Warranty, regulatory, safety, and copyright / licensing notices

Warranty - Aastra Telecom, Inc.

Aastra Telecom Inc. ("Aastra") warrants ("Warranty") to its customer that: (i) Aastra has good and marketable title to the Product at the time of delivery to its customer, free and clear of any and all security interests, liens, claims, charges or encumbrances; and (ii) the Product shall be free from defects in design, material and workmanship and shall perform in accordance with the Aastra specifications in all material respects when used for the intended purpose for a period of twelve (12) months from the date of purchase of the Product by such customer from Aastra ("Warranty Period"). This Warranty specifically excludes any representation, warranty, condition or other term relating to any software contained in the Product. At its sole option, Aastra shall either repair or replace defective Product returned during the Warranty Period. Any repaired or replacement Product shall subsequently be covered for the balance of the original Warranty Period or ninety (90) days, whichever is longer. Upon customer's specific request, Product that fails after the Warranty Period expires may be returned for repair at the then current rates, with the cost of such repairs and shipping to be borne by customer.

Customer shall obtain a "returned material authorization" ("RMA") number from Aastra and comply with shipping instructions for all defective Products being returned to Aastra. Defective Products shall be returned to Aastra at the customer's sole expense. Aastra shall repair or replace defective Products returned under Warranty at no charge to customer, and Aastra shall bear the expense of the return shipment of the repaired or replacement Product to customer.

Aastra does not warrant the Product to be compatible with the equipment of any particular telephone company, or their network. This Warranty does not extend to Products damaged by improper installation or operation, alteration, accident, neglect abuse, misuse, fire or natural causes such as storms or floods. Aastra reserves the right to use refurbished parts in the repair or replacement of defective Products. Unauthorized modification or repair will void the Warranty.

To exercise the Aastra CNX Warranty,:

1. First contact your reseller for instructions.
2. Alternatively, you can contact Aastra Telecom at 1-866-599-7399.

Warranty Limitation

THE FOREGOING PRODUCT WARRANTIES ARE IN LIEU OF ALL OTHER WARRANTIES AS TO THE CONDITION, OPERATION AND PERFORMANCE OF THE PRODUCT, EXPRESSED OR IMPLIED, INCLUDING, WITHOUT LIMITATION, ANY WARRANTIES AND/OR CONDITIONS OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. AAastra'S SOLE AND EXCLUSIVE LIABILITY, AND CUSTOMER'S SOLE AND EXCLUSIVE REMEDY, FOR ANY AAastra BREACH OF WARRANTIES HEREUNDER SHALL BE AAastra'S OBLIGATION TO REPAIR OR REPLACE THE PRODUCT, AS SET FORTH IN THIS SECTION, AND AAastra SHALL NOT BE LIABLE FOR ANY DAMAGES WHATSOEVER, INCLUDING BUT NOT LIMITED TO DIRECT, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES OF ANY KIND OR NATURE, OR OTHER LOSS, DAMAGE OR EXPENSE DIRECTLY OR INDIRECTLY ARISING FROM CUSTOMER'S USE OF OR INABILITY TO USE PRODUCT, EITHER SEPARATELY OR IN COMBINATION WITH OTHER EQUIPMENT.

Regulatory information

U.S.A. requirements

The AASTRA CNX has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the Federal Communications Commission (FCC) rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy. If it is not installed and used in accordance with the instruction manual, it may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case users will be required to take whatever measures may be necessary to correct the interference at their own expense.

Do not attempt to repair or modify this equipment. All repairs must be performed by Aastra Telecom, or an authorized Aastra Telecom representative.

FCC Part 68 general information

The AASTRA CNX complies with Part 68 of the FCC rules and the requirements adopted by the ACTA. On the bottom of this equipment is a label that contains, among other information, a product identifier in the format US:2L4DDNANAASTRA01. If requested, this number must be provided to the telephone company. This Aastra CNX uses the following USOC RJ-48 jacks:

Interface	Service Code	Facility Code
1.544 Mb/s superframe format (SF) without line power	6.0Y	04DU9-BN
1.544 Mb/s superframe format (SF) and B8ZS without line power	6.0Y	04DU9-DN
1.544 Mb/s ANSI extended superframe format (ESF) without line power	6.0Y	04DU9-1KN
1.544 Mb/s ANSI extended superframe format (ESF) and B8ZS without line power	6.0Y	04DU9-1SN

A plug and jack used to connect this equipment to the premises wiring and telephone network must comply with the applicable FCC Part 68 rules and requirements adopted by the ACTA. A compliant telephone modular plug is provided with this product. It is designed to be connected to a compatible modular jack that is also compliant. See installation instructions for details.

If the AASTRA CNX causes harm to the telephone network, the telephone company will notify you in advance that temporary discontinuance of service may be required. But if advance notice isn't practical, the telephone company will notify the customer as soon as possible. Also, you will be advised of your right to file a complaint with the FCC if you believe it is necessary.

The telephone company may make changes in its facility, equipment, operations or procedures that could affect the operation of the AASTRA CNX. If this happens the telephone company will provide advance notice in order for you to make necessary modifications to maintain uninterrupted service.

If you experience trouble with this equipment, please contact Aastra Telecom for repair and warranty information. If there is a problem with the network, the telephone company may request that you remove the equipment from the network until the problem is resolved.

Aastra Telecom recommends that you install an AC surge protector in the AC outlet to which the equipment is connected. This helps to prevent damage to the equipment caused by local lightning strikes or other electrical surges.

THE AAastra CNX HAS NO USER SERVICEABLE PARTS.

FCC and telephone company procedures and requirements

In order to connect this equipment to the network, you must provide the local telephone company with the registration number of this equipment, and you must order the proper connections.

To order the proper service, provide the telephone company with the following information:

- Number of required jacks and their USOC numbers
- Sequence in which the trunks are to be connected
- Facility interface codes, by position

CSA certification - U.S. and Canada

This equipment has been certified by CSA for use in the U.S. and Canada to the requirements of UL 1950. Third Edition - Safety of Information Technology Equipment. Including Electrical Business equipment and Canadian Standards Association CAN/CSA C22.2 No. 950-95 Third Edition.

Canadian requirements

Canadian Department of Communications Radio Interference Regulations

This digital apparatus (Aastra CNX) does not exceed the Class A limits for radio-noise emissions from digital apparatus, as documented in the Radio Interference Regulations of the Canadian Department of Communications.

Règlement sur le brouillage radioélectrique du ministère des Communications

Cet appareil numérique (Aastra CNX) respecte les limites de bruits radioélectriques visant les appareils numériques de classe A prescrites dans le Règlement sur le brouillage radioélectrique du ministère des Communications du Canada.

Canada CS-03 rules and regulations

NOTICE: This equipment meets the applicable Industry Canada Terminal Equipment Technical Specifications. This is confirmed by the registration number. The abbreviation, IC, before the registration number signifies that registration was performed based on a Declaration of Conformity indicating that Industry Canada technical specifications were met. It does not imply that Industry Canada approved the equipment.”

NOTE: The Canadian Department of Communications label identifies certified equipment. The certification means that the equipment meets certain telecommunications network protective, operational, and safety requirements. The Department does not guarantee the equipment will operate to the user’s satisfaction.

Before installing this equipment, ensure that it is permissible to connect to the facilities of the local telecommunications company. You must install this equipment using an acceptable connection method.

Regulatory information

Repairs to certified equipment should be made by a supplier-designated representative. If you make repairs or alterations to this equipment, or if the equipment malfunctions, the telecommunications company may request that you disconnect the equipment.

You should ensure, for your own protection, that the electrical ground connections for the power utility, telephone lines, and internal water-pipe system, if present, are connected. This precaution may be particularly important in rural areas.

CAUTION: You should not attempt to make such connections. You should contact the appropriate inspection authority or electrician.

Canada CS-03 Règles et règlements

« AVIS : Le présent matériel est conforme aux spécifications techniques d'Industrie Canada applicables au matériel terminal. Cette conformité est confirmée par le numéro d'enregistrement. Le sigle IC, placé devant le numéro d'enregistrement, signifie que l'enregistrement s'est effectué conformément à une déclaration de conformité et indique que les spécifications techniques d'Industrie Canada ont été respectées. Il n'implique pas qu'Industrie Canada a approuvé le matériel. »

NOTE: L'étiquette du ministère des Communications du Canada indique que l'appareillage est certifié, c'est-à-dire qu'il respecte certaines exigences de sécurité et de fonctionnement visant les réseaux de télécommunications. Le ministère ne garantit pas que l'appareillage fonctionnera à la satisfaction de l'utilisateur.

Avant d'installer l'appareillage, s'assurer qu'il peut être branché aux installations du service de télécommunications local. L'appareillage doit aussi être raccordé selon des méthodes acceptées.

Les réparations de l'appareillage certifié devraient être confiées à un service désigné par le fournisseur. En cas de réparation ou de modification effectuées par l'utilisateur ou de mauvais fonctionnement de l'appareillage, le service de télécommunications peut demander le débranchement de l'appareillage.

Pour leur propre sécurité, les utilisateurs devraient s'assurer que les mises à la terre des lignes de distribution d'électricité, des lignes téléphoniques et de la tuyauterie métallique interne sont raccordées ensemble. Cette mesure de sécurité est particulièrement importante en milieu rural.

ATTENTION: Les utilisateurs ne doivent pas procéder à ces raccordements, mais doivent plutôt faire appel aux pouvoirs de réglementation en cause ou à un électricien, selon le cas.

European requirements

EMI/EN 55 022 statement

This certifies that the Aastra CNX Asterisk Network Switch is shielded against the generation of radio interference in accordance with the application of Council Directive 89/336/EEC. Conformity is declared by the application of EN 55 022:1998 and EN 55 024:1998.

WARNING: This is a Class A product. In a residential area, this product may cause radio interference, in which case the user may be required to take the appropriate measures.

EC declaration of conformity

This product conforms to the provisions of Council Directive's EMC Directive (89/336/EEC), Low Voltage Directive (73/23/EEC), and R+TTE Directive (1999/5/EC).

Safety warnings

General warnings

The following safety warnings apply:

- Mechanical hazards and electrical shock hazards are possible if you remove one or more of the modules. There are no operator-serviceable modules. Only qualified personnel should service this equipment.
- This equipment must be connected to a protective ground according to the instructions in this manual. Improper grounding may result in electrical shock.
- This equipment does not provide safety isolation between any port that is connected to a digital network termination point or any port to which terminal equipment is connected.
- The wall circuit breaker provides the main protection for this equipment.
- Ensure that rack installation does not result in airflow blockage to power supply vents or chassis vents.
- Before installing the Aastra CNX rackmount version, ensure that the rack is sturdy and well-secured.

Lithium battery caution

CAUTION: Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Discard used batteries according to the manufacturer's instructions.

ATTENTION: Il y a danger d'explosion s'il y a un remplacement incorrect de la batterie. Remplacer uniquement avec une batterie du même type ou d'un type recommandé par le constructeur. Mettre au rebut les batteries usagées conformément aux instructions du fabricant.

Compliances

The Aastra CNX is in compliance with regulations as follows:

- Environmental
 - 32-104° F (0-40° C)
 - Humidity 10-85% non-condensing
 - 400 BTUs/hour
 - 28 dBA maximum acoustic noise
- Safety Certifications
 - cUL 950, NTRL/UL 1950, TUV EN 60 950
- Telecom Approvals
 - FCC Part 68, Industry Canada, CTR4
- EMI/RF
 - FCC Part 15 Class A, EN55022 Class A (CISPR), EN55024

Software licensing and copyright

The Aastra CNX product consists of an Aastra designed hardware platform distributed with embedded Linux operating system and application software. This embedded software consists of multiple Aastra and third party programs; each individual program may be subject to one or more Copyrights or Software Licenses; the overall aggregation and distribution of these separate programs is protected as a collective work, Copyright © Aastra Telecom Inc. 2005.

Use and distribution of the CNX product are deemed to be acceptance of the Software Licensing terms contained within the *Aastra CNX Service Level Agreement*. Associated third party license agreements and applicable Open Source software licenses are incorporated by reference; the full text of all licenses can be found on the Aastra CNX documentation CDROM.

The following is a list of Aastra CNX software licenses. See the Aastra CNX documentation CD for more information about these licenses.

Introduction

Congratulations!! You have purchased a highly functional, cost-effective, easy-to-use Aastra CNX Conference Network Switch for use in your network.

The Aastra CNX is easy to install and operate, and provides a comprehensive set of security features you would expect from a state-of-the-art call conferencing product.

What does the Aastra CNX do?

The Aastra CNX is a conference network switch that provides:

- High quality voice conferences for up to 30 participants in up to 15 active conferences, upgradable to 60 participants and 30 active conferences, or 120 participants and 60 active conferences.
- Allows for permanent and scheduled conferences
- Comprehensive conference controls for host and participants using a simple touch-tone telephony interface
- Simple to install, configure, manage, and use through an intuitive web interface
- Integrates with existing office systems: connects to Private branch exchange (PBX) using ISDN PRI and IP PBXs using SIP or H.323
- Comprehensive security features
- Cost-effective conferencing for small to medium-size enterprises

What is in the Aastra CNX shipping package?

The Aastra CNX is carefully and securely packaged within the shipping container. Upon opening the shipping package, inventory the contents to be sure there are no missing or damaged parts. The following parts are included:

- One Aastra CNX unit
- One Power cable (for connection to AC power source)
- One DB-9 to DB-9 console cable
- One CompactFlash memory card that contains the software required to operate the unit (for use in CompactFlash memory slot 1)
- One set of rack mounting brackets with six Phillips head screws
- One Aastra CNX Technical Documentation CD ROM
- One CD ROM envelope with License Key label

For a list of additional parts that you need to install the Aastra CNX (which are not included in the shipping package), see the section, “[Aastra CNX Installation and Setup Procedures](#)” on [page 1](#).

Aastra CNX Installation and Setup Procedures

Procedures

Introduction

This section provides quick installation and setup procedures for installing and starting up the Aastra CNX Conference Network Switch. This section also provides a list of additional parts that you need to install the Aastra CNX.

References

For information about configuring and using the Aastra CNX, see related documentation on the *Aastra CNX Conference Network Switch Documentation CD*.

Preparing for the hardware installation

Prepare for hardware installation

What you need for a single installation

- One Aastra CNX unit
- One AC power cable
- One CompactFlash memory card
- One set of rack mounting brackets with six (6) Phillips head screws
- Truss head screws (*not provided*)
- One to four RJ-48C T1/E1 cable(s) (*not provided*)
- NOTE: T1/E1 Ports 1 and 2 are available for the 30-port unit and the 60-port unit.
- One 9-pin male DB-9 to female DB-9, RS-232 serial cable
- One or two RJ-45 10/100BaseT Ethernet cable(s) (*not provided*)
(Optional) One 9-pin male DB-9 to female DB-25, RS-232 serial cable for modem connections (*not provided*)

*Tools required for rackmount installations

In addition to the parts listed above, the following tools are also required when installing an Aastra CNX rackmount unit:

- #2 Phillips screwdriver
- Torque wrench
- Nutdriver set

Check the shipping contents

Upon opening the shipping package, inventory the contents to be sure there are no missing or damaged parts, as described in the Welcome section of this document.

Determine location of Aastra CNX (desktop or rackmount)

- a. If you are installing the Aastra CNX as a desktop unit, place it on a flat surface in close proximity to your PC, skip Step 2, and perform Steps 3 through 8.
- b. If you are installing the Aastra CNX as a rackmount unit, proceed to Step 2.

Installing the Aastra CNX in a rack

2 Install the Aastra CNX in a rack

Warning: Before you install the Aastra CNX unit in a rack, ensure that the rack is sturdy and well secured.

Caution: The operating environment must provide unobstructed front-to-back airflow to the chassis mounted in a rack.

To install an Aastra CNX in a rack:

- a. Mount the rackmount brackets to the Aastra CNX unit in a flush-mount position using the 6 Phillips head screws.
- b. Align the bracket holes to the rack and insert truss-head screws (*not provided*).
- c. Tighten the screws to 15 in-lb (.69 Nm).

Connecting to the console port

3 Connect to the console

You can access the Aastra CNX console locally or remotely. Ensure that you configure your terminal or PC (terminal emulator) console port parameters.

Console port parameters

Parameter	Value
Baud rate	9600
Flow control	None
Data bits	8
Stop bits	1
Parity	None

Local connection

To connect a local PC or terminal:

- Attach the 9-pin male DB-9 connector on the serial cable to the female console port on the rear panel of the Aastra CNX.
- Attach the 9-pin female connector on the serial cable to the male console port on the back of your PC or terminal.

Remote connection

To connect a remote PC and an Aastra CNX to an Ethernet LAN:

- Attach one end of an Ethernet cable to the Ethernet port on the PC, and the other end to a LAN port.
- Attach one end of an Ethernet cable to an Ethernet port on the back panel of the Aastra CNX, and the other end to a LAN port.

To connect a modem:

- Attach the 9-pin male connector on the serial cable to the female console port on the rear panel of the Aastra CNX.
- Attach a 25-pin male connector on the modem cable to the modem's DB-25 RS-232 port.

Connecting the network cables

4 Connect network cables

Make sure you have the network cables that you need for your facility, and connect them to the following interfaces as appropriate:

- **T1/E1** — Connect the RJ-48C T1/E1 cable(s) to the RJ-48C T1/E1 port(s) on the rear panel of the Astra CNX .
- **Ethernet** — Connect the RJ-45 Ethernet UTP cable(s) to the RJ-45 10/100 ENET port(s) on the rear panel of the Astra CNX.

Connecting the AC power cable

5 Connect the power cable

Ground the chassis

- Locate the 3-hole, female, power receptacle on the rear of the chassis.
- Plug the male, 3-prong connector on the power cable into the power receptacle.
- Insert the plug at the other end of the power cable into a grounded power source (100 to 240 VAC).

NOTE: North America: 120 V at 15 A
Europe: 240 V at 10 A

Starting up and checking the Aastra CNX

6 Startup and check the Aastra CNX

Apply power to the Aastra CNX

To start up the Aastra CNX, insert the CompactFlash card into slot 1 of the unit and apply power from the power source.

Powering up a new Aastra CNX:

- Starts diagnostic test routines on the Aastra CNX.
- Checks for a flash memory card in CompactFlash slot 1 of the Aastra CNX chassis.
- Initializes the Aastra CNX and, if successful, resets all LEDs to their normal state.
- Starts a one-time software script that allows you to setup your network settings (See Step 7).

Check the LEDs

- Check the common LEDs on the front panel.
 The **Power** and **Status** LEDs should be ON (green) indicating the Aastra CNX is ready to take calls.
- Check the **ENET** LEDs on the front panel.
 If your Aastra CNX has a physical Ethernet link to your network from the 10/100 ENET ports 1 or 2 on the back panel, and no alarms are present, the **ENET** LEDs **1** and/or **2** should be ON (green).
NOTE: The **ENET** LEDs FLASH (green) when there is Rx/Tx activity.
- The T1/E1 ports are disabled by default in the Aastra CNX software configuration. The top row of **T1/E1** LEDs should be OFF. To enable these ports and check the LEDs, the System Administrator must enable the T1/E1 ports using the Aastra CNX GUI.

Alarm Indicators

- Check that the **Status** LED is **not** ON Red. If the **Status** LED is ON Red, an alarm condition exists in the unit. Contact your System Administrator.
NOTE: During bootup of the Aastra CNX, the **Status** LED is ON Red for 1 second. This is a normal condition at bootup.
- When the T1/E1 port(s) are enabled, check that the **T1/E1** LEDs on the bottom row are OFF. If the **T1/E1** LED(s) on the bottom row are ON Amber, a yellow alarm is present on the T1/E1 link. If the T1/E1 LEDs are ON Red, a Red alarm is present on the T1/E1 link. Contact your System Administrator.

Configuring the network settings

Configure the network settings

Requirements

The following is required before you configure the Aastra CNX for the first time:

- The Aastra CNX must physically be connected to your console using an RS-232/DB-9 cable.
- The Aastra CNX must physically be connected to your network interface via the Ethernet port(s).
- The Aastra CNX must be turned on.
- You must be running a terminal emulator on your PC. Terminal emulator must be set as follows:
 - Baud Rate 9600
 - Data 8 bit
 - Parity None
 - Stop 1 bit
 - Flow Control None

The Aastra CNX setup script allows you to configure the following:

[\(1\) Run network and time configuration](#)

The following procedure describes how to configure the network settings.

Note: If at any time during the initial configuration process, you want to backout of the configuration, press <ESC> to cancel.

(1) Run network and time configuration

Use the following procedure to initially configure the network settings on the Aastra CNX hardware.

Step	Action
1	<p>After first-time power up of the CNX, the following displays in a terminal window:</p> <pre style="text-align: center;"> Welcome to the Aastra CNX - Conference Bridge Configuration Utility - please press <enter> to continue - </pre>
2	<p>Press <Enter>.</p> <p>The following displays:</p> <pre> Hostname: </pre>
3	<p>Enter the hostname for the Aastra CNX and press <Enter>. For example:</p> <pre> Hostname: cnx1 ↵ </pre> <p>The following displays:</p> <pre> Configuring ENET #1... IP Address: </pre>
4	<p>Enter the IP address for the Ethernet port for which you want to use as a management interface, and press <Enter>. For example:</p> <pre> IP Address: 192.168.2.6 ↵ </pre> <p>The following displays:</p> <pre> Netmask: </pre>
5	<p>Enter the Netmask for the Ethernet port for which you want to use as a management interface, and press <Enter>. For example:</p> <pre> Netmask: 255.255.255.0 ↵ </pre> <p>The following displays:</p> <pre> Default Gateway: </pre>

(continued)

Step	Action
6	<p>Enter “y” if the network information is correct, and press <Enter>. Enter “n” if the network information is incorrect, and press <Enter>.</p> <p>Note: If you entered “n” at the verification prompt, repeat steps 3 through 7 to correct the network information, and then enter “y” at step 8.</p> <p>The following message and prompt display (after entering “y” at the verification prompt):</p> <pre>Configuring Domain Name Service (DNS)... Domain Name:</pre>
7	<p>Enter the Default Gateway for the Ethernet port for which you want to use as a management interface, and press <Enter>. For example:</p> <pre>Default Gateway: 192.168.2.1 ↵</pre> <p>The following displays:</p> <p>Before the following information is configured, please verify the information below is correct before proceeding.</p> <pre>Hostname: cnx1 IP Address: 192.168.2.6 Broadcast Address: 192.168.2.255 Netmask: 255.255.255.0 Default Gateway: 192.168.2.1 Is this correct (y/n):</pre>
8	<p>Enter “y” if the network information is correct, and press <Enter>. Enter “n” if the network information is incorrect, and press <Enter>.</p> <p>Note: If you entered “n” at the verification prompt, repeat steps 3 through 7 to correct the network information, and then enter “y” at step 8.</p> <p>The following message and prompt display (after entering “y” at the verification prompt):</p> <pre>Configuring Domain Name Service (DNS)... Domain Name:</pre>

(continued)

Step	Action
9	<p>Enter the domain name for the Aastra CNX and press <Enter>. For example:</p> <pre>Domain Name: aastra.com ↵</pre> <p>The following prompts display:</p> <pre>Nameserver #1: Nameserver #2:</pre>
10	<p>Enter the IP address of the DNS servers for the Aastra CNX and press <Enter>. For example:</p> <pre>Nameserver #1: 192.167.2.11 ↵ Nameserver #2: 192.168.2.12 ↵</pre> <p>The following message and prompts display:</p> <pre>Before the following information is configured, please verify the information below is correct before proceeding. Domain Name: aastra.com Nameserver #1: 192.167.2.11 Nameserver #2: 192.168.2.12 Is this correct (y/n):</pre>

(continued)

Step	Action
11	<p>Enter "y" if the DNS information is correct, and press <Enter>. Enter "n" if the DNS information is incorrect, and press <Enter>.</p> <p>Note: If you entered "n" at the verification prompt, repeat steps 9 and 10 to correct the DNS information, and then enter "y" at step 11.</p> <p>The following message and prompts display (after entering "y" at the verification prompt):</p> <pre>Unpacking timezones, please wait one moment... Timezone Configuration Africa Chile GMT Jamaica Navajo US America Cuba GMT+0 Japan PRC UTC Antarctica EET GMT-0 Kwajalein PST8PDT Universal Arctic EST GMT0 Libya Pacific W-SU Asia EST5EDT Greenwich MET Poland WET Atlantic Egypt HST MST Portugal Zulu Australia Eire Hongkong MST7MDT ROC Brazil Etc Iceland Mexico ROK CET Europe Indian Mideast Singapore CST6CDT GB Iran NZ Turkey Canada GB-Eire Israel NZ-CHAT UCT</pre> <p>Enter a choice, "back" to go up one level, or "cancel" to cancel:</p>
12	<p>Enter your local timezone and press <Enter>. For example:</p> <pre>Enter a choice, "back" to go up one level, or "cancel" to cancel: EST ↵</pre> <p>Note: Some of the options in the Timezone Configuration list display an additional list of options. For example, if you select "America" from the Timezone Configuration list, another list of options displays for timezones in America.</p> <p>The following message and prompt displays:</p> <pre>Timezone: EST Are you sure? (y/n)</pre>

(continued)

Step	Action
13	<p>Enter “y” if the timezone is correct, and press <Enter>. Enter “n” if the timezone is incorrect, and press <Enter>.</p> <p>Note: If you entered “n” at the verification prompt, repeat step 12 to correct the timezone, and then enter “y” at step 13.</p> <p>The following message and prompts display (after entering “y” at the verification prompt):</p> <pre>Please enter the date and time: Four-digit year [2005]: Month [03]: Day [09]: Hour [19]: Minutes [40]:</pre>
14	<p>The defaults for the date and time are the current date and time on your PC. If these defaults are correct, press <Enter> at each prompt without making an entry. If a default is incorrect, enter the correct value and press <Enter> to continue. In the following example, 14 is entered for the hour since the default of 19 is incorrect.</p> <pre>Four-digit year [2005]: Month [03]: Day [09]: Hour [19]: 14 Minutes [40]:</pre> <p>The following displays:</p> <pre>Before the following information is configured, please verify the information below is correct before proceeding. Date: 2005-03-09 14:40:00 Is this the correct time (y/n) [n]:</pre>

(continued)

Step	Action
15	<p>Enter “y” if the date and time are correct, and press <Enter>. Enter “n” if the date and time are incorrect, and press <Enter>.</p> <p>Note: If you entered “n” at the verification prompt, repeat step 14 to correct the date and time, and then enter “y” at step 15.</p> <p>The following message displays (after entering “y” at the verification prompt):</p> <pre>Configuring Network Time Protocol (NTP)...</pre> <p>You can configure up to 4 NTP servers. To remove an existing server, set it's address to 0.0.0.0. If no valid servers are given then ntp will be disabled.</p> <p>Do you want to continue (y/n) [n]:</p>
16	<p>Enter “y” to continue, and press <Enter>.</p> <p>The following prompts display:</p> <pre>NTP Server #1: [pool.ntp.org]: NTP Server #2: [pool.ntp.org]: NTP Server #3: [pool.ntp.org]: NTP Server #4: [pool.ntp.org]:</pre>

(continued)

Step	Action
17	<p>Enter up to four NTP servers in your network, and press <Enter>. For example:</p> <pre>NTP Server #1: [pool.ntp.org]: 192.167.2.11 ↵ NTP Server #2: [pool.ntp.org]: 192.167.2.12 ↵ NTP Server #3: [pool.ntp.org]: 0.0.0.0 ↵ NTP Server #4: [pool.ntp.org]: 0.0.0.0 ↵</pre> <p>Notes:</p> <ol style="list-style-type: none"> 1. You can enter up to four NTP servers. If you have fewer than four NTP servers, enter the IP address(es) for the NTP servers that you have, and then enter 0.0.0.0 for the remaining NTP entries. 2. If you do not have your own NTP server, and the Aastra CNX has Internet connectivity, you may use the default server entry of pool.ntp.org. 3. Aastra Telecom strongly recommends the use of NTP servers, either your own or the default servers. NTP servers avoid clock slippage and inconsistent conference start times on the Aastra CNX. However, you may completely disable the NTP server feature by setting the IP address of all four servers to 0.0.0.0. <p>The following displays:</p> <pre>Before the following information is configured, please verify the information below is correct before proceeding. NTP Server #1 : 192.167.2.11 NTP Server #2 : 192.167.2.12 Is this information correct (y/n) [n]:</pre>
18	<p>Enter “y” if the NTP information is correct, and press <Enter>. Enter “n” if the NTP information is incorrect, and press <Enter>.</p> <p>Note: If you entered “n” at the verification prompt, repeat step 17 to correct the NTP information, and then enter “y” at step 18.</p> <p>The following message displays (after entering “y” at the verification prompt):</p> <pre>The conference bridge has now been configured, the system will now reboot to reflect the changes.</pre>
19	<p>You have successfully initialized the Aastra CNX.</p> <p>When you have completed initializing and configuring the Aastra CNX, go to Step 8, “Using the Aastra CNX GUI via the Web” on page 16. For more information about logging in, see the Aastra CNX System Administrator Guide.</p>

Using the Aastra CNX GUI via the Web

Using the Aastra CNX GUI via the Web

To begin using the Aastra CNX GUI via the Web interface:

Important: The JRE allows you to use the Aastra CNX graphical user interface (GUI) to configure, manage, and maintain the Aastra CNX. You must have JRE installed in order to use the Aastra CNX GUI. If your PC (running Windows) is connected to the Internet, the JRE automatically installs (if not already installed) when accessing the Aastra CNX GUI. If you do not have access to an Internet connection **OR** if you are using the Aastra CNX in a Linux environment, you must acquire the applicable JRE and install it manually before using the Aastra CNX GUI.

- a. Open your web browser and enter the URL or IP address of the Aastra CNX. For example:
http://cnx1.aastra.com
or
http://192.168.112.15.
- b. Enter the username and password provided by the System Administrator.
Note: Default username and password for System Administrators is "**cnxadmin**".
- c. Enter the Aastra CNX License Key and click **APPLY**.
The License Key can be found on the label located on the Documentation CD ROM envelope.
The Aastra CNX reboots. Close your web browser and wait a few minutes before logging in again.
- d. Repeat steps **a.** and **b.** when the reboot is complete.
- e. Change the default password by clicking the "**Change Password**" button.
- f. Configure the Aastra CNX and/or schedule conferences as required.
Note: Available tasks are dependent on whether you are a System Administrator or Registered User.

Additional Notes:

1. After port upgrades and major software releases on the Aastra CNX, a System Administrator must enter a new license key to activate the software. See the *Aastra CNX System Administrator Guide* for more details.
2. The CNX performs an automatic reboot as part of an upgrade process.

For configuration details (System Administrators only)

See the *Aastra CNX Conference Network Switch System Administrator Guide* provided on the *Aastra CNX Conference Network Switch Documentation CD*.
All documentation is provided in PDF format

For troubleshooting

If you are having problems using your Aastra CNX, contact your reseller or Aastra Telecom Technical Support.
