parts for the repair and service of customers' machines.

NOTE: To scrap or to return the defective parts, please follow the local government ordinance or regulations on how to dispose it, or follow the rules set by your regional Acer office on how to return it.
