Antennas	These antennas are un-detachable 1.8dBi dipole antennas.	
1 - 4	Local Area Network (LAN) ports 1 to 4.	
WAN	VAN Wide Area Network (WAN / Internet) port.	
PWR	Power connector, connects to A/C power adapter.	

Section 2

Configuring the Router

Note: Prior to connecting the router, be sure to power off your computer, DSL/Cable modem, and the router.

Step 1 Connect one end of a network cable to the **WAN** port of the router and connect the other end of the cable to the DSL/Cable modem.

Step 2 Power on the modem.

Step 3 With another network cable, connect one end of the cable to your computer's **Ethernet** port and connect the other end to one of the **LAN** ports of the router, as shown in the following figure. (After setup finishes, you can remove the network cable between the computer and router if you want to use wireless connection.)

Step 4 Plug the power adapter to the router and connect it to an electrical outlet.

Step 5 Power on your computer.

Step 6 Check LEDs of the router: make sure **Status, WAN**, **W.LAN**, and the **LAN** port that the computer is connected to are ON. If one or more LEDs are not on, please refer to Section 4 Troubleshooting.

Step 7 Insert the Setup CD into CD-ROM drive.

Step 8 When the autorun menu pops up, click EZ Setup Wizard.

	Wireless N 300 Green Router
EZ Setup Wizard View User Manual View Quick Installatio Install Adobe Reader	on Guide
Browse Exit	Model No.: AR686W

Note: If the autorun menu does not show up on the screen, please go to **Computer** \rightarrow **CDROM drive** \rightarrow **Wizard** folder, and execute "**EZWizard.exe**".

Windows 7 and Vista users: an AutoPlay window pops up on screen, please make sure you give permission to run the setup program by clicking Autorun.exe.

Step 9 Select your language and click Next.

Step 10 Click on Wizard.

Connect to the Router Wirelessly

You must configure your wireless computer in order to establish a wireless connection to the router. In this section, you can find the instructions of how to connect to the router wirelessly with your **Windows 7** computer. You can also refer to the manual of your wireless adapter on how to connect to the router.

Step 1 Click on the wireless icon in the system tray on your desktop. A list of available network will pop up. Select the one you want to connect to and click **Connect**.

Step 2 Enter the key you configured in **Step 13** if you have enabled the wireless security, then click **OK**. The wireless connection should be now established.

Section 4

Troubleshooting

A. Diagnosing problems from LED indicators:

- 1. If the WAN LED is off, but Status LED is on, please check if the modem is powered on, and the network cable from the modem is plugged into the WAN port of the router.
- 2. If the Wireless LED is off, but Status LED is on, the wireless function might be turned off. Please press the **Wireless On** button on the front panel to turn on the wireless function.
- 3. If the LAN LED is off, but Status LED is on, please make sure:
 - I. The network cable plugged into the Ethernet port of your computer is connected to one of the LAN ports (1~4) of the router.
 - II. The Ethernet adapter's indicator on your computer is on, otherwise it may be disabled. Please enable the Ethernet adapter on your computer.

B. If you cannot connect to the Internet, please try the solutions below:

- 1. Make sure you can connect to the Internet with the Cable/DSL modem directly plugged into your computer.
- If you are using DSL (PPPoE) Internet service, please verify with your ISP that the username and password you entered into the router are correct.
- If you are using Cable Internet service, please do the following steps: Step 1 Power off the Cable/DSL modem, router, and computer and wait for 1 minute.

Step 2 Turn on the Cable/DSL modem and wait for the lights on the modem to settle down.

Step 3 Turn on the router and wait for the lights on the router to settle down.

Step 4 Turn on the computer.

C. Your wireless adapter is not connected to the Router:

- 1. Please make sure your wireless adapter is connected the Router with the correct security key you configured at **Step 13**.
- Please make sure your wireless adapter supports the security mode (WPA2-PSK/AES) you configured for the Router at Step 13. If your wireless adapter does not support WPA2-PSK; you can change the Security to WEP, and configure a 10-digit HEX key (0~9, a~f).
